EXECUTIVE SUMMARY

Honeywell is submitting this Remedial Action Report (RAR) to document the Chromium Remedy to address chromium-impacted soil and groundwater at Study Area 6 North (SA-6 North or Site), located in Jersey City, Hudson County, New Jersey. The remedial activities were initiated in May 2013 and were completed in December 2016. The Chromium Remedy was implemented successfully in accordance with the following documents:

- New Jersey Department of Environmental Protection (NJDEP)-approved Remedial Action Work Plan (RAWP);
- SA-6 North Consent Decree, In-situ Work Plans, the 100% Design Report and Design Change Bulletins;
- NJDEP's Technical Requirements for Site Remediation; and
- NJDEP's Administrative Requirements for the Remediation of Contaminated Sites.

SA-6 North encompasses approximately 42 acres near Kellogg Street and north of the SA-7 Site and is bounded by Route 440 and the Hackensack River on the east and west sides, respectively. Remediation was completed across the entire Site, with the exception of three small areas where remediation has been deferred ("Deferred Areas"), due to circumstances further detailed below:

- Two narrow portions of the Site adjacent to Route 440 right-of-way (ROW) along the eastern perimeter of the Site; and
- In-situ treatment area (TA-7) located within the Jersey City Municipal Utility Authority (JCMUA) property.

Remediation was partially completed in a portion of in-situ treatment area 10 (TA-10) that is located north of the SA-6 hydraulic barrier and north of the northern curbline of the future Stegman Boulevard. Soil sampling has been performed in this area to confirm achievement of the remedial action objectives (RAOs) for soil, but final validated analytical results are pending. Honeywell will also establish a deed notice on this area until results indicate that the RAOs have been achieved.

Therefore, no further remedial actions are required for SA-6 North other than remediation in the identified Deferred Areas and actions to support the long-term maintenance and operation requirements for the Open Space Area. Remediation of the Deferred Areas will be coordinated with the widening of Route 440 and relocation of a fueling system in the TA-7 Deferred Area.

For the purpose of this RAR, the contaminant of concern (COC) in soils at the Site is hexavalent chromium and the COC for shallow groundwater is total chromium per the NJDEP-approved RAWP. Chromium-impacted soil and groundwater was delineated during multiple phases of remedial investigations and subsequent pre-design investigations. With respect to chromium-impacted soil and groundwater, the RAWP identified one area of concern (AOC) at the Site, AOC-1. AOC-1 is further divided into two sub-areas based on future land use: the "Residential Development Area" and the "Open Space Area." AOC-2 was subsequently defined in the SA-6 North Consent Decree as the entirety of the Site (including AOC-1) where historic fill exists. A separate historic fill remedy is being implemented in AOC-2 which will be documented in a separate non-chromium RAR submittal; therefore, AOC-2 is not the subject of this RAR.

The Residential Development Area portion of AOC-1 was characterized in the RAWP as exhibiting soil with hexavalent chromium concentrations above 20 milligrams per kilogram (mg/kg), but with shallow groundwater concentrations of total chromium below 70 micrograms per liter (µg/L). The Open Space Area portion of AOC-1 was characterized in the RAWP as exhibiting soil with hexavalent chromium concentrations above 20 mg/kg and with shallow groundwater concentrations of total chromium above 70 µg/L.

Specific RAOs established in the NJDEP-approved RAWP for soils in the Residential Development Area included excavation and removal of hexavalent chromium-impacted soil to <20 mg/kg to meet the requirements of an unrestricted use in accordance with NJDEP's Chromium Policy, and with the SA-6 North Consent Decree and 100% Design Report. Additionally, following submission of the RAWP, three areas (TA-7, TA-8, and TA-10-1) within the Residential Development Area at SA-6 North where excavation was determined to be technically impracticable (TI) were identified due to depths of contamination and/or proximity to sewer lines and other critical structures. Thus, instead of excavation, in-situ chemical treatment of hexavalent chromium by injection of a chemical reductant was implemented in these

isolated areas to meet the same RAO for soils in the Residential Development Area as that stated above.

Since total chromium concentrations in shallow groundwater in the Residential Development Area portion of AOC-1 were identified as <70 µg/L, remediation of shallow groundwater outside of the SA-6 North Open Space Area (capped area) was not necessary. Deeper groundwater zones are being addressed by the Study Area 7 (SA-7) regional groundwater remedy.

Specific RAOs established in the NJDEP-approved RAWP for both chromium-impacted soils and shallow groundwater in the Open Space Area included containment and isolation using engineering controls (vertical hydraulic barrier and cap containment system), hydraulic control and establishment of appropriate institutional controls to restrict use. The NJDEP-approved RAWP originally included in-situ groundwater treatment using a permeable reactive barrier along the downgradient boundary of the Open Space Area, but that element was later eliminated based on further feasibility testing.

To meet the specified RAOs, major construction activities associated with the Chromium Remedy included:

- Excavation and offsite disposal of approximately 8,500 cubic yards (CYs) of chromium-impacted soil from the Residential Development Area;
- Excavation of approximately 9,500 CYs of chromium-impacted soil from the Residential Development Area and consolidation of this material in the Open Space Area;
- Reuse of approximately 28,000 CYs of confirmed non-chromium-impacted historic fill soils as backfill in excavations;
- Placement of approximately 41,000 CYs of structural fill material and horizon soils for the cap;
- Implementation of in-situ injections of a chemical reductant to treat chromium-impacted soils at Treatment Areas (TA) TA-7, TA-8, and TA-10-1 within the Residential Development Area;
- Surcharging of the Open Space Area to consolidate underlying compressible strata;

- Construction of approximately 2,400 feet of hydraulic barrier around the Open Space Area;
- Construction of an approximately 10-acre Resource Conservation and Recovery Act (RCRA) cap in the Open Space Area; and
- Construction of a contingent groundwater extraction system within the Open Space Area consisting of two runs 660 feet and 950 feet long.

With the exception of the Deferred Areas along the Route 440 ROW and the TA-7 Deferred Area as described above, the RAO for soils in the SA-6 North Residential Development Area and RAOs for soils and groundwater in the SA-6 North Open Space Area are being met by implementation of the Chromium Remedy and establishment of the necessary institutional controls. The Deferred Areas along the Route 440 ROW will be temporarily deed noticed until a public utility-owned gas main adjacent to the eastern boundary of the Site is relocated as part of a future road-widening project of Route 440. Likewise, the TA-7 Deferred Area will be temporarily deed noticed until JCMUA relocates their adjacent fueling system.

The RAO for soils was achieved with in-situ chemical treatment in the TA-8 TI area. The RAO for soils was achieved for nearly all of the TA-7 and TA-10-1 in-situ treatment TI areas, except for one limited, recalcitrant location in each area. In TA-7, the one recalcitrant shallow soil location will be excavated later to achieve the RAO after JCMUA moves the fuel station adjacent to this area. In TA-10-1, preliminary soil sample results indicate that a final injection of reductant recently implemented should address the one recalcitrant soil location and achieve the RAO for soil in the TA-10-1 area. Interim soil sampling to confirm achievement of the RAO in the TA-10-1 area has been completed, but final validated analytical results are pending. In the interim, both the TA-7 and the TA-10-1 area will be subject to temporary deed notices, which will remain in place until results demonstrate achievement of the RAOs for these areas. Final results for these areas will be submitted under separate cover.

The Long Term Monitoring Plan (LTMP) establishes procedures and schedules for long-term monitoring of shallow groundwater in the Open Space Area to evaluate hydraulic control and determine the need for operation of the contingent groundwater extraction system based on trigger criteria. The LTMP also establishes

the inspection, maintenance, and operation of critical features of the Chromium Remedy at areas where engineering and institutional controls are necessary.

Honeywell will establish appropriate institutional controls at SA-6 North that supplement the remedial actions, including deed notices and remedial action permits for soils for the Open Space Area and each of the deed notice areas. The draft soil remedial action permits are included. The draft remedial action permit for shallow groundwater in the Open Space Area is included. A classification exception area (CEA) has already been established with the NJDEP for the regional shallow groundwater which adequately covers shallow groundwater >70 µg/L in the Open Space Area at SA-6 North. In addition, the existing Conservation Restriction for the SA-6 North Open Space Area will be adjusted as needed to conform to the as-built remedy for Study Area 6 North.

Based on completion of the remedial actions for chromium-impacted soil as documented in this RAR; Honeywell is requesting NJDEP review and approval of this RAR in accordance with paragraph 23G of the Consent Judgment between Honeywell and the NJDEP dated September 7, 2011. It is Honeywell's intention that this document will close out remediation of chromium-impacted soil and groundwater at SA-6 North. As remediation at each Deferred Area is completed, the remedial action permit and deed notice for each area will be terminated by submitting documentation to NJDEP and All Parties.

1.0 INTRODUCTION

1.1 PURPOSE AND SCOPE

Honeywell International Inc. (Honeywell) is submitting this Remedial Action Report (RAR) prepared by Amec Foster Wheeler Environment and Infrastructure, Inc. (Amec Foster Wheeler) to document completion of remedial activities associated with the Chromium Remedy at Study Area 6 North (SA-6 North or Site), located in Jersey City, Hudson County, New Jersey. A Site Location Map is included as **Figure 1**. This report was prepared and is being submitted to the New Jersey Department of Environmental Protection (NJDEP) in accordance with the remedial action reporting requirements specified in the Technical Requirements for Site Remediation (TRSR), (New Jersey Administrative Code [N.J.A.C.] 7:26E-5.7). Since NJDEP's Site Remediation Program Case Management Team retained direct oversight of the Chromium Remedy, Honeywell is requesting NJDEP review and approval of this RAR in accordance with paragraph 23G of the Consent Judgment between Honeywell and the NJDEP dated September 7, 2011 (Consent Judgment).

The purpose of this RAR is to provide documentation of the successful execution of the Chromium Remedy and achievement of designated remedial action objectives (RAOs) at the Site to address chromium-impacted soil and groundwater. The Chromium Remedy was implemented at SA-6 North in accordance with the following documents:

- *First Amended Consent Decree regarding the Remediation and Redevelopment of Study Area 6 North* entered in U.S. District Court of New Jersey on August 2, 2012 (SA-6 North Consent Decree);
- July 1, 2013: Technical Requirements for Site Remediation N.J.A.C. 7:26E-1-5 adopted May 7, 2012, revised 2013;
- NJDEP, 2012. New Jersey Administrative Code, Chapter 26C Administrative Requirements for the Remediation of Contaminated Sites (ARRCS); last revised May 7, 2012, Trenton, New Jersey.
- January 4, 2008 (amended February 2008): *Remedial Action Selection Report and Remedial Action Work Plan for Chromium* to address chromium contamination at SA-6 North (SA-6 North Chromium RASR/RAWP). This document was approved by the NJDEP in a letter dated February 19, 2009.

- February 2013: *Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil* for three treatment areas (TA) at SA-6 North where excavation is technically impracticable and the *Updated Work Plan for In-Situ Treatment of Chromium-Impacted Soils at the Northern Area Section of Treatment Area 10* dated August 2015.
- June 28, 2013: *Chromium Remedy 100% Design Report - Issued for Construction* for SA-6 North (SA-6 North 100% Chromium Remedial Design). Portions of this document were reviewed and approved by the NJDEP in an email on May 15, 2013. The Design Report for SA-6 South was issued at the same time. Unless otherwise noted, the design reports are collectively referred to herein as the 100% Design Report.
- Design Change Bulletins (DCBs) to 100% Design Report as indicated in Section 3 below.

As the Chromium Remedy progressed, Honeywell prepared a series of 5 Declarations which were periodically submitted to the Parties to memorialize completion of specific remedial elements of the Chromium Remedy in accordance with the above documents. Each Declaration has a particular focus of work elements as pre-determined by the Parties in accordance with a letter from Honeywell, dated June 19, 2014. In addition, each Declaration is signed by Honeywell and a New Jersey-licensed professional engineer and all Declarations are entered into the Federal Court docket once finalized. As of the writing of this Revised Draft RAR, Declarations No. 1 and No. 2 are finalized and have been filed with the federal court. Remaining Declarations (Nos. 3, 4 and 5) have been submitted and are in various stages of review and re-drafting. Since Declarations are not required by the TRSR for RARs, the Final Declarations are attached only to the copy of this RAR going to the Parties.

For the purpose of this RAR, the contaminant of concern (COC) in soils at the Site is hexavalent chromium and the COC for shallow groundwater is total chromium per the NJDEP-approved RAWP. Chromium-impacted soil and groundwater was delineated during multiple phases of remedial investigations (RI) and subsequent pre-design investigations. With respect to chromium-impacted soil and groundwater, the RAWP identified one area of concern (AOC) at the Site, AOC-1. AOC-1 is further divided into two sub-areas with respect to future land use: the "Residential Development Area" and the "Open Space Area." AOC-2 was

subsequently defined in the SA-6 North Consent Decree as the entirety of the Site (including AOC-1) where historic fill exists. A separate historic fill remedy is being implemented in AOC-2 which will be documented in a separate non-chromium RAR submittal by Honeywell's Licensed Site Remediation Professional (LSRP); therefore, AOC-2 is not the subject of this RAR.

The Residential Development Area portion of AOC-1 was characterized in the RAWP as exhibiting soil with hexavalent chromium concentrations above 20 milligrams per kilogram (mg/kg), but with shallow groundwater concentrations of total chromium below 70 micrograms per liter (µg/L). The Open Space Area portion of AOC-1 was characterized in the RAWP as exhibiting soil with hexavalent chromium concentrations above 20 mg/kg and with shallow groundwater concentrations of total chromium above 70 µg/L.

The Chromium Remedy at SA-6 North was implemented for the majority of the work concurrently with the implementation of the Chromium Remedy at SA-6 South. The Chromium Remedy at SA-6 South was completed in November 2016. Implementation of remediation of non-chromium AOCs at SA-6 South was completed concurrent with the Chromium Remedy. The Chromium RAR for SA 6 South was submitted to NJDEP and all parties in December 2016 (revised February 2017) and the Non-chromium RAR for SA 6 South was submitted to NJDEP in October 2016.

Remediation of non-chromium areas of concern (AOCs) at SA-6 North was completed in March 2017 separately from the implementation of the Chromium Remedy at SA-6. This RAR does not address SA-6 North non-chromium AOCs. A separate RAR addressing the SA-6 North non-chromium AOCs will be prepared and submitted to NJDEP by Honeywell's Licensed Site Remediation Professional (LSRP) in the second quarter 2017.

1.2 SITE SETTING AND SITE HISTORY

SA-6 North and SA-6 South are located on the west side of Jersey City. The Sites are separated by Study Area 7 (SA-7) and all three Sites lie between Route 440 to the east and the Hackensack River to the west. A Site Layout Map is included as **Figure 2.** SA-6 North is bordered by a car dealership to the north and SA-7 to the south. SA-6 South is bordered by SA-7 to the north and Droyer's Cove, Kellogg Street and Droyers Point Society Hill developments to the south. Adjacent

commercial properties, including New Jersey City University (NJCU) and a Home Depot, are located east of Route 440.

Collectively, SA-6 North, SA-7, and SA-6 South comprise approximately 100 acres (see **Illustration 1**). Bayfront Redevelopment LLC, a wholly owned subsidiary of Honeywell, owns the entire property with the exception of: (a) Lot 4, a 0.4-acre lot that is owned by Mr. Paul Trenk, and (b) Block 6 on SA-6 North, representing a 6.25-acre lot occupied by the Jersey City Municipal Utilities Authority (JCMUA) and is jointly owned by the City of Jersey City (Jersey City)] and the Jersey City Redevelopment Agency (JCRA). All the other Lots and Blocks on SA-6 North are owned by Bayfront Redevelopment LLC. SA-6 North represents an overall area of just over 42 acres as indicated below.

SA-6 North consists of Hudson County Chromate Sites 087 and 088 as follows:

NJDEP Site No.	NJDEP Site Name	Program Interest Number for Chromium	Block 21901 Lot No.	Address	Acres
087	Jersey City Incinerator Authority (JCIA) Site	G000008710	9 & 10	555 & 575 Route 440	35.76
088	JCIA Well Site	G000008711	5	501 Route 440	6.48
Total Acres					42.24

Detailed site histories have been provided in previous regulatory submittals. Recent operations at the Sites are summarized as follows:

- SA-6 North is also referred to as the "Jersey City Properties." Since approximately the mid-1950s, the Site was owned by Jersey City and occupied by "Jersey City Entities" including the Jersey City Department of Public Works (JCDPW), Jersey City Incinerator Authority (JCIA), and JCMUA. JCDPW and JCIA vacated the Site in 2014 during the implementation of the Chromium Remedy and some of the associated structures formerly utilized by the JCIA were demolished. JCMUA continues operations on Block 6 including primary wastewater treatment (grit removal) and sanitary conveyance to the regional Passaic Valley Sewerage

Commission (PVSC) wastewater treatment facility located in Kearny, New Jersey. JCMUA also performs vehicle maintenance and material storage and maintains administrative operations on Block 6. Bayfront took ownership of the SA-6 North properties June 5, 2008.

- SA-6 South is also referred to as the "Kellogg Street Properties." SA-6 South was the location of historic industrial and commercial operations. Recent operations included a bowling alley, freight trucking terminals, chemical production, concrete mixing and distribution, boat repair, and light retail and office space. Honeywell purchased the SA-6 South properties between 2005 and 2010.

Historical maps and aerial photographs indicate that, prior to development, the Sites and surrounding area consisted of marshland, which extended to the edge of the former Morris Canal (approximately the eastern edge of Route 440). Filling activities occurred from approximately the 1920s to the 1950s. The aerial photographs indicate that the area comprising the SA-6 and SA-7 sites has been filled over the years to build up the grade to approximately current levels. No detailed information is available on the placement of chromite ore processing residue (COPR) for the properties comprising SA-6 North. However, it is believed that COPR deposited on SA-7 likely spilled over and was co-mingled with other types of fill, spreading the COPR material onto adjacent portions of the SA-6 North and South properties. The deposition of COPR is believed to have resulted from operations at a former sodium dichromate plant that operated on the east side of Route 440. Visual observations of soil borings and sample analytical results from soil borings conducted on SA-6 North and SA-6 South indicate the presence of other types of fill consistent with the NJDEP's definition of "historic" fill in the TRSR. The historic fill map of the Jersey City quadrangle (NJDEP, 2004) was obtained from the NJDEP's website and was reviewed. This map confirms that the Sites were identified as containing historic fill as mapped by the NJDEP. The resulting material on the SA-6 properties is thus a mixture of COPR and indigenous historic fills and soils.

1.3 PROJECT BACKGROUND AND LAND DEVELOPMENT

A redevelopment plan, known as the Bayfront Redevelopment Plan, encompasses the entire 100-acre parcel designated as SA-6 North, SA-7 and SA-6 South (see **Illustration 1**) and was approved by the City of Jersey City on March 12, 2008.

Remediation of chromium-impacted soils at SA-7 was completed in September 2009. Honeywell remediated SA-6 North from May 2013 to December 2016 so that implementation of the Bayfront Redevelopment Plan may now proceed. Remediation of chromium and non-chromium impacts at SA-6 South were completed in November 2016 and have been reported under separate chromium and non-chromium RARs.

Illustration 1: SA-6, SA-7, and Surrounding Area

The Bayfront Redevelopment Plan lays out the redevelopment of the nominal 100-acre site that is owned by Bayfront Redevelopment LLC (Bayfront, a subsidiary of Honeywell) and is being developed in partnership with the City of Jersey City into a residential, commercial and retail complex. The Bayfront Redevelopment Plan represents a major opportunity to revitalize the west side of Jersey City; it meets the objectives of Jersey City's master plan for the broader west side area designated as the Bayside Redevelopment Area (see **Illustration 2**).

The Chromium Remedy and Non-Chromium Remedies at both SA-6 North and SA-6 South integrate the requirements of the future Bayfront Redevelopment Plan.

To be consistent with future planned use and the Bayfront Redevelopment Plan, SA-6 North and SA-6 South are divided into Open Space and Development Areas. The designation of these areas is contained in the SA-6 North and SA-6 South Consent Decrees, and is designated as follows:

Illustration 2: Bayside Redevelopment Area

- SA-6 North Consent Decree: "Open Space Area" and "Residential Development Area;" and
- SA-6 South Consent Decree: "Open Space AOC" and "Development AOC." The "Development AOC" consists of two parts: the Kellogg Street Development AOC and the Site 163 Development AOC.

The Bayfront Redevelopment Plan designates the SA-6 North and SA-6 South Development Areas for future residential and commercial/retail use redevelopment, and designates the Open Space Areas for future redevelopment as linear parks and recreational use areas currently known as "Central Park" on SA-6 North and the "Promenade" on SA-6 South. The as-built grades of the cap associated with the Chromium Remedy in the SA-6 North Open Space Area are interim grades. During development, the cap grades will be made consistent with the Bayfront Redevelopment Plan grades, with smoothing as needed to facilitate drainage pending development, and associated installation of roadways and stormwater management. Development in the Open Space Area/AOC is also restricted via recorded conservation restrictions. **Illustration 3** depicts the major components of the SA-6 North Chromium Remedy.

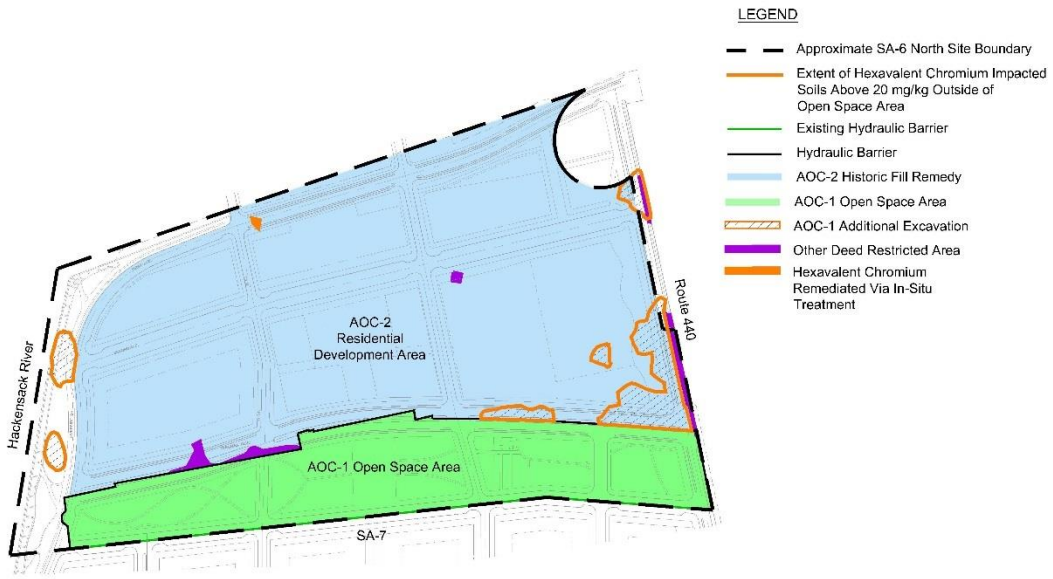

Illustration 3: SA-6 North Chromium Remedy and Redevelopment Plans

1.4 CONTAMINANTS OF CONCERN AND REMEDIAL ACTION OBJECTIVES

For the purpose of this RAR, the contaminant of concern (COC) in soils at the Site is hexavalent chromium and the COC for shallow groundwater is total chromium per the NJDEP-approved RAWP. The NJDEP-approved RAWP identified specific remedial action objectives for soil and groundwater as follows:

Specific RAOs for soils include:

- Prevent exposure to chromium-impacted soils containing hexavalent chromium above the NJDEP soil criteria of 20 milligrams per kilogram (mg/kg) to a depth of 20 feet, consistent with NJDEP policy.
- Remove and consolidate chromium-impacted soils that may be disturbed by future Site redevelopment activities; and reuse soils beneath the area to be capped, to the extent feasible.
- Coordinate remedial actions for chromium with remedial actions for non-chromium contaminants and Site redevelopment, to the extent feasible.

Specific RAOs for groundwater include:

- Mitigate the potential for surface water infiltration and leaching of contaminants (total and hexavalent chromium) from fill soils (vadose zone) to groundwater.
- Mitigate offsite migration of chromium in groundwater above the NJDEP Groundwater Quality Standard (GWQS).
- Reduce chromium concentrations in groundwater.
- Prevent exposure to groundwater chromium concentrations above the NJDEP GWQS.

To achieve the RAOs for SA-6 North soils and groundwater, the NJDEP-approved RAWP proposed the following remedial actions:

- Excavation of soil impacted with hexavalent chromium >20 mg/kg to a depth of 20 feet below ground surface (bgs) or 20 mg/kg, in the Residential Development Area;
- Consolidate lower concentration chromium-impacted soil from the Residential Development Area in the Open Space Area prior to cap construction;
- Capping and containment of chromium-impacted soil in the Open Space Area;
- In-situ permeable reactive barrier (PRB) treatment remedy using a reductant medium along the north side and vertical hydraulic barriers along the east and west sides of the Open Space Area; and
- Establishment of institutional controls.

Following submission of the RAWP, Honeywell continued to work with NJDEP to develop and refine the Chromium Remedy to achieve the RAOs stated in the NJDEP-approved RAWP. Eventually, Honeywell proposed to eliminate the PRB concept and fully contain the Open Space Area with a vertical hydraulic barrier consisting of sealed sheetpile. In addition, following submission of the RAWP, Honeywell identified several isolated locations where lower concentration

chromium-impacted soil existed in areas within the Residential Development Area where excavation was technically impracticable (TI) due to depths of the chromium-impacted soil within them and proximity to sewer lines and other critical structures. Instead of excavation in these isolated TI areas, in-situ chemical treatment of hexavalent chromium by injection of a chemical reductant was proposed to meet the RAOs for the Residential Development Area. These areas were identified as in-situ chemical treatment areas TA-7, TA-8, and TA-10. These areas are isolated from the identified areas in the Residential Development Area where excavation could be conducted. Thus, instead of excavation, in-situ chemical treatment of hexavalent chromium by injection of a chemical reductant was implemented in these isolated TI areas to meet the same RAO for soils in the Residential Development Area as that stated above.

Therefore, to achieve the soil RAOs in the Residential Development Area, Honeywell excavated soil impacted with hexavalent chromium >20 mg/kg to a maximum depth of 20 feet bgs. Excavated material that was impacted with hexavalent chromium between 20 and 240 mg/kg was consolidated in the Open Space Area. Excavated material that was impacted with hexavalent chromium >240 mg/kg was disposed of offsite. In lieu of excavation, Honeywell implemented in-situ chemical treatment of hexavalent chromium by injection of a reductant in the three isolated TI areas (TA-7, TA-8, and TA-10) identified within the Residential Development Area. Additional details pertaining to the implementation of the in-situ chemical reduction in the TI areas of the Residential Development Area are provided in Section 11. To achieve the soil RAOs in the Open Space Area, engineering controls (vertical hydraulic barrier and cap) were constructed around and over existing and consolidated chromium-impacted soil within the Open Space Area. The soil RAOs were met in AOC-1 with the exception of the three "Deferred Areas" and minor portions of the TI areas within the Residential Development Area discussed in Section 4.7.

Concentrations of total chromium in shallow groundwater within the Residential Development Area were below the NJDEP GWQS for groundwater of 70 µg/L prior to implementation of the Chromium Remedy. Therefore, remediation of shallow groundwater is not necessary in the Residential Development Area.

To achieve groundwater RAOs in the Open Space Area, Honeywell constructed a vertical barrier and a cap which now fully contains groundwater in the Open Space Area. Further, a contingent groundwater extraction system was installed within the

Open Space Area to assist in maintaining an inward hydraulic gradient relative to groundwater outside the Open Space Area. Groundwater level measurements will be monitored in accordance with the Long Term Monitoring Plan (LTMP), dated February 2017 (latest Revised Draft), prepared for both SA-6 North and SA-6 South, to monitor hydraulic conditions in both the Residential Development and Open Space Areas.

To achieve both soil and groundwater RAOs, Honeywell will establish appropriate institutional controls at SA-6 North including:

- Deed notices for each area of the Site where hexavalent chromium concentrations in soils remain >20 mg/kg;
- Remedial action permits for soils for all areas where hexavalent chromium concentrations in soils remain >20 mg/kg;
- A remedial action permit for groundwater in the Open Space Area;
- A classification exception area (CEA) has already been established with NJDEP for the chromium-impacted regional shallow groundwater which adequately covers shallow groundwater at SA-6 North; and
- A conservation restriction has already been established for the Open Space Area at SA-6 North. Honeywell will maintain the conservation restriction.

Honeywell will establish appropriate institutional controls at SA-6 North including deed notices and a remedial action permit for soils for five distinct areas including the Open Space Area, the three Deferred Areas, and the TA-10 Area. A remedial action permit for groundwater in the Open Space Area will be requested from NJDEP. A CEA has already been established with NJDEP for the regional shallow groundwater. More details concerning the institutional controls are provided in Section 17.

Section 4.7 more fully describes the deed notice areas, but a summary of the five areas at SA-6 North are:

- Deed Notice Area No. 5: Open Space Area,
- Deed Notice Area No. 6: Route 440 Right-of-Way (ROW) Deferred Area,
- Deed Notice Area No. 7: TA-10,
- Deed Notice Area No. 9: Route 440 ROW Deferred Area, and

- Deed Notice Area No. 10: TA-7 Deferred Area.

Draft deed notices, draft remedial action permit applications, and the NJDEP-approved CEA are appended to this RAR. More details concerning the institutional controls are provided in Section 17.

1.5 CONSTRUCTION OVERVIEW

The Chromium Remedy for the Residential Development Area at the Site consisted of excavation of soils exceeding 20 mg/kg for hexavalent chromium to the elevations established in the 100% Design Report based either upon pre-design investigation (PDI) sample data or encountering Stratum D. Excavated soil that was between 20 and 240 mg/kg for hexavalent chromium was consolidated in the SA-6 North Open Space Area; whereas excavated soil that was >240 mg/kg was disposed of offsite. Unlike SA-6 South, the chromium-impacted soils at SA-6 North were less wide-spread and were identified in specific areas. These distinct areas were previously delineated to 20 mg/kg during the RI and/or PDI sampling and were given the term Excavation Area (EA) and were numbered (1, 2/3, 4, 5, 7 and 8) for reference purposes. The originally defined EA-6 area was included in the Open Space Area by realignment of the hydraulic barrier once the design was completed.

Hydraulic barriers keyed into the Stratum D were installed on the east, north and west sides of the Open Space Area. The SA-7 Soil-Cement Bentonite (SCB) Wall forms the southern side of the hydraulic barrier. The northern hydraulic barrier also served as temporary excavation support for excavation of EA-5 and EA-2/3 in the Residential Development Area. A Resource Conservation and Recovery Act (RCRA)-equivalent cap was constructed over the Open Space Area to isolate contaminated soils.

More specifically, the Chromium Remedy included the following main work elements:

- Site preparation (utility mark out, temporary fencing, and erosion controls);
- Remedial Contractor mobilization and installation of site support facilities including construction trailers, decontamination stations, utility abandonment and bypassing, soil erosion controls, construction dewatering and stormwater control, and treatment infrastructure;

- Abandonment/demolition/removal/relocation of existing structures, select monitoring wells, and utilities as necessary to remediate chromium-impacted areas;
- Construction water management;
- Installation of temporary sheetpile for excavation support;
- Excavation within the designated Residential Development Area of chromium-impacted soils exceeding 20 mg/kg hexavalent chromium to a maximum depth of 20 feet;
- Consolidation of excavated material exhibiting hexavalent chromium concentrations between 20 and 240 mg/kg within the Open Space Area;
- Offsite disposal and transportation of excavated material exhibiting hexavalent chromium concentrations exceeding 240 mg/kg;
- Installation of a hydraulic barrier along the perimeter of the designated Open Space Area. The hydraulic barrier was tied into the existing hydraulic barrier associated with the SA-7 remedy along the common SA-6 North and SA-7 Site boundaries. The SA-6 North hydraulic barrier was embedded approximately 2 feet (minimum) into the underlying Stratum D.
- Installation within the Open Space Area of a contingent groundwater extraction system which will be operated as needed to maintain an inward hydraulic gradient as specified in the Consent Decree, the 100% Design Report, and the SA-6 LTMP.
- Soil surcharging in the Open Space Area to consolidate underlying compressible strata;
- Grading of soil consolidated from other areas in the Open Space Area and compaction of existing material/subgrade fill;
- Installation of the RCRA-equivalent geosynthetic cap system, including a methane venting layer to address naturally occurring methane;
- Installation of surface drainage and erosion control structures;
- Installation of a cap drainage system to collect stormwater infiltration and discharge to surface water;
- Installation of utility corridors for future site redevelopment;

- Installation of paired piezometers along the barrier wall to allow for groundwater level monitoring to demonstrate compliance with the inward hydraulic gradient requirement.
- Restoration of site and planting of grass or placement of clean crushed stone cover;
- Recording of institutional controls and initiation of future monitoring; and
- At TA-7, TA-8, and TA-10-1, in-situ treatment of soils exhibiting hexavalent chromium concentrations exceeding 20 mg/kg by injecting a chemical reductant solution into the subsurface.

Table 9 provides a cross-reference table of major construction elements referenced to particular components of the 100% Design (100% Design Report, Specifications, and Drawings), DCBs, and the Declarations which were periodically sent to all Parties documenting completion of specified portions of the Chromium Remedy.

The Chromium Remedy activities included the following major categories, and corresponding approximate quantities for SA-6 North (quantities that are combined for SA-6 North and SA-6 South are noted):

Item	Units	Quantity
Construction Water Discharged (North and South)	Gallons	41,257,040
Abandoned Existing Monitoring Wells/Piezometers	Each	41
Dewatering Wells		
Shallow	Each	44
Deep	Each	2
New Monitoring Wells		
Piezometers	Each	10
Material Handling		
Concrete	Cubic Yards (CY)	5,740
Excavated Soils		
Open Space Area 1N <20 mg/kg	CY	14,000
<20 mg/kg	CY	11,300
20-240	CY	9,500
>240 (Non-hazardous)	CY	2,500

Item	Units	Quantity
>240 (Hazardous)	CY	6,000
Consolidated Materials		
20-240 (South)	CY	35,000
20-240 (North)	CY	9,500
Asphalt	CY	100
Hydraulic Barrier	LF	2381
Cap Materials		
Subgrade Fill	CY	66,000
Geosynthetic Venting Layer (GVL)	Square Feet (SF)	361,300
Geosynthetic Composite Layer (GCL)	SF	29,500
Geotextile Layer	SF	59,000
Geosynthetic Drainage Layer (GDL)	SF	440,970
Liner	SF	440,970
GDL Soil	CY	17,700
Root Barrier	SF	440,970
Clean Cover Soils	CY	41,000
Backfill		
<20 mg/kg within excavation areas	CY	21,900
Imported Fill (Summit, NJ, "Celgene" fill)	CY	6,000
Surcharge		
Soil	CY	130,800
Monitoring Points	Each	11 Half Stations 13 Full Stations 15 Settlement Platforms
Disposal		
Recycled Asphalt (North and South)	Tons	3,700
>240 (Non-Hazardous)	Tons	4,000
>240 (Hazardous)	Tons	10,000

Item	Units	Quantity
Frac Tank	Tons	120
In-Situ Injections (CAPS Injected)		
TA-7	Gals	324
TA-8	Gals	168
TA-10	Gals	1,155

The following entities were involved in the construction of the SA-6 North remediation (see also **Figure 3,** Field Operations Organization Chart):

Party	Responsibility
Honeywell	Overall compliance with court-ordered remediation
Amec Foster Wheeler	Engineer of Record (EOR), Design, Contract Documents, Construction Inspection, Health and Safety Oversight, and Overall Site Construction Management
Entact	Excavation of chromium-impacted soil, imported backfill purchase and placement, and Dewatering and Groundwater Extraction
Gramercy	Demolition of JCIA buildings
Emilcott Associates	Air Monitoring
Arecon	Manifests, and Management of Excavated Soil Disposal
US Ecology	Transportation, Treatment and Disposal of hazardous chromium-impacted soils >240 mg/kg hexavalent chromium
Middlesex County Landfill	Transportation and disposal of non-hazardous chromium-impacted soils
Bayshore Soil Management LLC	Transportation and disposal of frac-tank sediment and soil
Mueser Rutledge Consulting Engineers (MRCE)	3rd Party Structural and Geotechnical Engineering Peer Review
Langan	3rd Party Liner QA
SGS Accutest Laboratories Inc. (Accutest)	Analytical Laboratory for samples collected by Amec Foster Wheeler
Travelers Industrial Hygiene Laboratory	Analytical Laboratory for Perimeter Air Monitoring Plan (PAMP) samples
Analytical & Environmental Services, Inc. (AESI)	3rd Party Analytical QA/QC

Party	Responsibility
Validata, LLC	3rd Party Analytical Data Validation
B&B Drilling	Piezometer drilling and installation, monitoring well abandonment
Isotec/ERFS	In-Situ Injections

Mobilization to both SA-6 North and SA-6 South commenced on March 1, 2013 and was completed on June 28, 2013. The Chromium Remedy on SA-6 North was substantially complete by December 2016. Work on SA-6 South was also substantially completed by November 2016. Representative photographs of major components of the work are included in **Appendix A.**

1.6 DATA VALIDATION AND DATA USABILITY EVALUATION

Unless otherwise indicated for specific sample types, Accutest analyzed the samples. Hexavalent chromium analysis was performed using United States Environmental Protection Agency (USEPA) Method 7199. Data validation was performed by a third-party data validation specialist with Validata, LLC (Validata) of Seattle, Washington. Additionally, Honeywell employs Dr. Rene Surgi of Analytical & Environmental Services, Inc. (AESI) of Glencoe, Illinois, to provide third-party analytical quality assurance/quality control (QA/QC).

Honeywell's general protocol is to have Dr. Surgi review 100% of the hexavalent chromium soil analytical data and work with Accutest on any QA/QC matters prior to issuance of the final analytical data packages. Samples that do not meet the laboratory's strict internal QA/QC criteria are re-logged by the laboratory and re-analyzed. Once the data packages are issued by Accutest to Validata, 100% of the hexavalent chromium (and total chromium, if performed) samples are validated. Employing such a protocol provides a high degree of confidence that the hexavalent chromium analytical data that has passed the internal laboratory QA/QC standards and was not rejected by the validator is accurate, precise, representative and, thus, usable. Rejected data, although reported, is flagged with an "R" and is not used for the intended purpose of the associated sampling.

The Data Management Plan (DMP) contained in the SA-6 North 100% Design Report outlined, among other things, the specific data validation objectives and procedures involved in producing quality, usable analytical data during implementation of the Chromium Remedy. Honeywell revised the DMP in August

2014 to clarify data validation level and frequency based upon the purpose of the sampling and end use of the data. This revised DMP was submitted to NJDEP and all Parties on August 22, 2014. A summary of the data validation level and frequency for soil samples analyzed for total and hexavalent chromium collected during the SA-6 Chromium Remedy and based upon the revised DMP was as follows:

- Level IV data validation on samples analyzed that are used for compliance purposes (i.e. post-excavation samples and those collected for re-use applicability of excavated material); and
- Level II data validation of approximately 25% on samples that are used for non-compliance purposes (i.e. samples for soils consolidated in the Open Space Area and those collected from soils being disposed of offsite).

Additionally, and in accordance with the DMP, data validation was also conducted on the following samples that included analysis of parameters other than total and hexavalent chromium:

- Level IV data validation on 100% of the monthly effluent water samples for tested parameters;
- Level IV data validation on 10% of soil samples for other (non-chromium) tested parameters; and
- Level IV data validation of approximately 10% of the PAMP air samples analyzed for hexavalent chromium for other (non-chromium) tested parameters. Those samples for which data validation was conducted only on a 10% frequency are indicated as **Tables 1A and 1B**.

The NJDEP issued guidance for the Data of Known Quality Protocols (DKQPs) in April 2014, approximately 1 year after the start of the SA-6 Chromium Remedy. The NJDEP was consulted regarding whether the questionnaire that is part of the DKQP process needed to be filled out for samples collected during the implementation of the Chromium Remedy. NJDEP concluded that the DKQP questionnaires were not required for the Chromium Remedy since the laboratory follows rigorous QA/QC protocols specifically developed for the chromium program in Jersey City which results in the generation of data of known quality and because the

third-party validation process covers the data assessment and usability evaluation promoted in the DKQP guidance. We note that the validation process essentially asks the same questions as those on the questionnaire. As indicated above, 100% of samples analyzed for hexavalent chromium were validated by Validata, whereas validation of all other analytical parameters was conducted on 10% of the samples. Any rejected data was not used.

Given the high level of internal and external QA/QC that is conducted, the 100% data validation that Honeywell employs for hexavalent chromium, and validation of 10% of samples for analytical parameters other than hexavalent chromium, the analytical data meets NJDEP's standards of precision, accuracy, and usability.

Copies of the laboratory analytical reports and the data validation reports are available upon request. Electronic Data Deliverable (EDD) documentation is included in **Appendix B**.

1.7 REPORT ORGANIZATION

This document has been prepared to meet the provisions specified in Sections 1.6 and 5.7 of the TRSR and contains the following sections:

- *Introduction.* This section contains information on the purpose and scope of the document, pertinent site setting information, project background and relationship between the Bayside Redevelopment Area and Bayfront, COCs, and RAOs, overview of the Chromium Remedy construction elements, and report organization.
- *Preparatory Construction Activities.* This section describes the activities implemented that were in support of the main elements of the Chromium Remedy.
- *Modifications and field changes to 100% Design Report.* Changes to what was proposed in the 100% Design reports are summarized in this section.
- *Items Encountered During Remedial Activities.* This section summarizes differing site conditions encountered during implementation of the Chromium Remedy.
- *Dewatering and Construction Water Treatment* (Section 5) through *Site Restoration* (Section 13). Detailed descriptions of the main elements of the

Chromium Remedy are provided in these sections. Tables and figures are used to graphically communicate the information.

- *Construction Permits.* This section presents a description of the permits obtained to implement the Chromium Remedy.
- *Sustainability Efforts During Construction.* Sustainable elements of the Chromium Remedy implementation are presented in this section.
- *Post-Remedy Operation & Maintenance.* This section describes the activities to inspect, monitor, and maintain elements of the Chromium Remedy that remain. In addition, groundwater monitoring and sampling is described.
- *Institutional Controls*. The implementation of deed notices, soil and groundwater remedial action permit(s), and a classification exception area are presented in this section.
- *Record Drawings*. Record drawings are discussed and provided.
- *Remedial Action Costs*. A summary of the costs to complete the project are provided.
- *Conclusion & Recommendations*. This section contains the conclusions and recommendations.
- *References.* References used in preparing this document are listed in this section.
- *List of Acronyms and Abbreviations.* This section contains a list of acronyms and abbreviations used in this document.

2.0 PREPARATORY CONSTRUCTION ACTIVITIES

On behalf of Honeywell, Amec Foster Wheeler managed and oversaw the bidding and contractor selection process for the SA-6 Chromium Remedy. The selected contractor was Entact LLC. (Entact) of Pittsburgh, Pennsylvania. Prior to mobilization, Entact prepared and submitted to Amec Foster Wheeler and Honeywell various work plans and submittals and acquired certain construction permits and approvals required by the 100% Design Report for implementation of the SA-6 Chromium Remedy.

In addition, several other permits were obtained by Amec Foster Wheeler for execution of the SA-6 Chromium Remedy during the design process. Other additional permits were obtained after the design process as detailed designs prepared by Entact were needed to obtain certain permits. Permits acquired for implementation of the SA-6 Chromium Remedy are listed in Section 14.

2.1 MOBILIZATION AND SITE PREPARATION

Amec Foster Wheeler and Entact mobilized equipment and labor forces to the Site between March 1, 2013 and June 28, 2013. Mobilization and site preparation included the following key activities:

- Re-establishment of Amec Foster Wheeler and Honeywell office space in the southern portion of the building located at 60 Kellogg Street;
- Mobilization and set-up of office trailers at SA-6 South for Entact operations. The trailers were outfitted with temporary electrical, internet, and telephone infrastructure;
- Establishment of a global positioning system (GPS) base station for use with construction layout and surveying;
- Mark-out of excavation, capping, staging and lay down areas;
- Geophysical surveys to locate unknown utilities, utility mark-outs, onsite utilities to be maintained, relocated or abandoned;
- Establishment of vehicular traffic pathways and staging areas;
- Installation of soil and erosion controls;

- Setup of the temporary construction water treatment plant (CWTP) at SA-6 North. The CWTP was utilized for SA-6 North and SA-6 South;
- Relocation of electrical feed for SA-7 regional groundwater extraction wells;
- Construction of decontamination facilities; and
- Installation of fencing, and establishment of initial exclusion zones, contaminant reduction zones and support zones. Such zones were maintained and modified as needed throughout the execution of remediation activities.

Other preparatory activities that occurred either just prior to or during initial stages of the construction activities are described in the sections that follow.

The Chromium Remedial Contractor could not fully engage in site preparation activities until the Jersey City Entities vacated the Site. While the Chromium Remedial Contractor did what they could to prepare the Site and begin the Remedy, the delay in the Jersey City Entities vacating the Site delayed and hampered progress and work sequencing.

2.2 HEALTH AND SAFETY

Health and Safety on the SA-6 Chromium Remedy was controlled by a Master Health and Safety Plan (HASP). The Master HASP was included as Appendix D of the SA-6 North Chromium Remedy 100% Design Report. Each site contractor was required to prepare and submit a HASP for their specific work requirements in conformance with the Master HASP. Direct responsibility for employee safety was retained by each contractor as outlined in the contractor's respective HASP.

The minimum personal protective equipment (PPE) for personnel within the fenced-in portion of the Site included hardhats, high visibility vests, gloves, safety glasses, and steel-toed boots. Minimum worker PPE within exclusion zones at the Site consisted of hardhat, safety glasses, high visibility vests, Tyvek™ suits, gloves, and steel-toed boots. Upon leaving the exclusion zone, disposable PPE was placed into containers staged within the contamination reduction zone. Non-disposable PPE was decontaminated in the same area. Disposable PPE was combined with other chromium-impacted waste and transported and disposed of offsite. Decontamination

fluids were processed through the onsite CWTP and subsequently discharged via JCMUA and PVSC discharge permits and agreements.

During the course of the project, 386,624 man-hours were worked on site. This number represents the combined total with SA-6 South as this was conducted as an integrated project. Of that total approximately 40% of the total hours worked could be allocated to SA-6 North. There were no Occupational Safety and Health Administration (OSHA) recordable incidents for the SA-6 South Chromium Remedy. Annual details are summarized in the table below:

Year	Man-Hours*
2013	60,928
2014	132,272
2015	104,384
2016	89,040
Project Total	**390,624**

*The man-hours include all hours on both SA-6 North and SA-6 South from mobilization through December 9, 2016.

A perimeter air monitoring program was carried out to document protection of human health outside of the remediation zone(s) to airborne COCs. The perimeter air monitoring program is discussed in detail in Section 10, but background and baseline monitoring activities are presented briefly below in Section 2.3 as they were part of the preparatory construction activities. In the course of the project, there were no exceedances of the perimeter air action levels.

2.3 BACKGROUND AND BASELINE PERIMETER AIR MONITORING

A perimeter air monitoring program was implemented and maintained whenever ground intrusive activities were occurring throughout the course of the SA-6 Chromium Remedy. The PAMPs were provided in the 100% Design Report. Separate PAMPs were prepared for SA-6 North and SA-6 South to account for the disparate durations of ground intrusive activities between the two Sites. The PAMP for SA-6 North was Appendix E of the SA-6 North Chromium Remedy 100% Design Report. More details of the overall perimeter air monitoring program are provided in Section 10.

During the mobilization phase and prior to ground intrusive activities, background perimeter air monitoring was performed to establish baseline air conditions that could be used for comparison to those measured during ground intrusive activities as shown on **Table 1A**. The background sampling was conducted for a minimum of 10 days during fair weather conditions (i.e., not during rain, snow, or high humidity) from July 15, 2013 to August 6, 2013.

Upon completion of the baseline sampling activities, the laboratory analytical data, real-time volatile organic compounds (VOC) [if applicable] and particulate matter dust monitoring data, and meteorological data was tabulated and presented to Honeywell. **Table 1A** summarizes the baseline perimeter air monitoring sample analytical data collected. **Figure 4** indicates the locations of the PAMP stations.

2.4 SITE SECURITY

Site security was established during the mobilization phase. Site security focused on perimeter security and access. The primary feature of Site Perimeter security was the perimeter fence line. SA-6 North was already surrounded by a perimeter fence due to the presence of the Jersey City Entities. The existing chain link fence along the exterior borders of the SA-7 and SA-6 South Sites previously installed during the remediation of SA-7 was repaired and replaced, as needed. Where new fence was required, 8-foot chain link fence was installed (equivalent to that installed on SA-7). For approximately one year, under a New Jersey Department of Transportation (NJDOT) issued Highway Occupancy Permit, the eastern end of the area fencing and sidewalk were relocated into the shoulder of Route 440 to facilitate construction of the hydraulic barrier and capping remedy and to maintain site security within that area.

Access to SA-6 North was limited by the security manned gate off of Culver Circle previously established by the Jersey City Entities at the JCDPW portion of the Site. Once JCDPW vacated the Site, site access was maintained strictly through this gate and Honeywell provided the security forces at the gate. Security forces were maintained on a 24-hour basis and patrolled the Site in vehicles.

Installation of the hydraulic barrier and capping remedy, along the eastern cap boundary, did require access to Route 440 from JCIA gate locations. Two excavation areas did encroach onto the driveway entrances to the JCMUA. The JCMUA

operations on Block 6 were fenced off as needed during the remediation activities; however, during the excavation on the JCMUA portion of the property, exclusion zones around the hot-spot excavation areas were established.

2.5 SUPPORT FACILITIES AND TEMPORARY SITE UTILITIES

Support facilities for the Honeywell and Amec Foster Wheeler construction management and Entact teams were also established during mobilization. Honeywell and Amec Foster Wheeler shared office space in the southern portion of the existing building at SA-6 South Site 125 (60 Kellogg Street) from the beginning of mobilization in March 2013 until February 2016. Once Honeywell and Amec Foster Wheeler moved out of the office space at Site 125, a set of permanent office trailers was established in the northeast corner of SA-6 North.

Site water for construction and dust suppression activities was obtained from a JCMUA fire hydrant located on SA-6 North.

Additionally, the CWTP was constructed between the former JCMUA Sludge Digesters and the JCDPW "H" building. The construction of the CWTP is described in more detail in Section 5. SA-7 was used for the staging of incoming clean materials including surcharge fill and geosynthetic materials. Equipment staging, parking, truck staging, and other storage was located in available areas.

2.6 TRAFFIC CONTROL

Onsite traffic associated with remedial activities was controlled by using designated routes established on the 100% Design Drawings. A perimeter-paved road was established on SA-7, which provided access from both SA-6 North and SA-6 South. Temporary ramps were built out of clean fill for transport between elevation changes on both SA-6 South and SA-6 North. These routes were marked using orange construction fence, traffic barricades, jersey barriers, signage and/or other types of traffic control devices.

Offsite truck traffic routes were consistent with routes previously approved for SA-7 and SA-5 remediation projects. The offsite truck routes used are indicated on **Figure 5**.

2.7 DEMOLITION

In accordance with a Site Preparation Plan prepared for SA-6 North dated October 2008, five major structures were either totally or partially demolished as necessary to facilitate implementation of the chromium remedy: the Former Sedimentation Basin, JCIA Incinerator Building, Former Waste Management, Inc. Leased Garage, JCIA Maintenance Garage and the Salt Dome. The demolition of these structures was contracted by the JCRA to Gramercy Group, Inc. Procurement and Specification Documents for the demolition scope and engineering oversight were provided to JCRA by Amec Foster Wheeler.

The former JCIA facility was located at 501 Route 440 in Jersey City, New Jersey. After JCIA relocated to a new Municipal Services Complex on Linden Avenue, Jersey City, New Jersey in September of 2014, the structures were demolished as detailed in **Appendix J**. A Structures Demolition Closeout Report was submitted to JCRA dated October 2015.

2.8 UTILITY ABANDONMENT

Utilities at SA-6 North included gas, electric, telephone/internet, water, storm and sanitary sewer which serviced both the Site and adjacent properties. Utilities that crossed into the excavation areas were abandoned in full compliance with Jersey City's Utility Abandonment Regulation, New Jersey's Underground Facility Protection Act and only after giving advanced notification via New Jersey's One Call system. Compliance requirements were completed prior to the inception of excavation activities.

During the preparation of the 100% Design Report, Honeywell determined that a 24-inch ductile iron gas main owned by Public Service Electric & Gas (PSE&G) exists north of the Open Space Area adjacent to the Route 440 ROW. A section of the gas line had been relocated to the east into Route 440 to facilitate construction of the SA-7 Remedy. At that time, the section of gas main adjacent to the SA-6 North Open Space Area was also relocated in anticipation of the SA-6 North Chromium Remedy. The relocation scope did not, however, anticipate the northern and eastern limits of the EA-1, and EA-2/3. This resulted in a conflict between the gas main and the eastern edge of these excavation areas adjacent to Route 440. Honeywell inquired of PSE&G and NJDOT about the potential relocation of a portion of this gas main and determined, based on their input, that utility relocation should be

deferred pending the comprehensive Route 440 Road Widening Project which is currently in the design phase. Consequently, a portion of excavations in EA-1 and EA-2/3 are deferred until the gas main is relocated in association with the Route 440 Road Widening Project. Honeywell will establish deed notices for these Deferred Areas until the work is completed, at which time the deed notices will be withdrawn. Honeywell will continue to monitor NJDOT and PSE&G progress on the Route 440 Road Widening Project and will address residual chromium contamination proximate to the gas line when relocated in the future for the Route 440 improvements.

2.9 GROUNDWATER TESTING FOR pH

During the mobilization phase and early stages of the Chromium Remedy implementation and prior to ground intrusive activities, Amec Foster Wheeler collected groundwater pH readings from 19 different locations along the proposed hydraulic barrier wall alignments at both SA-6 North and SA-6 South. The groundwater pH measurements were necessary to determine the type of sealant material that was suitable for the hydraulic barrier (sheetpile) joints.

The 100% Design required a cement-bentonite grouted seal on the sheetpile interlocks where the groundwater pH values were 11.5 standard units. **Figure 6** shows the measured pH values at each SA-6 North and SA-6 South location and stationing along the hydraulic barrier wall alignments. Section 9 details the installation of the hydraulic barrier and sealing of its joints.

The pH monitoring was performed in accordance with the methodology submitted by Honeywell and reviewed by All Parties as part of the Special Master document review process. All pH monitoring was performed in the fill above the meadow mat (Stratum D). Groundwater measurements were collected by Amec Foster Wheeler personnel certified with the NJDEP Office of Quality Assurance to perform field analysis of non-potable water for specific conductance, turbidity, dissolved oxygen, pH and temperature.

2.10 WASTE CLASSIFICATION

The *Proposed In Situ Waste Classification and Disposal Facility Approval Sampling Plan* (Amec, 2013) established a protocol for the sampling and analysis of the estimated 25,120 CYs of potentially chromium-impacted material that was planned

to be disposed offsite from both SA-6 North and SA-6 South. Materials containing hexavalent chromium >240 mg/kg at SA-6 North or >1,000 mg/kg at SA-6 South were designated for offsite disposal as shown on **Figures 7A through 7G**.

In order to properly classify the material for offsite disposal, the NJDEP *Waste Classification Request Form and Instructions* dated June 22, 2009 were used as a reference for the specific sampling frequency and analysis for the waste classification protocol in addition to any receiving disposal facilities' acceptance criteria. Results of the waste classification sampling are contained in **Appendix K**.

3.0 MODIFICATIONS AND FIELD CHANGES TO 100% DESIGN REPORT

Throughout the course of the implementation of the SA-6 Chromium Remedy, it was occasionally necessary to make modifications to the 100% Design Report based upon differing or unforeseen field conditions and/or provide further detail to conceptual design items. Design changes were documented in DCBs. Design changes are classified as either major or minor, where major DCBs were defined as those that could significantly impact cost and schedule and minor DCBs as those having minimal to no impact.

DCBs were issued using sequential numbering starting with DCB 000. A single combined DCB log was maintained for SA-6 North and SA-6 South (see **Appendix D**). Some DCBs applied to both sites. For purposes of the Special Master process a separate numbering system was maintained. The DCB Log provides a cross reference to the Special Master numbering.

During the course of the project a number of requests for information (RFIs) were received from the contractor. These RFIs sought clarification on specific areas of the 100% Design Report. Responses to all requests were provided. In the cases where an RFI resulted in a design change, an associated DCB was prepared and issued.

4.0 ITEMS ENCOUNTERED DURING REMEDIAL ACTIVITIES

During excavation activities at SA-6 North several unknown subsurface features and conditions were encountered. These included the following:

- "Anomalous" material was identified in excavation area EA-1 near Culver Circle;
- The 72-inch force main was found to be approximately 4 feet east of its recorded (as-built) location on the section of line east of the JCDPW "H Building;"
- Change in hydraulic barrier alignment due to the location of piles supporting the Sedimentation Basin;
- Two unregistered underground storage tanks (USTs) were identified; and
- Piles were encountered along the hydraulic barrier alignment within the EA-5 excavation limits.

As a result of above conditions, additional soil sampling was conducted that included:

- Post-excavation soil boring and sampling following excavation of a limited quantity of anomalous material at excavation EA-2; and
- Post-excavation soil sampling following visual discolored sidewall at excavation EA-5.

Descriptions of these conditions are provided in the sections below. Areas of the Site where remediation is not yet complete are considered Deferred Areas as detailed in Section 4.7 below.

As indicated in the 100% Design Report, due to the severity of the river bank slope along the western side of the Site, post excavation sampling at EA-8 was necessary following completion of excavation of this area to the design limits. The results of the post excavation sampling at EA-8 indicated a slight expansion of the original

EA-8 area vertically and horizontally. The additional sampling and excavation activities are detailed in Section 7.6.

4.1 "ANOMALOUS" MATERIAL AT EA-1

During visual inspection of the excavation EA-1 sidewall, a small lens of potentially chromium-impacted soil was identified on the north face of the excavation adjacent to the Culver Circle ROW. Field kits positively identified the material as hexavalent chromium. The excavation was extended to the NJDOT property line as shown on **Figure 8A**. No samples were collected. Honeywell notified the NJDOT of the visibly suspect material via e-mail on May 18, 2016.

4.2 HYDRAULIC BARRIER PARALLEL TO THE 72-INCH FORCE MAIN

The 100% Design required "soft dig" to confirm the 72-inch force main location prior to initiating the Chromium Remedy near the force main. As the result of those investigations it was determined that the north-south run of the force main east of the "H Building" was approximately 4 feet east of the documented "as-built" location. To comply with separation distances between the hydraulic barrier and the force main memorialized in a Memorandum of Understanding (MOU) entered in to by Honeywell and PVSC, it was necessary to move a short run of the north-south aligned hydraulic barrier approximately 4 feet east (see **Illustration 4**). This change was documented in DCB 014, dated September 2, 2014.

Additionally, after a series of discussions and meetings between NJDEP, PVSC and Honeywell following issuance of the 100% Design, the western-most section of the east-west aligned hydraulic barrier was moved approximately 15 feet to the south to increase the separation between the force main and hydraulic barrier (see **Illustration 4**). These hydraulic barrier relocations were documented in DCB 002 dated August 14, 2013 and in documentation to the NJDEP dated August 7, 2013. Record drawings contained in **Appendix C** show the re-aligned positions of the hydraulic barrier.

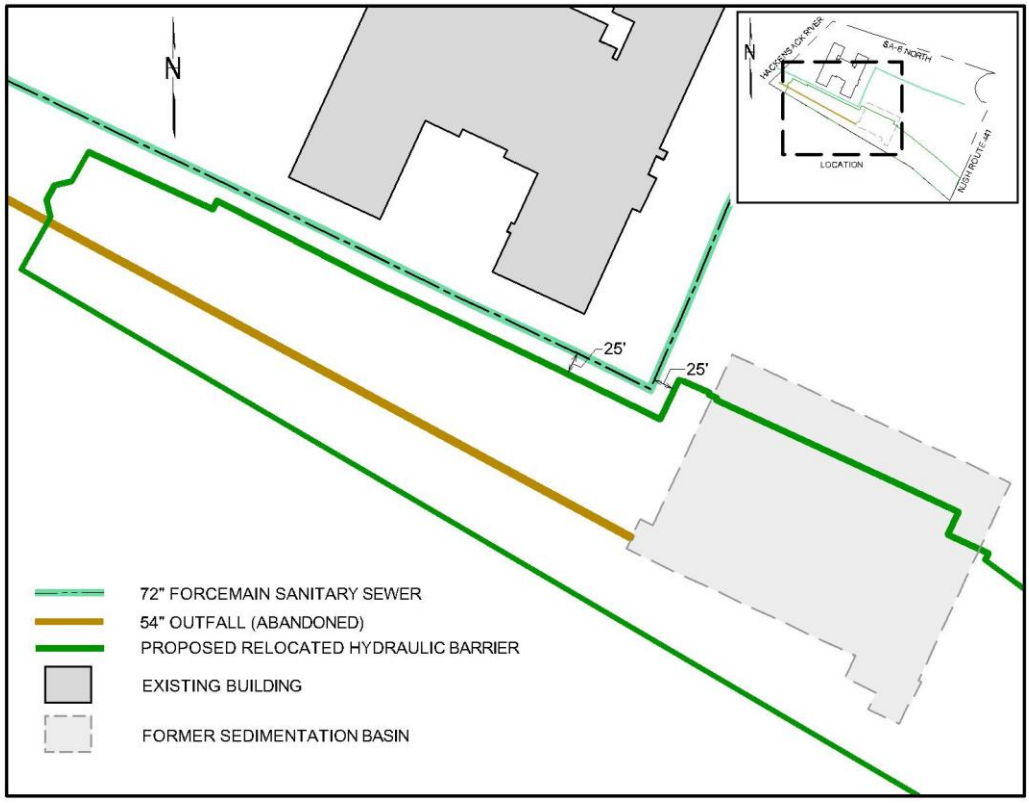

Illustration 4: Revised Hydraulic Barrier Location

Along most of the realigned hydraulic barrier sections, moving the barrier did not result in leaving chromium-impacted soils outside of the new alignment of the Open Space Area boundary. However, some chromium-impacted soils at a depth from approximately 12 to 14 feet bgs were left outside of the new alignment along the east-west section. During development, Stegman Boulevard will be constructed over this area and will effectively cap the underlying chromium-impacted soil, preventing any contact with the soil. In addition, Honeywell will establish a deed notice (Deed Notice #10 TA-7) to protect the footprint of chromium-impacted soils from disturbance. A limited area of chromium-impacted soils located north of the future Stegman Boulevard northern curbline is the TA-10-1 in-situ treatment area discussed more fully in Section 11.

Honeywell and PVSC entered into an MOU regarding implementation of the surcharge, hydraulic barrier installation, and construction of the RCRA-equivalent cap along the 72-inch force main in this area. The MOU required monitoring to be performed during those activities. Monitoring included installation of geophones on the 72-inch force main to allow for acoustical monitoring in addition to installation

of inclinometers between the barrier wall and force main, and installation of survey monuments on the force main. The acoustical monitoring program was conducted by Pure Technologies under contract to PVSC. The geotechnical, survey, and vibration monitoring plans were prepared by Amec Foster Wheeler and included in the First Amendment to the MOU dated October 10, 2013. The plans were submitted to PVSC for approval prior to commencing construction activities adjacent to the force main. The plans were reviewed and approved by Hatch Mott MacDonald on behalf of PVSC. Periodic reports were submitted to PVSC by Amec Foster Wheeler throughout the construction progress.

4.3 HYDRAULIC BARRIER WALL AT SEDIMENTATION BASIN

The 100% Design Report indicated that the hydraulic barrier would be subject to further minor changes pending the pre-trenching and verification of the pile locations along the alignment of the hydraulic barrier through the former JCMUA Sedimentation Basin. One objective of the 100% Design was to avoid removal of piles that penetrate the Stratum D. DCB 013 dated August 13, 2014 was submitted to document minor modifications to the hydraulic barrier alignment due to the located piles that support the Sedimentation Basin. This modification also reduced the number of corners of the hydraulic barrier wall. These changes also provided a wider utility corridor for the future Stegman Boulevard and allow for additional clearance between the cap geosynthetic materials and future Bayfront utilities.

4.4 USTS ENCOUNTERED

During the course of chromium-impacted soil excavation activities in September 2015 at EA-5 on Site 088 (former JCIA area) an unknown UST was discovered. A second unknown UST was encountered on Site 088 while doing subgrade preparation in May 2016 in the Open Space Area. In both instances upon discovery, Honeywell immediately notified their LSRP, Mr. Peter Jaran, P.E. of Equity Environmental Engineering, LLC (Equity), who is overseeing remediation of the non-chromium AOCs. Additional discussion of the USTs is contained in **Appendix J**.

4.5 EASTERN SECTION OF HYDRAULIC BARRIER REALIGNMENT

Pre-trenching along an eastern section of the hydraulic barrier alignment near the EA-5 excavation area revealed the presence of a cluster of piles. To avoid the piles, the hydraulic barrier alignment was moved approximately 3 feet to the north of the

design alignment. This resulted in a slight increase in the Open Space Area cap area and an equivalent decrease in the area of EA-5. This change was documented in DCB 020 on March 30, 2015.

4.6 ADDITIONAL SAMPLING CONDUCTED AT SA-6 NORTH

The 100% Design Report indicated that additional post-excavation sampling may be required if certain field conditions indicated the need to extend excavations beyond the identified limits, as determined by the onsite Construction Manager or designee or Honeywell's Remediation Manager. Conditions specified in the 100% Design Report that would trigger the need for additional post-excavation sampling included:

- Field observations indicating that an area previously characterized as clean shows evidence of contamination. In that event, sampling may be conducted to help identify the source and assess the impact;
- Observations that were not consistent with soil conditions characterized by the samples that were collected during the RI and PDI;
- Observations of chromium blooms on the surface of soils previously thought to be clean; and
- Other field conditions which suggest chromium impacts may extend outside of the previously defined limits.

Material referred to as "anomalous" pertains to material that, based on visual observation, was identified as being potentially chromium-impacted. Where such observations were noted at several locations in the excavations, Amec Foster Wheeler collected a sample of the visually-impacted material.

4.6.1 Additional Soil Boring at EA-2

One supplemental post-excavation confirmation sample, 088-SB-190, was required at EA-2/3 to verify that the excavation was terminated in <20 mg/kg material. A soil sample could not be collected at this location at the required depth during the PDI since this corner of EA-2/3 was slightly under the JCIA building. Soil boring 088-SB-190 was performed on February 10, 2016 and the soil sample collected at elevation 1.9 feet and analyzed for hexavalent chromium as shown on **Table 2A**. Honeywell submitted the standard certification email, including an as-built survey and tabulated coordinates of the finished excavation at the bottom and sidewall

sample locations, on April 3, 2016. The final excavation limits and sample locations are shown on **Figure 8B.** A Record Drawing of the final excavation limits is included in **Appendix C**.

4.6.2 Additional Soil Sampling at EA-5

The excavation of EA-5 was conducted from August 27, 2015 through September 24, 2015. A post-excavation sample of potentially anomalous material approximately 6-8 feet above the bottom of the excavation (Stratum D) was taken from the sidewall at EA-5 on September 29, 2015 as shown on **Figure 8B**. The 087-EA-5-SW-092915 sample results indicated that the hexavalent chromium level was <20 mg/kg as shown on **Table 2A**.

Once the preliminary analytical results of the post-excavation soil samples were obtained by Amec Foster Wheeler and reviewed with Honeywell, Honeywell submitted the results and a summary of the excavation effort to All Parties. Subsequently, Honeywell submitted the standard certification email, including an as-built survey and tabulated coordinates of the finished excavation at the bottom and sidewall sample locations, on October 12, 2016, after the analytical results were validated. Once the analytical results confirmed that the hexavalent chromium concentrations were <20 mg/kg in post-excavation samples, the excavation was backfilled with clean imported fill material.

In addition, at EA-5 less than 100 CY of asphalt was removed and sampled. The asphalt sample results indicated that low levels of arsenic were present above the Impact to Groundwater (IGW) and the residential direct contact soil remediation standards as shown on **Table 2B**. The arsenic-impacted asphalt was sampled, analyzed, evaluated, and handled in accordance with the NJDEP-approved Soil Management Plan (SMP), which was part of the 100% Design Report, and the *Proposed Concrete and Asphalt Sampling Plan* (CASP), dated September 2013, which was submitted to the NJDEP on October 28, 2013. The arsenic-impacted asphalt was placed in the Open Space Area.

4.7 DEFERRED AREAS

As indicated in Sections 1.4 and 2.8, there are three areas within the SA-6 North Development AOC where excavation was technically impracticable during the implementation of the SA-6 Chromium Remedy. These areas will be deferred until a

later time[1] and will be subject to temporary deed notices which Honeywell will establish until remediation can be completed. As remediation at each Deferred Area is completed, the remedial action permit and deed notice will be terminated by submitting documentation to NJDEP and All Parties.

The deed notice areas are shown on **Figure 16** and are generally referred to as the Route 440 ROW Deferred Areas, corresponding to Deed Notice Area #6 and Deed Notice Area #9 and the TA-7 and TA-10 areas corresponding to Deed Notice Area #10 and Deed Notice Area #7, respectively.

Deed Notice Area #6 is an approximately 4,000 square foot strip of land on SA-6 North adjacent to the Route 440 ROW where the PSE&G gas main is located north of the SA-6 North Open Space Area. PSE&G owns and operates a 24-inch high pressure gas main within the ROW in this area. As indicated in Section 5.3 of the SA-6 South 100% Design Report, Honeywell indicated its intention of deferring excavation of chromium-impacted soil within the Deed Notice Area #6 footprint until such time that the gas main is relocated during the Route 440 Road Widening Project. Excavation of residual chromium-impacted soil between the eastern edge of EA-2/3 and the SA-6 North property line in this area will be coordinated with the relocation of the gas main during the Route 440 Road Widening Project. Honeywell will establish a deed notice in this area and will maintain the deed notice until such time that the remediation .is complete and soil RAOs are achieved. Following that, Honeywell will terminate the deed notice. A draft of the deed notice is contained in **Appendix S**.

Deed Notice Area #9 is comprised of two tracts of land; Tract 1 is near Culver Circle at the Route 440 ROW and Tract 2 is further south along the Route 440 ROW. (The ownership of the Deferred Areas within Deed Notice Area #9 differs from that of the Deferred Area of Deed Notice Area #6.) Tract 1 is an approximately 1,400 square foot area. Tract 2 is an approximately 970 square foot area. Excavation of EA-1 and EA-2/3 were limited in these areas by the gas main, similar to Deed Notice #6 and will be completed after completion of the Route 440 ROW widening project. In the meantime, Honeywell will institute a deed notice on this area (both Tracts 1 and 2

[1] In the event that the Route 440 road widening project is not completed by the end of 2021 (five years after completion of the SA-6 Chromium Remedy), the Parties will confer regarding appropriate action for the Route 440 ROW Deferred Areas.

together in Deed Notice Area #9). Once the remediation of the area is complete and achieves soil RAOs, Honeywell will terminate the deed notice. A draft of the deed notice is contained in **Appendix S**.

It is not anticipated that implementation of the Bayfront Redevelopment Plan will impact Deed Notice Area #6 or Deed Notice Area #9. Because this area is so narrow, is proximate to the Route 440 ROW, and the gas main is located within the area, any planned development of this area will also need to be deferred until the gas main is relocated.

Deed Notice #10 is the in-situ treatment area TA-7 on the JCMUA property. This area is within the area of the JCMUA fueling system. This area consists of aboveground storage tanks connected by underground piping to a pump island with fuel-dispensing cabinets/pumps. To prevent disruption to the JCMUA fueling system and due to the depth of chromium-impacted soil and the proximity of the nearby 72-inch forcemain, in-situ treatment was implemented in this area in lieu of excavation. As described in Section 11, in-situ treatment reduced the chromium-impacted soils to below 20 mg/kg for hexavalent chromium throughout the area except for one recalcitrant area of approximately 560 square feet. As part of facility upgrades, JCMUA plans on relocating their fueling system. Once this system is relocated, the limited area where hexavalent chromium soil remains >20 mg/kg will be excavated and the deed notice terminated. This area will not be impacted by Open Space Development.

5.0 DEWATERING AND CONSTRUCTION WATER TREATMENT

5.1 GENERAL

Dewatering was conducted to remove groundwater and stormwater from within the excavation areas and to minimize the moisture content of excavated soils. Capture, collection, and treatment of stormwater/surface water that came in contact with impacted soils was also completed. Collected groundwater, stormwater, and surface water from both SA-6 North and SA-6 South was pumped to the CWTP installed on SA-6 North.

For management of stormwater, diversion berms were installed upgradient of excavation areas and within large excavation areas as needed to divert the flow of surface water away from open excavation areas. Additional controls used to minimize the volume of water requiring treatment included extending sheetpile used for temporary excavation support, sealed jersey barriers, and minimizing the open excavation between the excavation face and the backfill.

Wastewater collected at designated decontamination pads was also collected and pumped to the CWTP for treatment.

5.2 EXCAVATION DEWATERING/PUMPING

Excavation dewatering was accomplished with a combination of shallow well points, and localized sumps and pumps installed above Stratum D and deep wells installed below Stratum D.

5.2.1 Well Installation

Shallow well points and deep wells for dewatering above and below Stratum D were drilled and installed by B&B Drilling, Inc. (B&B Drilling), a licensed New Jersey well driller, in accordance with N.J.A.C. 7:9D. The well points and deep dewatering wells are shown on the figure provided by Entact contained in **Appendix I**. Deep dewatering wells within the main SA-6 North excavation area were given the designations DW-6 and DW-7. Because only EA-2/3 and EA-5 were deep enough to encounter groundwater, these were the only excavations that required dewatering

wells. Any other localized water intrusion in the other EAs was handled with intermittent sump pumping as needed.

The deep dewatering wells were drilled and installed by B&B Drilling using a hollow stem auger rig. Each was drilled through the Stratum O/D layer to a total depth of up to 48 feet bgs, 30 to 32.5 feet below the top of the Stratum O/D layer. A 6-inch diameter screen and riser pipe were used in the construction of each deep dewatering well. Screen lengths were 25 feet long in each. A 10-inch diameter steel conductor casing was set 1 to 2 feet into the top of the Stratum O/D layer to isolate water above the Stratum O/D layer from that below.

Well component specifications were submitted by Entact prior to installation. Shallow well points within the excavation areas were removed with the excavated soils. Deep dewatering wells were abandoned by B &B Drilling's licensed driller once an adequate amount of backfill placement and compaction within an area was complete. After consultation with representatives of the NJDEP, Bureau of Water Allocation and Well Permitting, B&B Drilling determined that individual permitting of the shallow well points was not necessary, but that the shallow well points were covered under the Temporary Dewatering Permit that was obtained from NJDEP. However, because the deep dewatering wells were constructed through Stratum D (confining layer), B&B Drilling obtained permits for the deep wells. Well records for the deep wells are included in **Appendix E**. Abandonment reports are included in **Appendix E**.

Three well point header systems (H-19 to H-21) were installed within the excavation footprints prior to excavation as shown in the figure contained in **Appendix I**. H-19 was installed in EA-5, whereas H-20 and H-21 were installed in EA-2/3.

Well points consisted of a 2.5" slotted polyvinyl chloride (PVC) well casing with filter pack placed around the slotted screen and a 1.5" PVC interior drop tube. The well casing was advanced to 2 feet below the anticipated bottom of the excavation or to the top of the Stratum D layer using hollow stem auger drilling methods. Each well point was equipped with a control valve and was connected to a header pipe (H-19 to H-21) via flexible hoses which connected to the electrically driven vacuum stations.

To determine the depth of the Stratum D prior to well installations, B&B Drilling drilled three investigatory boreholes per excavation for EA-2/3 and EA-5 along the

dewatering header pipe as shown on the Excavation Dewatering Layout record drawing in **Appendix I** and collected core samples from each to determine the actual bgs depth of the Stratum D layer prior to installing interior and perimeter well points. Boreholes were offset approximately 10 feet from the well point location to protect the integrity of the well point. The boreholes were advanced with the drill rig to the within 4 feet of the assumed Stratum D layer. The remaining 4 feet were advanced using a 2-foot-long spilt spoon sampler to retrieve core samples. The core samples were evaluated by Amec Foster Wheeler to determine if the Stratum D layer was encountered. Soil boring logs are included in **Appendix H**. At the completion of sample collection, the depth of the observed Stratum D layer or termination point of the borehole was recorded and the borehole was grouted. The data collected during the spilt spoon sampling event was evaluated to determine the depth at which the dewatering well points would be driven to effectively dewater excavation areas within breaching the Stratum D layer.

5.2.2 SA-6 North Dewatering/Pumping System

The general process for managing water was to prevent water from contacting chromium-impacted fill materials. However, this was not possible for activities performed below the groundwater table and where surface water/stormwater and incidental precipitation fell on active excavation areas, backfill areas, exclusion zones and contaminant reduction zones. Construction water was removed from remediation and support areas, and stormwater that contacted chromium-impacted soils was removed. Dewatering with shallow well points and deep wells began in an excavation area and/or phase to achieve drawdown in advance of excavation activities. Thus, shallow well points and deep wells were installed prior to the start of excavation activities to allow adequate time for groundwater removal. Site dewatering data is included in **Appendix I**.

Localized sumps and pumps were used to remove stormwater and surface water that migrated into open excavations. Sumps were installed at the low point within an excavation area and consisted of submersible pumps placed inside perforated pipe wrapped in geotextile liner and embedded in stone. Sumps were not installed below and did not penetrate the Stratum D layer and were constructed and relocated as needed as excavations proceeded. Stormwater and surface water collected in sumps were pumped to 21,000-gallon storage tanks for equalization prior to pumping through the treatment (filtering) portion of the CWTP as described in Section 5.3.

5.3 CONSTRUCTION WATER TREATMENT PLANT

The CWTP for SA-6 North and SA-6 South was constructed west of the JCMUA Digestion Tanks on SA-6 North. The CWTP was constructed within a secondary containment system for spill prevention. The secondary containment consisted of a 40-mil high-density polyethylene (HDPE) geomembrane overlain with a 6-inch layer of 1½-inch crushed stone. Class A geotextile liner was placed above and below the geomembrane. The 40 mil geomembrane panels were welded in the field. The secondary containment area had a perimeter berm constructed out of geotextile-covered jersey barriers. Eight 21,000-gallon "frac" tanks were positioned on top of the stone and were utilized for storing water. The frac tanks were manifolded together by flexible hoses. Up to six additional frac tanks were positioned on SA-6 South during the peak of excavation activities. Therefore, the CWTP consisted of approximately 300,000 gallons of untreated (influent) storage. The CWTP had a dual treatment train composed of 50-micron and 5-micron bag filters with a maximum throughput capacity of 500 gallons per minute (gpm). Treated effluent water was pumped into the unused JCMUA South Sludge Digestion tank. The digestion tank was fitted with a gate valve to regulate discharge. The tank normally operated in a flow through condition. During precipitation events the valve was closed and the digester used to provide an excess of 1 million gallons of temporary effluent storage. The effluent was discharged by gravity to the JCMUA wet well. The CWTP discharge was permitted under PVSC permit number 31630019. As required by the permit a non-resettable totalizing flow meter was used to record the instantaneous flow rate as well as the total flow. The CWTP base components are shown in **Figure 9**.

The PVSC-required MR-1 and MR-2 self-reporting documents were completed and sent to PVSC each month, reporting for the prior month. The effluent sample analytical results for the monthly samples are summarized on **Tables 3A, 3B, and 3C**. **Table 3B** also shows the chromium analytical results in each effluent sample. The total chromium load discharge limit permitted by PVSC is 11 pounds per day. The discharge limit was not exceeded during implementation of the Chromium Remedy. Thus, as anticipated and stated in the Construction Water Treatment System Design Report (CWTS Report) from the 100% Design Report, chemical treatment to remove chromium from the construction water was not required.

Commissioning and startup test procedures specified in the 100% Design Report were performed prior to initial discharge from the effluent tank. Entact oversaw operations and maintenance of the system during normal work hours.

Now that the SA-6 Chromium Remedy is complete, the CWTP system is no longer needed. Consequently, the majority of the system was decontaminated, disassembled, and demobilized and residual solids and spent media generated as a result of the operation of the CWTP were sent offsite for disposal. Waste classification sample results of this material are included in **Appendix K**. The final wastewater discharge occurred on November 1, 2016 and involved the final rinse-out after cleaning of the interiors of the CWTP storage tanks and treatment components. Several of the frac tanks remained onsite for use in the SA-6 North Non-Chromium Remedy.

5.4 GROUNDWATER LEVEL AND BASELINE GRADIENT MONITORING

The 100% Design Report requires that the groundwater levels within the SA-6 North Open Space Area be maintained at lower levels than both SA-7 to the south and the Residential Development Area to the north in the post-Remedy condition. If monitoring indicates that this inward gradient is not being maintained, contingent dewatering is to be conducted within the Open Space Area to maintain compliance with the gradient requirements. The LTMP details the specific post-Remedy monitoring requirements, frequencies, and action steps depending on water level measurements.

Shallow groundwater levels were monitored within the SA-6 North Open Space Area along the border with SA-7 SCB using piezometers installed during the SA-7 remedy as shown on **Figure 10**:

- 115-W6-SO;
- 115-W1-SO;
- 115-E5-SO; and
- 115-E4-SO.

Along the south side of the northern SA-7 SCB wall (adjacent to SA-6 North Open Space Area), the standpipes that monitor perimeter pools N1 through N4 were utilized to determine the head against the north side of the SA-7 SCB wall. An

elevation of 4.0 feet above mean sea level, based upon the National Geodetic Vertical Datum 1929 (NGVD29), is the lowest elevation within the SA-7 site-wide underdrain system. Thus, an elevation greater than 4 feet in the SA-6 North Open Space Area would obviate the need to dewater in the Open Space Area to maintain the hydraulic gradient requirement.

The 100% Design Report detailed the installation of 5 pairs of new piezometers along the SA-6 North hydraulic barrier. These piezometers allow long-term monitoring of the hydraulic gradient within the shallow groundwater zone between the Open Space Area and the SA-6 North Residential Development Area. The IDs of these 10 piezometers are:

Piezometers Installed Outside the Hydraulic Barrier:	Paired Piezometer Installed Inside the Hydraulic Barrier:
087-PZ-1	087-PZ-2
087-PZ-3	087-PZ-4
087-PZ-5	087-PZ-6
087-PZ-7	087-PZ-8
087-PZ-9	087-PZ-10

The locations of the 10 piezometers are shown on Figure 10. At each piezometer pair location, one piezometer is located inside of the SA-6 North hydraulic barrier and the other on the outside of the hydraulic barrier. The piezometers are constructed of 4-inch diameter stainless steel casing with a 5-foot-long screen set just above Stratum D. As-built construction diagrams for the piezometers are contained in **Appendix E**.

Following installation of the geomembrane portion of the cap and initial drawdown of the contingent groundwater system, Amec Foster Wheeler has conducted initial interim groundwater level monitoring on a bi-monthly basis. In accordance with the LTMP and GWLMP, Honeywell will initiate long-term groundwater monitoring activities at SA-6 North in Spring 2017 per correspondence dated November 7, 2016 (see **Appendix G**). To supplement the manual groundwater measurements, groundwater level data loggers have been installed in each of the 10 piezometers and monitoring well 088-MW-112 located outside of the Open Space Area. The results of the manual readings taken during the first event per month of the initial

interim groundwater level monitoring are provided in **Table 4**. The results indicate that an inward gradient has been maintained without active pumping of the contingent groundwater system. However, measurements at the 087-PZ-03 (exterior) and 087-PZ-04 (interior) piezometer pair have recently indicated an outward gradient. The groundwater levels at 087-PZ-03 and nearby monitoring wells 088-MW-111 and 088-MW112 installed in a former UST AOC also showed lower groundwater elevations than other wells in the SA-6 North Residential Development Area. This depression in groundwater levels may be attributed to the nearby breach in Stratum D at the former JCIA Incinerator Building/Trash Pit.

In response to Plaintiffs' request to establish baseline groundwater quality conditions inside the Open Space Areas, filtered and unfiltered groundwater samples were collected from each cap interior piezometer of both Sites. The samples were analyzed for total and hexavalent chromium. A summary of this data was included in the November 7, 2016 correspondence (see **Appendix G**) mentioned above and submitted to the Parties by Honeywell. The analytical results indicate that the filtered and unfiltered groundwater samples from the five inside piezometers (087-PZ-2, 087-PZ-4, 087-PZ-6, 087-PZ-8, and 087-PZ-10) were non-detect for hexavalent chromium and were below the NJDEP GWQS for total chromium.

6.0 MONITORING WELL ABANDONMENT AND INSTALLATION

Selected monitoring wells at SA-6 North and SA-6 South were abandoned during implementation of the SA-6 Chromium Remedy in accordance with the Monitoring Well Abandonment Plan which was Appendix A-2 of the SA-6 North Chromium Remedy 100% Design Report. A minor DCB011 dated June 6, 2014, clarified some of the wells that required abandonment.

As indicated in Section 5, five pairs of new shallow piezometers were installed on either side of the SA-6 North hydraulic barrier to monitor hydraulic gradients across the barrier as shown on **Figure 10** and detailed on **Table 5**. As detailed in Section 11, three monitoring wells were installed within the TA-10-1 area. The logs are included in **Appendix H**.

All well abandonment activities were performed in accordance with N.J.A.C. 7:9D by a New Jersey licensed driller from B&B. Well abandonment records are included in **Appendix E**. Permits for new wells were obtained from the NJDEP by B&B. New piezometer/well permits, Form A & B wells records, and new well construction diagrams are included in **Appendix E**.

7.0 EXCAVATION

Excavation of chromium-impacted soil was performed consistent with the NJDEP-approved RAWP, 100% Design Report, and subsequent DCBs applicable to excavation. The excavation at SA-6 North was implemented only in the Residential Development portion of AOC-1. Excavation was performed at SA-6 North from June 16, 2015 to March 9, 2016. More details concerning the excavation sequence and schedule are provided in Section 7.3. A progression chart was maintained throughout the project that tracked excavation and backfilling operations showing zones for work sequence and quality control and was reviewed with all Parties at routine progress meetings/conference calls. As excavation progressed, Honeywell periodically submitted to all Parties documentation of completion of portions of the excavation operations in accordance with the SA-6 South Standard Operating Procedure - Confirmation of Excavation Limits, dated March 3, 2014 (and including Honeywell's April 24, 2014 letter and attachments). Since these excavation confirmations are not required by the TRSR for RARs, they are attached only to the copy of this RAR going to the Parties. Record Drawings for excavation and backfill work are included in **Appendix C**.

7.1 TEMPORARY EXCAVATION SUPPORT ALONG ROUTE 440 EA-1, EA-2/3

Temporary excavation support consisting of sheetpile and soldier pile was installed at the locations shown on SA-6 North Temporary Support of Excavation Plans (SN-501 to SN-505) as prepared by Honeywell's geotechnical consultant, MRCE. The original 100% Design Report details were modified based on the Remedial Contractor's specialty subcontractor input (Linde Griffin) provided through the RFI process and as approved by MRCE. Hatch Mott MacDonald also reviewed the design of temporary excavation support proposed along critical infrastructure adjacent to Route 440 on behalf of JCMUA and Bayonne Municipal Utility Authority (BMUA). The temporary excavation support systems consisted of a combination of 2807 Hoesch Larssen Z sheetpile and a system of drilled soldier piles (H Piles), whalers and steel road plate lagging. The final field installation details were adjusted to reflect the field verified locations of the 36-inch BMUA forcemain and 48-inch reinforced concrete pipe (RCP) JCMUA sewer line. The depth of excavation and set back distance at EA-1 allowed for excavation by sloping without the need for shoring or other temporary excavation support.

The Entact Quality Control Engineer monitored the temporary excavation supports for horizontal deflection during excavation. The 100% Design Report also mandated the need for vibration monitoring when sheeting was being driven in close proximity to underground utilities. Vibration monitoring is discussed further in Section 9.2.

7.2 EXCAVATED SOIL MANAGEMENT

Excavated soil was managed onsite in accordance with the NJDEP-approved SMP and the approved soil erosion and sediment control plan. Prior to the start of the Chromium Remedy, as part of the PDI, post-excavation equivalent samples were collected and boring locations were surveyed (see the PDI Results and Mapping Report in Appendix B of SA-6 North 100% Design Report). The post-excavation equivalent samples established the horizontal and vertical limits of the chromium-impacted soils and, thus, defined the extent of the excavations.

The PDI sample hexavalent chromium results also established the designation and final disposition of the excavated material. Entact adopted three designations for SA-6 North for tracking and management purposes based upon their hexavalent chromium concentrations as follows:

- **A Material**: <20 mg/kg hexavalent chromium;
- **B Material**: 20 to 240 mg/kg hexavalent chromium;
- **C Material**: >240 mg/kg hexavalent chromium.

As provided in the SMP and 100% Design Report:

- **A Material** was stockpiled and tested to confirm its designation and, if confirmed, reused as backfill. If sample results of the A Material stockpiles, or portions of stockpiles, indicated that the material corresponded to one of the other designations, then the material represented by such samples was managed accordingly. **Table 6A** is the Stockpile Tracking Table. **Table 6B** presents the analytical data related to the stockpiles.
- **B Material** from SA-6 North was consolidated in the SA-6 North Open Space Area.

- **C Material** was shipped offsite for disposal. The material for offsite disposal was characterized as non-hazardous or hazardous waste depending on waste classification results (see Section 7.7)

The PDI sample results established the elevations to which excavation was to be performed for an excavation area, with the understanding that if Stratum D (i.e., "meadow mat") was encountered the excavation could be halted at a shallower depth.

Excavation was performed using hydraulic excavators directly loading into off-road articulated dump trucks (end dumps) to transport to designated stockpiling areas. The end dumps did not leave the Site, and were decontaminated if they were travelling out of an exclusion zone. The excavators were equipped with GPS equipment manufactured by Trimble®. Entact loaded X, Y, Z coordinates of the designed excavation limits into the GPS system and a transponder was attached to the bucket of the machine enabling the operator to precisely excavate in real-time to the design limits. Additionally, using the GPS and known coordinates differentiated the extents of the designation of various soils based upon the concentration of hexavalent chromium. A summary of the volumes of the soil designations is provided in the quantity summary table in Section 1.6.

Stockpiles of hazardous C Material (when not direct loaded) were covered with plastic sheeting to minimize air-borne dust and stormwater runoff. As provided in the 100% Design Report, excavations and soil stockpiles were protected from flooding to the 100-year flood elevation (10.2 feet) based on the NGVD29 datum by one or more of the options provided in the NJDEP Coastal Area Facilities Act (CAFRA)/Flood Hazard Area (FHA) permit (see Section 14 for more details). Daily inspections of the liners and plastic sheeting were performed to minimize migration of chromium-impacted soils beyond the designated stockpile area.

7.3 EXCAVATION SEQUENCING AND SCHEDULE

The EAs were each geographically distinct areas and were completed in sequence. Excavation began at EA-7 on the western portion of the Site and proceeded to EA-8 north of EA-7. Excavation of EA-4, then EA-5 were completed. The excavations along the Route 440 area were completed last with EA-2/3 conducted prior to EA-1.

A summary of the excavation schedule is provided in the table below.

Area Excavated	Start Date	End Date
EA-1	February 8, 2016	March 9, 2016
EA-2/3	November 5, 2015	January 6, 2016
EA-4	August 20, 2015	August 26, 2015
EA-5	August 24, 2015	September 8, 2015
EA-7	June 16, 2015	June 26, 2015
EA-8	June 18, 2015	December 9, 2015

7.4 EXCAVATED MATERIAL (STOCKPILE) TESTING

During the Chromium Remedy implementation, overburden soils (A Material or <20 mg/kg for hexavalent chromium) were excavated and set aside to allow for the excavation of chromium-impacted B (>20 mg/kg for hexavalent chromium) or C (>240 mg/kg for hexavalent chromium) below. In accordance with the SMP, stockpiles of A Material were managed onsite and sampled to confirm that the soil was <20 mg/kg for hexavalent chromium. The size of such A Material stockpiles ranged from 50 to 5,200 CY. Once a stockpile was deemed completed, sampling commenced. Grab samples were collected from such stockpiles for hexavalent chromium analysis at a maximum sampling frequency of 1 sample per 250 CYs. If the hexavalent chromium concentration in any sample from a portion of a stockpile was equal to or greater than 20 mg/kg, but below 240 mg/kg that portion of that stockpile was isolated from the remainder of the stockpile. Such portions of stockpiles were consolidated in the SA-6 North Open Space Area. Stockpiled soil that was verified to contain <20 mg/kg hexavalent chromium was then approved for re-use as backfill in excavations. This approved-for-reuse A Material is still considered historic fill. Additional imported clean backfill was generally placed over the reused material as needed to achieve the design grades. An institutional control (Restricted Area/Deed Notice) for the remaining site-wide historic fill soil will be filed in accordance with the NJDEP-approved RAWP as part of an RAR for non-chromium impacts to be submitted by Honeywell's LSRP.

Following surcharge, approximately 2 feet of <20 mg/kg of overburden soils (14,000 CY of historic fill) were stripped from Area 1N in accordance with SA-6 North Consent Decree paragraph 56(d) and DCB 045 dated September 2, 2015, to create additional capacity for the consolidation of 20-240 mg/kg chromium-impacted soils

within the SA-6 North Open Space Area. This material had been pre-characterized as non-chromium-impacted soil with RI/PDI sample results. In accordance with the SMP and as documented in Declaration #4, following excavation, the stockpiles of this historic fill soil were sampled before reusing as backfill in the SA-6 North excavations. Results confirmed that hexavalent chromium concentrations were below 20 mg/kg. Following removal of the Area 1N overburden soils, the cap was graded and compacted in accordance with the lines, grades and compaction requirements indicated in the Final 100% Design and DCB 054.6 dated September 2016.

7.5 EXCAVATION EXTENT SURVEYING AND CONFIRMATION

As indicated in Section 7.2, post-excavation equivalent samples collected during the RI and PDI established the horizontal and vertical limits of the chromium-impacted soils and, thus, defined the extent of the excavations at SA-6 North. On January 30, 2012, Honeywell submitted a request and justification for a variance in post-excavation sidewall and bottom sample frequencies for SA-6 North to the default frequency mandated in the TRSR. NJDEP approved the alternative post-excavation sidewall and bottom sample frequencies in a letter, dated February 16, 2012. Section 7.6 documents one location where the excavation was expanded beyond the limits defined by the PDI samples due to visual identification of "anomalous" material. New horizontal and vertical delineation samples defined the extent of these expanded areas.

As indicated at the beginning of Section 7, following the excavation, the horizontal and vertical extents of the completed excavations were surveyed and Honeywell periodically submitted documentation confirming the completion of excavation. In their submittals, Honeywell summarized the activities undertaken to complete the excavation and included the following statement from Honeywell's engineer, Amec Foster Wheeler: "Amec inspectors certify to the best of our technical ability that impacted soils as defined in the 100% Design Report have been removed and that the requirements to allow backfilling had been met." Honeywell also noted, where applicable/appropriate, that the excavation terminated [by depth] in the Stratum D and provided an Excavation Bottom Map that included the surveyed post-excavation bottom elevations for each excavation area. Honeywell further stated that the contractor was ready to backfill the respective excavations. During the course of the excavation, the Special Master acknowledged receipt of Honeywell's submittals and the notification that the contractor was ready to backfill.

Surveying of the final "as-built" horizontal and vertical extent of the excavations was conducted by Maser Consulting P.A. (Maser) of Marmora, New Jersey. R. Thomas Hugg, a New Jersey Professional Land Surveyor, certified record drawings surveyed by Maser. Record drawings are discussed and presented in Section 18.

Maser also surveyed the position and elevation of each PDI post-excavation equivalent soil sample to verify that the excavation was carried to or beyond the confirmatory points and tabulated the survey information. The table is provided in **Appendix C**.

For each excavation area, the table provides:

- The coordinates of the PDI bottom samples and a comparison of the actual excavation elevation to the targeted (design) elevation at the established PDI bottom sample locations; and
- The coordinates of the PDI sidewall samples and a comparison of the actual excavation elevation to the targeted (design) elevation at the established PDI sidewall sample locations.

7.6 ADDITIONAL SAMPLING AT EXCAVATION EA-8

The PDI investigation at EA-8 that was submitted in the 100% Design Report indicated the area boundaries, but not the final depths of the excavation. The geoprobe access to this area during the PDI had been limited due to a steep slope to the Hackensack River and active operations and storage by JCDPW. Therefore, the 100% Design Report detailed that additional vertical sampling be performed once the excavation footprint was advanced to elevation 7 feet. Once that elevation was reached, nine post-excavation soil samples were collected on June 25-26, 2015 throughout the footprint of the excavation to establish the limits of excavation below elevation 7. As shown on **Table 7A**, hexavalent chromium was detected >20 mg/kg in some of the soil samples. Therefore, additional excavation was conducted to elevations 3.7 feet and 2.0 feet in sub-areas designated EA-8 Area 1 and EA-8 Area 2 as shown on **Figure 11A**. Confirmation samples were collected on July 23, 2015.

During the inspection of the EA-8 Area 1 limits, an area of anomalous material was identified in the southern sidewall. Therefore, additional soil sampling and

excavation was conducted in sub-areas designated EA-8 Areas 3 and 4 to elevation 1.6 feet. Additional confirmation samples were collected on August 12, 2015, October 21, 2015, and November 12, 2015. The final vertical and horizontal excavation limits of EA-8 were documented in DCB 053, dated November 30, 2015.

Additional anomalous material was identified in the southwestern sidewall near 087-SB-102, which required sub-area EA-8 Area 5 to be expanded approximately 8-10 feet to the southwest.

All sampling and analysis of samples was performed in accordance with the Data Management Plan combined for both the SA-6 South and SA-6 North Chromium Remedies which was included as Appendix H of the SA-6 North Chromium Remedy 100% Design Report. EDDs for final (<20 mg/kg for hexavalent chromium) post-excavation samples were submitted to the NJDEP as documented in **Appendix B**.

7.7 OFFSITE TRANSPORTATION AND DISPOSAL

Depending on the hexavalent chromium concentration, the excavated soil from the Residential Development Area was either disposed offsite (>240 mg/kg) or consolidated under the cap in the SA-6 North Open Space Area cap (20-240 mg/kg). The characterization of soils within the excavation area was based upon PDI sample hexavalent chromium results and identified in Drawings CN-114 through CN-122 in the 100% Design. Furthermore, as more fully described in Section 2.10, waste classification sampling of the pre-characterized C Material (material that was pre-characterized as >240 mg/kg for hexavalent chromium based upon PDI soil sample results) in the SA-6 North EAs was conducted as part of the site preparation activities. Based upon the waste classification sample results, C Material was either characterized as non-hazardous or hazardous waste. As more fully described in Section 7.2, GPS coordinates delineating the horizontal and vertical extents of the material pre-characterized as >240 mg/kg for hexavalent chromium was used by the excavation operators to excavate and segregate only the material that was designated as >1,000 mg/kg. C Material classified as hazardous waste from SA-6 North and a limited amount of excess material from SA-6 South Open Space AOC that was confirmed >1,000 mg/kg for hexavalent chromium (see Section 9.4) was loaded into tri-axle dump trucks and shipped offsite to a rail transfer station, owned by Horwith Leasing Company LLC., in Northampton, PA. The material was then subsequently trans-loaded into gondola railroad cars and transported to the contracted disposal facilities as indicated below. Gondola cars were lined with

synthetic liners to contain the chromium-impacted waste during rail transport. C Material classified as non-hazardous waste from SA-6 was shipped in tri-axle dump trucks directly to Middlesex County Landfill. Approximately 10,000 tons of hazardous soils were disposed of offsite. Waste manifests are included as **Appendix K**.

Trucks were lined with synthetic liners which closed over the loads near the truck scales before leaving the work zone. Dump truck bodies were equipped with road covers which were closed over the liners before leaving the project site. Initially, trucks were decontaminated at the contamination reduction zone, and washed in a designated truck wash zone before leaving the site and entering the public roadways.

The offsite disposal facilities for chromium-impacted material were:

Disposal Facility	Material Type	Waste Classification	Weight (Tons)
Heritage/US Ecology	Chromium-Impacted C Material Excavated from the Residential Development portion of AOC-1 at SA-6 North and excess D Material (>1,000 mg/kg) from SA-6 South Open Space Area	Hazardous	10,000
Middlesex County Landfill	Chromium-Impacted C Material Excavated from the Residential Development portion of AOC-1 at SA-6 North	Non-hazardous	4,000
Bayshore Soil Management	Frac Tank Sediment & Soil	Non-hazardous	120
Clean Earth	Personal Protective Equipment	Non-hazardous	40 CYs

8.0 BACKFILLING, COMPACTION, AND COMPACTION TESTING

Backfilling within the excavations in the Residential Development Area included the spreading/placing, compacting, and grading of backfill materials that met the Specifications and were approved by the EOR.

8.1 BACKFILL SOURCES

The majority of the SA-6 North Residential Development Area was backfilled with historic fill soils that were sampled and confirmed <20 mg/kg for hexavalent chromium. Approximately, 21,900 CY of historic fill were placed in the Residential Development Area and compacted in accordance with Specification 02315-3.12.B.5. Imported clean backfill (referred to as "Celgene material") from a construction site in Summit, New Jersey was placed as bridge lift underneath the historic fill in portions of the SA-6 North Excavation Areas. Sources of imported backfill from offsite locations were tested and analyzed to confirm the material met the NJDEP's definition of clean fill in accordance with the TRSR and did not contain hexavalent chromium above 1 mg/kg. Approximately 6,000 CY of the Celgene material were placed as bridge lift and compacted in accordance with the Specifications.

These quantities have been updated to reflect the combined imported fill from SA-6 North and SA-6 from those reported in the Draft SA-6 South Chromium RAR that was submitted to NJDEP and all Parties in December 2016 and in the Revised Draft SA-6 South Chromium RAR that was submitted to NJDEP and all Parties in February 2017.

Source	Quarry	Material Type	Approximate Volume Imported (CYs)
Weldon	Watchung	Screenings	83,500
Weldon	Watchung	Quarry Process	9,300
Weldon	Watchung	DGA	300
Weldon	Lake Hopatcong	Screenings	5,300
Tilcon	Mount Hope	DGA	18,800
Tilcon	Mount Hope	1.5" Stone	4,200
Tilcon	Mount Hope	3/8" Stone	800
Tilcon	Mount Hope	6"-18" Riprap	100

Source	Quarry	Material Type	Approximate Volume Imported (CYs)
Tilcon	Mount Hope	2.5 Stone	500
Liberty Aggregates	Liberty	I-5 Structural Fill	5,000
Tilcon	Mount Hope	I-8 Structural Fill	27,000
Tilcon	Mount Hope	#57 Stone	12,300

8.2 BACKFILL TESTING

Backfill quality control testing was performed as indicated in the 100% Design Report. One sample for chemical analytical testing was required for each 5,000 cubic yards brought onsite to confirm the imported backfill material met the definition of clean fill in the TRSR. Analytical results for imported backfill used in the Residential Development Area were compared to the Residential Direct Contact Soil Remediation Standards. In addition, the 100% Design Report required imported fill to have a hexavalent chromium concentration of ≤1 mg/kg.

Entact collected samples of imported fill material for analysis by their subcontracted analytical laboratory, ChemTech Laboratories of Mountainside, New Jersey. Samples were submitted to Eurofins (a.k.a. Lancaster Laboratories) of Lancaster, Pennsylvania for analysis of hexavalent chromium by USEPA Method 7199.

In accordance with the 100% Design Report imported fill samples were analyzed for (see **Appendix L**):

- Target Compound List (TCL) VOCs by SW8260
- TCL Semivolatiles by SW8270
- Extractable Petroleum Hydrocarbons (EPH) by New Jersey extractable petroleum hydrocarbons (NJEPH) 10/08
- Target Analyte List (TAL) Metals by SW6010B/7471
- Pesticides by SW8081
- Herbicides by SW846 8151
- Polychlorinated Biphenols by SW8082
- Cyanide SW846 9012

- Hexavalent Chromium by USEPA 7199
- Synthetic Precipitation Leaching Procedure (SPLP) Metals by SW6010B/7471 only for those contaminants that exceed IGW standards.

Clean fill certifications were obtained from suppliers of the imported source location and certifying that the soil material was virgin and free of hazardous material or contaminants and included in **Appendix L**. The Specifications also required one sample of each source of imported fill to be tested for maximum dry density and optimum moisture content as determined by American Society of Testing Materials (ASTM) D 698 (Standard Proctor). The Proctor results were used by the technician conducting the compaction testing in the field to determine the degree of compaction based upon a % of the Proctor as specified in the 100% Design Report.

8.3 CONCRETE TESTING

Onsite sources of recycled concrete from SA-6 North included approximately 5,000 CYs of crushed concrete generated from demolition of the Sedimentation Basin as reported in the SA-6 South Chromium RAR as well as approximately 5,740 CY of crushed concrete generated from various excavations as discussed below.

All concrete materials were evaluated for suitability for onsite reuse through sampling and analysis. The SMP allowed concrete meeting NJDEP reuse parameters to be reused onsite as backfill in excavations or placed in the Open Space Area with consolidated chromium-impacted soil.

Concrete sampling and analysis was conducted in accordance with the September 2013 CASP. The procedures outlined in the CASP were in accordance with the NJDEP guidance document titled *Guidance for Characterization of Concrete and Clean Material Certification for Recycling*, dated January 12, 2010 and the NJDEP guidance document titled *Alternative and Clean Fill Guidance for SRP Sites*, dated December 29, 2011 – Version 2.

Concrete samples were collected at a maximum sampling frequency of one sample for every 250 CYs of concrete. Representative samples were obtained from the concrete cross-section (including the exposed surfaces) and crushed to fit into laboratory-supplied sample containers. A total of 18 concrete samples were collected from the crushed concrete generated from demolition of the sedimentation basin and

the data was reported in the SA-6 South Chromium RAR. A total of 19 concrete samples were collected from the remaining sources of recycled concrete from SA-6 North. An additional 18 concrete samples were collected for synthetic precipitation leaching procedure analysis for those instances when the IGW standards were exceeded. Concrete that met the reuse criteria was sized to 3-inch minus for reuse by Entact in accordance with the 100% Design Report.

Concrete samples were field screened with a photo-ionization detector (PID) and collected with a bias towards any instrument reading or visual contamination. Sample collection, preservation and handling was performed in accordance the NJDEP Field Sampling Procedures Manual (FSPM), August 2005, updated 2011 (NJDEP, 2005) and the Quality Assurance Project Plan provided in Appendix H-1 of the SA-6 North Chromium Remedy 100% Design Report.

In accordance with the CASP, concrete samples were analyzed for the same parameters as those tested on imported fill materials. The concrete sample results are included in **Tables 8A through 8H**.

8.4 BACKFILLING AND COMPACTION

The 100% Design Report allowed for the use of crushed recycled concrete as bridge lift where necessary to stabilize soft or wet subgrade materials at the bottom of excavations. A Material re-use soil or the offsite sources of clean backfill indicated above in Section 8.1 were placed over the bridge lift to bring the backfill to the appropriate design grades.

Bridge lifts were initially placed in nominal 12-inch lifts and compacted with three passes of a static steel drum roller as specified. Generally, vibratory compaction equipment was not used in the bridging lift. Based on the observation of the stability of the lift the EOR permitted increasing the lift to 18 inches using dozer placement. If the lift was stable, static rolling was initiated. In some locations, it was necessary to defer rolling until up to a 3-foot-thick bridging lift was placed due to excessive pumping. In other locations geotextile fabric was added between bridge lift layers or on top of the bridge lift to add additional reinforcing and material separation. Subsequent lifts of non-bridge-lift backfill materials were placed at a maximum of 12 inches thick loose lift and compacted using vibratory smooth-drum rollers to at least 95% of the maximum dry density in accordance with the Specifications.

Approved-for-reuse A Material (historic fill) was generally placed and compacted at the bottom of the excavations and buried to the maximum extent possible with additional imported clean backfill as needed to achieve the design grades. The variable nature of approved historic fill reuse material precluded testing for compaction using the Proctor density methods. The condition of the material was observed, unsuitable materials removed, and compaction conducted in accordance with the specified methodology using 2 to 3 passes of a vibratory roller.

8.5 IN-PLACE BACKFILL DENSITY TESTING

The in-place density of the compacted imported backfill materials were verified in the field using a nuclear surface moisture-density gauge in accordance with American Society of Testing Materials (ASTM) D 2922. Vertical V-Northeast, Inc. of Rahway, New Jersey, was subcontracted to Entact and performed compaction testing in the SA-6 North Open Space Area. Bridge lift and historic fill in the SA-6 North Residential Development Area were not tested for compaction. Figures showing the in-place density testing locations in the Open Space Area and tables ("Field Density Test Summary Log") summarizing the in-field density test results for each lift at these testing locations are provided in **Appendix M.** The coordinates of the testing locations and elevations of each associated lift are also provided on the Field Density Test Summary Logs. Test locations where test results showed the in-place density of the backfill material of that lift was less than 95% of the maximum dry density are also shown highlighted on the Field Density Test Summary Logs. Such lifts were re-compacted and retested until the in-field density results met the criterion.

9.0 CONTAINMENT SYSTEM CONSTRUCTION

In accordance with the SA-6 North Consent Decree and the 100% Design Report, the Chromium Remedy for the Open Space Area includes a containment system consisting of a hydraulic barrier, a RCRA-equivalent cap, and a contingent groundwater extraction system to provide hydraulic control of shallow groundwater. The objectives of the containment system are to physically separate chromium-impacted soils within the Open Space Area from the adjacent Residential Development Area and SA-7; to prevent the horizontal migration of contaminated groundwater out of the Open Space Area; and to limit infiltration of precipitation into the chromium-impacted soil within the Open Space Area.

Major containment system construction activities included:

- Installation of Hydraulic Barrier;
- Consolidation of Chromium-Impacted Soil Excavated from the Residential Development Area;
- Contingent Groundwater Extraction System Construction;
- Surcharging in the Open Space Cap Area; and
- Construction of the cap in the Open Space Area.

9.1 HYDRAULIC BARRIER INSTALLATION

The hydraulic barrier at SA-6 North consists of steel sheetpile with sealed joints around the eastern, northern, and western perimeters of the Open Space Area. The hydraulic barrier is connected to the existing SA-7 SCB on the southern boundary of SA-6 North. The western hydraulic barrier was installed approximately 100 feet inboard of the bulkhead at the chromium delineation boundary.

The sheetpile for the hydraulic barrier was installed using an ABI Mobileram with a high frequency vibratory driver. Prior to driving the sheets, pre-trenching was conducted to approximately 4 to 5 feet bgs along the hydraulic barrier alignment to remove debris that could inhibit sheetpile driving. Material removed during the pre-trenching was consolidated in the Open Space Area.

An abandoned 54-inch RCP ran from the southwest corner of the former JCMUA sedimentation basin to an outfall structure at the Hackensack River. During the pre-trench excavation, the sections of pipe that crossed the western section of hydraulic barrier alignment were removed. A flowable fill concrete plug was installed in the down gradient side between the hydraulic barrier alignment and outfall structure. The 54-inch pipe within the Open Space Area was crushed in place then backfilled with granular fill. This fill was used as a "French drain" for groundwater control west of the sedimentation basin pending installation of the contingent groundwater system collection trench west of the sedimentation basin.

The sheet piling was 1907 Hoesch Larssen Z Series sheetpile. The length of sheets varied along the alignment subject to the final design top elevation, the depth to Stratum D, and temporary support stability requirements. Sheets were fabricated and supplied to the site at specific lengths based upon the design profiles. The majority of sheetpile was delivered to the site in welded pairs. Single sheets and fabricated special sheets were used at specific locations. Sheet welding and epoxy coating was conducted by Durabond at their Steelton, Pennsylvania facility. The specification required application of an epoxy coating from the top of the sheet to a length equivalent of 2 feet into the Stratum D. Where longer sheets were used for structural purposes (i.e. to facilitate temporary excavation) the section of sheet below the 2 feet key did not require coating. The intent of the epoxy coating is to extend the life of the hydraulic barrier. Independent QA was performed at the Durabond facility to verify conformance with the specified requirements.

To meet the permeability objectives of the hydraulic barrier, the joints between the welded pairs were sealed with either a hydrophilic sealant or a cement bentonite grout. The type of sealant was based on the pH in the groundwater along the alignment. Record drawings of the sheetpile plan and profile are included in **Appendix N**.

As indicated in Section 2.9, supplemental pH testing of groundwater was conducted as part of the site preparation activities along limited sections of the hydraulic barrier alignment that were accessible outside of existing buildings and associated structures. In accordance with the 100% Design Report either a bentonite grout mix or hydrophilic seal were utilized on the sheetpile depending on the pH of the groundwater.

To achieve a continuous barrier around the Open Space Area, the hydraulic barrier was connected to the northeast and northwest corners of the SA-7 SCB wall using a grouted connection. These connections were made by drilling a series of 6-inch diameter boreholes at the connection point using a track mounted drill rig fitted with a continuous flight hollow stem auger. The auger was advanced into the Stratum D and a Cement Bentonite grout was pumped from the bottom of the auger to fill the void. The closure section of the sheetpile barrier was then installed prior to the grout setting.

The toe of the wall was designed to key a minimum of 2 feet into the Stratum D. The geotechnical investigation was used to develop a profile of the top of Stratum D along the barrier wall. As noted above the sheets were fabricated and installed based on that design profile. In EA-2/3 and EA-5 in the SA-6 North Residential Development Area, the excavation was carried down to Stratum D. These areas provided corroboration of the accuracy of the design Stratum D profile, and therefore confirmation that the sheet length/key and coating length were correct.

For the majority of the site, the cap to barrier wall profile is above the water table. In some utility corridors, the connection is submerged. Langan Engineering, Inc. (Langan) of Lawrenceville, New Jersey was retained by Amec Foster Wheeler to provide third party QA on the construction of the cap components. In submerged areas GCL was placed under the geomembrane in lieu of the gas vent layer and a sand bentonite plug was installed against the top of the sheetpile to provide for a low permeability connection. The installation of the connection detail for these areas is discussed in the Geosynthetics Quality Assurance Report prepared by Langan in **Appendix Q**.

9.2 HYDRAULIC BARRIER CONSTRUCTION ALONG TRASH PIT

Prior to installation of the hydraulic barrier wall in the Trash Pit area, the Trash Pit was dewatered by pumping of all free liquids. The remaining debris was removed from the Trash Pit with the excavator and stockpiled within the footprint of the former JCIA basement where additional liquids could gravity drain back into the Trash Pit and continue to be pumped out. The remaining solid wastes were trucked offsite for disposal. The concrete walls of the trash pit were scraped clean to allow for the sealing of the hydraulic barrier to the walls. The top of the trash pit walls was demolished to 2 feet below the geomembrane elevation.

The bottom of the Trash Pit was pressure washed and a cofferdam consisting of "super sacks" filled with fine granular clean imported soil were installed along the north and south sides of the proposed hydraulic barrier location. A low permeability plug of AquaBlok® was installed within the cofferdam walls. The toe of the steel sheetpiles was placed into the low permeability plug and the tops were tack welded to two steel guide beams for interim support as shown in figures in **Appendix C.** The interlocks between the sheets were sealed with Swellseal WA hydrophilic sealant. The hydraulic barrier was sealed to the concrete wall on the interior of the Trash Pit with cement bentonite grout columns.

The connections at the exterior walls of the Trash Pit were sealed with a specially fabricated sheetpile inserted into overlapping cement bentonite grouted columns prior to the grout setting. Prior to backfilling the Trash Pit, the concrete walls south of the barrier wall (under the cap and inside the containment) were penetrated below the groundwater table to reduce the potential for perched groundwater in the pit under the cap. The Trash Pit was backfilled in 1-foot lifts and tamped with the bucket until the elevation of the backfill reached a point where heavy compaction equipment could be utilized. Imported clean fill was placed 2 feet directly above the AquaBlok®.

Stratum D repair near the Trash Pit was conducted as described in Section 9.7.

9.3 VIBRATION MONITORING

The 100% Design Report mandated vibration monitoring when sheeting was being driven proximate to critical subsurface infrastructure or other features that could be damaged due to vibration. Such areas at SA-6 North are shown on **Figure 12** and included:

- Adjacent to the 72-inch Force Main;
- Temporary excavation support installation near the utilities along Route 440 and EA-1, and EA-2/EA-3; and
- Barrier Wall installation for the containment along Route 440

Honeywell's geotechnical engineering consultant, MRCE, developed the vibration limits for these sensitive areas. Seismographs were placed in proximity to the ABI Mobilram and the utility of concern. The seismographs were progressively relocated

in unison with the movement of the progress of the driving. The accelerations were measured "real time." The accelerations were well below the trigger levels in the vicinity of the 72-inch Force Main.

The ABI Mobileram operator had the ability to adjust the vibration frequency and total applied energy during driving. If the trigger levels were approached, the operator adjusted the driving parameters to keep the seismograph reading below the vibration limits.

There were a number of locations along the Route 440 Barrier Wall where vibrations exceeded the trigger levels for short periods of time. In these cases, driving was immediately stopped and options evaluated. These sheets were only 15 feet in length and hence driving times typically short. The 24-inch ductile iron gas main had also been replaced and relocated to the east as part of the SA-7 remediation. Therefore, while the same trigger level was followed when driving, the risk associated with higher vibration levels was less in this area due to the gas main relocation. The exceedances were along the southern section of the Route 440 Barrier Wall closer to SA-7. With two exceptions, the sheets were successfully driven by either frequency modification or adding water to the pretrench. In one location one pair of sheets reached practical refusal slightly above the design depth. Review of the geologic profile indicated that an adequate 2 feet key had been achieved and the sheets were left high. This change was documented in DCB 038 dated July 31, 2015. At a second location, practical refusal was encountered at a shallower depth. At this location, further investigation identified a piece of concrete slab below the pre-trench level. The concrete was removed and the barrier wall installation completed without any further exceedances. Vibration monitoring results are provided in **Appendix O**.

9.4 SOILS CONSOLIDATED IN OPEN SPACE AREA

The Chromium Remedy allowed for the consolidation of soil excavated from the SA-6 North Residential Development Area and SA-6 South Development AOC with hexavalent chromium concentrations of 20 to 240 mg/kg (B Material) to be placed in the SA-6 North Open Space Area below the cap. The total volume of soils excavated from the SA-6 South Development AOC placed in the SA-6 North Open Space Area was approximately 35,000 CYs.

Soils placed within the SA-6 North Open Space Area were compacted as specified to create a stable subgrade for the capping system. In accordance with Paragraph

56(d) of the SA-6 North Consent Decree, debris, or deleterious materials that could interfere with compaction was not placed under the cap. Compaction was typically performed using a vibratory steel drum roller. The subgrade was proof rolled with the roller operating in static mode loaded to provide a 1 ton per square foot (2,000 pounds per square foot), or equivalent, loading to the subgrade. The roller traversed over the subgrade materials until no further significant rutting or deformation of the subgrade was evident. Subgrade compaction was subject to engineer's approval. Soils that were too wet to compact were either dried or treated with Calciment® to reduce moisture content and increase strength to meet the specified criteria. The grading of the consolidated soils met the grading requirements in the 100% Design Report.

9.5 SURCHARGE PROGRAM

The existing surface grade of the Open Space Area generally varied between elevation 12 and elevation 16. The maximum "redevelopment grade" at the Open Space Area is elevation 23. Engineering calculations indicated that up to approximately 10 inches of settlement could result due to the increased load resulting from the increase in grade. That settlement was estimated to be primarily through consolidation of the underlying compressible Stratum O and Stratum D Soils. A decision was made based on this potential settlement, to surcharge the site to remove 100% of the primary consolidation attributable to the Development Area grade loading, prior to placement of the cap.

The surcharge program was designed to be completed in a sequenced manner starting from 1N and moving east to 4N (see **Illustration 5**).

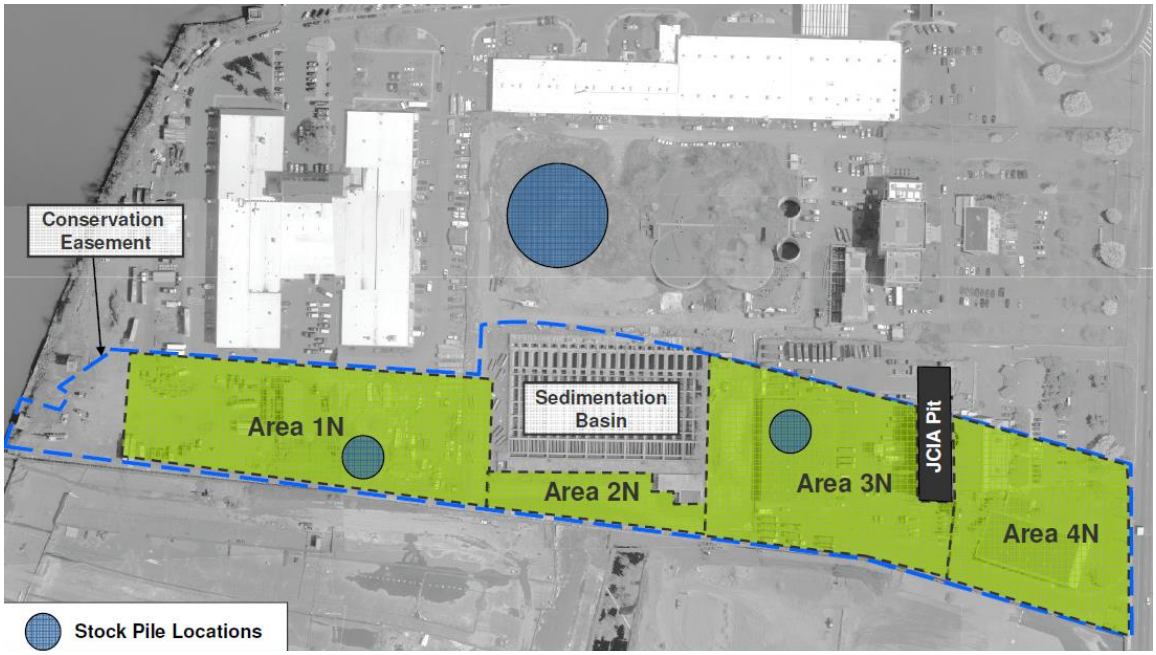

Illustration 5: Surcharge Loading Plan

The surcharge loads pile geometry was designed to achieve settlement as a result of primary consolidation in a period of approximately 6 months. Surcharge pile geometry was included in the 100% Design Report. The actual time required for the individual areas was determined by the results of the Surcharge Monitoring Plan. The Surcharge Monitoring Plan was provided in Appendix N of the 100% Design Report.

A Surcharge Monitoring report summarizing the results of the surcharge program for SA-6 North and SA-6 South was generated on a monthly basis during active surcharging. The Surcharge Monitoring Report included in **Appendix P** indicates that 100% of primary consolidation was achieved at the monitoring locations.

Upon completion of the analysis and verification by Amec Foster Wheeler that surcharge objectives were met, data packages were sent to MRCE for third party review. The dates of surcharging and third party agreement of completion are:

Surcharge Area	Initiation Date	Completion Date	MRCE Agreement
1N	April 2014	July 2014	August 8, 2014
2N	September 2014	November 2014	November 21, 2014
3N	November 2015	January 2016	March 29, 2016
4N	January 2016	January 2016	March 29, 2016

Following completion of the Surcharge Program, excess surcharge material was removed and the subgrade prepared for deployment of the cap geosynthetics.

9.6 STRATUM D REPAIR

During the course of chromium-impacted soil excavation activities at SA-6 North, repairs to Stratum D were necessary in the following situations:

- On several occasions pilings that penetrated the Stratum D were removed inadvertently in the excavation process, and
- In several locations, vertical cracks were observed in the Stratum D.

In each Stratum D repair location, GCL was placed over, and extended at least 3 feet beyond the repair area to provide continuity to the Stratum D layer. The locations of the repairs were noted on the Record Drawings.

Prior to installation of the GCL outside of the Trash Pit area, overburden soils were excavated and vinyl sheeting was driven into the existing Stratum D. The vinyl sheeting interlock abuts the hydraulic barrier wall and is connected to the hydraulic barrier wall by Swell Seal and 1-inch grouted column driven to a depth of 11 feet.

9.7 STRATUM D REPAIR JCIA TRASH PIT AREA

As indicated in Section 10.1.8 of the 100% Design Report it had been determined that the Stratum D layer was absent in a 25-30 feet halo around the JCIA Trash Pit. It is believed that portions of the Stratum D were removed during the construction of the Trash Pit. The 100% Design Report required development of means and methods for restoring the layer following Contractor selection, and inclusion of those

details in the Issued for Construction design (IFC). As a result of development of contractor means and methods, a modified repair scope was developed and shown on Drawing SN-302 of the IFC drawings. The modified IFC design was based on not conducting any repairs on the south side of the barrier wall (i.e. within the Open Space Area). The IFC design called for repair of the Stratum D North of the barrier wall. The repair consisted of three major steps:

- Excavation of the area to elevation 4.
- Installation of sealed vinyl sheetpile from elevation 4 and keyed into the Stratum D. The alignment was selected based on boring data and the interpreted limits of Stratum D.
- Placement of a GCL cap at elevation 4. The GCL extended from the concrete Trash Pit structure to the vinyl sheetpile. The GCL was connected to the sheetpile by means of a sand bentonite plug.

During installation of the vinyl sheetpile, a significant number of timber piles were encountered on the proposed alignment. To avoid removal of these piles the sheetpile was realigned to avoid the piles. DCB 051, dated October 22, 2015, was issued to document the location of the piles and the final alignment. These conditions are also documented in the "As Built" Drawings (**Appendix C**).

9.8 CAP CONSTRUCTION

The Chromium Remedy included a RCRA-equivalent geosynthetic cap system including; a methane GVL to address the potential release of naturally occurring methane, 60 mil Linear Low Density Polyethylene (LLDPE) geomembrane, GDL and cover soils to protect the geosynthetic components and support plant growth. Cap construction proceeded from west to east at SA-6 North, starting on June 22, 2016. The construction of the geosynthetic cap system was completed on August 19, 2016.

The licensed surveyor (Maser) provided survey of the construction control grid and verification that the subgrade was graded in accordance with the 100% Design. Amec Foster Wheeler conducted QA review of the geosynthetics manufacturer submittals, prepared the receiving records for geosynthetics delivered to the site, and provided QA approval of spark testing for all cap penetrations.

Langan provided third party QA on the construction of the geosynthetic cap components. Langan provided a final report of their QA inspection and evaluation of the cap construction which is contained in **Appendix Q**.

The following process was utilized for construction of the cap within the Open Space Area:

- Verification survey by Maser of the cap subgrade.
- Certification by the installation contractor (ESI) and Langan that the subgrade surface was suitable for geosynthetic deployment;
- Install cap geosynthetics (gas venting layer, geomembrane liner, geocomposite drainage layer) in the Open Space Area;
- QA/QC of placed geosynthetics;
- Spark testing of cap penetrations. Spark testing was conducted in accordance with DCB 052 dated December 14, 2015;
- Install Warning Layer. The top component of the GDL was comprised of a high visibility orange non-woven geotextile liner that met the visibility requirements of the SA-6 North Consent Decree. Yellow polyethylene, direct burial tape, with black lettered waring language, was installed every 5 feet on center on top of the GDL and also on top of the root barrier perpendicular to the lower elevation installed tape.
- Placement of protective cover soil;
- Placement of root barrier and additional warning tape installed above the root barrier in accordance with DCB 050 dated October 2, 2015;
- Placement of imported clean soil of the type required to the design thicknesses and grades; and
- Seeding and or gravel placement to serve as final cover pending redevelopment.

Figures 13 and 14 graphically portray the cap components.

The final design of the Bayfront Redevelopment includes roadways that traverse the Open Space Area in a North-South alignment. The geosynthetic cap system was

designed to accommodate future utilities in the roadways traversing the SA-6 North Open Space Area. The locations and design of the utility corridors were coordinated with the future Bayfront Redevelopment design and were in accordance with the SA-6 North Consent Decree. The locations of utility corridors are shown on **Figure 15**. The liner grades provide a minimum of 3 feet between the Bayfront Redevelopment road surface and the liner. The 3-feet criteria was established by Amec Foster Wheeler based on a conservative approach utilizing Bayfront Redevelopment planned traffic flows and a typical Municipal pavement design that was consistent with the road designation/traffic loadings. In areas designated as future roadways either imported NJ I-5 or NJ I-8 was placed as "Structural Fill under Roadways" above the cap components.

In accordance with the SA-6 North Consent Decree, a minimum thickness of 1 foot of clean soil (in areas to be paved) and 2 feet of clean soils (in other unpaved areas) were placed above the geomembrane liner. More clean soils may have actually been placed depending on the final surface grade features. The SA-6 North Consent Decree required an average thickness of clean cover soil above the geomembrane of 3 feet. The actual average thickness is 4.4 feet.

A woven geotextile root barrier was installed within the landscape areas. At least 6 inches of Horizon C soil was placed immediately above the root barrier and compacted to 90% of the maximum dry density as measured by ASTM D-698 (Standard Proctor). Additional Horizon C, and 6 inches of topsoil (Horizon A) were placed to complete the cover soil build up. Analytical sample results of Horizon A are also included in the table in **Appendix L**. The approximate volumes of cap cover soils imported and placed above the cap components was as follows:

Material Layer	Vendor/Source	Approximate Volume Imported (CYs)
GDL Cover Soil	Celgene	17,700
Structural Fill under Roadways	Tilcon Mount Hope	16,200
Horizon A - Topsoil	Nature's Choice	800
Horizon A - Topsoil	Excavating Materials & Equipment, Inc. (EME)	9,000
Horizon C	Nature's Choice	15,000

The average and minimum thickness of the cap cover soils meet the requirements of Section 56 (c) of the SA-6 North Consent Decree. The root barrier was installed over the entire cap area. Structural fill under roadways was placed in roadways above the protective cover soil. The placement of the root barrier, warning tape and Structural fill under Roadways meets the provisions of the OSDS, Appendix L of the SA-6 North 100% Design Report. As-built surveys of the top of the root barrier and structural fill as-built drawings are included in **Appendix C**.

Throughout the work, the amount of cover soil varied. As work advanced in some places the LLDPE required repairs. All repairs were completed by the end of August 2016 as detailed in **Appendix Q**.

The cap was designed with consideration of grading, drainage, and groundwater management provisions of the adjacent SA-7 site. The post-remediation monitoring and inspection of the cap required in Paragraph 64 of the SA-6 North Consent Decree and monitoring for methane was developed and presented in the LTMP as required in Paragraph 64 of the SA-6 North Consent Decree. A Revised Draft LTMP was submitted to all Parties in February 2017.

The methane vents extend from the geocomposite drainage, gas collection layer below the geomembrane liner through the cover soils to the atmosphere. See **Figure 16** for details of construction.

Existing monitoring wells which are to be maintained in the Open Space Area will be raised to meet proposed grade and re-surveyed with revised Form B

certifications. These monitoring wells are shown on **Figure 10** and are the following:

- 115-W6-SO
- 115-E5-SO
- 115-W1-SO and
- 115-E4-SO.

In addition, as indicated in Section 6, five pairs of new shallow piezometers were installed on either side of the SA-6 North hydraulic barrier to allow monitoring of the hydraulic gradient of the shallow groundwater zone between the Open Space Area and the SA-6 North Residential Development Area. See **Appendix E** for details of construction.

9.9 CONTINGENT GROUNDWATER EXTRACTION SYSTEM CONSTRUCTION

The 100% Design Report included a conceptual groundwater extraction design based on vertically-installed wells. The 100% Design Report also indicated that the conceptual design would be subject to further evaluation and possible change. Based on that further evaluation it was determined that a trench system would be more effective in the variable fill above the Stratum D. DCB 007 dated March 25, 2014 documents the change to the trench design. The collection trench was installed prior to surcharging. The contingent groundwater extraction trench is shown on **Figure 10**. A Record Drawing is also contained in **Appendix C**. The system will only operate as necessary to comply with the groundwater capture and gradient requirements noted in Paragraph 58 of the SA-6 North Consent Decree.

The specifications required that the water table be controlled during construction of the cap to maintain an inward gradient from SA-7 to the south and the Residential Development Area to the north. Pumping from the collection trench and other temporary trenches within the Open Space Area was initiated prior to cap placement to control groundwater levels and terminated in October 2016 after all Open Space Area cap work was completed. Evaluation of preliminary groundwater level monitoring results was discussed in Section 5.4.

The North contingent groundwater system consists of two trenches with 8-inch perforated HDPE conveyance pipe. One trench is east of the Sedimentation Basin.

It consists of two "legs." One leg runs approximately 150 feet west from Pump Station #2. The second leg runs approximately 500 feet to the east of Pump Station #2.

The second trench in the western portion of the site also has two "legs." One leg runs from the Pump Station #1 west 650 feet towards the Hackensack River end of the Open Space Area. The second leg extends south from the Pump Station then runs east between the south edge of the sedimentation basin and the SA-7 SCB wall. The second leg is approximately 350 feet long.

The HDPE pipe was placed on top of 6 inches of clean crushed stone and was covered with additional stone to depths in accordance with the above-referenced DCB. Geotextile fabric was placed across the top of the trench to prevent vertical migration of fines into the trench. As shown on the Record Drawing in **Appendix C**, the perforated piping is connected to a pump station located in each trench. Access structures are installed at the end of each trench to provide access for maintenance, if required. A double walled conveyance force main runs from each pump station to the GWTP. The force main discharge point was changed from the JCMUA grit chamber to the GWTP, as indicated in DCB 7.4.2 dated December 20, 2016. Electrical and instrumentation conduits were also installed between each pump station and the GWTP.

The groundwater model predicts that the inward gradient can be maintained by passive means (i.e. without active pumping). In the event it is necessary to implement active pumping, a pump along with the requisite electrical and instrumentation wiring and controls is being installed during the 1st Quarter 2017.

10.0 PERIMETER AIR MONITORING

As part of the Health and Safety monitoring conducted during remediation, air monitoring around the perimeter of the Site was implemented by Emilcott Associates, Inc., on behalf of Honeywell, to assess in an ongoing manner that COCs did not result in potential exposures to the surrounding public. Honeywell maintains a website at the following URL: www.jerseycitychromiumcleanup.com, which provided daily updates with perimeter air data and other information.

The primary COC, potentially found in dust from activities occurring at the site, was hexavalent chromium. Action levels determined for the SA-6 North project included 221.0 micrograms per cubic meter (µg/m^3) for air-borne dust. The air monitoring level was based on the potential for encountering lead dust at that Site. Preventative measures taken to control the generation of dust were conducted per the PAMP and HASPs. In order to assess the potential presence of hexavalent chromium in dust, the perimeter air monitoring stations were located throughout the multi-phase excavation activities using a grid system as shown on **Figure 4**. The points were determined by the PAMP and the Honeywell onsite representative based on the location of soil disturbance activities, prevailing wind direction, and field conditions.

PAMP data is included on **Tables 1A and 1B**. Baseline PAMP data was discussed and presented in Section 2.3. In the course of the project, there were no recorded employee exposures above the OSHA Permissible Exposure Limit. The highest total particulate detection at SA-6 North was on July 22, 2016 at 180 µg/m^3 (below operative action level of 221 µg/m^3) where the corresponding hexavalent chromium sample was not detected. The highest hexavalent chromium detection was on August 8, 2016 at 36 nanograms per cubic meter where the corresponding particulate detection was 79 µg/m^3.

11.0 IN-SITU TREATMENT

Although not specifically proposed in the NJDEP-approved RAWP, the RAWP indicated that in-situ treatment of chromium-impacted soils would be further evaluated as an option to address chromium-impacted soil in the Residential Development Area, particularly where excavation was technically impracticable. This included areas adjacent to active pipelines and utilities. Three such areas, called treatment areas (TA), were subsequently identified upon further evaluation of the data and discussions with the Jersey City Entities about the need to maintain critical infrastructure for their ongoing operations at SA-6 North. These areas were identified as Treatment Areas (TA) TA-7, TA-8, and TA-10 and are shown on **Figure 11B**. TA-7 is located immediately adjacent to two in-service above ground storage tanks on the JCMUA property and near the active 72-inch force main. TA-8 is located in the area of JCDPW and within 7 feet of a 96-inch combined sewer overflow line. TA-10 is located north of the Open Space Area hydraulic barrier and immediately adjacent to the 72-inch force main. The depth of the chromium-impacted soil and the nearby infrastructure made potential damage to the critical infrastructure during excavation a concern. Additionally, each of these areas is suitable for in-situ chemical treatment because they are geographically isolated locations, relatively small size, and exhibit lower hexavalent chromium concentrations (generally <100 mg/kg).

11.1 TA-7 AND TA-8

Honeywell implemented an initial injection program in the TA-7 and TA-8 areas in June 2013. Amec Foster Wheeler retained In-Situ Oxidative Technologies, Inc. (Isotec) of Lawrenceville, New Jersey to implement the in-situ injection of CAPS on behalf of Honeywell. The TA-7 and TA-8 in-situ injection program was implemented in accordance with the following documents:

- NJDEP Permit-by-Rule, Discharge to Groundwater Authorization, dated April 30, 2012;
- Amec's Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 2013 (Amec Revised WP); and
- Isotec's Chromium Treatment Program Operations Plan, dated April 8, 2013 (Isotec WP).

A total of 324 gallons of 29% stock CAPS was injected in TA-7 and a total of 168 gallons of 29% stock CAPS was injected in TA-8.

In June 2014, Honeywell authorized Amec to collect interim performance assessment soil samples in TA-7 and TA-8. These samples were collected in accordance with the Amec Revised WP. The TA-7 and TA-8 in-situ injection program and interim soil sampling program was summarized in a technical memorandum, dated September 12, 2014, submitted by Honeywell to all Parties (see **Appendix R**). The interim soil sample analytical results indicated that all soil samples collected were <20 mg/kg for hexavalent chromium.

In accordance with the Consent Order requirements Honeywell implemented the 3-year post-treatment performance assessment soil sampling in TA-7 and TA-8 on June 27, 2016. The results are included on **Table 7B**. As indicated in the Amec Revised WP, all soil samples from both TA-7 and TA-8 were analyzed for hexavalent chromium, total chromium, and sulfide. The TA-7 and TA-8 3-year post-treatment performance assessment soil sample results were summarized in a technical memorandum, dated August 10, 2016, submitted by Honeywell to all Parties (see **Appendix R**). The interim soil sample analytical results indicated that all soil samples collected in TA-8 were <20 mg/kg for hexavalent chromium. All soil samples collected in TA-7 were <20 mg/kg for hexavalent chromium, except for one isolated location in TA-7 at a depth of 2 to 3 feet bgs which exhibited a hexavalent chromium concentration of 26.3 mg/kg.

Thus, the RAO for soils was achieved in the TA-8 area and most of the TA-7 area. Honeywell will establish a temporary deed notice for the TA-7 area until such time that the area of the residual exceedance of 20 mg/kg can be excavated to meet the RAOs defined for soils in the Residential Development Area of AOC-1.

11.2 TA-10-1

In the *Work Plan for In-Situ Treatment of Chromium-Impacted Soils* (Appendix F of the SA-6 North 100% Design Report), the TA-10 area was originally identified as an area delineated to 20 mg/kg for hexavalent chromium covering an approximately 2,000 square foot area north of the hydraulic barrier. This proposed TA-10 injection area included both sides of the adjacent 72-inch force main which has a concrete outer shell. Due to concerns about impacts to the force main from sulfate, Honeywell reviewed the proposed injection program with NJDEP and PVSC.

NJDEP and PVSC requested Honeywell to investigate alternatives to CAPS injection in TA-10. Therefore, Honeywell authorized Amec Foster Wheeler and Mutch Associates to implement a bench scale test to test the efficacy of an organic substrate in treating chromium-impacted soils in TA-10.

The bench scale test concluded that the organic substrate did not offer any significant benefit in reducing hexavalent chromium concentrations in soils. Ultimately, Honeywell and all Parties agreed that CAPS injections would be implemented only in a sub-area (called TA-10-1) located north of the northern curbline for the future Stegman Boulevard to be constructed during implementation of the Bayfront Redevelopment Plan which is approximately 25 feet north of the 72-inch force main. This subarea is approximately 800 square feet. Honeywell and all Parties agreed that the remaining area between the Stegman Boulevard northern curbline and the 72-inch force main where chromium-impacted soils exist >20 mg/kg will be permanently deed noticed since the soils in this remaining portion of TA-10 would not be treated, cannot be excavated, and the future Stegman Boulevard footprint will effectively cap this area.

To allay concerns for impact on the 72-inch force main due to CAPS injections in subarea TA-10-1, Honeywell agreed to monitor sulfate conditions in shallow groundwater. Honeywell installed two permanent monitoring wells (087-MW-133 and 087-MW-134) between subarea TA-10-1 and the force main. As a contingency, Honeywell further proposed that if the sulfate concentrations in either one or both of 087-MW-133 and 087-MW-134 reached a threshold level of 150 mg/L, that clean potable water will be injected into both wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the force main. Both NJDEP and PVSC agreed that these proposed measures address their concerns about the sulfate in shallow groundwater in the vicinity of the force main. As shown in **Table 7D**, these levels were never reached.

Honeywell implemented an initial injection program in subarea TA-10-1 between August and September 2015. Amec Foster Wheeler retained ERFS of Lakewood, New Jersey to implement the in-situ injection of CAPS on behalf of Honeywell. The initial in-situ injection program was implemented in accordance with the following documents:

- NJDEP Permit-by-Rule Discharge to Groundwater Authorization, dated July 14, 2015;
- Amec Foster Wheeler's Updated Work Plan for In-Situ Treatment of Chromium Impacted Soils, dated August 2015 (Updated Work Plan); and
- ERFS' In-Situ Chemical Reduction Implementation Work Plan, dated September 2013.

This initial injection program was summarized in an October 12, 2015 technical memorandum submitted by Honeywell to all Parties (see **Appendix R**). A total of 165 gallons of 29% stock CAPS was injected in TA-10-1 during the initial injection program.

Following this initial injection program, post-treatment soil samples were collected in March 2016 (approximately six months after the initial injection) to provide an early indication of the efficacy of this treatment. All soil samples collected from TA-10-1 were analyzed for hexavalent chromium, total chromium, and sulfide as shown on **Table 7C**. As detailed in a May 6, 2016 technical memorandum submitted to all Parties, post in-situ analytical results showed that the majority of areas treated were now below the 20 milligrams per kilogram (mg/kg) standard for hexavalent chromium in soil (see **Appendix R**). However, 5 out of 20 sample points exceeded the 20 mg/kg hexavalent chromium standard. Based on these results, Honeywell proposed a supplemental CAPS injection program to further remediate soils in these areas in the *Additional In-Situ Injection of Calcium Polysulfide for Treatment of Hexavalent Chromium Impacted Soils*, dated July 11, 2016 (Proposed Implementation Plan) submitted by Honeywell to all Parties (see **Appendix R**). As requested in a May 23, 2016 letter from Plaintiffs, Honeywell agreed to re-inject CAPS within all five original treatment points, not just the remaining areas of soil exceedances. Modifications were made to the initial approach which included a slower and prolonged injection delivery approach over the course of several weeks through injection wells installed in the area. In contrast, the initial injection program utilized a direct-injection approach where the entire volume of CAPS solution was injected over the course of two days.

On July 28, 2016, Honeywell submitted a new NJDEP Permit-by-Rule Discharge to Groundwater (PBR-DGW) Authorization request to NJDEP to implement the proposed re-injection program based on the July 11, 2016 Proposed Implementation Plan. NJDEP issued the requested PBR-DGW on August 4, 2016.

Amec Foster Wheeler again retained ERFS to implement the additional injections. The Amec Foster Wheeler/ERFS team implemented the prolonged injection delivery program at the Site in five events separated by at least one week between September 7, 2016 and October 26, 2016. The Amec Foster Wheeler/ERFS team implemented the in-situ program in accordance with the following documents:

- Honeywell's July 11, 2016 Proposed Implementation Plan; and
- NJDEP August 4, 2016 PBR-DGW;

In addition, although not revised specifically for the 2016 re-injection program, the 2016 re-injection program generally followed provisions of documents previously prepared for the initial injection program since the means and methods were essentially similar.

The Proposed Implementation Plan detailed a delivery approach for the re-injection program where CAPS would be injected in specified dosages through injection points (IPs) in five separate events over a period of time. Thus, the IPs were installed first to facilitate the proposed dosage injections. Following installation of the IPs, the 2016 re-injection program was implemented in five injection events separated by at least a week between September 7, 2016 and October 26, 2016. A total of 825 gallons of 29% stock CAPS was injected in specified dosages during the five-event injection program.

Approximately six weeks after the final injection, Honeywell directed Amec Foster Wheeler to conduct an interim soil sampling program in the TA-10-1 area. The soil sampling program was implemented on December 5, 2016 using the same protocol as the post-treatment soil samples collected in March 2016 following the initial injection program. All soil samples were again analyzed for hexavalent chromium, total chromium, and sulfide. The interim soils data indicates successful reduction of hexavalent chromium concentrations in soils < 20 mg/kg in all but one recalcitrant location which exhibited a hexavalent chromium concentration of 33.3 mg/kg. The 2016 re-injection program, soil sample results, and the specific procedures for a supplemental re-injection program was summarized in a January 12, 2017 technical memorandum submitted by Honeywell to all Parties (see **Appendix R**).

The additional limited re-injection program proposed to address the area of hexavalent chromium exceedance was implemented in accordance with the January 12, 2017 correspondence in two events on January 26, 2017 and February 2, 2017. The resampling of the limited area of hexavalent chromium exceedance was conducted on March 13, 2017 in accordance with the January 12, 2017 correspondence. Final validated analytical results will be available shortly and will be submitted to all Parties upon receipt.

Honeywell will establish a deed notice for the TA-10 areas. TA-10 is located immediately north of the SA-6 North Open Space Area hydraulic barrier and overlies a section of the 72-inch force main (FM). The TA-10 deed notice is identified as Deed Notice #7. For the purpose of Deed Notice #7, the metes and bounds for the TA-10 deed noticed area consists of Tract 1 and Tract 2. Tract 1 includes the portion of TA-10 that lies south of the northern curbline of the future Stegman Boulevard which will be capped by Stegman Boulevard and is approximately 7,600 square feet. The Tract 1 portion of TA-10 overlies the FM and due to concerns of sulfate affecting the concrete outer shell of the FM pipe in-situ treatment of the Tract I area was not implemented. Instead, the Tract 1 area will be permanently deed noticed. Tract 2 includes the remainder of the TA-10 area that lies north of the northern curbline of the future Stegman Boulevard. This is the subarea TA-10-1 portion of TA-10. Once the soil sampling confirms that soil RAOs have been achieved for the TA-10-1 area as described above, the Tract 2 portion of the Deed Notice #7 can be withdrawn.

Because of its proximity to the SA-6 North Open Space Area, the Tract 1 portion of Deed Notice #7 area could be incidentally impacted by Open Space Development. Therefore, the LTMP addresses appropriate limits for this area, and describes on-site oversight of this area during Open Space Development.

12.0 GWTP RELOCATION AND CONSTRUCTION

While not necessarily a direct part of the implementation of the Chromium Remedy at SA-6 North, Honeywell constructed a new GWTP on SA-6 North. The GWTP is designed to handle and treat groundwater recovered as part of the SA-7 deep overburden and bedrock groundwater remedy. The former GWTP previously located at Site 140 on SA-6 South in the former ABR Trucking warehouse and office building was demolished to implement the SA-6 South Chromium Remedy. The former GWTP was initially built to handle and treat construction water during the SA-7 chromium remedy, but following the completion of the remediation of SA-7, had been treating recovered regional deep and overburden groundwater since December 2008. Once the new GWTP was built and started accepting flows on February 14, 2014, the former GWTP at SA-6 South was decommissioned, dismantled and removed from the Site 140 building.

AMEC Foster Wheeler designed, permitted and managed the construction of the 65 gpm GWTP beginning in March 2013. The GWTP pre-treats hexavalent chromium contaminated groundwater for discharge to the PVSC. The $4.5M GWTP design/build project also involved re-configuration of the existing three well groundwater extraction system, controls, and double wall conveyance system to allow for transition of flow from the old plant to the new plant and as required for GWTP commissioning activities.

The new GWTP incorporates chemical reduction, precipitation, flocculation, clarification and filter press processes which generates significantly less filter cake than the microfiltration system used in the original plant. The GWTP is housed in a 4,800-square foot pre-engineered metal building which also accommodates an office, equipment repair shop and state of the art chemical storage rooms and tanker offloading facilities.

Such facilities incorporate secondary containment, automatic leak and vapor detection systems, and an interface control system with remote monitoring capability, a closed-captioned television monitoring system as well as a card swipe access control and burglar alarm system. An innovative hydraulic pusher system was also custom designed and installed to allow for more efficient filling of the 30 CY waste filter cake roll-off. Local permitting included development of site plan

approval applications and testimony as required for both existing conditions and post redevelopment conditions. Interaction with the Jersey City building department and JCMUA at the preliminary design phase also led to a more streamlined building permitting process and local cooperation during the construction phase.

13.0 SITE RESTORATION

Site restoration activities were performed during the demobilization phase of the project. Site restoration activities included the following:

- Decontamination and demobilization of construction equipment and surplus materials;
- Decontamination, decommissioning and dismantlement of the construction wastewater treatment system and piping;
- Relocation or removal of the jersey barriers and chain-link fence to the property line boundary;
- Removal of temporary office trailers and power/phone service;
- Removal of traffic control features;
- Removal of construction debris;
- Disposal of other non-regulated waste; and
- Seeding of the Open Space Area cover soils.

14.0 CONSTRUCTION PERMITS

The following construction permits were obtained to complete the onsite work. Applications for renewals were submitted as needed. Permits that were no longer required were allowed to expire.

Permit	Site	Status	Expiration Date
NJDEP Waterfront Development	SA-6 North Only	Obtained 6/23/2010	6/23/2015*
NJDEP CAFRA/WFD/FHA GWTP Force Mains	GWTP	Obtained 4/22/2008	4/22/2013 (no extension necessary)
HEPSCD Soil Erosion and Sedimentation Control Plan (SESCP)	GWTP	Obtained 8/27/2012	2/27/2016 (no extension necessary)
NJDEP CAFRA/WFD/FHA	GWTP	Obtained 11/16/2012	6/23/2015 (no extension necessary)
NJDEP Treatment Works Approval	GWTP	Obtained 4/11/2013	4/23/2013 (no extension necessary)
NJDEP Air Pollution Control Preconstruction Permit	Existing GWTP	Obtained 9/24/2013 Automatically Renewed for 5 years	6/23/2019
PVSC SUP No. 20630025	Existing GWTP	Obtained 10/1/2013 Final Revision 12/02/15	6/30/2018

Permit	Site	Status	Expiration Date
PVSC SUP No. 31630019	SA-6 Chromium Remedy	Obtained 3/26/2014 Final Revision 5/23/14	8/31/2018
SESCP	SA-6 Chromium Remedy	Obtained 5/16/2013	11/16/2016
Request for Authorization (RFA)	SA-6 Chromium Remedy	Obtained 5/29/2013	Not Specified
NJDEP - Water Allocation	SA-6 Chromium Remedy	Obtained 6/19/2013	5/31/2018
NJDEP – Treatment Works Approval (TWA)	SA-6 Chromium Remedy	Obtained 7/8/2013	6/30/2016 (no extension necessary)
NJDOT - Highway Occupancy Permit	SA-6 Chromium Remedy	Obtained 9/11/2013 Extension Obtained 10/14/2015	6/30/2016
NJDEP Discharge to Groundwater (DGW) for In-Situ Treatment of Chromium Impacted Soils	SA-6 North	Obtained 4/30/2012 Revised 7/14/2015	Not Specified
NJDEP DGW for In-Situ Treatment of Chromium Impacted Soils	SA-6 North	Obtained 8/4/2016	Not Specified

Permit	Site	Status	Expiration Date
NJDOT – Application for Drainage Connection, Post Remediation Grading and Drainage	SA-6 Chromium Remedy	Application Submitted 8/19/14 Permit Application Rescinded 12/1/14 & Approved by DOT on 12/18/14	N/A
NJDOT – Highway Occupancy Permit – Installation of Sheet Piling and Excavation Adjacent to Rte. 440 ROW	SA-6 Chromium Remedy	Final Executed Permit Issued 12/2/14 Extension Obtained 12/24/2015	12/3/2016

*Note: Because the work was initiated before the expiration date of the NJDEP Waterfront Development permit, NJDEP did not require extension of this permit.

15.0 SUSTAINABILITY EFFORTS DURING CONSTRUCTION

Under Honeywell's stewardship the construction process was integrated into the overall vision for the Jersey City west side redevelopment by incorporating a sustainable design approach which focused on conservation of natural resources through beneficial reuse, recycling, minimization of ongoing energy consumption and reduction in carbon footprint. Specifically, Honeywell's sustainable construction efforts integrated:

- Use of renewable B-20 Biodiesel in lieu of conventional fossil fuel based petro-diesel in construction equipment;
- Consolidation of soils in the Open Space Area eliminating the fuel and traffic associated with off-site disposal; and,
- Crushing and recycling of demolition generated clean concrete to be reused as clean fill material on site.

16.0 POST-REMEDY OPERATION & MAINTENANCE

Following completion of the remedial actions, including installation of the groundwater extraction system which is to be operated on a contingent basis, a post-remediation long-term monitoring program will be implemented in accordance with the LTMP. The LTMP was developed and submitted to NJDEP and all Parties in October 2015 to address the monitoring requirements specified in the SA-6 North Consent Decree Paragraph 64. The LTMP satisfies the Consent Decree requirements for long-term monitoring, maintenance, and protection of engineering and institutional controls by establishing procedures and schedules for the following activities required by the Consent Decree:

- Quarterly visual inspections to ensure only permitted land usage is occurring and verify no usage compromises the integrity of the Chromium Remedy;
- Quarterly visual inspection monitoring of the grade and slope to identify whether erosion has occurred or is occurring;
- Quarterly visual inspection monitoring to determine if noticeable differential settlement or subsidence has occurred that could impair the integrity of the Chromium Remedy;
- Baseline topographic survey at completion of the Chromium Remedy and additional surveys annually for the first 5 years, then every 5 years for an additional 10 years;
- Quarterly visual inspection monitoring to determine if disturbance of the Chromium Remedy in the Open Space Area has occurred;
- Quarterly visual inspection monitoring to ensure that burrowing animals are not materially impairing the integrity of the Chromium Remedy;
- Quarterly visual inspection monitoring of the vegetative cover to ensure that vegetative cover in the Open Space Area is in conformance with the landscaping provisions of the 100% Design, including the OSDS, and the Redevelopment Plan and will not materially impair the integrity of the Chromium Remedy;
- Maintenance of the vegetative cover to include mowing to ensure tree species cannot become established except in designated areas and removal of any

vegetation not permitted by the OSDS that would impair the integrity of the Chromium Remedy;

- Quarterly groundwater elevation monitoring to ensure specified hydraulic gradients across the hydraulic barriers;
- Monthly monitoring of vented gases and the gas venting system for 1 year. Frequency will be reduced to quarterly after 1 year if data are stable;
- Any additional monitoring required by the specific design details;

The draft LTMP was submitted to all Parties, including NJDEP, in October 2015. A revised draft LTMP was submitted to all Parties, including NJDEP, in September 2016 and in February of 2017. The LTMP, once finalized after review by the NJDEP, Plaintiffs and the Special Master, will be the governing document for the operation, maintenance, and inspection of the Chromium Remedy components, including the contingent operation of the groundwater extraction system.

The relationship between long-term monitoring and institutional controls that are required by the SA-6 North Chromium Remedy is discussed in Section 17.

17.0 INSTITUTIONAL CONTROLS

Institutional controls are integral to the Chromium Remedy at SA-6 North and were made a part of the RAOs. The institutional controls are applied in accordance with Subchapter 7 of NJDEP's ARRCS (N.J.A.C. 7:26C).

Institutional controls include deed notices and remedial action permits at specific areas where chromium-impacted soils or groundwater remain and a CEA for residual chromium-impacted groundwater. Additional institutional controls for the Open Space Area pursuant to the SA-6 North consent decree includes transferring ownership to Jersey City after construction of roads and utility corridors and granting of a conservation restriction.

17.1 DEED NOTICES

To meet Honeywell's and Bayfront's objectives for the Site and coordinate with the objectives of the Development, five deed notices are required for the chromium impacts at SA-6 North. The areas to which each of the five deed notices apply are shown on **Figure 16**. Draft deed notices are contained in **Appendix S**. After the deed notices has been reviewed and approved by the NJDEP and finalized, they will be recorded at the office of the Hudson County Register.

The deed notices have been prepared in general accordance with NJDEP's ARRCS; however, model deed language from the SA-6 North Consent Decree was used as the model text. Each deed notice specifies conditions for alteration, improvement, and/or disturbance of the engineering controls, and provide monitoring, maintenance, notification and reporting requirements. These requirements include documentation that applicable worker health and safety laws and regulations are followed during the disturbance and restoration of those controls. The deed notices contain figures and cross-sections showing the engineering controls and details regarding notification and reporting requirements.

17.2 SOIL REMEDIAL ACTION PERMITS

Honeywell has prepared a draft Remedial Action Permit (RAP) Applications for Soil for the SA-6 North Open Space Area, three Deferred Areas, and one Treatment Area for NJDEP review. The draft RAP applications are attached to this document and once the RAR is approved by NJDEP, the RAP applications will be finalized and

submitted to the NJDEP at a later date. The permit applications contain requirements for monitoring, maintenance and reporting to document the protectiveness of the remedial actions and engineering controls for each of the areas on which the deed notices have been established until such time the deed notice is no longer required. The permit also includes a schedule for submittal of Biennial Certification Reports to the NJDEP, and requirements pertaining to financial assurance (see Section 19) and permit transfer, modification and termination.

As remediation at each Deferred Area is completed, the remedial action permit and deed notice will be terminated by submitting documentation to NJDEP and All Parties.

17.3 GROUNDWATER REMEDIAL ACTION PERMITS

Honeywell has prepared a draft RAP Application for Groundwater for the SA-6 North Open Space Area. The draft RAP application is attached to this document and once the RAR is approved by NJDEP, the RAP application will be finalized and submitted to the NJDEP at a later date.

The permit applications contain requirements for monitoring, maintenance and reporting to document the protectiveness of the remedial actions and engineering controls for each of the areas on which the deed notices have been established until such time the deed notice is no longer required. The permits also include a schedule for submittal of Biennial Certification Reports to the NJDEP, and requirements pertaining to financial assurance (see Section 19) and permit transfer, modification and termination.

17.4 CLASSIFICATION EXCEPTION AREA (EXISTING SHALLOW GW RA PERMIT)

A regional CEA for groundwater has been established by NJDEP on February 16, 2012 for the SA-5/6/7 sites as an institutional control to identify chromium-impacted groundwater above the NJDEP GWQS and prevent the use of groundwater within the designated CEA areas (see **Appendix F**). The CEAs address the shallow fill, deep overburden, and bedrock zones. The shallow zone refers to groundwater within fill material (above the Stratum D and underlying native soils), generally to a depth of 20 feet bgs. The deep overburden zone refers to groundwater below the fill and Stratum D down to bedrock, generally from approximately 20 feet to 90 feet bgs.

The bedrock zone refers to groundwater within the upper 20 to 40 feet of fractured bedrock. The shallow groundwater CEA may be modified in the future following 1 year of groundwater monitoring after completion of remedial actions.

A draft RAP application for shallow groundwater that matches the existing shallow groundwater CEA boundary is included herein. Separate RAPs for the Regional Groundwater are being prepared for the deep overburden and bedrock zones and will be submitted to NJDEP separately.

17.5 CONSERVATION RESTRICTION

Conservation Restrictions were prepared for both Open Space Areas at SA-6 North and SA-6 South at the time of property transfer from JCRA to Bayfront Redevelopment LLC per Paragraph 60(b) of the SA-6 North Consent Decree and at the time of the granting of the option to buy per Paragraph 74(b) of the SA-6 South Consent Decree. These conservation restrictions were recorded on March 25, 2010. In accordance with the Master Schedule contained in **Figure 17**, the existing conservation restriction placed on the SA-6 North Open Space Area will be amended to include the as-built hydraulic barrier boundaries. Hackensack River Watershed Land Trust shall be the primary holder of the conservation restrictions once amended.

18.0 RECORD DRAWINGS

In accordance with Section 60(j)(viii) of the SA-6 North Consent Decree and the TRSR, as-built drawings were prepared and are included in **Appendix C**. Maser completed surveys by a NJ licensed surveyor and Mr. Thomas Hugg sealed drawings prepared by Maser. Amec Foster Wheeler engineer of record for SA-6 North, Mr. Samuel G. Shallard, PE, sealed Record Drawings prepared by Amec Foster Wheeler.

19.0 REMEDIAL ACTION COSTS

Remediation costs are summarized in the table below:

Activity	Cost ($1MM)
Construction Costs	$26
Soil Disposal	$2
Oversight/Construction Management	$2.4
Total	**$30.4**

19.1 FINANCIAL ASSURANCE

Long term monitoring for SA 6 North and South is part of the overall financial assurance letter of credit for chromium Sites at SA 5, 6 and 7 that are subject to the oversight of the Special Master. This letter of credit is issued by the MUFG Union Bank, N.A. in the amount of $46.946,915million to cover all remediation and long term monitoring activities at these sites. The letter of credit is attached to the Remediation Funding Source form in the front of this document.

20.0 REMEDIATION CLOSE OUT SUMMARY

The Chromium Remedy at SA-6 North commenced on May 2013 and was substantially complete by November 2016. The Chromium Remedy was implemented in accordance with the TRSR, the ACO, the SA-6 North Consent Decree, the 100% Design Report and subsequent DCBs, and other clarifying correspondence between Honeywell and NJDEP and/or Plaintiffs. Therefore, other than remediation of the Deferred Areas, no further remedial actions are required for either the Residential Development or Open Space Areas at SA-6 North. Remediation of Deferred Areas will be coordinated with the implementation of the Bayfront Redevelopment Plan, the widening of Route 440, JCMUA relocation of the fuel island, and the completion of the in-situ treatment activities.

The RAOs for SA-6 North soils and groundwater were met by implementation of the Chromium Remedy in the Residential Development Area and Open Space Area portions of AOC-1. The hydraulic barrier will restrict potential offsite migration of chromium-impacted groundwater. Further, the LTMP establishes procedures and schedules for long-term monitoring of groundwater levels in the Open Space Area to determine the potential operation of the contingent groundwater extraction system based on trigger criteria. The LTMP also establishes the inspection, maintenance, and operation of critical features of the Chromium Remedy.

Honeywell will establish appropriate institutional controls at SA-6 North that supplement the physical remedial actions including deed notices for five distinct areas, conservation restrictions for the Open Space Area and the other chromium deed notice areas of the Site, and remedial action permits for soils and a remedial action permit for groundwater in the Open Space Area. A classification exception area has already been established with NJDEP for the regional shallow groundwater and adequately covers SA-6 North. A draft remedial action permit for groundwater in the Open Space Area that is consistent with the existing CEA boundary for SA-6 North is included herein. Once the deed notices are finalized, final soil and groundwater RAP applications will be submitted to NJDEP.

Based on completion of the remedial actions for chromium-impacted soil and groundwater as documented in this RAR, Honeywell is requesting NJDEP review and approval of this RAR in accordance with Paragraph 23 G of the Consent

Judgment. It is Honeywell's intention that this document will close out remediation of chromium-impacted soil, except for the limited isolate areas at which remediation is deferred, and chromium-impacted groundwater. In accordance with Paragraph 5 of the Consent Order Entering Consolidated 100% Design for Study Area 6 North and Study Area 6 South, *Jersey City Municipal Utilities Auth. v. Honeywell,* No. 2:05-cv-05955-DMC-JAD (D. N.J. July 9, 2013), ECF No. 448, Honeywell will submit a Consent Order which has appended to it (i) the 100% Design except the drawings and (ii) this Final RAR for entry into Federal Court.

As remediation at each Deferred Area is completed, the remedial action permit and deed notice will be terminated by submitting documentation to NJDEP and All Parties.

- ☐ Hazardous Discharge Remediation Fund (HDSRF) Grant/Loan
- ☐ ISRA
- ☐ Landfill (SRP subject only)
- ☐ Regulated Underground Storage Tank (UST)
- ☐ Remediation Agreement (RA)/Remediation Certification
- ☐ School Development Authority (SDA)
- ☐ School facility
- ☐ Spill Act Defense – Government Entity
- ☐ Spill Act Discharge
- ☐ UST Grant/Loan
- ☐ Other: _____

Federal Case (*check all that apply*)

☐ RCRA GPRA 2020 ☐ CERCLA/NPL ☐ USDOD ☐ USDOE

1. Is the party conducting remediation a government entity? ☐ Yes ☒ No

If "Yes," check one: ☐ Federal ☐ State ☐ Municipal ☐ County

SECTION E. PUBLIC FUNDS

Did the remediation utilize public funds? ☐ Yes ☒ No

If "Yes," check applicable:

- ☐ UST Grant
- ☐ HDSRF Grant
- ☐ Spill Fund
- ☐ UST Loan
- ☐ HDSRF Loan
- ☐ Schools Development Authority
- ☐ Brownfield Reimbursement Program
- ☐ Landfill Reimbursement Program
- ☐ Environmental Infrastructure Trust

SECTION F. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION INFORMATION AND CERTIFICATION

Full Legal Name of the Person Responsible for Conducting the Remediation: Honeywell International Inc.

Representative First Name: William Representative Last Name: Hague

Title: Global Director, Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Road

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

This certification shall be signed by the person responsible for conducting the remediation who is submitting this notification in accordance with Administrative Requirements for the Remediation of Contaminated Sites rule at N.J.A.C. 7:26C-1.5(a).

I certify under penalty of law that I have personally examined and am familiar with the information submitted herein, including all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge, I believe that the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. I am also aware that if I knowingly direct or authorize the violation of any statute, I am personally liable for the penalties.

Signature: DocuSigned by: William J. Hague Date: 2/27/2017

Name/Title: William Hague/Global Director, Remediation

For CEA Submissions:

☒ Check this box if the person above is also the property owner of the site or their representative. If this person is not the site property owner, please ensure the site property owner's name and address is in the first line of the table in Section E.2 of the Classification Exception Area / Well Restriction Area (CEA/WRA) Fact Sheet Form.

SECTION G. LICENSED SITE REMEDIATION PROFESSIONAL INFORMATION AND STATEMENT

LSRP ID Number: _____

First Name: _____ Last Name: _____

Phone Number: _____ Ext: _____ Fax: _____

Mailing Address: _____

City/Town: _____ State: _____ Zip Code: _____

Email Address: _____

This statement shall be signed by the LSRP who is submitting this notification in accordance with N.J.S.A. 58:10C-14, and N.J.S.A. 58:10B-1.3b(1) and (2).

I certify that I am a Licensed Site Remediation Professional authorized pursuant to N.J.S.A. 58:10C to conduct business in New Jersey. As the Licensed Site Remediation Professional of record for this remediation, I:

[SELECT ONE OR BOTH OF THE FOLLOWING AS APPLICABLE]:

☐ *directly oversaw and supervised all of the referenced remediation, and\or*

☐ *personally reviewed and accepted all of the referenced remediation presented herein.*

I believe that the information contained herein, and including all attached documents, is true, accurate and complete.

It is my independent professional judgment and opinion that the remediation conducted at this site, as reflected in this submission to the Department, conforms to, and is consistent with, the remediation requirements in N.J.S.A. 58:10C-14.

My conduct and decisions in this matter were made upon the exercise of reasonable care and diligence, and by applying the knowledge and skill ordinarily exercised by licensed site remediation professionals practicing in good standing, in accordance with N.J.S.A. 58:10C-16, in the State of New Jersey at the time I performed these professional services.

I am aware pursuant to N.J.S.A. 58:10C-17 that for purposely, knowingly or recklessly submitting false statement, representation or certification in any document or information submitted to the board or Department, etc., that there are significant civil, administrative and criminal penalties, including license revocation or suspension, fines and being punished by imprisonment for conviction of a crime of the third degree.

REMEDIAL ACTION REPORT FORM

Date Stamp
(For Department use only)

SECTION A. SITE

Site Name: Study Area SA-6 North

Program Interest (PI) Number(s): G000008710, G000008711

Case Tracking Number(s) for this submission: _____

This form must be attached to the Cover/Certification Form

SECTION B. SCOPE OF REMEDIAL ACTION REPORT

1. Does the RAR address:
   - ☒ Area(s) of Concern (AOCs) Only Chromium
   - ☐ Entire Site (Based on a completed and submitted Preliminary Assessment/Site Investigation)
2. Total number of contaminated AOCs associated with the case: 1
3. Total number of contaminated AOCs addressed in this submission: 1
4. Are there any outstanding contaminated AOCs associated with the case where the remedial action has NOT been performed? ☐ Yes ☒ No
5. Does this RAR address a discharge/release from a federally regulated UST? ☐ Yes ☒ No

When answering the remaining questions on this form consider only the AOCs addressed in this submission.

SECTION C. GENERAL

1. Does this submission include Remedial Action Permit Application(s) that require Site Remediation Program approval? ☒ Yes ☐ No
2. Was a remediation initiated after May 6, 2010, for new construction / change in the use of the site proposed for the purpose of residential use, use as a licensed child care center or use as a school? ☒ Yes ☐ No
   If "Yes," was an unrestricted use or a presumptive remedy implemented? ☒ Yes ☐ No
3. Was an alternative remedy approved by the NJDEP? ☐ Yes ☒ No
   If "Yes," provide the date of the approval: _____
4. Has the remediation varied from the Technical Rules? ☐ Yes ☒ No
   If "Yes." provide the citation(s) from which the remediation has varied and the page(s) in the attached document where the rationale for the variance is provided.
   N.J.A.C. 7:26E- _____ Page _____
   N.J.A.C. 7:26E- _____ Page _____
   N.J.A.C. 7:26E- _____ Page _____
5. Were the laboratory Reporting Limits below applicable remediation standards/screening levels criteria required for the contaminants of concern for the AOCs addressed in this submission? ☒ Yes ☐ No
6. Have past NJDEP-documented deficiencies been addressed in this submission? ☐ Yes ☐ No ☒ N/A
7. Did the remediation deviate from that proposed in the Remedial Action Workplan? ☐ Yes ☒ No
   If "Yes," specify the section/page(s) in the report where the deviation(s) are discussed:
   _____
8. Did the remedial action render the property unusable for future redevelopment or for recreational use (N.J.A.C. 7:26C-6.4(b)? ☐ Yes ☒ No

SECTION D. SITE CONDITIONS

1. At any time, was there any radiological contamination detected at the AOCs addressed in this submission? ☐ Yes ☒ No
2. At any time, did any of the AOCs addressed in this submission contain Ordnance and Explosives/ Unexploded Ordnance (OE/UXO)? ☐ Yes ☒ No
3. Did the remedial action involve containment of free product? ☐ Yes ☒ No
4. Has dioxin been detected at levels above NJDEP's interim direct contact soil screening level of 50 ppt dioxin TEQ (TCDD Toxicity Equivalence Quotient) in any AOCs addressed in this submission? ☐ Yes ☒ No
5. Have any of the following contaminants *ever* been detected in sediment above the ecological screening levels at the AOCs addressed in this submission? ☐ Yes ☒ No

   If "Yes," check all that apply:

   ☐ Arsenic ☐ Dioxin ☐ Mercury ☐ PCBs ☐ Pesticides
6. Is remediation complete in all affected media at the AOCs addressed in this submission? ☒ Yes ☐ No
7. Did contaminants from the AOCs addressed in this submission discharge to surface water? ☐ Yes ☐ No
8. Did contaminants from the AOCs addressed in this submission discharge to an Environmentally Sensitive Natural Resource (ESNR)? ☐ Yes ☒ No
9. Are any of the following conditions currently present for the AOCs addressed in this submission? *(check all that apply):*

Groundwater:

- ☒ Contaminated ground water in the overburden aquifer
- ☐ Contaminated ground water in a confined aquifer
- ☐ Contaminated ground water in the bedrock aquifer
- ☐ Contaminated ground water in multiple aquifer units
- ☐ Multiple distinct ground water plumes
- ☐ Contaminated ground water migrating off-site
- ☐ Natural background ground water contamination
- ☐ Contaminated ground water discharging to surface water or Environmentally Sensitive Natural Resource (ESNR)
- ☐ Residual or free product
- ☐ Radionuclides

Soil:

- ☐ On-site discharge(s) impacting soil off-site
- ☒ Chromate Chemical Production Waste/COPR
- ☐ Munitions and explosives of concern
- ☒ Contaminated soil in the saturated zone
- ☐ Historic pesticide impacts to soil
- ☐ Residual or free product
- ☐ Radionuclides
- ☒ Historic Fill
- ☐ Natural background only above Impact to Ground Water Cleanup Criteria
- ☐ Natural background above Direct Contact Remediation Standards
- ☐ Soil contamination in an ESNR

SECTION E. APPLICABLE REMEDIATION STANDARDS

1. Were Default Remediation Standards used for all contaminants? ☒ Yes ☐ No

   If "Yes," check all that apply: Chromium Policy

   ☐ Direct Contact
   ☐ Impact to Ground Water Soil Screening Levels
   ☐ Ecological Screening Levels
2. Has compliance averaging been utilized to determine compliance with the Soil Remediation Standards? ☐ Yes ☒ No

   If "Yes," check all that apply:

	Compliance Averaging Method Utilized			
Pathway	Arithmetic Mean	95 Percent UCL	Spatially Weighted Average	75 Percent/ 10X Procedure
☐ Ingestion-Dermal Pathway	☐	☐	☐	☐
☐ Inhalation Pathway	☐	☐	☐	☐
☐ Impact to Ground Water Pathway	☐	☐	☐	☐

3. Has a compliance option been utilized to determine compliance with the Impact to Ground Water Pathway? (If "Yes," check all that apply) ☐ Yes ☒ No

   ☐ Immobile Compounds
   ☐ Data evaluation for metals and semi-volatiles
   ☐ Data evaluation for volatile organics derived from discharges of petroleum mixtures

4. Was an interim standard used for a contaminant where a standard does not exist? ☐ Yes ☒ No
5. Were Alternate Remediation Standards used for the Ingestion/Dermal Pathway? ☐ Yes ☒ No
6. Were Alternate Remediation Standards used for the Inhalation Pathway? ☐ Yes ☒ No
7. Were Site Specific Standards used for the Impact to Ground Water Pathway? ☐ Yes ☒ No
   If "Yes," check all that apply:
   ☐ Soil-Water Partitioning Equation ☐ SPLP ☐ Sesoil ☐ Sesoil/AT123D
   ☐ DAF Modification
8. Were Site Specific Ecological Remediation Goals used? ☐ Yes ☒ No
9. What is the ground water classification for this site as per N.J.A.C. 7:9C? (check all that apply)
   ☐ Class I-A ☒ Class II-A
   ☐ Class I-PL Pinelands Protection Area ☐ Class III-A
   ☐ Class I-PL Pinelands Preservation Area ☐ Class III-B

SECTION F. ALTERNATIVE AND CLEAN FILL USE

1. Was alternative fill used? ☐ Yes ☒ No
2. Was clean fill used? ☒ Yes ☐ No
3. Was material sent off-site for use as alternative and/or clean fill? ☐ Yes ☒ No
   If "Yes," specify the section/page in the RAR where it states the SRP site receiving this alternative and/or clean fill: _____
4. Was material sent off-site for use as alternative and/or clean fill at a non-SRP site? ☐ Yes ☒ No
   If "Yes," specify the section/page in the RAR where it states the non-SRP site receiving this alternative and/or clean fill: _____
5. Was alternative fill used in excess of the amount required for the remedial action? ☐ Yes ☒ No
   If "Yes," was the NJDEP's preapproval obtained pursuant to N.J.A.C. 7:26E-5.2(b)3? ☐ Yes ☐ No

SECTION G. REMEDIAL ACTION REPORT INFORMATION

Soils

1. Did the remedy include a remedial action for soils? ☒ Yes ☐ No
   If "No," skip to **Ground Water**
2. Is a restricted use required? ☒ Yes ☐ No
   If "Yes," indicate the type of restriction being implemented. Deed Notice & Engineering Controls
3. If applicable, has consent from all involved property owners been obtained (i.e., for institutional or engineering controls)? ☒ Yes ☐ No
4. Was an engineering control required? ☒ Yes ☐ No
   If "Yes," indicate the receptor(s) each engineering control is intended to protect. *(check all that apply)*
   ☒ Human ☐ Ecological ☐ Offsite Impacts

Ground Water

5. Did the remedy include a remedial action for ground water? ☒ Yes ☐ No
   If "No," skip to **Ecological**
6. Is a restricted use required for ground water? ☒ Yes ☐ No

7. Is a revised CEA required? ☐ Yes ☒ No

8. Do any contaminant levels in ground water currently exceed the vapor intrusion ground water trigger? ☐ Yes ☒ No

Ecological

9. Did the remedy include a remedial action for Environmentally Sensitive Natural Resources (ESNRs)? ☐ Yes ☒ No
   If "No," skip to **Indoor Air**

10. Was post-remedial sampling performed to determine whether contaminant levels currently meet ecological screening levels or ecological remediation goals? ☐ Yes ☐ No

11. Did the remedial action require filling of State open waters or wetlands? ☐ Yes ☐ No

12. Have ecological risk-based remediation goals been developed? ☐ Yes ☐ No
    If "Yes," have the ecological risk-based remediation goals been approved by NJDEP? ☐ Yes ☐ No

13. Have Risk Management Decision (RMD) goals been developed? ☐ Yes ☐ No
    If "Yes," have the RMD goals been approved by NJDEP? ☐ Yes ☐ No

Indoor Air

14. Have any vapor intrusion engineering controls/mitigation systems been installed in order to mitigate a vapor condition in a structure? ☐ Yes ☒ No
    If "Yes," check each type of engineering control that was implemented:
    - ☐ Subsurface Depressurization System
    - ☐ Subsurface Ventilation System
    - ☐ Soil Vapor Extraction System
    - ☐ HVAC Positive Pressure
    - ☐ Other (specify): _____

SECTION H. LABORATORY DATA

1. Were all data submitted in the appropriate full and/or reduced formats according to the deliverables defined in N.J.A.C. 7:26E-2? ☒ Yes ☐ No

2. Do all data submitted meet the quality assurance/quality control (QA/QC) requirements incorporated by reference in N.J.A.C. 7:26E-2 for:
   sampling ☒ Yes ☐ No
   analysis ☒ Yes ☐ No

3. How was it determined that the data complied with the QA/QC requirements?
   - ☒ Laboratory non-conformance summary/narrative
   - ☒ Laboratory correspondence
   - ☐ LSRP review
   - ☒ Independent contractor review
   - ☐ Other: _____

4. Has any data been qualified and used? ☒ Yes ☐ No

5. Has any data been rejected and used? ☐ Yes ☒ No

6. Provide the page number for the "Reliability of Data" section of the report: Sec. 1.6

New Jersey Department of Environmental Protection
Site Remediation Program

RECEPTOR EVALUATION (RE) FORM

Date Stamp
(For Department use only)

SECTION A. SITE

Site Name: Study Area 6 North Site 087 (Jersey City Incinerator Authority Site)

Program Interest (PI) Number(s): G000008710

Case Tracking Number(s) for this submission: 99-01-08-1151-26; 97-04-07-1208-28; 08-06-17-1648-22

This form must be attached to the Cover/Certification Form if not submitted through the RIR Online Service

Indicate the type of submission:

☐ Initial RE Submission

☒ Updated RE Submission

Indicate the reason for submission of an updated RE form

☐ Submission of an Immediate Environmental Concern (IEC) source control report;
☐ Submission of a Remedial Investigation Report;
☒ Submission of a Remedial Action Report;

Check if included in updated RE

☐ The known concentration or extent of contamination in any medium has increased;
☐ A new AOC has been identified;
☐ A new receptor is identified;
☐ A new exposure pathway has been identified.

SECTION B. ON SITE AND SURROUNDING PROPERTY USE

1. Identify any sensitive populations/uses that are currently on-site or surrounding property usage within 200 feet of the site boundary (check all that apply):

	On-site	Off-site
None of the following	☒	☒
Residences or residential property	☐	☐
Public or Private Schools grades K-12	☐	☐
Child care centers	☐	☐
Public parks, playgrounds or other recreation areas	☐	☐
Other sensitive population use(s) Explain _____	☐	☐

If any of the above applies, attach a list of addresses, facility names, type of use, and a map depicting each location relative to the site. See Attached Figure B-1

2. Current site uses (check all that apply):

☐ Industrial ☐ Residential ☒ Commercial ☐ Agricultural
☐ School or child care ☐ Government ☐ Park or recreational use
☒ Vacant ☐ Other: _____

3. Planned future site uses and off-site use within 200 ft of site boundary (check all that apply):

☐ Industrial ☒ Residential ☒ Commercial ☐ Agricultural
☐ School or child care ☐ Government ☒ Park or recreational use
☐ Vacant ☐ Other: _____

Provide a map depicting the location of the proposed changes in land use. See Attached Figure B-3

SECTION C. DESCRIPTION OF CONTAMINATION

1. Identify if any of the following exist at the site (check all that apply):
   - ☐ Free product [N.J.A.C. 7:26E-1.8] identified is ☐ LNAPL* or ☐ DNAPL**. Date identified: _____
   - ☐ Residual product [N.J.A.C. 7:26E-1.8]
   - ☒ Other high concentration source materials not identified above (e.g., buried drums, containers, unsecured friable asbestos)

     Explain: Fill material containing chromite ore processing residue (COPR)

   * LNAPL – measured thickness of .01 feet or more

   **DNAPL – See US EPA DNAPL Overview

2. Soil Migration Pathway

   Has soil contamination been delineated to the applicable Direct Contact Soil Remediation Standard? ☒ Yes ☐ No

   Are all soils either below the applicable Direct Contact Criteria or under an institutional control (i.e. deed notice)? ☒ Yes ☐ No

3. If this evaluation is submitted with a technical document that includes contaminant summary information, proceed to Section D. Otherwise attach a brief summary of all currently available data and information to be included in the site investigation or remedial investigation report. See Attached RAR

SECTION D. GROUND WATER USE

1. Has the requirement for ground water sampling been triggered? ☒ Yes ☐ No ☐ Unknown
   If "No," proceed to Section F. If "Unknown," explain:

   Yes See Attached RAR

2. Is Ground water contaminated above the Ground Water Remediation Standards [N.J.A.C.7:9C]? ☒ Yes ☐ No ☐ Unknown

   Or ☐ Awaiting laboratory data with the expected due date: _____

   If "Yes," provide the date that the laboratory data was available and confirmed contamination above the Ground Water Remediation Standards. Date: 03/13/2009

   If "Unknown," explain: _____

   If "No," or awaiting laboratory data proceed to Section F.

3. Has ground water contamination been delineated to the applicable Remediation Standard? ☒ Yes ☐ No
4. Has a well search been completed? ☒ Yes ☐ No

   Date of most recent or updated well search: 12/11/2015

   Identify if any of the following conditions exist based on the well search [N.J.A.C.7:26E-1.14(a)] (check all that apply):
   - ☐ Potable wells located within 500 feet from the downgradient edge of the currently known extent of contamination.
   - ☐ Potable well located 250 feet upgradient or 500 feet side gradient of the currently known extent of contamination.
   - ☐ Ground water contamination is located within a Tier 1 wellhead protection area (WHPA).

5. Is a completed Well Search Spreadsheet or historical well search table attached and has an electronic copy of the spreadsheet been submitted to srpgis_wrs@dep.state.nj.us. See Attached Table ☒ Yes ☐ No

   If "No," explain: _____

6. Are any private potable or irrigation wells located within ½ mile of the currently known extent of contamination? ☐ Yes ☒ No

   If "Yes," was a door to door survey completed? ☐ Yes ☐ No

   If survey was not completed explain: _____

7. Has sampling been conducted of ☐ potable well(s) and /or ☐ non-potable use well(s)? ☐ Yes ☒ No

   If "No," provide justification then proceed to Section E.

   No, wells do not exist within search radius

8 Has contamination been identified in potable well(s) above Ground Water Remediation Standards that is not suspected to be from the site? (If "Yes," provide justification) ☐ Yes ☐ No

_____

9 Has contamination been identified in potable well(s) that is above the Ground Water Remediation Standards or Federal Drinking Water Standards? ☐ Yes ☐ No

Provide date laboratory data was received: _____

Or ☐ awaiting laboratory data with the expected due date: _____

If "Yes" for potable well contamination **not attributable to background**, follow the IEC Guidance Document at http://www.nj.gov/dep/srp/guidance/index.html#iec for required actions and answer the following:

Has an engineered system response action been completed on all receptors? ☐ Yes ☐ No

Provide a brief narrative description:

Date completed: _____ NJDEP Case Manager: _____

10. Were Non-potable use well(s) sampled and results were above Class II Ground Water Remediation Standards? ☐ Yes ☐ No

Provide date laboratory data was received: _____

Or ☐ awaiting laboratory data with the expected due date: _____

11. Has the ground water use evaluation been completed? ☐ Yes ☐ No

SECTION E. VAPOR INTRUSION (VI)

1. Contaminants present in ground water exceed the Vapor Intrusion Ground Water Screening Levels that trigger a VI evaluation. (see NJDEP Vapor Intrusion Technical Guidance). ☒ Yes ☐ No ☐ Unknown

Or ☐ Awaiting laboratory data and the expected due date: _____

Provide the date that the laboratory data was available and confirmed contamination above the Vapor Intrusion Trigger Levels. Date: 03/13/2009

2. Other existing conditions that trigger a VI evaluation. (see NJDEP Vapor Intrusion Technical Guidance)

☐ Wet basement or sump containing free product or ground water containing volatile organics
☐ Methane generating conditions causing oxygen deficient or explosion concern
☐ Other human or safety concern from the VI pathway (i.e. elemental mercury, unsaturated contamination, elevated soil gas or indoor vapor (explain):

If you answered "No," or awaiting laboratory data to Question 1., *and* did not check any boxes in Question 2, proceed to Section F, "Ecological Receptors", otherwise complete the rest of this section.

3. Has ground water contamination been delineated to the applicable Ground Water Vapor Screening Level? ☒ Yes ☐ No

4. Was a site specific screening level, modeling or other alternative approach employed for the VI pathway? ☐ Yes ☒ No

5. Identify and locate on a scaled map any buildings/sensitive populations that exist within the following distances from ground water contamination with concentrations above the Vapor Intrusion Ground Water Screening Levels or specific threats (check all that apply):

☐ 30 feet of petroleum free product or dissolved petroleum hydrocarbon contamination in ground water
☐ 100 feet of any non-petroleum free product or any non-petroleum dissolved volatile organic ground water contamination
☒ No buildings exist within the specified distances

See Attached RAR

6. The vapor intrusion pathway is a concern at or adjacent to the site (if "No," attach justification) ☒ Yes ☐ No

7. Has soil gas sampling of the building(s) been conducted? ☒ Yes ☐ No ☐ N/A
If "No," or "N/A," proceed to #12

8. Has indoor air sampling been conducted at the identified building(s)? ☒ Yes ☐ No
If "No," proceed to #12

9 Has indoor air contamination been identified but not suspected to be from the site?
(if "Yes," attach justification) ☐ Yes ☒ No

10. Indoor air results were above the NJDEP's Rapid Action Levels. ☐ Yes ☐ No

Provide the date that the laboratory data was available. Date: 01/11/2016

Or ☐ Awaiting laboratory data with the expected due date: _____

If "Yes" to #10 above, follow the IEC Guidance Document at
http://www.nj.gov/dep/srp/guidance/index.html#iec **for required actions.**

The IEC engineering system response for control was implemented for all
identified structures ☐ Yes ☒ No

Date: _____ NJDEP Case Manager: _____

11. Indoor air sampling was conducted and results were above the NJDEP's Indoor Air Screening
Levels but at or below the Rapid Action Levels ☐ Yes ☒ No

Provide the date that the laboratory data was available. Date: _____

Or ☐ Awaiting laboratory data with the expected due date: _____

If "Yes" to #11 above, answer the following:

Has the Vapor Concern (VC) Response Action Form notifying the NJDEP of the exceedances
been submitted? ☐ Yes ☐ No

Date: _____

Has a plan to mitigate and monitor the exposure been submitted? ☐ Yes ☐ No

Date: _____

Has the Mitigation Response Action Report been submitted? ☐ Yes ☐ No

Date: _____

12. Has the vapor intrusion investigation been completed? ☒ Yes ☐ No
If "No", is the vapor intrusion investigation stepping out as part of the site
investigation or remedial investigation. (If "No," attach justification) ☐ Yes ☐ No

SECTION F. ECOLOGICAL RECEPTORS

1. Has an Ecological Evaluation (EE) has been conducted? [N.J.A.C. 7:26E-1.16] ☒ Yes ☐ No

Date conducted: _____ 4 EE's completed: 05/2000, 07/2000, 08/2006, 03/2009

2. Do the results of an EE trigger a remedial investigation of ecological receptors? [N.J.A.C. 7:26E-4.8] ☐ Yes ☒ No

3. Has a remedial investigation of ecological receptors been conducted? ☐ Yes ☒ No

Date conducted: _____

4. Provide the following information for any surface water body on or within 200 feet of the site:

Surface Water Body Name	Stream Classification	Antidegradation Designation	Trout Production	Trout Maintenance
Hackensack River	SE3	Cat 2	☐	☐
			☐	☐
			☐	☐
			☐	☐
			☐	☐
			☐	☐

5. Does the site contain any features regulated by the Land Use Regulation Program (LURP)? (e.g. wetlands, flood hazard area, tidelands, etc.). ☐ Yes ☒ No

   If "Yes," identify the type(s) of features: _____

6. Have any formal LURP jurisdiction letters or approvals been issued for the site? ☐ Yes ☒ No

   If "Yes," what is the LURP Program Interest (PI) number(s) for the site? _____

7. Have any applications for formal LURP jurisdiction letters or approvals been submitted the NJDEP? ☐ Yes ☒ No

   If "Yes," what is the LURP Program Interest (PI) number(s) for the site? _____

8. Is free product or residual product located within 100 feet from an ecological receptor? ☐ Yes ☒ No

9. Does available data indicate an impact on Ecological receptor(s), Surface water, or Sediment? ☐ Yes ☒ No

   If "Yes,"

   a) Check all that apply:

      ☐ Ecological receptor(s) ☐ Surface water ☐ Sediment

   b) Submit with this evaluation either a technical document that includes contaminant summary information, or a description of the type of contamination, a schedule, and a description of all actions to be taken to mitigate exposure.

Completed forms should be sent to the municipal clerk, designate health department, and:

New Jersey Department of Environmental Protection
Site Remediation Program

RECEPTOR EVALUATION (RE) FORM

Date Stamp
(For Department use only)

SECTION A. SITE

Site Name: Study Area 6 North Site 088 (Jersey City Incinerator Authority Well Site)

Program Interest (PI) Number(s): 014142, G000008711

Case Tracking Number(s) for this submission: 97-12-30-1315-23

This form must be attached to the Cover/Certification Form if not submitted through the RIR Online Service

Indicate the type of submission:

☐ Initial RE Submission

☒ Updated RE Submission

Indicate the reason for submission of an updated RE form

☐ Submission of an Immediate Environmental Concern (IEC) source control report;
☐ Submission of a Remedial Investigation Report;
☒ Submission of a Remedial Action Report;

Check if included in updated RE

☐ The known concentration or extent of contamination in any medium has increased;
☐ A new AOC has been identified;
☐ A new receptor is identified;
☐ A new exposure pathway has been identified.

SECTION B. ON SITE AND SURROUNDING PROPERTY USE

1. Identify any sensitive populations/uses that are currently on-site or surrounding property usage within 200 feet of the site boundary (check all that apply):

	On-site	Off-site
None of the following	☒	☒
Residences or residential property	☐	☐
Public or Private Schools grades K-12	☐	☐
Child care centers	☐	☐
Public parks, playgrounds or other recreation areas	☐	☐
Other sensitive population use(s) Explain _____	☐	☐

If any of the above applies, attach a list of addresses, facility names, type of use, and a map depicting each location relative to the site. See Attached Figure B-1

2. Current site uses (check all that apply):

☐ Industrial ☐ Residential ☒ Commercial ☐ Agricultural
☐ School or child care ☐ Government ☐ Park or recreational use
☒ Vacant ☐ Other: _____

3. Planned future site uses and off-site use within 200 ft of site boundary (check all that apply):

☐ Industrial ☒ Residential ☒ Commercial ☐ Agricultural
☐ School or child care ☐ Government ☒ Park or recreational use
☐ Vacant ☐ Other: _____

Provide a map depicting the location of the proposed changes in land use. See Attached Figure B-3

SECTION C. DESCRIPTION OF CONTAMINATION

1. Identify if any of the following exist at the site (check all that apply):
   - ☐ Free product [N.J.A.C. 7:26E-1.8] identified is ☐ LNAPL* or ☐ DNAPL**. Date identified: _____
   - ☐ Residual product [N.J.A.C. 7:26E-1.8]
   - ☒ Other high concentration source materials not identified above (e.g., buried drums, containers, unsecured friable asbestos)

     Explain: FIll material containing chromite ore processing residue (COPR)

   * LNAPL – measured thickness of .01 feet or more

   **DNAPL – See US EPA DNAPL Overview

2. Soil Migration Pathway

   Has soil contamination been delineated to the applicable Direct Contact Soil Remediation Standard? ..... ☒ Yes ☐ No

   Are all soils either below the applicable Direct Contact Criteria or under an institutional control (i.e. deed notice)? ..... ☒ Yes ☐ No

3. If this evaluation is submitted with a technical document that includes contaminant summary information, proceed to Section D. Otherwise attach a brief summary of all currently available data and information to be included in the site investigation or remedial investigation report. See Attached RAR

SECTION D. GROUND WATER USE

1. Has the requirement for ground water sampling been triggered? ..... ☒ Yes ☐ No ☐ Unknown
   If "No," proceed to Section F. If "Unknown," explain:

   Yes See Attached RAR

2. Is Ground water contaminated above the Ground Water Remediation Standards [N.J.A.C.7:9C]? ..... ☒ Yes ☐ No ☐ Unknown

   Or ☐ Awaiting laboratory data with the expected due date: _____

   If "Yes," provide the date that the laboratory data was available and confirmed contamination above the Ground Water Remediation Standards. Date: 03/13/2009

   If "Unknown," explain: _____

   If "No," or awaiting laboratory data proceed to Section F.

3. Has ground water contamination been delineated to the applicable Remediation Standard? ..... ☒ Yes ☐ No
4. Has a well search been completed? ..... ☒ Yes ☐ No

   Date of most recent or updated well search: 12/11/2015

   Identify if any of the following conditions exist based on the well search [N.J.A.C.7:26E-1.14(a)] (check all that apply):
   - ☐ Potable wells located within 500 feet from the downgradient edge of the currently known extent of contamination.
   - ☐ Potable well located 250 feet upgradient or 500 feet side gradient of the currently known extent of contamination.
   - ☐ Ground water contamination is located within a Tier 1 wellhead protection area (WHPA). See Tables Attached to RAR

5. Is a completed Well Search Spreadsheet or historical well search table attached and has an electronic copy of the spreadsheet been submitted to srpgis_wrs@dep.state.nj.us. ..... ☒ Yes ☐ No

   If "No," explain: Yes See Attached Well Search

6. Are any private potable or irrigation wells located within ½ mile of the currently known extent of contamination? ..... ☐ Yes ☒ No

   If "Yes," was a door to door survey completed? ..... ☐ Yes ☐ No

   If survey was not completed explain: _____

7. Has sampling been conducted of ☐ potable well(s) and /or ☐ non-potable use well(s)? ..... ☐ Yes ☒ No

   If "No," provide justification then proceed to Section E.

   No, wells do not exist in the search radius

8 Has contamination been identified in potable well(s) above Ground Water Remediation Standards that is not suspected to be from the site? (If "Yes," provide justification) ..... ☐ Yes ☐ No

_____

9 Has contamination been identified in potable well(s) that is above the Ground Water Remediation Standards or Federal Drinking Water Standards? ..... ☐ Yes ☐ No

Provide date laboratory data was received: _____

Or ☐ awaiting laboratory data with the expected due date: _____

If "Yes" for potable well contamination **not attributable to background**, follow the IEC Guidance Document at http://www.nj.gov/dep/srp/guidance/index.html#iec for required actions and answer the following:

Has an engineered system response action been completed on all receptors? ..... ☐ Yes ☐ No

Provide a brief narrative description:

Date completed: _____ NJDEP Case Manager: _____

10. Were Non-potable use well(s) sampled and results were above Class II Ground Water Remediation Standards? ..... ☐ Yes ☐ No

Provide date laboratory data was received: _____

Or ☐ awaiting laboratory data with the expected due date: _____

11. Has the ground water use evaluation been completed? ..... ☐ Yes ☐ No

SECTION E. VAPOR INTRUSION (VI)

1. Contaminants present in ground water exceed the Vapor Intrusion Ground Water Screening Levels that trigger a VI evaluation. (see NJDEP Vapor Intrusion Technical Guidance). ... ☒ Yes ☐ No ☐ Unknown

Or ☐ Awaiting laboratory data and the expected due date: _____

Provide the date that the laboratory data was available and confirmed contamination above the Vapor Intrusion Trigger Levels. Date: 03/13/2009

2. Other existing conditions that trigger a VI evaluation. (see NJDEP Vapor Intrusion Technical Guidance)

☐ Wet basement or sump containing free product or ground water containing volatile organics
☐ Methane generating conditions causing oxygen deficient or explosion concern
☐ Other human or safety concern from the VI pathway (i.e. elemental mercury, unsaturated contamination, elevated soil gas or indoor vapor (explain):

If you answered "No," or awaiting laboratory data to Question 1., *and* did not check any boxes in Question 2, proceed to Section F, "Ecological Receptors", otherwise complete the rest of this section.

3. Has ground water contamination been delineated to the applicable Ground Water Vapor Screening Level? ..... ☒ Yes ☐ No

4. Was a site specific screening level, modeling or other alternative approach employed for the VI pathway? ..... ☐ Yes ☒ No

5. Identify and locate on a scaled map any buildings/sensitive populations that exist within the following distances from ground water contamination with concentrations above the Vapor Intrusion Ground Water Screening Levels or specific threats (check all that apply):

☐ 30 feet of petroleum free product or dissolved petroleum hydrocarbon contamination in ground water
☐ 100 feet of any non-petroleum free product or any non-petroleum dissolved volatile organic ground water contamination
☒ No buildings exist within the specified distances

See Attached RAR

6. The vapor intrusion pathway is a concern at or adjacent to the site (if "No," attach justification) ..... ☒ Yes ☐ No

7. Has soil gas sampling of the building(s) been conducted? ☐ Yes ☐ No ☒ N/A
   If "No," or "N/A," proceed to #12

8. Has indoor air sampling been conducted at the identified building(s)? ☐ Yes ☐ No
   If "No," proceed to #12

9 Has indoor air contamination been identified but not suspected to be from the site?
   (if "Yes," attach justification) ☐ Yes ☐ No

10. Indoor air results were above the NJDEP's Rapid Action Levels. ☐ Yes ☐ No

   Provide the date that the laboratory data was available. Date: _____

   Or ☐ Awaiting laboratory data with the expected due date: _____

   If "Yes" to #10 above, follow the IEC Guidance Document at
   http://www.nj.gov/dep/srp/guidance/index.html#iec **for required actions.**

   The IEC engineering system response for control was implemented for all
   identified structures ☐ Yes ☐ No

   Date: _____ NJDEP Case Manager: _____

11. Indoor air sampling was conducted and results were above the NJDEP's Indoor Air Screening
   Levels but at or below the Rapid Action Levels ☐ Yes ☐ No

   Provide the date that the laboratory data was available. Date: _____

   Or ☐ Awaiting laboratory data with the expected due date: _____

   If "Yes" to #11 above, answer the following:

   Has the Vapor Concern (VC) Response Action Form notifying the NJDEP of the exceedances
   been submitted? ☐ Yes ☐ No

   Date: _____

   Has a plan to mitigate and monitor the exposure been submitted? ☐ Yes ☐ No

   Date: _____

   Has the Mitigation Response Action Report been submitted? ☐ Yes ☐ No

   Date: _____

12. Has the vapor intrusion investigation been completed? ☒ Yes ☐ No
   If "No", is the vapor intrusion investigation stepping out as part of the site
   investigation or remedial investigation. (If "No," attach justification) ☐ Yes ☐ No

SECTION F. ECOLOGICAL RECEPTORS

1. Has an Ecological Evaluation (EE) has been conducted? [N.J.A.C. 7:26E-1.16] ☒ Yes ☐ No

   Date conducted: 07/01/2000 4 EE's Completed: 05/2000, 07/2000, 06/2006, 03/2009

2. Do the results of an EE trigger a remedial investigation of ecological receptors? [N.J.A.C. 7:26E-4.8] ☐ Yes ☒ No

3. Has a remedial investigation of ecological receptors been conducted? ☐ Yes ☒ No

   Date conducted: _____

4. Provide the following information for any surface water body on or within 200 feet of the site:

Surface Water Body Name	Stream Classification	Antidegradation Designation	Trout Production	Trout Maintenance
None			☐	☐
			☐	☐
			☐	☐
			☐	☐
			☐	☐
			☐	☐

5. Does the site contain any features regulated by the Land Use Regulation Program (LURP)? (e.g. wetlands, flood hazard area, tidelands, etc.). ☐ Yes ☒ No

   If "Yes," identify the type(s) of features: _____

6. Have any formal LURP jurisdiction letters or approvals been issued for the site? ☐ Yes ☒ No

   If "Yes," what is the LURP Program Interest (PI) number(s) for the site? _____

7. Have any applications for formal LURP jurisdiction letters or approvals been submitted the NJDEP? ☐ Yes ☒ No

   If "Yes," what is the LURP Program Interest (PI) number(s) for the site? _____

8. Is free product or residual product located within 100 feet from an ecological receptor? ☐ Yes ☒ No

9. Does available data indicate an impact on Ecological receptor(s), Surface water, or Sediment? ☐ Yes ☒ No

   If "Yes,"

   a) Check all that apply:

      ☐ Ecological receptor(s) ☐ Surface water ☐ Sediment

   b) Submit with this evaluation either a technical document that includes contaminant summary information, or a description of the type of contamination, a schedule, and a description of all actions to be taken to mitigate exposure.

Completed forms should be sent to the municipal clerk, designate health department, and:

Date Stamp
(For Department use only)

SECTION A. SITE NAME AND LOCATION

Site Name: Study Area SA-6 North Open Space Area

List All AKAs: Site 087 JCIA Site; Site 088 JCIA Well Site; See Section 1.2 of RAR for additional AKAs

Street Address: 501, 555, and 575 Route 440

Municipality: Jersey City (Township, Borough, or City)

County: Hudson Zip Code: 07305-4806

Program Interest (PI) Number(s): G000008710, G000008711

Case Tracking Number(s):

Municipal Block(s) and Lot(s) of the entire site: Block 21901 Lots 5-10

Is this site a Federal case?..... ☐ Yes ☒ No

If "Yes," indicate the Federal Case Type:

☐ **RCRA GPRA 2020** ☐ **CERCLA/NPL** ☐ **USDOD** ☐ **USDOE**

☐ Other (explain):

SECTION B. PERMIT APPLICATION, MODIFICATION, AND TERMINATION FEES

If this Application is for a Modification or Termination please confirm:

☐ All outstanding Remedial Action Permit annual fees are paid in full.

Note: The application will not be processed until all outstanding fees have been paid.

Select One: **Effective July 1, 2016**

☒ Remedial Action Permit Application.....$1,175.00
☐ Remedial Action Permit Modification.....$780.00
☐ Remedial Action Permit Termination.....$1,175.00

SECTION C. FEE BILLING CONTACT PERSON

Business Name: Honeywell International Inc. Phone: (973) 455-2175

Contact: William Hague Title: Director - Remediation Design and Construction

Mailing Address: 115 Tabor Rd

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

SECTION D. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION – CO-PERMITTEE

Affiliation/Name of Organization: Honeywell International Inc.

First Name of Contact: William Last Name of Contact: Hague

Title: Director - Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Rd

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

☒ Primary Responsibility for Permit Compliance

SECTION E. CURRENT OWNER OF THE SITE – CO-PERMITTEE

Affiliation/Name of Organization: Honeywell International Inc.

First Name of Contact: William Last Name of Contact: Hague

Title: Director - Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Rd

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

☒ Primary Responsibility for Permit Compliance

SECTION F. DEED NOTICE INFORMATION

1. Attach the following:

   ☐ Copy of the Filed Deed Notice or Deed Notice Termination document with Book & Page Numbers (both in paper and electronically in Adobe PDF format)

   ☒ Remedial Action Report (RAR) (electronically only - in Adobe PDF format)
   Provide the location in the RAR (*page # / figure #)*
   of the map(s) showing soil contaminant delineation: Figure 16

2. Deed Notice filing date:

3. Name of County Office the Deed Notice was filed in: Hudson

4. Book Number the Deed Notice is filed in: 21901 Page Numbers: First: to Last:

5. Total Number of Pages filed:

6. Instrument/Control/File Number(s):

7. Block(s) and Lot(s): 21901 Lots 5-10

8. Is the entire site restricted? ☐ Yes ☒ No

   If "No," what percent of the site is restricted? 100 % Open Space Area

9. Is this Deed Notice for Historic Fill material at the site? ☒ Yes ☐ No

   If "Yes," is the Historic Fill material impacting the ground water at the site? ☒ Yes ☐ No

10. If Historic Fill material is impacting the ground water, has the CEA/WRA Fact Sheet Form been submitted to the NJDEP? ☒ Yes ☐ No ☐ N/A

    If "No," attach a completed CEA/WRA Fact Sheet Form to this application.

11. Has the Deed Notice restricted area been accurately mapped on NJ-GeoWeb? ☐ Yes ☒ No

    If "No", then submit a GIS compatible map of the Deed Notice restricted area by email to srpgis_dn@dep.nj.gov and provide the date the email was sent:

SECTION G. FINANCIAL ASSURANCE

1. Does the Remedial Action/Deed Notice include an engineering control? ☐ Yes ☐ No

   If "No," proceed to the next section.

2. Are any of the entities identified in Section D or E exempt from establishing Financial Assurance pursuant to N.J.A.C. 7:26C-7.10(c)? ☐ Yes ☒ No

   If "Yes," check the exemption(s) that applies:

Person Responsible for Conducting the Remediation – Co-Permittee	Current Owner of the Site – Co-Permittee	
☐	☐	Government entity
☐	☐	A person not liable pursuant to the Spill Act that purchased contaminated property before May 7, 2009
☐	☐	A person that conducted remediation at their primary or secondary residence
☐	☐	Owner or operator of a child care center
☐	☐	Public school or private school
☐	☐	Owner or operator of a small business responsible for conducting remediation at the location of the business

If all of the entities identified in Section D or E are exempt, proceed to the next section.

3. Is the current owner of the site either a homeowner association or a condominium association pursuant to the New Jersey Common Interest Association Act, N.J.S.A. 46:8A-1 et seq.? ☐ Yes ☒ No

   If "Yes," and the association is identified in Section E of this Permit Application, attach a copy of the association's annual budget that includes funds for the operation, maintenance, and monitoring of the engineering control(s) at the site.

4. Identify the estimated cost of the operation, maintenance, and monitoring of the engineering control(s) at the site: $ 7,900,000.00

5. Are you using an existing Remediation Funding Source (RFS) mechanism for the site as the Financial Assurance? ☐ Yes ☒ No

   If "Yes," have <u>all</u> of the following criteria been met? ☐ Yes ☐ No

   a. There are no remaining areas of concern at the site that need additional remediation (i.e., the LSRP will be issuing a full site Remedial Action Outcome as a result of this permit issuance);
   b. The amount of funds in the RFS equals the amount of funds required to be posted for Financial Assurance; and
   c. The RFS is not in the form of a self-guarantee.

   Identify the full amount of the current RFS $ _____

6. Identify the full amount established as a Financial Assurance: $ 87,507,050.00
   Attach a completed Remediation Cost Review and RFS/FA Form.

7. What is the Financial Assurance Mechanism? *(check all that apply)*
   ☐ Remediation Trust Fund ☐ Line of Credit ☐ Loan or Grant
   ☐ Environmental Insurance Policy ☒ Letter of Credit

8. Contact information at the financial institution for the Financial Assurance:

   Financial Institution: MFUG Union Bank

   First Name of Contact: _____ Last Name of Contact: _____

   Mailing Address: _____

   City/Town: _____ State: _____ Zip Code: _____

   Email Address: _____

   Phone Number: _____ Ext: _____ Fax: _____

9. Attach the original Financial Assurance mechanism or a copy of the RFS mechanism if using an existing RFS mechanism as the Financial Assurance.

SECTION H. ENGINEERING CONTROL

1. Current Land Use for the Engineering Controlled Area *(check all that apply)*

☐ Industrial	☐ Park or Recreational Use	☐ Child Care Center
☐ Residential	☐ Agricultural	☐ Hospital
☐ Commercial	☐ Road/Right of Way	☒ Vacant
☐ Government Facility	☐ School	☐ Other: _____

2. If school, childcare, or residential was checked above, was a presumptive remedy implemented pursuant to N.J.A.C. 7:26E-5.3? ..... ☐ Yes ☐ No ☒ N/A

   If "No," when was the remedy approved by the NJDEP? _____

3. Date Engineering Control(s) was installed: 10/01/2016

4. Identify below the materials used for the engineering control(s).

Area	Engineering Control Description	Thickness	Units
Open Space Area	Lining	1	Inches
	Soil	1	Feet

*Other, describe:

5. In the following table, please list all contaminants that require the use of a Deed Notice/engineering control(s) (attach additional pages if needed). *Please do not attach tables from reports.*

Contaminant	Concentration (mg/kg)	Depth (feet)	Residential Direct Contact Soil Remediation Standard	Non-Residential Direct Contact Soil Remediation Standard
Hexavalent Chromium	See Table		20 mg/kg*	20 mg/kg*
*Per 2007 Chromium Policy				
Benzene	2.7-67.3	6-16	2	5
Methyl Tert Butyl Ether	129	7-7.5	110	320
Historic Fill (see table)				

SECTION I. RECEPTOR EVALUATION SUMMARY

1. Have any of the following been identified within 200 feet of the site boundary? Check all that apply.

   ☐ Residences
   ☐ Potable wells
   ☐ Public and private schools (K-12)
   ☐ Child care facilities
   ☐ Public parks and playgrounds
   ☐ Surface water
   ☐ Tier 1 Well-head protection areas
   ☐ Ecological receptor (e.g., wetlands, pinelands) Specify: _____

2. Have any of these receptors been impacted?..... ☐ Yes ☒ No

   If "Yes," date of Receptor Control: _____ Date of IEC Contaminant Source Control: _____

3. Have any vapor intrusion engineering controls/mitigation systems been installed as a result of this soil contamination?..... ☐ Yes ☒ No

   If "Yes," indicate the type of engineering control that was implemented: *(check all that apply)*

   ☐ Subsurface Depressurization System
   ☐ Subsurface Ventilation System
   ☐ Soil Vapor Extraction System
   ☐ HVAC Positive Pressure
   ☐ Other (specify): _____

   Attach the Operation, Maintenance, and Monitoring (OMM) Plan for the vapor intrusion engineering control(s)/mitigation system(s) both in paper and electronically (in "MS Word" file format). The OMM Plan should clearly identify the building(s) and/or structure(s) and vapor intrusion engineering control(s)/mitigation system(s) that are in place (e.g., active or passive), including the address and block and lot of each impacted property.

SECTION J. OTHER REMEDIAL ACTION PERMITS

Are other Remedial Action Permits also being applied for or already obtained?..... ☒ Yes ☐ No

If "Yes," please list the Permit Type, Permit Number, and Effective Date for each Remedial Action Permit obtained or the type of Remedial Action Permit(s) being applied for.

Groundwater RAP for Chromium
Non-Chromium Soil RAP
Non-Chromium Groundwater RAP

SECTION K. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION INFORMATION AND CERTIFICATION

Full Legal Name of the Person Responsible for Conducting the Remediation: Honeywell International Inc.

Representative First Name: William Representative Last Name: Hague

Title: Global Director, Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Road

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

This certification shall be signed by the person responsible for conducting the remediation who is submitting this notification in accordance with Administrative Requirements for the Remediation of Contaminated Sites rule at N.J.A.C. 7:26C-1.5(a).

I certify under penalty of law that I have personally examined and am familiar with the information submitted herein, including all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge, I believe that the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. I am also aware that if I knowingly direct or authorize the violation of any statute, I am personally liable for the penalties.

Signature: Date:

☐ Primary Responsibility for Permit Compliance

1. Does the Remedial Action/Deed Notice include an engineering control? ..... ☐ Yes ☐ No
   If "No," proceed to the next section.
2. Are you exempt from establishing financial assurance pursuant to N.J.A.C. 7:26C-7.10(c)? ..... ☐ Yes ☐ No
   If "Yes," check the exemption(s) that applies:
   - ☐ Government entity
   - ☐ A person not liable pursuant to the Spill Act that purchased contaminated property before May 7, 2009
   - ☐ A person that conducted remediation at their primary or secondary residence
   - ☐ Owner or operator of a child care center
   - ☐ Public school or private school
   - ☐ Owner or operator of a small business responsible for conducting remediation at the location of the business
3. Identify the estimated cost of the operation, maintenance, and monitoring of the engineering control(s) at the site: ..... $ _____
4. Are you using an existing Remediation Funding Source (RFS) mechanism for the site as the Financial Assurance? ..... ☐ Yes ☐ No
   If "Yes," have <u>all</u> of the following criteria been met? ..... ☐ Yes ☐ No
   a. There are no remaining areas of concern at the site that need additional remediation (i.e., the LSRP will be issuing a full site Remedial Action Outcome as a result of this permit issuance);
   b. The amount of funds in the RFS equals the amount of funds required to be posted for Financial Assurance; and
   c. The RFS is not in the form of a self-guarantee.

   Identify the full amount of the current RFS ..... $ _____
5. Identify the full amount established as a Financial Assurance: ..... $ _____
   Attach a completed Remediation Cost Review and RFS/FA Form.
6. What is the Financial Assurance Mechanism? *(check all that apply)*
   ☐ Remediation Trust Fund ☐ Line of Credit ☐ Loan or Grant
   ☐ Environmental Insurance Policy ☐ Letter of Credit
7. Contact information at the financial institution for the Financial Assurance:

   Financial Institution: _____

   First Name of Contact: _____ Last Name of Contact: _____

   Mailing Address: _____

   City/Town: _____ State: _____ Zip Code: _____

   Email Address: _____

   Phone Number: _____ Ext: _____ Fax: _____
8. Attach the original Financial Assurance mechanism or a copy of the RFS mechanism if using an existing RFS mechanism as the Financial Assurance.

☐ LSRP ☐ Subsurface Evaluator (UHOT only)

Date Stamp
(For Department use only)

SECTION A. SITE NAME AND LOCATION

Site Name: Study Area SA-6 North Route 440 Deferred Area

List All AKAs: Site 087 JCIA Site; Site 088 JCIA Well Site; See Section 1.2 of RAR for additional AKAs

Street Address: 501, 555, and 575 Route 440

Municipality: Jersey City (Township, Borough, or City)

County: Hudson Zip Code: 07305-4806

Program Interest (PI) Number(s): G000008710, G000008711

Case Tracking Number(s):

Municipal Block(s) and Lot(s) of the entire site: Block 21901 Lots 5-10

Is this site a Federal case?..... ☐ Yes ☒ No

If "Yes," indicate the Federal Case Type:

☐ **RCRA GPRA 2020** ☐ **CERCLA/NPL** ☐ **USDOD** ☐ **USDOE**

☐ Other (explain):

SECTION B. PERMIT APPLICATION, MODIFICATION, AND TERMINATION FEES

If this Application is for a Modification or Termination please confirm:

☐ All outstanding Remedial Action Permit annual fees are paid in full.

Note: The application will not be processed until all outstanding fees have been paid.

Select One: **Effective July 1, 2016**

☒ Remedial Action Permit Application.....$1,175.00
☐ Remedial Action Permit Modification.....$780.00
☐ Remedial Action Permit Termination.....$1,175.00

SECTION C. FEE BILLING CONTACT PERSON

Affiliation/Name of Organization: Honeywell International Inc.

First Name of Contact: William Last Name of Contact: Hague

Title: Director - Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Rd

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

☒ Primary Responsibility for Permit Compliance

SECTION F. DEED NOTICE INFORMATION

1. Attach the following:

   ☐ Copy of the Filed Deed Notice or Deed Notice Termination document with Book & Page Numbers (both in paper and electronically in Adobe PDF format)

   ☒ Remedial Action Report (RAR) (electronically only - in Adobe PDF format)
   Provide the location in the RAR (*page # / figure #)*
   of the map(s) showing soil contaminant delineation: Figure 16

2. Deed Notice filing date:

3. Name of County Office the Deed Notice was filed in: Hudson

4. Book Number the Deed Notice is filed in: 21901 Page Numbers: First: to Last:

5. Total Number of Pages filed:

6. Instrument/Control/File Number(s):

7. Block(s) and Lot(s): A Portion of Block 22901 Lot 5

8. Is the entire site restricted? ☐ Yes ☒ No

   If "No," what percent of the site is restricted? 0.2 % Route 440 Deferred Area

9. Is this Deed Notice for Historic Fill material at the site? ☒ Yes ☐ No

   If "Yes," is the Historic Fill material impacting the ground water at the site? ☒ Yes ☐ No

10. If Historic Fill material is impacting the ground water, has the CEA/WRA Fact Sheet Form been submitted to the NJDEP? ☒ Yes ☐ No ☐ N/A

    If "No," attach a completed CEA/WRA Fact Sheet Form to this application.

11. Has the Deed Notice restricted area been accurately mapped on NJ-GeoWeb? ☐ Yes ☒ No

    If "No", then submit a GIS compatible map of the Deed Notice restricted area by email to srpgis_dn@dep.nj.gov and provide the date the email was sent:

SECTION G. FINANCIAL ASSURANCE

1. Does the Remedial Action/Deed Notice include an engineering control? ☐ Yes ☐ No

   If "No," proceed to the next section.

2. Are any of the entities identified in Section D or E exempt from establishing Financial Assurance pursuant to N.J.A.C. 7:26C-7.10(c)? ☐ Yes ☒ No

   If "Yes," check the exemption(s) that applies:

Person Responsible for Conducting the Remediation – Co-Permittee	Current Owner of the Site – Co-Permittee	
☐	☐	Government entity
☐	☐	A person not liable pursuant to the Spill Act that purchased contaminated property before May 7, 2009
☐	☐	A person that conducted remediation at their primary or secondary residence
☐	☐	Owner or operator of a child care center
☐	☐	Public school or private school
☐	☐	Owner or operator of a small business responsible for conducting remediation at the location of the business

If all of the entities identified in Section D or E are exempt, proceed to the next section.

3. Is the current owner of the site either a homeowner association or a condominium association pursuant to the New Jersey Common Interest Association Act, N.J.S.A. 46:8A-1 et seq.? ☐ Yes ☒ No

   If "Yes," and the association is identified in Section E of this Permit Application, attach a copy of the association's annual budget that includes funds for the operation, maintenance, and monitoring of the engineering control(s) at the site.

4. Identify the estimated cost of the operation, maintenance, and monitoring of the engineering control(s) at the site: $ 7,900,000.00

5. Are you using an existing Remediation Funding Source (RFS) mechanism for the site as the Financial Assurance? ☐ Yes ☒ No

   If "Yes," have <u>all</u> of the following criteria been met? ☐ Yes ☐ No

   a. There are no remaining areas of concern at the site that need additional remediation (i.e., the LSRP will be issuing a full site Remedial Action Outcome as a result of this permit issuance);
   b. The amount of funds in the RFS equals the amount of funds required to be posted for Financial Assurance; and
   c. The RFS is not in the form of a self-guarantee.

   Identify the full amount of the current RFS $ _____

6. Identify the full amount established as a Financial Assurance: $ 87,507,050.00
   Attach a completed Remediation Cost Review and RFS/FA Form.

7. What is the Financial Assurance Mechanism? *(check all that apply)*
   ☐ Remediation Trust Fund ☐ Line of Credit ☐ Loan or Grant
   ☐ Environmental Insurance Policy ☒ Letter of Credit

8. Contact information at the financial institution for the Financial Assurance:

   Financial Institution: MFUG Union Bank

   First Name of Contact: _____ Last Name of Contact: _____

   Mailing Address: _____

   City/Town: _____ State: _____ Zip Code: _____

   Email Address: _____

   Phone Number: _____ Ext: _____ Fax: _____

9. Attach the original Financial Assurance mechanism or a copy of the RFS mechanism if using an existing RFS mechanism as the Financial Assurance.

SECTION H. ENGINEERING CONTROL

1. Current Land Use for the Engineering Controlled Area *(check all that apply)*

☐ Industrial	☐ Park or Recreational Use	☐ Child Care Center
☐ Residential	☐ Agricultural	☐ Hospital
☐ Commercial	☐ Road/Right of Way	☒ Vacant
☐ Government Facility	☐ School	☐ Other: _____

2. If school, childcare, or residential was checked above, was a presumptive remedy implemented pursuant to N.J.A.C. 7:26E-5.3? ..... ☐ Yes ☐ No ☒ N/A

   If "No," when was the remedy approved by the NJDEP? _____

3. Date Engineering Control(s) was installed: 10/01/2016

4. Identify below the materials used for the engineering control(s).

Area	Engineering Control Description	Thickness	Units
Route 440 Deferred Area	Other *	0.5	Inches
	Permeable Cover	6	Inches

*Other, describe:

Geotextile Demarcation Fabric; Permeable Cover = gravel

5. In the following table, please list all contaminants that require the use of a Deed Notice/engineering control(s) (attach additional pages if needed). *Please do not attach tables from reports.*

Contaminant	Concentration (mg/kg)	Depth (feet)	Residential Direct Contact Soil Remediation Standard	Non-Residential Direct Contact Soil Remediation Standard
Hexavalent Chromium	26 - 4690	0 - 12	20 mg/kg*	20 mg/kg*
*Per 2007 Chromium Policy				

SECTION I. RECEPTOR EVALUATION SUMMARY

1. Have any of the following been identified within 200 feet of the site boundary? Check all that apply.

   ☐ Residences
   ☐ Potable wells
   ☐ Public and private schools (K-12)
   ☐ Child care facilities
   ☐ Public parks and playgrounds
   ☐ Surface water
   ☐ Tier 1 Well-head protection areas
   ☐ Ecological receptor (e.g., wetlands, pinelands) Specify: _____

2. Have any of these receptors been impacted?..... ☐ Yes ☒ No

   If "Yes," date of Receptor Control: _____ Date of IEC Contaminant Source Control: _____

3. Have any vapor intrusion engineering controls/mitigation systems been installed as a result of this soil contamination?..... ☐ Yes ☒ No

   If "Yes," indicate the type of engineering control that was implemented: *(check all that apply)*

   ☐ Subsurface Depressurization System
   ☐ Subsurface Ventilation System
   ☐ Soil Vapor Extraction System
   ☐ HVAC Positive Pressure
   ☐ Other (specify): _____

   Attach the Operation, Maintenance, and Monitoring (OMM) Plan for the vapor intrusion engineering control(s)/mitigation system(s) both in paper and electronically (in "MS Word" file format). The OMM Plan should clearly identify the building(s) and/or structure(s) and vapor intrusion engineering control(s)/mitigation system(s) that are in place (e.g., active or passive), including the address and block and lot of each impacted property.

SECTION J. OTHER REMEDIAL ACTION PERMITS

Are other Remedial Action Permits also being applied for or already obtained?..... ☒ Yes ☐ No

If "Yes," please list the Permit Type, Permit Number, and Effective Date for each Remedial Action Permit obtained or the type of Remedial Action Permit(s) being applied for.

Affiliation/Name of Organization: _____

First Name of Contact: _____ Last Name of Contact: _____

Phone Number: _____ Ext: _____ Fax: _____

Title: _____

City/Town: _____ State: _____ Zip Code: _____

Email Address: _____

☐ Primary Responsibility for Permit Compliance

1. Does the Remedial Action/Deed Notice include an engineering control? ..... ☐ Yes ☐ No
   If "No," proceed to the next section.
2. Are you exempt from establishing financial assurance pursuant to N.J.A.C. 7:26C-7.10(c)? ..... ☐ Yes ☐ No
   If "Yes," check the exemption(s) that applies:
   - ☐ Government entity
   - ☐ A person not liable pursuant to the Spill Act that purchased contaminated property before May 7, 2009
   - ☐ A person that conducted remediation at their primary or secondary residence
   - ☐ Owner or operator of a child care center
   - ☐ Public school or private school
   - ☐ Owner or operator of a small business responsible for conducting remediation at the location of the business
3. Identify the estimated cost of the operation, maintenance, and monitoring of the engineering control(s) at the site: ..... $ _____
4. Are you using an existing Remediation Funding Source (RFS) mechanism for the site as the Financial Assurance? ..... ☐ Yes ☐ No
   If "Yes," have <u>all</u> of the following criteria been met? ..... ☐ Yes ☐ No
   a. There are no remaining areas of concern at the site that need additional remediation (i.e., the LSRP will be issuing a full site Remedial Action Outcome as a result of this permit issuance);
   b. The amount of funds in the RFS equals the amount of funds required to be posted for Financial Assurance; and
   c. The RFS is not in the form of a self-guarantee.

   Identify the full amount of the current RFS ..... $ _____
5. Identify the full amount established as a Financial Assurance: ..... $ _____
   Attach a completed Remediation Cost Review and RFS/FA Form.
6. What is the Financial Assurance Mechanism? *(check all that apply)*
   ☐ Remediation Trust Fund ☐ Line of Credit ☐ Loan or Grant
   ☐ Environmental Insurance Policy ☐ Letter of Credit
7. Contact information at the financial institution for the Financial Assurance:

   Financial Institution: _____

   First Name of Contact: _____ Last Name of Contact: _____

   Mailing Address: _____

   City/Town: _____ State: _____ Zip Code: _____

   Email Address: _____

   Phone Number: _____ Ext: _____ Fax: _____
8. Attach the original Financial Assurance mechanism or a copy of the RFS mechanism if using an existing RFS mechanism as the Financial Assurance.

REMEDIAL ACTION PERMIT APPLICATION – SOIL

☐ LSRP ☐ Subsurface Evaluator (UHOT only)

Date Stamp
(For Department use only)

SECTION A. SITE NAME AND LOCATION

Site Name: Study Area SA-6 North TA-10

List All AKAs: Site 087 JCIA Site; Site 088 JCIA Well Site; See Section 1.2 of RAR for additional AKAs

Street Address: 501, 555, and 575 Route 440

Municipality: Jersey City (Township, Borough, or City)

County: Hudson Zip Code: 07305-4806

Program Interest (PI) Number(s): G000008710, G000008711

Case Tracking Number(s):

Municipal Block(s) and Lot(s) of the entire site: Block 21901 Lots 5-10

Is this site a Federal case?..... ☐ Yes ☒ No

If "Yes," indicate the Federal Case Type:

☐ **RCRA GPRA 2020** ☐ **CERCLA/NPL** ☐ **USDOD** ☐ **USDOE**

☐ Other (explain):

SECTION B. PERMIT APPLICATION, MODIFICATION, AND TERMINATION FEES

If this Application is for a Modification or Termination please confirm:

☐ All outstanding Remedial Action Permit annual fees are paid in full.

Note: The application will not be processed until all outstanding fees have been paid.

Select One: **Effective July 1, 2016**

☒ Remedial Action Permit Application.....$1,175.00
☐ Remedial Action Permit Modification.....$780.00
☐ Remedial Action Permit Termination.....$1,175.00

SECTION C. FEE BILLING CONTACT PERSON

Business Name: Honeywell International Inc. Phone: (973) 455-2175

Contact: William Hague Title: Director - Remediation Design and Construction

Mailing Address: 115 Tabor Rd

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

SECTION D. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION – CO-PERMITTEE

Affiliation/Name of Organization: Honeywell International Inc.

First Name of Contact: William Last Name of Contact: Hague

Title: Director - Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Rd

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

☒ Primary Responsibility for Permit Compliance

SECTION E. CURRENT OWNER OF THE SITE – CO-PERMITTEE

Affiliation/Name of Organization: Honeywell International Inc.

First Name of Contact: William Last Name of Contact: Hague

Title: Director - Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Rd

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

☒ Primary Responsibility for Permit Compliance

SECTION F. DEED NOTICE INFORMATION

1. Attach the following:

   ☐ Copy of the Filed Deed Notice or Deed Notice Termination document with Book & Page Numbers (both in paper and electronically in Adobe PDF format)

   ☒ Remedial Action Report (RAR) (electronically only - in Adobe PDF format)
   Provide the location in the RAR (*page # / figure #)*
   of the map(s) showing soil contaminant delineation: Figure 16

2. Deed Notice filing date:

3. Name of County Office the Deed Notice was filed in: Hudson

4. Book Number the Deed Notice is filed in: 21901 Page Numbers: First: to Last:

5. Total Number of Pages filed:

6. Instrument/Control/File Number(s):

7. Block(s) and Lot(s): Portions of Block 21901 Lots 9 and 10

8. Is the entire site restricted? ☐ Yes ☒ No

   If "No," what percent of the site is restricted? 0.45 % TA-10 Area

9. Is this Deed Notice for Historic Fill material at the site? ☒ Yes ☐ No

   If "Yes," is the Historic Fill material impacting the ground water at the site? ☒ Yes ☐ No

10. If Historic Fill material is impacting the ground water, has the CEA/WRA Fact Sheet Form been submitted to the NJDEP? ☒ Yes ☐ No ☐ N/A

    If "No," attach a completed CEA/WRA Fact Sheet Form to this application.

11. Has the Deed Notice restricted area been accurately mapped on NJ-GeoWeb? ☐ Yes ☒ No

    If "No", then submit a GIS compatible map of the Deed Notice restricted area by email to srpgis_dn@dep.nj.gov and provide the date the email was sent:

SECTION G. FINANCIAL ASSURANCE

1. Does the Remedial Action/Deed Notice include an engineering control? ☐ Yes ☐ No

   If "No," proceed to the next section.

2. Are any of the entities identified in Section D or E exempt from establishing Financial Assurance pursuant to N.J.A.C. 7:26C-7.10(c)? ☐ Yes ☒ No

   If "Yes," check the exemption(s) that applies:

Person Responsible for Conducting the Remediation – Co-Permittee	Current Owner of the Site – Co-Permittee	
☐	☐	Government entity
☐	☐	A person not liable pursuant to the Spill Act that purchased contaminated property before May 7, 2009
☐	☐	A person that conducted remediation at their primary or secondary residence
☐	☐	Owner or operator of a child care center
☐	☐	Public school or private school
☐	☐	Owner or operator of a small business responsible for conducting remediation at the location of the business

If all of the entities identified in Section D or E are exempt, proceed to the next section.

3. Is the current owner of the site either a homeowner association or a condominium association pursuant to the New Jersey Common Interest Association Act, N.J.S.A. 46:8A-1 et seq.? ☐ Yes ☒ No

   If "Yes," and the association is identified in Section E of this Permit Application, attach a copy of the association's annual budget that includes funds for the operation, maintenance, and monitoring of the engineering control(s) at the site.

4. Identify the estimated cost of the operation, maintenance, and monitoring of the engineering control(s) at the site: $ 7,900,000.00

5. Are you using an existing Remediation Funding Source (RFS) mechanism for the site as the Financial Assurance? ☐ Yes ☒ No

   If "Yes," have <u>all</u> of the following criteria been met? ☐ Yes ☐ No

   a. There are no remaining areas of concern at the site that need additional remediation (i.e., the LSRP will be issuing a full site Remedial Action Outcome as a result of this permit issuance);
   b. The amount of funds in the RFS equals the amount of funds required to be posted for Financial Assurance; and
   c. The RFS is not in the form of a self-guarantee.

   Identify the full amount of the current RFS $ _____

6. Identify the full amount established as a Financial Assurance: $ 87,507,050.00
   Attach a completed Remediation Cost Review and RFS/FA Form.

7. What is the Financial Assurance Mechanism? *(check all that apply)*
   ☐ Remediation Trust Fund ☐ Line of Credit ☐ Loan or Grant
   ☐ Environmental Insurance Policy ☒ Letter of Credit

8. Contact information at the financial institution for the Financial Assurance:

   Financial Institution: MFUG Union Bank

   First Name of Contact: _____ Last Name of Contact: _____

   Mailing Address: _____

   City/Town: _____ State: _____ Zip Code: _____

   Email Address: _____

   Phone Number: _____ Ext: _____ Fax: _____

9. Attach the original Financial Assurance mechanism or a copy of the RFS mechanism if using an existing RFS mechanism as the Financial Assurance.

SECTION H. ENGINEERING CONTROL

1. Current Land Use for the Engineering Controlled Area *(check all that apply)*

☐ Industrial	☐ Park or Recreational Use	☐ Child Care Center
☐ Residential	☐ Agricultural	☐ Hospital
☐ Commercial	☐ Road/Right of Way	☒ Vacant
☐ Government Facility	☐ School	☐ Other: _____

2. If school, childcare, or residential was checked above, was a presumptive remedy implemented pursuant to N.J.A.C. 7:26E-5.3? ..... ☐ Yes ☐ No ☒ N/A

   If "No," when was the remedy approved by the NJDEP? _____

3. Date Engineering Control(s) was installed: 10/01/2016

4. Identify below the materials used for the engineering control(s).

Area	Engineering Control Description	Thickness	Units
TA-10 Area	Soil	12	Feet
	Asphalt Cap	6	Inches

*Other, describe:

5. In the following table, please list all contaminants that require the use of a Deed Notice/engineering control(s) (attach additional pages if needed). *Please do not attach tables from reports.*

Contaminant	Concentration (mg/kg)	Depth (feet)	Residential Direct Contact Soil Remediation Standard	Non-Residential Direct Contact Soil Remediation Standard
Hexavalent Chromium	39 - 82	0 - 3	20 mg/kg*	20 mg/kg*
*Per 2007 Chromium Policy				

SECTION I. RECEPTOR EVALUATION SUMMARY

1. Have any of the following been identified within 200 feet of the site boundary? Check all that apply.

   ☐ Residences
   ☐ Potable wells
   ☐ Public and private schools (K-12)
   ☐ Child care facilities
   ☐ Public parks and playgrounds
   ☐ Surface water
   ☐ Tier 1 Well-head protection areas
   ☐ Ecological receptor (e.g., wetlands, pinelands) Specify: _____

2. Have any of these receptors been impacted?..... ☐ Yes ☒ No

   If "Yes," date of Receptor Control: _____ Date of IEC Contaminant Source Control: _____

3. Have any vapor intrusion engineering controls/mitigation systems been installed as a result of this soil contamination?..... ☐ Yes ☒ No

   If "Yes," indicate the type of engineering control that was implemented: *(check all that apply)*

   ☐ Subsurface Depressurization System
   ☐ Subsurface Ventilation System
   ☐ Soil Vapor Extraction System
   ☐ HVAC Positive Pressure
   ☐ Other (specify): _____

   Attach the Operation, Maintenance, and Monitoring (OMM) Plan for the vapor intrusion engineering control(s)/mitigation system(s) both in paper and electronically (in "MS Word" file format). The OMM Plan should clearly identify the building(s) and/or structure(s) and vapor intrusion engineering control(s)/mitigation system(s) that are in place (e.g., active or passive), including the address and block and lot of each impacted property.

SECTION J. OTHER REMEDIAL ACTION PERMITS

Are other Remedial Action Permits also being applied for or already obtained?..... ☒ Yes ☐ No

If "Yes," please list the Permit Type, Permit Number, and Effective Date for each Remedial Action Permit obtained or the type of Remedial Action Permit(s) being applied for.

Groundwater RAP for Chromium
Non-Chromium Soil RAP
Non-Chromium Groundwater RAP

SECTION K. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION INFORMATION AND CERTIFICATION

Full Legal Name of the Person Responsible for Conducting the Remediation: Honeywell International Inc.

Representative First Name: William Representative Last Name: Hague

Title: Global Director, Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Road

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

This certification shall be signed by the person responsible for conducting the remediation who is submitting this notification in accordance with Administrative Requirements for the Remediation of Contaminated Sites rule at N.J.A.C. 7:26C-1.5(a).

I certify under penalty of law that I have personally examined and am familiar with the information submitted herein, including all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge, I believe that the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. I am also aware that if I knowingly direct or authorize the violation of any statute, I am personally liable for the penalties.

Signature: Date:

Name/Title: William Hague/Global Director, Remediation Design and Con

SECTION L. CURRENT OWNER OF THE SITE INFORMATION AND CERTIFICATION

Full Legal Name of the Person who owns the site: Honeywell International Inc.

Representative First Name: William Representative Last Name: Hague

Title: Global Director, Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Road

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

This certification shall be signed by the person who owns the site and is submitting this notification in accordance with Administrative Requirements for the Remediation of Contaminated Sites rule at N.J.A.C. 7:26C-1.5(a).

I certify under penalty of law that I have personally examined and am familiar with the information submitted herein, including all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge, I believe that the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. I am also aware that if I knowingly direct or authorize the violation of any statute, I am personally liable for the penalties.

Signature: Date:

Name/Title: William Hague/Global Director, Remediation Design and Co

SECTION M. LICENSED SITE REMEDIATION PROFESSIONAL INFORMATION AND STATEMENT

LSRP ID Number: _____

First Name: _____ Last Name: _____

Phone Number: _____ Ext: _____ Fax: _____

Mailing Address: _____

City/Town: _____ State: _____ Zip Code: _____

Email Address: _____

This statement shall be signed by the LSRP who is submitting this notification in accordance with N.J.S.A. 58:10C-14, and N.J.S.A. 58:10B-1.3b(1) and (2).

I certify that I am a Licensed Site Remediation Professional authorized pursuant to N.J.S.A. 58:10C to conduct business in New Jersey. As the Licensed Site Remediation Professional of record for this remediation, I:

[SELECT ONE OR BOTH OF THE FOLLOWING AS APPLICABLE]:

☐ *directly oversaw and supervised all of the referenced remediation, and\or*

☐ *personally reviewed and accepted all of the referenced remediation presented herein.*

I believe that the information contained herein, and including all attached documents, is true, accurate and complete.

It is my independent professional judgment and opinion that the remediation conducted at this site, as reflected in this submission to the Department, conforms to, and is consistent with, the remediation requirements in N.J.S.A. 58:10C-14.

My conduct and decisions in this matter were made upon the exercise of reasonable care and diligence, and by applying the knowledge and skill ordinarily exercised by licensed site remediation professionals practicing in good standing, in accordance with N.J.S.A. 58:10C-16, in the State of New Jersey at the time I performed these professional services.

I am aware pursuant to N.J.S.A. 58:10C-17 that for purposely, knowingly or recklessly submitting false statement, representation or certification in any document or information submitted to the board or Department, etc., that there are significant civil, administrative and criminal penalties, including license revocation or suspension, fines and being punished by imprisonment for conviction of a crime of the third degree.

LSRP Signature: _____ Date: _____

LSRP Name/Title: _____

Company Name: _____

Completed forms should be sent to:

REMEDIAL ACTION PERMIT APPLICATION – SOIL

☐ LSRP ☐ Subsurface Evaluator (UHOT only)

Date Stamp
(For Department use only)

SECTION A. SITE NAME AND LOCATION

Site Name: Study Area SA-6 North Route 440 Deferred Area - Adjacent to EA1

List All AKAs: Site 087 JCIA Site; Site 088 JCIA Well Site; See Section 1.2 of RAR for additional AKAs

Street Address: 501, 555, and 575 Route 440

Municipality: Jersey City (Township, Borough, or City)

County: Hudson Zip Code: 07305-4806

Program Interest (PI) Number(s): G000008710, G000008711

Case Tracking Number(s):

Municipal Block(s) and Lot(s) of the entire site: Block 21901 Lots 5-10

Is this site a Federal case?..... ☐ Yes ☒ No

If "Yes," indicate the Federal Case Type:

☐ **RCRA GPRA 2020** ☐ **CERCLA/NPL** ☐ **USDOD** ☐ **USDOE**

☐ Other (explain):

SECTION B. PERMIT APPLICATION, MODIFICATION, AND TERMINATION FEES

If this Application is for a Modification or Termination please confirm:

☐ All outstanding Remedial Action Permit annual fees are paid in full.

Note: The application will not be processed until all outstanding fees have been paid.

Select One: **Effective July 1, 2016**

☒ Remedial Action Permit Application.....$1,175.00
☐ Remedial Action Permit Modification.....$780.00
☐ Remedial Action Permit Termination.....$1,175.00

☐ Primary Responsibility for Permit Compliance

SECTION F. DEED NOTICE INFORMATION

1. Attach the following:

   ☐ Copy of the Filed Deed Notice or Deed Notice Termination document with Book & Page Numbers (both in paper and electronically in Adobe PDF format)

   ☒ Remedial Action Report (RAR) (electronically only - in Adobe PDF format)
   Provide the location in the RAR (*page # / figure #)*
   of the map(s) showing soil contaminant delineation: Figure 16

2. Deed Notice filing date:
3. Name of County Office the Deed Notice was filed in: Hudson
4. Book Number the Deed Notice is filed in: 21901 Page Numbers: First: to Last:
5. Total Number of Pages filed:
6. Instrument/Control/File Number(s):
7. Block(s) and Lot(s): Portions of Block 21901 Lot 4
8. Is the entire site restricted? ☐ Yes ☒ No
   If "No," what percent of the site is restricted? 0.05 % Deferred Area near EA-1
9. Is this Deed Notice for Historic Fill material at the site? ☒ Yes ☐ No
   If "Yes," is the Historic Fill material impacting the ground water at the site? ☒ Yes ☐ No
10. If Historic Fill material is impacting the ground water, has the CEA/WRA Fact Sheet Form been submitted to the NJDEP? ☒ Yes ☐ No ☐ N/A
    If "No," attach a completed CEA/WRA Fact Sheet Form to this application.
11. Has the Deed Notice restricted area been accurately mapped on NJ-GeoWeb? ☐ Yes ☒ No
    If "No", then submit a GIS compatible map of the Deed Notice restricted area by email to srpgis_dn@dep.nj.gov and provide the date the email was sent:

SECTION G. FINANCIAL ASSURANCE

1. Does the Remedial Action/Deed Notice include an engineering control? ☐ Yes ☐ No

   If "No," proceed to the next section.

2. Are any of the entities identified in Section D or E exempt from establishing Financial Assurance pursuant to N.J.A.C. 7:26C-7.10(c)? ☐ Yes ☒ No

   If "Yes," check the exemption(s) that applies:

Person Responsible for Conducting the Remediation – Co-Permittee	Current Owner of the Site – Co-Permittee	
☐	☐	Government entity
☐	☐	A person not liable pursuant to the Spill Act that purchased contaminated property before May 7, 2009
☐	☐	A person that conducted remediation at their primary or secondary residence
☐	☐	Owner or operator of a child care center
☐	☐	Public school or private school
☐	☐	Owner or operator of a small business responsible for conducting remediation at the location of the business

If all of the entities identified in Section D or E are exempt, proceed to the next section.

3. Is the current owner of the site either a homeowner association or a condominium association pursuant to the New Jersey Common Interest Association Act, N.J.S.A. 46:8A-1 et seq.? ☐ Yes ☒ No

   If "Yes," and the association is identified in Section E of this Permit Application, attach a copy of the association's annual budget that includes funds for the operation, maintenance, and monitoring of the engineering control(s) at the site.

4. Identify the estimated cost of the operation, maintenance, and monitoring of the engineering control(s) at the site: $ 7,900,000.00

5. Are you using an existing Remediation Funding Source (RFS) mechanism for the site as the Financial Assurance? ☐ Yes ☒ No

   If "Yes," have <u>all</u> of the following criteria been met? ☐ Yes ☐ No

   a. There are no remaining areas of concern at the site that need additional remediation (i.e., the LSRP will be issuing a full site Remedial Action Outcome as a result of this permit issuance);
   b. The amount of funds in the RFS equals the amount of funds required to be posted for Financial Assurance; and
   c. The RFS is not in the form of a self-guarantee.

   Identify the full amount of the current RFS $ _____

6. Identify the full amount established as a Financial Assurance: $ 87,507,050.00
   Attach a completed Remediation Cost Review and RFS/FA Form.

7. What is the Financial Assurance Mechanism? *(check all that apply)*
   ☐ Remediation Trust Fund ☐ Line of Credit ☐ Loan or Grant
   ☐ Environmental Insurance Policy ☒ Letter of Credit

8. Contact information at the financial institution for the Financial Assurance:

   Financial Institution: MFUG Union Bank

   First Name of Contact: _____ Last Name of Contact: _____

   Mailing Address: _____

   City/Town: _____ State: _____ Zip Code: _____

   Email Address: _____

   Phone Number: _____ Ext: _____ Fax: _____

9. Attach the original Financial Assurance mechanism or a copy of the RFS mechanism if using an existing RFS mechanism as the Financial Assurance.

SECTION H. ENGINEERING CONTROL

1. Current Land Use for the Engineering Controlled Area *(check all that apply)*

☐ Industrial	☐ Park or Recreational Use	☐ Child Care Center
☐ Residential	☐ Agricultural	☐ Hospital
☐ Commercial	☐ Road/Right of Way	☒ Vacant
☐ Government Facility	☐ School	☐ Other: _____

2. If school, childcare, or residential was checked above, was a presumptive remedy implemented pursuant to N.J.A.C. 7:26E-5.3? ..... ☐ Yes ☐ No ☒ N/A

   If "No," when was the remedy approved by the NJDEP? _____

3. Date Engineering Control(s) was installed: 10/01/2016

4. Identify below the materials used for the engineering control(s).

Area	Engineering Control Description	Thickness	Units
Deferred Area near EA-1	Soil	1	Feet
	Other *	0.5	Inches
	Permeable Cover	6	Inches

*Other, describe:

Geotextile Demarcation Fabric

5. In the following table, please list all contaminants that require the use of a Deed Notice/engineering control(s) (attach additional pages if needed). *Please do not attach tables from reports.*

Contaminant	Concentration (mg/kg)	Depth (feet)	Residential Direct Contact Soil Remediation Standard	Non-Residential Direct Contact Soil Remediation Standard
Hexavalent Chromium	24 - 4670	0 - 7	20 mg/kg*	20 mg/kg*
*Per 2007 Chromium Policy				

SECTION I. RECEPTOR EVALUATION SUMMARY

1. Have any of the following been identified within 200 feet of the site boundary? Check all that apply.

   ☐ Residences
   ☐ Potable wells
   ☐ Public and private schools (K-12)
   ☐ Child care facilities
   ☐ Public parks and playgrounds
   ☐ Surface water
   ☐ Tier 1 Well-head protection areas
   ☐ Ecological receptor (e.g., wetlands, pinelands) Specify: _____

2. Have any of these receptors been impacted?..... ☐ Yes ☒ No

   If "Yes," date of Receptor Control: _____ Date of IEC Contaminant Source Control: _____

3. Have any vapor intrusion engineering controls/mitigation systems been installed as a result of this soil contamination?..... ☐ Yes ☒ No

   If "Yes," indicate the type of engineering control that was implemented: *(check all that apply)*

   ☐ Subsurface Depressurization System
   ☐ Subsurface Ventilation System
   ☐ Soil Vapor Extraction System
   ☐ HVAC Positive Pressure
   ☐ Other (specify): _____

   Attach the Operation, Maintenance, and Monitoring (OMM) Plan for the vapor intrusion engineering control(s)/mitigation system(s) both in paper and electronically (in "MS Word" file format). The OMM Plan should clearly identify the building(s) and/or structure(s) and vapor intrusion engineering control(s)/mitigation system(s) that are in place (e.g., active or passive), including the address and block and lot of each impacted property.

SECTION J. OTHER REMEDIAL ACTION PERMITS

Are other Remedial Action Permits also being applied for or already obtained?..... ☒ Yes ☐ No

If "Yes," please list the Permit Type, Permit Number, and Effective Date for each Remedial Action Permit obtained or the type of Remedial Action Permit(s) being applied for.

Groundwater RAP for Chromium
Non-Chromium Soil RAP
Non-Chromium Groundwater RAP

SECTION K. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION INFORMATION AND CERTIFICATION

SECTION M. LICENSED SITE REMEDIATION PROFESSIONAL INFORMATION AND STATEMENT

LSRP ID Number: _____

First Name: _____ Last Name: _____

Phone Number: _____ Ext: _____ Fax: _____

Mailing Address: _____

City/Town: _____ State: _____ Zip Code: _____

Email Address: _____

This statement shall be signed by the LSRP who is submitting this notification in accordance with N.J.S.A. 58:10C-14, and N.J.S.A. 58:10B-1.3b(1) and (2).

I certify that I am a Licensed Site Remediation Professional authorized pursuant to N.J.S.A. 58:10C to conduct business in New Jersey. As the Licensed Site Remediation Professional of record for this remediation, I:

[SELECT ONE OR BOTH OF THE FOLLOWING AS APPLICABLE]:

☐ *directly oversaw and supervised all of the referenced remediation, and\or*

☐ *personally reviewed and accepted all of the referenced remediation presented herein.*

I believe that the information contained herein, and including all attached documents, is true, accurate and complete.

It is my independent professional judgment and opinion that the remediation conducted at this site, as reflected in this submission to the Department, conforms to, and is consistent with, the remediation requirements in N.J.S.A. 58:10C-14.

My conduct and decisions in this matter were made upon the exercise of reasonable care and diligence, and by applying the knowledge and skill ordinarily exercised by licensed site remediation professionals practicing in good standing, in accordance with N.J.S.A. 58:10C-16, in the State of New Jersey at the time I performed these professional services.

I am aware pursuant to N.J.S.A. 58:10C-17 that for purposely, knowingly or recklessly submitting false statement, representation or certification in any document or information submitted to the board or Department, etc., that there are significant civil, administrative and criminal penalties, including license revocation or suspension, fines and being punished by imprisonment for conviction of a crime of the third degree.

☐	☐	Owner or operator of a small business responsible for conducting remediation at the location of the business

If all of the entities identified in Section D or E are exempt, proceed to the next section.

3. Is the current owner of the site either a homeowner association or a condominium association pursuant to the New Jersey Common Interest Association Act, N.J.S.A. 46:8A-1 et seq.? ☐ Yes ☒ No

   If "Yes," and the association is identified in Section E of this Permit Application, attach a copy of the association's annual budget that includes funds for the operation, maintenance, and monitoring of the engineering control(s) at the site.

4. Identify the estimated cost of the operation, maintenance, and monitoring of the engineering control(s) at the site: $ 7,900,000.00

5. Are you using an existing Remediation Funding Source (RFS) mechanism for the site as the Financial Assurance? ☐ Yes ☒ No

   If "Yes," have <u>all</u> of the following criteria been met? ☐ Yes ☐ No

   a. There are no remaining areas of concern at the site that need additional remediation (i.e., the LSRP will be issuing a full site Remedial Action Outcome as a result of this permit issuance);
   b. The amount of funds in the RFS equals the amount of funds required to be posted for Financial Assurance; and
   c. The RFS is not in the form of a self-guarantee.

   Identify the full amount of the current RFS $ _____

6. Identify the full amount established as a Financial Assurance: $ 87,507,050.00
   Attach a completed Remediation Cost Review and RFS/FA Form.

7. What is the Financial Assurance Mechanism? *(check all that apply)*
   ☐ Remediation Trust Fund ☐ Line of Credit ☐ Loan or Grant
   ☐ Environmental Insurance Policy ☒ Letter of Credit

8. Contact information at the financial institution for the Financial Assurance:

   Financial Institution: MFUG Union Bank

   First Name of Contact: _____ Last Name of Contact: _____

   Mailing Address: _____

   City/Town: _____ State: _____ Zip Code: _____

   Email Address: _____

   Phone Number: _____ Ext: _____ Fax: _____

9. Attach the original Financial Assurance mechanism or a copy of the RFS mechanism if using an existing RFS mechanism as the Financial Assurance.

SECTION H. ENGINEERING CONTROL

1. Current Land Use for the Engineering Controlled Area *(check all that apply)*

☐ Industrial	☐ Park or Recreational Use	☐ Child Care Center
☐ Residential	☐ Agricultural	☐ Hospital
☐ Commercial	☐ Road/Right of Way	☒ Vacant
☐ Government Facility	☐ School	☐ Other: _____

2. If school, childcare, or residential was checked above, was a presumptive remedy implemented pursuant to N.J.A.C. 7:26E-5.3? ..... ☐ Yes ☐ No ☒ N/A

   If "No," when was the remedy approved by the NJDEP? _____

3. Date Engineering Control(s) was installed: 10/01/2016

4. Identify below the materials used for the engineering control(s).

Area	Engineering Control Description	Thickness	Units
TA-7 Area	Soil	2	Feet
	Other *	6	Inches

*Other, describe:

Ashpalt or Concrete Cap

5. In the following table, please list all contaminants that require the use of a Deed Notice/engineering control(s) (attach additional pages if needed). *Please do not attach tables from reports.*

Contaminant	Concentration (mg/kg)	Depth (feet)	Residential Direct Contact Soil Remediation Standard	Non-Residential Direct Contact Soil Remediation Standard
Hexavalent Chromium	26 - 44	0 - 3	20 mg/kg*	20 mg/kg*
*Per 2007 Chromium Policy				

SECTION I. RECEPTOR EVALUATION SUMMARY

1. Have any of the following been identified within 200 feet of the site boundary? Check all that apply.

   ☐ Residences
   ☐ Potable wells
   ☐ Public and private schools (K-12)
   ☐ Child care facilities
   ☐ Public parks and playgrounds
   ☐ Surface water
   ☐ Tier 1 Well-head protection areas
   ☐ Ecological receptor (e.g., wetlands, pinelands) Specify: _____

2. Have any of these receptors been impacted?..... ☐ Yes ☒ No

   If "Yes," date of Receptor Control: _____ Date of IEC Contaminant Source Control: _____

3. Have any vapor intrusion engineering controls/mitigation systems been installed as a result of this soil contamination?..... ☐ Yes ☒ No

   If "Yes," indicate the type of engineering control that was implemented: *(check all that apply)*

   ☐ Subsurface Depressurization System
   ☐ Subsurface Ventilation System
   ☐ Soil Vapor Extraction System
   ☐ HVAC Positive Pressure
   ☐ Other (specify): _____

   Attach the Operation, Maintenance, and Monitoring (OMM) Plan for the vapor intrusion engineering control(s)/mitigation system(s) both in paper and electronically (in "MS Word" file format). The OMM Plan should clearly identify the building(s) and/or structure(s) and vapor intrusion engineering control(s)/mitigation system(s) that are in place (e.g., active or passive), including the address and block and lot of each impacted property.

SECTION J. OTHER REMEDIAL ACTION PERMITS

Are other Remedial Action Permits also being applied for or already obtained?..... ☒ Yes ☐ No

If "Yes," please list the Permit Type, Permit Number, and Effective Date for each Remedial Action Permit obtained or the type of Remedial Action Permit(s) being applied for.

Groundwater RAP for Chromium
Non-Chromium Soil RAP
Non-Chromium Groundwater RAP

SECTION K. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION INFORMATION AND CERTIFICATION

Full Legal Name of the Person Responsible for Conducting the Remediation: Honeywell International Inc.

Representative First Name: William Representative Last Name: Hague

Title: Global Director, Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Road

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

This certification shall be signed by the person responsible for conducting the remediation who is submitting this notification in accordance with Administrative Requirements for the Remediation of Contaminated Sites rule at N.J.A.C. 7:26C-1.5(a).

I certify under penalty of law that I have personally examined and am familiar with the information submitted herein, including all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge, I believe that the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. I am also aware that if I knowingly direct or authorize the violation of any statute, I am personally liable for the penalties.

Signature: Date:

Name/Title: William Hague/Global Director, Remediation Design and Con

SECTION L. CURRENT OWNER OF THE SITE INFORMATION AND CERTIFICATION

Full Legal Name of the Person who owns the site:

Representative First Name: Representative Last Name:

Title:

Phone Number: Ext: Fax:

Mailing Address:

City/Town: State: Zip Code:

Email Address:

This certification shall be signed by the person who owns the site and is submitting this notification in accordance with Administrative Requirements for the Remediation of Contaminated Sites rule at N.J.A.C. 7:26C-1.5(a).

I certify under penalty of law that I have personally examined and am familiar with the information submitted herein, including all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge, I believe that the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. SECTION M. LICENSED SITE REMEDIATION PROFESSIONAL INFORMATION AND STATEMENT

LSRP ID Number: _____

First Name: _____ Last Name: _____

Phone Number: _____ Ext: _____ Fax: _____

Mailing Address: _____

City/Town: _____ State: _____ Zip Code: _____

Email Address: _____

This statement shall be signed by the LSRP who is submitting this notification in accordance with N.J.S.A. 58:10C-14, and N.J.S.A. 58:10B-1.3b(1) and (2).

I certify that I am a Licensed Site Remediation Professional authorized pursuant to N.J.S.A. 58:10C to conduct business in New Jersey. As the Licensed Site Remediation Professional of record for this remediation, I:

[SELECT ONE OR BOTH OF THE FOLLOWING AS APPLICABLE]:

☐ *directly oversaw and supervised all of the referenced remediation, and\or*

☐ *personally reviewed and accepted all of the referenced remediation presented herein.*

I believe that the information contained herein, and including all attached documents, is true, accurate and complete.

It is my independent professional judgment and opinion that the remediation conducted at this site, as reflected in this submission to the Department, conforms to, and is consistent with, the remediation requirements in N.J.S.A. 58:10C-14.

My conduct and decisions in this matter were made upon the exercise of reasonable care and diligence, and by applying the knowledge and skill ordinarily exercised by licensed site remediation professionals practicing in good standing, in accordance with N.J.S.A. 58:10C-16, in the State of New Jersey at the time I performed these professional services.

I am aware pursuant to N.J.S.A. 58:10C-17 that for purposely, knowingly or recklessly submitting false statement, representation or certification in any document or information submitted to the board or Department, etc., that there are significant civil, administrative and criminal penalties, including license revocation or suspension, fines and being punished by imprisonment for conviction of a crime of the third degree.

LSRP Signature: _____ Date: _____

LSRP Name/Title: _____

EXEMPTION CLAIM FOR RFS ONLY (not FA)

If claiming an exemption from the requirement to post Remediation Funding Source pursuant to N.J.A.C. 7:26C-5.2(b), please check the appropriate box below and do not complete sections C through H:

- ☐ Environmental Opportunity Zone
- ☐ Innovative remedial action technology
- ☐ Unrestricted or limited restricted use remedial action
- ☐ Government entity
- ☐ Remediation at primary or secondary residence
- ☐ Owner or operator of a licensed child care center
- ☐ Public, private or charter school

NOTE: All exemptions require additional supporting documentation to be attached. Please refer to the form instructions. If the exemption is only for a portion of the site, you must complete section C through H for the portion of the site that does not meet the exemption criteria. **See instructions**.

SECTION C. PURPOSE OF SUBMISSION

Check all that apply

- ☐ Initial Remediation Funding Source pursuant to N.J.A.C. 7:26C-5.2(a) (*attach original RFS instrument and 1% surcharge payment, as applicable)*
- ☒ Initial Financial Assurance for a Remedial Action Permit pursuant to N.J.A.C. 7:26C-7 (*attach original FA instrument*)
- ☐ Initial Direct Oversight Remediation Trust Fund Agreement pursuant to N.J.A.C. 7:26C-14.2(b)5 (*attach original RTF instrument and 1% surcharge payment)*

- ☐ Initial Direct Oversight Remediation Cost Review pursuant to N.J.A.C. 7:26C-14.2(b)4
- ☐ Annual Remediation Cost Review pursuant to N.J.A.C. 7:26C-5.10 *(attach RFS instrument verification and valuation)*
- ☐ Biennial Cost Review pursuant to N.J.A.C. 7:26C-7.10 *(Remedial Action Permits)*

- ☐ Change in Remediation Funding Source or Financial Assurance Amount pursuant to N.J.A.C. 7:26C-5.11
- ☐ Change in Remediation Funding Source or Financial Assurance Mechanism pursuant to N.J.A. 7:26C-5.11(d)
- ☐ Remediation Funding Source Disbursement Notification pursuant to N.J.A.C. 7:26C-5.12(a)
- ☐ Remediation Funding Source Disbursement Request pursuant to N.J.A.C. 7:26C-5.12(b) – Direct Oversight only
- ☐ Remediation Funding Source/Financial Assurance Disbursement Request pursuant to N.J.A.C. 7:26C-5.13(d) – Department held RFS/FA

- ☐ Request Release of the Remediation Funding Source or Financial Assurance pursuant to N.J.A.C. 7:26C-5.11(e)
- ☐ Using a Remediation Funding Source as Financial Assurance

SECTION D. TYPE AND AMOUNT OF REMEDIATION FUNDING SOURCE OR FINANCIAL ASSURANCE POSTED

Initial or Existing Mechanism for ☐ RFS or ☐ FA

Check all that apply

- ☐ Letter of Credit
- ☐ Remediation Trust Fund
- ☐ Self Guarantee
- ☐ Line of Credit
- ☐ Environmental Insurance Policy
- ☐ Direct Oversight Remediation Trust Fund
- ☐ Fully Funded Trust (Existing only pre-June 1993)
- ☐ Performance Bond (Existing only pre-June 1993)
- ☐ Surety Bond (Existing only pre-June1993)

Replacement Mechanism for ☐ RFS or ☐ FA

Check all that apply

- ☐ Letter of Credit
- ☐ Remediation Trust Fund
- ☐ Self Guarantee
- ☐ Line of Credit
- ☐ Environmental Insurance Policy
- ☐ Direct Oversight Remediation Trust Fund

1. Expiration Date of Remediation Funding Source or Financial Assurance Posted: ..... _____
2. Amount of Remediation Funding Source or Financial Assurance posted prior to any increase, reduction, or disbursement addressed in this submission: ..... _____
3. Do you want to disburse, reduce, or increase the amount of the Remediation Funding Source?..... ☐ Yes ☐ No
   If "Yes," specify below:

   ☐ Disburse RFS ☐ Reduce RFS ☐ Increase RFS by (amount): _____

SECTION E. REMEDIATION COST ESTIMATION

1. Indicate the method(s) used to calculate the remediation cost review/estimate: (*Check all that apply*)

   ☐ RACER® (*attach documentation for estimate*)
   ☐ Cost-Pro® (*attach documentation for estimate*)
   ☐ Surrogate Cost (*ISRA Remediation Certifications, see for instructions for further clarification)*
   A Preliminary Assessment/Site Investigation has NOT been completed for the site, the surrogate remediation funding source has been established in the amount of $100,000 or $250,000.
   ☐ Calculated independently by LSRP/Consultant using (*attach documentation used to generate calculation*):
   ☐ Actual competitive bid(s)
   ☐ Internal company data
   ☐ Other commercially available software. Specify: _____
   ☐ Other. Specify: _____

2. Estimated cost:
   To complete remediation: _____
   or
   For Financial Assurance: _____

3. Full legal name of person who prepared the cost estimate: _____

SECTION F. COST REVIEW FOR REMEDIATION FUNDING SOURCE OR FINANCIAL ASSURANCE

1. **Remediation Funding Source – due annually**

   a. Date of most recent prior cost estimate: ..... _____

   b. Total monies spent to date to remediate the site: ..... _____
   Attach detailed summary of monies spent to remediate.

   c. Estimated remaining costs to complete the remediation: ..... _____
   Attach detailed estimate of remaining costs to complete remediation.

   d. Provide an explanation of any changes from most recent prior cost estimate.

2. Financial Assurance – due biennially

   a. Date of most recent prior cost estimate: ..... _____

   b. Current cost estimate to operate, maintain and monitor the engineering control: ..... _____

   c. Provide an explanation of any changes from most recent prior cost estimate.

SECTION G. LSRP AUTHORIZED DISBURSEMENTS NOTIFICATION AND REQUEST FOR NJDEP REDUCTION APPROVAL

1. Date previous notification/request submitted: ..... _____

2. For Remediation Trust Funds and Lines of Credit:

   a. Date the LSRP authorized disbursement (*Attach copy of authorization*): ..... _____

   b. Total amount of the authorized disbursement: ..... _____

   c. Date the holder of the RFS mechanism disbursed the funds: ..... _____

   d. Amount of RFS remaining after disbursement..... _____

3. For NJDEP authorized reductions:

   a. Amount of funds you are requesting the NJDEP authorize for reduction: ..... _____

   b. Provide RFS account information (e.g., bank name, account number, etc.):

SECTION H. REQUEST FOR NJDEP AUTHORIZED DISBURSEMENTS

ONLY for sites subject to Direct Oversight pursuant to N.J.A.C. 7:26C-14 and disbursement requests in accordance with N.J.A.C. 7:26C-5.13

1. Total amount of requested disbursement ..... _____

2. Provide the name, address, telephone number, email and tax identification number of all parties to receive payment from this disbursement and amount of each payment.

3. Attach a description of remediation costs incurred or to be incurred and the specific remediation that has or will be completed under this request including the following documentation:

   a.) For remediation costs that have been incurred, include a Remediation Report documenting the completion of the remediation activities; or

   b.) For remediation costs to be incurred, include a proposed scope of work of the remediation activities to be completed.

4. Attach an estimate of all remaining costs to complete the remediation.

SECTION I. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION INFORMATION AND CERTIFICATION

Full Legal Name of the Person Responsible for Conducting the Remediation: Honeywell International Inc.

Representative First Name: William Representative Last Name Hague

Title: Global Director, Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax:

Mailing Address: 115 Tabor Road

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

☒ The person responsible for conducting the remediation is the person responsible for establishing and maintaining a remediation funding source/financial assurance.

This certification shall be signed by the person responsible for conducting the remediation who is submitting this notification in accordance with Administrative Requirements for the Remediation of Contaminated Sites rule at N.J.A.C. 7:26C-1.5(a).

I certify under penalty of law that I have personally examined and am familiar with the information submitted herein, including all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge, I believe that the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. I am also aware that if I knowingly direct or authorize the violation of any statute, I am personally liable for the penalties.

I certify I am fully aware of the requirements of N.J.A.C. 7:26C-5 et seq. as they pertain to Remediation Funding Sources and Financial Assurances and the language of any provided Remediation Funding Source or Financial Assurance instrument does not deviate in any way from the language in the Department's model documents found at www.nj.gov/dep/srp/guidance/rfsguide except as approved by the Department.

For disbursement notification or request pursuant to N.J.A.C. 7:26C-5.12 or 5.13(d), I certify that the disbursement relates to actual remediation costs, incurred or to be incurred, and does not include ineligible legal fees.

Signature: Date:

Mailing Address: _____

City/Town: _____ State: _____ Zip Code: _____

Email Address: _____

This statement shall be signed by the LSRP who is submitting this notification in accordance with N.J.S.A. 58:10C-14, and N.J.S.A. 58:10B-1.3b(1) and (2).

I certify that I am a Licensed Site Remediation Professional authorized pursuant to N.J.S.A. 58:10C to conduct business in New Jersey. As the Licensed Site Remediation Professional of record for this remediation, I:

[SELECT ONE OR BOTH OF THE FOLLOWING AS APPLICABLE]:

☐ *directly oversaw and supervised all of the referenced remediation, and\or*

☐ *personally reviewed and accepted all of the referenced remediation presented herein.*

I believe that the information contained herein, and including all attached documents, is true, accurate and complete.

It is my independent professional judgment and opinion that the remediation conducted at this site, as reflected in this submission to the Department, conforms to, and is consistent with, the remediation requirements in N.J.S.A. 58:10C-14.

My conduct and decisions in this matter were made upon the exercise of reasonable care and diligence, and by applying the knowledge and skill ordinarily exercised by licensed site remediation professionals practicing in good standing, in accordance with N.J.S.A. 58:10C-16, in the State of New Jersey at the time I performed these professional services.

I am aware pursuant to N.J.S.A. 58:10C-17 that for purposely, knowingly or recklessly submitting false statement, representation or certification in any document or information submitted to the board or Department, etc., that there are significant civil, administrative and criminal penalties, including license revocation or suspension, fines and being punished by imprisonment for conviction of a crime of the third degree.

For a disbursement notification or request pursuant to N.J.A.C. 7:26C-5.12(a) and (c), I certify that the disbursement relates to actual remediation costs, incurred or to be incurred, and does not include ineligible legal fees.

REMEDIAL ACTION PERMIT APPLICATION – GROUND WATER

☐ LSRP ☐ Subsurface Evaluator (UHOT only)

Date Stamp
(For Department use only)

SECTION A. SITE NAME AND LOCATION

Site Name: Study Area SA-6 North Open Space Area

List All AKAs: Site 087 JCIA Site; Site 088 JCIA Well Site; See Section 1.2 of RAR for additional AKAs

Street Address: 501, 555, and 575 Route 440

Municipality: Jersey City (Township, Borough, or City)

County: Hudson Zip Code: 07305-4806

Program Interest (PI) Number(s): G000008710, G000008711

Case Tracking Number(s):

Municipal Block(s) and Lot(s) of the entire site: Block 21901 Lots 5-10

Is this site a Federal case? ☐ Yes ☒ No

If "Yes," indicate the Federal Case Type:

☐ **RCRA GPRA 2020** ☐ **CERCLA/NPL** ☐ **USDOD** ☐ **USDOE**

☐ Other (explain):

SECTION B. PERMIT APPLICATION, MODIFICATION, AND TERMINATION FEES

If this Application is for a Modification or Termination please confirm:

☐ All outstanding Remedial Action Permit annual fees are paid in full.

Note: The application will not be processed until all outstanding fees have been paid.

Select One	**Effective July 1, 2016**
☐ Natural Attenuation Permit Application	$1,565.00
☐ Natural Attenuation Permit Modification	$1,175.00
☐ Natural Attenuation Permit Termination	$1,205.00
☒ Active System Permit Application	$1,955.00
☐ Active System Permit Modification	$1,565.00
☐ Active System Permit Termination	$1,720.00

SECTION C. FEE BILLING CONTACT PERSON

Business Name: Honeywell International Inc. Phone: (973) 455-2175

Contact: William Hague Title: Director - Remediation Design and Construction

Mailing Address: 115 Tabor Rd

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

SECTION D. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION – CO-PERMITTEE

Affiliation/Name of Organization: Honeywell International Inc.

First Name of Contact: William Last Name of Contact: Hague

Title: Global Director, Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax: (973) 455-5802

Mailing Address: 115 Tabor Road

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

☒ Primary Responsibility for Permit Compliance

SECTION E. CURRENT OWNER OF THE SITE – CO-PERMITTEE

Affiliation/Name of Organization: Honeywell International Inc.

First Name of Contact: William Last Name of Contact: Hague

Title: Global Director, Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax: (973) 455-5802

Mailing Address: 115 Tabor Road

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

☒ Primary Responsibility for Permit Compliance

SECTION F. CLASSIFICATION EXCEPTION AREA (CEA) INFORMATION

1. Is this Ground Water Remedial Action Permit Application for a previously established CEA? ☒ Yes ☐ No
   If "Yes," provide the date the original CEA was established: 02/16/2012
2. Attach a completed CEA/WRA Fact Sheet Form with all exhibits.
3. Has the CEA been accurately mapped on NJ-GeoWeb? ☒ Yes ☐ No
   If "No", then submit a GIS compatible map of the CEA by email to srpgis_cea@dep.nj.gov .

SECTION G. MONITORING, MAINTENANCE AND EVALUATION INFORMATION

1. Type of Ground Water Remediation
   a. ☐ Monitored Natural Attenuation
      1) Is there a decreasing trend of contaminant concentrations in the ground water? ☐ Yes ☐ No
         If "No", is the ground water plume considered stable? ☐ Yes ☐ No
      2) Is the ground water plume reaching the sentinel wells? ☐ Yes ☐ No
      3) Has all soil contamination in the unsaturated zone been remediated to the applicable numeric Soil Remediation Standard for all area(s) of concern associated with this CEA? ☐ Yes ☐ No ☐ N/A
      4) Has all free and/or residual product in the unsaturated and saturated zones, as determined pursuant to N.J.A.C. 7:26E-5.1(e), been treated or removed for all area(s) of concern associated with this CEA? ☐ Yes ☐ No ☐ N/A
   b. ☒ Active Remediation
      Provide the type of remediation: Hydraulic Barrier, RCRA-equivalent cap, & extraction system
      1) Is there a decreasing trend of contaminant concentrations in the ground water? ☒ Yes ☐ No
         If "No", is the ground water plume considered stable? ☐ Yes ☐ No
      2) Is the ground water plume reaching the sentinel wells? ☐ Yes ☒ No

3) Is the ground water plume migrating horizontally or vertically into an uncontaminated aquifer zone below and adjacent to the contaminant plume? ☐ Yes ☒ No

4) Is the ground water remedial action performing as designed? ☒ Yes ☐ No

5) What is the expected duration of the active remediation? 100 (whole years)

2. Has a Technical Impracticability (TI) Determination been submitted? ☐ Yes ☒ No

If "Yes," attach a summary of the TI Determination and include any additional monitoring requirements in the Ground Water Monitoring Plan.

3. Check the **Monitoring Schedule** you plan to apply:

☐ Monthly ☐ Annual
☒ Quarterly ☐ Biennial
☐ Semi Annual ☐ Other: _____

4. Attach the following:

☒ An electronic copy in Adobe Portable Document Format (PDF) of the applicable Remedial Action Report (RAR). Provide the location in the RAR (*page #(s) / figure #(s)*) of the map(s) showing ground water contaminant delineation (horizontally and vertically): Appendix G

☒ The Ground Water Monitoring Plan in both paper and electronically (in "MS Excel" file format); See CEA

☒ A Site Location Map in both paper and electronically (in ".jpg" file format);

☐ A scaled CEA Map indicating the locations of the proposed ground water sampling points and ground water flow direction in both paper and electronically (in ".jpg" file format).

SECTION H. FINANCIAL ASSURANCE

1. Does the Remedial Action include a ground water or vapor intrusion engineering control? ☒ Yes ☐ No

If "No," proceed to the next section.

2. Are any of the entities identified in Section D or E exempt from establishing financial assurance pursuant to N.J.A.C. 7:26C-7.10(c)? ☐ Yes ☒ No

If "Yes," check the exemption(s) that applies.

Person Responsible for Conducting the Remediation – Co-Permittee	Current Owner of the Site – Co-Permittee	
☐	☐	Government entity
☐	☐	A person not liable pursuant to the Spill Act that purchased contaminated property before May 7, 2009
☐	☐	A person that conducted remediation at their primary or secondary residence
☐	☐	Owner or operator of a child care center
☐	☐	Public school or private school
☐	☐	Owner or operator of a small business responsible for conducting remediation at the location of the business

If all of the entities identified in Section D or E are exempt, proceed to the next section.

3. Is the current owner of the site either a homeowner association or a condominium association pursuant to the New Jersey Common Interest Association Act, N.J.S.A. 46:8A-1 et seq.? ☐ Yes ☒ No

If "Yes," and the association is identified in Section E of this Permit Application, attach a copy of the association's annual budget that includes funds for the operation, maintenance, and monitoring of the engineering control(s) at the site.

4. Identify the estimated cost of the operation, maintenance, and monitoring of the engineering control(s) at the site: $ 7,900,000.00

5. Are you using an existing Remediation Funding Source (RFS) mechanism for the site as the Financial Assurance? ☐ Yes ☒ No

If "Yes," have all of the following criteria been met? ☐ Yes ☐ No

a. There are no remaining areas of concern at the site that need additional remediation (i.e., the LSRP will be issuing a full site Remedial Action Outcome as a result of this permit issuance);
b. The amount of funds in the RFS equals the amount of funds required to be posted for Financial Assurance; and
c. The RFS is not in the form of a self-guarantee.

Identify the full amount of the current RFS ..... $ _____

6. Identify the full amount established as a Financial Assurance: ..... $ 87,507,050.00

Attach a completed Remediation Cost Review and RFS/FA Form.

7. What is the Financial Assurance Mechanism? *(check all that apply)*

☐ Remediation Trust Fund ☐ Line of Credit ☐ Loan or Grant
☐ Environmental Insurance Policy ☒ Letter of Credit

8. Contact information at the financial institution for the Financial Assurance:

Financial Institution: MFUG Union Bank

First Name of Contact: _____ Last Name of Contact: _____

Mailing Address: _____

City/Town: _____ State: _____ Zip Code: _____

Email Address: _____

Phone Number: _____ Ext: _____ Fax: _____

9. Attach the original Financial Assurance mechanism or a copy of the RFS mechanism if using an existing RFS mechanism as the Financial Assurance.

SECTION I. LAND USE *(for overlying CEA)*

1. **Current Site Land Use** *(check all that apply)*

☐ Industrial ☐ Park or Recreational Use ☐ Child Care Facility
☐ Residential ☐ Agricultural ☐ Hospital
☐ Commercial ☐ Road/Right of Way ☒ Vacant
☐ Governmental Facility ☐ School ☐ Other _____

2. **Off-site Land Use** *(check all that apply for Blocks/Lots included in the areal extent of the CEA)*

☐ Industrial ☐ Park or Recreational Use ☐ Child Care Facility
☐ Residential ☐ Agricultural ☐ Hospital
☐ Commercial ☐ Road/Right of Way ☐ Vacant
☐ Governmental Facility ☐ School ☐ Other _____

SECTION J. RECEPTOR EVALUATION SUMMARY

1. Have any of the following been identified within 200 feet of the site boundary?
Check all that apply.

☐ Residences ☐ Public parks and playgrounds
☐ Potable wells ☒ Surface water
☐ Public and private schools (K-12) ☐ Tier 1 Well-head protection areas
☐ Child care facilities ☐ Ecological receptor (e.g., wetlands, pinelands) *Specify:* _____

2. Have any of these receptors been impacted? ..... ☐ Yes ☒ No

If "Yes," date of Receptor Control: _____ Date of IEC Contaminant Source Control: _____

3. Have any vapor intrusion engineering controls/mitigation systems been installed as a result of this ground water contamination? ..... ☐ Yes ☒ No

If "Yes," indicate the type of engineering control that was implemented: *(check all that apply)*

- ☐ Subsurface Depressurization System
- ☐ Subsurface Ventilation System
- ☐ Soil Vapor Extraction System
- ☐ HVAC Positive Pressure
- ☐ Other (specify): _____

Attach the Operation, Maintenance, and Monitoring (OMM) Plan for the vapor intrusion engineering control(s)/mitigation system(s) both in paper and electronically (in "MS Word" file format). The OMM Plan should clearly identify the building(s) and/or structure(s) and vapor intrusion engineering control(s)/mitigation system(s) that are in place (e.g., active or passive), including the address and block and lot of each impacted property.

4. Have any Point of Entry Treatment (POET) water systems been installed as a result of this ground water contamination? ..... ☐ Yes ☒ No

   If "Yes," attach the OMM Plan for the POET water system(s) that are in place both in paper and electronically (in "MS Word" file format). The OMM Plan should provide the address and lot and block of each property with a POET water system in place. The sampling of the POET water system(s) should be included in the Ground Water Monitoring Plan for the site (see Section G.4 above).

5. Are any potable wells that do not have a POET water system being sampled regularly as a result of this ground water contamination? ..... ☐ Yes ☒ No

   If "Yes", include these potable wells in the Ground Water Monitoring Plan for the site (see Section G.4 above).

SECTION K. OTHER REMEDIAL ACTION PERMITS

Are other Remedial Action Permits also being applied for or already obtained? ..... ☒ Yes ☐ No

If "Yes," please list the Permit Type, Permit Number, and Effective Date for each Remedial Action Permit obtained, or the type of Remedial Action Permit(s) being applied for.

Soil Remedial Action Permits for chromium
Soil Remedial Action Permits for non-chromium
Groundwater Remedial Action Permit for non-chromium

SECTION L. OTHER INFORMATION PROVIDED

If there is other information, please list.

SECTION M. PERSON RESPONSIBLE FOR CONDUCTING THE REMEDIATION INFORMATION AND CERTIFICATION

Full Legal Name of the Person Responsible for Conducting the Remediation: Honeywell International Inc.

Representative First Name: William Representative Last Name: Hague

Title: Global Director, Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax: (973) 455-5802

Mailing Address: 115 Tabor Road

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

This certification shall be signed by the person responsible for conducting the remediation who is submitting this notification in accordance with Administrative Requirements for the Remediation of Contaminated Sites rule at N.J.A.C. 7:26C-1.5(a).

I certify under penalty of law that I have personally examined and am familiar with the information submitted herein, including all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge, I believe that the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. I am also aware that if I knowingly direct or authorize the violation of any statute, I am personally liable for the penalties.

Signature: Date:

Name/Title: William Hague, Director - Remediation Design

SECTION N. CURRENT OWNER OF THE SITE INFORMATION AND CERTIFICATION

Full Legal Name of the Person who owns the site: Honeywell International Inc.

Representative First Name: William Representative Last Name: Hague

Title: Global Director, Remediation Design and Construction

Phone Number: (973) 455-2175 Ext: Fax: (973) 455-5802

Mailing Address: 115 Tabor Road

City/Town: Morris Plains State: NJ Zip Code: 07950

Email Address: William.Hague@Honeywell.com

This certification shall be signed by the person who owns the site and is submitting this notification in accordance with Administrative Requirements for the Remediation of Contaminated Sites rule at N.J.A.C. 7:26C-1.5(a).

I certify under penalty of law that I have personally examined and am familiar with the information submitted herein, including all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, to the best of my knowledge, I believe that the submitted information is true, accurate and complete. I am aware that there are significant civil penalties for knowingly submitting false, inaccurate or incomplete information and that I am committing a crime of the fourth degree if I make a written false statement which I do not believe to be true. I am also aware that if I knowingly direct or authorize the violation of any statute, I am personally liable for the penalties.

**JC32905-1, 6 and 7 plotted on the line that separates the Cr(III) and Cr(VI) stability fields. Statistical examination of the laboratory Eh QC data indicates these samples are not oxidizing with the preferred level of certainty of p = 0.95 or greater (0.85 for these samples). This result coupled with the extremely low recovery of the soluble (-0.3%) and insoluble (9.4%) Cr(VI) spike for QC sample JC3205-1gives the appearance of a reducing character. Additional spikes as high as 3500 mg/kg for this sample failed to recover more than 10% of the Cr(VI) spike

Notes:
NJ 2012 MOST STRINGENT SRS – NJDEP Most Stringent Soil Remediation Standards [N.J.A.C. 7:26D; last amended 5/7/2012].
NJ 2013 IGW SOIL – NJDEP Impact to Groundwater Soil Screening Levels [N.J.A.C. 7:26D; last amended November 2013]
NC: No criterion established
Bold and underlined concentrations exceed the NJ 2012 MOST STRINGENT SRS
Bold and shaded concentrations exceed the NJ 2013 IGW SOIL or both the NJ 2013 IGW SOIL and the NJ 2012 MOST STRINGENT SRS
Depths reported in feet below ground surface
CONC: Concentration reported in milligrams per kilogram (mg/kg)
J: Estimated concentration
Q: Data qualifier assigned by laboratory or data validator
U: Not detected above method detection limit
Results with a value of "0" indicates no TICs were detected

Notes:
NJ 2012 MOST STRINGENT SRS – NJDEP Most Stringent Soil Remediation Standards [N.J.A.C. 7:26D; last amended 5/7/2012].
NJ 2013 IGW SOIL – NJDEP Impact to Groundwater Soil Screening Levels [N.J.A.C. 7:26D; last amended November 2013]
NC: No criterion established
Bold and underlined concentrations exceed the NJ 2012 MOST STRINGENT SRS
Bold and shaded concentrations exceed the NJ 2013 IGW SOIL or both the NJ 2013 IGW SOIL and the NJ 2012 MOST STRINGENT SRS
Depths reported in feet below ground surface
CONC: Concentration reported in milligrams per kilogram (mg/kg)
J: Estimated concentration
Q: Data qualifier assigned by laboratory or data validator
U: Not detected above method detection limit
Results with a value of "0" indicates no TICs were detected

Notes:

NJ 2012 MOST STRINGENT SRS – NJDEP Most Stringent Soil Remediation Standards [N.J.A.C. 7:26D; last amended 5/7/2012].

NJ 2013 IGW SOIL – NJDEP Impact to Groundwater Soil Screening Levels [N.J.A.C. 7:26D; last amended November 2013]

NC: No criterion established

Bold and underlined concentrations exceed the NJ 2012 MOST STRINGENT SRS

Bold and shaded concentrations exceed the NJ 2013 IGW SOIL or both the NJ 2013 IGW SOIL and the NJ 2012 MOST STRINGENT SRS

Depths reported in feet below ground surface

CONC: Concentration reported in milligrams per kilogram (mg/kg)

J: Estimated concentration

NT: Not tested

Q: Data qualifier assigned by laboratory or data validator

U: Not detected above method detection limit

Results with a value of "0" indicates no TICs were detected

Notes:
TAL: Target Analyte List; hexavalent chromium results included for comparison (see Table 1 for full results)
NJ 2012 MOST STRINGENT SRS – NJDEP Most Stringent Soil Remediation Standards [N.J.A.C. 7:26D; last amended 5/7/2012].
NJ 2013 IGW SOIL – NJDEP Impact to Groundwater Soil Screening Levels [N.J.A.C. 7:26D; last amended November 2013]
NC: No criterion established
Bold and underlined concentrations exceed the NJ 2012 MOST STRINGENT SRS
Bold and shaded concentrations exceed the NJ 2013 IGW SOIL or both the NJ 2013 IGW SOIL and the NJ 2012 MOST STRINGENT SRS
Italicized values not detected; reporting limit exceeds criteria
Depths reported in feet below ground surface
CONC: Concentration reported in milligrams per kilogram (mg/kg)
Q: Data qualifier assigned by laboratory or data validator
U: Not detected above method detection limit

FINAL FREQUENCY SUMMARY

SIDEWALL = 8/220 = 1:28

BOTTOM = 8/6,650 = 1:832

REFER TO ENTACT EXCAVATION BOTTOM ELEVATIONS EA8 DATED 12/17/15 FOR MASER SURVEYED BOE ELEVATIONS

LEGEND

- PDI BOTTOM SAMPLE LOCATION (<20 PPM HEX CR)
- PDI SIDEWALL SAMPLE LOCATION (<20 PPM HEX CR)
- PDI BOTTOM AND SIDEWALL SAMPLE LOCATION (<20 PPM HEX CR)
- POST EXCAVATION PERIMETER SIDEWALL SAMPLE (<20 PPM HEX CR)
- POST EXCAVATION BOTTOM SAMPLE (<20 PPM HEX CR)
- POST EXCAVATION INTERIOR SIDEWALL SAMPLE (<20 PPM HEX CR)
- POST EXCAVATION SAMPLE (>20 PPM HEX CR)
- BOE EL — DESIGN BOTTOM OF EXCAVATION ELEVATION
- 087-SB-511 / 3.9 — SAMPLE ID / SAMPLE ELEVATION (NGVD 1929 MSL)
- 100% DESIGN LIMITS
- FINAL DESIGN LIMITS
- EXCAVATION BEYOND FINAL DESIGN
- EXCAVATION PROGRESSION

NOTES

1. THE 100% DESIGN REQUIRED EXCAVATION IN EA8 TO ELEVATION 7.0 FT PRIOR TO OBTAINING SUPPLEMENTAL SAMPLES AND ESTABLISHING FINAL EXCAVATION LIMITS.
2. EXCAVATION AREA 1 AND 2 WERE ESTABLISHED BASED ON SUPPLEMENTAL EXCAVATION SAMPLE RESULTS AND PREVIOUSLY OBTAINED PDI DATA. SAMPLES WERE COLLECTED UPON REMOVAL OF EXISTING MATERIAL TO ELEVATION 7.0 FT.
3. AREA 3 WAS EXCAVATED BASED ON VISUAL IDENTIFICATION OF POTENTIALLY IMPACTED MATERIAL ALONG THE SIDEWALL OF AREA 1. THE SUSPECT MATERIAL EXTENDED IN TWO SMALL SEAMS AND PITCHED DOWN TO ELEVATIONS ABOVE 1.6 FT. UPON REMOVAL OF THE SUSPECT MATERIAL ADDITIONAL SAMPLES WERE COLLECTED (643, 644, AND 645).
4. ANALYTICAL RESULTS INDICATED SAMPLE 087-SB-645 EXCEEDED 20 PPM HEXAVALENT CHROMIUM. SEVERAL TEST TRENCHES WERE THEN EXCAVATED AND A SIDEWALL SAMPLE COLLECTED AT 087-SB-646. ANALYTICAL TESTING INDICATED <20 PPM HEXAVALENT CHROMIUM AND FINAL EXCAVATION OF AREA 4 WAS COMPLETED.
5. A SMALL POCKET OF ANOMALOUS MATERIAL WAS OBSERVED NEAR PDI BORING 087-SB-102. VISUALLY IMPACTED MATERIAL WAS REMOVED AND SIDEWALL SAMPLE (087-SB-630) WAS COLLECTED. ANALYTICAL RESULTS INDICATED THIS SAMPLE EXCEEDED 20 PPM HEXAVALENT CHROMIUM SO ADDITIONAL EXCAVATION WAS COMPLETED AND A NEW SIDEWALL SAMPLE COLLECTED AT 087-SB-641 WHICH TESTED <20 PPM HEXAVALENT CHROMIUM AND USED TO DEFINE THE FINAL LIMITS OF EXCAVATION AREA 5.

NOTES:

1. VIBRATION MONITORING WAS CONDUCTED BY GEOCOMP DURING SHEET PILE DRIVING UTILIZING A MOBILE INSTANTEL MICROMATE WITH GEOPHONE PLACED ON THE GROUND SURFACE IN THE VICINITY OF ACTIVITIES. TRIGGER LEVELS WERE ESTABLISHED AT 0.5 IN/SEC AND ALERT LEVELS AT 2.0 IN/SEC.

2. ACOUSTICAL MONITORING AND SURVEY POINTS WERE INSTALLED ALONG THE SECTION OF 72-INCH FORCE MAIN THAT RUNS PARALLEL TO THE HYDRAULIC BARRIER WALL. THESE MONITORING POINTS WERE UTILIZED DURING THE SURCHARGE PROGRAM TO EVALUATE ANY UNANTICIPATED STRESS IMPACTS.

ID	Task Name	Duration	Start	Finish	Predecessors
82	Initial Conservation Restriction	0 days	Wed 10/1/08	Wed 10/1/08	
83	Option for JC to Purchase Property	0 days	Wed 10/1/08	Wed 10/1/08	
84	Submit Open Space Design Standards for Park Design	294 days	Sun 2/15/09	Thu 4/1/10	
85	Submit Revised Open Space Design Standards for Park Design	0 days	Tue 4/16/13	Tue 4/16/13	
86	Submit Long Term Monitoring Plan (See Note 19)	0 days	Thu 10/1/15	Thu 10/1/15	
87	Amended Conservation Restriction (See Note 2)	1 day	Wed 2/10/10	Wed 2/10/10	
88	Final Deed Notice for Open Space (See Note 3)	1 day	Wed 2/10/10	Wed 2/10/10	
89	Final Transfer of Open Space Title to JC (See Note 4)	1 day	Wed 2/10/10	Wed 2/10/10	
90	Placement of Open Space on Jersey City ROSI Inventory (See Note 4)	1 day	Wed 2/10/10	Wed 2/10/10	
91	Submit Open Space Development Plans (See Note 5)	1 day	Wed 2/10/10	Wed 2/10/10	
92	**SA-6 South Long Term Protections**	**2569 days**	**Thu 6/5/08**	**Sat 3/31/18**	
93	Initial Conservation Restriction	0 days	Thu 3/19/09	Thu 3/19/09	
94	Prepare Open Space Design Standards for Park Design (Combine with SA-6 North)	0 days	Tue 4/16/13	Tue 4/16/13	111FF
95	Submit Long Term Monitoring Plan (See Note 19)	0 days	Thu 10/1/15	Thu 10/1/15	
96	Development AOC Shallow GW Monitoring	261 days	Mon 1/2/17	Sun 12/31/17	
97	Submit Development AOC Shallow GW Remedy Report	0 days	Sat 3/31/18	Sat 3/31/18	
98	L-Well GW (One-Time) Monitoring Event (Inside Cap Area) (See Note 18)	3 days	Wed 6/3/15	Fri 6/5/15	
99	L-Well GW (One-Time) Monitoring Event (Outside Cap Area) (See Note 18)	1 day	Wed 2/10/10	Wed 2/10/10	
100	Submit L-Well GW Remedy Report	120 days	Mon 8/18/14	Fri 1/30/15	
101	Amended Conservation Restriction (See Note 7)	1845 days	Thu 6/5/08	Thu 6/25/15	
102	Final Deed Notice for Open Space (See Note 3)	0 days	Fri 1/30/15	Fri 1/30/15	126
103	Final Transfer of Open Space Title to JC (See Note 9)	0 days	Fri 1/30/15	Fri 1/30/15	126
104	Placement of Open Space on Jersey City ROSI Inventory (See Note 9)	0 days	Fri 1/30/15	Fri 1/30/15	126
105	Submit Open Space Development Plans (See Note 10)	0 days	Fri 1/30/15	Fri 1/30/15	126

Note 1: 100% Design Submittal includes Data Validation Plan and Health and Safety Plan.
Note 1A: The 30-day Special Master review period is provided as a placeholder. This 30-day period is not binding to the Special Master or Honeywell.
Note 2: The future event(s) that will trigger the deadline for the Amended Conservation Restriction, as set forth in Schedule A of the Conservation Restriction recorded on January 9, 2009, include: 1) upon completion of the construction of the hydraulic barrier walls the AOC 1 Open Space Area will be re-surveyed (the "As-Built Survey") and a metes and bounds description (the "As-Built Description") will be prepared based on the As-Built Survey; 2) following preparation of the As-Built Description Honeywell shall request that the Court amend the order entered on April 8, 2009, which, pursuant to paragraph 60(b)(i) of the Consent Decree, incorporates the Conservation Restriction ("the Conservation Restriction Order"), by substituting the As-Built Description for the metes and bounds description set forth in Exhibit A of the Conservation Restriction recorded on January 9, 2009, and thereby creating an amended Conservation Restriction; and 3) once the Conservation Restriction Order is amended by the Court, Honeywell shall record the Amended Conservation Restriction in the office of the Hudson County Register (TBD).
Note 3: Deed Notice is to be submitted 90 calendar days following completion of Chromium Remedy. The NJDEP will issue an Acceptance Letter of Completion after the final deed notice is recorded with the county clerk and submitted to the NJDEP for review (TBD).
Note 4: 120 calendar days following construction of adjacent roads and utility corridors within the AOC 1 Open Space Area (TBD).
Note 5: Open Space Development Plans to be submitted any time after approval of Open Space Design Standards (TBD).
Note 6: 100% Design includes:
* Data Validation Plan
* Health and Safety Plan
* Post-Treatment Monitoring Plan
* Post Remedial Treated Soil Monitoring Plan
* Plan for Investigative Measures for Cap Integrity
* L-Well Groundwater Monitoring Plan
* Groundwater Level Control Plan
* Development AOC Shallow Groundwater Monitoring Plan
Note 7: The future event(s) that will trigger the deadline for the Amended Conservation Restriction, as set forth in Schedule A of the Conservation Restriction recorded on March 25, 2010, include: 1) upon completion of the construction of the hydraulic barrier walls the Open Space AOC will be re-surveyed (the "As-Built Survey") and a metes and bounds description (the "As-Built Description") will be prepared based on the As-Built Survey; 2) following preparation of the As-Built Description Honeywell shall request that the Court amend the order, entered on March 21, 2011, which, pursuant to paragraph 74(b)(i) of the Consent Decree, incorporates the Conservation Restriction ("the Conservation Restriction Order"), by substituting the As-Built Description for the metes and bounds description set forth in Exhibit A of the Conservation Restriction recorded on March 25, 2010, and thereby creating an amended Conservation Restriction; and 3) once the Conservation Restriction Order is amended by the Court, Honeywell shall record the Amended Conservation Restriction in the office of the Hudson County Register (TBD).
Note 8: Honeywell reserves the right to combine project closeout activities.
Note 9: 120 calendar days following construction of adjacent roads and utility corridors within the Open Space AOC (TBD).
Note 10: Open Space Development Plans to be submitted any time after approval of Open Space Design Standards (TBD).
Note 11: The deferred remediation along the SA-6 South Bulkhead will be performed commensurate with the schedule for construction of the permanent Bayfront Bulkhead Project. This Bulkhead construction project is planned for the calendar year 2019 which results in the deferred remediation phase being implemented within approximately three years of completion of the main site remedy.
Note 12: The deferred remediation along the SA-6 North/South PSEG Gas Line will be performed commensurate with the schedule for construction of the Route 440 Road Widening Project. This Road Widening construction project is planned for calendar year 2019 which results in the deferred remedy phase being implemented within approximately three years of completion of the main site remedy.
Note 13: In-situ treatment was initiated in Areas 7 and 8 at SA-6 North. Additional time is allotted for the revised Area 10 footprint proximate to the 72-inch forcemain and for subsequent injection events if needed.
Note 14: In-situ treatment at SA-6 South was completed in Summer 2014. Additional time is allotted in the event that a subsequent injection event is needed.
Note 15: This activity includes all locations except the JCIA Facilities. The surcharge instrumentation will be installed at JCIA after relocation of the employees to the new municipal services complex.
Note 16: The chromium remedy contractor is planning demobilization as indicated. Depending on the weather, there may be some additional site restoration activities in the fall of 2016.

Project: SA-6 Remediation Schedule
Revision 4
Date: 8/28/15

Task | Milestone | Summary | Critical

FIGURE 17
SA-6 North/South Combined Chromium Remediation Schedule

ID	Task Name	Duration	Start	Finish	Predecessors	2008	2009	2010	2011	2012	2013	2014	2015	2016
						1qtr 2qtr 3qtr 4qtr	1qtr 2qtr 3qtr 4qtr	1qtr 2qtr 3qtr 4qtr	1qtr 2qtr 3qtr 4qtr	1qtr 2qtr 3qtr 4qtr	1qtr 2qtr 3qtr 4qtr	1qtr 2qtr 3qtr 4qtr	1qtr 2qtr 3qtr 4qtr	1qtr 2qtr 3qtr 4qtr

Note 17: Report prepared pursuant to Paragraph 72, (c)(viii) of SA-6 North Consent Decree and Paragraph 86, (c)(xix) of the SA-6 South Consent Decree. both of which state, "A report reviewing measured groundwater levels for the groundwater remedy."
Note 18: The L-well locations outside of the Open Space (Cap Area) will be sampled after one full year of seasonal hydrologic fluctuations following completion of the Chromium Remedy, currently anticipated to be in the latter half of March 2017.
Note 19: A combined LTMP addressing both SA-6 North and South will be prepared and submitted.
Note 20: Confirmation soil sampling at in-situ treatment areas have been / will be completed as follows:

SA-6 North TA-7 & TA-8:
- 6-month: June 2014 (Completed)
- 3-year: Approx. June 2016

SA-6 North TA-10-1:
- 6-month: Approx. March 2016 (weather permitting)
- 3-year: No later than approx. Sept 2018 (or sooner pending approval)

SA-6 South (Site 163)
- 6-month: April 2015 (Completed)
- 3-year: TBD (not needed if Site 163 re-injections not performed)

Natalie – Henry @ DEP had to change the PI #'s and SRPIDs for the site we submitted. But here are the revised conformations. I had submitted 7 total, so waiting for 1 more. I have asked DEP as to when I might receive that.

1 This is the actual elevation of the PDI Bottom sample included in the 100% design.

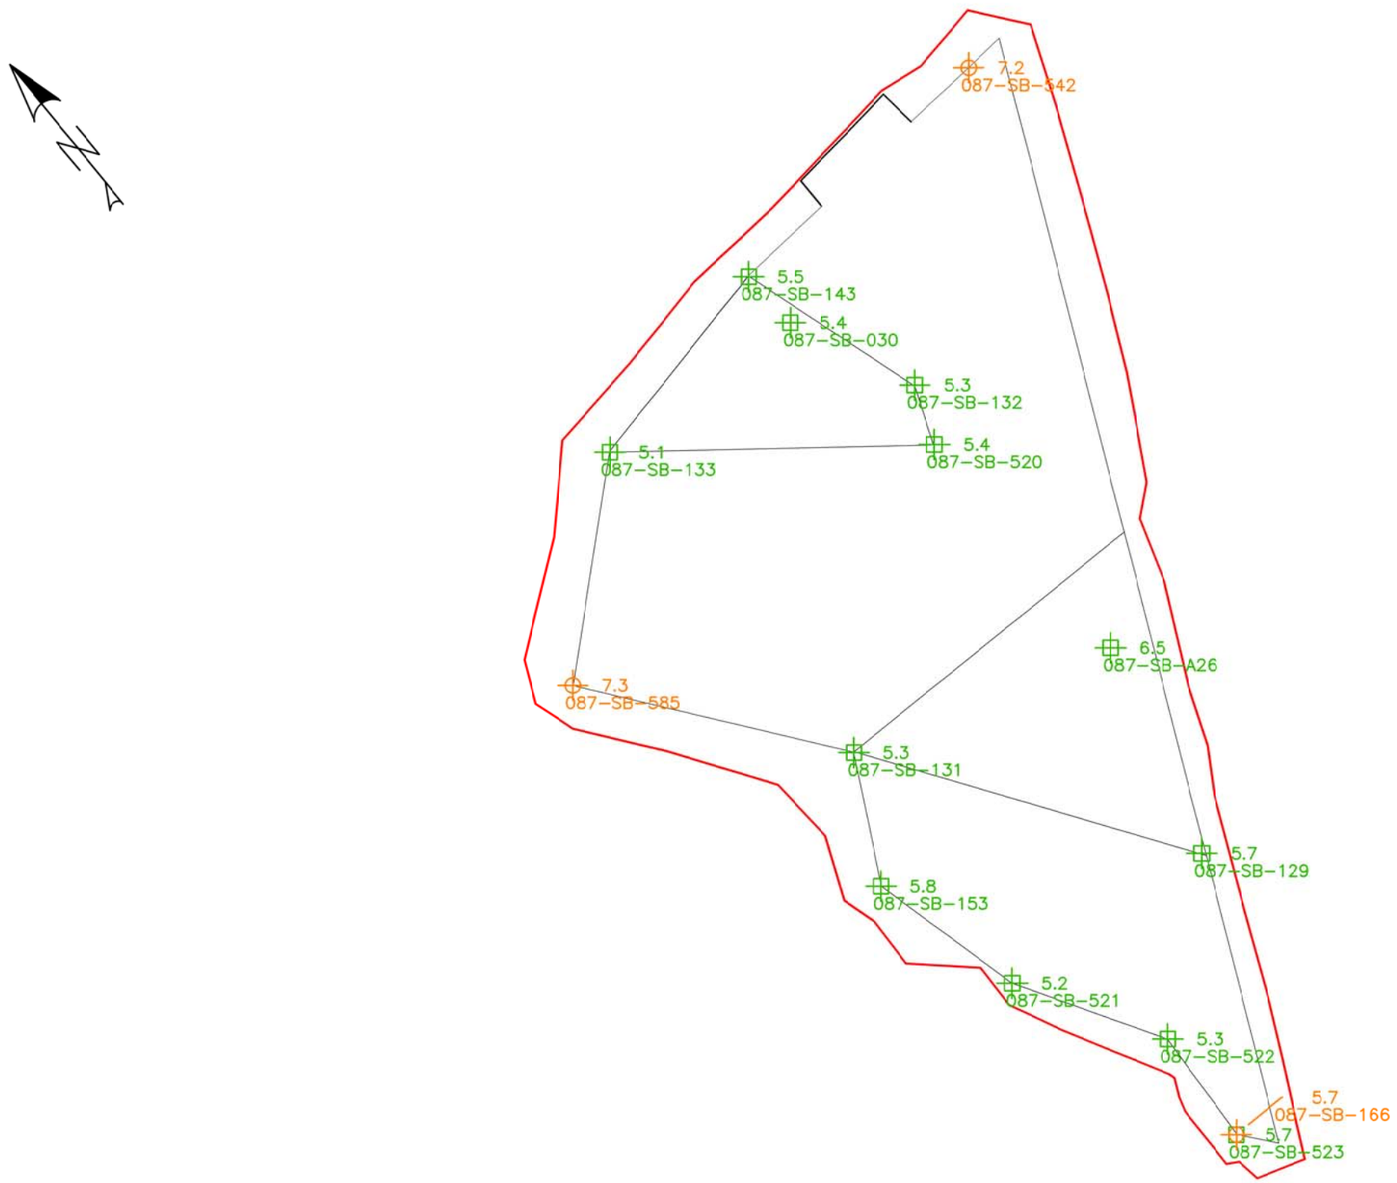
2 The IFC 100% Design for EA 2&3 included 9 perimeter borings that delineated both horizontal and vertical excavation limits. Sidewall and bottom confirmatory samples at these locations were collected from two separate elevation intervals. All sample results in these borings were <20ppm Hex Cr. The locations are color coded on the Excavation Bottom figure in green as Bottom Samples.

3 088-SB-190 was located in the earthen basement of the JCIA incinerator building in close proximity to the JCIA Pit. The boring log indicates that the materials appeared to be clean backfill. The western portion of the EA-2 excavation was observed to be a visibly clean imported sand backfill consistent with what was observed in the boring. Boring 088-SB-190 included <20 sample results below the design bottom elevation. A supplemental sample was taken post excavation to verify that the excavation was terminated in <20 PPM material. The result was <1 mg/Kg.

4 The IFC 100% Design for EA 1 included 6 perimeter borings that delineated both horizontal and vertical excavation limits. Sidewall and bottom confirmatory samples at these locations were collected from two separate elevation intervals. All sample results in these borings were <20ppm Hex Cr. The locations are color coded on the Excavation Bottom figure in green as Bottom Samples.



Maser Consulting P.A. certifies that the elevations, with their corresponding date obtained, of the Confirmatory Points depicted in Table 1, Sidewall Confirmatory Sidewall Points in Table 2 and Bottom of Excavation topographic spot elevations are correct, and representative of the as-built post-excavation grades throughout the corresponding excavation areas.

GENERAL NOTES

1. THE SOLE PURPOSE OF THIS PLAN IS TO SHOW POST-EXCAVATION ELEVATIONS WITHIN THE SA6 NORTH EXCAVATION AREAS AT THE PROJECT SITE.
2. POST-EXCAVATION LOCATIONS AND ELEVATIONS WERE OBTAINED BY MASER CONSULTING P.A. AND ENTACT ON MULTIPLE FIELD VISITS FROM 6/26/15 THROUGH 3/9/16.
3. HORIZONTAL DATUM NAD 1983, VERTICAL DATUM NGVD29.

NOTES:

1. PLAN LOCATION AND TOP ELEVATION OF HYDRAULIC BARRIER BASED ON SURVEY SUPERVISED BY MASER CONSULTING AND UPON CUTTING OF THE WALL TO MATCH THE INSTALLED LINER GRADE.
2. BOTTOM OF HYDRAULIC BARRIER AND EXTENT OF EPOXY COATING BASED ON ENTACT TOP SURVEY AND SHEET PILE FABRICATION DRAWINGS. ALL SHEETS DELIVERED TO THE SITE WERE INSPECTED BY AMEC PERSONNEL TO VERIFY LENGTHS AND EPOXY COATING.
3. STRATUM D SHOWN FOR REFERENCE ONLY AND IS BASED ON GEOTECHNICAL BORINGS COMPLETED DURING THE PRELIMINARY DESIGN INVESTIGATION.

Re: SA-6 North Surcharge Monitoring
Jersey City, NJ
MRCE File 11173

Dear Mr. Shallard:

Mueser Rutledge Consulting Engineers (MRCE) reviewed the settlement and piezometer monitoring data related to Area 1N provided by AMEC, on July 18th 2014. MRCE's review of the available data is summarized below:

1. AMEC indicated boring sampling performed was to define the compressible layer stratification and the Vibrating Wire Piezometers (VWP) were set at the center of the layers. Center of the layer provide the most conservative pore water pressure reading for the effective stress evaluation. MRCE effective stress calculations were made at the center of the layers.

2. MRCE obtained the 06/16/14 measured fill thickness from the "Settlement Platform – Data Report". MRCE calculated the total stress as of 06/16/14 based on the 06/16/14 fill thickness and the "Historic Pre-Construction Conditions" total stresses provided by AMEC. MRCE calculated the pore water pressures based from 06/16/14 piezometer readings on "Vibrating Wire Piezometer – Data Report" and calculated the 06/16/14 effective stresses, as presented in Table 1.

3. MRCE compared calculated 06/16/14 effective stresses with the effective stresses provided by AMEC for "Final Post-Development Conditions". The defined goal of surcharge program was to achieve an equal or greater effective stress than the "Final Post-Development Conditions" effective stress. Accordingly, MRCE evaluated 06/16/14 percentage completion, shown as "MRCE % Completion (06/16/14)" in Table 1. Table 1 also presents 06/30/14 percent completion evaluation of AMEC, "AMEC % Completion (06/30/14)", for comparison.

4. Two settlement monitoring locations, N_FS-04 and N_HS-04 (highlighted in Table 1), had percentage completion less than 100%. These monitoring points did not meet the defined goal of the surcharge program as of 06/16/14.

5. AMEC provided updated settlement and piezometer monitoring data on August 6th 2014. MRCE calculated effective stresses and the percent completion for N_FS-04 and N_HS-04 based on the updated monitoring data, as shown in Table 2.

6. MRCE agrees that the defined goal of the surcharge program of achieving an equal or greater effective stress than the "Final Post-Development Conditions" effective stress is met in all settlement monitoring locations.

Very truly yours,

MUESER RUTLEDGE CONSULTING ENGINEERS

Attention: Mr. Geoff Shallard

Re: Area 2N Surcharge Review
SA-6 North
Jersey City, NJ
MRCE File 11173

Dear Mr. Shallard:

The Mueser Rutledge Consulting Engineers (MRCE) review of November 17, 2014 AMEC settlement and piezometer monitoring data for Area 2N is summarized below:

AMEC indicated from borings and sampling the Vibrating Wire Piezometers (VWP) were set at the center of the compressible clay layer, which provides the most conservative pore water pressure reading for the effective stress evaluation. All the stress calculations are at the center of the compressible layers.

MRCE used measured fill thickness dated 10/28/14 from "Settlement Platform – Data Report" to calculate the total stress. Pore water was taken from the 10/28/14 "Vibrating Wire Piezometer – Data Report." Effective stress computed for 10/28/14, is presented in Table 1. MRCE compared the 10/28/14 calculated effective stress with the "Final Post-Development Conditions" effective stress estimates provided by AMEC. The defined goal of surcharge program was to achieve an effective stress greater than the "Final Post-Development Conditions."

This review finds all Area 2N monitoring locations have met the surcharge program goal as of 10/28/14.

Very truly yours,
MUESER RUTLEDGE CONSULTING ENGINEERS

Attn: Mr. Geoff Shallard

Re: Updated Area 3N and 4N Surcharge Review
SA-6 North
Jersey City, NJ
MRCE File 11173

Dear Mr. Shallard:

The Mueser Rutledge Consulting Engineers (MRCE) review of March 15th, 2016 AMEC settlement and piezometer monitoring data for Area 3N and 4N is summarized below:

AMEC indicated boring sampling was performed to define the soil profile and the Vibrating Wire Piezometer (VWP) was set at the center of the compressible layer, so that the pore water pressure reading is the most conservative for effective stress evaluation. All the effective stress calculations were made at the center of the layers.

MRCE used the latest measured elevation head dated March 15th, 2016 from "Vibrating Wire Piezometer – Data Report" to calculate the post-surcharge pore water pressures. Post-surcharge total stresses were calculated using fill thickness measurements from the "Settlement Platform – Data Report" taken on March 9th, 2016. Calculated post-surcharge effective stresses are presented in Table 1 and Table 2. MRCE compared the calculated post-surcharge effective stresses with the "Final Post-Development Conditions" effective stress estimates provided by AMEC. The defined goal of the surcharge program was to achieve an effective stress greater than "Final Post-Development Conditions."

This review finds that with the March 15, 2016 readings all settlement monitoring locations, including the two settlement locations, N_HS-11 in Area 3N (Table 1) and N_FS-12 in Area 4N (Table 2), have met the surcharge program goal. This finding is in agreement with the AMEC data review and interpretation.

Very truly yours,

MUESER RUTLEDGE CONSULTING ENGINEERS

DRAWING NAME: JCIA Trash Pit As Built Vinyl Sheetpile and Meadow Mat Repair 12/08/16

PROJECT NAME & LOCATION: HONEYWELL SA-6 REMEDIATION JERSEY CITY, NJ

NOTES:

1. VIBRATION MONITORING WAS CONDUCTED BY GEOCOMP DURING SHEET PILE DRIVING UTILIZING A MOBILE INSTANTEL MICROMATE WITH GEOPHONE PLACED ON THE GROUND SURFACE IN THE VICINITY OF ACTIVITIES. TRIGGER LEVELS WERE ESTABLISHED AT 0.5 IN/SEC AND ALERT LEVELS AT 2.0 IN/SEC.

2. ACOUSTICAL MONITORING AND SURVEY POINTS WERE INSTALLED ALONG THE SECTION OF 72-INCH FORCE MAIN THAT RUNS PARALLEL TO THE HYDRAULIC BARRIER WALL. THESE MONITORING POINTS WERE UTILIZED DURING THE SURCHARGE PROGRAM TO EVALUATE ANY UNANTICIPATED STRESS IMPACTS.

APPENDIX D

DESIGN CHANGE BULLETIN LOG

SA-6 North/South Field Change Log			
AmecFW ID	**Changed Item Identifier**	**Description of Change**	**Comments**
1	**DC 2013-7-29**	Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentation Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application".	Submitted to all Parties on March 12, 2014.
2	**DC 2013-8-14 (HB Wall)**	Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades.	Submitted to all Parties on September 12, 2013.
3	**DC 2013-8-14 (Grouted Angles)**	The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle.	Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only as clarification or response to RFI.
4	**DC 2013-9-12**	Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall.	Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only as clarification or response to RFI.
5	**DC 2013-9-24**	Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow.	Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only as clarification or response to RFI.
6	**DC 2013-12-12**	The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14.	In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents: 1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29. 2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. 3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52. 4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.
7	**DC 2014-3-25**	Change Contingent GW system from wells to trench on both SA-6 S and SA-6N.	Submitted to all Parties on March 25, 2014 and April 23, 2014.
7.1	**DC 2014-6-10**	AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-6-10 includes the french drain installation, as well as pump and access station manholes for SA-6 South. Some design details, including the electrical design, will be finalized based field observations and constructability review.	Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016
7.2	**DC 2014-11-20**	AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-11-20 includes the french drain installation, electrical supply and discharge piping for SA-6 North.	Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016.
7.22	**DC 2016-6-6**	AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-6-10 includes the revised electrical supply and discharge piping for SA-6 North.	Submitted to Parties as Attachment to Declaration 004. (Design Change ID changed from DC 2016-6-10 to DC 2016-6-6 to reflect actual date on Design Change form).
7.3	**DC 2015-2-12**	AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-2-24 is a follow up to DC 2014-6-10, the SA-6 South CGWES trench design. DC 2015-2-24 includes details for electrical supply and discharge piping.	Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016
7.4	**DC 2015-9-03**	AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-9-03 is a follow up to DC 2015-2-24, the SA-6 South CGWES electrical supply. DC 2015-9-03 provides a revised electrical plan.	Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016
7.4.1	**DC 2016-5-24**	AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to address the elimination of a drop structure, the elimination of a flow meter, conduit sizing changes, and to clarify Entact's scope.	Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016

SA-6 North/South Field Change Log			
AmecFW ID	**Changed Item Identifier**	**Description of Change**	**Comments**
7.4.2	**DC 2016-12-20**	This DCB documents a number of minor field changes that have been conveyed by the EOR to Entact during the course of the work and also includes revisions to the (E series) electrical drawings for both SA-6N and SA-6S.	Included as an attachment to Declaration 005.
7.5	**DC 2015-2-24**	AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to document the changes in the SA-6 North and South cap subgrades that resulted from the change to a trench system.	Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016
8.1	**DC 2013-8-14 (Surcharge)**	Modify surcharge pile toe of slope to reduce load on the bulkhead.	Submitted to all Parties on July 10, 2014.
9	**DC 2014-5-6**	Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area.	5/6/14 letter from Honeywell summarizing the ERFS Site Vision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ.
10	**DC 2014-5-19**	Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead.	Submitted to all Parties on May 19, 2014.
11	**DC 2014-7-28**	Update the list of monitoring wells to be abandoned / retained.	Submitted to all Parties on August 26, 2014.
12	**DC 2014-10-28**	Direction on the handling of petroleum soils under the cap.	Submitted to all Parties on November 19, 2014.
13	**DC 2014-8-13**	Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles.	Submitted to all Parties on August 19, 2014.
14	**DC 2014-9-2**	Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC.	Submitted to all Parties on September 4, 2014.
15	**DC 2014-10-31**	Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap. Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil.	Submitted to Contractor only as clarification or response to RFI.
16	**DC 2014-12-01**	The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill.	Submitted to Contractor only as clarification or response to RFI.
17	**DC 2015-01-22**	In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South.	Submitted to Parties as Attachment to Declaration 004.
18	**DC 2015-01-22**	During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards.	Submitted to all Parties on January 28, 2015.
19	**DC 2015-03-03**	Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin.	Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15.

SA-6 North/South Field Change Log			
AmecFW ID	**Changed Item Identifier**	**Description of Change**	**Comments**
20	**DC 2015-03-30**	A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation.	Submitted to all Parties on 5/27/15.
21	**DC 2015-03-04**	The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge.	Submitted to Parties on July 2, 2015.
22	**DC 2015-03-09**	The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations.	Submitted to Contractor only as clarification or response to RFI.
23	**DC 2015-04-30**	A concrete protuberance was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth.	Submitted to Contractor only as clarification or response to RFI.
26.1	**DC 2015-05-19**	Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groundwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South.	Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016
27	**DC 2015-06-18**	Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor). In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design.	Submitted to all Parties on June 18, 2015.
28	**DC 2015-05-29**	Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner.	Submitted to Parties on August 27, 2015.
29	**DC 2015-06-05**	Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall.	Submitted to Parties on August 27, 2015.
30	**DC 2015-11-12**	Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage.	Included as an attachment to Declaration 005.
30.1	**DC 2016-04-15**	Amec Foster Wheeler has provided final restoration grades for SA-6 South Development Area. The DCB also includes the final cover types in revised Drawing C-128.	Included as an attachment to Declaration 005.
30.2	**September 2016-South**	The design change documents revisions to the final grading and SESCP drawings on the SA-6 South Chromium Remedy. Minor grading changes were performed in the field to improve surface drainage. In addition, the extent of demarcation fabric, crushed stone and DGA placed over the Development Area was increased to meet historic fill regulations. SESCP changes included installation of crushed stone toe drain along SA-7, installation of erosion mat, installation of supplemental diversion berms, and installation of stone check dams.	Included as an attachment to Declaration 005.
32	**DC 2015-06-18 (South)**	Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012.	Submitted to all Parties on 6/22/15.

SA-6 North/South Field Change Log			
AmecFW ID	**Changed Item Identifier**	**Description of Change**	**Comments**
33	**DC 2015-06-18 (North)**	Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013.	Submitted to all Parties on 6/22/15.
34	**DC 2015-06-15**	A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards.	Submitted to Parties on August 27, 2015.
35	**DC 2015-07-16**	The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components.	Submitted to Parties on August 27, 2015.
35.2	**DC 2015-08-18**	The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW.	Submitted to Parties on August 27, 2015.
35.3	**DC 2015-10-06**	GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15).	Submitted to Contractor only as clarification or response to RFI.
36	**DC 2015-07-22**	Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall.	Submitted to Parties on August 27, 2015.
37	**DC 2015-07-28**	Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified.	Submitted to Contractor only as clarification or response to RFI.
37.2	**DC 2015-08-07**	AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability.	Submitted to Contractor only as clarification or response to RFI.
38	**DC 2015-07-31**	The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree.	Submitted to Contractor only as clarification or response to RFI.
39	**DC 2015-07-30**	Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings.	Submitted to Contractor only as clarification or response to RFI.
41	**DC 2015-08-19**	Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking.	Submitted to Parties on August 27, 2015.
42	**DC 2015-08-21**	The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA-6S Caps. As such, Paragraph 3.02 is no longer required and therefore the following is deleted in its entirety.	Submitted to Parties on August 27, 2015.

SA-6 North/South Field Change Log			
AmecFW ID	**Changed Item Identifier**	**Description of Change**	**Comments**
43	**DC 2015-08-20**	The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204).	Submitted to Parties on August 27, 2015.
45	**DC 2015-9-02**	As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap.	Submitted to Parties as Attachment to Declaration 004.
46	**DC 2015-9-17**	Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Graboskyõs letter and specification revision recommendation are attached.	Submitted to Parties on September 23, 2015.
47	**DC 2015-9-04**	EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S.	Submitted to Parties as Attachment to Declaration 003.
47.1	**DC 2015-11-18**	Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2.	Submitted to Parties as Attachment to Declaration 003.
48	**DC 2015-09-28**	Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling.	Submitted to Parties on October 1, 2015.
48.1	**DC 2015-12-21**	Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation ï 8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area.	Submitted to Contractor only as clarification or response to RFI.
50	**DC 2015-10-02**	As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope.	Submitted to Parties on October 8, 2015.
51	**DC 2015-10-22**	Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development.	Submitted to Contractor only as clarification or response to RFI.

SA-6 North/South Field Change Log			
AmecFW ID	**Changed Item Identifier**	**Description of Change**	**Comments**
52	**DC 2015-12-14**	Specification 02372, Sections 3.03 ï Geomembrane Placement, C. Liner Boots and 3.06 ï Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance with ASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative. Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly.	Submitted to Parties on January 14, 2016.
53	**DC 2015-11-30**	EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required.	Submitted to Parties as Attachment to Declaration 003.
54	**DC 2016-02-02**	The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25ô(no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design.	Submitted to Parties as Attachment to Declaration 004. (Design Change ID changed from DC 2016-02-03 to DC 2016-02-02 to reflect actual date on Design Change form).
54.1	**DC 2016-02-22**	AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entactõs request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location. In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5.	Submitted to Parties as Attachment to Declaration 004.
54.2	**DC 2016-02-25**	This DCB has been issued to provide Entact with the latest SA-6 North HB Wall and SCB wall plan and profile drawings (SN-201 thru SN-205), which were modified to reflect changes made in DC 2016-02-22.	Submitted to Parties as Attachment to Declaration 004.
54.3	**DC 2016-5-11**	The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25ô(no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. As part of DC 2016-5-11, AmecFW issued SA-6 North Interim Grades to Entact.	Submitted to Parties as Attachment to Declaration 004.
54.4	**DC 2016-5-20**	After further review, AmecFW lowered the geomembrane Pump Station #1 on the SA-6 North cap in order to provide additional separation between the geomembrane and the bottom of the vault. (Refer to DC 2016-02-22).	Submitted to Parties on June 15, 2016.
54.5	**DC 2016-7-14**	Design change documenting minor field changes needed to achieve positive drainage in the cap area.	Included as an attachment to November 2016 monthly progress report and included in the finalized Declaration 004.

SA-6 North/South Field Change Log			
AmecFW ID	**Changed Item Identifier**	**Description of Change**	**Comments**
54.6	**September 2016-North**	The design change documents revisions to the interim/final grading and SESCP drawings on the SA-6 North Chromium Remedy. Minor grading changes were performed in the field to improve surface drainage pending redevelopment. SESCP changes included installation of crushed stone toe drain along SA-7, installation of erosion mat, installation of supplemental diversion berms, and installation of stone check dams.	Included as an attachment to Declaration 005.
55	**DC 2016-05-03**	The laboratory results of all gradations for planting soils shall be presented in terms of the USDA classification system rather than the USCS classification system.	Submitted to Contractor only as clarification or response to RFI.
56	**DC 2016-03-18**	This DC 2016-03-18 documents the revised acceptable ranges of physical parameters and provides an updated specification made in consultation with Dr. Grabosky of Rutgers University. Dr. Grabosky provided his recommendations in correspondence dated 3/17/2016.	Submitted to Parties on March 22, 2016. Plaintiffs responded in a letter dated April 15, 2016. Plaintiffs and Honeywell subsequently held discussions and DCB 2016-04-20 was developed to document an agreement reached by all parties on the Special Master All-Hands monthly call on April 19, 2016.
57	**DC 2016-03-21**	Natureõs Choice was identified as the source that best met the physical requirements for Horizon C soils by Dr. Grabosky; however, several samples of Natureõs Choice Horizon C soils have hexavalent chromium concentration >1.0 mg/kg. Consequently, Honeywell is proposing a design change to allow the hexavalent chromium concentration in Natureõs Choice Horizon C soils to be less than 1.8 mg/kg, as agreed to by the parties, as documented in the attached emails. For future sampling, hexavalent chromium soil samples will be composited from 10 grab sample locations per 5,000 CY (maximum). There are additional conditions in Attachment A that are part of this DCB and specific to Natureõs Choice Horizon C soil. All other requirements specified in the 100% Design for imported soils will be met by the Natureõs Choice Horizon C soils as amended in previous DC 2015-09-17.	Submitted to Parties on March 22, 2016.
58	**DC 2016-05-06**	To allow for traffic flow within the project site following completion of the SA-6S Cap, a road will be installed within the "B Street" corridor. The road will be constructed by continuing the "Structural Fill under Roadways to within 6 inches of final grade"	Submitted to Parties on June 30, 2016.
59	**DC 2016-04-20**	This DCB documents the approved sources of Horizon B and Horizon C materials, as agreed to by all parties on the Special Master All-Hands monthly call on April 19, 2016.	Submitted to Parties on April 21, 2016.
60	**DC 2016-05-31**	This DCB documents the vault sketch Drawing C-310 (Rev 5, 5/31/16)	Submitted to Contractor only as clarification or response to RFI.
61	**DC 2016-11-09**	The limits and the type of restoration north of the SA-6N cap has been modified to be integrated with the SA-6N Non Chrome Remedy.	Included as an attachment to Declaration 005.
62	**DC 2016-7-12**	DC 2016-7-12 clarifies the limit of GCL deployment and the location of the sand bentonite plug in the SA-6 North cap.	Included as an attachment to July 2016 Monthly Progress Report.

Notes: All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

WELL PERMIT

New Well

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

New Well

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

New Well

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

New Well

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

New Well

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

New Well

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

New Well

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

New Well

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

New Well

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

New Well

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

Approval

Re: Classification Exception Area
Study Areas 5, 6 and 7
Hudson County Chromate Sites 73, 87, 88, 90, 115, 117, 120, 124, 125, 134, 140, 153, 157, and 184
Jersey City, Hudson County
NJDEP PI # G000008789

Dear Ms. Kaouris:

The New Jersey Department of Environmental Protection (NJDEP) has reviewed the Groundwater Classification Exception Area (CEA) application dated 8 June 2009, prepared by HydroQual, Inc. The NJDEP has determined that the referenced document is in compliance with Section 7:26E-8.3 of the New Jersey Technical Requirements for Site Remediation, and the CEA Guidance Document (revised November 1998). NJDEP hereby approves the CEA request effective the date of this letter.

Honeywell is advised that the CEA does not specify monitoring requirements since it functions as a notification mechanism, not as a "stand alone" enforcement or regulatory document. The need and the extent of ground water monitoring required during the duration of the CEA will be determined as part of the Comprehensive Ground Water Monitoring Program. As specified in NJAC 7:26E-8.3(b)5, the Department will require Honeywell to notify external agencies/affected parties of the CEA designations according to the guidelines established in the CEA Guidance Document (11/98) which can be located at: http://www.nj.gov/dep/srp/guidance/cea/ceaguid2.pdf. Note that all property owners within the plume do not need to be notified as long as they are on public water. Honeywell must also comply with the Biennial Certification requirements at NJAC 7:26E-8.6.

The CEAs are for the ground water contamination in three distinct water bearing zones (Shallow, Deep Overburden, and Bedrock). Since the aerial extent of contamination is different for each of the three zones, three separate CEAs were prepared. Note that these

CEAs are only for total and hexavalent chromium. Any other ground water contamination areas within or nearby (e.g. organic compounds in Study Area 6 – North) will require a separate CEA.

If you have any questions, please contact Thomas J. Cozzi of the Site Remediation Program at (609) 984-2905.

Sincerely,

Thomas J. Cozzi, Assistant Director
NJDEP Site Remediation

Re: Classification Exception Area
Study Areas 5, 6 and 7
Hudson County Chromate Sites 73, 87, 88, 90, 115, 117, 120, 124, 125, 134, 140, 153, 157, and 184
Jersey City, Hudson County
NJDEP PI # G000008789

Dear Ms. Kaouris:

The New Jersey Department of Environmental Protection (NJDEP) has reviewed the Groundwater Classification Exception Area (CEA) application dated 8 June 2009, prepared by HydroQual, Inc. The NJDEP has determined that the referenced document is in compliance with Section 7:26E-8.3 of the New Jersey Technical Requirements for Site Remediation, and the CEA Guidance Document (revised November 1998). NJDEP hereby approves the CEA request effective the date of this letter.

Honeywell is advised that the CEA does not specify monitoring requirements since it functions as a notification mechanism, not as a "stand alone" enforcement or regulatory document. The need and the extent of ground water monitoring required during the duration of the CEA will be determined as part of the Comprehensive Ground Water Monitoring Program. As specified in NJAC 7:26E-8.3(b)5, the Department will require Honeywell to notify external agencies/affected parties of the CEA designations according to the guidelines established in the CEA Guidance Document (11/98) which can be located at: http://www.nj.gov/dep/srp/guidance/cea/ceaguid2.pdf. Note that all property owners within the plume do not need to be notified as long as they are on public water. Honeywell must also comply with the Biennial Certification requirements at NJAC 7:26E-8.6.

The CEAs are for the ground water contamination in three distinct water bearing zones (Shallow, Deep Overburden, and Bedrock). Since the aerial extent of contamination is different for each of the three zones, three separate CEAs were prepared. Note that these

CEAs are only for total and hexavalent chromium. Any other ground water contamination areas within or nearby (e.g. organic compounds in Study Area 6 – North) will require a separate CEA.

If you have any questions, please contact Thomas J. Cozzi of the Site Remediation Program at (609) 984-2905.

Sincerely,

Thomas J. Cozzi, Assistant Director
NJDEP Site Remediation

JUNE 2009 CEA APPLICATION

Ground Water Classification Exception Area Fact Sheet

A. SITE INFORMATION

1. Program's Site Identification Number: 64070

2. Program Interest Number (Preferred ID): G000002548

3. Program Interest Name: Roosevelt Drive In (Site 115)

4. Street address: 425, 445 & 465 Route 440

5. City: Jersey City

6. County: Hudson

7. Block and Lots of the site (duplicate if the site is located in more than one municipality):

   a. Name of the municipality in which the site is located: Jersey City

   b. Block and Lots: Block: 1290.A Lots: 11W, 9L, 11H, 11J, 11K, 11L, 11Y, 11M, 11N, 11O, 11P, 11Q, 11R, 12B, 12A, 10Z, 10E, 10H, 10Y, 11T, 11U, 2D, 2E, 15D

   c. Year of tax map: 1977

8. United States Geological Survey Quadrangle map, indicating the location of the site, presented as Exhibit A.

9. Site Contact:

   a. Name of contact person: John J. Morris, P.E.

   b. Company name: Honeywell International Inc.

   c. Mailing address: 101 Columbia Road Morristown, NJ 07962

   d. Phone number: (973) 455 - 4003

B. PROPOSED CLASSIFICATION EXCEPTION AREA INFORMATION

1. Narrative description of proposed classification exception area:

The proposed CEA boundary represents the maximum extent to which groundwater in the shallow water-bearing zone (fill material) contains total chromium in excess of the NJDEP Class II-A Ground Water Quality Standards (GWQS). With one exception, this delineation is based on prior subsurface investigations conducted in the vicinity of Hudson County Chromate Site 115 (Study Area 7). The basis for this delineation has been documented in Section 4 of the Final Groundwater Investigation Report (FGIR) prepared by HydroQual on behalf of Honeywell (HydroQual, February 2, 2007). The proposed CEA boundary therefore has been developed based on the extent of total chromium in the shallow zone as depicted on Figure 4.2-3 of the FGIR. The exception is that there is no longer groundwater present above the meadow mat within the boundary of Site 115, and thus this portion of the Study Area has been carved out of the CEA. The majority of this area has been excavated and replaced with clean fill. The remaining portion of Site 115 is currently being excavated and has been dewatered through pumping from headers installed within the COPR. Based on multiple lines of evidence (as further discussed in the FGIR), it is concluded that this plume has reached steady-state conditions and thus no further lateral expansion of the plume is expected.

2. Location of proposed classification exception area (duplicate if the site is located in more than one municipality):

a. Name of the municipality in which the site is located: Jersey City

b. Block and Lots: Block: 1290.A Lots: 9H, 11W, 9L, 11H, 11J, 11K, 11L, 11Y, 11M, 11N, 11O, 11P, 11Q, 11R, 12B, 12A, 10Z, 10E, 10H, 10Y, 11T, 11U, 2D, 2E, 15D; Block: 1290.B Lots: 9E, 10F, 10G; Block: 1288.2 Lot: C1; Block: 1275 Lot: 4; Block: 1285.5 Lot: 1; Block 1286 Lot: 5; Block: 1286.5 Lot: 1; Blocks: 1291 – 1292 Lot: 76

c. Year of tax map: 1977

3. Affected aquifer(s):

Aquifer Name	Vertical Depth	Ground Water Classification
Fill	0 - 20 ft	Class II-A

4. Contaminant concentrations:

Contaminant	Concentration[1]	GWQS[2]	SWQS[3]
Chromium (Total)	229,000 ug/L	70 ug/L	750 ug/L
Chromium (Hexavalent)	115,000 ug/L	-------	50 ug/L

5. Proposed classification exception area boundaries:

Horizontal: Scaled map indicating projected areal extent of proposed classification exception area, as well as location of site, presented as Exhibit B.

Vertical: As stated in B.3., above.
Locational coordinates of boundary of proposed classification exception area as New Jersey State Plane Coordinates. A minimum of four coordinates shall be submitted, in a format compatible with Department's geographic information system:

Northing	Easting	(New Jersey State Plane Coordinates)
683438	603172	
683814	603807	
684547	604214	
685701	604234	
685353	603400	
686111	602154	
685441	601413	
684256	602709	

Latitude	Longitude
40.7090	-74.0994
40.7100	-74.0971
40.7120	-74.0956
40.7152	-74.0956
40.7143	-74.0986
40.7164	-74.1031
40.7145	-74.1057
40.7113	-74.1011

6. Estimated size of the proposed ground water classification exception area:

45.35 Acres

7. Projected duration and expiration date of the proposed classification exception area:

a. Duration (in years and or days): Indeterminate

Data from prior investigations indicates that the presence of elevated chromium in the shallow groundwater is limited to the extent of COPR and COPR-impacted soils. This indicates that the plume will not expand beyond its current extent, and that concentrations will remain above the NJ GWQS as long as the COPR remains in place. Thus, with the following exceptions, the duration of the proposed CEA is indeterminate.

The exceptions include ongoing and planned remedial actions which will reduce the concentrations and/or footprint of the shallow groundwater plume. For example, hot spot soil excavation with off-site disposal, soil containment, capping, and the installation of subsurface barrier walls are planned for SA-5, SA-6 north and SA-6 south. Remedial action work plans that provide a description of these activities have been approved by NJDEP. Upon completion of these remedial activities, proposals will be made to modify the CEA accordingly.

b. Expiration date (as calendar date): N/A

Footnotes

1 Maximum concentration detected at the time Classification Exception Area information submitted to the Department. For a complete list of sampling points in which chromium was detected above applicable standards, refer to the Final Groundwater Investigation Report-Honeywell Study Area 7 Site (HydroQual, February 2007).

None

Table 1
Water Supply Wells
Well Search Summary

The results of the well search found five (5) water supply wells within a 1-mile radius of the site. Three (3) of these wells are listed as industrial water supply wells and the other two as domestic and non-public. Although their current operational status is unknown, all five wells are completed in the bedrock rather than the Shallow zone. None of the wells are located within the proposed CEA boundary, and potable water is provided to all locations within a 1-mile radius of the site.

Metadata Information for Groundwater CEA (Shallow Fill)
Program Interest Number: G000002548
Jersey City, New Jersey

1. IDENTIFICATION INFORMATION

1.1. DESCRIPTION

The maps represent the area on and adjacent to the Roosevelt Drive In (Site 115) in Jersey City, New Jersey for which a groundwater Classification Exception Area (CEA) has been proposed for the shallow fill aquifer. The site location and CEA boundary for shallow groundwater is illustrated on the identified maps.

CSL#: G000008742 (from KCSNJ)
Site Name (from KCSNJ): Roosevelt Drive In (Site 115); 425, 445 & 465 Route 440, Jersey City, New Jersey.

1.1.1. ABSTRACT

The "CEA_shallow.xxx" are a set of four (4) ESRI Shapefiles that illustrate the boundaries of the Classification Exception Area (CEA) at Site 115 in Jersey City, New Jersey. The files contain the polygon shapefile and associated files showing the extent of the CEA boundary for groundwater in the shallow water-bearing zone (fill material) that contains total chromium in excess of the NJDEP Class II-A Ground Water Quality Standards (GWQS).

1.1.2. PURPOSE/BRIEF DESCRIPTION

The four (4) ESRI Shapefiles, "CEA_shallow.xxx", illustrate the boundaries of the Classification Exception Area (CEA) for the shallow fill at Site 115 in Jersey City, New Jersey.

1.1.3. SUPPLEMENTAL INFORMATION

The following files are provided on the diskette:

CEA_shallow.shp – ArcView shapefile
CEA_shallow.dbf – ArcView attribute table
CEA_shallow.prj – ArcView projection file
CEA_shallow.shx – ArcView index file

cea_metafile_shallow_final.doc – metadata information for GIS maps.

cea_site_info_file_shallow.doc – support information for CEA

1.1.4. CURRENTNESS REFERENCE

The maps are representative of current conditions as of June 2008.

---

2. DATA QUALITY INFORMATION

2.1. ATTRIBUTE ACCURACY

The shapefile CEA_shallow.shp was digitized using the 2002 orthophotography available from the State of New Jersey Office of Information Technology. The orthophotos and resulting CEA boundary are georeferenced to NJ State Plane, NAD 1983, Feet.

2.2. QUANTITATIVE ATTRIBUTE ACCURACY ASSESSMENT

The CEA boundary has been plotted on the georeferenced USGS topographic map to assess the positional accuracy of the files.

2.3. COMPLETENESS REPORT

There were no known omissions in the construction of the data sets.

2.4. LINEAGE

ESRI ArcGIS was used to view the orthophotos and digitize the CEA boundary based on measured values at sampling wells.

The Honorable Robert G. Torricelli
Office of the Special Master
RGTSpecialMaster@aol.com

Re: Initiation of Long Term Groundwater Monitoring
Study Area 6 (SA-6) South
Jersey City, New Jersey

Dear Senator Torricelli:

In accordance with the September 1, 2016 Revised Draft SA-6 Long Term Monitoring Plan (LTMP) and the Groundwater Level Monitoring Plan (GWLMP) which was Appendix J of the SA-6 North Chromium Remedy 100% Design Report, Honeywell is hereby providing notice to the Parties that we will initiate long-term groundwater monitoring activities at SA-6 South the week of November 14, 2016. While Honeywell acknowledges the LTMP has not been approved as final by the parties, Honeywell will act to meet the requirements of the current draft to move site activities forward. Since the Chromium Remedy at SA-6 South was substantially complete when the geomembrane liner was installed in October 2015, the 12-month ñtransition periodò for groundwater specified in the LTMP and GWLMP ended in October 2016. We have authorized our environmental consultants, Amec Foster Wheeler and Cornerstone, to implement the following general activities at SA-6 South:

- Install data loggers in piezometers,
- Conduct manual water level gauging, and
- Implement quarterly groundwater sampling of the twelve specified monitoring wells in the Development AOC.

Similarly for SA-6 North, we are monitoring the groundwater level recovery following completion of excavation and geomembrane liner installation, and anticipate that the ñtransition periodòwill be complete in Spring 2017. At that time, we will initiate long-term monitoring at SA-6 North. The Spring 2017 monitoring will include the inspections associated with the cap vegetation.

In response to Plaintiffsô request to establish baseline groundwater quality conditions inside the Open Space Areas, Amec Foster Wheeler collected filtered and unfiltered groundwater samples from each piezometer on the interior of both Sites. The samples were analyzed for total and hexavalent chromium. A summary of this data is provided in the attached Table 1. The location of the piezometers is shown on the attached Figure 1.

Should the Parties wish to discuss this further, we will be prepared to discuss at the next All Parties meeting on November 15th. Should you have any questions in the meantime, please contact the undersigned at (973) 455-2175.

Sincerely,

William J. Hague
Global Director, Remediation
Design and Construction

APPENDIX J

ITEMS ENCOUNTERED DURING REMEDIAL ACTIVITIES

DEMOLITION

The former JCIA facility was located at 501 Route 440 in Jersey City, NJ. After JCIA relocated to a new Municipal Services Complex on Linden Avenue, Jersey City, New Jersey in September of 2014, the structures were readied for demolition.

Demolition included:

- mobilization and setup; work plans and submittal preparation;
- utility (water, sewer, gas, and electric) termination;
- asbestos containing material abatement and disposal;
- hazardous materials and universal waste removal and disposal;
- Waste Management Garage demolition and debris disposal;
- JCIA Garage demolition and debris disposal;
- Salt Dome demolition and debris disposal;
- JCIA Incinerator and Administrator Building demolition and debris disposal (including concrete and wood debris from inside building);
- management of stockpiles and testing of concrete and wood;
- demobilization and final submittals;
- a credit for recyclable materials;
- a performance and payment bond; and
- removal of miscellaneous items.

Gramercy, under contract to the JCRA, mobilized to the site and began setup activities on October 9, 2014. Asbestos abatement activities began on November 7, 2014 and were performed by Gramercy. The friable and non-friable asbestos waste was transported by Horwith Trucks, Inc. (Northampton, Pa.) to the Cumberland County Landfill in Shippensburg, PA. Gramercy removed a total of 113.49 tons of non-friable asbestos containing material, and 7.23 tons of friable asbestos containing material. Abatement was completed according to federal, state, local, EPA, and OSHA requirements. Gramercy collected ten 55 gallon drums of bird droppings from the third and fourth floors of the Incinerator Building and transported them offsite for disposal at Cycle Chem Facility in Elizabeth, NJ on March 16, 2015. Demolition activities were completed on March 18, 2015. Site cleanup and demobilization was completed on March 23, 2015.

UNDERGROUND STORAGE TANKS ENCOUNTERED

The UST in discovered in EA-5 was approximately 6 feet in diameter and 16 feet long and was approximately 1 to 3 feet bgs. Based upon the measured tank dimensions, the estimated volume of the tank is nominally 3,500 gallons. This tank was encountered near the northeast corner of the former "Waste Management Garage" on the JCIA site and in the vicinity of previously abandoned-in-place USTs in that area. This area is AOC "JCIA-1B, Abandoned USTs" in the non-chromium RAWP.

The 550-gallon capacity second JCIA UST was found adjacent to and south of the southern wall of the former JCIA Maintenance Garage. Due to the location of an oil/water separator previously located within the JCIA Maintenance Garage proximate to the UST location, it was surmised that the UST was likely associated with the former oil/water separator system. This oil/water separator was identified as AOC "JCIA-9B Oil Water Separators" in the non-chromium RAWP.

Since both tanks were previously unregistered, the LSRP registered the tanks with NJDEP. Upon consultation and oversight by the LSRP, Honeywell authorized Entact to remove the USTs. Due to leakage of the EA-5 tank contents and the presence of a strong gasoline-type odor from the liquid, Amec Foster Wheeler contacted the NJDEP Spill Hot Line and NJDEP Case No. 15-09-03-1258-48 was assigned. Additional details concerning the USTs' removal and samples collected will be included in the SA-6 North Non-Chromium Remedy RAR report.

Notes:

NJ 2012 MOST STRINGENT SRS- NJDEP Most Stringent Soil Remediation Standards [N.J.A.C. 7:26D; last amended 5/7/2012].

NJ 2013 IGW SOIL – NJDEP Impact to Groundwater Soil Screening Levels [N.J.A.C. 7:26D; last amended November 2013]

NC: No criterion established

Bold and underlined concentrations exceed the NJ 2012 MOST STRINGENT SRS

Bold and shaded concentrations exceed the NJ 2013 IGW SOIL or both the NJ 2013 IGW SOIL and the NJ 2012 MOST STRINGENT SRS

Italicized values not detected; reporting limit exceeds criteria

Depths reported in feet below ground surface

CONC: Concentration reported in milligrams per kilogram (mg/kg)

J: Estimated concentration

Q: Data qualifier assigned by laboratory or data validator

U: Not detected above method detection limit

Results with a value of "0" indicates no TICs were detected

SVOC: Semi-Volatile Organic Compounds

Notes:

TAL: Target Analyte List; hexavalent chromium results included for comparison

RCRA Toxicity Characteristics from 40 CFR 261.24

NC: No criterion established

Bold and underlined concentrations exceed the Toxicity Characteristics

Depths reported in feet below ground surface

CONC: Concentration reported in milligrams per liter (mg/L)

J: Estimated concentration

Q: Data qualifier assigned by laboratory or data validator

U: Not detected above method detection limit

mg/L: milligrams per liter

APPENDIX L

BACKFILL DOCUMENTATION

Honeywell

Honeywell
101 Columbia Rd
Morristown, NJ 07962

July 3, 2014 *Via Express Mail*

Honorable Robert G. Torricelli
Office of the Special Master
41 W. State St., Suite 2F
Trenton, NJ 08608

Subject: **New Source of Imported Clean Fill**
Study Area 6 (SA-6)
Jersey City, New Jersey

Dear Senator Torricelli:

Honeywell is preparing this letter to advise the parties that we have identified a new source of fill which can be used at SA-6 for both surcharging and common borrow needs. The borrow site located in Summit, NJ and has received a Site-Wide NFA designation from the NJDEP and is now in active construction of a new subgrade parking garage. This construction requires excavation up to 20 feet below grade and is creating the potential availability of up to ~70,000 cubic yards of surplus clean fill.

Although the site has an NFA, additional analytical samples were collected and compared to the NJDEP Soil Remediation Standards. Specifically, 66 composite soil samples were collected from 13 soil boring locations and analyzed for:

a. Discrete - VOCs
b. Composite - SVOCs, PCBs, pesticides, metals, Hex Cr, cyanide, EPH

All the data was found to meet NJDEP unrestricted use criteria and the Hex Cr was found to be < 1 mg/kg. Consistent with our prior practice we are providing the parties a copy of one of the final laboratory data packages which includes soil samples D-1 and E-1 is attached to this letter.

In addition, Honeywell requested that Amec collect geotechnical samples for evaluation of whether the material meets the Common Borrow fill specifications in the approved 100% Design. Amec found that the materials are acceptable for common fill and a copy of the geotechnical data (classification, moisture content and standard proctor) are also attached to this letter.

As discussed at our weekly progress meetings, Honeywell/Amec have contracted with a trucking firm and began importing the material on Jun 25, 2014. The materials will either be stockpiled adjacent to the Novartis materials on SA-7, or used immediately for Surcharge on SA-6 South.

Additional testing will be continued as needed to meet the specifications and updates will be provided in future reports per previous agreement with the parties.

Should you have any questions please contact the undersigned at (973) 455-2175.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

GENERAL CONTRACTOR : Entach Corp

CERTIFICATION: Clean Fill Certification

PROJECT: Honeywell Jersey City NJ.

Please accept this letter as our certification that the Clean Fill to be supplied to you through EME for the above referenced project is produced at our Plumsted Township Plant located at 849 Route 539, New Egypt, NJ 08533. Block 80 lot 4.

The material provided from our pit is:
Excavated from undisturbed geologic formations;
Obtained from a licensed quarry/mine;
Not been subject to a discharged hazardous substance at any time;
Not located on or impacted by other contaminant sources;
Not comingled with any other materials;
Not known or suspected of being contaminated.
Not adversely impacted by discharges of hazardous materials or chemical applications;
Not affected by conditions or processes that would result in the introduction of contaminates into the licensed quarry/mine material in concentrations above regulatory concern; and
Not affected by conditions or processes that would increase the concentrations of contaminants already present in the licensed quarry/mine to concentrations above regulatory concern.
Also please find a copy of our state mine registration.

If you need any further assistance, please feel free to contact me.

Sincerely,

Keith Prince
Vice President

State of New Jersey
Department of Labor and Workforce Development

Legend

Bold - >IGW

Underline - >NRDCSRS

Highlight - >RDCSRS

Italics - > SPLP

NA = Not Available

NS = Not Sampled

U = Not Detected

D = Dilution

Q = indicates LCS control criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

* = indicates the duplicate analysis is not within control limits

N = Spiked sample recovery not within control limits

Notes:

1.) In accordance with the NJDEP's Frequently Asked Questions for the Impact to Ground Water Pathway in Soil Remediation Standards, the GWQS for aluminum, manganese, silver, and zinc are secondary (i.e. they are not based on health considerations); therefore, the NJDEP has determined that the IGW pathway does not need to be addressed for these contaminants, unless there is reason to believe their presence is due to a site discharge.

2.) For samples in which the reported 1,2-Dibromo-3-chloropropane and 2,4-Dinitrophenol level exceeds the IGW standard, the analytical lab has provided an e-mail confirming that 1,2-Dibromo-3-chloropropane or 2,4-Dinitrophenol is below the reported level and below IGW.

3) Three SPLP samples were taken per submittal. The highest value of the three samples is reported in this table. SPLP reported only when a parameter exceeded IGW.

4) These samples represent material used in both SA-6 North and SA-6 South.

*All metals and total EPH reported in mg/kg. All other parameters reported in ug/kg.

Backfill Sample Comparison to NJDEP Soil Standards

Study Area 6

Honeywell International Inc.

Jersey City, New Jersey

Legend

Bold - >IGW
Underline - >NRDCSRS
Highlight - >RDCSRS
Italics - > SPLP
NA = Not Available
NS = Not Sampled
U = Not Detected
D = Dilution
Q = indicates LCS control criteria did not meet requirements
J = Estimated Value
B = Analyte Found in Associated Method Blank
* = indicates the duplicate analysis is not within control limits
N = Spiked sample recovery not within control limits

Notes:

1.) In accordance with the NJDEP's Frequently Asked Questions for the Impact to Ground Water Pathway in Soil Remediation Standards, the GWQS for aluminum, manganese, silver, and zinc are secondary (i.e. they are not based on health considerations); therefore, the NJDEP has determined that the IGW pathway does not need to be addressed for these contaminants, unless there is reason to believe their presence is due to a site discharge.

2.) For samples in which the reported 1,2-Dibromo-3-chloropropane and 2,4-Dinitrophenol level exceeds the IGW standard, the analytical lab has provided an e-mail confirming that 1,2-Dibromo-3-chloropropane or 2,4-Dinitrophenol is below the reported level and below IGW.

3) Three SPLP samples were taken per submittal. The highest value of the three samples is reported in this table. SPLP reported only when a parameter exceeded IGW.

4) These samples represent material used in both SA-6 North and SA-6 South.

*All metals and total EPH reported in mg/kg. All other parameters reported in ug/kg.

Legend

Bold - >IGW

Underline - >NRDCSRS

Highlight - >RDCSRS

Italics - > SPLP

NA = Not Available

NS = Not Sampled

U = Not Detected

D = Dilution

Q = indicates LCS control criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

* = indicates the duplicate analysis is not within control limits

N = Spiked sample recovery not within control limits

Notes:

1.) In accordance with the NJDEP's Frequently Asked Questions for the Impact to Ground Water Pathway in Soil Remediation Standards, the GWQS for aluminum, manganese, silver, and zinc are secondary (i.e. they are not based on health considerations); therefore, the NJDEP has determined that the IGW pathway does not need to be addressed for these contaminants, unless there is reason to believe their presence is due to a site discharge.

2.) For samples in which the reported 1,2-Dibromo-3-chloropropane and 2,4-Dinitrophenol level exceeds the IGW standard, the analytical lab has provided an e-mail confirming that 1,2-Dibromo-3-chloropropane or 2,4-Dinitrophenol is below the reported level and below IGW.

3) Three SPLP samples were taken per submittal. The highest value of the three samples is reported in this table. SPLP reported only when a parameter exceeded IGW.

4) These samples represent material used in both SA-6 North and SA-6 South.

*All metals and total EPH reported in mg/kg. All other parameters reported in ug/kg.

Backfill Sample Comparison to NJDEP Soil Standards

Study Area 6

Honeywell International Inc.

Jersey City, New Jersey

Legend

Bold - >IGW

Underline - >NRDCSRS

Highlight - >RDCSRS

Italics - > SPLP

NA = Not Available

NS = Not Sampled

U = Not Detected

D = Dilution

Q = indicates LCS control criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

* = indicates the duplicate analysis is not within control limits

N = Spiked sample recovery not within control limits

Notes:

1.) In accordance with the NJDEP's Frequently Asked Questions for the Impact to Ground Water Pathway in Soil Remediation Standards, the GWQS for aluminum, manganese, silver, and zinc are secondary (i.e. they are not based on health considerations); therefore, the NJDEP has determined that the IGW pathway does not need to be addressed for these contaminants, unless there is reason to believe their presence is due to a site discharge.

2.) For samples in which the reported 1,2-Dibromo-3-chloropropane and 2,4-Dinitrophenol level exceeds the IGW standard, the analytical lab has provided an e-mail confirming that 1,2-Dibromo-3-chloropropane or 2,4-Dinitrophenol is below the reported level and below IGW.

3) Three SPLP samples were taken per submittal. The highest value of the three samples is reported in this table. SPLP reported only when a parameter exceeded IGW.

4) These samples represent material used in both SA-6 North and SA-6 South.

*All metals and total EPH reported in mg/kg. All other parameters reported in ug/kg.

Legend

Bold - >IGW

Underline - >NRDCSRS

Highlight - >RDCSRS

Italics - > SPLP

NA = Not Available

NS = Not Sampled

U = Not Detected

D = Dilution

Q = indicates LCS control criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

* = indicates the duplicate analysis is not within control limits

N = Spiked sample recovery not within control limits

Notes:

1.) In accordance with the NJDEP's Frequently Asked Questions for the Impact to Ground Water Pathway in Soil Remediation Standards, the GWQS for aluminum, manganese, silver, and zinc are secondary (i.e. they are not based on health considerations); therefore, the NJDEP has determined that the IGW pathway does not need to be addressed for these contaminants, unless there is reason to believe their presence is due to a site discharge.

2.) For samples in which the reported 1,2-Dibromo-3-chloropropane and 2,4-Dinitrophenol level exceeds the IGW standard, the analytical lab has provided an e-mail confirming that 1,2-Dibromo-3-chloropropane or 2,4-Dinitrophenol is below the reported level and below IGW.

3) Three SPLP samples were taken per submittal. The highest value of the three samples is reported in this table. SPLP reported only when a parameter exceeded IGW.

4) These samples represent material used in both SA-6 North and SA-6 South.

*All metals and total EPH reported in mg/kg. All other parameters reported in ug/kg.

Legend

Bold - >IGW

Underline - >NRDCSRS

Highlight - >RDCSRS

Italics - > SPLP

NA = Not Available

NS = Not Sampled

U = Not Detected

D = Dilution

Q = indicates LCS control criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

* = indicates the duplicate analysis is not within control limits

N = Spiked sample recovery not within control limits

Notes:

1.) In accordance with the NJDEP's Frequently Asked Questions for the Impact to Ground Water Pathway in Soil Remediation Standards, the GWQS for aluminum, manganese, silver, and zinc are secondary (i.e. they are not based on health considerations); therefore, the NJDEP has determined that the IGW pathway does not need to be addressed for these contaminants, unless there is reason to believe their presence is due to a site discharge.

2.) For samples in which the reported 1,2-Dibromo-3-chloropropane and 2,4-Dinitrophenol level exceeds the IGW standard, the analytical lab has provided an e-mail confirming that 1,2-Dibromo-3-chloropropane or 2,4-Dinitrophenol is below the reported level and below IGW.

3) Three SPLP samples were taken per submittal. The highest value of the three samples is reported in this table. SPLP reported only when a parameter exceeded IGW.

4) These samples represent material used in both SA-6 North and SA-6 South.

*All metals and total EPH reported in mg/kg. All other parameters reported in ug/kg.

Legend

Bold - >IGW

Underline - >NRDCSRS

Highlight - >RDCSRS

Italics - > SPLP

NA = Not Available

NS = Not Sampled

U = Not Detected

D = Dilution

Q = indicates LCS control criteria did not meet requirements

J = Estimated Value

B = Analyte Found in Associated Method Blank

* = indicates the duplicate analysis is not within control limits

N = Spiked sample recovery not within control limits

Notes:

1.) In accordance with the NJDEP's Frequently Asked Questions for the Impact to Ground Water Pathway in Soil Remediation Standards, the GWQS for aluminum, manganese, silver, and zinc are secondary (i.e. they are not based on health considerations); therefore, the NJDEP has determined that the IGW pathway does not need to be addressed for these contaminants, unless there is reason to believe their presence is due to a site discharge.

2.) For samples in which the reported 1,2-Dibromo-3-chloropropane and 2,4-Dinitrophenol level exceeds the IGW standard, the analytical lab has provided an e-mail confirming that 1,2-Dibromo-3-chloropropane or 2,4-Dinitrophenol is below the reported level and below IGW.

3) Three SPLP samples were taken per submittal. The highest value of the three samples is reported in this table. SPLP reported only when a parameter exceeded IGW.

4) These samples represent material used in both SA-6 North and SA-6 South.

*All metals and total EPH reported in mg/kg. All other parameters reported in ug/kg.

Attn: Caroline Panico
Re: Honeywell SA6 South Cap Toe Drains

Caroline,

Tilcon NY Inc. New Jersey Division confirms that the materials produced from our Mt. Hope Quarry are defined as virgin Gneiss mined at Mt. Hope Quarry, 625 Mt. Hope Road, Block No(s) 20001, 70001, 20101 – Lot No(s) 5.01, 5.02, 7, 2, 6 Wharton Borough, Morris County NJ. The material is identified on the job with Tilcon NJ delivery tickets.

The material produced at the Mt. Hope quarry is processed through the plant to the various sizes with the source remaining the same. The 1 ½" stone is produced from the same quarry/material as the DGA.

Attached is also the analytical data for your reference.

Please feel free to contact me for any additional information.
Thank You,

Aleksandra Rogozinski
Quality Control Supervisor
Tilcon New York, Inc.

Tilcon Inc confirms that DGABC available at Mt. Hope Quarry conforms to section 901 of the ***New Jersey Department of Transportation StandardSpecifications for Road and Bridge Construction.*** The material is defined as virgin Gneiss mined at Mt. Hope Quarry, 625 Mount Hope Road, Block 20001-Lot 6.01 Wharton Borough, Morris County NJ. The material is identified on the job with Tilcon delivery tickets.

The unit weights and voids are for process control and should be verified by the contractor before use.

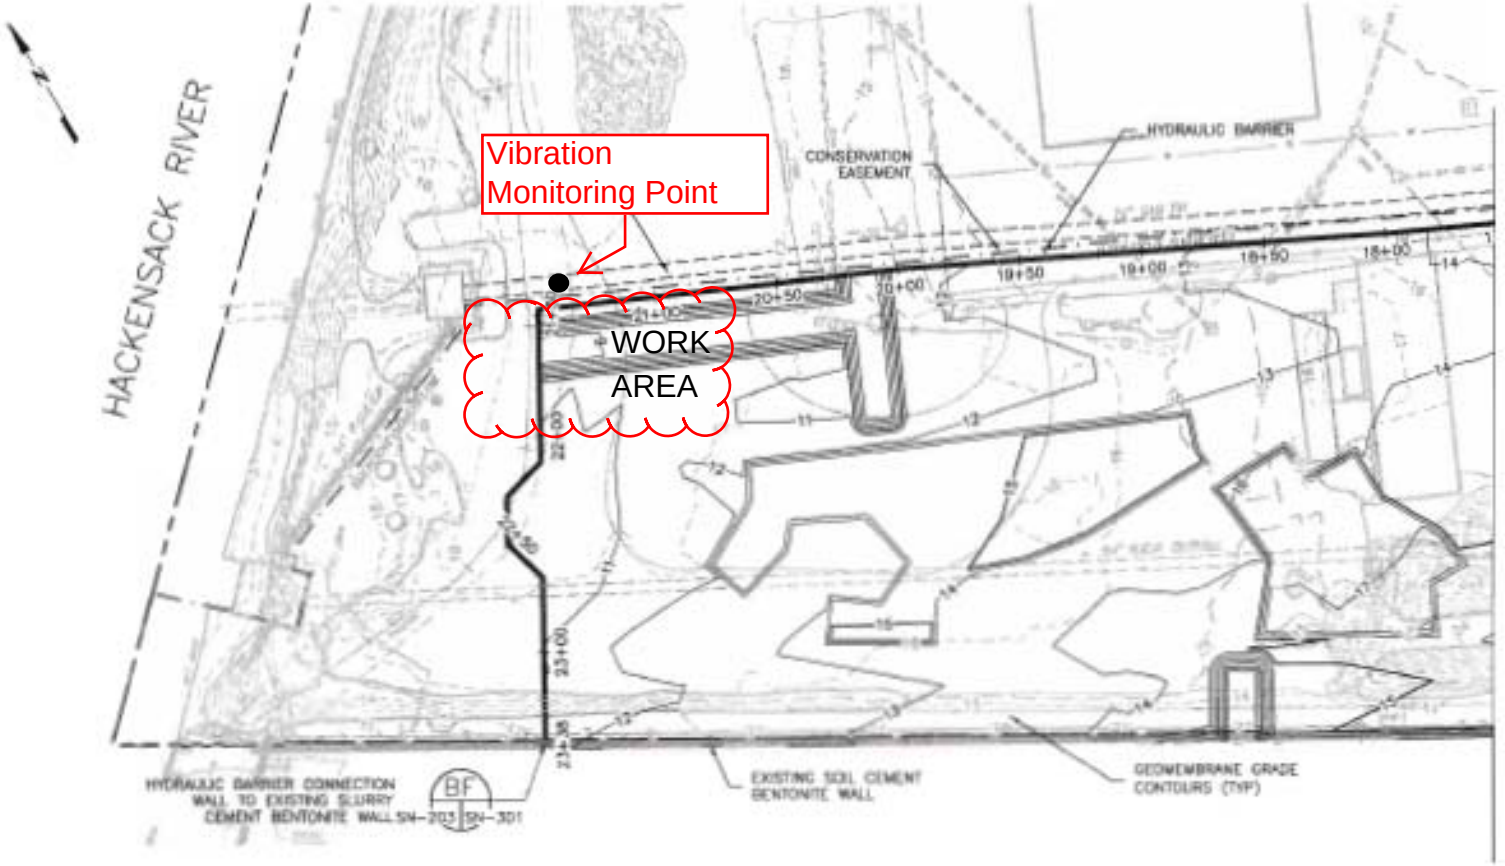
February 27th, 2014
For ENTACT, LLC



111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631

NOTES:

Summary of Work:
Sheet pile driving commenced at 2:12 PM until 3:12 PM. An Instantel Blastmate III was used to record vibrations via a geophone placed on the ground over the 72 inch force main.

Four sheets were driven, and no exceedances were recorded. See attached plan for area of work and location of the seismograph. See attached Blastware reports for PPV at this location.

Vibration Monitoring Report

Study Area 6 North

Prepared by
Geocomp Engineering

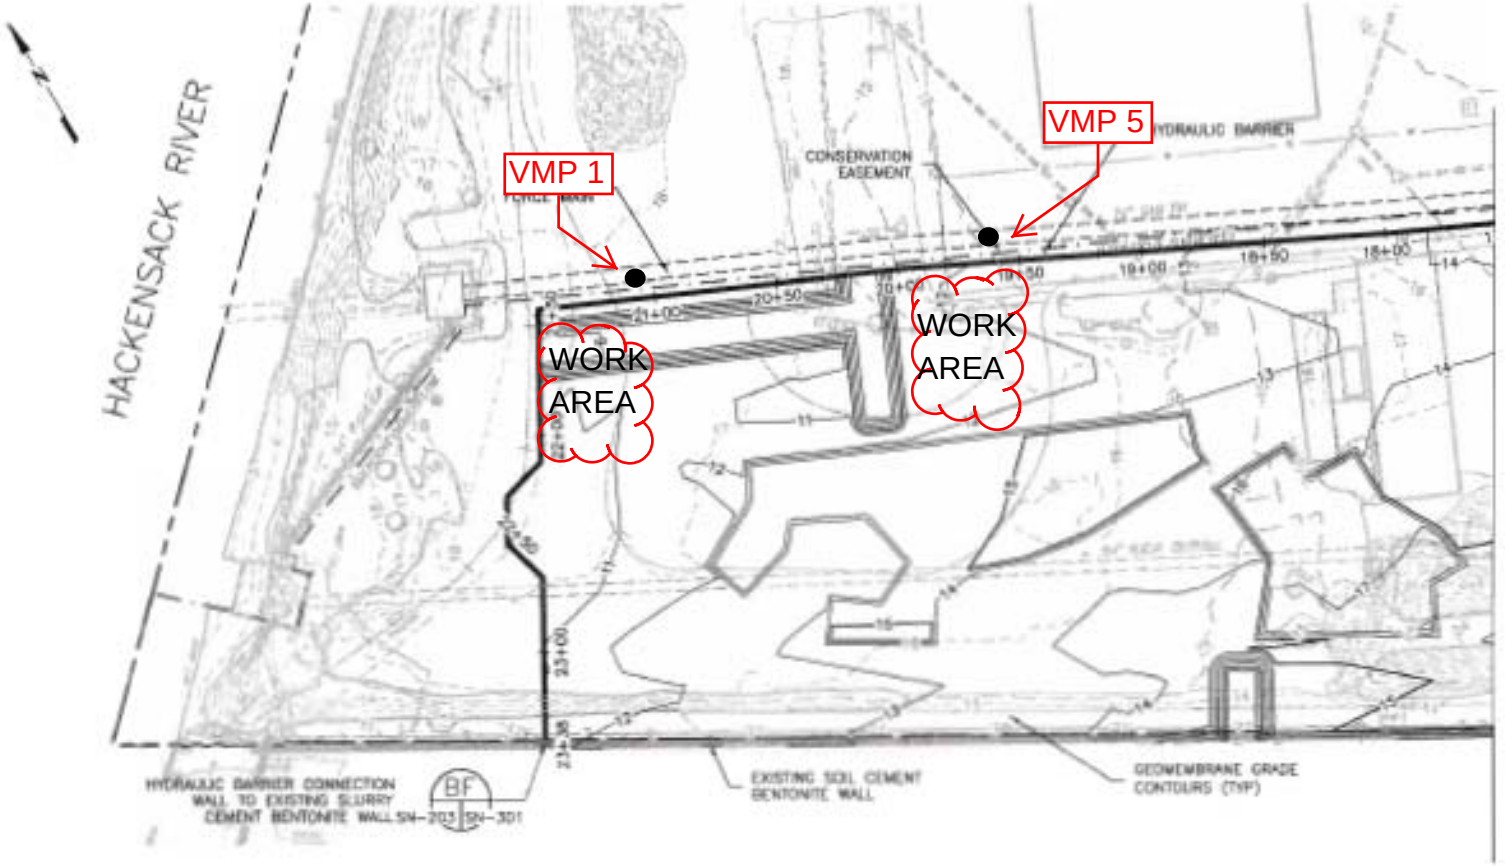
March 6th, 2014
For ENTACT, LLC



111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631

NOTES:

Summary of Work:
Sheet pile driving commenced at 1:20 PM until 3:30 PM. An Instantel Blastmate III was used to record vibrations via a geophone placed on the ground over the 72 inch force main.

Five sheets were driven, and no exceedances were recorded. See attached plan for area of work and location of the seismograph. See attached Blastware reports for PPV at this location.

Trigger Level: 0.5 in/sec
Alert Level: 1.0 in/sec

NOTES:

Summary of Work:
Sheet pile driving commenced at 8:00 AM and ended at 10:40 AM. An Instantel Blastmate III was used to record vibrations via a geophone placed on the ground over the 72 inch force main.

16 sheets were driven, and no exceedances were recorded. See attached plan for area of work and location of the seismograph. See attached Blastware reports for PPV at this location.

Vibration Monitoring Report

Study Area 6 ~~South~~ North

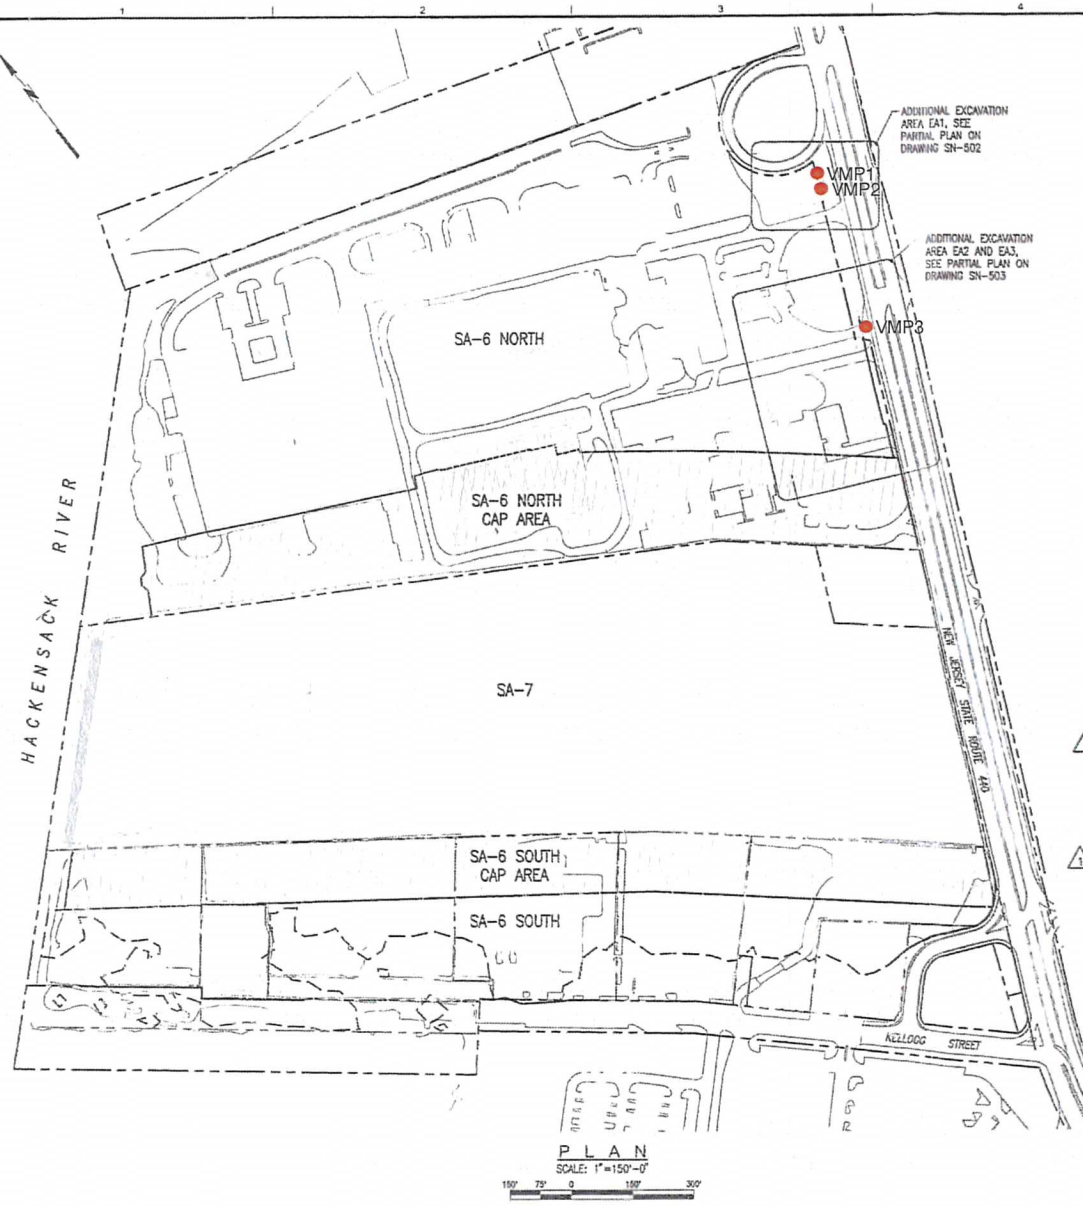
Prepared by
Geocomp Engineering

July 20th, 2015
For ENTACT, LLC

111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631

NOTES:

Summary of Work:
I-beam pile driving commenced at 11:10 AM and ended at 11:32 AM. Two Instantel Micromate were used to record vibrations via a geophone placed on the ground over the 36" inch force main and the gas line.



Sheet pile driving commenced at 4:28 and ended at 4:33. An Instantel Micromate was used to record vibrations via a geophone placed on the ground over the gas line.

2 I-beams were driven with no recorded exceedances and 1 sheet was driven with no recorded exceedances. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

32 Inch Force Main:
Trigger Level: 0.5 in/sec
Alert Level: 1.0 in/sec

Gas Line:
Trigger Level: 0.5 in/sec
Alert Level: 2.0 in/sec

Event Reports:
The force main report has an incorrect date and time attached to it because of a unit issue, but the recorded values are correct. The unit has been readjusted to the correct date and time for future work.

PLAN
SCALE: 1"=150'-0"
150' 75' 0 150' 300'

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E7010), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level.
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, GNP points may be reflective targets for total station surveys.
23. Survey location of monitoring point. (X, Y, Z) (baseline reading).
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey data, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec

    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations.
28. Elevation are based on NGVD 1929 Datum.

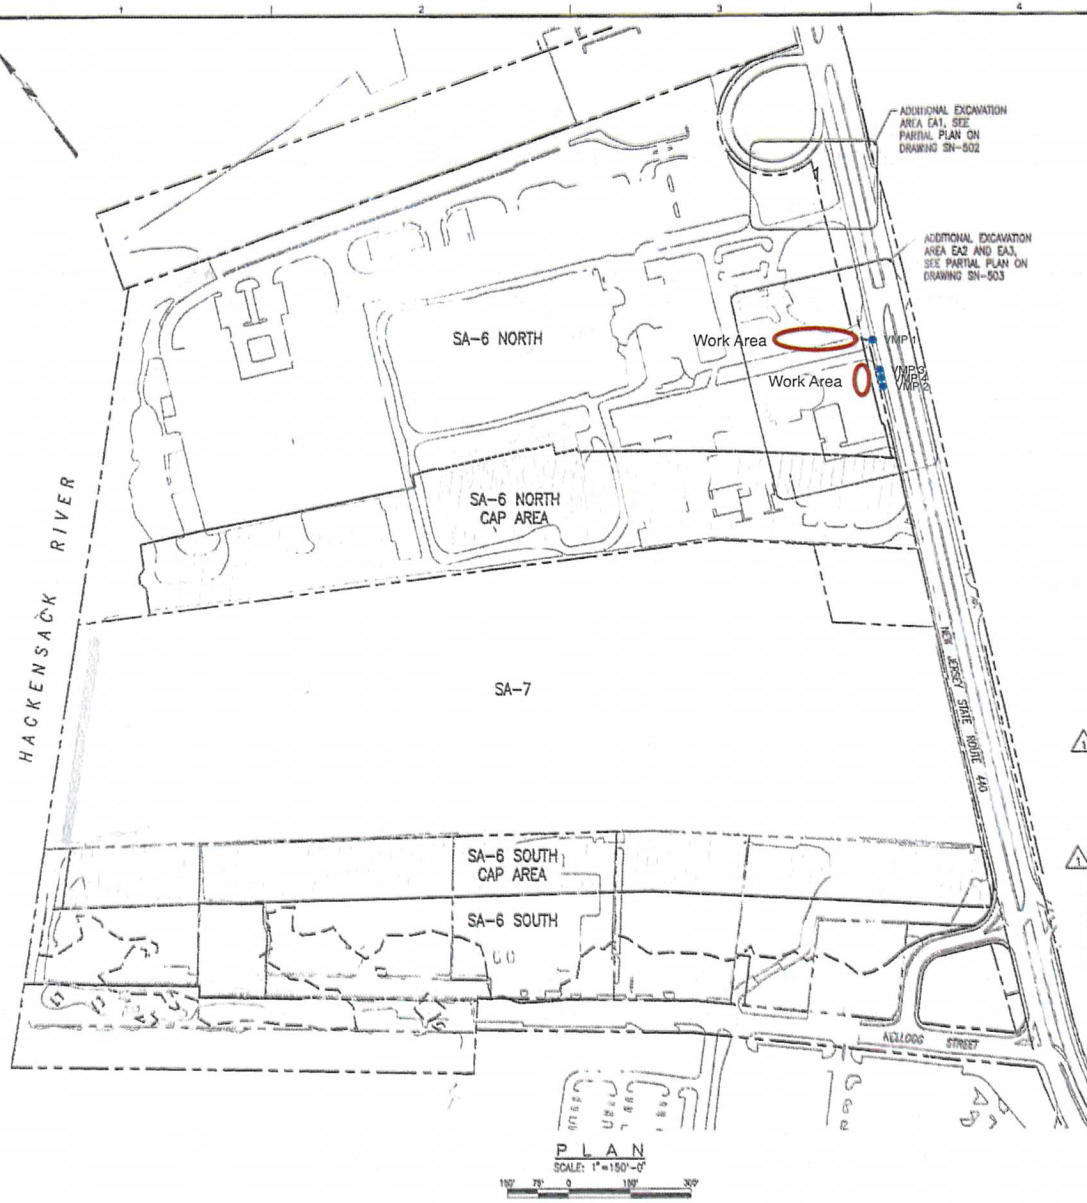
Vibration Monitoring Report

Study Area 6 ~~South~~ North 1/27/17

Prepared by
Geocomp Engineering

July 29th, 2015
For ENTACT, LLC

111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631



NOTES:

Summary of Work:
Sheet pile driving commenced at 9:30 AM and ended at 2:00 PM. An Instantel Micromate was used to record vibrations via a geophone placed on the ground over the water main.

5 sheets were driven and 9 were brought to grade with 6 recorded exceedances, i.e., the 0.5 limit was exceeded at 12:48 PM, 12:57 PM, 1:20 PM, 1:22 PM, 1:25 PM and 1:44 PM. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Water Main:
Trigger Level: 0.25 in/sec
Alert Level: 0.5 in/sec

Errors:
The top of each report states all data was collected for the force main but should read water main. All future water main data will have the correct label.

PLAN
SCALE: 1" = 150'-0"

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and stop sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from rocking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E7010), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level.
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. Survey location of monitoring point, (X, Y, Z) (baseline reading).
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main - 2.0 in/sec
    Sewer & F.M. - 1.0 in/sec
    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations.
28. Elevation are based on NGVD 1929 Datum.

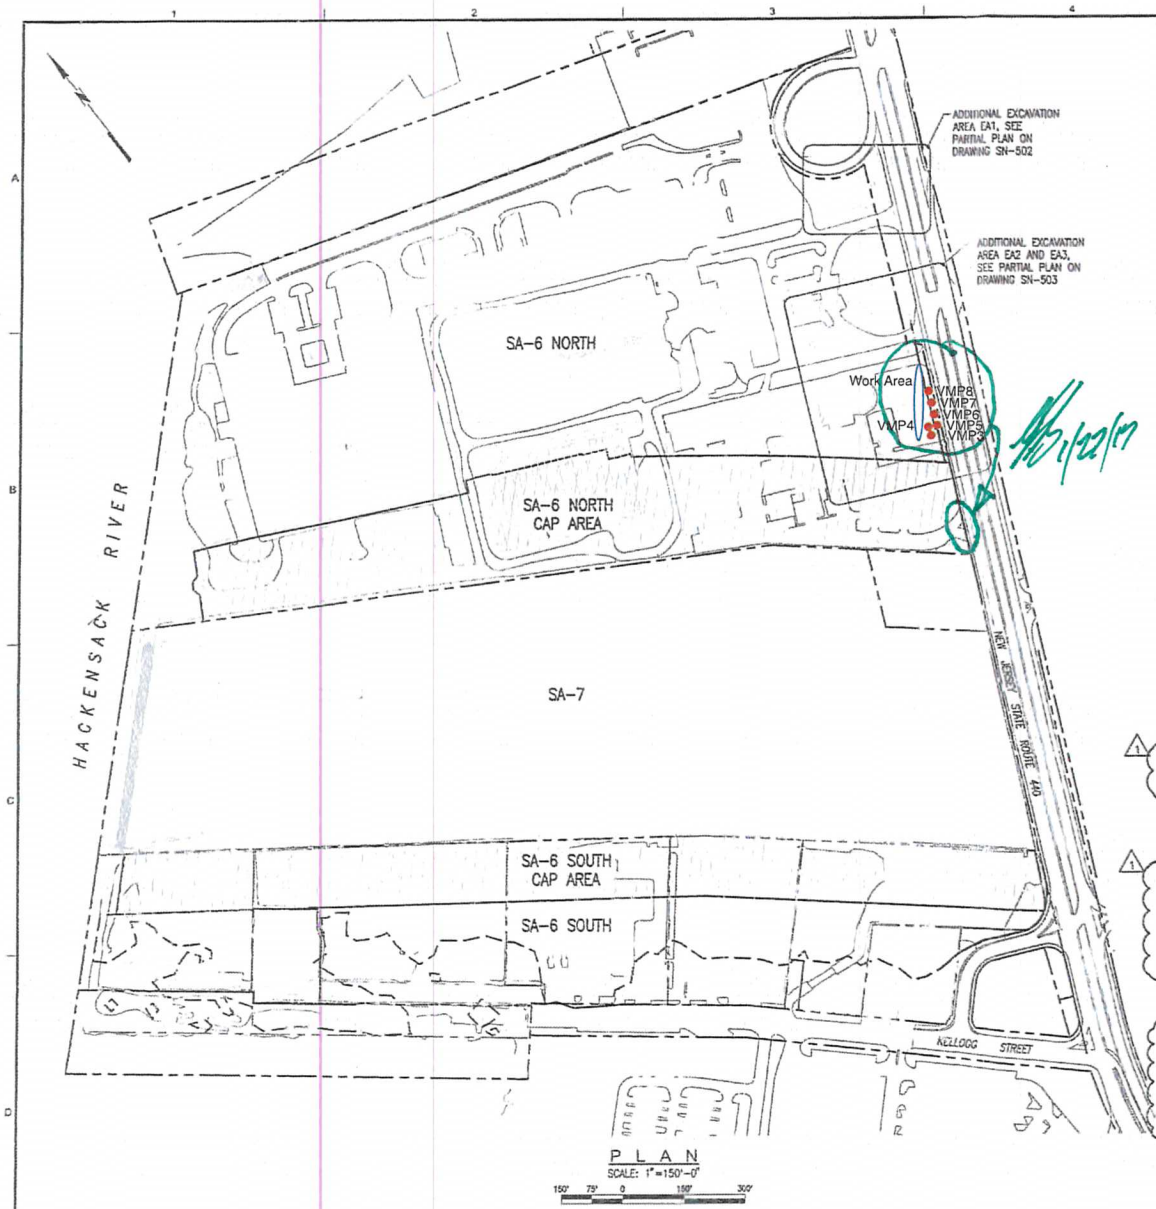
Vibration Monitoring Report

Study Area 6 ~~South~~ North 1/27/17

Prepared by
Geocomp Engineering

July 21th, 2015
For ENTACT, LLC

111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631



NOTES:

Summary of Work:
Sheet pile driving commenced at 8:05 AM and ended at 2:30 PM. An Instantel Micromate was used to record vibrations via a geophone placed on the ground over the gas line.

12 sheets were driven and 11 were brought to grade with 5 recorded exceedances, i.e., the 2.0 limit was exceeded at 10:28 AM, 11:27 AM, 1:45 PM, 2:10 PM, and 2:22 PM. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Gas Line:
Trigger Level: 0.5 in/sec
Alert Level: 2.0 in/sec

Errors:
The 3rd recording was taken too close to the work due to traffic concerns, granting higher readings than it should have recorded and was knocked at the recording's end, creating a 10:28 AM exceedance unrelated to sheet driving. The sheet driving was paused to allow movement of the sensor onto a street location closer to the gas pipe.

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level.
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. Survey location of monitoring point. (X, Y, Z) (baseline reading).
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec
    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations.
28. Elevation are based on NGVD 1929 Datum.

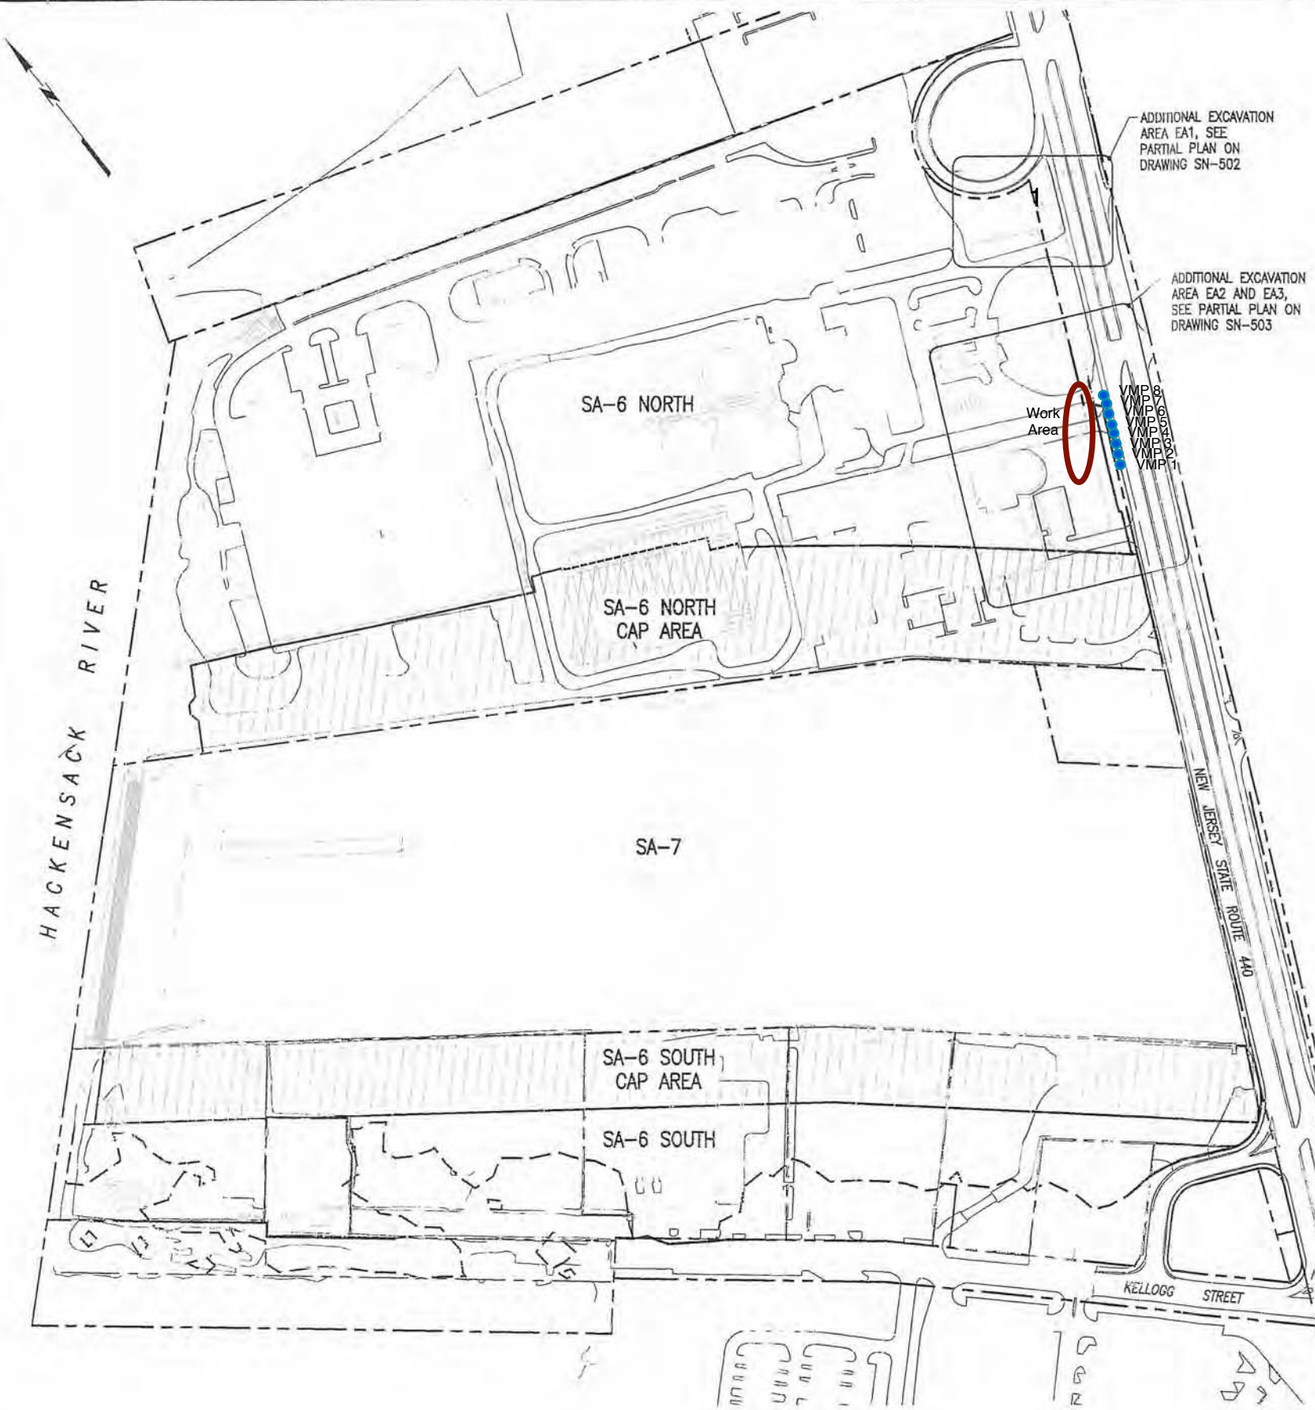
Vibration Monitoring Report

Study Area 6 South

Prepared by
Geocomp Engineering

July 28th, 2015
For ENTACT, LLC



111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631

NOTES:

Summary of Work:
Hammering commenced at 8 AM and ended at 8:30 AM. Sheet pile driving commenced at 9:35 AM and ended at 2:30 PM. An Instantel Micromate was used to record vibrations via a geophone placed on the ground over the gas line.

19 sheets were driven and 18 were brought to grade with 5 recorded exceedances, i.e., the 0.5 limit was exceeded at 9:35 AM, 1:12 PM, 1:18 PM, 1:37 PM, and 1:43 PM. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Gas Line:
Trigger Level: 0.25 in/sec
Alert Level: 0.5 in/sec

PLAN
SCALE: 1"=150'-0"
150' 75' 0 150' 300'

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. (1) Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level.
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. (1) Survey location of monitoring point. (X, Y, Z) (baseline reading).
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec

    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations. (1)
28. Elevation are based on NGVD 1929 Datum.

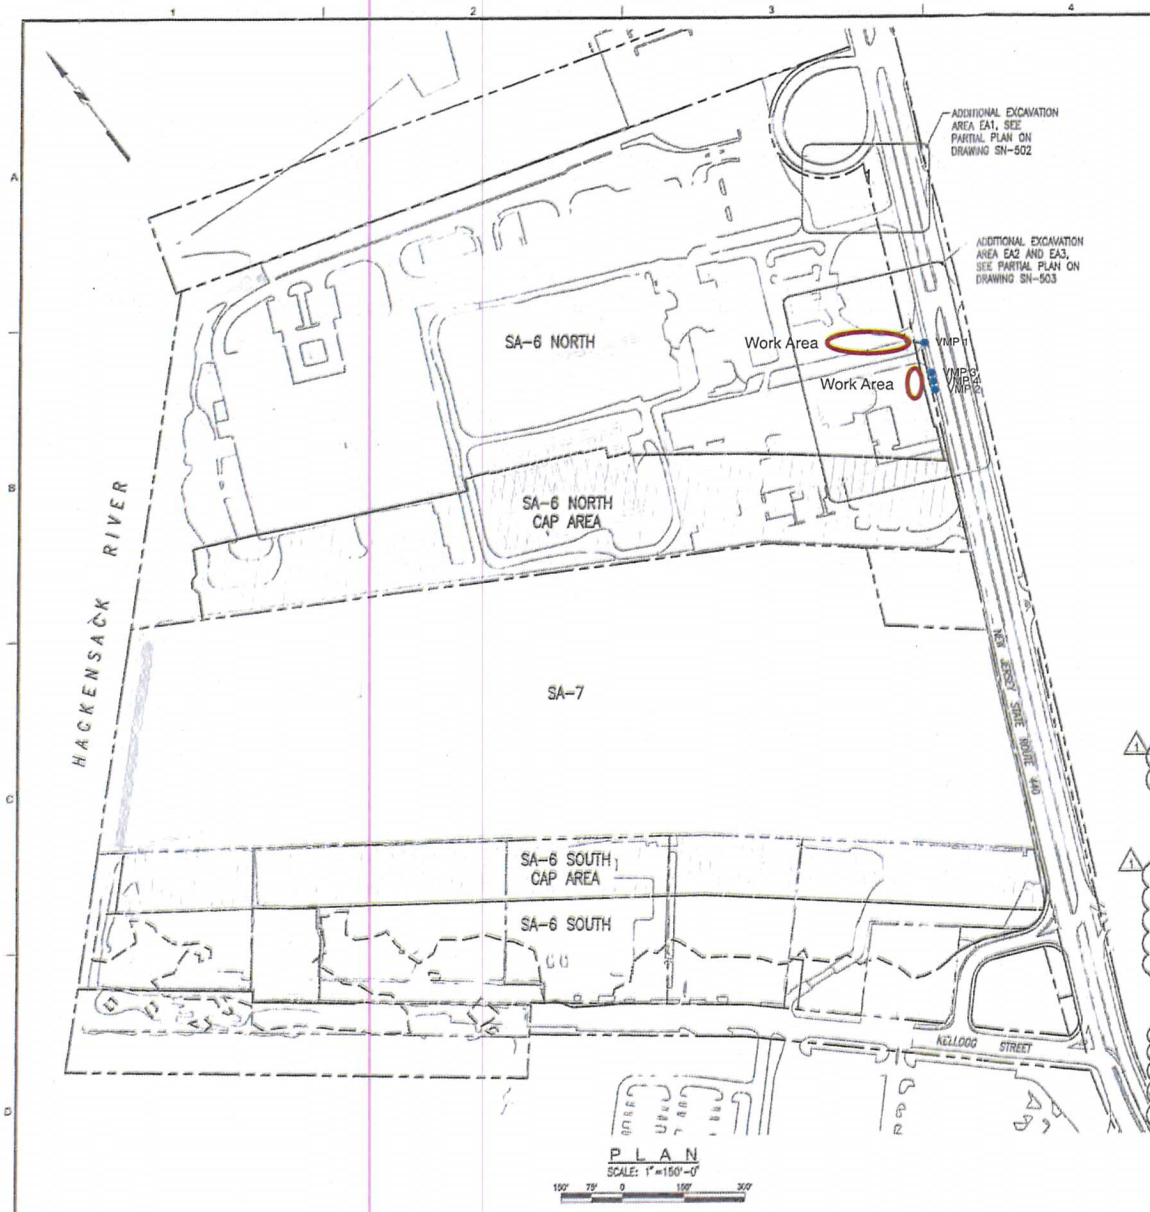
Vibration Monitoring Report

Study Area 6 ~~South~~ North 1/26/17

Prepared by
Geocomp Engineering

July 29th, 2015
For ENTACT, LLC

111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631



NOTES:

Summary of Work:
Sheet pile driving commenced at 9:30 AM and ended at 2:00 PM. An Instantel Micromate was used to record vibrations via a geophone placed on the ground over the water main.

5 sheets were driven and 9 were brought to grade with 6 recorded exceedances, i.e., the 0.5 limit was exceeded at 12:48 PM, 12:57 PM, 1:20 PM, 1:22 PM, 1:25 PM and 1:44 PM. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Water Main:
Trigger Level: 0.25 in/sec
Alert Level: 0.5 in/sec

Errors:
The top of each report states all data was collected for the force main but should read water main. All future water main data will have the correct label.

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from rocking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level.
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, CMP points may be reflective targets for total station surveys.
23. Survey location of monitoring point, (X, Y, Z) (baseline reading).
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec
    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations.
28. Elevation are based on NGVD 1929 Datum.

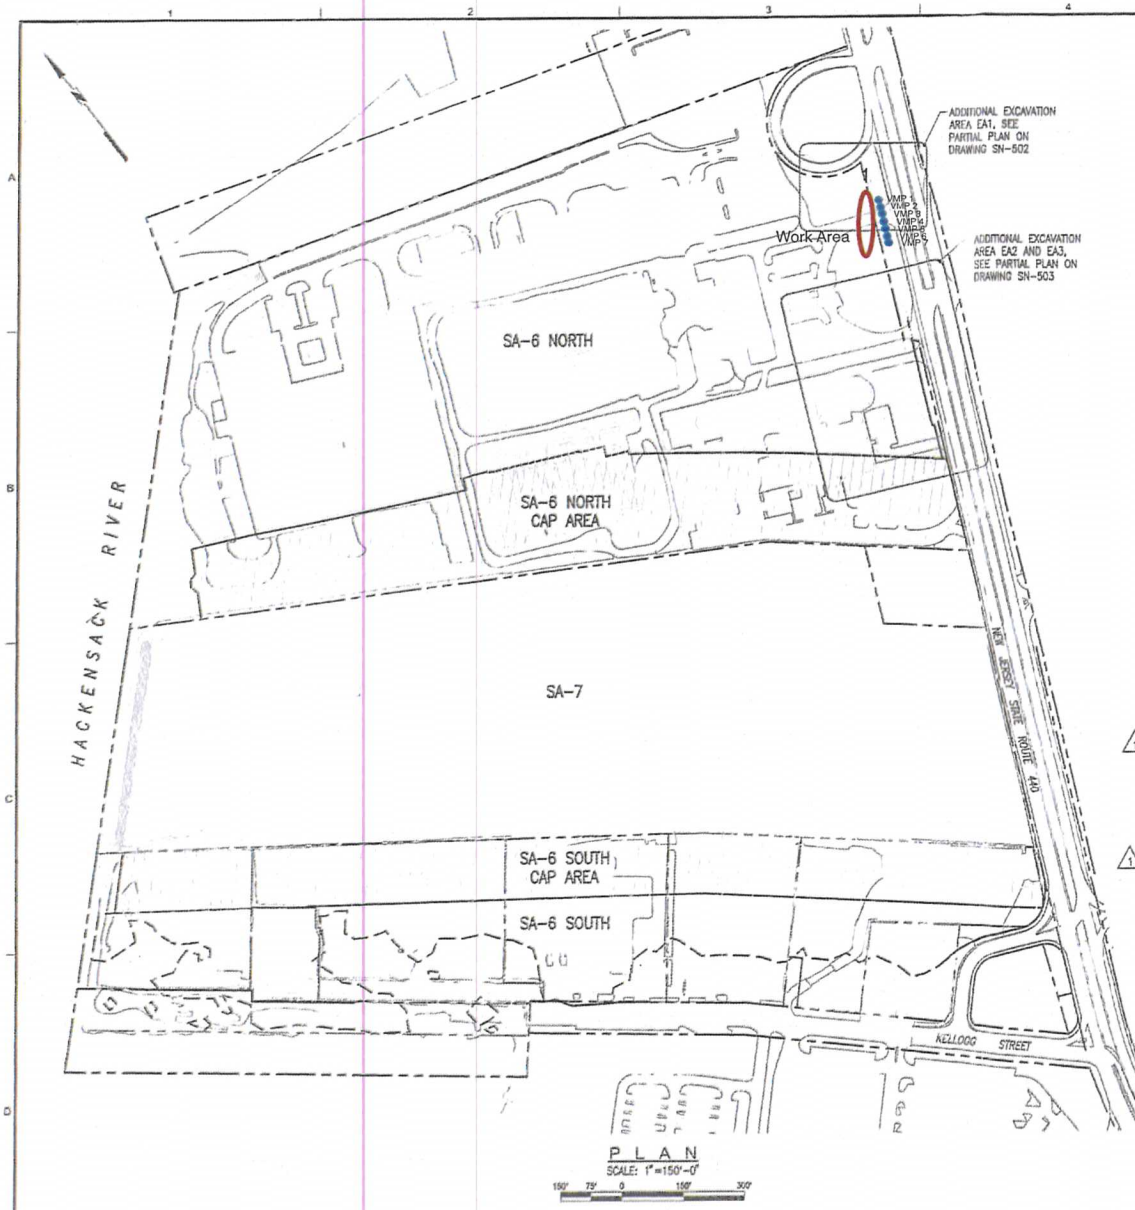
Vibration Monitoring Report

Study Area 6 ~~South~~ North 1/26/17

Prepared by
Geocomp Engineering

July 31th, 2015
For ENTACT, LLC



111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631

NOTES:

Summary of Work:
Sheet pile driving commenced at 7:50 AM and ended at 2:30 PM. An Instantel Micromate was used to record vibrations via a geophone placed on the ground over the gas main.

23 sheets were driven 2 recorded exceedances, i.e., the 2.0 limit was exceeded at 1:22 PM and 1:25 PM. The 1:25 PM spike was caused by the machine being knocked and was unrelated to construction activities. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Gas Main:
Trigger Level: 0.5 in/sec
Alert Level: 2.0 in/sec

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level.
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. Survey location of monitoring point, (X, Y, Z) (baseline reading).
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec
    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations.
28. Elevation are based on NGVD 1929 Datum.

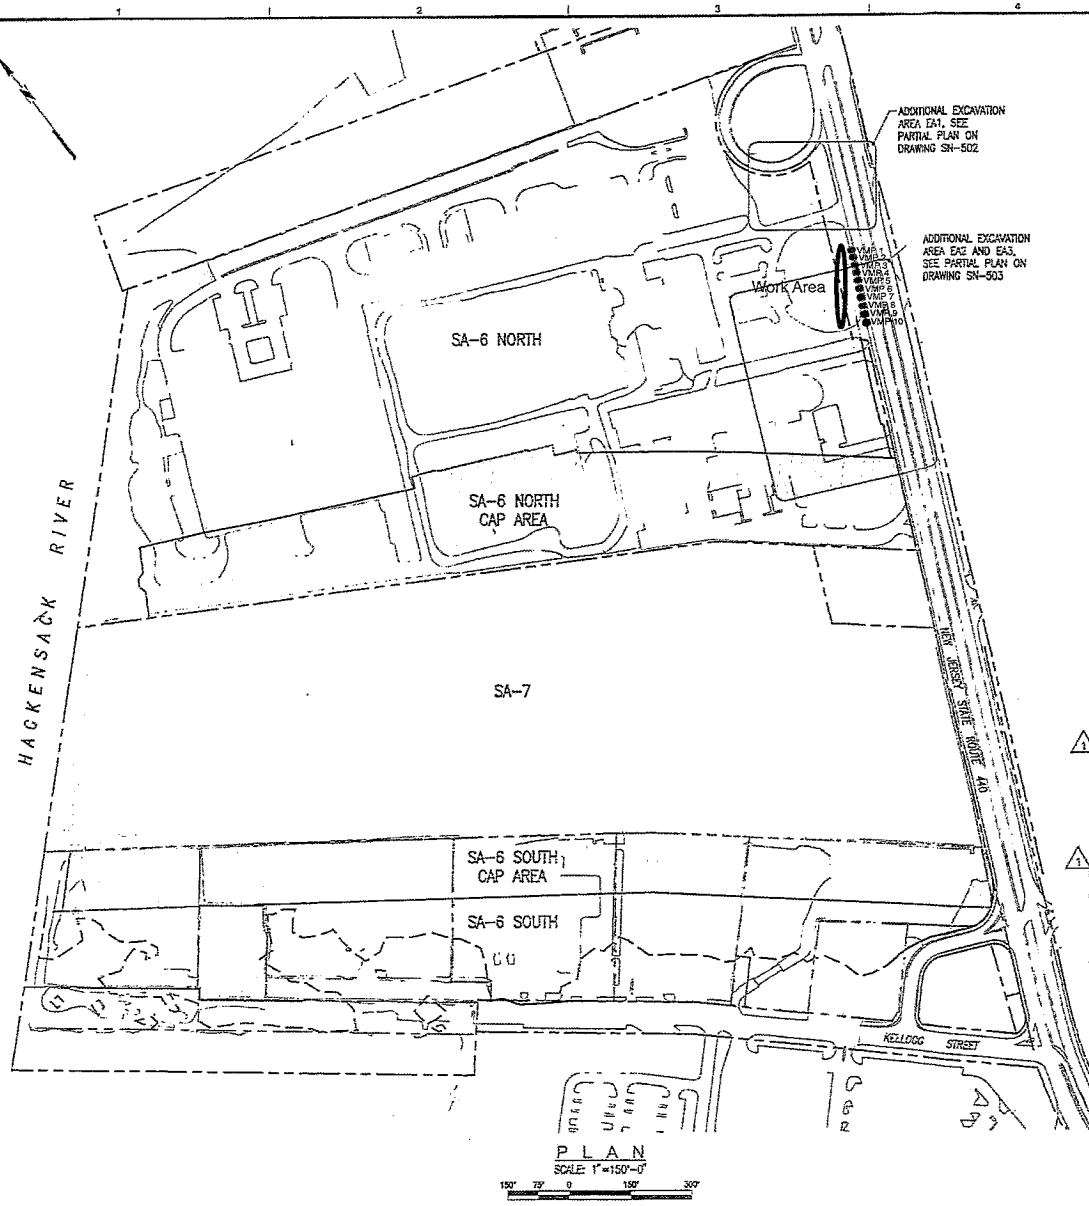
Vibration Monitoring Report

Study Area 6 ~~South~~ North 1/26/17

Prepared by
Geocomp Engineering

August 3rd, 2015
For ENTACT, LLC

111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631



NOTES:

Summary of Work:
Sheet pile driving commenced at 6:30 AM and ended at 2:30 PM. An Instantel Micromate was used to record vibrations via a geophone placed on the ground over the gas main and water main.

30 sheets were driven 1 recorded exceedance, i.e., the 2.0 gas main limit was exceeded at 10:47 AM. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Gas Main:
Trigger Level: 0.5 in/sec
Alert Level: 2.0 in/sec

Water Main
Trigger Level: 0.25 in/sec
Alert Level: 0.5 in/sec

PLAN
SCALE: 1" = 150'-0"
150' 75' 0 150' 300'

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from rocking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level. 1
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. Survey location of monitoring point, (X, Y, Z) (baseline reading). 1
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec
    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations. 1
28. Elevation are based on NGVD 1929 Datum.

Vibration Monitoring Report

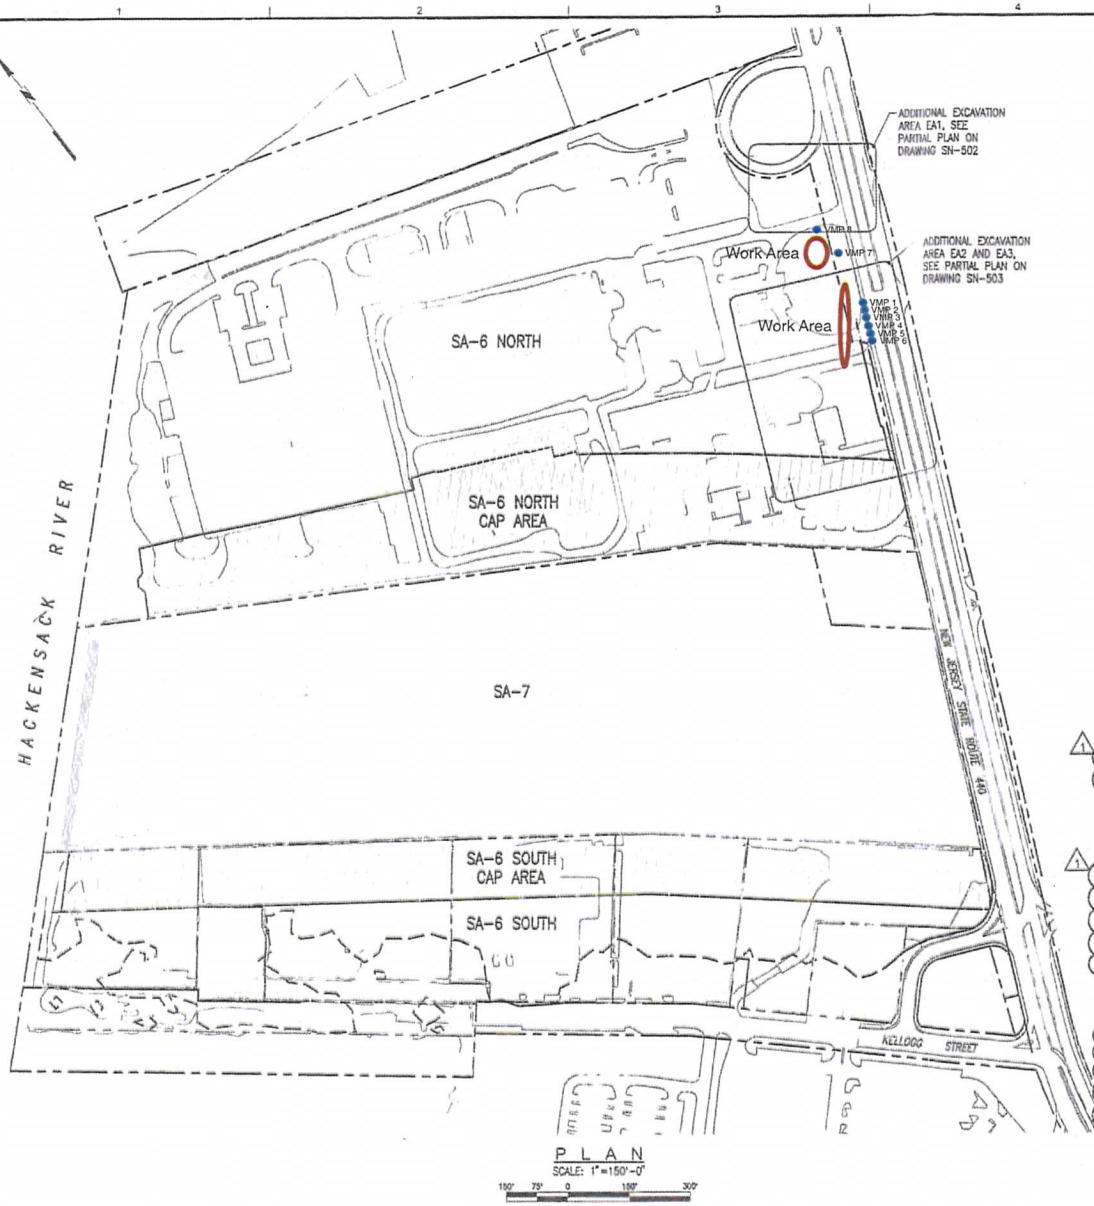
Study Area 6 South North 1/26/17

Prepared by
Geocomp Engineering

August 4th, 2015
For ENTACT, LLC

111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631

NOTES:



Summary of Work:
Sheet pile driving commenced at 6:30 AM and ended at 11:20 AM. An Instantel Micromate was used to record vibrations via a geophone placed on the ground over the gas main, water main, and force main.

17 sheets were driven no recorded exceedances. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Gas Main:
Trigger Level: 0.5 in/sec
Alert Level: 2.0 in/sec

Water Main
Trigger Level: 0.25 in/sec
Alert Level: 0.5 in/sec

Force Main
Trigger Level: 0.25 in/sec
Alert Level: 0.5 in/sec

PLAN
SCALE: 1"=150'-0"
150' 75' 0 150' 300'

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level.
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point. If required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. Survey location of monitoring point, (X, Y, Z) (baseline reading).
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec
    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations.
28. Elevation are based on NGVD 1929 Datum.

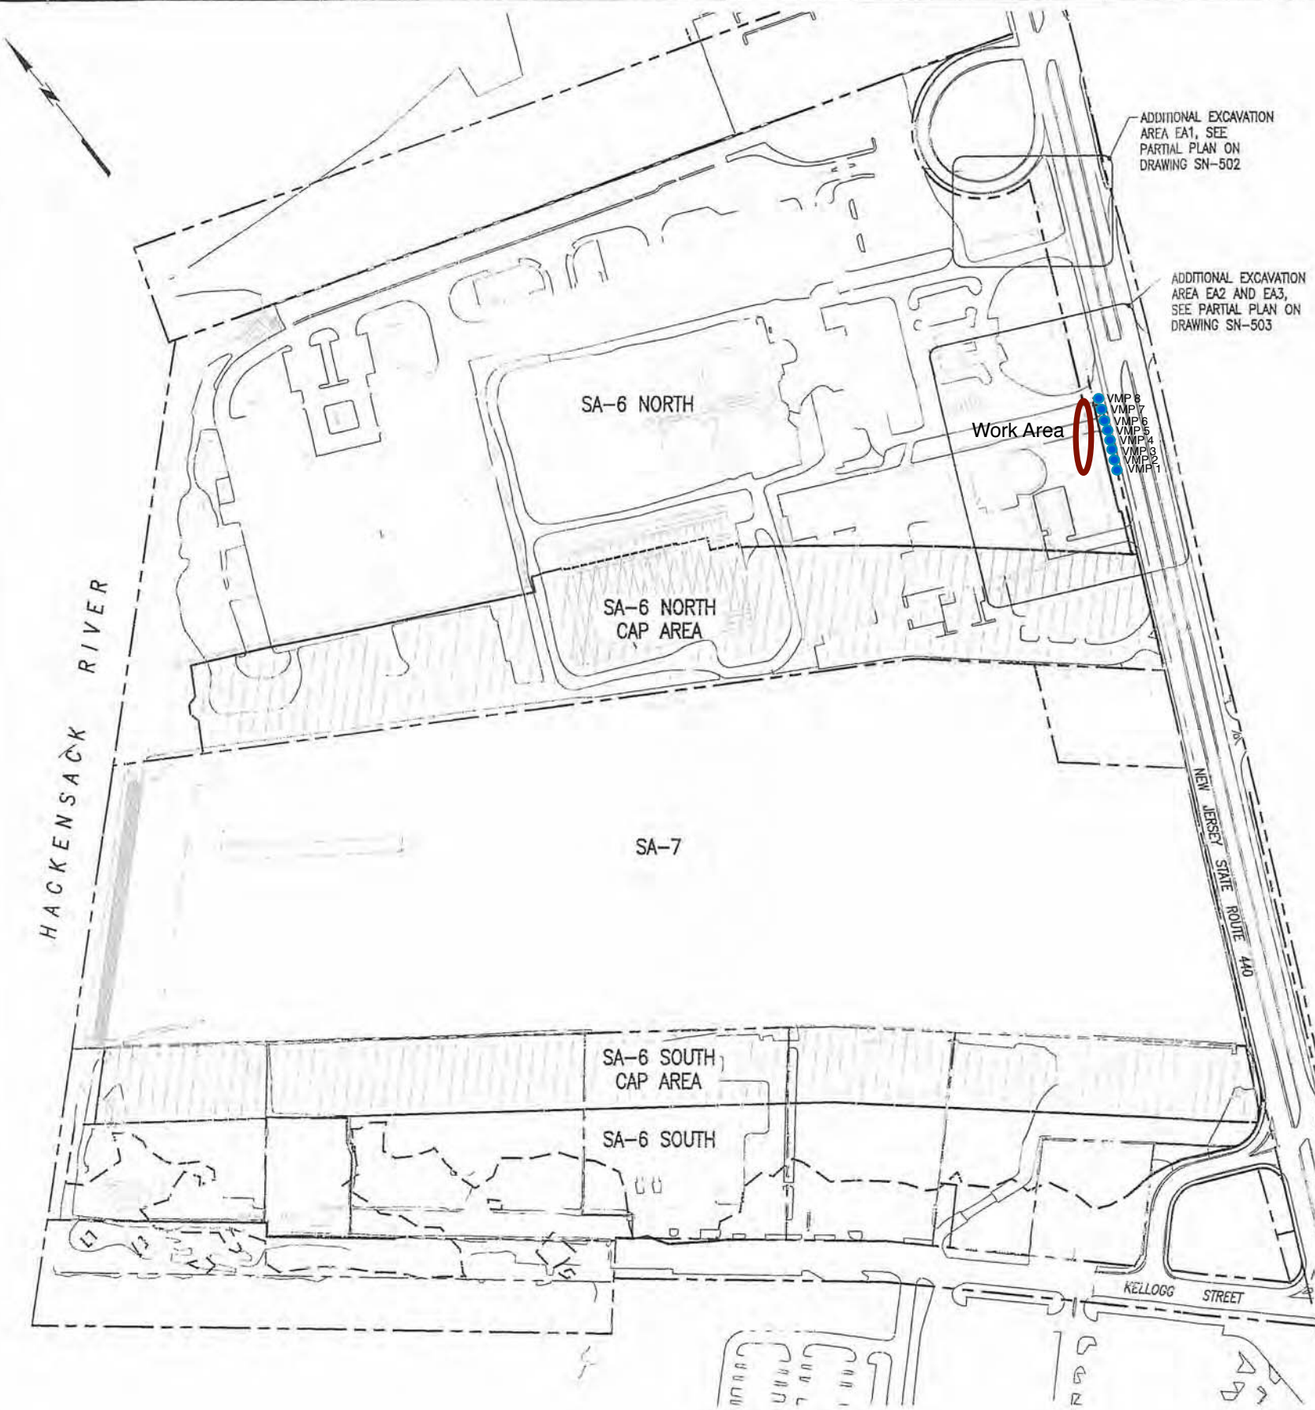
Vibration Monitoring Report

Study Area 6 South

Prepared by
Geocomp Engineering

August 5th, 2015
For ENTACT, LLC



111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631

NOTES:

Summary of Work:
Sheet pile driving commenced at 7:50 AM and ended at 1:30 PM. An Instantel Micromate was used to record vibrations via a geophone placed on the ground over the water main.

18 sheets were driven and brought to grade with 6 recorded exceedances, i.e., the 0.5 limit was exceeded at 7:22 AM, 7:37 AM, 7:43 AM, 9:20 AM, 10:10 AM, and 10:33 AM. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Water Main:
Trigger Level: 0.25 in/sec
Alert Level: 0.5 in/sec

PLAN
SCALE: 1"=150'-0"
150' 75' 0 150' 300'

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. (1) Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level.
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. (1) Survey location of monitoring point. (X, Y, Z) (baseline reading).
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec

    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations. (1)
28. Elevation are based on NGVD 1929 Datum.

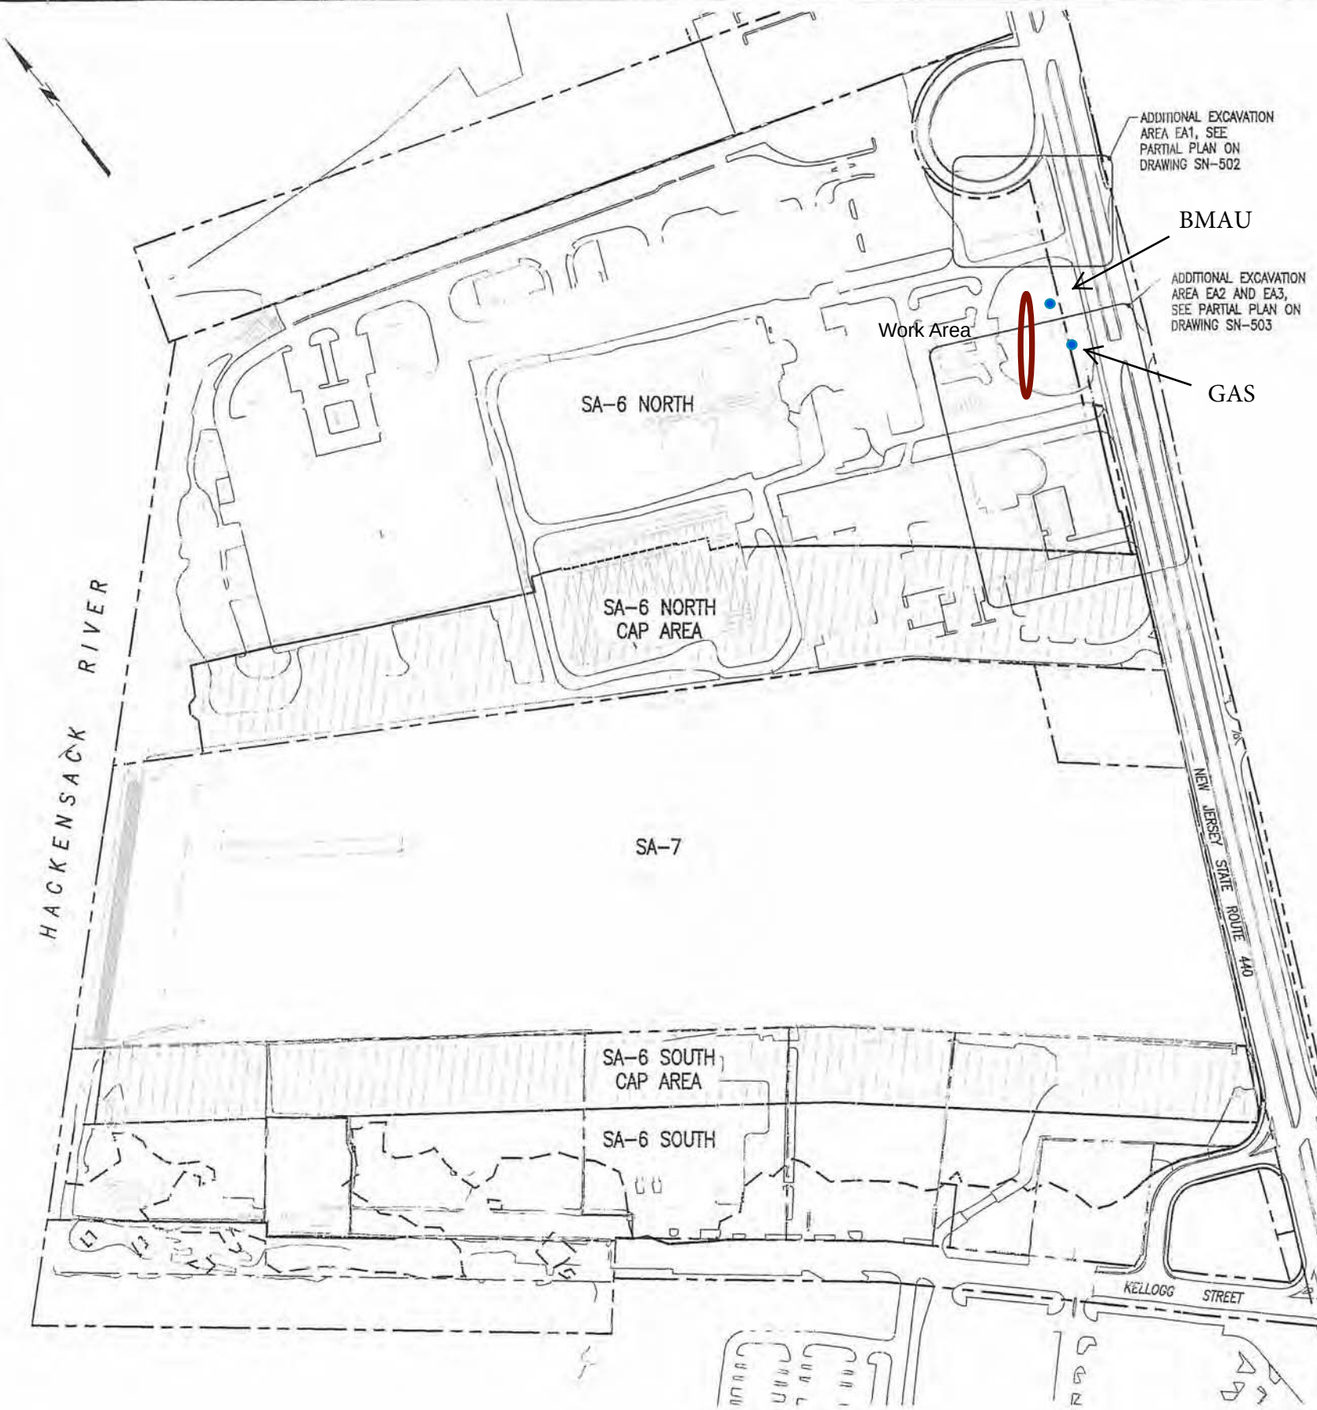
Vibration Monitoring Report

Study Area 6 North

Prepared by
Geocomp Engineering

October 19th, 2015
For ENTACT, LLC

111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631



NOTES:

Summary of Work:
Sheet pile driving commenced at 11:10 AM and ended at 11:30 AM. Two Instantel Minimates were used to record vibrations via a geophone placed on the ground over the gas and BMAU main.

3 sheets were driven, and no exceedances were recorded. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Gas Main:
Trigger Level: 0.5 in/sec
Alert Level: 2.0 in/sec

BMAU Main:
Trigger Level: 0.25 in/s
Alert level: 0.5 in/s

PLAN
SCALE: 1"=150'-0"
150' 75' 0 150' 300'

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level. (1)
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. Survey location of monitoring point. (X, Y, Z) (baseline reading). (1)
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec

    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations. (1)
28. Elevation are based on NGVD 1929 Datum.

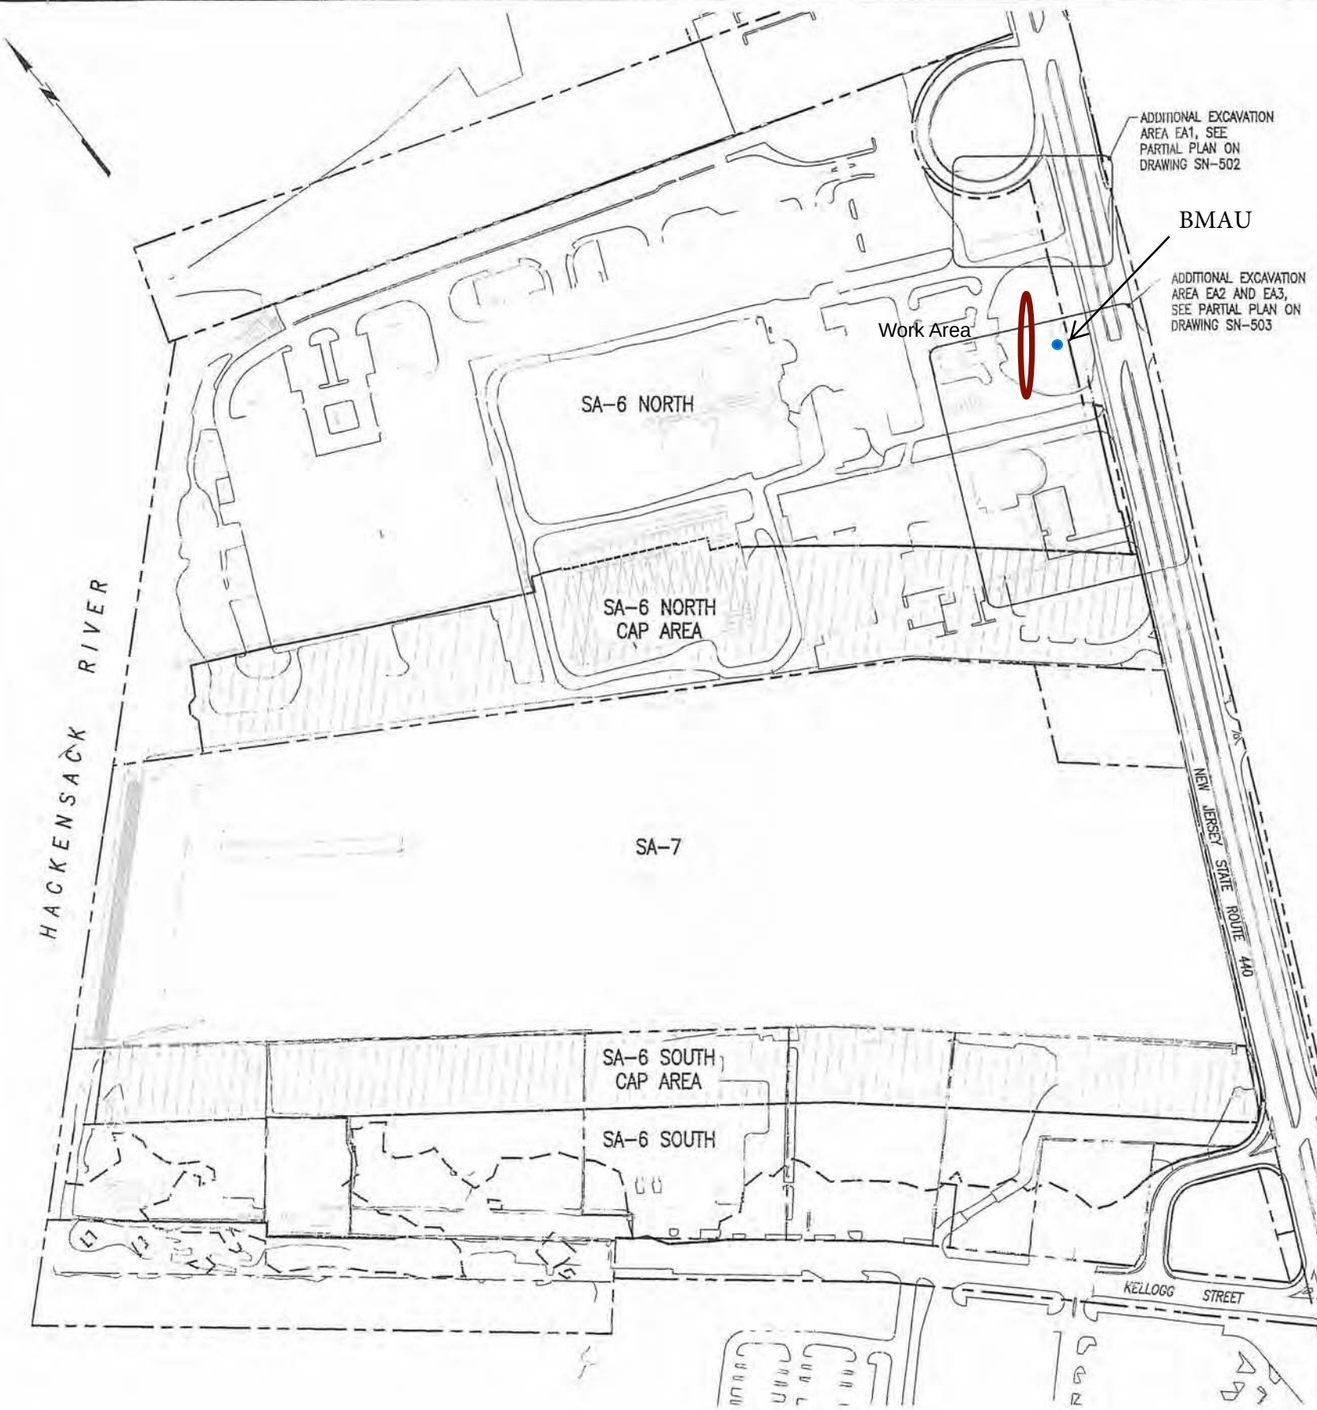
Vibration Monitoring Report

Study Area 6 North

Prepared by
Geocomp Engineering

January 12, 2016
For ENTACT, LLC



111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631

NOTES:

Summary of Work:
Sheet pile driving commenced at 10:53 AM and ended at 11:30 AM. One Instantel Minimate was used to record vibrations via a geophone placed on the ground over the Water/Sewer main.

2 sheets were driven, and a 0.54 in/sec alert level was recorded on the first 2 feet of the 2nd sheet. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Water/Sewer
Alert Level: 0.5 in/sec
Limit Level: 1.0 in/sec

PLAN
SCALE: 1"=150'-0"
150' 75' 0 150' 300'

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. (1) Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level.
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. (1) Survey location of monitoring point. (X, Y, Z) (baseline reading).
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec

    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations. (1)
28. Elevation are based on NGVD 1929 Datum.

Vibration Monitoring Report

Study Area 6 North

Prepared by
Geocomp Engineering

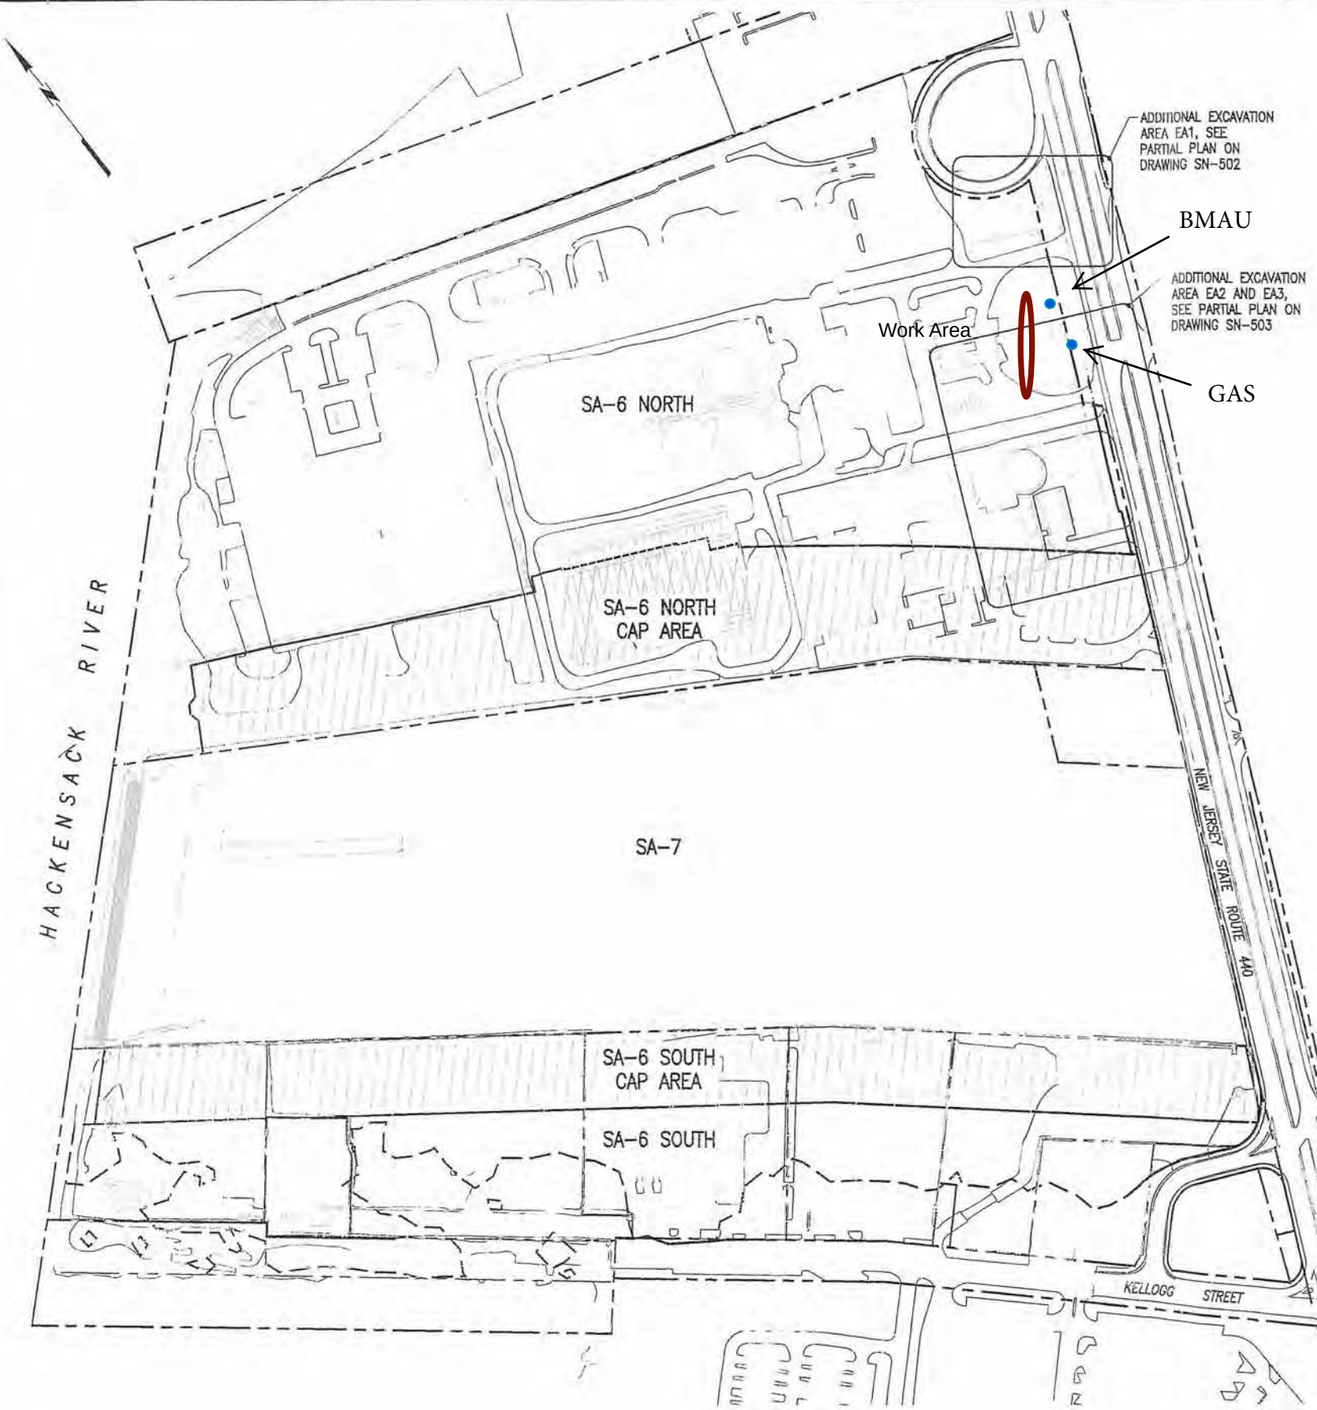
January 27, 2016
For ENTACT, LLC

111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631



NOTES:

Summary of Work:
Removing of sheet pile commenced at 8:30 AM and ended at 3:00 PM. Two Instantel Minimate were used to record vibrations via a geophone placed on the ground over the Water/Sewer main and North Gas.

Total of 23 sheets pile were removed, and no exceedances were recorded. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Water/Sewer
Alert Level: 0.5 in/sec
Limit Level: 1.0 in/sec

North Gas
Alert Level 1.0 in/sec
Limit Level 2.0 in/sec

PLAN
SCALE: 1"=150'-0"
150' 75' 0 150' 300'

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level. (1)
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. Survey location of monitoring point. (X, Y, Z) (baseline reading). (1)
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec

    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations. (1)
28. Elevation are based on NGVD 1929 Datum.

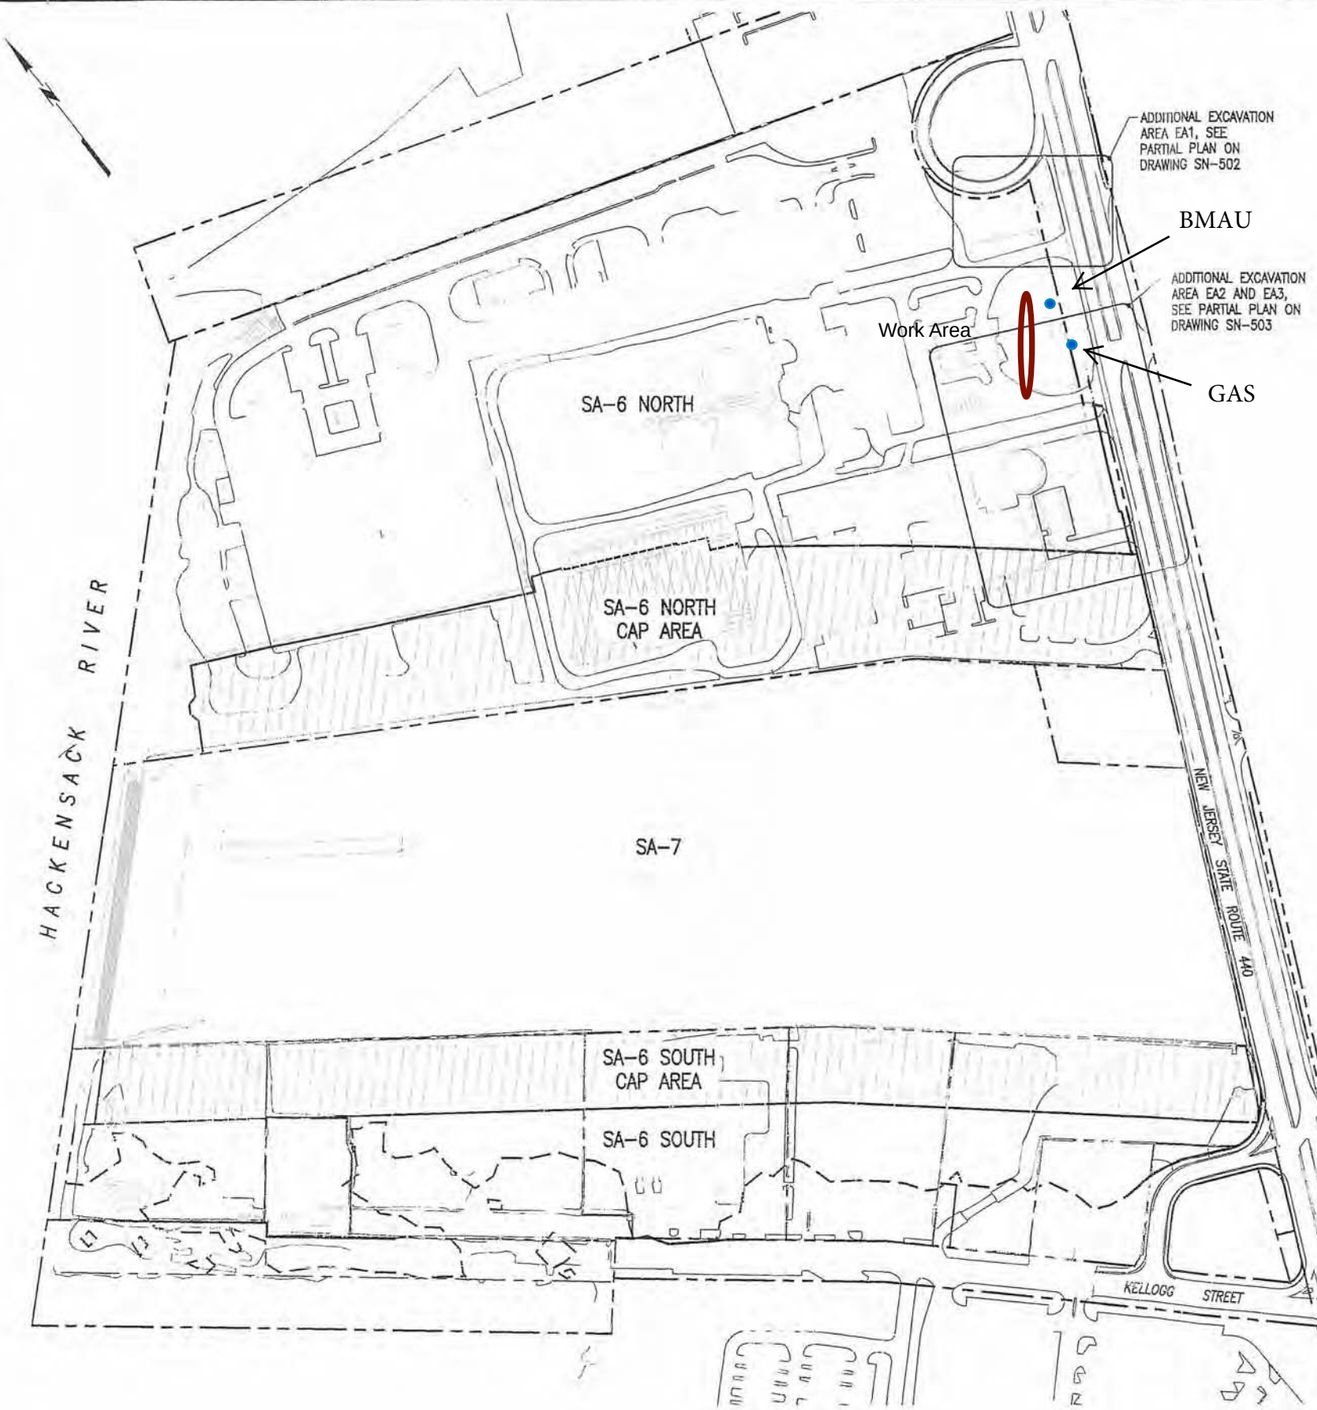
Vibration Monitoring Report

Study Area 6 North

Prepared by
Geocomp Engineering

January 28, 2016
For ENTACT, LLC



111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631

NOTES:

Summary of Work:
Removing of sheet pile commenced at 10:40 AM and ended at 3:00 PM. One Instantel Minimate were used to record vibrations via a geophone placed on the ground over the Water/Sewer main.

Total of 21 sheets pile were removed, and no exceedances were recorded. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

North Gas
Alert Level: 0.5 in/sec
Limit Level: 1.0 in/sec

PLAN
SCALE: 1"=150'-0"
150' 75' 0 150' 300'

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level. (1)
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. Survey location of monitoring point. (X, Y, Z) (baseline reading). (1)
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec

    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations. (1)
28. Elevation are based on NGVD 1929 Datum.

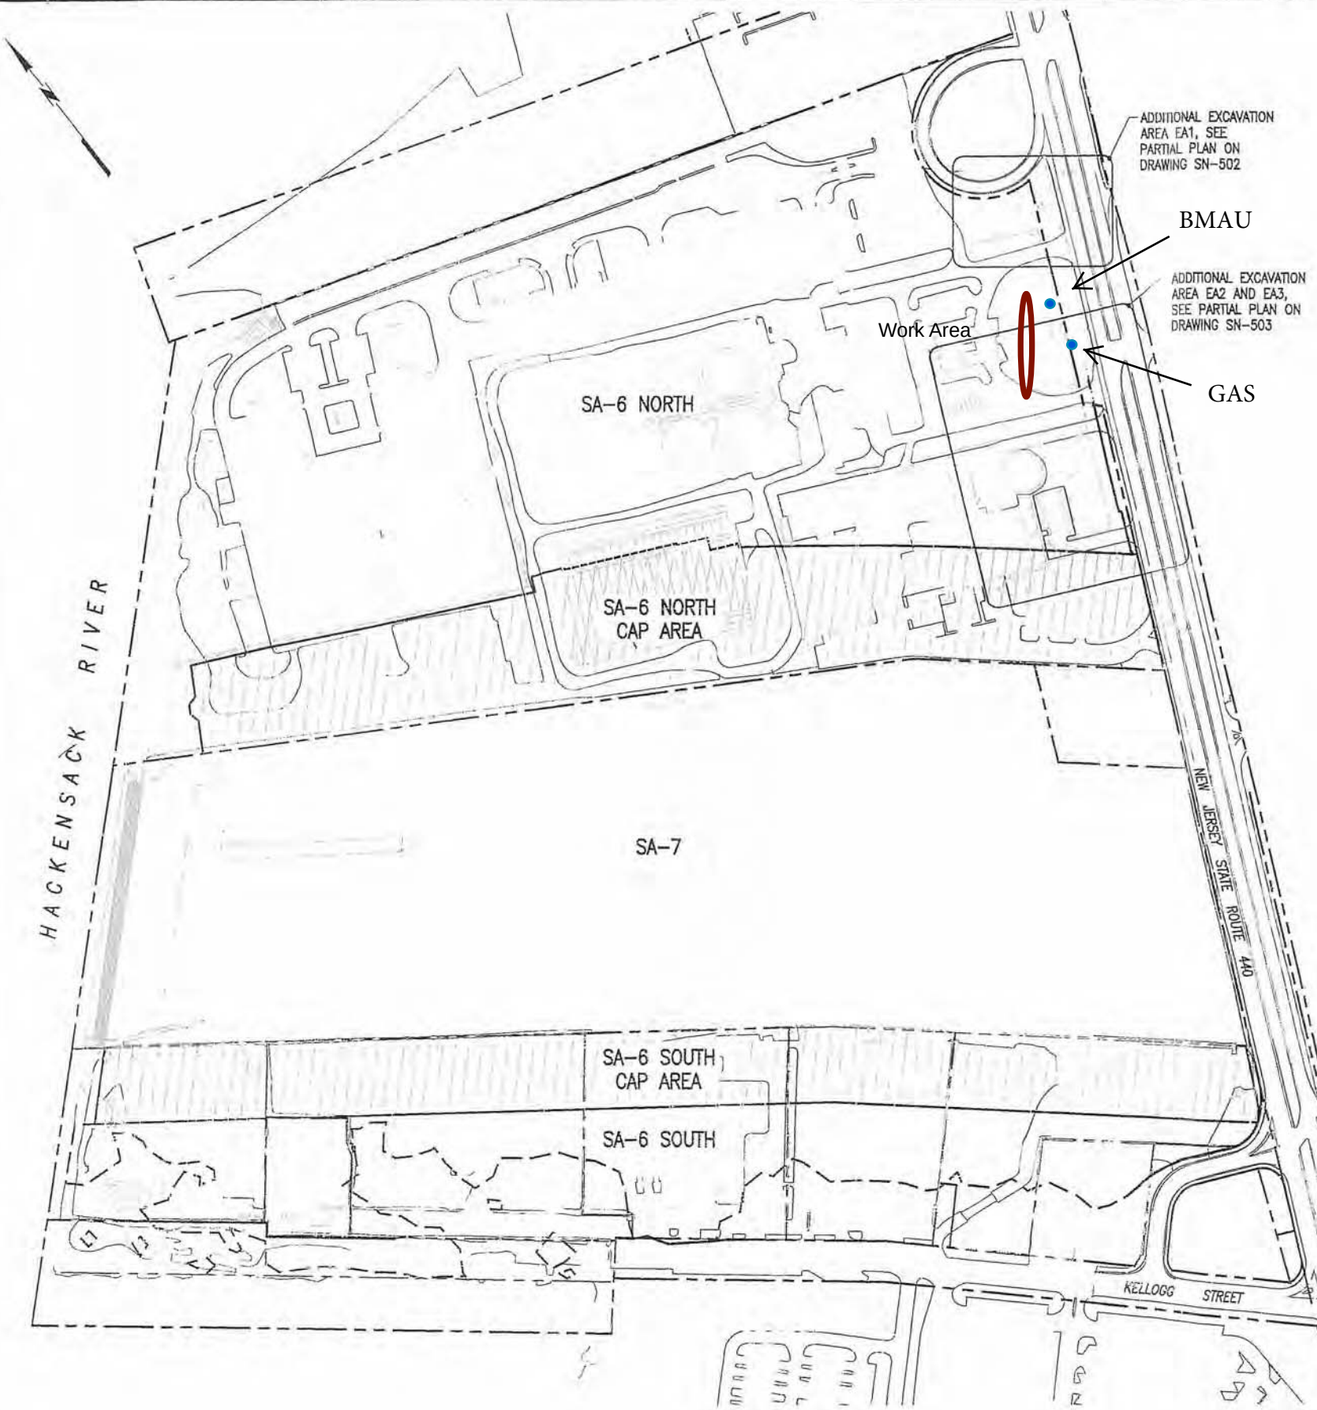
Vibration Monitoring Report

Study Area 6 North

Prepared by
Geocomp Engineering

January 29, 2016
For ENTACT, LLC

111 John Street, Suite 650 | New York, NY 10038 | Tel 212 566 6630 | Fax 212 566 6631



NOTES:

Summary of Work:
Removing of sheet pile commenced at 8:00 AM and ended at 12:00 PM. Two Instantel Minimate were used to record vibrations via a geophone placed on the ground over the Water/Sewer main and North Gas.

Total of 10 1/2 sheets pile were removed, and no exceedances were recorded. See attached plan for area of work and location of the seismographs. See attached Blastware reports for PPV at these locations.

Water/Sewer
Alert Level: 0.5 in/sec
Limit Level: 1.0 in/sec

North Gas
Alert Level 1.0 in/sec
Limit Level 2.0 in/sec

PLAN
SCALE: 1"=150'-0"
150' 75' 0 150' 300'

Notes:

1. The work requires installation of sheet piles, drilling, and excavation in close proximity to overhead power lines and underground utilities. Coordinate access and controls with utility companies having jurisdiction over buried and overhead utilities.
2. Re-mark utility control markings daily if removed by excavation.
3. Steel sheet piling shall be uncoated, new or used in good condition, and of the sizes shown on the drawings or structural equivalent.
4. See AMEC Environment and Infrastructure, Inc. drawings for excavation subgrade elevations.
5. The angle of repose shown on the drawings is based on the definition and requirements provided by PSE&G.
6. Final wall locations subject to location of gas main, determined by test pits.
7. Pre-excavate as required to remove obstructions within the fill prior to driving sheet piling.
8. Handle sheet piling in a manner which prevents damage to the sheet piling. Use standard safety lifting devices, use lifting holes or provide secondary support during lifting.
9. Discontinue spudding more than 5 ft. above the minimum tip elevations indicated herein.
10. Stage pile driving and step sheet piling tips as necessary to maintain interlocks. Remove and replace steel sheet piling found to be out of interlock, out of tolerance, damaged, or otherwise deficient.
11. Use drive templates and guides to maintain pile alignment and install piles plumb.
12. Sheet piling may be welded to adjacent sheets if required to control settlement during driving.
13. Spliced sheet piling shall be free sliding and able to obtain the maximum swing with contiguous piles. Splice welds shall develop the full structural strength of the member.
14. Drive templates: Prior to driving, provide template or driving frame suitable for aligning, supporting, and maintaining the sheet piling in the correct location and verticality during setting and driving. Fix template in place to prevent movement during sheet pile driving. Provide restraint necessary to prevent the sheets from warping or wandering from the alignment, or from racking along the alignment.
15. Provide continuous inspection of sheet pile driving. Inspect location and verticality when setting sheets, and when sheets are driven half depth.
16. Maintain pile driving inspection record for each pair driven. Indicate pile hammer, rate of operation, energy, use of drive helmet and cap, etc. Provide a unique number for each pair, and indicate location on alignment. Document installation date, set time, drive duration, and time drive completed, initial pile length, re-heading or cutting length(s), and any additional information required for record drawings. Record unusual conditions or problems observed during driving.
17. Soldier piles and wales shown are minimum sizes. Substitution with members of equivalent or higher capacity is allowed.
18. Shop and field welding procedures, electrode classification (E70XX), and preheat temperature shall conform to AWS D1.1. Welders shall be certified in accordance with AWS D1.1 criteria.
19. Drill soldier pile using methods approved by the Engineer.
20. Dewater excavations to provide stable subgrade and to remove all uplift pressure below all sewers, force mains or other active utilities as may be required, as determined by the Engineer. Install piezometer within 10 feet of 48 inch sewer to monitor groundwater level. (1)
21. Survey to establish construction station baseline and establish monitoring points.
22. Set permanent monitoring point on top of sheet piling and soldier piles. Grind smooth surface for point, if required. Mark point ID. At contractor option, DMP points may be reflective targets for total station surveys.
23. Survey location of monitoring point. (X, Y, Z) (baseline reading). (1)
24. Survey location (X, Y, Z) two additional times, on separate days, before performing excavation within 50 ft. of monitoring point.
25. Survey monitoring point (X, Y, Z) daily, or more often at Engineer direction, when excavating within 50 ft. of monitoring point. For each reading event document survey date, time, reading change from previous reading, and reading change from baseline. Provide readings for Construction Manager review during active excavation.
26. Monitor vibrations at the ground surface above the gas main, force main, and sewer under Route 440 adjacent to the excavations within 25 feet.
27. Advise the Construction Manager of vibration monitoring data. Limiting values are:
    Gas Main – 2.0 in/sec
    Sewer & F.M. – 1.0 in/sec

    If limiting values are exceeded, the contractor shall notify the CM and cease work until adequate measures are taken to reduce vibrations. (1)
28. Elevation are based on NGVD 1929 Datum.

SURCHARGE MONITORING PLAN
MONTHLY REPORT NO. 16
MARCH 2016 REPORTING PERIOD

JERSEY CITY, NEW JERSEY

Prepared for

Honeywell

115 Tabor Road
Morris Plains, New Jersey 07950

Prepared by

Amec Foster Wheeler Environment & Infrastructure, Inc.
200 American Metro Boulevard, Suite 113
Hamilton, New Jersey 08619

APRIL 2016

INTRODUCTION

The surcharge monthly reports are generated to indicate the status of progress and/or indicate corrective actions needed as provided for in Appendix N (Surcharge Monitoring Plan, Section 5.0 Reporting). Report No. 13 July 2015 indicated completion of Area 1N, Area 2N, Area 1S, Area 2S and Area 3S.

Surcharge Instrumentation was installed in Area 3N and Area 4N subsequent to March 2015 in preparation for surcharge placement in those areas. Surcharge placement in Area 3N was complete on January 18, 2016. Surcharge placement in Area 4N was complete on January 29, 2016. This report is the third report for Area 3N and Area 4N. MRCE's March 29, 2016 letter confirms completion of Area 3N and Area 4N. This marks the formal end of the Surcharge Monitoring Program for the SA-6S and SA-6N project.

Report No. 16 will be the final report for the Surcharge Program.

The goal of the program was to "remove 100% of the Primary Consolidation that will result from the future development grading prior to cap installation". The reports have documented the successful attainment of that goal for each of the 7 designated areas. In general the magnitude of settlement and time for consolidation were consistent with the predicted settlements.

This report has been prepared consistent with the format and content of the prior reports with two notable exceptions.

1. Over the course of the program Installation Logs and instrument data plots were incorporated in one monthly report then incorporated by reference in subsequent reports. In this report a summary table is provided at the end of the Table of Contents that provides a matrix showing the report location for both monitoring data and installation logs by Area and Report Number.
2. All the MRCE approval letters have been included in the final report.

REPORT CONTENTS

SURCHARGE AREA	INCLUDED HEREIN	REPORT SECTION NO.
AREA 1N	**YES****	**1.0**
AREA 2N	**YES****	**2.0**
AREA 3N	**YES****	**3.0**

1.0 AREA 1N SUMMARY

Surcharging was initiated in Area 1N on April 8, 2014. Final surcharge placement was completed on July 31, 2014.

1.1 SURCHARGE MONITORING DATA TRENDS/ANOMALIES/ MODIFICATIONS

Table 1N-1 below summarizes the status of the surcharge. Surcharging is complete at all 11 monitoring stations.

1.2 SURCHARGE PROGRESS

As noted in Section 1.1 and as summarized in **Table 1N-1** the surcharge objective has been met in the Stratum D at all 11 monitoring locations. Surcharge removal was initiated adjacent to the 72 in. force main on August 29, 2014 and continued through October.

Tasks requiring acoustical monitoring (Barrier Wall installation and Surcharge placement and removal) were completed by the end of October. Acoustical monitoring has been discontinued by PVSC.

2.0 AREA 2N SUMMARY

Geotechnical instrumentation has been installed in Surcharge Area 2N consistent with the Surcharge Monitoring Plan (Amec, 2013) and Design Change Bulletin dated April 30, 2014. The installed instrument locations are depicted on **Figure 2N-1** (attached). Geotechnical Boring Records and Instrument Construction Diagrams for Area 2N were previously provided in Report No. 4.

The Baseline Surcharge Settlement Analysis for 2N is shown in **Attachment 2N-1.**

Surcharge placement continued in Area 2N throughout October. The surcharge Placement was completed on November 3, 2014.

2.1 SURCHARGE MONITORING DATA TRENDS/ANOMALIES/ MODIFICATIONS

Monitoring is no longer being performed.

2.2 SURCHARGE PROGRESS

As of October 28, 2014 Amec Foster Wheeler Environment and Infrastructure's (Amec Foster Wheeler's) evaluation concluded that the surcharge objective has been met at all three locations. **Table 2N-1** below summarizes the status of the surcharge.

TABLE 2N-1
SURCHARGE COMPLETION EVALUATION
SUMMARY OF EFFECTIVE STRESS

SURCHARGE MONITORING POINT	FINAL DEVELOPMENT CONDITION	SURCHARGE CONDITIONS	SURCHARGE COMPLETION EVALUATION	
	Middle of Stratum D	Middle of Stratum D	Middle of Stratum D Effective Stress Conditions / Comparisons	
	Effective Stress (psf)	Effective Stress (psf)	Percent Complete	Comments
N_FS-05	2766	2970	**107%**	Data as of November 2014; Pore pressure elevated 9.2 ft. (Stratum D).
N_FS-06	2833	3497	**123%**	Data as of November 2014
N_FS-07	2588	3389	**131%**	Data as of November 2014

3.0 AREA 3N SUMMARY

Geotechnical instrumentation has been installed in Surcharge Area 3N consistent with the Surcharge Monitoring Plan (Amec, 2013) and Design Change Bulletin dated April 30, 2014. The installed instrument locations are depicted on **Figure 3N-1** (attached). Geotechnical Boring Records and Instrument Construction Diagrams for Area 3N were previously provided in Report No. 13.

The Baseline Surcharge Settlement Analysis for 3N is shown in **Attachment 3N-1.**

Surcharge placement commenced in November 2015 in Area 3N and was completed on January 18, 2016.

3.1 SURCHARGE MONITORING DATA TRENDS/ANOMALIES/ MODIFICATIONS

Copies of the data plots are provided in **Attachment 3N-2.** Final Surcharge Grades in Area 3N were 1-2 ft. above the Design Surcharge Grades. All instruments performed as expected. Pumping of the contingent groundwater collection system has allowed for the desired pore pressure dissipation to take place at all monitoring locations.

3.2 SURCHARGE PROGRESS

All eight monitoring stations have met the 100% primary consolidation goal and the areas where fill was last placed have also met the required surcharge completion criteria. The surcharge completion summary for Area 3N is included in **Table 3N-1**.

TABLE 3N-1
SURCHARGE COMPLETION EVALUATION
SUMMARY OF EFFECTIVE STRESS

SURCHARGE MONITORING POINT	FINAL DEVELOPMENT CONDITION	SURCHARGE CONDITIONS	SURCHARGE COMPLETION EVALUATION	
	Middle of Stratum D	Middle of Stratum D	Middle of Stratum D Effective Stress Conditions / Comparisons

N_HS-10	2216	2313	**104%**	SP and VWP data through 3/9/16.
N_HS-11	2280	2335	**102%**	SP data through 3/9/16. VWP data through 3/24/16.
N_HS-12	1932	2198	**114%**	SP and VWP data through 3/9/16.
N_HS-13	2050	2214	**108%**	SP and VWP data through 3/9/16.

4.0 AREA 4N SUMMARY

Geotechnical instrumentation has been installed in Surcharge Area 4N consistent with the Surcharge Monitoring Plan (Amec, 2013) and Design Change Bulletin dated April 30, 2014. The installed instrument locations are depicted on **Figure 4N-1** (attached). Geotechnical Boring Records and Instrument Construction Diagrams for Area 4N were previously provided in Report No. 13.

The Baseline Surcharge Settlement Analysis for 4N is shown in **Attachment 4N-1.**

Surcharge placement was completed in Area 4N on January 29, 2016.

4.1 SURCHARGE MONITORING DATA TRENDS/ANOMALIES/ MODIFICATIONS

Data plots for Area 4N are included in **Attachment 4N-2.** All instrumentation performed as intended.

4.2 SURCHARGE PROGRESS

There are only two Full Stations in Area 4N. Both locations now have met the surcharge goal and are therefore considered complete. The areas that were loaded last have also been loaded for an adequate duration. The surcharge completion summary for Area 4N is included in **Table 4N-1**.

TABLE 4N-1
SURCHARGE COMPLETION EVALUATION
SUMMARY OF EFFECTIVE STRESS

SURCHARGE MONITORING POINT	FINAL DEVELOPMENT CONDITION	SURCHARGE CONDITIONS	SURCHARGE COMPLETION EVALUATION

N_FS-12	1869	1897	**101%**	SP data through 3/9/16. VWP data through 3/24/16.
N_FS-13	2064	2433	**118%**	SP and VWP data through 3/9/16.

5.0 AREA 1S SUMMARY

Geotechnical instrumentation has been installed in Surcharge Area 1S consistent with the Surcharge Monitoring Plan (Amec, 2013) and Design Change Bulletin dated April 30, 2014. The installed instrument locations are depicted on **Figure 1S-1** (attached). Geotechnical Boring Records and Instrument Construction Diagrams for Area 1S were included in Attachment 1S-3 Report No. 3.

The Baseline Surcharge Settlement Analysis for 1S is shown in **Attachment 1S-1.**

Surcharging was initiated in Area 1S on June 16, 2014 and continued through the week of September 26, 2014. Surcharging was noted as complete in Report No. 6, September 2014.

5.1 SURCHARGE MONITORING DATA TRENDS/ANOMALIES/ MODIFICATIONS

Monitoring is no longer being performed.

5.2 SURCHARGE PROGRESS

The Surcharge was considered complete (see **Table 1S-1**) at all locations as indicated in Report No. 6.

5.3 PROPOSED MODIFICATIONS

The grading of the surcharge pile has been modified at the Hackensack River to reduce load on the bulkhead and minimize the amount of rework in the deferred area. This information was issued in a Design Change Bulletin. The change moves the crest of the surcharge back approximately 16 ft. to the east.

TABLE 1S-1
SURCHARGE COMPLETION EVALUATION
SUMMARY OF EFFECTIVE STRESS

SURCHARGE MONITORING POINT	FINAL DEVELOPMENT CONDITION	SURCHARGE CONDITIONS	SURCHARGE COMPLETION EVALUATION	
	Middle of Stratum D	Middle of Stratum D	Middle of Stratum D	
			Effective Stress Conditions / Comparisons	
	Effective Stress (psf)	Effective Stress (psf)	Percent Complete	Comments
S_FS-01	2616	3236	**124%**	Data as of November 2014. Pore pressure elevated 5 ft. in Stratum D and 3 ft. in Stratum RC.
S_FS-02	2627	3201	**122%**	Data as of November 2014. Pore pressure elevated 4.5 ft. in Stratum D.
S_HS-01	3064	3292	**107%**	Data as of November 2014.
S_HS-02	2571	2962	**115%**	Data as of November 2014. Pore pressure elevated 3 ft. in Stratum D.
S_HS-03	2400	2541	**106%**	Data as of November 2014. Pore pressure elevated 11 ft. in Stratum D and 5.5 ft. in Stratum RC.
S_HS-04	2548	3053	**120%**	Data as of November 2014. Pore pressure elevated 5 ft. in Stratum D.
S_HS-05	2583	2919	**113%**	Data as of November 2014.
S_HS-06	2881	3205	**111%**	Data as of November 2014. Pore pressure elevated 1.5 ft. in Stratum D and 7 ft. in Stratum RC.

S_HS-07	2494	3130	**126%**	Data as of November 2014.
S_HS-08	2595	2880	**111%**	Data as of November 2014. Pore pressure elevated 5 ft. in Stratum D.

6.0 AREA 2S SUMMARY

Geotechnical instrumentation has been installed in Surcharge Area 2S consistent with the Surcharge Monitoring Plan (Amec, 2013) and Design Change Bulletin dated April 30, 2014. The installed instrument locations are depicted on **Figure 2S-1** (attached). Geotechnical Boring Records and Instrument Construction Diagrams for Area 2S were previously provided in Attachment 2S-2 of Report No. 4.

The Baseline Surcharge Settlement Analysis for 2S is shown in **Attachment 2S-1.**

Surcharging was initiated in Area 2S in July 2014 as subgrade fill placement progressing from Area 1S into Area 2S. Placement of subgrade fill was completed during the December reporting period. The placement of "Celgene and Novartis" imported fill was completed in the January reporting period.

Surcharging for Area 2S was noted as complete in Report No. 10.

6.1 SURCHARGE MONITORING DATA TRENDS/ANOMALIES/ MODIFICATIONS

Surcharge monitoring is no longer being conducted in Area 2S.

6.2 SURCHARGE PROGRESS

As of January 26, 2015 the reduced data at all 10 monitoring stations indicated that the completion criteria has been met. **Table 2S-1** below summarizes the status of the surcharge at each monitoring stations at the end of the January monitoring period.

6.3 PROPOSED MODIFICATIONS

There have been no modifications to the Surcharge Plan in Area 2S.

TABLE 2S-1

S_HS-15	2637	3234	**123%**	VWP data as of 1/12/15; SP data through 1/30/15.

7.0 AREA 3S SUMMARY

Geotechnical instrumentation has been installed in Surcharge Area 3S consistent with the Surcharge Monitoring Plan (Amec, 2013) and Design Change Bulletin dated April 30, 2014. The installed instrument locations are depicted on **Figure 3S-1** (attached). Geotechnical Boring Records and Instrument Construction Diagrams for Area 3S were previously provided in Attachment 3S-1 of Report No. 1.

The Baseline Surcharge Settlement Analysis for 3S is shown in **Attachment 3S-1.**

Surcharging was initiated in Area 3S in November 2014 as subgrade fill placement progressing from West to East. Completion of surcharge fill placement finished in the first week of March with the placement of a small volume of gravel surface at the east end of Area 3S.

7.1 SURCHARGE MONITORING DATA TRENDS/ANOMALIES/ MODIFICATIONS

Surcharge monitoring is no longer being conducted.

7.2 SURCHARGE PROGRESS

As of the close of the March, 2015 reporting period Amec Foster Wheeler's evaluation concludes that the surcharge objective has been met at all nine locations. **Table 3S-1,** below, summarizes the status of the surcharge.

MRCE have completed their peer review of the results. MRCE's letter dated April 24, 2015 (Attachment 3S-4 to Report No. 10) indicates that based on their analysis all stations met the surcharge program completion goal as of the end of the March 2015 reporting period.

7.3 PROPOSED MODIFICATIONS

The 0-12 ft. wide Deferred Area strip along Route 440 will not be surcharged. The surcharge design grades have been carried to the point of forming a stable slope at the Barrier Wall at elevation 11. A Design Change Bulletin has been filed documenting this Field Change. The development grades are similar to the existing grades along the "Deferred Area" (i.e. approximately + 0.5 ft.). The surcharge height

in this area was an artifact resulting from generating a simple surcharge pile geometry with a uniform slope. Therefore elimination of surcharge from this strip will have no impact on the Chromium Remedy.

The intent of SP-08 was to monitor settlement impacts on the perimeter pool. The original Settlement Platform SP-08 was located just south of the SA-7 barrier wall and not north of the wall over the perimeter pool. The platform was relocated mid-January 2015 to be over the perimeter pool. The platform was renamed SP-08 (2). Both plots are included in this report.

NOTES:

1. PRIOR TO SURCHARGING REMOVE SA-7 FENCE AND SA-7 FLOODLIGHTS.
2. RELOCATE POWER SUPPLY TO PW1 AND PW2 PRIOR TO SURCHARGE.
3. GEOTECHNICAL MONITORING INSTRUMENTATION TO BE INSTALLED PRIOR TO SURCHARGE.
4. SURCHARGE PILE TO BE SLOPED TO THE SHED FACE WATER TO THE NORTH.
5. LOCATION OF SA-7 PERIMETER POOL RISER PIPES ARE APPROXIMATE. RISER PIPES TO BE FIELD VERIFIED AND EXTENDED WITH SURCHARGE AND MONITORED.
