Re: SA-6 North Surcharge Monitoring
Jersey City, NJ
MRCE File 11173

Dear Mr. Shallard:

Mueser Rutledge Consulting Engineers (MRCE) reviewed the settlement and piezometer monitoring data related to Area 1N provided by AMEC, on July 18th 2014. MRCE's review of the available data is summarized below:

1. AMEC indicated boring sampling performed was to define the compressible layer stratification and the Vibrating Wire Piezometers (VWP) were set at the center of the layers. Center of the layer provide the most conservative pore water pressure reading for the effective stress evaluation. MRCE effective stress calculations were made at the center of the layers.

2. MRCE obtained the 06/16/14 measured fill thickness from the "Settlement Platform – Data Report". MRCE calculated the total stress as of 06/16/14 based on the 06/16/14 fill thickness and the "Historic Pre-Construction Conditions" total stresses provided by AMEC. MRCE calculated the pore water pressures based from 06/16/14 piezometer readings on "Vibrating Wire Piezometer – Data Report" and calculated the 06/16/14 effective stresses, as presented in Table 1.

3. MRCE compared calculated 06/16/14 effective stresses with the effective stresses provided by AMEC for "Final Post-Development Conditions". The defined goal of surcharge program was to achieve an equal or greater effective stress than the "Final Post-Development Conditions" effective stress. Accordingly, MRCE evaluated 06/16/14 percentage completion, shown as "MRCE % Completion (06/16/14)" in Table 1. Table 1 also presents 06/30/14 percent completion evaluation of AMEC, "AMEC % Completion (06/30/14)", for comparison.

4. Two settlement monitoring locations, N_FS-04 and N_HS-04 (highlighted in Table 1), had percentage completion less than 100%. These monitoring points did not meet the defined goal of the surcharge program as of 06/16/14.

5. AMEC provided updated settlement and piezometer monitoring data on August 6th 2014. MRCE calculated effective stresses and the percent completion for N_FS-04 and N_HS-04 based on the updated monitoring data, as shown in Table 2.

6. MRCE agrees that the defined goal of the surcharge program of achieving an equal or greater effective stress than the "Final Post-Development Conditions" effective stress is met in all settlement monitoring locations.

Very truly yours,

MUESER RUTLEDGE CONSULTING ENGINEERS

Attention: Mr. Geoff Shallard

Re: Area 2N Surcharge Review
SA-6 North
Jersey City, NJ
MRCE File 11173

Dear Mr. Shallard:

The Mueser Rutledge Consulting Engineers (MRCE) review of November 17, 2014 AMEC settlement and piezometer monitoring data for Area 2N is summarized below:

AMEC indicated from borings and sampling the Vibrating Wire Piezometers (VWP) were set at the center of the compressible clay layer, which provides the most conservative pore water pressure reading for the effective stress evaluation. All the stress calculations are at the center of the compressible layers.

MRCE used measured fill thickness dated 10/28/14 from "Settlement Platform – Data Report" to calculate the total stress. Pore water was taken from the 10/28/14 "Vibrating Wire Piezometer – Data Report." Effective stress computed for 10/28/14, is presented in Table 1. MRCE compared the 10/28/14 calculated effective stress with the "Final Post-Development Conditions" effective stress estimates provided by AMEC. The defined goal of surcharge program was to achieve an effective stress greater than the "Final Post-Development Conditions."

This review finds all Area 2N monitoring locations have met the surcharge program goal as of 10/28/14.

Very truly yours,
MUESER RUTLEDGE CONSULTING ENGINEERS

Attn: Mr. Geoff Shallard

Re: Updated Area 3N and 4N Surcharge Review
SA-6 North
Jersey City, NJ
MRCE File 11173

Dear Mr. Shallard:

The Mueser Rutledge Consulting Engineers (MRCE) review of March 15th, 2016 AMEC settlement and piezometer monitoring data for Area 3N and 4N is summarized below:

AMEC indicated boring sampling was performed to define the soil profile and the Vibrating Wire Piezometer (VWP) was set at the center of the compressible layer, so that the pore water pressure reading is the most conservative for effective stress evaluation. All the effective stress calculations were made at the center of the layers.

MRCE used the latest measured elevation head dated March 15th, 2016 from "Vibrating Wire Piezometer – Data Report" to calculate the post-surcharge pore water pressures. Post-surcharge total stresses were calculated using fill thickness measurements from the "Settlement Platform – Data Report" taken on March 9th, 2016. Calculated post-surcharge effective stresses are presented in Table 1 and Table 2. MRCE compared the calculated post-surcharge effective stresses with the "Final Post-Development Conditions" effective stress estimates provided by AMEC. The defined goal of the surcharge program was to achieve an effective stress greater than "Final Post-Development Conditions."

This review finds that with the March 15, 2016 readings all settlement monitoring locations, including the two settlement locations, N_HS-11 in Area 3N (Table 1) and N_FS-12 in Area 4N (Table 2), have met the surcharge program goal. This finding is in agreement with the AMEC data review and interpretation.

Very truly yours,

Re: SA-6 ~~North~~ Surcharge Monitoring
Jersey City, NJ
MRCE File 11173

Dear Mr. Shallard:

Mueser Rutledge Consulting Engineers (MRCE) reviewed the settlement and piezometer monitoring data related to Area 1S provided by AMEC, on October 17th 2014. MRCE's review of the available data is summarized below:

1. AMEC indicated boring sampling were performed and the Vibrating Wire Piezometer (VWP) was set at the center of the layer. Center of the layer provide the most conservative pore water pressure reading for the effective stress evaluation. All the effective stress calculations were made at the center of the layers.

2. MRCE used measured fill thickness dated 09/22/14 from provided "Settlement Platform – Data Report" and calculated the total stress as of 09/22/14 based on the fill thickness recorded on 09/22/14 and the "Historic Pre-Construction Conditions" total stresses provided by AMEC. MRCE evaluated the pore water pressures based on the piezometer reading on 09/23/14 from "Vibrating Wire Piezometer – Data Report" and calculated the effective stresses as of 09/23/14, as presented in Table 1.

3. MRCE compared calculated effective stresses of 09/23/14 with the effective stresses provided by AMEC for "Final Post-Development Conditions". The defined goal of surcharge program was to achieve an effective stress greater than the "Final Post-Development Conditions" effective stress. Percent completion computed by MRCE ("MRCE % Completion (09/23/14)" in Table 1) indicates effective stress compared to "Final Post-Development Conditions" effective stress; percent completion greater than 100 % indicates overconsolidation compared to "Final Post-Development Conditions" effective stress. Table 1 also presents percent completion evaluation of AMEC as of 09/26/14, "AMEC % Completion (09/26/14)" for comparison.

4. Settlement monitoring location S_FS-02 (highlighted in attached Table 1) has not yet met the surcharge program goal as of 09/23/14.

5. MRCE suggests leaving the surcharge on at S_FS-02 location until the pore water pressure dissipate such that the pore pressure head measured in the middle of Stratum D drops an additional 1.5 ft, or raising grade to increase the total stress to accelerate consolidation.

Very truly yours,

MUESER RUTLEDGE CONSULTING ENGINEERS

Re: Area 2S Surcharge Review
SA-6 North
Jersey City, NJ
MRCE File 11173

Dear Mr. Shallard:

The Mueser Rutledge Consulting Engineers (MRCE) review of February 06, 2015 AMEC settlement and piezometer monitoring data for Area 2S is summarized below:

AMEC indicated from borings and sampling the Vibrating Wire Piezometers (VWP) were set at the center of the compressible clay layer, which provides the most conservative pore water pressure reading for the effective stress evaluation. All the stress calculations are at the center of the compressible layers.

MRCE used latest measured elevation head dated between January 12-29, 2015 from "Vibrating Wire Piezometer – Data Report" to calculate the post-surcharge pore water pressures. Post-surcharge total stresses were calculated based on the fill thickness measurements from the "Settlement Platform – Data Report" taken at corresponding dates, between January 14-30, 2015. Calculated post-surcharge effective stresses are presented in Table 1. MRCE compared the calculated post-surcharge effective stresses with the "Final Post-Development Conditions" effective stress estimates provided by AMEC. The defined goal of surcharge program was to achieve an effective stress greater than the "Final Post-Development Conditions."

This review finds all Area 2S monitoring locations have met the surcharge program goal as of 01/30/2015.

Very truly yours,
MUESER RUTLEDGE CONSULTING ENGINEERS

Attention: Mr. Geoff Shallard

Re: Area 3S Surcharge Review
SA-6 South
Jersey City, NJ
MRCE File 11173

Dear Mr. Shallard:

The Mueser Rutledge Consulting Engineers (MRCE) review of March 30, 2015 AMEC settlement and piezometer monitoring data for Area 3S is summarized below:

AMEC indicated from borings and sampling the Vibrating Wire Piezometers (VWP) were set at the center of the compressible clay layer, which provides the most conservative pore water pressure reading for the effective stress evaluation. All the stress calculations are at the center of the compressible layers.

MRCE used latest measured elevation head dated between March 24-13, 2015 from "Vibrating Wire Piezometer – Data Report" to calculate the post-surcharge pore water pressures. Post-surcharge total stresses were calculated based on the fill thickness measurements from the "Settlement Platform – Data Report" taken on March 19, 2015. Calculated post-surcharge effective stresses are presented in Table 1. MRCE compared the calculated post-surcharge effective stresses with the "Final Post-Development Conditions" effective stress estimates provided by AMEC. The defined goal of surcharge program was to achieve an effective stress greater than the "Final Post-Development Conditions."

This review finds all Area 3S monitoring locations have met the surcharge program goal as of 03/30/2015.

Very truly yours,

MUESER RUTLEDGE CONSULTING ENGINEERS

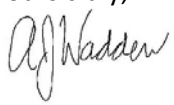
Amec Foster Wheeler E&I, Inc.
200 American Metro Boulevard
Hamilton, New Jersey 08619

Attention: Eric Christodoulatos



Reference: Settlement Platform Decommissioning
Honeywell Site, Jersey City, New Jersey

Dear Eric,

B&B Drilling, Inc. (B&B) decommissioned settlement platforms at the north and south surcharge areas. Although settlement platforms were not NJDEP-permitted wells they were decommissioned in accordance with the NJDEP regulations for well abandonment (N.J.A.C. 7:9D-3.1). The only difference is that no formal decommissioning report submission to NJDEP was required.

Settlement platforms were constructed with a 1-inch galvanized steel casing inside a 4-inch PVC casing. A portion of the annular space between the 1 and 4-inch pipes was filled with bentonite when originally constructed. The decommissioning consisted of pressure tremie grouting both the 1-inch inner casing and the remaining open annular space in the 4-inch casings at each settlement platform.

Yours truly,

Andrew Wadden
Operations Manager

WELL PERMIT

DEVIATION INFORMATION	
Purpose:	Please see Engineers Design Documentation
Unusual Conditions:	Please see Engineers Design Documentation
Reason for Deviation:	Please see Engineers Design Documentation
Proposed Well Construction	Please see Engineers Design Documentation

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

DEVIATION INFORMATION	
Purpose:	Please see Engineers Design Documentation
Unusual Conditions:	Please see Engineers Design Documentation
Reason for Deviation:	Please see Engineers Design Documentation
Proposed Well Construction	Please see Engineers Design Documentation

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

DEVIATION INFORMATION	
Purpose:	Please see attached Engineers Design Documentation
Unusual Conditions:	Please see attached Engineers Design Documentation
Reason for Deviation:	Please see attached Engineers Design Documentation
Proposed Well Construction	Please see attached Engineers Design Documentation

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

DEVIATION INFORMATION	
Purpose:	Please see attached Engineers Design Documentation
Unusual Conditions:	Please see attached Engineers Design Documentation
Reason for Deviation:	Please see attached Engineers Design Documentation
Proposed Well Construction	Please see attached Engineers Design Documentation

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

DEVIATION INFORMATION	
Purpose:	Please see attached Engineers Design Documentation
Unusual Conditions:	Please see attached Engineers Design Documentation
Reason for Deviation:	Please see attached Engineers Design Documentation
Proposed Well Construction	Please see attached Engineers Design Documentation

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

Company/Organization: BAYFRONT REDEVELOPMENT, LLC

Address: 101 COLUMBIA ROAD Morristown, New Jersey 07962

WELL LOCATION: Honeywell SA-6 North

Address: 501 ROUTE 440 SA-6 NORTH

County: Hudson Municipality: Jersey City Lot: 10 Block: 21901

Easting (X): 603339 Northing (Y): 685387
Coordinate System: NJ State Plane (NAD83) - USFEET

DATE WELL STARTED: May 29, 2015

DATE WELL COMPLETED: June 2, 2015

WELL USE: EXTENSOMETER

Other Use(s):

Local ID: NFS11-SD

WELL CONSTRUCTION

Total Depth Drilled (ft.): 35 Finished Well Depth (ft.): 35 Well Surface: Above Grade

	Depth to Top (ft.)	Depth to Bottom (ft.)	Diameter (inches)	Material	Wgt/Rating/Screen # Used (lbs/ch no.)
Borehole	0	35	4.5		
Casing	0	35	3.34	PVC	SONDEX CASING
Screen					

	Depth to Top (ft.)	Depth to Bottom (ft.)	Outer Diameter (in.)	Inner Diameter (in)	Material		
					Bentonite (lbs.)	Neat Cement (lbs.)	Water (gal.)
Grout	0	35	4.5	3.34	0.75	60	3.5
Gravel Pack							

Grouting Method: Pressure method (Tremie Pipe) Drilling Method: Mud Rotary

ADDITIONAL INFORMATION

Protective Casing: Yes
Static Water Level: 8 ft. below land surface
Water Level Measure Tool: m-scope in adjacent well
Well Development Period: 0 hrs.
Method of Development: NA
Pump Type:

Pump Capacity: _ gpm
Total Design Head: _ ft.
Drilling Fluid:
Drill Rig: Mobil B-61
Health and Safety Plan Submitted? Yes

ATTACHMENTS:

GEOLOGIC LOG
0 - 13: BRN GC - Clayey gravels, gravel-sand-clay mixtures FILL
13 - 15: ORANGE-BRN SM - Silty sands, sand-silt mixtures COPR PRESENT
15 - 17: BRN ML - Inorganic silts, very fine sands, rock four, silty or clayey fine sands
17 - 20: GRAY-BRN OH - Organic clays of medium to high plasticity
20 - 35: RED-BRN SP - Poorly graded sands and gravelly sands, little or no fines

ADDITIONAL INFORMATION: SONDEX Well was installed in compliance with an approved NJDEP Deviation Request.

WELL PERMIT

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

DEVIATION INFORMATION	
Purpose:	
Unusual Conditions:	
Reason for Deviation:	
Proposed Well Construction	

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

WELL PERMIT

DEVIATION INFORMATION	
Purpose:	Please see Engineers Design Documentation
Unusual Conditions:	Please see Engineers Design Documentation
Reason for Deviation:	Please see Engineers Design Documentation
Proposed Well Construction	Please see Engineers Design Documentation

GENERAL CONDITIONS/REQUIREMENTS
A copy of this permit shall be kept at the worksite / on the property and shall be exhibited upon request. [N.J.A.C. 7:9D-1]
A well record must be submitted by the well driller to the Bureau of Water Systems and Well Permitting. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the well record shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Record: within ninety (90) days after the well is completed.[N.J.A.C. 7:9D-1]
All well drilling/pump installation activities shall comply with N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
For this permit to remain valid, the well approved in this permit shall be constructed within one year of the effective date of the permit. [N.J.A.C. 7:9D-1]
If the pump capacity applied for is less than 70 gpm, no subsequent increase to 70 gpm or more shall be made without prior approval of the Bureau of Water Systems and Well Permitting. [N.J.A.C. 7:9D-1]
If the use of the well is to be changed a well permit for the proposed use of the well shall be submitted for review and approval. [N.J.A.C. 7:9D-1]
If you or a future property owner intend to redesignate this well as a Category 1 well (domestic, non-public, community water supply or public non-community water supply wells), the well must be constructed as a Category 1 well per the Well Construction and Abandonment Regulations at N.J.A.C. 7:0D-1.1 et seq. In addition, if the current or future property owner intends to have this well redesignated as a community water supply well, the well must be constructed by a Master well driller, which would include having a Master well driller on-site at all times during construction of the well, as specified in the Well Construction and Abandonment Regulations. Otherwise, the New Jersey Department of Environmental Protection will not allow the well to be redesignated, and a new well would have to be installed. [N.J.A.C. 7:9D-1.7((a))1i]
In accepting this permit the Property Owner and Driller agree to abide by the following terms and conditions [N.J.A.C. 7:9D-1]
In the event that this well is not constructed the well driller shall notify the Bureau of Water Systems and Well Permitting of the permit cancellation. Unless prior written approval is obtained from the Bureau of Water Systems and Well Permitting the Cancellation notification shall be submitted electronically through the New Jersey Department of Environmental Protection's Regulatory Services Portal Submit Well Permit Cancellation : by the expiration date of this permit.[N.J.A.C. 7:9D-1]
In the event this well is abandoned, the Owner or Well driller shall assume full responsibility for having the well decommissioned in a manner satisfactory to the New Jersey Department of Environmental Protection in accordance with the provisions of N.J.A.C. 7:9D-1 et seq. [N.J.A.C. 7:9D-1]
The granting of this permit shall not be construed in any way to affect the title or ownership of property, and shall not make the New Jersey Department of Environmental Protection or the State a party in any suit or question of ownership of property. [N.J.A.C. 7:9D-1]
The issuance of this permit shall not be deemed to affect in any way action by the New Jersey Department of Environmental Protection on any future application. [N.J.A.C. 7:9D-1]
This permit conveys no rights, either expressed, or implied to divert water. [N.J.A.C. 7:9D-1]
This permit does not waive the obtaining of Federal or other State or local Government consent when necessary. This permit is not valid and no work shall be undertaken until such time as all other required approvals and permits have been obtained. [N.J.A.C. 7:9D-1]
This permit is NONTRANSFERABLE [N.J.A.C. 7:9D]
This well shall not be used for the supply of potable / drinking water. [N.J.A.C. 7:9D-1]

QC – Quality Control
WR - Wrinkle

1.0 INTRODUCTION

The purpose of this Cap Geosynthetic Quality Assurance Report (QA Report) is to present the observations made, and data collected during the construction of an engineered cap placed within the Study Area 6 (SA-6) North Open Space Area of Concern (AOC) located in Jersey City, New Jersey (site). The capping activities at SA-6 North included the preparation of the soil subgrade, placement of geocomposite venting layer (GVL), geosynthetic clay liner (GCL), linear low-density polyethylene (LLDPE) geomembrane, and a geocomposite drainage layer (GDL). Langan Engineering & Environmental Services, Inc. (Langan) was contracted by Honeywell International, Inc. (Honeywell) to provide independent Quality Assurance (QA) for the installation of the geosynthetic components of the cap.

The Chromium Remedy *100% Design* Issued for Construction dated June 2013, (*100% Design*) was prepared by AMEC Foster Wheeler Environment & Infrastructure, Inc. (Amec Foster Wheeler) on behalf of Honeywell, to address chromium contamination at SA-6 North. The *100% Design* required installation of a Resource Conservation and Recovery Act (RCRA) – equivalent geosynthetic cap system, including a venting layer for naturally occurring methane, covering approximately ten acres of the designated Open Space AOC. As part of this QA Report, the Record Drawings, which outline the placement and construction of the various geosynthetic components of the cap, have been provided as *Appendix A*. Other design details discussed herein, including the Issued for Construction (IFC) drawings, geosynthetics specifications, and geosynthetic products approved for this site are incorporated by reference only. Refer to Amec Foster Wheeler documents titled "*100% Design*," dated June 2013, and "*Remedial Action Report (RAR) for Chromium*" for these details. Additionally, the Construction Quality Assurance Plan (CQA) Plan prepared by Langan in June 2015 was previously submitted as part of the April 2016 SA-6 South QA Report (*Cap Geosynthetic Quality Assurance (QA) Report – Honeywell SA-6 South)* and is incorporated by reference only. The CQA Plan also outlines the details of the scope conducted by Langan, as well as the roles and responsibilities of the owner, Engineer of Record (EOR), earthwork contractor, and liner contractor.

This QA Report documents the results of the QA Geosynthetic activities conducted during the construction of the cap at SA-6 North by both Langan and Amec Foster Wheeler field personnel. Design Change Bulletins (DCBs) and Requests for Information (RFIs) which were generated subsequent to the *100% Design*, and relevant to the QA scope were reviewed and approved by the EOR, and are further summarized in Amec Foster Wheeler's EOR Closure Report.

This QA Report specifically includes the following documentation of the cap construction activities:

- The Record Drawings;
- Summary of the various phases of the work observed as part of this QA Report;
- Daily Reports summarizing the work activities completed each day and other pertinent information;
- Daily cap construction forms submitted by the Geosynthetic Installer which includes: Repair Reports, Trial Weld Logs, Panel Placement Forms, Seam Control Forms, Destructive & Non-Destructive Test Forms, and Subgrade Approval Forms;

- Field testing results for fusion welds and extrusion welds;
- Laboratory testing results for the destructive samples collected (i.e., fusion & extrusion welds);
- Photographs depicting daily work activities and various phases of the capping activities; and
- Independent QA's certification that the placement of the SA-6 North geosynthetics was implemented in general compliance with the design documents.

This QA Report addresses the cap construction of SA-6 North only. The cap construction at SA-6 South was previously completed in November 2015 and was summarized in the *Cap Geosynthetic Quality Assurance (QA) Report – Honeywell SA-6 South* submitted to Honeywell in April 2016.

2.0 SA-6 NORTH CAP CONSTRUCTION AND DOCUMENTATION

2.1 General

This Section describes the construction methods implemented and the Quality Control (QC) and QA documentation completed as part of the construction of SA-6 North. This Section also provides the results of the QC and QA testing that was performed during field activities by Langan (QA Engineer), Environmental Specialties International (ESI) as the Geosynthetic Installer, and Entact, LLC (Entact) as the Construction Contractor and QC Supervisor.

QA activities commenced on June 21, 2016, with Langan conducting observation of the soil subgrade preparation for the western end of SA-6 North (near the Hackensack River). Geocomposite / geotextile placement began on June 22, 2016 and continued until capping activities were completed on August 15, 2016. Relevant observations and QA/QC testing during this timeframe are defined further in this section. A project Certificate of Completion (completed and verified by Entact) certifying that the SA-6 North cap has been constructed and completed in compliance with the project drawings and technical specifications is attached as *Appendix B*.

2.2 Survey Control / Subgrade Elevations

Entact subcontracted Maser Consulting, P.A. (Maser), a licensed New Jersey land surveyor, who provided surveying services during the construction of the cap. Maser completed surveying of the cap from the initial subgrade preparation phases to the placement of the geomembrane. Maser surveyed the subgrade elevations of the cap prior to material placement and tabulated the survey results as compared to the design elevations on the construction control grid. These survey activities included:

1. Measurement of elevations of the subgrade surface in accordance with a pre-determined Construction Control Grid. Conformance to the design lines and grades was verified by Amec Foster Wheeler and Entact by comparing the actual elevations with the design elevations on the Construction Control Grid. The accepted subgrade elevations, and corresponding Construction Control Grid for SA-6 North are provided within *Appendix C1* and *Appendix C2*, respectively.

2. Measurement of the as-built conditions including the perimeter or termination of the geomembrane and geotextile over the hydraulic barrier (HB), and Soil Cement Bentonite (SCB) wall, as well as, the location of the geomembrane repairs, boots / penetrations, and other pertinent information related to the construction of the cap.
3. The subgrade surface was observed to verify uniformity of grade between the construction control grid points.

This survey information is shown on the final Record Drawings attached in *Appendix A.* Amec Foster Wheeler provided QA review and verification of the Maser survey data.

2.3 Soil Subgrade Preparation

Soil subgrade preparation was required prior to the placement of the geotextile and the geomembrane in the areas to be capped. Soil subgrade preparation for the cap was completed by Entact using the following procedures:

- Step 1: Entact conducted rough grading of the subgrade surfaces with the use of track-mounted dozers to prepare the appropriate grades and to clear the surface of large objects (i.e. rocks, metals, debris, etc.);
- Step 2: The subgrade surface was fine-graded and compacted in accordance with the project specifications presented in the *100% Design* package. Subgrade sections not meeting survey or compaction requirements were re-worked by Entact until specified conditions were achieved. At the conclusion of this step, Entact provided a certification that the surface met the grading and compaction requirements. The certifications included the Construction Control Grid tabulation prepared by Maser (as defined in *Section 2.2*) and issuance of a Certificate of Subgrade Surface Acceptance as defined in further detail below;
- Step 3: When precipitation was forecast, the prepared subgrade surface was temporarily covered with a polyethylene plastic sheet to protect the soil from overnight precipitation; and
- Step 4: The subgrade surface would be prepared in approximate 100 ft. sections (moving from west to east across SA-6), followed by extra fine grading conducted by laborers who cleared the surface of extraneous materials greater than ½-inch in diameter, followed by repair and re-compaction of any areas that became inadvertently wetted.

Entact and ESI also conducted their own observation of the subgrade surface to confirm if the surface was acceptable for the placement of the geosynthetic material. Upon notification by Entact that the grading was acceptable, Langan conducted an independent observation to identify that the subgrade was prepared in general accordance with the *100% Design*. As part of the observation activities, the Langan field engineer walked the subgrade in approximate 8 ft. by 200 ft. to 300 ft. (width of SA-6 North from north to south) transects to observe soil compaction, as well as items requiring removal (>1/2") prior to panel placement.

If the soil subgrade surface was deemed acceptable with no additional re-work required, the Langan QA and Entact QC representative signed and submitted an acceptance form for the approved subgrade. The daily QA subgrade approval forms are provided in *Appendix D*, with the ESI Certificate of Subgrade Surface Acceptance forms provided in *Appendix D1*, and the Langan Certificate of Soil Surface provided in *Appendix D2.* In the event the subgrade surface was not deemed acceptable, Steps 2, 3, and 4 outlined above were repeated until an acceptable subgrade surface was achieved (based on conditions outlined in the Langan Certificate of Soil Surface forms) and confirmed by Langan and Entact.

Figure 1 below shows a typical section of subgrade approved for geomembrane placement. Additional photos and summaries of the subgrade preparation activities conducted each day are presented in the Daily Reports and Daily Photo Logs provided in *Appendix E.*

Figure 1 – Typical Soil Subgrade Approved for Geomembrane Placement

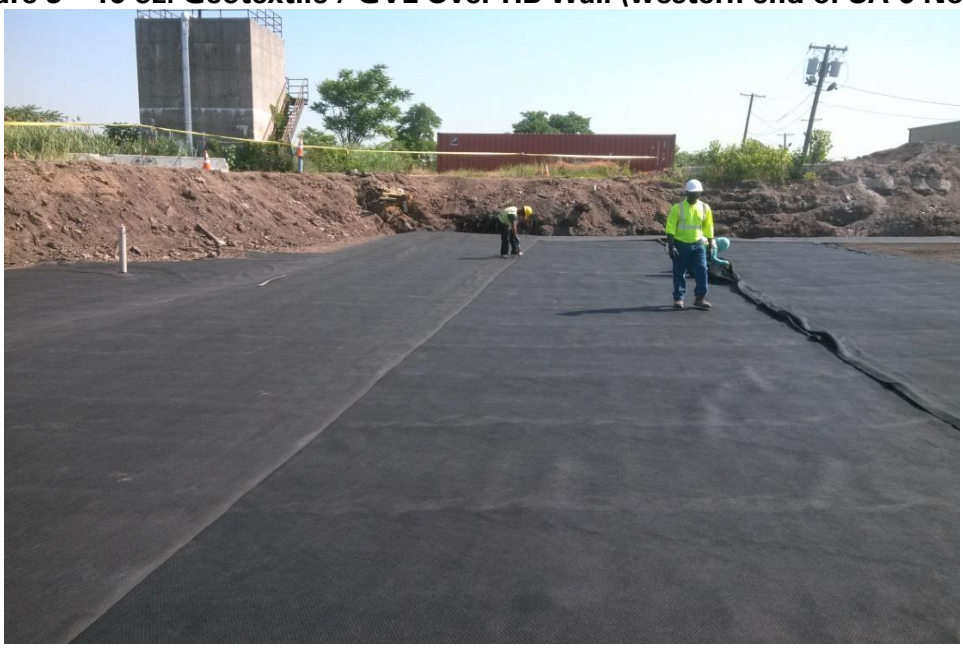
2.4 SA-6 North Cap Components

2.4.1 Geotextiles

The geotextile materials installed at SA-6 North were previously delivered to the site in 2015 during the installation of the cap at SA-6 South. The corresponding Receiving Inspection Reports (RIRs) prepared by Amec Foster Wheeler documenting receipt of the geotextile material were outlined in the *Cap Geosynthetic Quality Assurance (QA) Report – Honeywell SA-6 South (SA-6 South QA Report)* submitted in April 2016. As such the RIRs are incorporated in this report as reference only. Additional details on the delivery, handling, and storage of the geotextile material is outlined in the *SA-6 South QA Report*.

Following approval of the subgrade surface at the various sections of the work area, a 16 oz. geotextile layer was placed over the HB and SCB barrier walls around the perimeter of the

capped area. According to the *100% Design* package, this geotextile layer was designed to protect the 60-mil LLDPE geomembrane from potential puncture damage from the perimeter barriers / walls. The approved 16 oz. non-woven geotextile fabric layer consisted of SKAPS GE-116 (further defined in Amec Foster Wheeler's *EOR Closure Report).*



The 16 oz. geotextile was installed by ESI at locations shown on the Record Drawings (*Appendix A2*). Geotextile was placed along the boundaries of SA-6 North over the HB and SCB wall located along the northern, southern, eastern and western boundaries of the cap. The 15 ft. wide geotextile panels were placed with approximately 14 ft. of the geotextile panel inbound of the perimeter of the HB and SCB walls and with 1 ft. of the geotextile panel extending outbound of the perimeter containment walls. This geotextile was installed in areas where the GVL was placed. For areas where the GCL was installed, the GCL overlapped the HB/SCB wall as shown in *Appendix A2*.

Geotextile panels were overlapped at least 12-inches and seamed using a dual hot wedge welder that melted the two surfaces together to form a bond (also referred to as leistering). The 16 oz. geotextile was placed along the boundary areas of SA-6 North at locations above the Site water table (i.e. locations where geosynthetic clay liner was not required). The geotextile (on the interior of the Cap) overlapped the geocomposite venting layer and was leistered in place following the procedure outlined above. *Figure 2* below shows the 16 oz. geotextile being placed over the SCB wall (southern end of SA-6 North cap), and *Figure 3* shows the geotextile overlapping the GVL Note, the GVL rolls were placed in a general north to south direction across SA-6, while the 16 oz. geotextile rolls were placed in a general east to west direction.

Figure 2 – 16 oz. Geotextile Placed Over SCB Wall (southern end of SA-6 North)

Figure 3 – 16 oz. Geotextile / GVL Over HB Wall (western end of SA-6 North)

2.4.2 Geocomposite Venting Layer (GVL)

Prior to placement of the 60-mil LLDPE geomembrane, GVL was placed over the soil subgrade at locations above the water table to serve as a venting layer for naturally occurring methane that may emanate from below the cap.

The approved GVL (i.e., defined as SKAPS TN-220-2-6 in Amec Foster Wheeler's *EOR Closure Report* consisted of an extruded polyethylene drainage net structure (or geonet) sandwiched between two non-woven geotextile layers. The GVL was placed by ESI, over the approved soil subgrade for areas above the Site water table at locations shown on the Record Drawings (*Appendix A1*).

The GVL rolls were typically oriented in a north to south direction. The leading edge of the GVL panels was held in place by sand bags until the subsequent panels could be placed and seamed. The placement strategy for this material was to limit the amount of GVL to be placed in a day, to an area that could also be covered by the LLDPE geomembrane that same day. This strategy was used to minimize the risk of the GVL and underlying subgrade from becoming wet during overnight rain events. GVL panels were not placed during precipitation events, in the presence of excessive moisture, or during high winds.

GVL panels were placed according to Section 02380 – Gas Venting System as defined in *100% Design* package. GVL was generally placed with the predominant flow direction towards the edge of the cap with GVL panels running parallel to any slopes or elevation changes (i.e. running up/down the slope and not across the slope). For adjacent GVL panels, the following minimum seaming requirements were met:

- Adjacent rolls of GVL were placed so that the geonet overlapped by 2 to 3-inches, and the geotextiles overlapped by at least 4-inches;
- The bottom layer of geotextile (underneath the geonet) was overlapped to ensure that no areas of the soil subgrade were exposed;
- White plastic fasteners were placed at a maximum of every 5 ft. along the seam to connect adjacent pieces of the GVL panels. Additional fasteners were requested by the QA team when the seams extended down slopes or at significant subgrade elevation changes. *Figure 4* below shows placement of the white plastic fasteners; and
- Once the geonet was tied with a sufficient number of fasteners, the top geotextile of the GVL panel was continuously sewn as shown in *Figure 5* below.

Figure 4 – Typical Placement of GVL & Joining of the Net with Plastic Fasteners

Figure 5 – Typical Sewing of GVL (for top layer of geotextile)

During placement of the GVL, butt seams, rips, tears, or other damaged areas of the GVL were repaired by exposing an appropriate area of geonet, placing fasteners as defined in the project specifications, and covering the area with a new piece of geotextile which was leistered in-place. Additional details of the GVL placement are further described in the Langan Daily Reports and Photo Logs provided in *Appendix E*.

2.4.3 Geosynthetic Clay Liner (GCL)

The approved GCL consisted of granular sodium bentonite clay sandwiched between, supported, and encapsulated by two geotextiles, and held together by needled punching. The approved GCL consisted of Cetco Bentomat DN (as further defined in Amec Foster Wheeler's EOR Closure Report.

The approved GCL was deployed by ESI in accordance with Section 02375 – Geosynthetic Clay Liner as defined in the *100% Design* package. GCL was placed directly over the approved soil subgrade, at locations situated below (to 1 ft. above) the site water table. GCL was generally placed along the eastern end of SA-6 North (northern and eastern side of the cap), as the east end of the site was constructed at a lower elevation than the west end. The location of the GCL placement is also shown on the Record Drawings (*Appendix A1*).

During placement of the GCL, granular bentonite was placed along the GCL seams as outlined in the project specifications and shown on *Figure 6* below. No GCL was placed during precipitation, in the presence of excessive moisture, or during high winds.

Figure 6 – ESI Placing Granular Bentonite along GCL Seams

Additional details on the placement of the GCL are further described in the Langan Daily Reports and supporting photo logs provided in *Appendix E*.

2.4.3.1 Bentonite Sand Plug

As outlined in specification Section 02375 – Geosynthetic Clay Liner of the *100% Design* package, a sand bentonite plug was constructed on the inboard side of the HB wall for wall sections below Elevation 7 (below the site groundwater table) along the edges of SA-6 North. This bentonite sand plug was constructed in the field by Entact by mixing clean sand with sodium montmorillonite at a 90% sand to 10% bentonite ratio.

The plug was constructed to a depth of approximately 18-inches below the HB wall elevation, and was approximately 2 ft. wide. Additional details on the edge connection details are provided below in *Section 2.4.3.2*.

2.4.3.2 GCL to Barrier Wall Connection Details

GCL to Barrier Wall Logs are provided within *Appendix F*. As per the approved Langan CQA Plan, Amec Foster Wheeler completed a GCL to Barrier Wall (HB Wall & SCB) Connection Detail form for the low-lying areas of SA-6 North (below the Site water table). This form documented that the bentonite sand plug was appropriately constructed, that the barrier wall was clean and exposed, and that the appropriate GCL overlap (1 ft. minimum) was maintained.

2.4.4 60-mil Low Linear Density Polyethylene (LLDPE) Geomembrane

A textured LLDPE geomembrane manufactured to a nominal 60-mil thickness was placed over the 16 oz geotextile (installed over the HB/SCB wall), GVL and GCL layers at the Site to mitigate groundwater infiltration through the cap. The 60-mil LLDPE geomembrane was placed directly over the GVL and GCL geotextiles. The 60-mil geomembrane was placed in accordance with specification Section 02372 – Cap Geomembrane Liner as defined in the *100% Design* Package. The location and placement of the LLDPE panels is documented on the ESI Panel Placement Logs provided in *Appendix G*.

ESI deployed the geomembrane rolls in a general north to south orientation. Hand clamps were used on the edge of the panels to aid in the final positioning, as required. The leading edge of the LLDPE geomembrane panels were held in place by sand bags until the subsequent panels could be placed and seamed via fusion welding methodology. The number of panels deployed in a single day was limited to the amount that could be field seamed that same day. No panels were placed during precipitation, in the presence of excessive moisture in the subgrade, or during high winds. The minimum ambient temperature for seaming was specified as 32°F, with a maximum ambient temperature of 104°F. No cold or hot weather seaming was conducted as temperatures did not reach below 32°F, or above 104°F during geomembrane installation.

Each individual LLDPE panel was observed for damage by ESI, Entact, and Langan during the installation process. Prior to seaming, the approved geomembrane was observed by Langan to evaluate that the material for defects or damage prior to seaming. Areas observed to be damaged / defective, or areas where the geomembrane had to be custom cut to conform to the subgrade contours, were marked for repair. Repairs were completed in the field by ESI via patching and welding the geomembrane as further described below. All repairs were

documented and recorded on the Record Drawings (*Appendix A2*). Additional details on the repair methodology and types of repairs are further described in *Section 2.4.4.4*.
The LLDPE geomembrane was seamed in the field by one of two welding methods: extrusion and double-fusion. Extrusion welding was used for repairs, short seams, and areas where the double fusion could not operate. Extrusion welding was performed with a hand held extrusion welding gun. The double-fusion seaming (fusion welding) was performed using a self-propelled "wedge welder" which formed an air channel between the two seams. Fusion welding was performed with a minimum of 4-inches overlap as per the project specifications.

The integrity of the welds was monitored by both destructive and non-destructive test methods. The destructive testing consisted of the collection of samples from the completed seams at a minimum frequency of one sample per 500 ft. of weld (for both fusion and extrusion welds) for the first twenty-five (25) samples collected. Based on the results of the first 25 samples, the sampling frequency may be modified as outlined in *Section 2.4.4.3.* A representative of Langan was onsite to confirm the locations of the destructive samples along with a representative of ESI.

The destructive samples were analyzed by Geotechnics, Inc. (Geotechnics) the Contractor's Material Quality Control Laboratory. Langan also collected additional QA samples (approximate 15% of total samples collected) and submitted samples to TRI Environmental, Inc. (TRI) for independent QA testing. Destructive sample locations were repaired in the field and confirmed with vacuum box testing. All destructive sample locations have been recorded and are shown on the Record Drawings (*Appendix A2*). The laboratory results of the destruct samples are discussed further in *Section 2.4.4.3* below.

In addition to the destructive testing, non-destructive testing was completed by ESI during cap construction. Two types of non-destructive tests were used at the Site: air channel tests (pressure tests) and vacuum box tests as defined further below. In addition for all pipe boot / penetrations, spark testing was also completed at the base of the boot and vertical weld (areas not accessible for vacuum box testing) to confirm the integrity of the extrusion weld:

1. Pressure Testing - The pressure tests were conducted on 100% of all the double fusion welded seams where both ends of the seam were clamped and sealed and a pressure needle was inserted into the air channel. The air channel was then pressurized to thirty pounds per square inch (psi) and the pressure was maintained for a minimum of five minutes. If the pressure did not stabilize, or a pressure drop greater than four psi was noted over a five minute span, then the seam was deemed unacceptable and the faulty area was isolated and repaired. Results of the non-destructive testing are discussed further in *Section 2.4.4.2* below.
2. Vacuum Box Testing - For patch / repair work and other areas where extrusion welding was required, the extrusion welds were vacuum box tested by ESI. A soapy solution was applied to the weld area, and a vacuum box was placed over the weld for a minimum of ten seconds and observed for the appearance of soap bubbles. No failed vacuum box tests were encountered during the extrusion weld testing for SA-6 North.

3. Spark Testing – Spark testing was conducted for the vertical weld on the "sleeve" and horizontal weld on the "skirt" (base of boot) weld for the pipe boot / penetrations at the

site. This included piezometers, gas vents, monitoring wells, injection wells, and access manholes. The spark test strategy included installing a copper wire under the extrusion weld, and applying a charged probe to complete the circuit when testing. If any deficiencies were present in the weld, the probe and wire would arc, thus causing a visible spark to identify the location. Individual forms were generated to document the installation of each boot / penetration. Additional details on the pipes / penetrations encountered, as well as the spark testing details, are further described in *Section 2.4.4.5 and Section 2.4.4.5.1*, respectively.

For additional details on the geomembrane placement, destructive and non-destructive testing, patch / repair work, and other geomembrane related construction activities, refer to the Langan Daily Reports and Photo Logs provided in *Appendix E*.

2.4.4.1 Trial Weld Logs

Prior to any seaming of the geomembrane each day, the fusion and/or extrusion welding equipment was used to conduct trial welds (or test strips) to confirm that the material and equipment met the specification requirements. Test strips were collected (using the same 60 mil LLDPE geomembrane placed across the cap) by completing a sample fusion or extrusion weld. This activity included producing several types of seams to qualify that a specific seamer and apparatus would yield the desired specified performance requirements. These seam types included: smooth-to-smooth, smooth-to-texture, and texture-to-texture. It should be noted that the 60 mil geomembrane installed across the cap was textured (60-mil Microspike); however, the manufacturer's product has a smooth edge for welding.

The trial welds were cut and tested on a portable tensiometer by ESI. Langan and Entact observed the trial weld tests to confirm that the minimum peel and shear values were obtained as per specification Section 02372 – Cap Geomembrane Liner defined in the *100% Design* package. These trial welds were completed prior to commencement of seaming at the start of each day, and once every four hours. The results of daily trial weld logs are provided in *Appendix H*.

2.4.4.2 Non-Destructive Testing Results

Non-Destructive Pressure Testing (i.e., using vacuum box testing) was conducted along the geomembrane panels, and the repaired / patched areas by ESI, as per the project specifications. The results of the non-destructive testing for each of the panel seams are provided in the Seam Control Log shown in *Appendix I*. Additionally, the associated repairs and the corresponding vacuum box testing results are presented in the ESI Repair Report attached in *Appendix J*.

During the construction of the cap at SA-6 North, there were no observed non-destructive test failures during the field testing. All vacuum box and pressure tests were in compliance with Section 02372 – Cap Geomembrane Liner.

2.4.4.3 Destructive Testing Results

Destructive testing was conducted for the fusion and extrusion welding that was completed along the edge of the geomembrane panels. Destruct samples were collected at a minimum sampling interval of 500 linear feet (LF) of seaming length for the initial twenty-six (26) samples. The locations of the destruct samples were identified in the field by the Independent QA Engineer (Langan) and are shown on the Record Drawings (*Appendix A2*). Once the destruct sample locations were determined, ESI cut and tested the destruct samples (as per the project specifications).

A total of ten (10) 1-inch wide specimens were cut from the destruct sample for field testing. These samples were then tested by a tensiometer equipped with a drive/pull apparatus rate of 20-inches per minute. Five of the specimens were tested for peel strength, and the remaining five for shear strength. The samples were tested to confirm that the geomembrane met the specified peel and shear strength values outlined in *Table 1* below. Additional details on the test results are provided on the Destructive Sample Information Log attached as *Appendix K*.

Table 1 – LLDPE Geomembrane Seam Property Requirements

Property	Test Method	60-mil LLDPE Value
Shear Strength (min. avg.)	ASTM D 6392	90 lb/in
Peel Strength – Extrusion (min. avg.)	ASTM D 6392	66 lb/in
Peel Strength – Fusion (min. avg.)	ASTM D 6392	75 lb/in

In addition to the field testing completed by ESI, thirty-six (36) fusion weld destruct samples, and seventeen (17) extrusion weld samples were sent to Geotechnics for lab verification.

A total of thirty-six (36) fusion weld destruct samples (DS-1 through DS-36) were collected during the capping of SA-6 North. The first 26 fusion weld destruct samples were collected every 500 LF and all samples met the specified destructive testing requirements outlined in *Table 1* with the exception of sample DS-26 as defined in further detail below. As per the specification, the frequency of fusion weld destruct sampling was reduced from every 500 LF of welded seam to every 1,500 LF of welded seam; however, additional destruct samples were collected (at approximately 500 LF to 600 LF) immediately after sample location DS-26 to confirm that they met the specification requirements. A summary of the peel and shear QA testing conducted for the 36 fusion weld samples collected is summarized in *Appendix L*.

As shown in the fusion weld destruct sample summary, destruct sample DS-26 was reported as EPA Break Classification Code "AD BRK". Although the specimen met the required peel and strength parameters, since the coupons broke at the weld and was not considered a film tearing bond (FTB), the sample was reported as a failed test. As such, additional samples were cut at approximately 10 ft. on either side of DS-26 (DS-26A and DS-26B). Both samples were field tested and the peel and shear criteria were achieved. Additionally, the sample that exhibited the lower peel and shear values (DS-26A) was sent for confirmatory laboratory analysis. The analytical results for sample DS-26A confirmed that the sample met the minimum peel and shear strength values. Additional details on this non-compliance issue are described in further detail in *Section 2.4.6*.

A total of 17 extrusion destruct samples were collected throughout the capping of SA-6 North. *Table 2* below summarizes the results of the extrusion weld destruct samples collected and corresponding laboratory data, peel and shear averages, and compliance with specification Section 02372 – Cap Geomembrane Liner outlined in the *100% Design* package.

Table 2 – Summary of ESI / Langan QA Testing - Extrusion Weld Data

Honeywell SA-6 Capping										
Comparison of ESI / Langan (QA) Destruct Samples - Extrusion Welds										
Sample ID	***Weld Type***	***Submitted By:***	***Test***	***Peel Strength (ppi)***					**Avg. Strength (ppi)**	***Meets Spec Requirement***

Extrusion weld destruct samples were collected at every 500 LF of weld and as shown on *Table 2*, all extrusion weld samples were in compliance with the project specifications.

In addition, Langan collected a total of six (6) QA samples (4 fusion weld samples and 2 extrusion weld samples) to verify the results of the Geosynthetic Installer's laboratory data. Langan's QA samples were submitted to Texas Research Institute Environmental, Inc. (TRI). The results of the ESI and Langan destruct samples indicated that the peel and shear strength values met the requirements outlined in the project specifications. Furthermore, the additional QA samples collected by Langan yielded values that were in close proximity to the values obtained by ESI (which were generally lower than the values obtained by Langan's QA laboratory). The Laboratory Destruct Test Results are provided in *Appendix L*.

2.4.4.4 Repair Reports

Several different types of repairs were observed and recorded during field activities by ESI. These corresponding repairs are documented in the ESI Repair Report provided in *Appendix J* and depicted on the Record Drawings (*Appendix A2*), and consisted of the following types of repairs:

- Custom Fit Repairs (CF) – Custom Fit Repairs consisted of areas of the geomembrane cap where the geomembrane was cut (and subsequently repaired) to allow the geomembrane to conform to the cap contours. These areas were typically located where there were abrupt elevation changes, such as drainage and utility swales, utility corridors, and planting areas;
- Wrinkles (WR) – Wrinkles consisted of areas where excess geomembrane was observed. Where the size of the wrinkle was determined to be detrimental to the geomembrane (i.e. wrinkles with the potential for folding), the wrinkle was cut, and the excess geomembrane was overlapped and sealed with an extrusion weld in accordance with the project specifications;
- Burnouts (BO) –Wedge burnouts occurred where the wedge became jammed thus causing the welder to burn / melt through the geomembrane seam. These areas were subsequently patched and repaired according to the project specifications;
- Destruct Samples (DS & DSX) – These areas consisted of the geomembrane destruct samples that were cut for laboratory testing. The removal of the sample creates a hole in the seam, thus these areas were subsequently patched according to the project specifications;
- Pipe Boots (PB) – Pipe boots were installed where penetrations of the geomembrane occurred such as at monitoring wells, injection wells, piezometers, gas vents, and access manholes. Additional details regarding the pipe boot construction are provided in *Section 2.4.4.5;*
- Add On (AO) – AO areas consisted of sections of SA-6 North where an additional piece of geomembrane was required to finish a geomembrane run across the cap (from north to south);

- Seam Joints (SJ) – Seam joints consisted of the areas where non-destructive testing (pressure testing) was conducted along a "T" section of the geomembrane;
- Subgrade Irregularities (SI) – Subgrade Irregularities consisted of areas along the geomembrane cap where a rock or object larger than ½-inch in diameter was encountered underneath the geomembrane after the material had been placed. These areas were subsequently cut, the rock/debris removed, and the area patched / repaired according to the project specifications. These SIs were identified as non-compliance issues and are discussed in further detail in *Section 2.4.6* below;
- Damage By Others (DO) – DO areas consisted of a deficiency or cut in the LLDPE geomembrane that required repair. This also included the grounding rod puncture through the LLDPE geomembrane that occurred by an outside contractor after the LLDPE had already been covered with the protective cover soil. This incident was identified as a DO instance and was also considered a non-compliance issue which is discussed in further detail in *Section 2.4.6* below.

Additional details on the geomembrane repairs are provided in *Appendix J* and the non-compliance issues observed during field activities are summarized within *Appendix M*.

2.4.4.5 Geomembrane Penetrations & Pipe Boot Installation

The geomembrane penetration and pipe boot logs are provided in *Appendix N*. The pipe boots were field fabricated by ESI, and the boots were installed at monitoring wells, injection wells, gas vents, piezometers, and access manhole penetrations across the cap.

The geomembrane boots consisted of a vertical (minimum of 2 ft.) section of LLDPE being wrapped around the penetration (i.e. well, gas vent, etc.) from the base to the top of the penetration. Prior to welding, the joints for the pipe boots covering the penetration were equipped with a copper wire to facilitate spark testing as discussed in further detail in *Section 2.4.4.5.1* below. The geomebrane wrap was then heat sealed and an extrusion weld was placed with a vertical seam connecting the two pieces of geomembrane. The end of the boot terminated in a skirt section which was placed over the boot. The skirt and the geomembrane overlapped a minimum of 18-inches and the skirt was welded to the geomembrane.

A neoprene rubber gasket was used between the boot and the penetration and secured with a 1-inch wide stainless steel clamp (or two ½-inch clamps). An LLDPE sacrificial sheet was then placed between the boot and the clamp for protection and a butyl sealant was applied along the top of the boot. *Figure 7* below shows the typical construction of a geomembrane pipe boot in the field by ESI. The welding of each boot was observed by Langan, and each boot fabrication was documented on an individual boot fabrication form provided in *Appendix N*. The seven (7) typical types of penetrations present on the SA-6 North cap are defined below.

Figure 7 – Typical Geomembrane Pipe Boot Construction

Monitoring Wells

A total of four (4) monitoring wells were located within the SA-6 North cap. The monitoring wells were constructed with PVC and were encased within a minimum 4-inch metal casing. Refer to *Appendix N* for the penetration and boot logs for monitoring wells: 115-W1-SO, 115-W6-SO, 115-E4-SO, and 115-E5-SO.

Injection Wells

A total of three (3) injection wells were located within the boundaries of the SA-6 North cap. The injection wells were constructed with PVC and were encased within minimum 4-inch metal casing. Additional details are provided in Appendix N for injection wells 088-IW-01, 088-IW-02, and 088-IW-03 as well as the Record Drawings (*Appendix A2*).

Gas Vents

A total of six (6) gas vents were constructed through the SA-6 North cap. Gas vents were completed in accordance with Section 02380 – Gas Venting System of the *100% Design* Package to allow any naturally occurring methane to vent to the atmosphere. Refer to *Appendix N* for the penetration and boot logs for gas vents GV-1 through GV-6, with the corresponding locations shown on the Record Drawings (*Appendix A2*).

Piezometers

A total of five (5) piezometers were installed through the cap to allow the project team to compare the groundwater within capped area to the groundwater immediately outside of the cap. Piezometers were encased within a minimum of 4-inch steel casing. Refer to *Appendix N* for the penetration and boots logs for piezometers PZ-2, PZ-4, PZ-6, PZ-8, and PZ-10, and to the Record Drawings (*Appendix A2*) for the corresponding piezometer locations.

Cleanout Structures

A total of two (2) cleanout stations were installed at SA-6 North to provide access to the groundwater treatment piping for areas where access manholes were not practical. Additional details are provided in *Appendix N* for the penetration and boot logs completed for Cleanout 1

and Cleanout 2. Refer to the Record Drawings (*Appendix A2*) for the corresponding cleanout locations.

Horizontal Drain Pipe
One horizontal drainage pipe was installed along the southern end of the cap within the bottom of the SA-6 North D-Street utility corridor. This pipe is aligned with the perimeter pool clay plug located between the N1 pool and N2 pool. The drain penetrates the SCB wall and clay plug and drains to the interior of SA-7. The drain allows for gravity flow from the bottom of the utility corridor to the exterior of the cap. Additional details are provided within *Appendix N*, and the Record Drawings (*Appendix A2*).

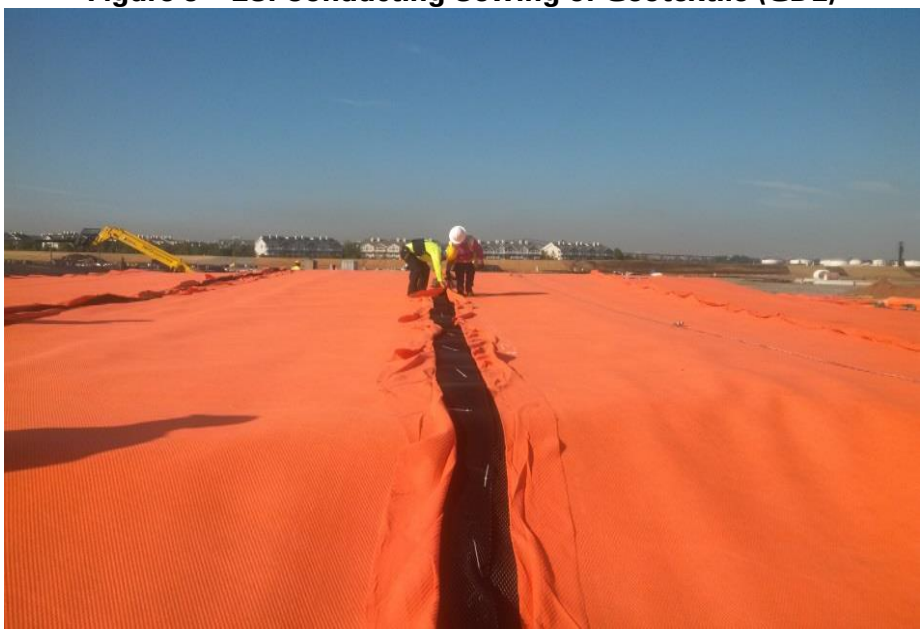
Pump Station and Access Manholes
A total of two pump stations and two access manholes were completed with field fabricated geomembrane boots. Refer to *Appendix N* for the penetration and boot logs for Access Manhole Sta. 1+00, Extraction Pump Station 1, Extraction Pump Station 2, and Access Manhole Sta. 18+00 with the corresponding locations shown on the Record Drawings (*Appendix A2).*

2.4.4.5.1 Spark Testing

Prior to spark testing, Amec Foster Wheeler conducted methane testing at each pipe boot location to determine the percentage of methane present below the geomembrane boot. In the event that methane was greater than 1%, spark testing was not completed and the weld was visually observed for any deficiencies. If methane testing was less than 1%, spark testing was conducted by ESI and if no sparks were observed the spark test passed. If sparks were observed, then the weld was reported as a failed weld. Failed spark tests were also identified as non-compliance issues as further described in *Section 2.4.6*.

Design Change 2015-12-14 added the spark testing provisions for the SA-6 North cap. Spark testing was completed at the site at the pipe boot / penetration locations across SA-6 North, and was conducted to test the integrity of the vertical weld and base weld of the boot, as these areas could not be tested via vacuum box testing. To complete the spark test, a thin copper wire (approximately 20 gauge) was placed along the base of the boot and vertical weld prior to extrusion welding. The extrusion welding was conducted over the vertical seam and base of the boot where the copper wire was placed. A handheld probe was then utilized to attempt to complete a arc, thus causing the probe and wire to visibly spark. If any sparks were observed, the area was grinded, rewelded, and re-tested. Additional details are provided in the Spark Test Logs provided in *Appendix O*. *Figure 8* below shows ESI conducting spark testing along the base of a boot.

Figure 8 – ESI Conducting Spark Test at Base of Boot



2.4.5 Geocomposite Drainage Layer (GDL)

To facilitate drainage and transport of infiltrated surface water off the cap, a geocomposite drainage layer (GDL) consisting of a geonet with a non-woven geotextile bonded to both sides (i.e., defined as SKAPS TN 330-2-6) was deployed across SA-6 North. The GDL was placed at the site by ESI and was placed directly over the geomembrane cap as shown on the Record Drawings (*Appendix A3*).

GDL panels were placed according to the specification Section 02374 – Geocomposite Drainage Layer as defined in the *100% Design* package. For adjacent GDL panels, the following minimum seaming requirements were met:

- Adjacent rolls of GDL were overlapped so that the geonet overlapped by 2 to 3-inches, and the geotextiles overlapped by at least 4-inches;
- The bottom layer of geotextile (underneath the geonet) was overlapped so that no areas of the underlying geomembrane were exposed;
- White plastic fasteners were placed at a maximum of every 5 ft. along the seam. Additional fasteners were requested by the QA team when the seams extended down the slopes or elevation changes were noted; and
- Once the geonet was tied with a sufficient number of fasteners, the top geotextile of the GDL was continuously sewn as shown in *Figure 9* below.

Figure 9 – ESI Conducting Sewing of Geotextile (GDL)

During placement of the GDL, butt seams, rips, tears, or other damaged areas of the GDL were repaired by exposing an appropriate area of geonet, placing fasteners as defined in the project specifications, and covering the area with a new piece of orange geotextile (same as the GDL geotextile) which was heat sealed in place.

Once the GDL was placed, Entact placed protective cover soil (i.e., 1 ft. layer of material) directly over the GDL. In addition, yellow caution tape was placed every 55-inches over the GDL prior to protective cover soil placement. The caution type had bold type which indicated "Danger Do Not Dig – Peligro No Excavar" in English and Spanish. Additional details on the GDL placement are provided in the Langan Daily Reports and Photo Logs provided in *Appendix E*.

2.4.6 Non-Compliance Issues

Summaries of Non-Compliance & Corrective Action Sheets are provided in *Appendix M*. During the SA-6 North capping activities, any QA field tests, observations, or failed samples that did not comply with the project specifications were documented and recorded as a non-compliance issue followed by repair or correction of these issues in accordance with the specifications. A total of fourteen (14) non-compliance issues were identified and repaired throughout the capping of SA-6 North and are summarized below:

1. Subgrade Irregularities – Refer to Sheet Numbers 1, 2, 5, 6, 7, 8, and 13 of the Non-Compliance & Corrective Action Sheets (*Appendix M)*. In general, the subgrade irregularities consisted of stones or other material greater than ½-inch in size encountered below the geomembrane cap after the material had been placed and secured. These objects were removed by cutting the geomembrane, removing the object, and patching the geomembrane in accordance with the project specifications. The subgrade showed no indication of these items at the time of subgrade approval,

and it is postulated that these items were dislodged from the subgrade as the GVL was drawn across the subgrade surface;

2. Failed Destruct Sample – Refer to Sheet Number 9 (*Appendix M*). Fusion weld destruct sample DS-26, which was collected from Panel Seam P-72 / P-74 was reported as EPA Break Classification Code "AD BRK". Although the peel and shear strength requirements were met, since the coupons broke at the weld and were not considered film tearing bond (FTB), the sample was reported as a failed sample. Two field samples (DS-26A and DS-26B) were cut approximately 10 ft. on each side of the DS-26 seam and field tested. Both samples met the peel and shear strength requirements. Additionally, sample DS-26B (lesser peel and shear strength values than 26-A) was sent for confirmatory laboratory analysis, which indicated peel and shear strength values were in compliance with project specifications.
3. Failed Spark Tests – Refer to Sheet Number 3, 4, 11, 12 and 14. During spark testing of boots Well 115-E4-SO, a spark was observed during testing along the base of the boot and/or vertical weld for Piezometer PZ4, Gas Vent GV-5, Well 115-W1-SO, Well 115-E4-SO, and Well 115-E5-WO. For each of the failed areas where a spark was observed, the area was grinded, re-welded, and retested with the spark retest passing (i.e. no sparks observed); and
4. Geomembrane Puncture (Equipment) – Refer to Sheet Number 10 (*Appendix M*). During outside construction activities at the site, an equipment puncture through SA-6 North on Panel P-36 (north end) was observed as a grounding rod was driven through the membrane. This puncture was subsequently repaired / patched, welded, and vacuum box tested by ESI, according to the project specifications. The repair associated with the puncture was identified as repair RP-418, and was listed as Damage by Others (DO) on the Non-Compliance Log.

Additional details on the non-compliance issues encountered, as well as the subsequent repair activities, are further described in the Langan Daily Reports and Photo Logs provided in *Appendix E*.

3.0 DECLARATIONS

3.1 General

Langan personnel have monitored the construction and field activities completed for the capping of SA-6 North specific to the subgrade preparation and placement of the geotextile and geocomposite materials as defined herein. Based on the field observations made by Langan along with the field and laboratory test data collected by the Contractor and Subcontractors, it is our professional opinion that the construction observed at SA-6 North complied with the approved *100% Design* package. Additional details on the work and approval of materials is outlined in the *EOR Closure Report*.

3.2 Limitations

This Cap Geosynthetic Quality Assurance Report (QA Report) was prepared by Langan (in conjunction with Amec Foster Wheeler) for the exclusive use of Honeywell. This QA Report

applies specifically to the subgrade preparation and construction of the geosynthetics components of the SA-6 North cap only.

The construction observations and monitoring were conducted under the conditions stated. Conclusions made in this report were based on these observations and data obtained from field and laboratory tests conducted on the QA samples collected.

The topographic survey measurements were completed by Entact and their licensed surveyor Maser and were subject to review and approval by Amec Foster Wheeler. Langan did not independently verify the accuracy of this data.

Acceptance of the geosynthetic materials used for the SA-6 North cap construction was completed by Amec Foster Wheeler. Furthermore, the QC laboratory testing was completed by Geotechnics (under the direction of Entact) and QA laboratory testing was completed by TRI (under the direction of Langan).

The approval of all materials used for this project was completed by Amec Foster Wheeler in the *EOR Closure Report*. The geosynthetic production quality testing was completed by AGRU America, Inc. and their subcontracted companies working on their behalf. Langan did not independently verify the accuracy of the conformance test data.

1 This is the design elevation at Construction Control Grid Points.

2 Deviation = Surveyed Elevation - Design Elevation

Points in 0.1 - 0.5 ft. tolerance are due to a slight overcut in the top of slopes where it wouldn't be suitable for backfill due to compaction difficulties.

1 This is the design elevation at Construction Control Grid Points.

2 Deviation = Surveyed Elevation - Design Elevation

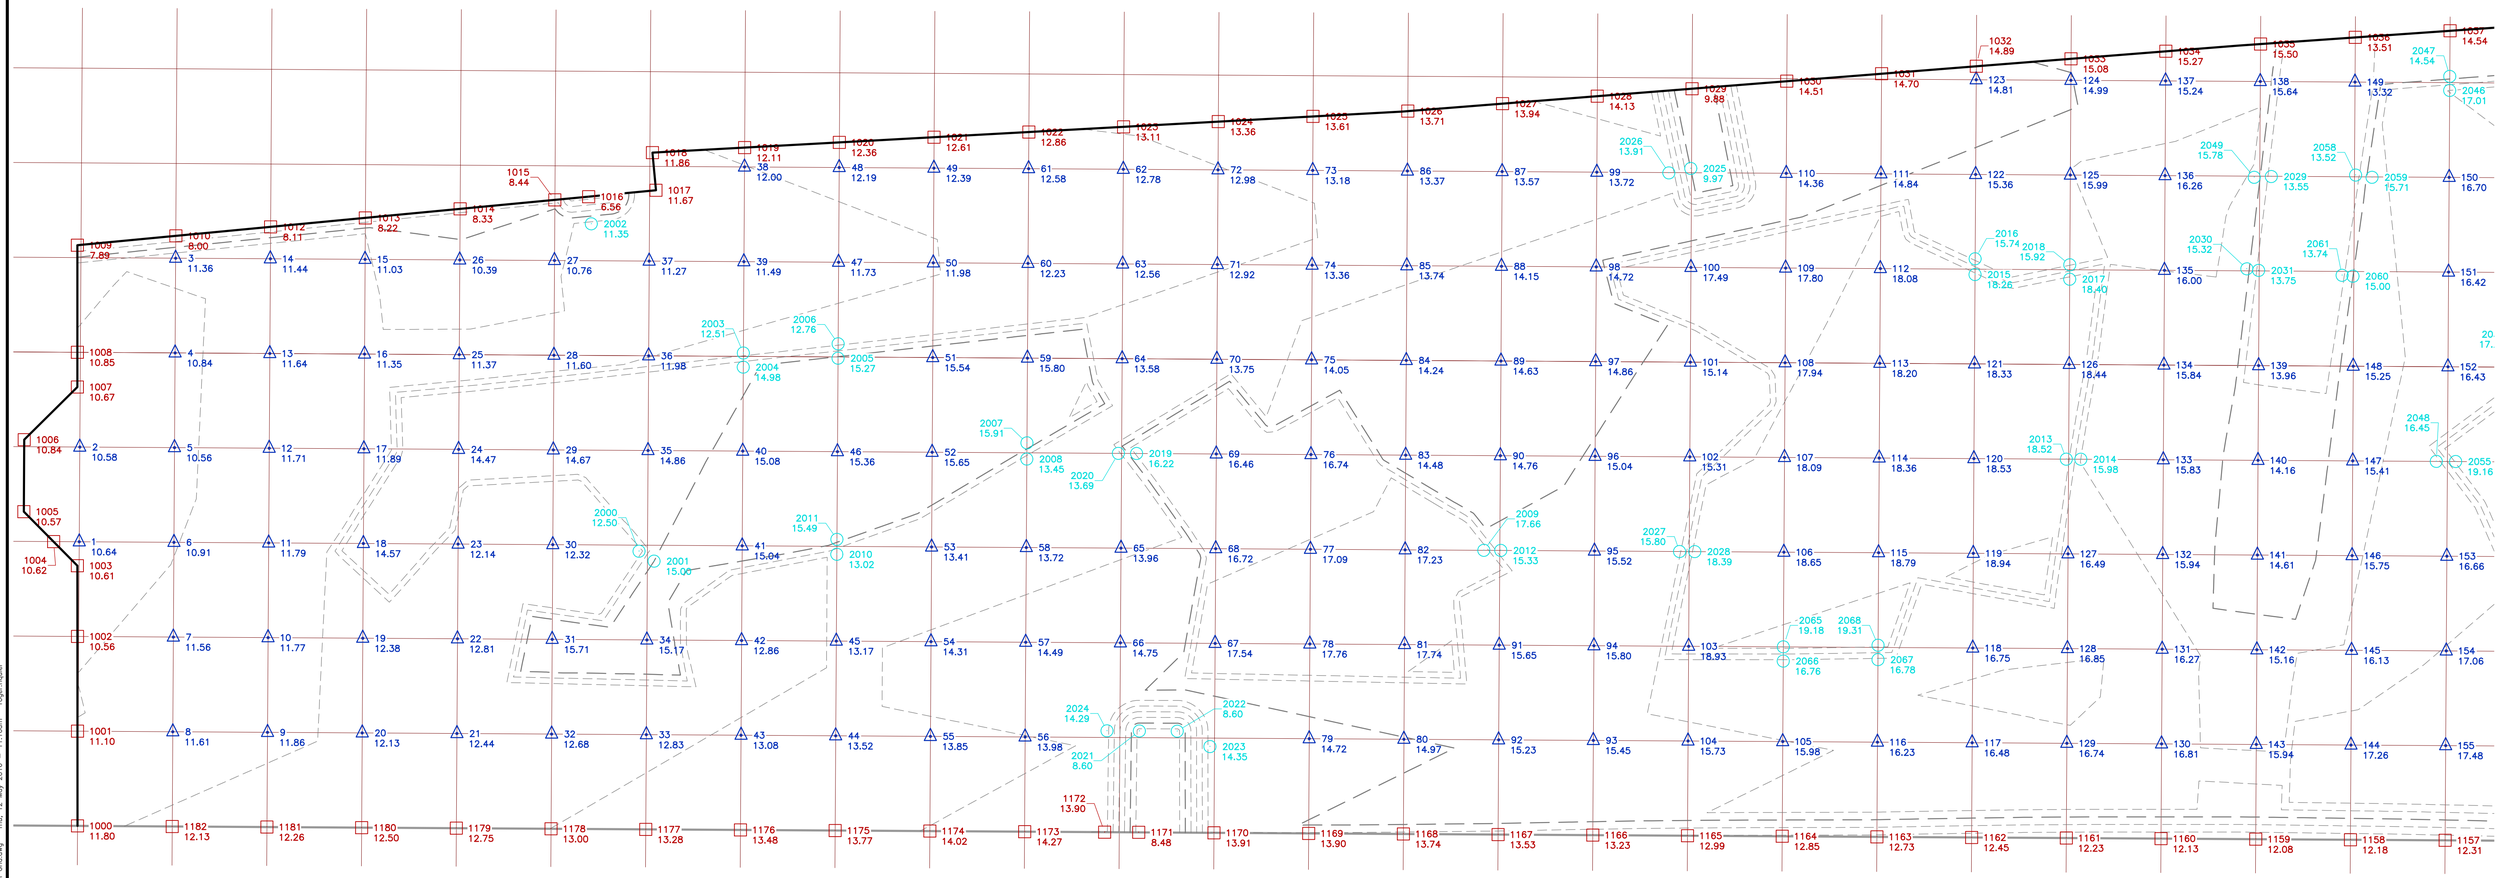
Per SPECIFICATION 01460 SURVEY. SECTION 1.05 F. Spot Elevations - Survey shall be constructed to provide an accuracy of 0.1 feet vertically. Ninety percent of all spot elevations placed on the maps shall have an accuracy of at least 0.1', and the remaining 10 percent shall not be in error by more than one-half (1/2) the contour interval (0.5'). Break points added to replace Grid Points that fell on slopes and Boundary Points will be treated as Spot Elevations as defined in Section 1.05 F.



Maser Consulting P.A. certifies that the elevations, with their corresponding date obtained, of the Grid Points depicted in Table 1, Break Points in Table 2, Boundary Points in Table 3, and topographic spot elevations are correct, and representative of the as-built cap subgrade throughout the SA6 North cap.

D2. Langan Certificate of Soil Surface

LANGAN

Certificate of Soil Surface

Sheet # 1

Project Name	HONEYWELL SA-6 NORTH	Material Desc.	GEOMEMBRANE		
Project No.	100530001	General Desc.	Subgrade	Operations	LCRS
Owner/ Contr.	HONEYWELL / AMEC FW	Cell No.	~STA. 319+00 + ~STA 317+75		
QA Monitor	LANGAN	Date	6/22/16		

Description of Soil Surface to be lined: WESTERN END OF SA-6 NORTH (~STA 319+00) APPROX. 125 FT. EAST (STA. 317+75). SOIL APPEARS TO BE GRADED, COMPACTED, AND FREE OF DEBRIS (7½") AND IN CONFORMANCE WITH PROJECT SPECS. NOTE: MINOR CHANGES IN SUBGRADE ELEVATION IN SELECT AREAS TO ALLOW POSITIVE DRAINAGE

I hereby certify that the above surface area is suitable for the installation of geosynthetics, and I shall be responsible for its integrity and suitability in accordance with the specifications from this date to the completion of the installation.

Visual Inspection of Subgrade Surface	
QUALITY	**Y/N/NA**
Geomembrane	
Smooth	Y
Uniform	Y
Relatively free from abrupt changes in grade, rocks larger than ½, sharp objects, and debris	Y
Free of standing water	Y
Surface area to be lined has been properly prepared	Y
Geocomposite Clay Liner	
Free from wheel ruts, debris, rocks, sticks, and rocks larger than 1 inch	
Suitable for placement of GCL	
Smooth	
Any changes required? If so the contractor and owner's representative must be notified.

LANGAN
ENGINEERING & ENVIRONMENTAL SERVICES

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	6/21/2015
PROJECT:	SA-6 Capping		**WEATHER:**	80/92° F, Clear, Sunny
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Soil Subgrade Observation	**TIME:**	0745 – 1215

CONTRACTOR & EQUIPMENT: **Entact & ESI** *Equipment:* Dozers, Steel Drum Rollers, Misc. Hand Tools (shovels, rakes)	**PERSONNEL ON SITE:** **Day #1** **AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Philemon **Langan:** Dan Bosworth, Jeff Stoicescu **ENTACT**: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite to conduct soil subgrade observation along the west end of SA-6 North. A preliminary kickoff meeting was conducted between AmecFW, Langan, and Entact to discuss the QA / QC activities, along with the strategy and implementation plan for the proposed capping of SA-6 North.
- Following the meeting, Langan and AmecFW conducted a visual observation of the prepared soil subgrade along the western end of SA-6 North. This area included the furthest western part of the cap (approximately 100 ft. from the western end moving east).
- In general, the following soil subgrade properties were observed:
  - Various debris including broken glass, wood fragments, small rocks, etc. were observed along the western end of SA-6 North (specifically along the slopes and elevation changes at the northern end of the cap). It is recommended that this debris addressed so that no objects are penetrating / extruding from the surface, and the overall subgrade is flat and even. Additionally, Entact should provide laborers with a wheelbarrow and equipment to collect various debris as it is encountered.
  - Some slight changes in elevation were observed in areas along the western end of the cap where one area appeared higher than the other. The variations in cap subgrade elevation could potentially result in the ponding of water. Additionally, the mouths along the tree bulb swales appeared to be higher than the swale itself, thus causing water to pond in the swales instead of flowing out and down the sides of the cap. AmecFW to review the survey data and confirm existing grades.
  - Additional details regarding the subgrade are outlined in the 6/21/16 Photograph Log attached as part of this report.
- AmecFW to address the issues outlined above, with follow up subgrade inspection to be completed on 6/22/16 by Langan (prior to deployment of GVL).

Observations Requiring Contractor / QA Engineer Review

- Based on the soil subgrade observation, the soil has not yet been approved for liner installation activities based on the debris / penetrations outlined in this report. It is recommended that the Entact provide the necessary labor to remove the various debris and provide a flat, even surface with no penetrations or extrusions through the subgrade.

Cc Jeff Stoicescu, Rory Johnston, Vikki Hon, File

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items Pending

- QA Engineer - Review SA-6 North capping specifications and drawings. Review product submittals (as provided) and ensure that all data, drawings, and pertinent documents are ready for liner installation kickoff (planned to commence on 6/22/16).

Action Items – Weekly Completions

- None to Date

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- SA-6 North capping to commence on 6/22/16 (pending soil subgrade approval).

LANGAN
ENGINEERING & ENVIRONMENTAL SERVICES

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	6/22/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	78/92° F, Clear, Sunny
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement		**TIME:**	0745 – 1630

CONTRACTOR & EQUIPMENT: **ENTACT & ESI** *Equipment:* Dozers, Steel Drum Rollers, Misc. Hand Tools (shovels, rakes)	**PERSONNEL ON SITE:** **Day #2** **AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Philemon **Langan:** Dan Bosworth **ENTACT**: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) starting at the western end of SA-6 North. Material to be placed starting from the western end (approximate Sta. 319+00) of SA-6 North for approximately 125 ft. east. (to approximate Sta. 317+75).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area).
- Prior to placement of geosynthetic material, soil subgrade observation was conducted by Langan and Entact for the area outlined above. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #1, 2, 3, and 4 of the daily photo log for 6/22/2016, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications as verified by AmecFW. Additionally, minor modifications to the subgrade elevations were completed by Entact to facilitate positive drainage flow away from the tree bulb swales (located at approximate Sta. 317+75).
- Following soil subgrade approval, ESI began by placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed on the western end of the Site (approximate Sta. 319+00) moving east (to approximate Sta. 317+75). GVL was placed according to the project specifications with white plastic fasteners spaced at a minimum of 5 ft. Additionally the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to 6/22/16 Photo Log for supporting photographs.
- After installation of GVL, geomembrane liner was installed beginning at the western end of SA-6 North and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 319+00 to approximate Sta. 317+75. A total of seven panels were installed (P1, P2, P3, P4, P5, P6, and P7). Note: P1 consisted of an approximate 50 ft. by 18 ft. piece of LLDPE installed along the western end of SA-6 North. During placement of Panel P4, the roll of LLDPE terminated at the approximate center of the cap, thus the remaining run of LLDPE was installed as P5. P2, P3, P6, and P7 ran the entire width of SA-6 North (approximately 162 ft.) from north to south.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- Adjacent panel seams were overlapped a minimum of four inches for fusion welding (according to project specifications). Prior to welding activities, trial welds were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 6/22/16 *Trial Weld Log.*
- Non-destructive testing was then conducted (pressure testing) for the fusion welded seams. 30 psi was applied to the seams and held for 5-minute increments with no more than 4 psi loss measured over the 5-minute interval. The results of the non-destructive tests are outlined in the *Seam Control Form.*
- Destruct test samples and extrusion weld detailing (repairs) to be completed on 6/23/15.

Non-Conformance Items / Corrective Actions

- None Encountered.

Action Items – Pending

- Complete Daily Report and Photo Log for 6/22/16. Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, etc.)

Action Items – Weekly Completions

- None to Date

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Additional subgrade preparation work for the next approximate 100 ft. run east (approximately from Sta. 317+75 to Sta. 316+75).
- Continue with 16 oz. geotextile, GVL, and LLDPE placement moving east along SA-6 North.

Daily QA Documents Completed

Appendix / QA Forms	***Sheet / Page Numbers***	***Comments***
A1 – Certificate of Completion		To be certified upon completion of SA-6 North
A2 – Receiving and Inspection		NA - No material delivered to the site on 6/22/16
A3 – Photo Log	Pages 1 - 8	Total of 16 photos outlining pertinent daily observations and descriptions for activities completed on 6/22/16
A4 – Geosynthetic Inventory Log		Completed to date, no updates from 6/22/15
A5 – Subgrade Approval	Sheet 1 & ESI (6/22/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer.
A6 – Trial Weld Log	Sheet 1	One trial weld log provided by ESI and confirmed by Langan for trial welds completed on 6/22/16
A7 – Panel Placement Log	Sheet 1	One panel placement log provided by ESI and confirmed by Langan for panels placed on 6/22/16.
A8 – Destruct Seam Testing COC		NA – no destruct samples collected on 6/22/16
A9 – Seam/Non-Destruct. Test Log	Sheets 1 - 2	One seam control form provided by ESI and confirmed by Langan for air pressure testing conducted on 6/22/16
A10 – Repair Log		NA – no repairs or extrusion welds completed on 6/22/16
A11 – Conformance COC		NA – for 6/22/16.
A12 – Destructive Seam Field Test		NA – no destruct samples collected on 6/22/16
A13 – Destruct. Sample Summary		NA – no destruct samples collected on 6/22/16
A14 – Penetration & Edge Form		NA – no penetrations / boots completed on 6/22/16
A16 – Notice of Non-Compliance		NA – no non-compliance issues observed on 6/22/16
A17 – Spark Test Form		NA – no spark testing conducted on 6/22/16

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	6/23/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	78/90° F, Overcast
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0650 – 1530

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Lull, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #3**
AmecFW: Stu Bills, Dave Ambrose, Ari Eslaminejad, Philemon Onyango
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from Panel P7 installed on 6/22/16 (approximate Sta. 317+75). Material to be placed from Panel P7 running approximately 125 ft. east to approximate Sta. 316+50.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 317+75 (east of Panel P7 installed on 6/22/16) to approximate Sta. 316+50. Refer to *Soil Subgrade Approval* forms from 6/23/15 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 4 of the daily photo log for 6/23/2016, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications as verified by AmecFW
- GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 317+75 (east Panel P7) moving east to approximate Sta. 316+50. GVL was placed according to the project specifications with white plastic fasteners spaced at a minimum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/23/16 Photo Log for supporting photographs.
- While GVL was being deployed, ESI also conducted patch / repair work along the panels installed on 6/22/16 (Panels P1 to P7). Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (6/23/16).

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- A total of eleven repairs (R-1 through R-11) were observed and fixed (according to the project specifications) from Panels P1 through P7. Refer to 6/23/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While the geomembrane (installed on 6/22/16) was being patched / repaired, ESI also began to prepare penetration boots for Piezometer PZ10, Well 115-W6-SO, and Gas Vent GV-6. Note: The boot and boot skirts were completed, however, the vertical welds along the boots have not yet been tested as methane testing / spark testing are to be completed prior to finalizing the boot details.
- During repair activities / extrusion welding one non-conformance issue was observed and was documented on Sheet #1 as non-compliance. The non-compliance issue encountered was identified based on debris / rock that was observed underneath the LLDPE geomembrane. The rock was subsequently removed and the hole was patched / repaired according to the project specifications and further outlined in the *Non-Compliance and Corrective Action* forms – *Sheet #1* for 6/23/16. The non-compliance issue was also recorded within the *Repair Log* as a subgrade irregularity and is identified as R-10.
- After placement of GVL, geomembrane liner was installed beginning at the western end of SA-6 North (from Panel P7) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 317+75 (Panel P7) to approximate Sta. 316+50. A total of six panels were installed (P8, P9, P10, P11, P12, and P13). Note: During placement of panel P8, the roll of LLDPE terminated approx. 2/3 from the north of the cap, thus the remaining run of LLDPE was installed as P9. Similarly, during placement of Panel P12, the roll terminated along the northern end of SA-6 North, thus the remaining run of LLDPE was labeled as P13. Panels P10 and P11 ran the entire width of SA-6 North (approximately 162 ft.) from north to south.
- Adjacent geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 6/23/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 316+50, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 6/23/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panels P8 through P13. A total of 32 additional repairs (RP-11 through RP-43) were observed and fixed according to the project specifications. Additional details are also outlined on the 6/23/16 *Repair Log.*
- A total of four destruct samples were collected for laboratory sampling by Entact / ESI. Three fusion weld destruct samples DS-1 (Panel P1 / P2 seam), DS-2 (Panel P6 / P7 seam), and DS-3 (Panel P10 / P11 seam) were collected for laboratory analysis. Additionally, one extrusion weld sample DSX-1 (Panel P1) was also collected for laboratory analysis.

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 1 (Sheet #1) – Subgrade irregularity identified as R-10 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P6. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 1 Notice of Non-Compliance.*

Action Items – Pending

- Complete Daily Report and Photo Log (for 6/23/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.)

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items – Pending (continued)

- Review laboratory destruct sample data for fusion weld destruct samples DS-1 to DS-3 and extrusion weld sample DSX-1 (once received from laboratory).

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16. ESI Daily Form Submittals still to be reviewed.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Daily QA Documents Completed

A1 – Certificate of Completion		To be completed at termination of project
A2 – Receiving and Inspection		NA – no material delivered on 6/23/16
A3 – Photo Log	Pages 1 – 8	Total of 16 photos outlining pertinent daily observations and descriptions for 6/23/16
A4 – Geosynthetic Inventory Log		Completed to date; no updates from 6/23/16
A5 – Subgrade Approval	Sheet 2 & ESI (6/23/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer
A6 – Trial Weld Log	Page 1	One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 6/23/16
A7 – Panel Placement Log	Pages 1 - 2	One panel placement log provided by ESI and confirmed by Langan for panels placed on 6/23/16
A8 – Destruct Seam Testing COC	Sheet 1	Updated for destruct samples collected on 6/23/16
A9 – Seam/Non-Destruct. Test Log	Pages 2 - 4	One seam control form provided by ESI and confirmed by Langan for air pressure testing conducted on 6/23/16
A10 – Repair Log	Pages 1 - 2	One repair log provided by ESI and confirmed by Langan for repairs completed for 6/23/16

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #4**
AmecFW: Stu Bills, Dave Ambrose, Ari Eslaminejad, Philemon Onyango
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from Panel P12 / P13 installed on 6/23/16 (approximate Sta. 316+50). Material to be placed from Panel P12 / P13 running approximately 75 ft. east to approximate Sta. 315+75.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 316+50 (Panel P12 / P13 installed on 6/23/16) to approximate Sta. 315+75. Refer to *Soil Subgrade Approval* forms from 6/24/15 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 3 of the daily photo log for 6/24/2016, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications as verified by AmecFW
- GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 316+50 (east of Panel P12 / P13) moving east to approximate Sta. 315+75. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/24/16 Photo Log for supporting photographs.
- While GVL was being deployed, ESI also continued patch / repair work for the panels installed on 6/23/16 (Panels P8 to P13). Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (6/24/16).
- In addition, methane testing was conducted for the pipe boots completed for Well 115-W6-SO,

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Piezometer PZ10, and Gas Vent GV-6. Methane testing was conducted by AmecFW to measure the concentration of methane present below the LLDPE geomembrane. During methane testing of Well 115-W6-SO, a concentration of 1.4% (greater than 1%) was measured. No spark testing was conducted on Well 115-W6-SO due to the measured methane concentration. Instead, the weld was visually observed for deficiencies and none were noted.

- Methane testing for PZ10 and Gas Vent GV-6 yielded methane concentrations of 0.8% and 0.0%, respectively (<1%). Following the methane testing, spark testing was conducted by ESI for the vertical weld and pipe boot weld at the base of the penetration (i.e. welds not accessible for vacuum box testing). No sparks were observed during the test, and both boots passed. Additional details are outlined in the *Spark Testing QA Form Sheets #1-3.*
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P12 / P13 (installed on 6/23/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 316+50 (Panel P12 / P13) to approximate Sta. 315+75. A total of six panels were installed (P14, P15, P16, P17, P18, and P19). Note: During placement of panel P15, the roll of LLDPE terminated approx. 2/3 from the north of the cap, thus the remaining run of LLDPE was installed as P16. Panels P14, P17, P18, and P19 ran the entire width of SA-6 North (approximately 192 ft.) from north to south.
- Adjacent geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At leastsix 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 6/24/16 *Trial Weld Log*.
- Upon completion of geomembrane panel placement to approximate Sta. 315+75, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 6/24/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panels P14 through P19. Additional details are also outlined on the 6/24/16 *Repair Log.*
- A total of thirty repairs (RP-44 through RP-73) were observed and fixed (according to the project specifications) from Panels P14 through P19. Refer to 6/24/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Note: vacuum box testing not completed for all welds. To be continued on 6/27/16.
- ESI completed pipe boot / penetrations for Access Manhole 1 (Sta. 1+50). Additional details are provided in the 6/24/16 Pipe Boot Forms.
- A total of two destruct samples were collected for laboratory analysis by Entact / ESI. One fusion weld destruct sample DS-4 (Panel P15 / P17 seam) was collected for laboratory analysis. Additionally, one extrusion weld sample DSX-2 (Panel P10) was also collected for laboratory analysis.

Non-Conformance Items / Corrective Actions

- None Encountered

Action Items – Pending

- Complete Daily Report and Photo Log (for 6/24/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample data (once received from laboratory).

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16 and 6/23/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1, DS-2, and DS-3. Reviewed laboratory data for extrusion weld destruct sample DSX-1.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Daily QA Documents Completed

A1 – Certificate of Completion		To be completed at termination of project
A2 – Receiving and Inspection		NA – no material delivered on 6/24/16
A3 – Photo Log	Pages 1 – 7	Total of 14 photos outlining pertinent daily observations and descriptions for 6/24/16
A4 – Geosynthetic Inventory Log		Completed to date; no updates from 6/24/16
A5 – Subgrade Approval	Sheet 3 & ESI (6/24/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer
A6 – Trial Weld Log	Pages 1 - 2	One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 6/24/16
A7 – Panel Placement Log	Pages 2 & 3	One panel placement log provided by ESI and confirmed by Langan for panels placed on 6/24/16
A8 – Destruct Seam Testing COC	Sheet 1	Updated for destruct samples collected on 6/24/16
A9 – Seam/Non-Destruct. Test Log	Pages 4 - 7	One seam control form provided by ESI and confirmed by Langan for air pressure testing conducted on 6/24/16
A10 – Repair Log	Pages 2 - 4	One repair log provided by ESI and confirmed by Langan for repairs completed for 6/24/16
A11 – Conformance COC		NA for 6/24/16

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	6/27/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	70/85° F, Sunny (AM), PM Showers
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement		**TIME:**	0650 – 1930

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #5**
AmecFW: Stu Bills, Dave Ambrose, Ari Eslaminejad, Philemon Onyango
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from Panel P19 installed on 6/24/16 (approximate Sta. 315+75). Material to be placed from Panel P19 running approximately 150 ft. east to approximate Sta. 314+25.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 315+75 (Panel P19 installed on 6/24/16) to approximate Sta. 314+25. Refer to *Soil Subgrade Approval* forms from 6/27/15 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 3 of the daily photo log for 6/27/2016, for supporting subgrade photos. During subgrade observation, AmecFW was also completing surveying to verify the subgrade elevations. The area was subsequently approved by AmecFW following review of the survey data.
- While the subgrade was being surveyed, ESI deployed the orange geocomposite drainage layer (GDL), over the installed LLDPE geomembrane. GDL was placed from Panel P1 (approximate Sta. 319+00), to Panel P11 (approximate Sta. 316+25). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/27/16 Photo Log for supporting photographs.
- While GDL was being deployed, ESI also conducted, methane / spark testing for the pipe boot completed for Access Manhole #1 (Panel P10). Prior to spark testing, methane testing was conducted to measure the concentration of methane present below the LLDPE geomembrane. During methane testing of Manhole #1, a concentration of 0.1% (less than 1%) was measured. Following the methane testing, spark testing was conducted by ESI for the vertical weld and pipe boot weld at the base of the penetration (i.e. welds not accessible for vacuum box testing). No sparks were observed during the test, and Manhole #1 boot passed. Additional details are outlined in the *Spark Testing QA Form Sheet #4.*

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- Following the placement of GDL, and subsequent to AmecFW completing the survey requirements for the soil subgrade, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 315+75 (east of Panel P19) moving east to approximate Sta. 314+25. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/27/16 Photo Log for supporting photographs.
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P19 (installed on 6/24/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 315+75 (Panel P19) to approximate Sta. 314+25. A total of eight panels were installed (P20, P21, P22, P23, P24, P25, P26, and P27). Note: During placement of panel P21, the roll of LLDPE terminated at the approximate center of the cap, thus the remaining run of LLDPE was installed as P22. Similarly, during placement of Panel P24, the roll of LLDPE terminated along the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P25. Panels P20, P23, P26, and P27 ran the entire width of SA-6 North (approximately 200 ft.) from north to south.
- Adjacent geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 6/27/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 314+25, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 6/27/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panels P19 through P27 to attempt to patch / cover the LLDPE before inclement weather. Additional details are outlined on the 6/27/16 *Repair Log.*
- ESI completed pipe boot / penetrations for Piezometer PZ8. Additional details are provided in the 6/27/16 Pipe Boot Forms.
- A total of seven repairs (R-75 through R-81) were observed and fixed (according to the project specifications) from Panels P20 through P21. Refer to 6/27/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Note: not all repairs completed, repairs conducted to cover and seal cap before inclement weather. Vacuum box testing not completed. Activities to be continued on 6/28/16. No destruct samples were collected, as destruct samples to be cut on 6/28/16 (Note: Repair R-74 destruct sample to be cut on 6/28/16).

Non-Conformance Items / Corrective Actions

- None Encountered

Action Items – Pending

- Complete Daily Report and Photo Log (for 6/27/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete pipe boot penetration log for Piezometer PZ-8 (Panel P21).

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	6/29/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	78/90° F, Clear, Sunny
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0650 – 1530

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #6**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for LLDPE repair activities to be completed on LLDPE geomembrane installed on 6/27/16. Note: No capping activities conducted on 6/28/16 due to inclement weather, and no new LLDPE was placed on 6/29/16 as soil subgrade was not approved.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI continuing with non-destructive testing (pressure testing) and repair activities for geomembrane panels P19 through P27 (installed on 6/27/16). Non-destructive testing was conducted on the remaining panel seams and the seams were pressurized to 30 psi and held for 5 minutes with less than 4 psi loss. Refer to *6/29/16 Seam Control Form* for additional details.
- A total of twenty-two repairs (R-82 through RP-103) were observed and fixed (according to the project specifications) from Panels P19 through P27. Refer to 6/29/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of two destruct samples were collected for laboratory analysis. Two fusion weld destruct samples, DS-5 and DS-6, were collected from Panel Seam P19 / P20 and Panel Seam P23 / P24, respectively. Additional details are outlined in the *Trial Weld Log* dated 6/29/16.
- The LLDPE pipe boot penetration for Gas Vent GV-5 was completed and extrusion welded. Note: no methane testing / spark testing completed. Methane / spark testing to be completed week of July 5, 2016.
- While ESI was conducting repairs, small areas of standing water were observed on the soil subgrade from Sta. 314+25 to approximate Sta. 313+75. Entact solidified the subgrade by adding calcium cement to the soils so that the wet areas were absorbed / removed. Additionally, minor modifications to the subgrade were completed to facilitate positive drainage off of SA-6 North.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 2 (Sheet #2) – Subgrade irregularity identified as R-98 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P26. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 2 Notice of Non-Compliance.*

Action Items – Pending

- Complete Daily Report and Photo Log (for 6/29/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct samples results for DS-5 and DS-6.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, and 6/27/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1, DS-2, DS-3, and DS-4. Reviewed laboratory data for extrusion weld destruct sample DSX-1 and DSX-2. Laboratory results in compliance with project specifications.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	6/30/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	78/95° F, Sunny, Clear
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1615

CONTRACTOR & EQUIPMENT:	**PERSONNEL ON SITE:** **Day #7**
ENTACT & ESI *Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)	**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton **Langan:** Dan Bosworth **ENTACT / ESI**: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from Panel P27 installed on 6/27/16 (approximate Sta. 314+25). Material to be placed from Panel P27 running approximately 100 ft. east to approximate Sta. 313+25.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 314+25 (Panel P27 installed on 6/27/16) to approximate Sta. 313+25. Refer to *Soil Subgrade Approval* forms from 6/30/16 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 3 of the daily photo log for 6/30/2016, for supporting subgrade photos. During subgrade observation, AmecFW was also completing surveying to verify the subgrade elevations. The area was subsequently approved by AmecFW following review of the survey data.
- Following subgrade approval (including AmecFW completing the survey requirements for the soil subgrade), GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 314+25 (east of Panel P27) moving east to approximate Sta. 313+25. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/30/16 Photo Log for supporting photographs.
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P27 (installed on 6/27/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 314+25 (Panel P27) to approximate Sta. 313+25. A total of five panels were installed (P28, P29, P30, P31, and P32). Note: During placement of Panel P30

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

the roll of LLDPE terminated near the north end of SA-6 North, thus the remaining run of LLDPE was installed as P31. Panels P28, P29, and P31 ran the entire width of SA-6 North (approximately 215 ft.) from north to south.

- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 6/30/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 314+25, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 6/30/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panels P27 through P32. Additional details are outlined on the 6/30/16 *Repair Log.*
- A total of thirty-one repairs (R-104 through R-134) were observed and fixed (according to the project specifications) from Panels P19 through P27. Refer to 6/30/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Note: Add on (AO) repairs completed for Panels P17, P18, and P19, as LLDPE length had to be increased along edges of SA-6 North.
- Following the placement of LLDPE geomembrane, ESI deployed the orange geocomposite drainage layer (GDL), over the installed LLDPE geomembrane. GDL was placed from Panel P11 (approximate Sta. 316+25), to east of Panel P19 (approximate Sta. 315+50). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/30/16 Photo Log for supporting photographs
- A total of four destruct samples were collected on 6/30/16. Three fusion weld destruct samples DS-7, DS-8, and DS-9 were collected from panel seams P13 / P14, P18 / R-105, and 18 / 19, respectively. One extrusion weld destruct sample, DSX-3, was collected from Panel P21 (R-79).

Non-Conformance Items / Corrective Actions

- None Encountered

Action Items – Pending

- Complete Daily Report and Photo Log for 6/30/16. Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DS-7, DS-8, DS-9, and DSX-3.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, and 6/29/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-6. Reviewed laboratory data for extrusion weld destruct sample DSX-1 and DSX-2. Laboratory results in compliance with project specifications.

ENGINEERING & ENVIRONMENTAL SERVICES

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	7/1/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	78/95° F, Sunny, Clear
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1315

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #8**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from Panel P32 installed on 6/30/16 (approximate Sta. 313+25). Material to be placed from Panel P32 running approximately 65 ft. east to approximate Sta. 312+60.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 313+25 (Panel P32 installed on 6/30/16) to approximate Sta. 312+60. Refer to *Soil Subgrade Approval* forms from 7/1/16 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 3 of the daily photo log for 7/1/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 313+25 (east of Panel P32) moving east to approximate Sta. 312+60. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/1/16 Photo Log for supporting photographs.
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P32 (installed on 6/30/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 313+25 (Panel P32) to approximate Sta. 312+60. A total of seven panels were installed (P33, P34, P35, P36, P37, and P38). Note: During placement of Panel P33 the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P34. Similarly, during placement of Panel 36, the roll of LLDPE terminated

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

approximately 2/3 from the north end of SA-6 North, thus the remaining run of LLDPE was installed as P37. Panels P32, P35, and P38 ran the entire width of SA-6 North (approximately 220 ft.) from north to south.

- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 7/1/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 312+60, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/1/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panel P29 (installed on 6/30/16) and Panels P33 to P38 (installed on 7/1/16). Additional details are outlined on the 7/1/16 *Repair Log.*
- A total of twenty-eight repairs (R-135 through R-162) were observed and fixed (according to the project specifications) from Panels P19 through P27. Refer to 7/1/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- ESI also completed a pipe boot for Well 115-S1-SO located on the Panel P28 / P29 seam. Additional details are provided in the pipe boot penetration form for 7/1/16. No methane / spark testing was conducted on the boot (to be completed on 7/6/16).
- Following the placement of LLDPE geomembrane, ESI deployed the orange geocomposite drainage layer (GDL), over the installed LLDPE geomembrane. GDL was placed from Panel P11 (approximate Sta. 316+25), to east of Panel P19 (approximate Sta. 315+50). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/1/16 Photo Log for supporting photographs
- A total of four destruct samples were collected on 7/1/16. Three (3) fusion weld destruct samples were collected – DS-11, DS-12, and DS-13 from Panel Seams P31 / P32, P34 / P35, and P36 / P38, respectively. One extrusion weld destruct sample – DSX-4 was collected from Panel P32 (Repair R-148).

Non-Conformance Items / Corrective Actions

- None Encountered

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/1/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory data for destruct samples DS-11, DS-12, DS-13, and DSX-4.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, and 6/30/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-10. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-3. Laboratory results in compliance with project

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Daily QA Documents Completed

A1 – Certificate of Completion		To be completed at termination of project
A2 – Receiving and Inspection		NA – no material delivered on 7/1/16
A3 – Photo Log	Pages 1 – 6	Total of 11 photos outlining pertinent daily observations and descriptions for 7/1/16
A4 – Geosynthetic Inventory Log		Completed to date; no updates from 7/1/16
A5 – Subgrade Approval	Sheet 6 & ESI (7/1/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer
A6 – Trial Weld Log	Page 3	One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 7/1/16
A7 – Panel Placement Log	Page 5	One panel placement log provided by ESI and confirmed by Langan for panels placed on 7/1/16
A8 – Destruct Seam Testing COC	Sheets 1 - 2	Updated for destruct samples collected on 7/1/16
A9 – Seam/Non-Destruct. Test Log	Pages 12-13	One seam control form provided by ESI and confirmed by Langan for air pressure testing conducted on 7/1/16
A10 – Repair Log	Pages 7-9	One repair log provided by ESI and confirmed by Langan for repairs completed for 7/1/16
A11 – Conformance COC		NA for 7/1/16
A12 – Destructive Seam Field Test	Pages 1 - 2	Updated with destruct samples collected on 7/1/16
A13 – Destruct. Sample Summary	Pages 1 - 2	Destruct sample summary updated with samples collected on 7/1/16
A14 – Penetration & Edge Form	7/1/16 Form	Pipe boot completed for Well 115-W1-SO located along Panel P28 / P29.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	7/6/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	82/98° F, Sunny, Humid
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement		**TIME:**	0655 – 1630

CONTRACTOR & EQUIPMENT: **ENTACT & ESI** *Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)	**PERSONNEL ON SITE:** **Day #9** **AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton **Langan:** Dan Bosworth **ENTACT / ESI**: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), 60-mil geomembrane liner (LLDPE) continuing east from Panel P38 installed on 7/1/16 (approximate Sta. 312+60). Material to be placed from Panel P38 running approximately 85 ft. east to approximate Sta. 311+75.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P19 (approximate Sta. 315+50), moving east up to Panel P27 (approximate Sta. 314+60). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/6/16 Photo Log for supporting photographs
- While ESI was deploying GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 312+60 (Panel P38 installed on 7/1/16) to approximate Sta. 311+75. Refer to *Soil Subgrade Approval* forms from 7/6/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 3 to 5 of the daily photo log for 7/6/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 312+60 (east of Panel P38) moving east to approximate Sta. 311+75. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/6/16 Photo Log for supporting photographs.

- During deployment of GVL, the potential for rocks or other debris to become dislodged in the soil subgrade were observed. Additional walkover and observation activities were conducted along the GVL to attempt to identify any rocks or debris (>1/2") that may have been dislodged.
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P38 (installed on 7/1/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 312+60 (Panel P38) to approximate Sta. 311+75. A total of four panels were installed (P39, P40, P41, and P42). Note: During placement of Panel P39 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P40. Panels P41 and P42 ran the entire width of SA-6 North (approximately 220 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 7/6/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 311+75, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/6/16 *Seam Control Form* for non-destructive testing details. ESI completed a temporary pipe boot for Extraction Pump Station #1 and completed leistering of temporary patches to cover the LLDPE geomembrane. Repair (detailing) activities to be completed on 7/7/16.
- While GDL was being deployed, ESI also conducted, methane / spark testing for the pipe boots completed for Piezometer PZ8, Gas Vent GV-5, and Well 115-W1-SO. Prior to spark testing, methane testing was conducted to measure the concentration of methane present below the LLDPE geomembrane. During methane testing, a concentration of 0.0% (<1%) was measured for each of the pipe boots. Following the methane testing, spark testing was conducted by ESI for the vertical weld and pipe boot weld at the base of the penetration (i.e. welds not accessible for vacuum box testing).
- During the spark testing for Piezometer PZ8 a spark was observed at the top of the boot (outside of the 2 ft. boot requirement). Since this spark was outside of the required boot construction, the boot was subsequently cut at 2 ft. (thus removing the failed weld), and the remaining boot was retested with no sparks observed.
- During spark testing of Gas Vent GV-5 and Well 115-W1-SO, a spark was observed while testing the vertical weld and a small pinhole deficiency was observed in the weld. These areas will be grinded, rewelded, and retested on 7/7/16. Additional details are outlined in the *Spark Testing QA Forms* dated 7/6/16.
- No destruct samples collected on 7/6/16. Destruct samples to be cut on 7/7/16.

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 3 (Sheet #3) – Failed spark test along vertical weld of Gas Vent GV-5
  - Failed spark test identified during spark testing of Gas Vent GV-5. Small pinhole deficiency identified in vertical weld. Weld to be grinded, re-welded, and re-tested on 7/7/16.
- Non-Conformance No. 4 (Sheet #4) – Failed spark test along vertical weld of Well 115-W1-SO
  - Failed spark test identified during spark testing of Well 115-W1-SO. Small pinhole deficiency identified in vertical weld. Weld to be grinded, re-welded, and re-tested on 7/7/16.

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/6/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, and 7/1/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-13. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-4. Laboratory results in compliance with project specifications.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	7/7/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	82/98° F, Overcast, Humid
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1530

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #10**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), 60-mil geomembrane liner (LLDPE), continuing east from Panel P42 installed on 7/6/16 (approximate Sta. 311+75). Material to be placed from Panel P42 running approximately 20 ft. east to approximate Sta. 311+55. Note: based on available prepared subgrade and inclement weather scheduled in the afternoon, ESI deployed one panel of GVL and one panel of LLDPE geomembrane so that the installed LLDPE was outside of the slope swales and depressed contours thus promoting positive drainage away from the installed material.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P27 (approximate Sta. 314+60), moving east up to Panel P36 / P37 (approximate Sta. 313+25). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/7/16 Photo Log for supporting photographs
- While GDL was being deployed, ESI also completed repair activities for Panels P39 to P42 (installed on 7/6/16). A total of thirty-seven repairs (R-163 through R-199) were observed and fixed (according to the project specifications) from Panels P39 through P42. Refer to 7/7/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of two (2) destruct samples were collected. One fusion weld destruct sample (DS-14) was collected from Panel P41 / P42 seam, and one extrusion weld sample (DSX-5) was collected from Panel P42, Repair R-179 for laboratory analysis.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- While GDL and repair activities were being completed, ESI also conducted, methane / spark testing for the pipe boots repairs for Gas Vent GV-5, and Well 115-W1-SO. Based on the sparks observed during spark testing on 7/6/16, the areas were subsequently grinded, re-welded, and re-tested. Refer to 7/7/16 Photograph Log for supporting photos. Prior to spark testing, methane testing was conducted by AmecFW to measure the concentration of methane present below the LLDPE geomembrane. During methane testing, a concentration of 0.0% (<1%) was measured for each of the boots. Following the methane testing, spark testing was conducted by ESI for the vertical weld areas that were re-welded. During the re-test no sparks were observed and the retest spark test passed. Additional details are outlined in the *Spark Testing QA Forms* dated 7/6/16.
- Following the LLDPE repair activities, and deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 311+75 (Panel P42 installed on 7/6/16) to approximate Sta. 311+55. Refer to *Soil Subgrade Approval* forms from 7/7/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photo 9 of the daily photo log for 7/7/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement. Note: the approximate 20 ft. area of soil was approved so that an additional panel of LLDPE geomembrane could be deployed to allow the edges of the liner to be outside of the depressed contours in the event of afternoon rainstorms (positive drainage away from the installed LLDPE geomembrane).
- Following subgrade approval, one panel of GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications).
- After placement of GVL, one panel of LLDPE geomembrane was installed continuing from Panel P42 (installed on 7/6/16) and moving east. The panel was oriented from north to south (as proposed in the approved Panel Layout) and was installed from approximate Sta. 311+75 (Panel P42) to approximate Sta. 311+55. A total of one panel was installed (P43). Panel P43 ran the entire width of SA-6 North (approximately 230 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 7/7/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 312+60, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/7/16 *Seam Control Form* for non-destructive testing details. Additionally, repairs were marked and temporary patches were leistered in place for repair activities (i.e. detailing) to be completed on 7/8/16.
- ESI completed the boot / penetration construction for Extraction Pump Station #1 manhole and welded (detailed) the repairs. Note: Extraction Pump Station #1 manhole was located in a recessed contour of SA-6 North and repair activities were conducted to seal the LLDPE geomembrane as rainstorms were forecasted for the afternoon.

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 5 (Sheet #5) – Subgrade irregularity identified as R-170 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P38. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 5 Notice of Non-Compliance.*

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/6/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct samples DS-14 and DSX-5.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, and 7/6/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-13. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-4. Laboratory results in compliance with project specifications.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Daily QA Documents Completed

A1 – Certificate of Completion		To be completed at termination of project
A2 – Receiving and Inspection		NA – no new material delivered on 7/7/16
A3 – Photo Log	Pages 1 – 5	Total of 10 photos outlining pertinent daily observations and descriptions for 7/7/16
A4 – Geosynthetic Inventory Log		Completed to date; no updates from 7/7/16
A5 – Subgrade Approval	Sheet 8 & ESI (7/7/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer
A6 – Trial Weld Log	Pages 3-4	One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 7/7/16
A7 – Panel Placement Log	Page 6	One panel placement log provided by ESI and confirmed by Langan for panels placed on 7/7/16
A8 – Destruct Seam Testing COC	Sheet 2	Updated for destruct samples collected on 7/7/16

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	7/8/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	82/98° F, Overcast, Humid
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1530

CONTRACTOR & EQUIPMENT: **ENTACT & ESI** *Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)	**PERSONNEL ON SITE:** **Day #11** **AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton **Langan:** Dan Bosworth **ENTACT / ESI**: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P43 installed on 7/7/16 (approximate Sta. 311+55). Material to be placed from Panel P43 running approximately 75 ft. east to approximate Sta. 310+80.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI completing repair activities for Panels P42 and P43 (Panel P43 installed on 7/7/16). A total of twelve repairs (R-200 through R-211) were observed and fixed (according to the project specifications) from the two panels. Refer to 7/8/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While LLDPE repair activities were being conducted, Langan and Entact conducted soil subgrade approval from approximate Sta. 311+55 (Panel P43 installed on 7/7/16) to approximate Sta. 310+80. Refer to *Soil Subgrade Approval* forms from 7/8/16 for additional details. During subgrade observation, the subgrade area was transversed in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 1 and 2 of the daily photo log for 7/8/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 311+55 (east of Panel P43) moving east to approximate Sta. 310+80.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/8/16 Photo Log for supporting photographs.
- During deployment of GVL, the potential for rocks or other debris to become dislodged in the soil subgrade were observed. Additional walkover and observation activities were conducted along the GVL to attempt to identify any rocks or debris (>1/2") that may have been dislodged.
- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P43 (installed on 7/7/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 311+55 (Panel P43) to approximate Sta. 310+80. A total of eight panels were installed (P44, P44A, P44B, P45, P46, P47, P48, and P49). Note: During placement of Panel P44 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P45. Similarly, during placement of Panel P47, the roll of LLDPE terminated near the center of SA-6 North, thus the remaining run of LLDPE was installed as P48. Panels P46 and P49 ran the entire width of SA-6 North (approximately 290 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 7/8/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 310+80, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/8/16 *Seam Control Form* for non-destructive testing details. Additionally, repairs activities were conducted for Panels P44 through P49 (installed on 7/8/16). These repair activities were conducted in addition to the repairs completed in the morning for Panels P42 and P43 (installed on 7/7/16).
- A total of twenty additional repairs (R-212 through R-223, R-225, R-227, R-228, R-229, and R-233 to R-236) were observed and fixed (according to the project specifications) from Panels P44 to P49. Refer to 7/8/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of one (1) destruct sample was collected. One extrusion weld sample (DSX-6) was collected from Panel P42, Repair R-180 for laboratory analysis. Additional destruct samples to be cut and collected on 7/11/16.

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 6 (Sheet #6) – Subgrade irregularity identified as R-222 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P45. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 6 Notice of Non-Compliance.*

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/8/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct sample DSX-6.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	7/11/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	72/80° F, Sunny, Clear
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** LLDPE Repair Activities & Destruct Samples	**TIME:**	0645 – 0845

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #12**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of LLDPE repair activities (from Panels P44 to P49 installed on 7/8/16). Note: soil subgrade not approved for LLDPE placement as standing water / wet areas observed along subgrade from rainstorms over the weekend. Entact to solidify, rework, and re-compact soils for subgrade approval to be completed on 7/12/16. Note: the edge of the LLDPE geomembrane placed on 7/8/16 was pulled back until dry soil subgrade from below the liner was exposed (as shown in the 7/11/16 Photo Log). Soil to be dried, solidified, reworked, and re-compacted by Entact for approval on 7/12/16.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting repair activities for Panels P44 through P49 (panels installed on 7/8/16). A total of eight repairs (R-224, R-226, R-230, R-231, R-232, R-239, R-240, and R-241) were observed and fixed (according to the project specifications) from the two panels. Refer to 7/11/16 *Repair Report* for additional details. In general, the majority of the repairs were destruct samples that were collected for laboratory analysis and cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of four (4) destruct samples were collected from panels installed on 7/8/16. Three fusion weld destruct samples – DS-15, DS-16, and DS-17 were collected from Panel Seam P43 / P44, P46 / P47, and P45 / 46, respectively. Additionally, one extrusion weld destruct sample - DSX-7 was collected from Panel P44, Repair R-179 for laboratory analysis.

Non-Conformance Items / Corrective Actions

- None Encountered

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/11/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct results for DS-15, DS-16, DS-17, and DSX-7.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, and 7/8/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-14. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-6. Laboratory results in compliance with project specifications.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	7/12/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	72/85° F, Sunny, Clear
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1500

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #13**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P49 installed on 7/8/16 (approximate Sta. 310+80). Material to be placed from Panel P49 running approximately 100 ft. east to approximate Sta. 309+75.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P36 / P37 (approximate Sta. 313+25), moving east up to Panel P42 (approximate Sta. 312+25). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/12/16 Photo Log for supporting photographs.
- While GDL was being deployed, ESI also completed the LLDPE pipe boot for Gas Vent GV-4 (previously installed on 7/8/16). The boot was patched and welded (to be methane / spark tested later in the morning). Additional details are outlined in the Gas Vent GV-4 penetration log dated 7/12/16.
- ESI completed methane / spark testing for the LLDPE pipe boot for Extraction Pump Station #1 and Gas Vent GV-4. Prior to spark testing, Entact conducted methane testing to measure the concentration of methane present underneath the LLDPE geomembrane. A concentration of 0.0% (>1%) was measured for both boots. As such, ESI conducted spark testing along the base of the boot and the vertical weld. No sparks were observed during the spark test and both boots passed. Additional details are outlined in the *Spark Testing QA Forms* dated 7/12/16.
- Following the deployment of GDL and spark testing activities, Langan and Entact conducted soil subgrade approval from approximate Sta. 310+80 (Panel P49 installed on 7/8/16) to approximate Sta. 309+75. Refer to *Soil Subgrade Approval* forms from 7/12/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

generally free of any loose material greater than ½". Refer to Photos 7 to 9 of the daily photo log for 7/12/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement. Note: the approximate 20 ft. area of soil was approved so that an additional panel of LLDPE geomembrane could be deployed to allow the edges of the liner to be outside of the depressed contours in the event of afternoon rainstorms (positive drainage away from the installed LLDPE geomembrane).

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 310+80 (east of Panel P49) moving east to approximate Sta. 309+75. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/12/16 Photo Log for supporting photographs.
- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P49 (installed on 7/8/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 310+80 (Panel P49) to approximate Sta. 309+75. A total of eight panels were installed (P50, P51, P52, P53, P54, P55, P56, and P7). Note: During placement of Panel P51 the roll of LLDPE terminated near the approximate center of SA-6 North, thus the remaining run of LLDPE was installed as P52 and P53 (P52 and P53 remaining pieces of LLDPE from rolls previously used). Similarly, during placement of Panel P55, the roll of LLDPE terminated near the center of SA-6 North, thus the remaining run of LLDPE was installed as P56 & P57 (Panels P56 and P57 installed as remaining pieces of previously used LLDPE rolls). Panels P50 and P54 ran the entire width of SA-6 North (approximately 288 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 7/12/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 309+75, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/12/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P50 through P57 (installed on 7/12/16).
- ESI conducted repair activities for Panels P50 to P57 (installed on 7/12/16). A total of twenty-two repairs (R-237, R-238 and R-242 through R-261) were observed and fixed (according to the project specifications) from Panels P50 through P57. Refer to 7/12/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- As part of the repair activities for Panels P50 to P57, the pipe boot/penetration for Piezometer PZ6 was also completed as outlined on the 7/12/16 Pipe Boot Form. A total of three (3) destruct samples were also collected. Three fusion weld destruct samples - DS-18, DS-19, DS-20 were collected from Panel Seams P49 / P50, P53 / P54, and P55 / P56 for laboratory analysis

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 7 (Sheet #7) – Subgrade irregularity identified as R-242 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P49 / P50. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 7 Notice of Non-Compliance.*

Project: Honeywell SA-6 North Capping	**Location:** SA-6 North (North of SA-7.) Jersey City, New Jersey	**Project No.** **100530001**

Date:
7/12/16

Direction Taken:

SA-6 North – Extraction Pump Station #1

Description:

ESI conducting spark testing along base of boot for Extraction Pump Station #1. Entact previously conducted methane testing and concentration of 0.0% (>1%) was measured. ESI completed spark testing of the base of boot and vertical weld and no sparks or deficiencies were observed (spark test passed).

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	7/13/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	72/85° F, Overcast
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1630

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #14**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth, Kale
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P55 / P56 / P57 installed on 7/12/16 (approximate Sta. 309+75). Material to be placed from Panel P55 / P56 / P57 running approximately 75 ft. east to approximate Sta. 309+00.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P42 (approximate Sta. 312+25), moving east through Panel P47 / P48 (approximate Sta. 311+10). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/13/16 Photo Log for supporting photographs.
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 309+75 (Panel P55 / P56 / P57 installed on 7/12/16) to approximate Sta. 309+00. Refer to *Soil Subgrade Approval* forms from 7/13/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 3,4, and 5 of the daily photo log for 7/13/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 309+75 (east of Panel P55 / P56 / P57) moving east to approximate Sta. 309+00. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/13/16 Photo Log for supporting photographs.

- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P55 / P56 / P57 (installed on 7/12/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 309+75 (Panel P55 / P56 / P57) to approximate Sta. 309+00. A total of six panels were installed (P58, P59, P60, P61, P62, and P63). Note: During placement of Panel P59 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P60. Similarly, during placement of Panel P62, the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P63. Panels P58 and P61 ran the entire width of SA-6 North (approximately 295 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 7/13/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 309+00, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/13/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P58 to P63 (installed on 7/13/16)
- ESI conducted repair activities for Panels P58 to P63 (installed on 7/13/16). A total of eleven repairs (R-262 through R-272) were observed and fixed (according to the project specifications) from Panels P58 through P63. Refer to 7/13/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of two (2) destruct samples were collected. Two fusion weld destruct samples - DS-21 and DS-22 were collected from Panel Seams P58 / P59 and P61 / P63, respectively, for laboratory analysis.

Non-Conformance Items / Corrective Actions

- None Encountered.

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/13/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct samples DS-21 and DS-22.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, and 7/12/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-20. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-7. Laboratory results in compliance with project specifications.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Daily QA Documents Completed

Appendix / QA Forms	***Sheet / Page Numbers***	***Comments***
A1 – Certificate of Completion		To be completed at termination of project
A2 – Receiving and Inspection		NA – no new material delivered on 7/13/16
A3 – Photo Log	Pages 1 – 6	Total of 12 photos outlining pertinent daily observations and descriptions for 7/13/16
A4 – Geosynthetic Inventory Log		Completed to date; no updates from 7/13/16
A5 – Subgrade Approval	Sheet 11 & ESI (7/13/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer
A6 – Trial Weld Log	Pages 4-5	One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 7/13/16
A7 – Panel Placement Log	Pages 8 - 9	One panel placement log provided by ESI and confirmed by Langan for panels placed on 7/13/16
A8 – Destruct Seam Testing COC	Sheet 2	Updated for destruct samples collected on 7/13/16
A9 – Seam/Non-Destruct. Test Log	Pages 22-24	One seam control form provided by ESI and confirmed by Langan for air pressure testing conducted on 7/13/16
A10 – Repair Log	Page 14	One repair log provided by ESI and confirmed by Langan for repairs completed for 7/13/16
A11 – Conformance COC		NA for 7/13/16
A12 – Destructive Seam Field Test	Page 2	Updated with destruct samples collected on 7/13/16
A13 – Destruct. Sample Summary	Page 2	Destruct sample summary updated with samples collected on 7/13/16

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	7/14/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	75/85° F, Overcast
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1500

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #15**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth, Kale
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P62 / P63 installed on 7/13/16 (approximate Sta. 309+00). Material to be placed from Panel P62 / P63 running approximately 80 ft. east to approximate Sta. 308+20.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting repair activities for a wrinkle observed on Panel P50 / P51. A total of four repairs (R-273 through R-276) were observed and fixed (according to the project specifications) from Panels P50 and P51. Refer to 7/14/16 *Repair Report* for additional details. The observed wrinkles were cut to allow the geomembrane to conform to the subgrade, and the cut areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While repair activities were being conducted, Langan and Entact conducted soil subgrade approval from approximate Sta. 309+00 (Panel P62 / P63 installed on 7/13/16) to approximate Sta. 308+20. Refer to *Soil Subgrade Approval* forms from 7/14/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 1, 2, and 3 of the daily photo log for 7/14/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta.309+00 (east of Panel P62 / P63) moving east to approximate Sta. 308+20. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/14/16 Photo Log for supporting photographs.

- During deployment of GVL, the potential for rocks or other debris to become dislodged in the soil subgrade were observed. Additional walkover and observation activities were conducted along the GVL to attempt to identify any rocks or debris (>1/2") that may have been dislodged.
- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P62 / P63 (installed on 7/13/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 309+00 (Panel P62 / P63) to approximate Sta. 308+20. A total of five panels were installed (P64, P65, P66, P67, and P68). Note: During placement of Panel P66 the roll of LLDPE terminated approximately 2/3 from the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P67. Panels P64, P65, and P68 ran the entire width of SA-6 North (approximately 299 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 7/14/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 308+20, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/14/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P64 to P68 (installed on 7/14/16).
- ESI conducted repair activities for Panels P64 to P68 (installed on 7/14/16) in addition to the wrinkle repairs completed in the morning on Panels P50 / P51. A total of sixteen repairs (R-277 through R-292) were observed and fixed (according to the project specifications) from Panels P64 through P68. Refer to 7/14/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- ESI also completed the boot / penetration construction for Gas Vent GV-3 and Cleanout 1. The boots were welded and sealed with methane / spark testing to be conducted at a later date.
- A total of three (3) destruct samples were collected. Two fusion weld destruct samples - DS-23 and DS-24 were collected from Panel Seams P64 / P65 and P66 / P68, respectively, for laboratory analysis. In addition, one extrusion weld destruct sample – DSX-8 was collected from Panel P61 (Repair R-270) for laboratory analysis.

Non-Conformance Items / Corrective Actions

- None Encountered.

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/14/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct samples DS-23, DS-24, and DSX-8.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, and 7/13/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-22. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-7. Laboratory results in compliance with project specifications.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Daily QA Documents Completed

Appendix / QA Forms	***Sheet / Page Numbers***	***Comments***
A1 – Certificate of Completion		To be completed at termination of project
A2 – Receiving and Inspection		NA – no new material delivered on 7/14/16
A3 – Photo Log	Pages 1 – 6	Total of 11 photos outlining pertinent daily observations and descriptions for 7/14/16
A4 – Geosynthetic Inventory Log		Completed to date; no updates from 7/14/16
A5 – Subgrade Approval	Sheet 12 & ESI (7/14/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer
A6 – Trial Weld Log	Pages 5	One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 7/14/16
A7 – Panel Placement Log	Page 9	One panel placement log provided by ESI and confirmed by Langan for panels placed on 7/14/16
A8 – Destruct Seam Testing COC	Sheet 3	Updated for destruct samples collected on 7/14/16
A9 – Seam/Non-Destruct. Test Log	Pages 24-25	One seam control form provided by ESI and confirmed by Langan for air pressure testing conducted on 7/14/16

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	7/15/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	80/95° F, Partly Cloudy, Humid
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite Drainage Layer (GDL)	**TIME:**	0645 – 1630

CONTRACTOR & EQUIPMENT:	**PERSONNEL ON SITE:** **Day #16**
ENTACT & ESI *Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)	**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton **Langan:** Dan Bosworth, Kale Novalis **ENTACT / ESI**: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of geocomposite drainager layer (GDL) over approved LLDPE geomembrane. Note: no soil subgrade approved and no LLDPE geomembrane installed on 7/15/16. Next area of subgrade still being prepared, graded, and compacted by Entact (to be surveyed by Maser).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P47 / P48 (approximate Sta. 311+10) to Panel P66 (approximate Sta. 308+35) along northern end of cap. Note: GDL rolls were approximately 200 ft. in length and covered approximately 2/3 of the cap (north to south). As such, GDL was deployed along the northern half to Panel P66. The southern end of the cap was covered to Panel P63 (approximate Sta. 309+00). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/15/16 Photo Log for supporting photographs.

Non-Conformance Items / Corrective Actions

- None encountered

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/15/16). No LLDPE paperwork to be completed as no subgrade was approved and no LLDPE geomembrane was installed.

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, and 7/14/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-24. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-8. Laboratory results in compliance with project specifications.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	7/25/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	85/93° F, Overcast
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1630

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #18**
AmecFW: Dave Ambrose, Josh Boynton
Langan: Dan Bosworth, Kale Novalis
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P68 installed on 7/14/16 (approximate Sta. 308+20). Material to be placed from Panel P68 running approximately 100 ft. east to approximate Sta. 307+20.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 308+20 (Panel P68 installed on 7/14/16) to approximate Sta. 307+20. Refer to *Soil Subgrade Approval* forms from 7/25/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 1, 2, and 3 of the daily photo log on 7/25/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 308+20 (east of Panel P68) moving east to approximate Sta. 307+20. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/25/16 Photo Log for supporting photographs.
- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P68 (installed on 7/14/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 308+20 (Panel P68) to approximate Sta. 307+20. A total of seven panels were installed (P69, P70, P71, P72, P73, P74 and P75).

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Note: During placement of Panel P69 the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P70 and P71 (P70 and P71 remaining pieces of LLDPE from rolls previously used). Similarly, during placement of Panel P73, the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P74. Panels P72 and P75 ran the entire width of SA-6 North (approximately 280 ft.) from north to south.

- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 7/25/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 307+20, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/25/16 *Seam Control Form* for non-destructive testing details.
- ESI conducted repair activities for Panels 68 to P75 (installed on 7/25/16). A total of twenty-six repairs (R-293 through R-318) were observed and fixed (according to the project specifications) from Panels P68 through P75. Refer to 7/25/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications (Note: vacuum box testing not completed for all repairs. To be finished on 7/26/16).
- ESI also completed the pipe boot construction for Cleanout 2. Additional details are provided in the 7/25/16 Pipe Boot Penetration Form.
- A total of two (3) destruct samples were collected. Two fusion weld destruct samples were collected – DS-25 and DS-26 were collected from Panel Seams P68 / P69 and P72 / P74, respectively. One extrusion weld destruct sample – DSX-9 was also collected from patch repair R-299 (Panel P72) for laboratory analysis.

Non-Conformance Items / Corrective Actions

- None Encountered.

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/25/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete boot penetration log for Cleanout 2
- Review laboratory results for destruct samples DS-25, DS-26, and DSX-9.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, and 7/18/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-24. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-8. Laboratory results in compliance with project specifications.

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Daily QA Documents Completed

Appendix / QA Forms	***Sheet / Page Numbers***	***Comments***
A1 – Certificate of Completion		To be completed at termination of project
A2 – Receiving and Inspection		NA – no new material delivered on 7/25/16
A3 – Photo Log	Pages 1 – 5	Total of 10 photos outlining pertinent daily observations and descriptions for 7/25/16
A4 – Geosynthetic Inventory Log		Completed to date; no updates from 7/25/16
A5 – Subgrade Approval	Sheet 13 & ESI (7/25/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer
A6 – Trial Weld Log	Page 5	One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 7/25/16
A7 – Panel Placement Log	Pages 9 - 10	One panel placement log provided by ESI and confirmed by Langan for panels placed on 7/25/16
A8 – Destruct Seam Testing COC	Sheet 3	Updated for destruct samples collected on 7/25/16
A9 – Seam/Non-Destruct. Test Log	Pages 25-28	One seam control form provided by ESI and confirmed by Langan for air pressure testing conducted on 7/25/16
A10 – Repair Log	Pages 15-16	One repair log provided by ESI and confirmed by Langan for repairs completed for 7/25/16
A11 – Conformance COC		NA for 7/25/16
A12 – Destructive Seam Field Test	Page 3	Updated with destruct samples collected on 7/25/16
A13 – Destruct. Sample Summary	Page 3	Destruct sample summary updated with samples collected on 7/25/16

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	7/27/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	78/98° F, Sunny
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement		**TIME:**	0645 – 1615

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #19**
AmecFW: Dave Ambrose, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P75 installed on 7/25/16 (approximate Sta. 307+20). Material to be placed from Panel P75 running approximately 80 ft. east to approximate Sta. 306+40.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 307+20 (Panel P75 installed on 7/25/16) to approximate Sta. 306+40. Refer to *Soil Subgrade Approval* forms from 7/27/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and one wet / soft area was identified at the top of the western slope of the utility corridor. The wet area was identified underneath the edge of the GVL panel (previously installed on 7/25/16). The GVL was pulled back and the soil subgrade was exposed. The wet area was re-worked by Entact and calcium cement was added to solidify the soil. Based on visual observation, the remaining soil subgrade (along with the re-worked wet area) appeared to be firm and unyielding with no other soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 1 to 4 of the daily photo log for 7/27/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 307+20 (east of Panel P75) moving east to approximate Sta. 306+40. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to the 7/27/16 Photo Log for supporting photographs.

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P75 (installed on 7/25/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 307+20 (Panel P75) to approximate Sta. 306+40. A total of five panels were installed (P76, P77, P78, P79, and P80). Note: During placement of Panel P77 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P78. Panels P76, P79, and P80 ran the entire width of SA-6 North (approximately 270 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 7/27/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 306+40, ESI began to conduct non-destructive testing (pressure testing) in accordance with the project specifications. Seams were pressurized to 30 psi and held for 5 minutes with less than 5 psi loss. Refer to the 7/27/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P75 to P80 (installed on 7/25/16 and 7/27/16)
- ESI conducted repair activities for Panel P75 (installed on 7/25/16), and Panels P76 through P80 (installed on 7/27/16). A total of forty-three repairs (R-319 through R-361) were observed and fixed (according to the project specifications) from Panels P75 through P80. Refer to 7/27/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- As part of the repair activities for LLDPE geomembrane installed on 7/27/16, two pipe boots / penetrations were completed for Well 115-E5-SO and Extraction Pump Station 2. Additional details are provided in the 7/27/16 Pipe Boot Forms.
- While repair activities were being conducted, ESI also completed methane / spark testing for Piezometer PZ6 and Cleanout 1. Prior to spark testing methane testing was conducted at each location and 0.0% methane was recorded. As such, spark testing was then conducted and no sparks were observed along the base of the boot or vertical weld for both boots. Refer to the *Spark Testing Forms* from 7/27/16 for additional details.
- A total of two (2) destruct samples were collected on 7/27/16. One fusion weld destruct samples - DS-27 was collected from Panel Seams P75 / P76, for laboratory analysis. Additionally, one extrusion weld sample – DSX-10 was collected from Panel P75 Repair R-320.

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 8 (Sheet #8) – Subgrade irregularity identified as R-328 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P71 / P72. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 8 Notice of Non-Compliance.*

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/27/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct samples DS-27 and DSX-10.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, and 7/25/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-24. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-8. Laboratory samples DS-25, DS-26, and DSX-9 still pending.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	7/28/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	78/95° F, Sunny
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement		**TIME:**	0645 – 1745

CONTRACTOR & EQUIPMENT: **ENTACT & ESI** *Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)	**PERSONNEL ON SITE:** **Day #20** **AmecFW**: Dave Ambrose, Josh Boynton **Langan:** Dan Bosworth, Jeff Stoicescu **ENTACT / ESI**: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P80 installed on 7/27/16 (approximate Sta. 306+40). Material to be placed from Panel P80 running approximately 100 ft. east to approximate Sta. 305+40.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 306+40 (Panel P80 installed on 7/27/16) to approximate Sta. 305+40. Refer to *Soil Subgrade Approval* forms from 7/28/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 1, 2, and 3 of the daily photo log for 7/28/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 306+40 (east of Panel P80) moving east to approximate Sta. 305+40. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to the 7/28/16 Photo Log for supporting photographs.
- While GVL was being installed, Entact and ESI conducted spark testing for Gas Vent GV-3, and Cleanout 2. Prior to spark testing, methane testing was conducted by Entact and a concentration of 0.0% was measured at each boot. As such, spark testing was subsequently completed, and no sparks were observed during the test (i.e. spark test passed). Additional details regarding the

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

methane / spark testing are provided in the 7/28/16 *Spark Test Logs*.

- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P80 (installed on 7/27/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 306+40 (Panel P80) to approximate Sta. 305+40. A total of eight panels were installed (P81, P82, P83, P84, P85, P86, P87, and P88). Note: During placement of Panel P81 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P82. Similarly, during placement of Panel P84 the roll of LLDPE terminated near the southern end of SA-6, thus the remaining run of LLDPE was installed as Panel P85. Panel P87 also terminated near the approximate center of SA-6 North, thus the remaining LLDPE run was installed as Panel P88. Panels P83 and P86 ran the entire width of SA-6 North (approximately 260 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 7/28/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 305+40, ESI began to conduct non-destructive testing (pressure testing) in accordance with the project specifications. Seams were pressurized to 30 psi and held for 5 minutes with less than 5 psi loss. Refer to the 7/28/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P80 to P88 (installed on 7/27/16 and 7/28/16)
- ESI conducted repair activities for Panel P80 (installed on 7/27/16), and Panels P81 through P88 (installed on 7/28/16). A total of twenty-nine repairs (R-362 through R-390) were observed and fixed (according to the project specifications) from Panels P80 through P88. Refer to 7/28/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- As part of the repair activities ESI also completed the pipe boots for the Utility Corridor Drainage Pipe and Injection Well 088-IW-03. Additional details are provided in the 7/28/16 Boot Forms
- Laboratory results for destruct sample DS-26 were received and two of the coupons were reported as EPA Break Classification Code “AD BRK”. Although the coupons met the peel strength requirements, since the break was reported at the weld and not considered a film tearing bond (FTB), the sample was considered a failed sample and reported as a non-conformance item.
- No destruct samples were collected due to the forecasted storms at the end of the day. Destruct samples anticipated to be cut on 8/1/16 (rain forecast for 7/29/16 – no LLDPE activities anticipated).

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 9 (Sheet #9) – Failed destruct sample DS-26 collected from Panel P72 / P74
    - Destruct sample DS-26 failed 2/5 coupons as the weld breaks were reported as “AD BRK” under the EPA Break Classification Code. Although the coupons achieved the required peel / shear strength parameters, since the break occurred at the weld and was not considered an FTB, the sample failed.

Action Items – Pending

- Complete Daily Report and Photo Log (for 7/28/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, and 7/27/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-27. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-10. Laboratory results in compliance with project specifications with the exception of destruct sample DS-26 (recorded as Non-Conformance #9).

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	8/2/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	78/85° F, Overcast
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1645

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #21**
AmecFW: Stu Bills, Dave Ambrose, Josh Boynton
Langan: Dan Bosworth, Vikki Hon
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of geocomposite drainage layer (GDL) over approved LLDPE geomembrane. Note: no soil subgrade approved and no LLDPE geomembrane installed on 8/2/16. Next area of subgrade still being prepared, graded, and compacted by Entact (to be surveyed by Maser).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was first placed along the northern end of SA-6 North from Panel P66 / P67 (approximate Sta. 308+35) to the approximate center of the Utility Corridor (approximate Sta. 306+80) Note: The GDL panel orientation changed to east to west through the utility corridor so that the GDL followed the same contours as the utility corridor slopes. GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/2/16 Photo Log for supporting photographs.
- While GDL was being deployed ESI also conducted vacuum box testing and minor repair activities for Panels P86 and P87 (installed on 7/28/16). Additional details are provided in the 8/2/16 Repair Report.
- A total of three (3) destruct samples were collected. One fusion weld sample – DS-28 was collected from Panel Seam P81 / P83. Two extrusion weld destruct samples – DSX-11 and DSX-12 were collected from Repair R-365 (Panel 81) and Repair R-387 (Panel 86), respectively.
- ESI also completed repair activities for fusion weld destruct sample DS-26 (Panel P72 / P74 seam). DS-26 failed laboratory testing as two specimens were reported as EPA Break Code “AD-BRK” outlining a break in the weld and not the film tear break (FTB). Although the minimum peel requirements were met, since the break code was not an FTB, the test was reported as a failed test.
- To address the failed destruct sample, two field specimens (DS-26A & DS-26B) were cut approximately 10 ft. on each side of DS-26. Both samples were field tested and peel and shear strength requirements were met. Sample DS-26B which exhibited peel and shear breaks slightly less than DS-26A was sent for laboratory analysis.

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Non-Conformance Items / Corrective Actions

- None Encountered - Failed destruct sample DS-26 was previously outlined on the 7/28/16 Daily Report

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/2/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct results for DS-28, DSX-11, DSX-12, and DS-26B.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/27/16, and 7/28/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-27. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-10. Laboratory results generally in compliance with project specifications with the exception of DS-26.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Project: Honeywell SA-6 North Capping	**Location:** SA-6 North (North of SA-7.) Jersey City, New Jersey	**Project No.** **100530001**

Date:
8/2/16

Direction Taken:

SA-6 North – Panel Seam P72 / P74

Description:

ESI conducting LLDPE patching activities (LLDPE cap) over failed destruct sample DS-26. Two field samples cut approximately 10 ft. on each side of DS-26 (labeled A & B). Subsequent field testing yielded peel and shear strength parameters that passed the spec requirements Sample B was sent for laboratory analysis (peel and shear strength slightly less than sample A).

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	8/3/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	80/85° F, Clear
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement		**TIME:**	0645 – 1630

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #22**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth, Kale Novalis
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P87 / P88 installed on 7/28/16 (approximate Sta. 305+40). Material to be placed from Panel P87 / P88 running approximately 80 ft. east to approximate Sta. 304+60.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from the approximate center of the Utility Corridor (approximate Sta. 306+80), moving east through Panel P81 (approximate Sta. 306+20). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/3/16 Photo Log for supporting photographs.
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 305+40 (Panel P87 / P88 installed on 7/28/16) to approximate Sta. 304+60. Refer to *Soil Subgrade Approval* forms from 8/3/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 3 to 5 of the daily photo log for 8/3/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 305+40 (east of Panel P87 / P88) moving east to approximate Sta. 304+60. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications).

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P87 / P88 (installed on 7/28/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 305+40 (Panel P87 / P88) to approximate Sta. 304+60. A total of five panels were installed (P89, P90, P91, P92, and P93). Note: During placement of Panel P89 a piece of LLDPE was used to realign the panel placement arrangement. Panels P90, P91, P92, and P93 ran the entire width of SA-6 North (approximately 245 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 8/3/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 304+60, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 8/3/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P89 to P93 (installed on 8/3/16)
- ESI conducted repair activities for Panels 89 to P93 (installed on 8/13/16). A total of sixteen repairs (R-400 through R-415) were observed and fixed (according to the project specifications) from Panels P89 through P93. Refer to 8/3/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Additionally, ESI completed boot construction activities for Gas Vent GV-2 and Piezometer PZ4. Additional details are provided in the 8/3/16 Pipe Boot Forms.
- No destruct samples were collected on 8/3/16. Samples to be cut for laboratory analysis on 8/4/16.

Non-Conformance Items / Corrective Actions

- None Encountered.

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/3/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 and 8/2/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-28. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-12. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

Near Misses / Incidents

- None Encountered

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	8/4/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	72/85° F, Clear
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1645

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #23**
AmecFW: Stu Bills, Dave Ambrose, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and temporary liner, continuing east from Panel P93 installed on 8/3/16 (approximate Sta. 304+60). Material to be placed from Panel P93 running approximately 85 ft. east to approximate Sta. 303+75.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting vacuum box and repair activities for LLDPE previously installed on 8/3/16. In addition, two destruct samples were collected for laboratory analysis. One fusion weld destruct sample – DS-29 was collected from Panel P90 / P91. One extrusion weld destruct sample was also collected – DSX-13 from Panel P90 Repair R-401.
- While repair / vacuum box activities were being conducted ESI deployed the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed moving east through Panel P81 (approximate Sta. 306+20) up to Panel P86 (approximate Sta. 305+80). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/4/16 Photo Log for supporting photographs.
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 304+60 (Panel P93 installed on 8/3/16) to approximate Sta. 303+75. Refer to *Soil Subgrade Approval* forms from 8/4/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 3, 4, and 5 of the daily photo log for 8/4/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 304+60 (east of Panel P93) moving east to approximate Sta. 303+75. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/4/16 Photo Log for supporting photographs.
- Additionally, GCL was placed along the areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included a small area along the northern edge of SA-6 North east of Sta. 303+75. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/4/16 *Photograph Log*.
- Based on an LLDPE inventory completed by Entact, it was determined that approximately two additional rolls of 60-mil LLDPE would be required to complete the remaining area of SA-6 North. As such, three temporary panels were installed (to be replaced once new LLDPE rolls were received) from approximate Sta. 304+60 to approximate Sta. 303+75 (area of SA-6 North at upper elevation above the water table).
- After placement of GVL, three temporary panels were installed east of Panel P93 (installed on 8/3/16) and moving east. The three temporary panels were installed up to approximate Sta. 303+75 (did not cover the GCL or remaining area of subgrade to the east as permanent 60-mil panels will be installed continuing east from the temporary panel on 8/5/16.
- Note: since no permanent LLDPE was installed, and only temporary panels were placed, no repairs or non-destructive testing was conducted on the temporary panels.

Non-Conformance Items / Corrective Actions

- None Encountered.

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/4/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct results for samples DS-29 and DSX-13.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, and 8/3/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-28. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-12. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

Near Misses / Incidents

- None Encountered

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	8/5/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	75/85° F, Clear
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1745

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #24**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from the third temporary panel installed on 8/4/16 (approximate Sta. 303+75). Material to be placed from Temp Panel 3 running approximately 60 ft. east to approximate Sta. 303+15.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed moving east through Panel P86 (approximate Sta. 305+80) up to Panel P93 (approximate Sta. 304+60). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/5/16 Photo Log for supporting photographs.
- While GDL was being deployed, a puncture / penetration through the liner was fixed at Panel P36. The penetration was due to work activities outside of SA-6 North, as a grounding rod was driven through the liner. This penetration was recorded as a non-conformance issue, and is identified as Repair R-418 on the *Repair Report.*
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 303+75 (east of temporary panels installed on 8/4/16) to approximate Sta. 303+15. Refer to *Soil Subgrade Approval* forms from 8/5/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 5 to 8 of the daily photo log for 8/5/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 303+75 (east of temporary panels) moving east to approximate Sta. 303+15. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/5/16 Photo Log for supporting photographs. Note: GVL was placed along the southern end of SA-6 North at areas above the site water table (areas not covered by GCL).
- Additionally, GCL was placed along the northern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included an area along the northern edge of SA-6 North from Sta. 303+75 to Sta. 303+15. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/5/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east of the temporary panels (installed on 8/4/16). The LLDPE panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 303+75 (east of temporary panels) to approximate Sta. 303+15. A total of five panels were installed (P94, P95, P96, P97, and P98). Note: During placement of Panel P96 the LLDPE panel terminated along the southern end of SA-6 North, thus the remaining run of LLDPE was installed as Panel P97. Panels P94, P95, and P98 ran the entire width of SA-6 North (north to south) spanning approximately 235 ft.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 8/5/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 303+15, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 8/5/16 *Seam Control Form* for non-destructive testing details.
- ESI conducted repair activities for Panels P94 to P98 (installed on 8/5/16). A total of thirteen repairs (R-418 through R-430) were observed and fixed (according to the project specifications) from Panels P94 through P98. Refer to 8/5/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- ESI also completed the pipe boot construction for Injection Well 088-IW-02. Additional details are provided in the 8/5/16 Pipe Boot Forms. No destruct samples were collected on 8/5/16.

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 10 (Sheet #10) – Penetration / puncture through LLDPE geomembrane
    - Penetration / puncture through LLDPE geomembrane from work activities outside of geosynthetic installation. Grounding rod driven through liner. Puncture exposed, and hole patched / repaired as per project specifications and outlined in the non-conformance log.

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/5/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, and 8/4/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-29. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-13. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Daily QA Documents Completed

Appendix / QA Forms	***Sheet / Page Numbers***	***Comments***
A1 – Certificate of Completion		To be completed at termination of project
A2 – Receiving and Inspection		NA – no new material delivered on 8/5/16
A3 – Photo Log	Pages 1 – 8	Total of 15 photos outlining pertinent daily observations and descriptions for 8/5/16
A4 – Geosynthetic Inventory Log		Completed to date; no updates from 8/5/16
A5 – Subgrade Approval	Sheet 18 & ESI (8/5/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer
A6 – Trial Weld Log	Page 7	One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 8/5/16
A7 – Panel Placement Log	Page 13	One panel placement log provided by ESI and confirmed by Langan for panels placed on 8/5/16
A8 – Destruct Seam Testing COC		NA – no destruct samples collected on 8/5/16
A9 – Seam/Non-Destruct. Test Log	Page 36	One seam control form provided by ESI and confirmed by Langan for air pressure testing conducted on 8/5/16

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	8/8/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	85/95° F, Sunny, Humid
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement		**TIME:**	0645 – 1215

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #25**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P98 installed on 8/5/16 (approximate Sta. 303+15). Material to be placed from Panel P98 running approximately 45 ft. east to approximate Sta. 302+70.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI completing vacuum box testing for repairs from Panels P94 to P98 (installed on 8/5/16). Additionally, two destruct samples were collected. One fusion weld destruct sample – DS-30 was collected from Panel P97 / P98, and one extrusion weld sample DSX-14 was collected from Panel P98 (Repair R-430).
- ESI deployed the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed moving east through Panel P93 and up to the temporary panels (installed on 8/4/16). Approximately 2 rolls of GDL were placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/8/16 Photo Log for supporting photographs.
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 303+15 (east of Panel P98 installed on 8/5/16) to approximate Sta. 302+70. Refer to *Soil Subgrade Approval* forms from 8/8/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 303+15 (east of Panel P98) moving east to approximate Sta. 302+70. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/8/16 Photo Log for supporting photographs. Note: GVL was placed along the southern end of SA-6 North at areas above the site water table (areas not covered by GCL).

- Additionally, GCL was placed along the northern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included an area along the northern edge of SA-6 North from approximate Sta. 303+15 to Sta. 302+70. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/8/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east Panel P98 (installed on 8/5/16). The LLDPE panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 303+15 (east of Panel P98) to approximate Sta. 302+70. A total of two panels were installed (P99 and P100). Panels P99 and P100 ran the entire width of SA-6 North (north to south) spanning approximately 238 ft.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 8/8/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 302+70, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/8/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P99 and P100 (installed on 8/8/16) as outlined below.
- ESI conducted repair activities for Panels P99 and P100 (installed on 8/8/16). A total of seven repairs (R-431 through R-437) were observed and fixed (according to the project specifications) from Panels P99 to P100. Refer to 8/8/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.

Non-Conformance Items / Corrective Actions

- None Encountered

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/8/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DS-30 and DSX-14.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, and 8/5/16. ESI Forms still to be reviewed.

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-29. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-13. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	8/9/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	85/90° F, Clear
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement		**TIME:**	0645 – 1800

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #26**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth, Kale Novalis
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P100 installed on 8/8/16 (approximate Sta. 302+70). Material to be placed from Panel P100 running approximately 100 ft. east to approximate Sta. 301+70.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P94 (approximate Sta. 303+75), moving east through Panel P97 (approximate Sta. 303+15). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/9/16 Photo Log for supporting photographs.
- While GDL was being deployed, ESI also collected two destruct samples for laboratory analysis. Two fusion weld destruct samples – DS-31 was collected from Panel P79 / P80 and DS-32 was collected from Panel P86 / P87. These additional samples were collected to supplement the destruct sample data previously collected beyond failed destruct sample DS-26. DS-31 and DS-32 were collected between the destruct samples collected at 1,500 LF to provide additional sample information.
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 302+70 (Panel P100 installed on 8/8/16) to approximate Sta. 301+70. Refer to *Soil Subgrade Approval* forms from 8/9/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 9 to 12 of the daily photo log for 8/9/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 302+70 (east of Panel P100) moving east to approximate Sta. 301+70. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/9/16 Photo Log for supporting photographs.
- Additionally, GCL was placed along the northern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs), which included an area along the northern edge of SA-6 North from approximate Sta. 302+70 to Sta. 301+70. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/9/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east from Panel P100 (installed on 8/8/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 302+70 (Panel P100) to approximate Sta. 301+70. A total of six panels were installed (P101, P102, P103, P104, P105, and P106). Note: During placement of Panel P101 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P102. Similarly, during placement of Panel P104, the roll of LLDPE terminated near the northern end of SA-6 North and the remaining run of LLDPE was installed as P105. Panels P103 and P106 ran the entire width of SA-6 North (approx. 235 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test) for each weld. The results of the pre-trial weld are provided in the 8/9/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 301+70, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/9/16 *Seam Control Form* for pressure testing details. Additionally, repair activities were conducted for Panels P100 to P106 (installed on 8/9/16)
- ESI conducted repair activities for Panels P100 to P106 (installed on 8/9/16). A total of eight repairs (R-438 through R-445) were observed and fixed (according to the project specifications) from Panels P100 through P106. Refer to 8/9/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds. Repair activities for Panels P100 to P106 to be completed on 8/10/16.
- ESI also conducted spark testing for seven pipe boots / penetrations total. Prior to spark testing, Entact conducted methane testing prior to spark testing and a concentration of 0.0% was measured at each location. Spark testing was completed for Extraction Pump Sta. 2, Gas Vent GV-2, Utility Corridor Drain Pipe, Injection Well 088-IW-02, and Injection Well 088-IW-03. The vertical welds and base of the boots were tested and no sparks were observed (thus the spark tests passed). During spark testing of Piezometer PZ4 and Well 115-E5-SO,a spark was observed during testing as the spark was able to arc to the wire through a section of vertical weld. Area was re-grinded, rewelded, and retested on 8/9/16 and spark retest passed.

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 11 (Sheet #11) – Failed spark test along vertical weld of Piezometer PZ4
    - Failed spark test identified during spark testing of Piezometer PZ4. Spark able to arc to wire through section of vertical weld (thin weld). Weld to be grinded, re-welded, and re-tested on 8/9.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Non-Conformance Items / Corrective Actions (continued)

- Non-Conformance No. 12 (Sheet #12) – Failed spark test along vertical weld of Well 115-E5-SO
    - Failed spark test identified during spark testing of Well 115-E5-SO. Spark able to arc to wire through section of vertical weld (thin weld). Weld to be grinded, re-welded, and re-tested on 8/9.

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/9/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DS-31 and DS-32.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, and 8/8/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-30. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-14. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	8/10/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	82/88° F, Overcast
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1315

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #27**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) for area previously covered by temporary panels (area east of Panel P93). Temporary panels were removed, and new LLDPE was placed from Panel P93 (approximate Sta. 304+60) running approximately 85 ft. east to approximate Sta. 303+75 (subgrade previously approved on 8/4/16).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI continuing with repair activities for Panels P100 to P106 (installed on 8/9/16). The repairs were patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Additional details are outlined on the 8/10/16 *Repair Report.*
- ESI also collected two destruct samples from Panels P100 to P106 (installed on 8/9/16) for laboratory analysis. One fusion weld destruct samples – DS-33 was collected from Panel P104 / P106 and one extrusion weld destruct sample – DSX-15 was collected from Repair R-445 (Panel P104 / P106).
- While repair / vacuum box activities were being conducted ESI removed the temporary panels from approximate Sta. 304+60 to approximate Sta. 303+75 which were previously installed on 8/4/16. Note: soil subgrade approval for this area was also completed on 8/4/16 prior to the temporary panel placement. 16 oz. geotextile and GVL were also placed on 8/4/16 following subgrade approval.
- LLDPE geomembrane was installed continuing east from Panel P93 (installed on 8/4/16) up to Panel P94 (installed on 8/5/16). The new LLDPE panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 304+60 (east of Panel P93) to approximate Sta.303+75 (Panel P94) . A total of four panels were installed (P107, P108, P109, and P110). Note: During placement of Panel P109 the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P110. Panels P107 and P108 ran the entire width of SA-6 North (approximately 233 ft.) from north to south.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing for each weld (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 8/10/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 303+75, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/10/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P107 to P110 (installed on 8/10/16)
- ESI conducted repair activities for Panels P107 to P110 (installed on 8/10/16), along with the repair activities for Panels P100 to P106 (installed on 8/9/16). A total of twenty-two repairs (R-446 through R-467) were observed and fixed (according to the project specifications). Refer to 8/10/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- ESI also completed pipe boot / penetrations for Gas Vent GV-1 and Well 115-E4-SO. Additional details are provided in the 8/10/16 Pipe Boot Construction Logs.
- One fusion weld sample – DS-34 was also collected from Panels P107 to P110 (installed on 8/11/16) from Panel P94 / P110 seam for laboratory analysis.

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 13 (Sheet #13) – Subgrade irregularity identified as R-457 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P107 / P108. Stone was subsequently removed, and hole was patched / repaired following project specs as further described in *Sheet 13 Notice of Non-Compliance.*

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/10/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DS-33, DS-34, and DSX-15.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, 8/8/16, and 8/9/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-32. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-14. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

Near Misses / Incidents

- None Encountered

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	8/11/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	85/90° F, Overcast, Humid, Iso. Storms
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1715

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #28**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P106 installed on 8/9/16 (approximate Sta. 301+70). Material to be placed from Panel P106 running approximately 45 ft. east to approximate Sta. 301+25.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting vacuum box testing and "Add On" repair activities for Panels P94 to P104. ESI completed Add On repairs along the southern end of SA-6 North. Additional LLDPE was installed so that the cap extended a minimum of 1 ft. beyond the edges of the SCB wall. These repairs were recorded and documented on the 8/11/16 *Repair Report.*
- Following repair activities, ESI placed geocomposite drainage layer (GDL) continuing east of Panel P93. GDL was placed over Panels P107 to P110 (installed on 8/10/16) from approximate Sta. 304+60 to approximate Sta. 303+75. GDL was placed according to the project specs with white plastic fasteners spaced at a maximum of 5 ft. with the top layer of geotextile sewn.
- Prior to soil subgrade approval, the edge of Panel P106 (installed on 8/9/16) was pulled back to expose the underlying GCL layer. A small portion of the GCL had become saturated due to overnight storms. The saturated GCL was cut and exposed to dry the GCL and soil subgrade. A new piece of GCL was then installed over the saturated GCL, secured with bentonite, and leistered in place. See Photos 6 & 7 in 8/11/6 *Photograph Log.*
- Following the GCL activities, Langan and Entact conducted soil subgrade approval from approximate Sta. 301+70 (east of Panel P106 installed on 8/9/16) to approximate Sta. 301+25. Refer to *Soil Subgrade Approval* forms from 8/11/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 301+75 (east of Panel P106) moving east to approximate Sta. 301+25. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/11/16 Photo Log for supporting photographs. Note: GVL was placed along the southern end of SA-6 North at areas above the site water table (areas not covered by GCL).
- Additionally, GCL was placed along the northern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included an area along the northern edge of SA-6 North from approximate Sta. 301+75 to Sta. 301+25. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/11/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east Panel P106 (installed on 8/9/16). The LLDPE panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 301+75 (east of Panel P106) to approximate Sta. 301+25. A total of two panels were installed (P111 and P112). Panels P111 and P112 ran the entire width of SA-6 North (north to south) spanning approximately 237 ft.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 8/11/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 301+25, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/11/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P111 and P112 (installed on 8/11/16)
- ESI completed repair activities for Panels P94 to P104 (Add On repairs along southern end of the cap) and Panels P111 & P112 (installed on 8/11/16). A total of twenty-one repairs (R-468 through R-485 and R-495 to R-497) were observed and fixed (according to the project specifications). Refer to the 8/11/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- No destruct samples collected on 8/11/16.

Non-Conformance Items / Corrective Actions

- None Encountered.

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/11/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.	**DATE:**	8/12/2016
PROJECT:	SA-6 North Capping		**WEATHER:**	85/98° F, Sunny, Humid
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement	**TIME:**	0645 – 1730

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #29**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P112 installed on 8/11/16 (approximate Sta. 301+25). Material to be placed from Panel P112 running approximately 45 ft. east to approximate Sta. 300+80.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying orange geocomposite drainage layer (GDL) continuing east from Panel P98. GDL was placed over Panels P99 to P106 (installed on 8/8/16 and 8/9/16) from approximate Sta. 303+15 (Panel P99) to approximate Sta. 301+70 (Panel P106). GDL was placed according to the project specs with white plastic fasteners spaced at a maximum of 5 ft. with the top layer of geotextile sewn.
- While GDL was being deployed ESI also conducted vacuum box testing and minor repairs for Panels P111 and P112 (installed on 8/11/16). Additional details are provided in the 8/12/16 *Repair Report.*
- ESI also completed spark testing for Gas Vent GV-1 and Well 115-E4-SO. Prior to spark testing, methane testing was completed by AmecFW and a concentration of 0.0% was measured for both boots. Spark testing was then completed for Gas Vent GV-1 along the base of the boot and vertical weld and no sparks were observed (spark test passed). During spark testing of Well 115-E4-SO a spark was observed along the edge of the vertical weld as the extrusion weld was not centered over the copper wire. This area was marked by ESI, grinded, re-welded, and retested. No sparks were observed during the spark retest thus the retest passed.
- Prior to soil subgrade approval, the edge of Panel P112 (installed on 8/11/16) was pulled back to expose the underlying GCL layer. A small portion of the GCL had become saturated due to overnight storms. The saturated GCL was cut and exposed to dry the GCL and soil subgrade. A new piece of GCL was then installed over the saturated GCL, secured with bentonite, and leistered in place.
- Following the GCL activities, Langan and Entact conducted soil subgrade approval from approximate Sta. 301+25 (east of Panel P112 installed on 8/11/16) to approximate Sta. 300+80. Refer to *Soil Subgrade Approval* forms from 8/12/16 for additional details.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 301+25 (east of Panel P112) moving east to approximate Sta. 300+80. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/12/16 Photo Log for supporting photographs. Note: GVL was placed along the southern end of SA-6 North at areas above the site water table (areas not covered by GCL).
- Additionally, GCL was placed along the northern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included an area along the northern edge of SA-6 North from approximate Sta. 301+25 to approximate Sta. 300+80. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/12/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east of Panel P112 (installed on 8/12/16). The LLDPE panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 301+25 (east of Panel P112) to approximate Sta. 300+80. A total of two panels were installed (P113 and P114). Panels P113 and P114 ran the entire width of SA-6 North (north to south) spanning approximately 233 ft.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each weld). The results of the pre-trial weld are provided in the 8/12/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 300+80, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/12/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P113 and P114 (installed on 8/12/16)
- ESI completed repair activities for Panels P113 to P114 (installed on 8/12/16). A total of seven repairs (R-486 through R-489 and R-492, R-493, and R-494) were observed and fixed (according to the project specifications). Refer to the 8/12/16 *Repair Report* for additional details. Repairs were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- ESI also completed pipe boot / penetrations for Access Manhole Sta. 18+00 and Injection Well 088-IW-01. Additional details are provided in the 8/12/16 Pipe Boot Forms.
- No destruct samples collected on 8/12/16.

Non-Conformance Items / Corrective Actions

- Non-Conformance No. 14 (Sheet #14) – Failed spark test along vertical weld of Well 115-E4-SO
    - Failed spark test identified during spark testing of Well 115-E4-SO. Spark observed along edge of extrusion weld (weld not centered over wire). Area was grinded, rewelded, and retested and no sparks were observed during spark retest (spark retest passed).

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/12/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, 8/8/16, 8/9/16, 8/10/16, and 8/11/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-34. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-15. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Daily QA Documents Completed

Appendix / QA Forms	***Sheet / Page Numbers***	***Comments***
A1 – Certificate of Completion		To be completed at termination of project
A2 – Receiving and Inspection		NA – no new material delivered on 8/12/16
A3 – Photo Log	Pages 1 – 8	Total of 16 photos outlining pertinent daily observations and descriptions for 8/12/16
A4 – Geosynthetic Inventory Log		Completed to date; no updates from 8/12/16
A5 – Subgrade Approval	Sheet 22 & ESI (8/12/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer
A6 – Trial Weld Log	Pages 8-9	One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 8/12/16
A7 – Panel Placement Log	Page 15	One panel placement log provided by ESI and confirmed by Langan for panels placed on 8/12/16

SA-6 North – Injection Well 088-IW-01

Description:

ESI completing pipe boot / penetration for Injection Well 088-IW-01.

LANGAN
ENGINEERING & ENVIRONMENTAL SERVICES

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	8/13/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	85/98° F, Sunny, Humid
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement		**TIME:**	0645 – 1800

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #30**
AmecFW: Philemon Onyango, Josh Boynton
Langan: Dan Bosworth
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P114 installed on 8/12/16 (approximate Sta. 300+80). Material to be placed from Panel P114 running approximately 80 ft. east to approximate Sta. 300+00 (east end of SA-6 North).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting vacuum box testing and minor repair activities for Panels P113 / P114 (installed on 8/12/16). Repairs were patched, extrusion welded, and vacuum box tested as per project specifications. Additional details are outlined on the 8/13/16 *Repair Report*. Additionally, two destruct samples were collected. One fusion weld destruct sample DS-35 was collected from Panel P112 / P113, and one extrusion weld destruct sample – DSX-16 was collected from Panel P112 (Repair R-478)
- While repair activities were being completed ESI deployed orange geocomposite drainage layer (GDL) continuing east from Panel P106. GDL was placed over Panels P106 (approximate Sta. 301+70) to approximate Sta. 300+80 (Panel P114). GDL was placed according to the project specs with white plastic fasteners spaced at a maximum of 5 ft. with the top layer of geotextile sewn. Note: repairs were completed for Panels P113 / P114 in the early morning and were surveyed and verified before GDL was deployed over the panels later in the morning.
- ESI also completed spark testing for Access Manhole Sta. 18+00 and Injection Well 088-IW-01. Prior to spark testing, methane testing was completed by AmecFW and a concentration of 0.0% was measured for both boots. Spark testing was then completed along the base of the boot and vertical weld for both locations. No sparks were observed during either test (spark tests passed).
- Following the GDL activities, Langan and Entact conducted soil subgrade approval from approximate Sta. 300+80 (east of Panel P114 installed on 8/12/16) to approximate Sta. 300+00 (east end of cap). Refer to *Soil Subgrade Approval* forms from 8/13/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

loose material greater than ½". The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 300+80 (east of Panel P114) moving east to approximate Sta. 300+00 (east end of cap). GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/13/16 Photo Log for supporting photographs. Note: GVL was placed along the southern end of SA-6 North at areas above the site water table (areas not covered by GCL).
- Additionally, GCL was placed along the northern and eastern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included an area along the northern edge of SA-6 North from approximate Sta. 300+80 to approximate Sta. 300+00 (east end of cap). GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/13/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east of Panel P114 (installed on 8/12/16). The LLDPE panels were generally oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 300+80 (east of Panel P114) to approximate Sta. 300+00. A total of five panels were installed (P115, P116, P117, P118, and P119). Panels P116, P117, P118, and P119 were oriented northwest/southeast and were placed to fill in the triangle area along the southeast portion of the cap. Panel P115 ran the entire width of SA-6 North (north to south) spanning approximately 235 ft.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (minimum of 3 samples for each test). The results of the pre-trial weld are provided in the 8/13/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 300+00 (east end of cap), ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/13/16 *Seam Control Form* for non-destructive testing details.
- Temporary patches were leistered in place for Panels P115 to P119, but no repair activities (extrusion welding) were completed on 8/13/16 (to be finished Monday – 8/15/16). ESI completed repair activities for Panels P113 to P114 (installed on 8/12/16). A total of seven repairs (R-490, R-491, R-498 to R-502) were observed and fixed (according to the project specifications). Refer to the 8/13/16 *Repair Report* for additional details. Repairs were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.

Non-Conformance Items / Corrective Actions

- None Encountered.

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/13/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DSX-16 and DS-35.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, 8/8/16, 8/9/16, 8/10/16, 8/11/16, and 8/12/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-34. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-15. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

Daily QA Documents Completed

Appendix / QA Forms	***Sheet / Page Numbers***	***Comments***
A1 – Certificate of Completion		To be completed at termination of project
A2 – Receiving and Inspection		NA – no new material delivered on 8/13/16
A3 – Photo Log	Pages 1 – 8	Total of 16 photos outlining pertinent daily observations and descriptions for 8/13/16
A4 – Geosynthetic Inventory Log		Completed to date; no updates from 8/13/16
A5 – Subgrade Approval	Sheet 23 & ESI (8/13/16)	Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer
A6 – Trial Weld Log	Page 9	One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 8/13/16
A7 – Panel Placement Log	Pages 15 - 16	One panel placement log provided by ESI and confirmed by Langan for panels placed on 8/13/16
A8 – Destruct Seam Testing COC	Sheet 4	Updated with destruct samples collected on 8/13/16
A9 – Seam/Non-Destruct. Test Log	Pages 43-44	One seam control form provided by ESI and confirmed by Langan for pressure testing conducted on 8/13/16
A10 – Repair Log	Pages 25-26	One repair log provided by ESI and confirmed by Langan for repairs completed for 8/13/16

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	8/15/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	82/92° F, Sunny, Humid
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Geocomposite & LLDPE Placement		**TIME:**	0645 – 1500

CONTRACTOR & EQUIPMENT: **ENTACT & ESI** *Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)	**PERSONNEL ON SITE:** **Day #31** **AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton **Langan:** Dan Bosworth **ENTACT / ESI**: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of placement of geocomposite drainage layer (GDL) over approved LLDPE geomembrane (Panel P115 to P119). Note: LLDPE geomembrane installation complete up to east end of cap (Panels P115 to P119).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI completing repair activities and vacuum box testing for Panels P115 to P119 (installed on 8/13/16). A total of twelve repairs were (R-503 to R-514) observed and fixed according to the project specifications. Refer to the 8/15/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of two destruct samples were collected. One destruct sample DS-36 was collected from Panel P117 / P118 seam and one extrusion weld destruct sample – DSX-17 was collected from Panel P118 (Repair R-505) for laboratory analysis.
- ESI also completed the boot construction for Piezometer PZ2. Following the boot completion, methane / spark testing for Piezometer PZ2 was completed. Methane testing was conducted prior to spark testing and a concentration of 0.0% was measured. Spark testing was then conducted along the base of the boot and vertical weld and no sparks were observed (spark test passed). Additional details are provided in the Piezometer PZ2 boot construction log and the 8/15 *Spark Test Log.*
- After repair activities were completed, the as-built information including repair locations, distances, etc. was verified and ESI deployed the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane (Panels P115 to P119). GDL was placed from approximate Sta. 300+80 to the east end of SA-6 North (approximate Sta. 300+00). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/15/16 Photo Log for supporting photographs.

Non-Conformance Items / Corrective Actions

- None Encountered.

Action Items – Pending

- Complete Daily Report and Photo Log (for 8/15/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DSX-17 and DS-36.

Action Items – Weekly Completions

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, 8/8/16, 8/9/16, 8/10/16, 8/11/16, 8/12/16, and 8/13/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-35. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-16. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

Near Misses / Incidents

- None Encountered

Future Activities Scheduled

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

SITE OBSERVATION REPORT

PROJECT No.:	10053001	**CLIENT:** Honeywell International, Inc.		**DATE:**	8/17/2016
PROJECT:	SA-6 North Capping			**WEATHER:**	82/92° F, Sunny, Humid
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Final Site Walk / Observation		**TIME:**	0745 – 1015

CONTRACTOR & EQUIPMENT: **ENTACT & ESI** *Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)	**PERSONNEL ON SITE:** **Day #32** **AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton **Langan:** Dan Bosworth, Jeff Stoicescu **ENTACT / ESI**: Keith Goisse, Caroline Panico

Site Activities

- Langan (Dan Bosworth and Jeff Stoicescu) onsite for final site walk of SA-6 North to observe completed geosynthetic components of SA-6 North capping activities.
- Langan conducted a site walk of the completed SA-6 North cap spanning from the west end (approximate. Sta. 319+00) to the east end (approximate Sta. 300+00). During the site walk, the following conditions were observed (in relation to the geosynthetic components of the cap installation):
    - Condition 1: The final GDL geotextile wrap around Gas Vent GV-2 was cut and gas vent was exposed.
    - Action Item: Based on discussions with Entact, the GDL was cut so that the construction of the gas vent could be completed. Entact plans to conduct leistering activities to reseal the geotextile wrap and secure the GDL.
    - Condition 2: Wrinkles were observed along the east end of the cap (approximate Sta. 300+00) due to the spreading of cover soils over the GDL.
    - Action Item: Entact to attempt to work out wrinkles to the east end of the cap. If wrinkles cannot be removed, ESI will return to the site to cut the geomembrane and complete patch / repair activities.
    - Condition 3: LLDPE was pulled taught along the slopes / contour changes along SA-6 North for areas where cover soil was being placed. During placement of cover soil, sand bags were removed from the cap so that the cover soil could be placed over the GDL. However, for areas where cover soil was not completed by the end of the day, the sand bags were not returned and the geosynthetic material was left un-weighted, thus causing the LLDPE to trampoline.
    - Action Item: Entact to ensure that areas not covered with cover soil at the end of the day will be secured with sand bags.
- Above items shall be reviewed on Friday (8/19).
- Additional details are outlined in the 8/17/16 *Photograph Log.*

PROJECT:	SA-6 North Capping			**WEATHER:**	85/95° F, Sunny, Humid
LOCATION:	60 Kellogg St., Jersey City New Jersey	**TASK.:** Final Site Walk / Observation		**TIME:**	0815 – 1230

CONTRACTOR & EQUIPMENT:
ENTACT & ESI
Equipment: Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

PERSONNEL ON SITE: **Day #33**
AmecFW: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
Langan: Dan Bosworth, Kale Novalis
ENTACT / ESI: Keith Goisse, Caroline Panico

Site Activities

- Langan onsite for observation of wrinkle repair along the east end of the cap (approximate Sta. 300+00) due to the spreading of cover soils over the GDL.
- ESI completed repairs of wrinkles along the east end of the cap (approximate Sta. 300+00) as outlined in the 8/17/16 Report. Upon cutting of the GDL layer it was observed that the wrinkles were contained to the GDL only with no observed damage to the LLDPE or soil subgrade. As such, the GDL layer was cut, flattened, and leistered. No repairs to the LLDPE were required.
- Additional details are outlined in the 8/19/16 *Photograph Log.*

Preweld Test Report

Project Name: HONEYWELL SA6 NORTH CAP **Job #** 12-11-1399 **Superintendent:** TONY UNG

Material Type: 60 MIL LLDP MICROSPIKE LINER **Primary** X **Pond**

Job Description: SINGLE LAYER CAP **Secondary** **Cell**

Reported By : KHAI S. SOK **Cap** X

Other : CAP CONSTRUCTION

Peel Test Extrusion Minimum 66 **PPI**

Peel Test Fusion Minimum 75 **PPI**

Shear Test Minimum 90 **PPI**

Liner Types **S = Smooth** **T = Textured** **SG = Super Grip**

Seam Control Form

Project Name: HONEYWELL SA6 NORTH CAP **Job #** 12-11-1399 **Superintendent:** TONY UNG

Material Type: 60 MIL LLDP MICROSPIKE LINER **Primary** X **Pond** | **Air Pressure Test** 30 **PSI**

Job Description: SINGLE LAYER CAP **Secondary** **Cell** | **Air Pressure Hold Time** 5 **Minutes**

Reported By KHAI S. SOK **Cap** X **Allowable Air Pressure Loss** 4 **PSI**

Other CAP CONSTRUCTION

21,428 **Total LF of Welding to Date Combined** **Extrusion LF Weld Total To Date** **126** **Fusion LF Weld Total To Date:** **21,302**

Weld Date	Seam No.	Seam Length	Time Welded	Operator Name/ ID	Mach No.	Mach Speed	Mach Temp	Preheat Temp	Test Date	Test Type	AT Time In / PSI IN	AT Time Out / PSI OUT	PSI Loss	Test Results
7/27/16	75 / 76	71	11:08	AP	4000	6	860		7/27/16	Air Pressure	11 27 / 30	11 32 / 29	1	Pass

Sample reported as "AD-BRK" under EPA Break Classification Code. Although specimen met the minimum peel requirements, since the sample broke at the weld, the sample is reported as a failed sample.

PEEL AND SHEAR TEST RESULTS
DESTRUCTIVE SEAM TESTING

ASTM D 6392

Geotechnics
INTEGRITY IN TESTING

CLIENT: ENTACT, LLC
CLIENT PROJECT: HONEYWELL SA6 NORTH & SOUTH CAPS

PROJECT NO.: L16040-03
LAB ID NO.: L16040-03-02
MATERIAL: 60 MIL LLDPE
SEAM TYPE: DOUBLE FUSION

Langan Environmental Services

Dear Mr. Bosworth,

Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Honeywell 5A-6 North**
TRI Job Reference Number:	**21760**
Material(s) Tested:	(1) Heat Fusion Weld Seam(s) (1) Single Extrusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.
Sincerely,

James Burgess

Geosynthetic Services Division

Bill To:

Langan Environmental Services

Dear Mr. Bosworth,

Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Honeywell 5A-6 North**
TRI Job Reference Number:	**23021**
Material(s) Tested:	(1) Single Extrusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.
Sincerely,

James Burgess

Geosynthetic Services Division

Appendix M
Summary of Non-Compliance & Corrective Action Sheets

LANGAN

Notice of Non-Compliance and Corrective Action

Sheet # 1

General Project Information	
Project Name: SA-6 North Project No.: 100530001 Owner/Contr.: Honeywell / AmecFW QA Monitor: Langan	Date: 6/23/16 Contractor in NC: Entact Non-Compliance No.: 1 Notes: Soil Subgrade Irregularity
Reference	
Item: Soil Subgrade Specification Sec. No.: 02372	Drawing No.: Other:

Description of Non-Compliance

Cross Reference (QA Inspection Form & Sheet No.):

Rock / loose debris (>1/2 – inches) observed underneath LLDPE geomembrane at Panel P6. This non-compliance issue is also noted on the 6/23/16 Repair Report, and is identified as R-10. The location of this repair was recorded and logged (via GPS) by the team.

Contractor's Response

Loose debris / rock area identified as subgrade irregularity. Rock to be removed and the area will be patched / repaired, and sealed with an extrusion weld as outlined in the project specifications. Vacuum box testing will then be conducted to confirm repair.

Follow Up Action Required

Remove rock / debris from underneath cap and patch / repair area with extrusion welds following project specifications and as outlined in the Contractor's Response.

Follow Up Action Taken

Cross Reference (QA Inspection Form & Sheet No.):

Rock was removed from underneath LLDPE geomembrane as a small hole (< 4-inches) was made in the LLDPE to remove the stone. This hole was then repaired with approximate 3 ft. by 3 ft. geomembrane patch. The patch was overlapped a minimum of 4-inches beyond the edges of the cut, conformed so that the edges were rounded, and sealed with an extrusion weld (as outlined in Section 02372). Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the hole was properly patched (as outlined in Section 02372). Refer to Photo #12 and Photo #14 of 6/23/16 photo log for repair of R-10.

Sheet # 2

General Project Information	
Project Name: SA-6 North Project No.: 100530001 Owner/Contr.: Honeywell / AmecFW QA Monitor: Langan	Date: 6/29/16 Contractor in NC: Entact Non-Compliance No.: 2 Notes: Soil Subgrade Irregularity
Reference	
Item: Soil Subgrade Specification Sec. No.: 02372	Drawing No.: Other:

Description of Non-Compliance

Cross Reference (QA Inspection Form & Sheet No.):

Rock / loose debris (>1/2 – inches) observed underneath LLDPE geomembrane at Panel P26. Prior to deployment of the panel, the subgrade was observed by a field engineer who walked the placement area in approximate 200 ft. by 8 ft. transects to observe soil bearing conditions as well as items requiring removal prior to panel placement (i.e. materials such as rocks or other items that protrude >1/2" above the surface). In the event these conditions were during the subgrade observation, the material was removed and the area was observed again. After deployment of the GVL and LLDPE, the area was walked again (following the same procedure during the soil subgrade observation) to attempt to identify the presence of materials larger than ½" protruding below the LLDPE. During this latest observation, a rock was noted to be present below the LLDPE. It is possible that this rock may have been dislodged during deployment of the GVL which was pulled over a small portion of the subgrade surface. This non-compliance issue was repaired as defined below and on the 6/29/16 Repair Report, and is identified as R-98. The location of this repair was recorded and logged (via GPS) by the team.

Contractor's Response

Loose debris / rock area identified as subgrade irregularity. Rock to be removed and the area will be patched / repaired, and sealed with an extrusion weld as outlined in the project specifications. Vacuum box testing will then be conducted to confirm repair.

Follow Up Action Required

Remove rock / debris from underneath cap and patch / repair area with extrusion welds following project specifications and as outlined in the Contractor's Response. Assess GVL deployment methods to determine most effective method in reducing dislodgment of subgrade material.

Follow Up Action Taken

Cross Reference (QA Inspection Form & Sheet No.):

Rock was removed from underneath LLDPE geomembrane as a small hole (< 4-inches) was made in the LLDPE to remove the stone. This hole was then repaired with approximate 2 ft. by 2 ft. geomembrane patch. The patch was overlapped a minimum of 4-inches beyond the edges of the cut, conformed so that the edges were rounded, and sealed with an extrusion weld (as outlined in Section 02372). Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the hole was properly patched (as outlined in Section 02372). Refer to Photo #2 of 6/29/16 photo log for repair of R-98.

Notice of Non-Compliance and Corrective Action

Sheet # 3

General Project Information	
Project Name: SA-6 North Project No.: 100530001 Owner/Contr.: Honeywell / AmecFW QA Monitor: Langan	Date: 7/6/16 Contractor in NC: ESI Non-Compliance No.: 3 Notes: Failed Spark Test
Reference	
Item: Failed Spark Test Specification Sec. No.: 02372	Drawing No.: Other:

Description of Non-Compliance

Cross Reference (QA Inspection Form & Sheet No.):

During spark testing of Gas Vent GV-5 on 7/6/16, a small pinhole deficiency was identified (via spark test) within the vertical weld of the boot. As the point probe was passed over the weld, a visual spark was observed. The failed weld was marked by ESI and the area to be grinded, re-welded, and re-tested on 7/7/16. Additional details on the spark testing are also noted on the 7/6/16 Spark Test Log.

Contractor's Response

Failed spark test identified and confirmed on vertical weld for Gas Vent GV-5 pipe boot. Weld to be grinded, re-welded, and re-tested on 7/7/16 as outlined in the project specifications.

Follow Up Action Required

Grind area of weld requiring retesting, re-weld the vertical seam, and conduct additional spark testing to confirm integrity of weld.

Follow Up Action Taken

Cross Reference (QA Inspection Form & Sheet No.):

Area of vertical weld identified during spark testing was grinded, re-welded, and re-tested on 7/7/16. The extrusion weld was grinded by ESI to scratch / mar the surface and the area was re-welded. Following the welding activities, Entact conducted methane testing to confirm that the methane concentration was below 1% (measured as 0.0%). Following methane testing, ESI conducted a spark retest along the vertical weld, and no sparks or deficiencies were identified (spark retest passed). Refer to Photo #5 and Photo #6 of 7/7/16 Photo Log for spark retest details.

General Project Information	
Project Name: SA-6 North Project No.: 100530001 Owner/Contr.: Honeywell / AmecFW QA Monitor: Langan	Date: 7/6/16 Contractor in NC: ESI Non-Compliance No.: 4 Notes: Failed Spark Test
Reference	
Item: Failed Spark Test Specification Sec. No.: 02372	Drawing No.: Other:

Description of Non-Compliance

Cross Reference (QA Inspection Form & Sheet No.):

During spark testing of Well 115-W1-SO on 7/6/16, two small pinhole deficiencies were identified (via spark test) within the vertical weld of the boot. As the point probe was passed over the weld, a visual spark was observed along two areas of the weld. The failed weld was marked by ESI and the areas were to be grinded, re-welded, and re-tested on 7/7/16. Additional details on the spark testing are also noted on the 7/6/16 Spark Test Log.

Contractor's Response

Failed spark test identified and confirmed on vertical weld for Well 115-W1-SO pipe boot. Weld to be grinded, re-welded, and re-tested on 7/7/16 as outlined in the project specifications.

Follow Up Action Required

Grind area of weld requiring retesting, re-weld the vertical seam, and conduct additional spark testing to confirm integrity of weld.

Follow Up Action Taken

Cross Reference (QA Inspection Form & Sheet No.):

Two areas of vertical weld for Well 115-W1-SO identified during spark testing were grinded, re-welded, and re-tested on 7/7/16. The extrusion weld was grinded by ESI to scratch / mar the surface and the area was re-welded. Following the welding activities, Entact conducted methane testing to confirm that the methane concentration was below 1% (measured as 0.0%). Following methane testing, ESI conducted a spark retest along the vertical weld, and no sparks or deficiencies were identified (spark retest passed). Refer to Photo #7 and Photo #8 of 7/7/16 Photo Log for spark retest details.

General Project Information	
Project Name: SA-6 North Project No.: 100530001 Owner/Contr.: Honeywell / AmecFW QA Monitor: Langan	Date: 7/12/16 Contractor in NC: Entact Non-Compliance No.: 7 Notes: Soil Subgrade Irregularity
Reference	
Item: Soil Subgrade Specification Sec. No.: 02372	Drawing No.: Other:

Description of Non-Compliance

Cross Reference (QA Inspection Form & Sheet No.):

Rock / loose debris (>1/2 – inches) observed underneath LLDPE geomembrane at southern end of Panel P49 / P50. Prior to deployment of the panel, the subgrade was observed by a field engineer who walked the placement area in approximate 200 ft. by 8 ft. transects to observe soil bearing conditions as well as items requiring removal prior to panel placement (i.e. materials such as rocks or other items that protrude >1/2" above the surface). In the event these conditions were identified during the subgrade observation, the material was removed and the area was observed again. After deployment of the GVL and LLDPE, the area was walked again (following the same procedure during the soil subgrade observation) to attempt to identify the presence of materials larger than ½" protruding below the LLDPE. During this latest observation, a rock was noted to be present below the LLDPE. It is possible that this rock may have been dislodged during deployment of the GVL which was pulled over a small portion of the subgrade surface. This non-compliance issue was repaired as defined below and on the 7/12/16 Repair Report, and is identified as R-242. The location of this repair was recorded and logged (via GPS) by the team.

Contractor's Response

Loose debris / rock area identified as subgrade irregularity. Rock to be removed and the area will be patched / repaired, and sealed with an extrusion weld as outlined in the project specifications. Vacuum box testing will then be conducted to confirm repair.

Follow Up Action Required

Remove rock / debris from underneath cap and patch / repair area with extrusion welds following project specifications and as outlined in the Contractor's Response. Assess GVL deployment methods to determine most effective method in reducing dislodgment of subgrade material.

Follow Up Action Taken

Cross Reference (QA Inspection Form & Sheet No.):

Rock was removed from underneath LLDPE geomembrane along the southern edge of SA-6 North (approximately 3 ft. from the edge of the cap. As such, the edge of the LLDPE was cut to remove the stone. This cut was then repaired with an extrusion weld bead. Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the cut / bead was properly sealed (as outlined in Section 02372).

During this latest observation, a rock was noted to be present below the LLDPE. It is possible that this rock may have been dislodged during deployment of the GVL which was pulled over a small portion of the subgrade surface. This non-compliance issue was repaired as defined below and on the 7/27/16 Repair Report, and is identified as R-328. The location of this repair was recorded and logged (via GPS) by the team.

Contractor's Response

Loose debris / rock area identified as subgrade irregularity. Rock to be removed and the area will be patched / repaired, and sealed with an extrusion weld as outlined in the project specifications. Vacuum box testing will then be conducted to confirm repair.

Follow Up Action Required

Remove rock / debris from underneath cap and patch / repair area with extrusion welds following project specifications and as outlined in the Contractor's Response.

Follow Up Action Taken

Cross Reference (QA Inspection Form & Sheet No.):

Rock was removed from underneath LLDPE geomembrane as a small hole (< 4-inches) was made in the LLDPE to remove the stone. This hole was then repaired with approximate 2 ft. by 2 ft. geomembrane patch. The patch was overlapped a minimum of 4-inches beyond the edges of the cut, conformed so that the edges were rounded, and sealed with an extrusion weld (as outlined in Section 02372). Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the hole was properly patched (as outlined in Section 02372).

Geosynthetic Installer Representative _____ Date 7/28/16

Independent CQA Monitor _____ Date 7/28/16

LANGAN

Notice of Non-Compliance and Corrective Action

Sheet # 9

General Project Information	
Project Name: SA-6 North Project No.: 100530001 Owner/Contr.: Honeywell / AmecFW QA Monitor: Langan	Date: 7/28/16 Contractor in NC: ESI Non-Compliance No.: 9 Notes: Failed Destruct Sample
Reference	
Item: Soil Subgrade Specification Sec. No.: 02372	Drawing No.: Other:

Description of Non-Compliance

Cross Reference (QA Inspection Form & Sheet No.):

Destruct sample DS-26 (Repair R-312) collected from Panel P72 / P74 failed two of the five specimens for peel testing completed by the Geosynthetic Installer's Laboratory. Although the peel strength parameters exceeded the minimum strength requirements outlined in the project specifications, the break was reported as EPA Break Classification Code "AD BRK" by the laboratory. Although the coupons met the peel strength requirements, since the break was reported at the weld and not considered a film tearing bond (FTB), the sample was considered a failed sample and reported as a non-conformance item.

Contractor's Response

Destruct sample DS-26 break failure for two of the five specimens confirmed. As per project specs, an additional two field samples will be collected 10 ft. on each side of the failed sample. Both field samples will be tested for peel and shear strength parameters. The sample with the lower of the peel and shear strength parameters will be sent for confirmatory laboratory analysis.

Follow Up Action Required

Collect two field samples approximately 10 ft. on each side of failed destruct sample DS-26. If both samples pass the peel and shear strength requirements, the entire Panel 72/74 seam will be capped, sealed with an extrusion weld, and vacuum box tested.

Follow Up Action Taken

Cross Reference (QA Inspection Form & Sheet No.):

Two field samples (DS-26A and DS-26B) were cut approximately 10 ft. on each side of destruct sample DS-26 (along Panel P72 / P74 seam). Both samples passed the peel and shear strength requirements during field testing. Sample DS-26B exhibited peel and shear strength parameters slightly less than DS-26A. As such, DS-26B was sent for laboratory analysis and passed the peel and shear requirements. Panel P72 / P74 seam from sample DS-26A to DS-26B was capped, sealed with an extrusion weld, and vacuum box tested on 8/2/16.

Independent CQA Monitor _____ Date 8/2/16

LANGAN

Notice of Non-Compliance and Corrective Action

Sheet # 10

General Project Information	
Project Name: SA-6 North Project No.: 100530001 Owner/Contr.: Honeywell / AmecFW QA Monitor: Langan	Date: 8/5/16 Contractor in NC: Entact Non-Compliance No.: 10 Notes: Equipment Puncture
Reference	
Item: Soil Subgrade Specification Sec. No.: 02372	Drawing No.: Other:

Description of Non-Compliance

Cross Reference (QA Inspection Form & Sheet No.):

Equipment puncture through SA-6 North observed at Panel P36 (northern end of SA-6 North cap). Grounding rod was driven through liner by others. Puncture to be patched / repaired according to project specs. Additional details on the patch / repair work completed are described in the *8/5/16 Daily Report* and *8/5/16 Photograph Log*. This non-compliance issue was also noted on the 8/5/16 Repair Report, and is identified as RP-418. The location of this repair was recorded and logged (via GPS) by the team (along the hydraulic barrier [HB] wall).

Contractor's Response

Equipment puncture through geomembrane along SCB wall confirmed. Puncture to be covered with new patch, sealed, and extrusion welded according to project specifications.

Follow Up Action Required

Place patch over puncture location and repair and seal with extrusion weld according to project specs. Vacuum box to then be conducted to confirm integrity of weld.

Follow Up Action Taken

Cross Reference (QA Inspection Form & Sheet No.):

Geomembrane patch was placed over the equipment puncture and was overlapped a minimum of 4-inches beyond the edges of the cut, conformed so that the edges were rounded, and sealed with an extrusion weld (as outlined in Section 02372). The weld was then vacuum box tested and passed. Additional details provided in the 8/5/16 Daily Report and 8/5/16 Photograph Log (Photos 3 & 4).

Notice of Non-Compliance and Corrective Action

Sheet # 11

General Project Information	
Project Name: SA-6 North Project No.: 100530001 Owner/Contr.: Honeywell / AmecFW QA Monitor: Langan	Date: 8/9/16 Contractor in NC: ESI Non-Compliance No.: 11 Notes: Failed Spark Test
Reference	
Item: Failed Spark Test Specification Sec. No.: 02372	Drawing No.: Other:

Description of Non-Compliance

Cross Reference (QA Inspection Form & Sheet No.):

During spark testing of Piezometer PZ4, a spark was observed through the weld as the probe transmitted through the weld thus causing the spark to arc. As the point probe was passed over the weld, a visual spark was observed. The failed weld was marked by ESI and the area to be grinded, re-welded, and re-tested on 8/9/16. Additional details on the spark testing are also noted on the 8/9/16 Spark Test Log.

Contractor's Response

Failed spark test identified and confirmed on vertical weld for Piezometer PZ4 pipe boot. Weld to be grinded, re-welded, and re-tested as outlined in the project specifications.

Follow Up Action Required

Grind area of weld requiring retesting, re-weld the vertical seam, and conduct additional spark testing to confirm integrity of weld.

Follow Up Action Taken

Cross Reference (QA Inspection Form & Sheet No.):

Area of vertical weld identified during spark testing was grinded, re-welded, and re-tested on 8/9/16. The extrusion weld was grinded by ESI to scratch / mar the surface and the area was re-welded. Following the welding activities, Entact conducted methane testing to confirm that the methane concentration was below 1% (measured as 0.0%). Following methane testing, ESI conducted a spark retest along the vertical weld, and no sparks or deficiencies were identified (spark retest passed).

Notice of Non-Compliance and Corrective Action

Sheet # 13

General Project Information	
Project Name: SA-6 North Project No.: 100530001 Owner/Contr.: Honeywell / AmecFW QA Monitor: Langan	Date: 8/10/16 Contractor in NC: Entact Non-Compliance No.: 13 Notes: Soil Subgrade Irregularity
Reference	
Item: Soil Subgrade Specification Sec. No.: 02372	Drawing No.: Other:

Description of Non-Compliance

Cross Reference (QA Inspection Form & Sheet No.):

Rock / loose debris (>1/2 – inches) observed underneath LLDPE geomembrane at southern end of Panel P107 / P108. Prior to deployment of the panel, the subgrade was observed by a field engineer who walked the placement area in approximate 200 ft. by 8 ft. transects to observe soil bearing conditions as well as items requiring removal prior to panel placement (i.e. materials such as rocks or other items that protrude >1/2" above the surface). In the event these conditions were identified during the subgrade observation, the material was removed and the area was observed again. After deployment of the GVL and LLDPE, the area was walked again (following the same procedure during the soil subgrade observation) to attempt to identify the presence of materials larger than ½" protruding below the LLDPE. During this latest observation, a rock was noted to be present below the LLDPE. It is possible that this rock may have been dislodged during deployment of the GVL which was pulled over a small portion of the subgrade surface. This non-compliance issue was repaired as defined below and on the 8/10/16 Repair Report, and is identified as R-457. The location of this repair was recorded and logged (via GPS) by the team.

Contractor's Response

Loose debris / rock area identified as subgrade irregularity. Rock to be removed and the area will be patched / repaired, and sealed with an extrusion weld as outlined in the project specifications. Vacuum box testing will then be conducted to confirm repair.

Follow Up Action Required

Remove rock / debris from underneath cap and patch / repair area with extrusion welds following project specifications and as outlined in the Contractor's Response.

Follow Up Action Taken

Cross Reference (QA Inspection Form & Sheet No.):

Rock was removed from underneath LLDPE geomembrane as a small hole (< 4-inches) was made in the LLDPE to remove the stone. This hole was then repaired with approximate 2 ft. by 3 ft. geomembrane patch. The patch was overlapped a minimum of 4-inches beyond the edges of the cut, conformed so that the edges were rounded, and sealed with an extrusion weld (as outlined in Section 02372). Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the hole was properly patched (as outlined in Section 02372).

QA – Manhole Boot Installation

LINER ANCHOR TO CONCRETE STRUCTURE

NTS

CE TYP C-304

***Check applicable Detail:**

Boot Fabrication Details (check one)

☐ Pre-fabricated, no field test ☒ Field fabricated, spark test ☐ Field fabricated, visual

☒18-in. overlap between boot and geomembrane

☒ Neoprene rubber gasket and/or silicone caulking shall be used between the boot or shroud and the penetration structure

☒ LLDPE sacrificial sheet shall be used between the boot or shroud and the clamp for protection

☒ SS Band Clamps tightened and uniform

☒ Caulked Butyl Sealant around top edge of liner

☒ Boot connection (minimum 18-inch overlap) field tested to ensure seal (ex. vacuum box testing) and spark testing of boot vertical seam and penetration edge extrusion welds

Location: Access Manhole #1 (Sta. 1+50) located near approximate center of SA-6 North Cap on Panel P10 (approximately 93 ft. south of northern end of cap and 4 ft. east from Panel P10/P11 seam). Identified as R-29 on *As Built* and *Repair Report*.

AmecFW QA Signature:

Independent CQA Signature: -LANGAN

Comments: Initial boot fabrication and construction conducted on 6/23/16 for skirt and boot with vertical welding completed on 6/24/16. Methane testing / spark testing completed on 6/27/16. Methane testing conducted by AmecFW and a concentration of 0.1% was measured, thus spark testing was subsequently completed by ESI for the base of the boot and vertical weld and no sparks were observed (spark test passed).

Boot Fabrication Details (check one)

☐ Pre-fabricated, no field test ☒ Field fabricated, spark test ☐ Field fabricated, visual

☒18-in. overlap between boot and geomembrane

☒ Neoprene rubber gasket and/or silicone caulking shall be used between the boot or shroud and the penetration structure

☒ LLDPE sacrificial sheet shall be used between the boot or shroud and the clamp for protection

☒ SS Band Clamps tightened and uniform

☒ Caulked Butyl Sealant around top edge of liner

☒ Boot connection (minimum 18-inch overlap) field tested to ensure seal (ex. vacuum box testing) and spark testing of boot vertical seam and penetration edge extrusion welds

Location: Extraction Pump Station #2 located near approximate center of SA-6 North Cap on Panel P80 (approximately 140 ft. north of southern end of cap and 1 ft. west of Panel P80/P81 seam). Identified as R-357 on *As Built* and *Repair Report.*

AmecFW QA Signature:

Independent CQA Signature: - LANGAN

Comments: Boot fabrication, construction, and welding completed on 7/27/16. Methane testing / spark testing completed on 8/9/16. Methane testing completed by AmecFW and yielded concentration of 0.0%. As such, spark testing was conducted by ESI along the base of the boot and vertical weld and no sparks were observed (spark test passed). Following spark testing, the stainless steel clamps and butyl sealant were applied to complete the boot construction.

☒ 18-in. overlap between boot and geomembrane

☒ Neoprene rubber gasket and/or silicone caulking shall be used between the boot or shroud and the penetration structure

☒ LLDPE sacrificial sheet shall be used between the boot or shroud and the clamp for protection

☒ If penetration is greater than 4-in. in diameter, a second clamp shall be used.

☒ Boot connection (minimum 18-inch overlap) field tested to ensure seal (ex. vacuum box testing) and spark testing of boot vertical seam and penetration edge extrusion welds

☒ Caulked Butyl Sealant around top edge of liner

Location: Monitoring well 115-E5-SO located along southern end of SA-6 North Cap on Panel P78 (approximately 15 ft. north of southern end of cap and 9 ft. west from Panel P78/P79 seam). Identified as R-343 on *As Built* and *Repair Report*.

AmecFW QA Signature:

Independent CQA Monitor Signature: LANGAN

Comments: Boot fabrication, construction, and welding completed on 7/27/16. Methane testing / spark testing completed on 8/9/16. Methane testing conducted by AmecFW and yielded concentration of 0.0%. As such, spark testing was conducted by ESI along the base of the boot and vertical weld. A spark was observed along the vertical weld as the weld over the wire was too thin thus causing the spark to arc. The area was grinded, rewelded, and retested and the spark retest passed. Following the spark retest the stainless steel clamps and final butyl sealant were applied to complete the boot construction.

Vertical weld	~20 Gauge Copper	TU	20,000 – 45,000	AC		Model BD-10A	CP	Fail	Pass (7/7/16)	CP

*QCR represents the designated Quality Control representative determined by the Geosynthetic Installer

Comments: Boot fabrication completed on 6/29/16. Methane testing conducted by AmecFW and concentration of 0.0% was measured. Spark testing conducted on 7/6/16 by ESI. Base of boot spark tested and no sparks were observed (spark test passed). During spark testing of vertical weld, a spark was observed during testing which identified a pinhole location along the edge of the weld. This minor anomaly was subsequently re-welded and re-tested on 7/7/16. During the retest on 7/7/16 no sparks were observed (passed re-test).

Comments: Boot fabrication and construction completed on 8/10/16. Methane / spark testing completed on 8/12/16 by ESI. Methane testing yielded concentration of 0.0%. As such, spark testing was conducted at the base of boot and along the vertical weld. No sparks were observed during testing of the base of the boot, thus the spark test passed. During spark testing of the vertical weld a spark was observed along the edge of the weld (weld not centered over wire) thus the test failed. The area was grinded, rewelded, and retested on 8/12/16 and no sparks were observed (spark retest passed).

Subject: SA-6 North Treatability – Areas 7 & 8
CAS Injection Test Results

Dear Senator Torricelli:

I am attaching a technical memorandum prepared by Honeywell's Engineer, Amec, which provides a summary of the post treatment analytical results for the program conducted at the chromium contaminated soils Area 7 & 8.

We are very pleased to report that this treatment program has successfully reduced the hexavalent chrome levels to below 20 mg/kg. All program implementation details and analytical results are provided in the attached memorandum. Should you have any questions on these materials please contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

Memo

Date:	**September 9, 2014**	cc:	**John Morris, Maria Kaouris, John Mojka – Honeywell Jeremy Karpatkin, Michael Daneker – A&P**
From:	**Joe Clifford/Dennis Nagg, Amec**		
To:	**Bill Hague – Honeywell**		
Subject:	**Summary of In-Situ Treatment of Hexavalent Chromium Impacted Soils, SA-6 North, Treatment Areas 7 & 8**		

This memorandum presents a summary of the in-situ treatment of hexavalent chromium (Cr(VI)) impacted soils and initial post-treatment sampling conducted adjacent to active pipelines at SA-6 North (the Site) within Treatment Areas 7 and 8 (TA-7 and TA-8). As shown in the attached tables, the analytical data demonstrate that the program succeeded in reducing Cr(VI) concentrations in soils to below the 20 milligram per kilogram (mg/kg) objective in these two treatment areas.

The in-situ approach for TA-10 was updated as a result of the barrier wall relocation proximate to the 72-inch force main and the treatment program associated with this location will be implemented and documented under separate cover.

BACKGROUND

Amec retained In-Situ Oxidative Technologies, Inc. (Isotec) of Lawrenceville, New Jersey to implement the in-situ injection of calcium polysulfide (CAPS) on behalf of Honeywell. The Amec/Isotec team implemented the in-situ program in TA-7 and TA-8 between June 17, 2013 and June 30, 2013 in accordance with the following documents:

- NJDEP Permit-by-Rule, Discharge to Groundwater Authorization, dated April 30, 2012;
- Amec's Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 2013 (Amec Revised WP); and
- Isotec's Chromium Treatment Program Operations Plan, dated April 8, 2013 (Isotec WP).

TREATMENT AREAS

TA-7 is located within the portion of the Site occupied by the Jersey City Municipal Utilities Authority (JCMUA). Chromium-impacted soils at TA-7 are located immediately adjacent to two in-service above ground storage tank (AST) systems containing Gasoline and Diesel motor fuels and beneath the associated dispenser island used daily by JCMUA. The Cr(VI)-impacted soils exceeding 20 mg/kg were detected in TA-7 at 2 to 4 and 16 to 18 feet below existing grade during the initial remedial investigation (RI). The Cr(VI) concentration in the 2 to 4 foot depth interval was 43.6 mg/kg and the Cr(VI) concentration in the 16 to 18 foot depth interval was 84.4 mg/kg. An active 72-inch Force Main (FM) is also proximate to TA-7 to the north.

TA-8 is located within the portion of the Site occupied by the Jersey City Department of Public Works (JCDPW). Chromium-impacted soils at TA-8 are located within approximately 7 feet of a 96-inch Combined Sewer Overflow (CSO) line. The Cr(VI)-impacted soils exceeding 20 mg/kg were detected in TA-8 at a depth of 10 to 12 feet and 18 to 20 feet below existing grade during the initial RI. The Cr(VI) concentration in the 10 to 12 foot depth interval was 68.8 mg/kg and

AMEC
200 American Metro Blvd, Suite 113
Hamilton, NJ 08619
Tel 609-689-2829
Fax 609-689-2838
amec.com

the Cr(VI) concentration in the 18 to 20 foot depth interval was <25.4 mg/kg (below detection limit).

INJECTION PROGRAM MOBILIZATION ACTIVITIES

As indicated in the Amec Revised WP, injections were targeted for a zone from 2 feet above to 2 feet below each contaminated zone. However, injections were not to penetrate below the meadow mat that underlies the Cr(VI)-impacted soil/fill at the Site. Therefore, prior to the initiation of the in-situ injection programs at TA-7 and TA-8, soil borings were drilled in each area to confirm the depth of the meadow mat. At both TA-7 and at TA-8 the top of the meadow mat was encountered at 17.0 feet below ground surface (ft bgs). Based on the confirmed meadow mat depths and the reported sampling intervals (samples were all identified as 2-foot intervals during the initial RI), the injection depths of the deeper intervals at TA-7 was adjusted to 14.0 to 17.0 ft bgs and at TA-8 was adjusted to 15.0 to 17.5 ft bgs. Due to the depth of the deep sample in TA-8 (18 to 20 ft bags) and the confirmed depth to the top of the meadowmat (17 ft bgs), it was decided that the deep injection at TA-8 would be implemented only to 6 inches within the top of the meadow mat, but not penetrate any further into the meadow mat. Therefore, because the deep injection intervals were cut approximately in half, the volume of diluted CAPs solution was also decreased by 50%, but the volume of stock 29% CAPs solution was not decreased, effectively doubling the concentration of the injected solution.

In addition, during drilling of the initial soil boring prior to the initiation of the in-situ injection program in TA-7, it was observed that the top 12 inches of the area consisted of up to 6 inches of asphalt and up to 6 inches of gravel sub-base. Therefore, the shallow injection program in TA-7 was adjusted to start at 1 ft bgs, instead of 0 ft bgs.

TEMPORARY MONITORING WELL INSTALLATION

In each area and at each injection interval, 1-inch diameter temporary monitoring wells were installed prior to the initiation of injections constructed from polyvinyl chloride (PVC) well screen and riser pipe material. As indicated in the Isotec Work Plan, temporary monitoring points (TMPs) were installed within each area and utility line monitoring points (ULMPs) were installed between the area and adjacent major utility pipelines to monitor propagation of the injected fluids. Additionally, during injections in TA-8, Isotec monitored the existing monitoring well, 087-MW-O29, previously installed in that area during the initial RI.

Drilling was performed using a Geoprobe® direct push drill rig (see **Photo 1** on the attached photolog). Boreholes for the temporary monitoring wells were drilled with 2-inch diameter direct push hollow casing sleeves fitted with an expendable drive point to the design depth and the 1-inch diameter PVC well screens/risers were installed within the casings. All temporary monitoring wells installed were screened at the same depth of the injection intervals; therefore, multiple wells were installed in each area to correspond to the shallow and deep injection intervals. As indicated on **Tables 3, 5, 7**, and **9**, screened intervals for all TMPs and ULMPs generally matched the injection intervals. Shallow TMPs and ULMPs were installed first and were abandoned with a cement/bentonite grout upon completion of the shallow injections and prior to installation of the deep TMPs and ULMPs. At the completion of deep injections, all remaining TMPs and ULMPs were also abandoned in the same manner.

Prior to the start of injections, baseline readings were collected from all TMPs and ULMPs as follows:

- Depth to groundwater table;

- Groundwater quality parameters, including pH, oxidation/reduction potential (ORP), specific conductivity (SC), and total dissolved solids (TDS);
- Hydrogen sulfide (H2S) in the headspace of the PVC riser pipe; and
- Groundwater color.

Once injections began, these same readings/observations were recorded in each TMP and ULMP to monitor injectant propagation. Because of their shallow depth, the temporary monitoring wells installed in TA-7 did not encounter groundwater; therefore, it was impossible to measure baseline groundwater quality parameters in the shallow zone in TA-7.

INJECTION PROGRAM

At each area, the shallow injections were completed prior to the start of the deep injections. Boreholes for injection points (IPs) were drilled with a Geoprobe® direct push drill rig. A proprietary steel well screen was then installed in the borehole with the drill rig to the design depth. Isotec conducted all mixing operations in plastic 55-gallon drums in a box truck and delivered the mixed solution using small volume double diaphragm pumps (see **Photo 2**). Up to 4 IPs were installed and injected at a time using a manifold system (see **Photo 3**).

Pertinent information concerning the in-situ injection program at TA-7 and TA-8 is summarized on **Table 1**. The layout of the completed TMPs, ULMPs, and IPs is shown on **Figure 1** and **Figure 2** for TA-7 and TA-8, respectively. A summary of the injection logs and monitoring data collected in the TMPs and ULMPs during the injections is shown on **Table 2** through **Table 9**. During mixing operations and injections, the breathing zone in the work areas and at the perimeter of the areas were monitored for odors and carbon monoxide, oxygen, H_2S, and lower explosive limit using a 4-gas meter, and volatile contaminants were monitored using a photoionization device. Samples of the groundwater from TMPs were collected periodically to check for color change (**Photo 4**).

Table 1 summarizes the operational parameters of the injection program as proposed in the Isotec Work Plan as well as those for the completed injection program to compare one to the other. The proposed and completed information on **Table 1** includes the number of IPs, the number of temporary monitoring wells, and the volume of CAPs, CAPs solution, and concentration of CAPs injected. **Table 1** also shows the calculated radius of influence (ROI) for each treatment area/zone determined by comparing the monitoring data to the distance from the injection point to the TMP at which the data was collected. As seen by **Table 1**, with Amec's approval Isotec increased the volume of stock 29% CAPs solution injected into each area/injection zone, while maintaining or increasing the concentration of the injected solution CAPs solution throughout the areas.

Because of the lack of groundwater in the shallow TMPs and ULMPs in the shallow zone in TA-7, it was not possible to obtain baseline groundwater measurements in the shallow TMPs and ULMPs and subsequently obtain measurements during injections, with one exception (see 087-TMPI-07002 on **Table 3**). Consequently, to be conservative and to verify adequate coverage of the area, with Amec's approval Isotec installed 3 extra IPs during shallow injections in TA-7 and increased the overall diluted CAPs solution volume injected while maintaining the original volume of stock CAPs solution. .

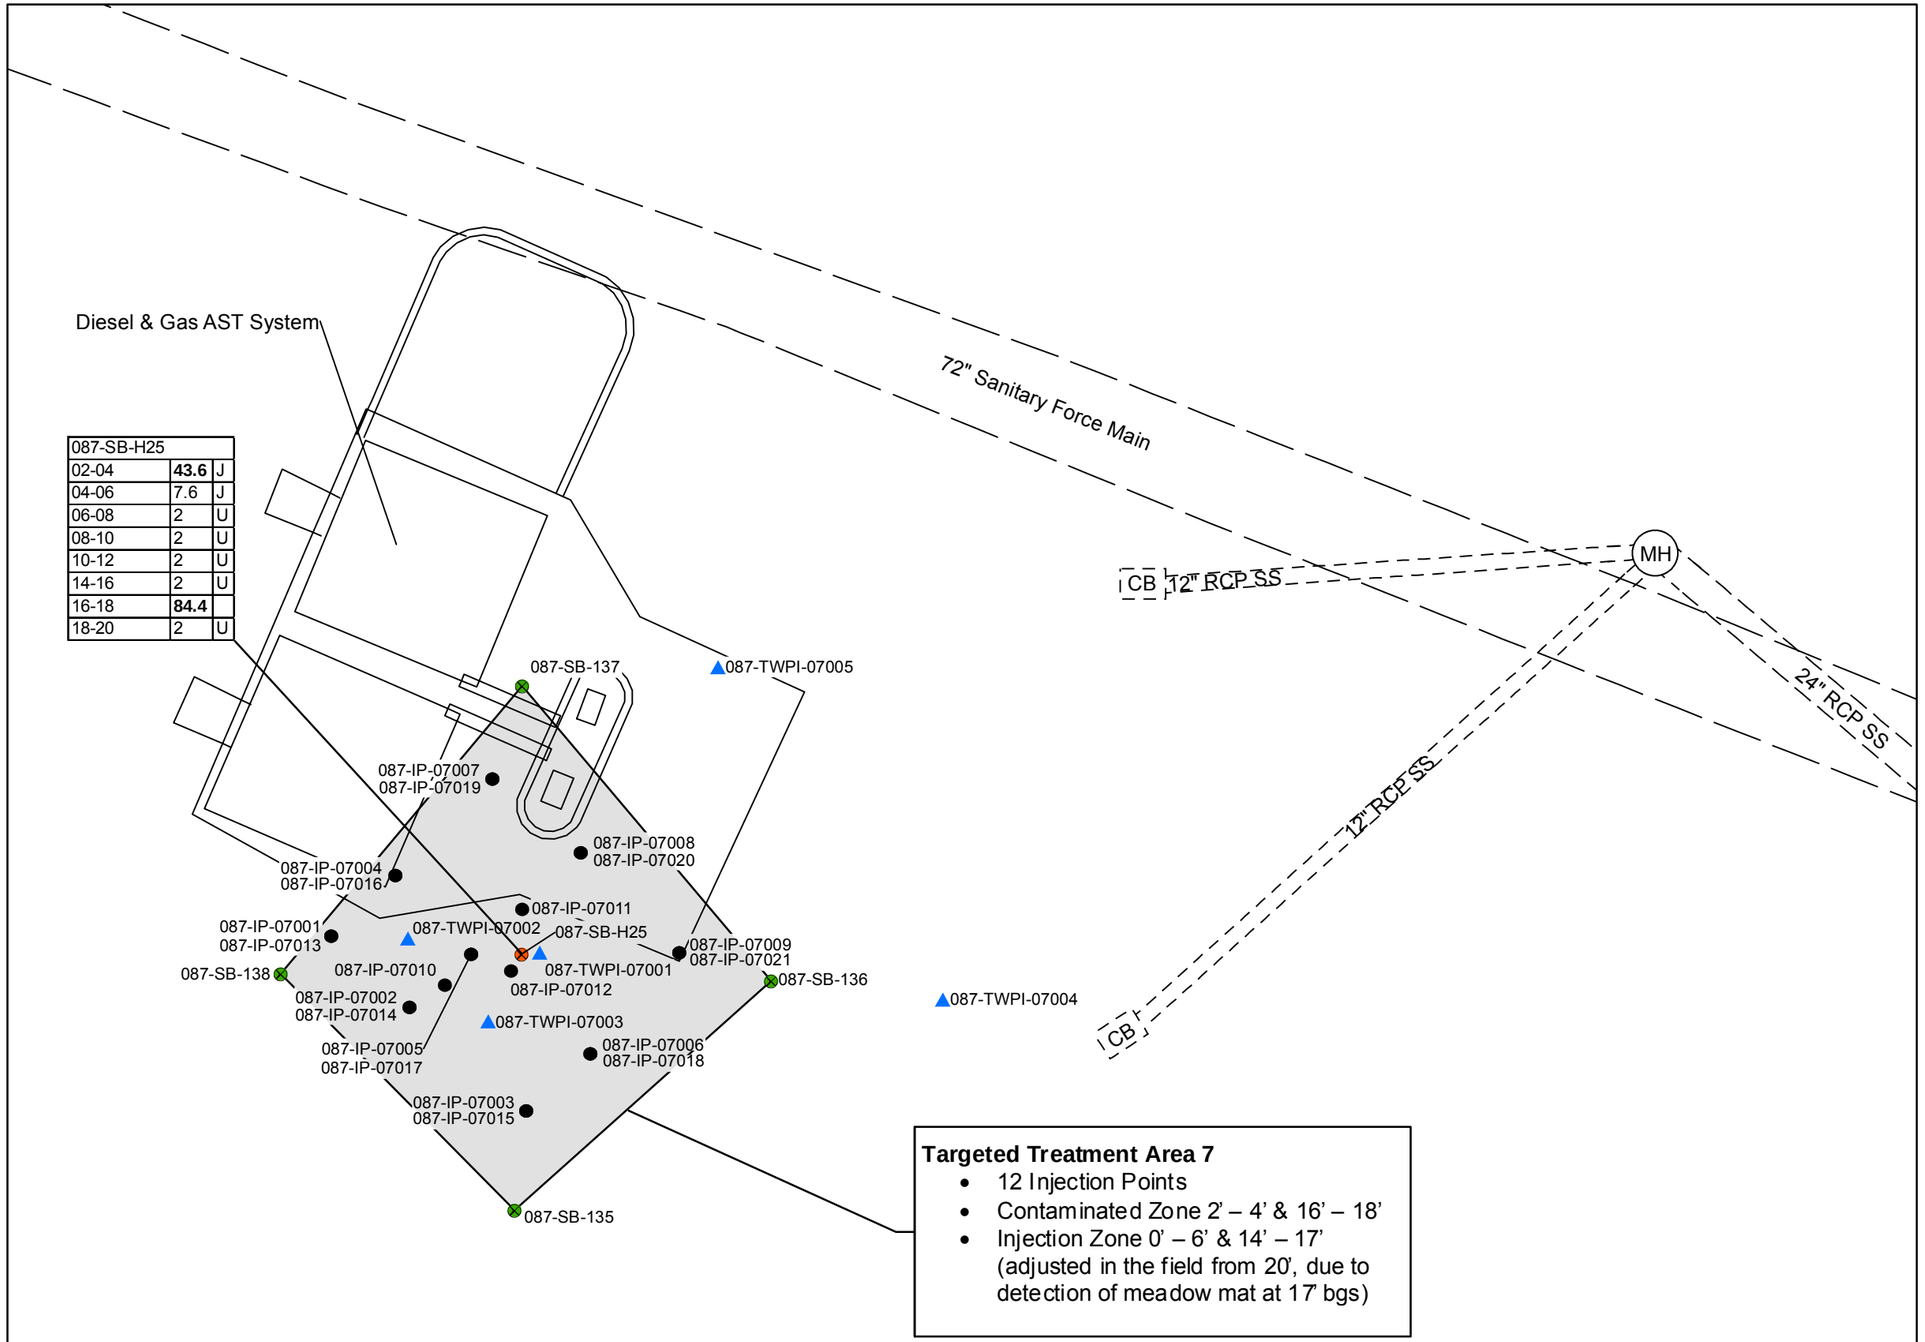
In addition, due to the initially proposed distribution of the temporary monitoring wells and IPs in both zones in TA-8, Isotec elected to install 1 additional TMP and 2 additional IPs in both injection zones in TA-8 to verify adequate coverage of the area.

As discussed above, in both TA-7 and TA-8, the deeper injection intervals were decreased by approximately 50% due to the confirmed depth of the top of meadowmat (17 ft bgs). Consequently, with Amec's approval Isotec decreased the overall diluted CAPs solution volume injected by 50%, while maintaining the original volume of stock CAPs solution.

Key observations of the injection program are summarized below:

- No noticeable smells, or readings above background levels, were noted during the injection program.
- Propagation of injectant fluids was evidenced by one or more of the following:
    - Increase in the depth to groundwater table;
    - Marked increase in pH;
    - Marked decrease in ORP;
    - Changes in SC or TDS;
    - H2S readings or odor; and
    - Change in groundwater color.
- The calculated ROIs ranged from 8 to 13 feet. Given these ROIs, it is clear that the injectant propagation covered the entire footprint of each area in both shallow and deep zones.
- Generally, no evidence of detections of injectant fluids was noted in any of the ULMPs, indicating that the injected fluids did not reach the nearby utilities. As shown on **Table 9**, during the deep zone injections in TA-8, the ORP decreased slightly in the ULMP from 12 millivolts (mV) to -106 mV after injecting for approximately 30 mins into 4 IPs, including the closest IP (087-IP-08009). The ORP rebounded to 64 mV 70 minutes later, at which point injections into 2 additional IPs and 2 repeated IPs were coming to a close. This localized and temporary decrease in ORP in the TA-8 ULMP is likely due to a minor detection of diluted CAPs solution from 087-IP-08009. Given that the TA-8 ULMP is only 8 feet from this IP and the 96-inch CSO is approximately 15 feet from this IP (slightly farther than observed ROI in this area), it is unlikely that injected fluids reached the utility in any significant quantity. .

PERFORMANCE ASSESSMENT SOIL SAMPLING



In June 2014, Honeywell authorized Amec to collect performance assessment soil samples in each treatment area and at each treatment zone. These samples were collected in accordance with the Amec Revised WP by drilling 2 soil borings no more than 15 feet apart and straddling the original soil borings which exhibited the elevated Cr(VI) concentrations during the initial RI. The soil borings were drilled with a Geoprobe® direct push drill rig and soil was obtained for the samples in 4-foot long acetate sleeves fitted into a Geoprobe® steel macro core sampler. In accordance with the Amec Revised WP, samples were collected from each boring from 1 foot intervals and the entire 1 foot interval was homogenized and placed into laboratory-provided sample jars for analysis. All samples were analyzed for total chromium and Cr(VI) using

USEPA Method 3060A/7199, Eh and pH, and sulfides using USEPA Method 9030b by Accutest Laboratories of Dayton, New Jersey.

In TA-7, soil borings 087-SB-454 and 087-SB-455 were drilled and in TA-8, soil borings 087-SB-452 and 087-SB-453 were drilled at the locations shown on **Figures 3** and **4**, respectively.

The analytical data is summarized on **Tables 10A** and **10B** for TA-7 and **Tables 11A** and **11B** for TA-8. For comparison, the initial RI samples are included on the tables. As indicated by the analytical results, all performance assessment soil samples collected were below 20 mg/kg for Cr(VI). Thus, the data support that the in-situ injection program was successful at treating the Cr(VI)-impacted soils at TA-7 and TA-8.

Notes:
* For TA-7, 3 temporary monitoring wells (TMWs) were proposed and installed within the area and 2 utility line monitoring points (ULMPs) were proposed and installed between the area and the 72-inch Force Main.
** For TA-8, 1 TMW was proposed within the area and 1 ULMPs was proposed and installed between the area and the 96-inch Combined Sewer Outfall. To increase the monitoring of injections withing the area, 2 TMWs were installed. In addition, the existing shallow monitoring well in TA-8, 087-MW-O29, was used for monitoring.
ft = Feet
bgs = Below Ground Surface
gals = Gallons
mins = Minutes
gpm = Gallons per Minute
psi = Pounds per Square Inch

TOTAL VOLUME (Gallons)/ AVERAGE FLOW RATE (Gals/Min)							**2,702.5**	**108**	**2.87**		

Notes:

BGS =	Below Ground Surface
Gals =	Gallons
Min =	Minutes
Gals/Min =	Gallons per Minute
IP =	Injection Point
psi =	Pounds per Square Inch
CAPS =	Calcium Polysulfide

Cells shaded gray indicate that the concentration injected into a given location was ~0.75% as opposed to ~1.50% which was the proposed concentration. The concentration was reduced so that additional volume of reagent could be injected to the unsaturated zone to assist in obtaining increased radial distribution to verify propagation.

TOTAL VOLUME (Gallons)/ AVERAGE FLOW RATE (Gals/Min)							**1,035**	**216**	**2.07**		

Notes:

BGS = Below Ground Surface
Gals = Gallons
Min = Minutes
Gals/Min = Gallons per Minute
IP = Injection Point
psi = Pounds per Square Inch
CAPS = Calcium Polysulfide
* = The concentration injected into a given location was ~6.0% as opposed to ~3.0% which was the proposed concentration. The concentration was increased because the vertical interval was decreased from 14-20 ft bgs (6 ft thickness) to 14-17 ft bgs (3 ft thickness) due to the depth of the underlying meadow mat occurring at ~17 ft bgs.

Notes:

BGS = Below Ground Surface
Gals = Gallons
Min = Minutes
Gals/Min = Gallons per Minute
IP = Injection Point
psi = Pounds per Square Inch
CAPS = Calcium Polysulfide

* = The concentration injected into a given location was ~2.0% as opposed to ~1.0% which was the proposed concentration. The concentration was increased because the vertical interval was decreased from 16-22 ft bgs (6 ft thickness) to 15-17.5 ft bgs (2.5 ft thickness) due to the depth of the underlying meadow mat occurring at ~17.0-17.5 ft bgs.

The Honorable Robert G. Torricelli
Office of the Special Master
RGTSpecialMaster@aol.com

Re: 3 Year Sampling Results
Treatment Areas 7 and 8
Study Area 6 North (Site 087)
Jersey City, New Jersey

Dear Senator Torricelli:

Honeywell's engineer, Amec Foster Wheeler, has prepared the enclosed memorandum that summarizes the 3-year post-treatment performance assessment for the in-situ Treatment Areas 7 and 8 (TA-7 and TA-8). The locations and depths of the soil sampling program were finalized with Plaintiffs in recent written and email correspondence, as described in the attached Amec Foster Wheeler memo.

The data indicates that fifteen of the sixteen sample results for hexavalent chromium are below 20 milligrams per kilogram (mg/kg) Guideline. Honeywell is evaluating which option, re-treat or excavate, makes the most sense for the one area where there was an exceedence at a concentration of 26.3 mg/kg.

We are prepared to discuss this matter further at the next All Parties meeting. If you have any questions in the meantime, please call me at (973) 455-2175.

Sincerely,

William J. Hague
Global Remediation Director
Design and Construction

WJH:dn/sgf

Subject: Study Area 6 North – 3 Year Sampling At TA-7 & TA-8

In accordance with the approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 2013 (Revised WP) prepared by Amec Foster Wheeler Environment & Infrastructure, Inc. (Amec Foster Wheeler), Amec Foster Wheeler implemented the 3-year post-treatment performance assessment soil sampling within in-situ Treatment Areas 7 and 8 (TA-7 and TA-8). The in-situ injections in TA-7 and TA-8 were implemented between June 17, 2013 and June 30, 2013 as summarized in a memo dated September 4, 2014. The 3-Year soil sampling occurred on June 27, 2016. These areas are adjacent to active pipelines at SA-6 North (the Site) as shown on the attached Figure 2 (Revised) borrowed from the Revised Work Plan.

The 3-Year sampling program was implemented in accordance with the following correspondence regarding the 6-month performance assessment sampling between Honeywell and the Parties:

- Plaintiffs' comments, dated December 4, 2014;
- Honeywell response, dated February 4, 2015;
- Plaintiffs' comments, dated March 6, 2015;
- Honeywell response, dated March 30, 2015; and
- Plaintiffs' comments, dated April 16, 2015.

Based upon their comments regarding the 6-month performance assessment sampling, Plaintiffs requested slight adjustments in the 3-Year sampling program soil boring locations and sample depths. The locations of borings and sample depths were finalized in the following recent correspondence regarding the 3-Year sampling program between Honeywell and the Parties:

- Honeywell memo, dated June 16, 2016
- Email correspondence from Ben Ross, dated June 17, 2016

200 American Metro Blvd
Suite 113
Hamilton, NJ 08619
609-689-2829
amecfw.com

Upon mobilization, additional minor adjustments were made in the field based upon detection of underground utilities and other subsurface obstructions using geophysical equipment. The "as-built" soil boring locations are shown on the attached Figure 1 for TA-7 and Figure 2 for TA-8.

TA-7

For the shallow sampling interval in TA-7, the Revised WP proposed to collect samples from 2 to 3 ft. below ground surface (bgs) and 3 to 4 ft bgs from two borings each. Thus, four samples were collected as proposed from the shallow sampling interval at shallow soil boring locations 087-SB-659 and 087-SB-660. As agreed to with All Parties in the previous correspondence, borings for the shallow sampling intervals were separated from borings for the deeper sampling intervals.

For the deep sampling interval in TA-7, the Revised WP proposed to collect samples from 16 to 17 ft bgs and 17 to 18 ft bgs from two borings each. Two samples were collected as proposed from 16 to 17 ft bgs and from 17 to 17.5 ft bgs at the deep soil boring locations 087-SB-661 and 087-SB-662. Boring 087-SB-662 was adjusted to the northeast to avoid contact with reinforcing steel in the edge of the concrete pad in this area. The deeper interval was collected from a 6-inch interval from 17 to 17.5 ft bgs rather than the proposed 12-inch interval because meadow mat was found at 17.5 ft bgs. Thus, four samples were collected from the deep sampling interval.

TA-8

For the shallow sampling interval in TA-8, the Revised WP proposed to collect samples from 10 to 11 ft bgs and 11 to 12 ft bgs from two borings each. As agreed to with All Parties in the previous correspondence, shallow and deep samples were to be collected from one of the borings in TA-8 (087-SB-657) while two separate borings were to be drilled to collect the shallow sampling interval (087-SB-658) and the deeper sampling interval (087-SB-663) elsewhere in TA-8. However, because of lack of sample recovery at the 10 to 12 ft depth interval in soil boring 087-SB-657, this boring was also spilt into two separate adjacent borings (087-SB-657A for the shallow sampling and 087-SB-657B for the deep sampling). Soil borings 087-SB-658 was drilled at the proposed location and shallow samples were collected from this boring as proposed. Thus, four samples were collected as proposed from the shallow sampling interval.

For the deep sampling interval in TA-8, the Revised WP proposed to collect samples from 16 to 17 ft bgs and 17 to 18 ft bgs from two borings each. Soil borings 087-SB-657B and 087-SB-663 were drilled to collect samples from the deep intervals. Two samples were collected as proposed from the 16 to 17 ft bgs. The deeper interval was collected from a 6-inch interval from 17 to 17.5 ft bgs rather than the proposed 12-inch interval because meadow mat was found at 17.5 ft bgs. Thus, four samples were collected from the deep sampling interval.

As indicated in the Revised WP, all soil samples from both TA-7 and TA-8 were analyzed for hexavalent chromium, total chromium, and sulfide. The attached Table 1 summarizes the sample results. Fifteen of the sixteen sample results for hexavalent chromium are below 20 milligrams per kilogram (mg/kg). Due to the exceedance of one shallow sample at TA-7 that

exceeds 20 mg/kg for hexavalent chromium, Honeywell is evaluating options for either re-injecting in this area or excavating the shallow soils.

Re: Summary of Additional In-Situ Injection of Calcium Polysulfide for Treatment of Hexavalent Chromium Impacted Soils
Treatment Area 10-1
Study Area 6 (SA-6) North (Site 087)
Jersey City, New Jersey

Dear Senator Torricelli:

Honeywell's engineer, Amec Foster Wheeler, has prepared the enclosed technical memorandum providing a summary of the implementation of the recently completed additional in-situ injection program within the northern section of Area 10 (designated as TA 10-1) using calcium polysulfide (CAPS). This injection event was a follow-up to the initial in-situ event completed in September 2015 which was presented in correspondence entitled, Additional In-Situ Injection of Calcium Polysulfide for Treatment of Hexavalent Chromium Impacted Soils, dated July 11, 2016 (Proposed Implementation Plan) submitted by Honeywell to all Parties.

The Amec Foster Wheeler/ERFS team implemented the prolonged in-situ injection program at the Site in five events separated by at least one week between September 7, 2016 and October 26, 2016. On December 5, 2016, Amec Foster Wheeler implemented an interim soil sampling program using the same protocol as the post-treatment soil samples collected in March 2016.

As is evident in the attached soil sample data, the 2016 re-injection program was very successful in further reducing hexavalent chromium concentrations in soils in this area. Nineteen of the 20 samples are below the 20 mg/kg cleanup criteria and only one sample location is at 33 mg/kg. Amec Foster Wheeler/ERFS will remobilize and perform another treatment injection at this one exceedance location within the next several weeks.

We are prepared to discuss this matter further at the next All Parties call if the parties desire. If you have any questions in the meantime, please call me at (973) 455-2175.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

Subject: Summary of Additional In-Situ Injection of Calcium Polysulfide for Treatment of Hexavalent Chromium Impacted Soils, SA-6 North, Treatment Area-10-1

Amec Foster Wheeler Environment & Infrastructure, Inc. (Amec Foster Wheeler), on behalf of Honeywell, has prepared this memorandum to summarize the recently completed additional injection of calcium polysulfide (CAPS) for in-situ treatment of hexavalent chromium (Cr(VI)) impacted soils in the northern section of Treatment Area 10 (TA-10-1) at SA-6 North, Site 087 (the Site, **Figure 2 (Revised)**). As described herein and shown by the attached tables and figures, we successfully implemented the re-injection of the proposed volumes of CAPS in the designated area consistent with the Additional In-Situ Injection of Calcium Polysulfide for Treatment of Hexavalent Chromium Impacted Soils, dated July 11, 2016 (Proposed Implementation Plan) submitted by Honeywell to all Parties. Additionally, Honeywell directed Amec Foster Wheeler to implement interim soil sampling approximately six weeks after the completion of the re-injection program to assess short-term Cr(VI) concentrations in soils in the area. As shown by the soils data, the results of that soil sampling program indicated marked reduction in Cr(VI) concentrations in soils compared to the previous soil sampling.

BACKGROUND

Amec Foster Wheeler retained ERFS of Lakewood, New Jersey to implement an initial in-situ treatment event in the TA-10-1 area between August and September 2015. This initial injection of CAPS was summarized in an October 12, 2015 technical memorandum submitted by Honeywell to all Parties. Following this initial CAPS injection, post-treatment soil samples were collected in March 2016 (approximately six months after the initial injection) to provide an early indication of the efficacy of this treatment. As detailed in a May 6, 2016 technical memorandum, post in-situ analytical results showed that the majority of areas treated were now below the 20 milligram per kilogram (mg/kg) standard for Cr(VI) in soil. However, 5 out of 20 sample points exceeded the

200 American Metro Blvd
Suite 113
Hamilton, NJ 08619
609-689-2829
amecfw.com

20 mg/kg Cr(VI) standard. Based on these results and due to the limited timeframe remaining before potential redevelopment, Honeywell proposed a supplemental CAPS injection program to further remediate soils in these areas in the Proposed Implementation Plan. As requested in a May 23, 2016 letter from Plaintiffs, Honeywell agreed to re-inject CAPS within all five original treatment points, not just the remaining areas of soil exceedances. Modifications were made to the initial approach which included a slower and prolonged injection delivery approach over the course of several weeks through injection wells installed in the area. In contrast, the initial injection program utilized a direct-injection approach where the entire volume of CAPS solution was injected over the course of two days.

On July 28, 2016, Honeywell submitted a new NJDEP Permit-by-Rule Discharge to Groundwater (PBR-DGW) Authorization request to NJDEP to implement the proposed re-injection program based on the July 11, 2016 Proposed Implementation Plan. NJDEP issued the requested PBR-DGW on August 4, 2016.

Amec Foster Wheeler again retained ERFS to implement the re-injections. The Amec Foster Wheeler/ERFS team implemented the prolonged injection delivery program at the Site in 5 events separated by at least one week between September 7, 2016 and October 26, 2016. The Amec Foster Wheeler/ERFS team implemented the in-situ program in accordance with the following documents:

- Honeywell's July 11, 2016 Proposed Implementation Plan; and
- NJDEP August 4, 2016 PBR-DGW;

In addition, although not revised specifically for the 2016 re-injection program, the 2016 re-injection program generally followed provisions of the following documents previously prepared for the initial injection program since the means and methods were essentially similar:

- Amec Foster Wheeler's Updated Work Plan for In-Situ Treatment of Chromium Impacted Soils, dated August 2015 (Updated Work Plan);
- ERFS' In-Situ Chemical Reduction Implementation Work Plan, dated September 2013;
- ERFS Health and Safety Plan, dated June 2013 (Revised July 2014)

TREATMENT AREA

As shown on **Figure 2 (Revised)** and **Figure 5A (Revised)**, the TA-10-1 area is the portion of TA-10 that is north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. TA-10 is located immediately proximate to and

north of the hydraulic barrier wall installed along the northern boundary of the SA-6 North Open Space Area and overlies a portion of the 72-inch sanitary sewer force main (FM) owned by Jersey City Municipal Utilities Authority that traverses this part of the Site. The depth to the chromium impacted material in this area is 12 to 14 feet below existing grade which is approximately at the same elevation as the bottom portion of the FM. Because of the proximity of the FM, excavation of impacted soils in TA-10 could structurally impact the FM during removal of the impacted soils; therefore, in-situ treatment of the chromium impacted material was preferred for this area. To allay concerns about impacts from sulfate on the concrete outer shell of the FM, Honeywell reviewed the proposed CAPS injection program with NJDEP and PVSC. Ultimately, it was agreed by all Parties that only impacted soils within subarea TA-10-1 would be treated with CAPS so that the injections are approximately 20 to 25 feet away from the FM. The remaining portion of TA-10, south of the northern curbline for the future Stegman Boulevard, will be capped by the Stegman Boulevard footprint.

MONITORING WELL AND TEMPORARY WELL POINT INSTALLATION

Three monitoring wells (MWs) and five temporary well points (TWPs) were installed by ERFS' subcontracted New Jersey-licensed driller (Summit Drilling) in August 2015 for the initial injection program. All MWs and TWPs were permitted with NJDEP as permanent wells. The MW identifications (IDs) are 087-MW-132, 087-MW-133, and 087-MW-134 and the TWP IDs are 087-TWP-37 through 087-TWP-41. Details of the installation and construction of the MWs and TWPs was provided in the summary of the implementation of the initial injection program, dated October 12, 2015, submitted by Honeywell to all Parties. Amec Foster Wheeler maintained these MWs and TWPs and used them for monitoring groundwater conditions during the 2016 re-injection program. The locations of the MWs and TWPs are shown on **Figure 5A (Revised)**.

INJECTION POINT INSTALLATION

The Proposed Implementation Plan detailed a delivery approach for the re-injection program where CAPS would be injected in specified dosages through injection points (IPs) in five separate events over a period of time. Thus, the IPs were installed first to facilitate the proposed dosage injections. ERFS retained B&B Drilling of Netcong, New Jersey to install the IPs (see Photo 1). B&B Drilling drilled and installed the IPs on August 25, 2016 and August 26, 2016.

The Proposed Implementation Plan specified the installation of ten IPs, grouped in 5 nested pairs, in the same general location as the previous 5 injection points from the initial injection program. The location of each of the 5 nested pairs is shown on **Figure 5A (Revised)**. Each pair of wells was installed no further than approximately 1 foot apart. Each IP was installed with 2-inch diameter PVC well screen and riser pipe. Both the initial and re-injection programs specified CAPS injections from 10 to 16 feet below ground surface (bgs) which was from 2 feet

above to 2 feet below the contaminated zone. To increase the vertical distribution of CAPS during the re-injection program, the IPs within each nested pair were screened at 3-foot intervals, one from 10 to 13 feet bgs and one from 13 to 16 feet bgs. Each of the 5 nested pair of IPs were given the IDs IP-10-1 through IP-10-5; an "A" suffix at the end of each IP ID denotes that the IP is the shallower screened interval, whereas a "B" suffix denotes that the IP is the deeper screened interval. Following installation, each IP was developed by pumping until the pumped water ran clear.

During drilling operations, the breathing zones at the drilling locations were monitored for volatile organic compounds (VOCs) and hydrogen sulfide (H_2S).All readings were non-detect.

CHEMICAL STORAGE/MIXING AREA MOBILIZATION

Because the re-injection program was designed to inject specified dosages over the course of 5 separate events, ERFS did not mobilize all of the required 29% stock CAPS solution at once. Instead, ERFS brought only the required volume of 29% stock CAPS needed for each of the injection events. The stock CAPS solution was obtained from the supplier and brought to the Site in 55-gallon plastic drums. For each event, ERFS mixed the prescribed volume of 29% stock CAPS solution in potable water to make the prescribed volume of diluted CAPS solution in a plastic mixing tank staged inside a utility van (see Photo 2). Potable water for mixing the diluted solution was obtained from a nearby fire hydrant. The 29% stock CAPS solution was transferred to the mixing tank from the drums using a drum pump. Only enough diluted CAPS solution was mixed for each of the separate injection events; no solution was kept over until the next event. Once the mixture was ready, the diluted CAPS solution was then transferred directly from the mixing tank on the truck to the IPs as described in the following section.

INJECTION PROGRAM

Tables 1 and 2 summarize the re-injection program. The five re-injection events occurred on the following dates:

- September 7, 2016;
- September 14, 2016;
- October 5, 2016;
- October 12, 2016; and
- October 26, 2016

As specified in the Proposed Implementation Plan, a total of 825 gallons of 29% stock CAPS solution was mixed with approximately 2,425 gallons of potable water to produce 3,250 gallons

of CAPS solution. Thus, for each of the five events, ERFS mixed 165 gallons of 29% stock CAPS solution and 485 gallons of potable water to make up 650 gallons of diluted CAPS solution. During each event, the ten IPs received 65 gallons of diluted CAPS solution. The prescribed volume of diluted CAPS solution was gravity fed from the mixing tank on ERFS' truck into the IPs utilizing hosing, valves, and associated fittings (see Photo 3). Occasionally, a transfer pump located between the tank on the truck and the IP was operated for a minute or two to start the flow, but was then shut off allowing the flow to continue by gravity. Ten gallons of clean potable water was flushed through the transfer hoses after each 65 gallons of diluted CAPS solution was injected into each IP to rinse the hoses and flush any solution remaining in the IP into the surrounding soil.

The area surrounding the injection locations was monitored for daylighting throughout the re-injection program. No daylighting occurred. During mixing operations and injections, the breathing zone in the work area and at the perimeter was monitored for odors and H_2S using a 4-gas meter and VOCs using a photoionization device. No elevated readings were measured.

Table 1 summarizes the operational parameters of the injection program as proposed in the Proposed Implementation Plan as well as those for the completed injection program to compare one to the other. Table 2 summarizes the volume of stock CAPs, diluted CAPs solution, and concentration of CAPs injected into each IP. In addition, the injection time and average flow rates for each area are presented on Table1.

GROUNDWATER MONITORING

Prior to the installation of the IPs, samples from each of the three MWs and five TWPs were collected for analysis of sulfide and sulfate to assess baseline groundwater conditions in subarea TA-10-1 on August 23, 2016. Following the first injection event, the sampling of the three MWs and five TWPs and analysis of sulfide and sulfate was repeated each week until November 8, 2016 (nine weekly post-injection sampling events) and again on December 7, 2016. The baseline and post-injection groundwater sample results are summarized on Table 3.

Of particular interest with respect to maintaining the integrity of the FM was sulfate concentrations in either one or both of 087-MW-133 and 087-MW-134 installed between subarea TA-10-1 and the FM. In the event that sulfate concentrations in these two sentinel MWs increased to a limit of 150 milligrams per liter (mg/L), a contingency plan would be implemented that called for clean potable water to be injected into both wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the FM. As seen on Table 3, sulfate concentrations in these 2 sentinel MWs remained well below the limit of 150 mg/L. However, because of the elevated sulfate concentrations in 087-MW-132 and 087-TWP-41 during the

December 7, 2016 sampling, as a precautionary measure, samples from 087-MW-133 and 087-MW-134 were again collected on December 21, 2016 to confirm that sulfate concentrations in the two sentinel MWs remained below the limit of 150 mg/L.

Prior to the start of injections (baseline), during injections, and following injections Amec Foster Wheeler and/or ERFS measured groundwater conditions in the MWs and TWPs in subarea TA-10-1. The following measurements were taken and recorded:

- Depth to groundwater;
- Groundwater quality parameters, including pH, oxidation/reduction potential (ORP), specific conductivity (SC), and total dissolved solids (TDS);
- Hydrogen sulfide (H_2S) and volatile organic compounds (VOCs) in the headspace of the PVC riser pipe; and
- Groundwater color and/or odor.

These results are summarized on Table 4. For brevity, only measurements of depth to groundwater, pH, ORP, and SC are included. By comparing the baseline monitoring data to measurements collected during or following injections distribution of the CAPS could be monitored. Following each injection event Amec Foster Wheeler and Mutch Associates reviewed the sulfide and sulfate and groundwater parameter data to assess the shallow groundwater conditions.

SOIL SAMPLING

In accordance with the Proposed Implementation Plan, Honeywell directed Amec Foster Wheeler to conduct an interim soil sampling program in the TA-10-1. The soil sampling program was implemented on December 5, 2016 using the same protocol as the post-treatment soil samples collected in March 2016 following the initial CAPS injection program. Ten borings (087-SB-710 through 087-SB-719) were drilled no more than 15 feet apart (shown on Figure 5A Revised), as close as possible to the March 2016 borings, and straddling the locations of the previous Remedial and/or Pre-Design Investigation borings where Cr(VI) was previously detected in concentrations above 20 mg/kg in soils. All soil borings were drilled with a Geoprobe® drill rig. Samples were extracted from the soil boring location in 4-foot long acetate sleeves fitted in the steel Geoprobe® tooling. Samples were collected at 1 foot intervals (12 to 13 and 13 to 14 feet bgs). All soil samples were analyzed for the following:

- Hexavalent chromium;
- Total chromium;

- Sulfide; and
- pH

On December 7, 2016, Amec Foster Wheeler also collected post injection groundwater samples from the 3 monitoring wells and 5 temporary well points that were installed in the TA-10-1 area during the injection program. A total of 8 groundwater samples were collected and analyzed for sulfide and sulfate.

The groundwater sample results are summarized on Table 4 and the soil sample results are summarized on Table 5. As seen from the soil data, all locations, but one, were reduced to below 20 mg/kg for Cr(VI). This sample is 087-SB-712 (13-14).

CONCLUSIONS

Key observations of the injection program are summarized below:

- The overall average injection flow rate for the Site was 3.33 gallons per minute.
- Propagation of injectant fluids was evidenced by one or more of the following:
    - Decrease in the depth to groundwater table in shallow MW and TWPs;
    - Marked increase in pH;
    - Marked decrease in ORP; and
    - Increases in SC or TDS.
- Sulfide concentrations in 087-MW-132, the MW in the center of the TA-10-1 subarea were much higher during the re-injection program as compared to the initial injection program. This suggests that groundwater conditions inside the boundary of the TA-10-1 area were more conducive to treatment of the remaining chromium-impacted soils. For comparison, Table 1 from the October 12, 2015 technical memorandum summarizing the initial injection of CAPS is included in Attachment 1.
- Elevated sulfide and sulfate concentrations were measured in TWP 087-TWP-41, which is east of the boundary of TA-10-1, indicating a preferential pathway in this direction. Since this direction is upgradient of the TA-10-1 area, groundwater is expected to flow back into the TA-10-1 area after the injections were completed. While slightly elevated sulfide and sulfate concentrations were detected in the TWPs and MWs located north, west, and south of the TA-10-1 area, they were not as high as those in TWP 087-TWP-41.

Based on the above summary, Amec Foster Wheeler concludes that the reinjection program was successfully implemented in accordance with the Proposed Implementation Plan. The interim soils data indicates successful reduction of Cr(VI) concentrations in soils to below 20 mg/kg in all

but one recalcitrant location. Consequently, an additional limited re-injection program in this one location is recommended below.

RECOMMENDATIONS

Amec Foster Wheeler recommends an additional limited re-injection of CAPS in the one recalcitrant location. This additional re-injection program is summarized as follows:

- The same volume of CAPS as that injected during the re-injection program described above will be injected into the closest IP to the 087-SB-712 soil boring location, 087-IP-10-1, which is 5 feet from the 087-SB-712 soil boring.
- A total volume of 650 gallons of an approximate 7% CAPS solution will be injected by diluting 165 gallons of 29% CAPS in 485 gallons of potable water.
- The injection will be divided into 2 equal injection events (325 gallons each) separated by no more than a week.
- Since the IP consists of a nested well pair screened at 10 to 13 feet bgs and 13 to 16 feet bgs, each 325 gallon injection will be divided equally amongst the two nested pairs.
- All other procedures activities will be generally identical to those indicated above for the re-injection program.
- Post-treatment groundwater samples will be collected from two TWPs (087-TWP-38 and 087-TWP-39) and all three MWs (087-MW-132, 087-MW-133, and 087-MW-134) for several weeks following completion of the additional limited re-injection program. Depending on the results, the post-treatment groundwater sampling may be terminated after 2 or 3 weeks.

To provide an early indication of the efficacy of the additional limited re-injection program, Honeywell will implement post-treatment re-sampling of the recalcitrant sample location 087-SB-712 (13-14) as early as February or March 2017. Subsequent post-treatment soil sampling may be implemented 6 months after the completion of the additional limited re-injection program in the third quarter 2017. Results of all soil sampling will be shared with the Parties upon receipt and validation/evaluation of the data.

Notes:

*The original sample ID for the remedial investigation sample that exceeded 20 mg/kg for hexavalent chromium.

**JC32905-1, 6 and 7 plotted on the line that separates the Cr(III) and Cr(VI) stability fields. Statistical examination of the laboratory Eh QC data indicates these samples are not oxidizing with the preferred level of certainty of p = 0.95 or greater (0.85 for these samples). This result coupled with the extremely low recovery of the soluble (-0.3%) and insoluble (9.4%) Cr(VI) spike for QC sample JC3205-1gives the appearance of a reducing character. Additional spikes as high as 3500 mg/kg for this sample failed to recover more than 10% of the Cr(VI) spike

Remedial Investigation Analytical Data
6-Month Post Injection (March 2016) Analytical Data
Most Recent (December 2016) Analytical Data
Bold and shaded concentrations exceed the Most Stringent NJ Residential Direct Contact Soil Remediation Standard
NS = No Standard.
J = Estimated Value
NT= Not Tested
NA= Not Applicable
U= Not Detected Above Method Detection Limit

Re: Summary of 6-Month Performance Assessment Sampling Post In-Situ Treatment of Hexavalent Chromium Impacted Soils
Treatment Area 10-1 Only
Study Area 6 (SA-6) North (Site 087)
Jersey City, New Jersey

Dear Senator Torricelli:

Honeywell's engineering consultant, Amec Foster Wheeler, completed the 6-month performance assessment of soil sampling associated with the treatability injection of reductants at SA-6 North, specifically Treatment Area 10-1, which is north of the 72-inch forcemain. This work was conducted in accordance with the Updated Work Plan for In-Situ Treatment of Chromium Impacted Soils, dated August 2015 (updated Work Plan) and the NJDEP Permit-by-Rule Discharge to Groundwater Authorization, dated July 14, 2015.

The attached technical memorandum prepared by Amec Foster Wheeler provides a summary of the analytical sampling activities. The results essentially demonstrate that 15 of the 20 sample points are now compliant with the 20 mg/Kg hexavalent chromium criteria. Honeywell is currently evaluating if additional injections will be performed at the 5 locations exceeding the 20 mg/Kg hexavalent chromium criteria.

Honeywell also notes that a second round of soil sampling will be conducted 3 years after completion of the field program. In a July 21, 2015 letter from Arnold and Porter to the Special Master, Honeywell indicated that it may seek to conduct the second sampling event sooner than the 3 year timeframe after the completion of the TA-10-1 injection program. In the event Honeywell seeks to advance the second sampling event, Honeywell will provide a proposal to the Parties for their review and comment.

Should you have any questions regarding this submittal or require additional information, please contact me at (973) 455-2175.

Sincerely,

William J. Hague
Global Remediation Director
Design and Construction

Subject: Summary of 6 Month Post In-Situ Analytical Sampling
SA-6 North, Treatment Area 10-1

This memorandum presents a summary of the analytical results from the six month post in-situ treatment sampling event at SA-6 North at Treatment Area 10-1 (TA-10-1). As shown by the attached tables and figures, Amec Foster Wheeler collected and analyzed 20 soil samples from 10 soil borings and 8 groundwater samples within the designated area consistent with the proposed plan. A detailed description of the treatment areas, well installation, mobilization, implementation, and the overall treatment program has been previously outlined and discussed in a memo dated October 12, 2015.

BACKGROUND

Amec Foster Wheeler retained ERFS of Lakewood, New Jersey to implement the in-situ injection of CAPS on behalf of Honeywell. The Amec Foster Wheeler/ERFS team implemented the in-situ program at the Site in three non-consecutive days beginning on August 17, 2015. The Amec Foster Wheeler/ERFS team paused the in-situ program on August 18, 2015 after one injection point (IP-1) was completed. On September 9, 2015 the Amec Foster Wheeler/ERFS team remobilized and implemented the in-situ program through September 10, 2015. The in-situ program was implemented in accordance with the following documents:

- NJDEP Permit-by-Rule Discharge to Groundwater Authorization, dated July 14, 2015;
- Amec Foster Wheeler's Updated Work Plan for In-Situ Treatment of Chromium Impacted Soils, dated August 2015 (Updated Work Plan); and
- ERFS' In-Situ Chemical Reduction Implementation Work Plan, dated September 2013.

6-Month Performance Assessment Soil Sampling Implementation

In accordance with the Updated Work Plan, the first round of soil sampling was conducted approximately 6 months after completing the in-situ injection program to evaluate the effectiveness of the in-situ treatment. Between March 15, 2016 and March 16, 2016, 20 soil samples were collected from 10 borings drilled no more than 15 feet apart **(see Figure 5A Revised)**, straddling

200 American Metro Blvd
Suite 113
Hamilton, NJ 08619
609-689-2829
amecfw.com

the locations of the Remedial and/or Pre-Design Investigation borings. All soil borings were drilled with a Geoprobe® drill rig. Samples were extracted from the soil boring location in 4-foot long acetate sleeves fitted in the steel Geoprobe® tooling. Samples were collected from the intervals where hexavalent chromium was previously detected in concentrations above 20 mg/kg. Samples were collected at 1 foot intervals and the entire 1 foot interval was homogenized and sampled. This is a deviation from the NJDEP requirement that samples be collected from discreet 6-inch intervals. However, this procedure ensured that the sampling results are not biased by hand-specimen-scale inhomogeneities and variability in contaminant distribution and reagent propagation.

In accordance with the Updated Work Plan, on March 16, 2016, Amec Foster Wheeler also collected 6 month post injection groundwater samples from the 3 monitoring wells and 5 temporary well points that had been installed at TA-10-1 during the injection program. A total of 8 groundwater samples were collected and analyzed.

6-Month Performance Assessment Soil Sampling Analytical Results
All of the 6-month performance assessment soil samples were analyzed for the following:

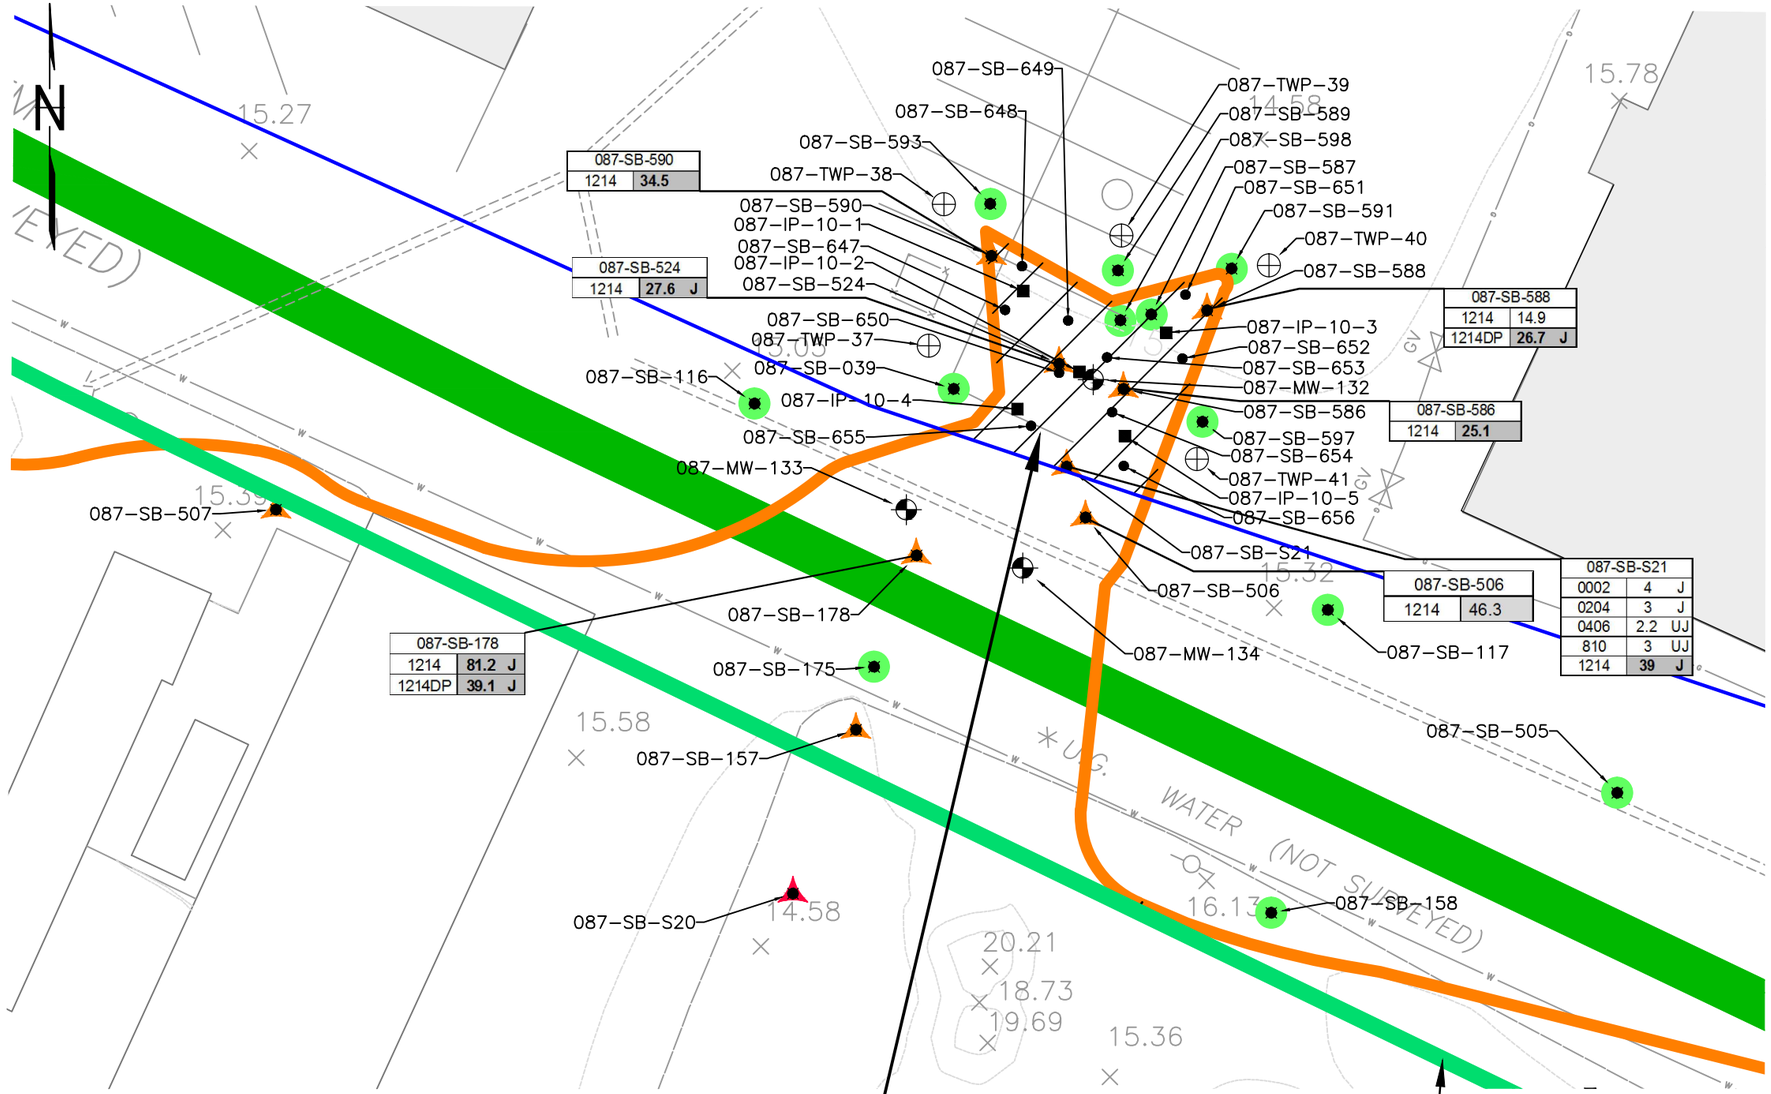
- Hexavalent chromium;
- Total chromium;
- Sulfide; and
- pH

The analytical results are summarized on the attached **Table 1**. For comparison, the table also indicates the previous PDI soil sample data which exceeded 20 mg/kg and indicated the need for treatment in this area. The soil laboratory data packages were validated by a third party validator in accordance with Section 3.4.2 of the Updated Work Plan. This 6-month performance assessment soil sample data indicates the following:

- 15 of the 20 soil samples are <20 mg/kg for hexavalent chromium;
- 5 of the 20 soil samples are >20 mg/kg for hexavalent chromium.

All of the 6-month performance assessment groundwater samples were analyzed for the following:

- Sulfide; and
- Sulfate.



This groundwater data along with baseline and post-treatment samples are summarized in **Table 2**. The groundwater laboratory data packages were validated by a third party validator in accordance with Section 3.4.2 of the Updated Work Plan. This new data affirms the original analytical conclusions that sulfate concentrations in the monitoring wells between the injection area and the 72-inch FM (087-MW-133 and 087-MW-134) have not risen above 150 mg/L and therefore, do not pose a concern to the concrete pipe.

Recommendation
Amec Foster Wheeler recommends re-injection of CAPS at the isolated locations that remain >20 mg/kg for hexavalent chromium.

Re: Proposed Additional In-Situ Injection of Calcium Polysulfide for Treatment of Hexavalent Chromium Impacted Soils
Treatment Area 10-1
Study Area 6 (SA-6) North (Site 087)
Jersey City, New Jersey

Dear Senator Torricelli:

Honeywell's engineer, Amec Foster Wheeler, has prepared the enclosed technical memorandum providing a scope of work for a supplemental in-situ treatment event within the northern section of Area 10 (designated as TA 10-1) using calcium polysulfide (CAPS). This supplemental injection event is proposed as a follow-up to the initial in-situ event completed in September 2015.

As described in our May 6, 2016 technical memorandum, the six-month post in-situ analytical soil sample results indicated that 5 out of 20 sample points contain soil which still exceeds the 20 mg/kg cleanup criteria for hexavalent chromium. Honeywell proposes this supplemental treatment event to further remediate soils in these areas.

In response to the Plaintiffs' comments in their May 23, 2016 correspondence, this event will include the injection of CAPS within all original treatment points, not just the remaining areas of soil exceedances. The attached technical memorandum provides further details on this proposed re-injection program.

This proposed work will be conducted in general accordance with the Updated Work Plan for In-Situ Treatment of Chromium Impacted Soils, dated August 2015 (Updated Work Plan) and a new NJDEP Permit-by-Rule Discharge to Groundwater Authorization (DGW Permit) which is being obtained as the previous permit has expired. Honeywell and Amec Foster Wheeler anticipate receipt of this new DGW Permt such that implementation of the supplemental injection event can be completed in the third quarter 2016 utilizing ERFS as our subcontractor.

We are prepared to discuss this matter further at the next All Parties call if the parties desire. If you have any questions in the meantime, please call me at (973) 455-2175.

Sincerely,

William J. Hague
Global Director, Remediation
Design and Construction

Subject: Proposed In-Situ Treatment Event for Remaining Hexavalent Chromium Impacted Soils – Treatment Area 10-1 SA-6 North, Site 087

Amec Foster Wheeler Environment & Infrastructure, Inc. (Amec Foster Wheeler), on behalf of Honeywell, has prepared this memorandum to summarize the proposed supplemental injection event of calcium polysulfide (CAPS) for in-situ treatment of hexavalent chromium (Cr(VI)) impacted soils in the northern section of Treatment Area 10 (TA-10-1) at SA-6 North at Site 087 (the Site, **Figure 2 (Revised)**). The initial in-situ treatment event occurred between August and September 2015 and was summarized in an October 12, 2015 technical memorandum. Subsequent to this initial CAPS injection, post-treatment soil samples were collected approximately six months later to provide an early indication of the efficacy of this treatment.

As detailed in a May 6, 2016 technical memorandum, post in-situ analytical results showed that the majority of areas treated were now below the 20 mg/kg clean up criteria. However, 5 out of 20 sample points contained soil which will require additional treatment. Based on these results and due to the limited timeframes remaining before potential redevelopment, Amec Foster Wheeler proposes a supplemental CAPS injection event to further remediate soils in these areas. Although we do not feel it is necessary for the efficacy of the treatment program, as requested in the Plaintiffs' May 23, 2016 letter, CAPS will be re-injected within all five original treatment points, not just the remaining areas of soil exceedances.

Amec Foster Wheeler, Mutch Associates, and our injection subcontractor (ERFS) reviewed the initial treatment event and have made some modifications to the approach as detailed within this memo. The modifications include a requirement for a slower and prolonged injection delivery approach. Nevertheless, the proposed additional CAPS injections will be conducted in general

200 American Metro Blvd
Suite 113
Hamilton, NJ 08619
609-689-2829
amecfw.com

accordance with Amec Foster Wheeler's Updated Work Plan for In-Situ Treatment of Chromium Impacted Soils (August 2015) and ERFS' In-Situ Chemical Reduction Implementation Work Plan (September 2013). Injections will be implemented under a pending NJDEP Permit-by-Rule Discharge to Groundwater (PBR DGW) Authorization.

Scope of Supplemental In-Situ Injection Event

The attached **Table 1** indicates the injection volume estimates for the in-situ injection program for the northern portion of TA-10-1 and **Figure 5A (Revised)** shows this treatment area. The calculated theoretical volume of required CAPS in **Table 1** has been increased by a factor of five. Additionally, this volume has been increased per the available volume increments for which CAPS can be purchased (i.e. 55 gallon drums). The amount of potable water needed to maintain solution has also been adjusted to the estimated volume.

Other than the delivery approach outlined below, means and methods will generally follow the February 2013 Revised WP; ERFS' In-Situ Chemical Reduction Implementation Work Plan, dated September 2013; and ERFS Health and Safety Plan, dated June 2013 (Revised July 2014).

The in-situ injection event will be implemented as follows:

- Injections in subarea TA-10-1 will occur from 10 to 16 feet below grade.
- Injections will occur over a 6-foot vertical profile.
- Ten (10) 1-inch diameter PVC injection wells (IWs) will be drilled and installed within subarea TA-10-1, grouped in 5 nested pairs, in the same general location as the previous 5 injection points (**Figure 5A (Revised)**). Wells within each pair will be screened at 3-foot intervals, one from 10 to 13 feet bgs and one from 13 to 16 feet bgs, to increase the vertical distribution of CAPS.
- A total of 825 gallons of 29% CAPS will be mixed with approximately 2,425 gallons of potable water to produce 3,250 gallons of CAPS solution.
- The 3,250 gallons of CAPS solution will be gravity fed from tanker trucks into the 10 IWs utilizing hosing, valves, and associated fittings. Injections will occur over an estimated 5 weekly dosages of 650 gallons each. Each IW will receive 65 gallons of solution during each event.
- Areas surrounding injection locations will be monitored for evidence of daylighting.

- If daylighting occurs, the liquid will be contained at the daylighting site and be allowed to seep back into the ground.
- Injection activities will be adjusted as necessary to eliminate excessive daylighting.
- Groundwater monitoring wells 087-MW-132, 087-MW-133, and 087-MW-134 installed between subarea TA-10-1 and the adjacent force main (FM) for the 2015 injection event have been maintained in the area. Each of these monitoring wells will be monitored for sulfate and sulfide in the shallow groundwater. As a contingency measure, if the sulfate concentrations in either one or both of 087-MW-133 and 087-MW-134 reach 150 milligrams per liter (mg/L), clean potable water will be injected into both wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the FM. These proposed response measures were accepted by NJDEP and PVSC to allay concerns about the sulfate in shallow groundwater in the vicinity of the FM. Additionally, the five temporary well points (TWPs) 087-TWP-37 through 087-TWP-41 installed for the 2015 injection event have been maintained in the area and will also be monitored for sulfate and sulfide, but will not be subject to the limitations and contingency measured noted above as they are not proximate to the FM.
- Groundwater samples will be collected from the TWPs and MWs within the vicinity of the treatment area (see **Figure 5A (Revised)**) for analysis of sulfate and sulfide prior to the start of injections (baseline) and each week between dosages and for several weeks after the last dosage. Additional sampling may be implemented if conditions warrant.
- The following measurements will be taken and recorded in TWPs and MWs prior to the start of injections (baseline), during injections, and following completion of injections as required:
    - Depth to groundwater;
    - Groundwater quality parameters, including pH, oxidation/reduction potential (ORP), specific conductivity (SC), and total dissolved solids (TDS);
    - Hydrogen sulfide (H2S) and volatile organic compounds (VOCs) in the headspace of the PVC riser pipe; and
    - Groundwater color and/or odor.
- The breathing zones at storage, mixing, and injection areas will be monitored for hydrogen sulfide (H_2S).
- The breathing zones at drilling locations will be monitored for volatile organic compounds (VOCs) and H_2S.

- Honeywell will obtain a new Discharge to Groundwater – Permit By Rule from NJDEP for the injection activities.
- All as-built nested IW locations will be surveyed to determine their position.

Performance Assessment Soil Sampling and Reporting

Approximately six months after the final (fifth) weekly injection dosage in subarea TA-10-1 (weather permitting), we will collect and analyze soil samples in accordance with the February 2013 Revised WP. Additionally, Honeywell may seek to conduct the final sampling event sooner than 3 years after the completion of the TA-10-1 injection program. In the event Honeywell seeks to advance the final sampling event, Honeywell will provide notice to the parties.

Upon receipt of final validated analytical results, the performance assessment soil sampling will be summarized in a memorandum and on tables and “chem-box” figures and will be transmitted to All Parties in a timely manner.

Re: Summary of In-Situ Treatment of Hexavalent Chromium Impacted Soils
Treatment Area 10-1 Only
Study Area 6 North (Site 087)
Jersey City, New Jersey

Dear Senator Torricelli:

As discussed at the All Parties meeting on September 15, 2015, Honeywell's engineering consultant, Amec Foster Wheeler, completed field activities associated with the treatability injection of reductants at SA-6 North, specifically Treatment Area 10-1 which is north of the 72-inch forcemain. This work was conducted in accordance with the Updated Work Plan for In-Situ Treatment of Chromium Impacted Soils, dated August 2015 (Updated Work Plan) and the NJDEP Permit-by-Rule Discharge to Groundwater Authorization, dated July 14, 2015.

The attached technical memorandum prepared by Amec Foster Wheeler provides a summary of the field activities. If necessary, we are prepared to walk the Parties through the enclosed information at the next All Parties call scheduled for October 20, 2015. In the meantime, should you have any questions regarding this submittal or require additional information, please contact me at (973) 455-2175.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

Subject: Summary of In-Situ Treatment of Hexavalent Chromium Impacted Soils, SA-6 North, Treatment Area 10-1

This memorandum presents a summary of the field activities recently completed for the in-situ treatment of hexavalent chromium (Cr(VI)) impacted soils at SA-6 North at TA-10-1. As shown by the attached tables and figures, we successfully injected the proposed volumes of calcium polysulfide (CAPS) in the designated area consistent with the proposed plan.

BACKGROUND

Amec Foster Wheeler retained ERFS of Lakewood, New Jersey to implement the in-situ injection of CAPS on behalf of Honeywell. The Amec Foster Wheeler/ERFS team implemented the in-situ program at the Site in three non-consecutive days beginning on August 17, 2015. The Amec Foster Wheeler/ERFS team paused the in-situ program on August 18, 2015 after one injection point (IP-1). On September 9, 2015 the Amec Foster Wheeler/ERFS team remobilized and implemented the in-situ program through September 10, 2015 in accordance with the following documents:

- NJDEP Permit-by-Rule Discharge to Groundwater Authorization, dated July 14, 2015;
- Amec Foster Wheeler's Updated Work Plan for In-Situ Treatment of Chromium Impacted Soils, dated August 2015 (Updated Work Plan); and
- ERFS' In-Situ Chemical Reduction Implementation Work Plan, dated September 2013.

TREATMENT AREAS

The area of impacted soils is located immediately proximate to the 72 inch force main (FM) (see **Figure 2 (Revised)**). The 72 inch FM is installed at an approximate invert elevation of 3.0 feet msl or approximately 12 feet below grade (source: Record Drawings No. 7 Plan, Existing Outfall and No. 8 Profiles, Emergency Overflow Structures prepared by LMS, Inc.) The depth to the chromium impacted material is 12 to 14 feet below existing grade. Therefore, excavation of impacted soils in TA-10 would potentially result in undermining of the FM during removal of the

200 American Metro Blvd
Suite 113
Hamilton, NJ 08619
609-689-2829
amecfw.com

impacted soils. Although the 72 inch FM is supported by a pile foundation system, there is still a risk of joint separation during soil excavation activities due to the fact that one or more unrestrained pipe joints may exist along this straight run portion of piping.

Honeywell has implemented CAPS injections in subarea TA-10-1 (See **Figure 5A (Revised)**), north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project (see **Photo 1**). This subarea is approximately 800 square feet. Honeywell reviewed this proposed CAPS injection program with NJDEP and PVSC to allay concerns about impacts to the FM from sulfate. To monitor sulfate conditions in shallow groundwater, one permanent MW (087-MW-132) was installed in the center of the injection area and two permanent MWs (087-MW-133 and 087-MW-134) were installed between subarea TA-10-1 and the FM. As a contingency, Honeywell further proposed that if the sulfate concentrations in either one or both of 087-MW-133 and 087-MW-134 reach 150 milligrams per liter (mg/L), that clean potable water would be injected into both wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the FM. Both agencies agreed that these proposed measures addressed their concerns about the sulfate in shallow groundwater in the vicinity of the FM. In accordance with the Updated Work Plan, Amec Foster Wheeler has, to date, collected baseline and four weekly post-injection groundwater samples from the MWs and TWPs for sulfide and sulfate analysis to monitor groundwater conditions in the area. This groundwater data is summarized in **Table 1**. The data indicates that sulfate concentrations in the MWs between the injection area and the 72-inch FM (087-MW-133 and 087-MW-134) are not above 150 mg/L and therefore, do not pose a concern to the concrete pipe. Depending on results, groundwater sampling of the TWPs and MWs will continue for several more weeks.

TEMPORARY MONITORING WELL INSTALLATION

ERFS subcontracted Summit Drilling (Summit) of Bridgewater, New Jersey to install MWs and TWPs prior to the implementation of the in-situ injection program. Summit obtained well permits from NJDEP prior to mobilizing to the Site. MWs were installed on August 10, 2015 and TWPs on August 11, 2015. Summit's New Jersey-licensed well driller utilized a Geoprobe® rig outfitted with hollow stem augers to drill and install the MWs and TWPs at the locations shown on **Figure 5A (Revised)** in accordance with NJDEP well drilling and construction standards in N.J.A.C. 7:9D and as described below:

- One (1) permanent 2-inch diameter MW was installed in the center of subarea TA-10-1 and two permanent MWs were installed between subarea TA-10-1 and the FM to monitor sulfate in the shallow groundwater.
- Five (5) 1-inch diameter TWPs were installed adjacent to (around the perimeter of) subarea TA-10-1.

The MWs and TWPs were constructed as follows:

- MWs were constructed of 10 feet of 2-inch diameter polyvinyl chloride (PVC) 0.010-inch slotted well screen/riser pipe with screens set from 6 to 16 feet below ground surface (bgs). The annular space around the screen was filled with No. 1 graded sand to 12 inches above the top of the screen. At least 12 inches of hydrated bentonite seal was

placed above the sand pack, and the remaining annular space was filled with a neat bentonite/cement grout.

- An 8-inch diameter, steel, flush-mounted traffic-rated protective well cap was installed at the top of each MW well borehole.
- TWP boreholes were drilled with a combination of the hollow stem augers for the first 5 feet below ground surface (ft bgs) and 2-inch diameter direct push hollow casing sleeves fitted with an expendable drive point for the remainder of the borehole. All TWP boreholes were drilled to 16 feet bgs.
- The TWPs were constructed from 1-inch diameter PVC 0.010-inch slotted well screen/riser pipe with screens set from 9 to 16 feet. Once the TWP boreholes were drilled, the PVC well screens/risers were installed within the casing sleeves/hollow stem augers. A sand pack was installed around the well screens to approximately 12 inches above the screen and a combination of hydrated bentonite chips and bentonite/cement grout was placed within the remaining annular space to grade to mitigate any short-circuiting of injection fluids. The tops of the PVC riser pipes protrude above the ground surface and are affixed with threaded caps.

Following the installation of the MWs and the TWPs all of the wells were developed by pumping until the pumped water ran clear. On August 14, 2015, groundwater samples from each MW and TWP were collected for analysis of sulfide and sulfate to assess baseline groundwater conditions in subarea TA-10-1. Additionally, the horizontal positions and the elevations of the tops of the riser pipes on each MW and TWP were surveyed by a New Jersey-licensed surveyor from Maser Consulting, P.A. of Red Bank, New Jersey.

The following measurements were taken and recorded in the MWs and TWPs prior to the start of injections (baseline) as follows:

- Depth to groundwater;
- Groundwater quality parameters, including pH, oxidation/reduction potential (ORP), specific conductivity (SC), and total dissolved solids (TDS);
- Hydrogen sulfide (H_2S) and volatile organic compounds (VOCs) in the headspace of the PVC riser pipe; and
- Groundwater color and/or odor.

CHEMICAL STORAGE/MIXING AREA MOBILIZATION

On August 18, 2015, prior to the initiation of the injection program, ERFS set up chemical storage/mixing stations (see **Photo 2**). Portable pop-up secondary containment berms were deployed and all CAPS containers, mixing tanks, and pumps were located within the berms. ERFS took delivery of the 29% stock CAPS solution in 55-gallon plastic drums. Potable water for mixing the diluted solution was obtained from a nearby fire hydrant maintained and operated by Jersey City Municipal Utility Authority (JCMUA) at the SA-6 North Site.

ERFS conducted all mixing operations in plastic 500-gallon mixing tanks within the secondary containment berms at the mixing stations. 29% stock CAPS solution was transferred to the mixing tanks from the totes or drums using a drum pump. ERFS mixed enough solution for one IP at a time. Only enough diluted CAPS solution was mixed for the day's injection events; no solution was kept overnight.

INJECTION PROGRAM

The selection of the reductant and the delivery methods are based on full scale work conducted by Honeywell at SA-6 North and SA-6 South. Direct injection of a diluted calcium polysulfide (CAPS) aqueous solution was used for this treatment program (see **Photo 3**). A Geoprobe® drill-rig was utilized to advance the injection tooling to the desired treatment depth. The reductant was injected into the formation directly from the drill tool string, without the need to construct injection wells. Portable pumps were utilized for reagent transfer and injection. Connections were made using chemical-grade hoses with quick disconnect couplers. Pumping rates and pressures were controlled manually by the chemical feed operators. The contaminated interval targeted by the treatment program is approximately 2 feet thick. To ensure adequate coverage and good permeation of the targeted interval by the reductant, the injection spanned a zone from 2 feet above to 2 feet below the contaminated zone. Injections did not continue below the meadow mat.

Based on our experience from the previously completed in-situ treatment programs at TA-7, TA-8, Site 079, Site 163, and the pilot program at Site 124, the injection program is designed based on 30 percent porosity and 25 percent volume exchange. A 10 percent excess was included in the final injectant volume estimate. Because CAPS contains a mixture of polysulfides with x ranging from 2 to 5, we have used x=5 (the least favorable formulation) as the basis for estimating stoichiometric demand. Additionally, Amec Foster Wheeler increased the stoichiometric ratio of the CAPS solution to approximately 5X to account for potential ambient soil reductant demand.

The locations of the five (5) injection points in subarea TA-10-1 are shown on **Figure 5A (Revised)**. Injections were carried out as follows:

- Means and methods generally followed ERFS' In-Situ Chemical Reduction Implementation Work Plan, dated September 2013; and ERFS' Health and Safety Plan, dated June 2013 (Revised July 2014).
- Injections in subarea TA-10-1 occurred from 10 to 16 feet below grade.
- Injections occurred over a 6-foot vertical profile.
- A total of 165 gallons of 29% CAPS were mixed with approximately 3,085 gallons of potable water to produce the CAPS 3,250 gallon solution.
- The 3,250 gallons of CAPS solution was injected into 5 IPs; 650 gallons of CAPS solution per IP.
- The breathing zones at storage, mixing, and injection areas were monitored for hydrogen sulfide (H_2S).

- The breathing zones at drilling locations were monitored for volatile organic compounds (VOCs) and H2S.

Boreholes for the IPs were drilled with a Geoprobe® direct push drill rig (See **Photo 3**). Injection intervals were 6 feet from top to bottom. Injections were conducted by driving a pressure-activated injection probe (see **Attachment 1**) to 16 ft bgs, attaching an injection well head to the drive pipe (see **Photo 4**), and applying 50 gallons of 1.47% CAPS solution to that depth interval. Since ERFS purchased and used three 55-gallon drums of 29% CAPS for this injection program, this concentration of CAPS solution was slightly higher than proposed in the Updated Work Plan. Once the specified volume had been injected, the rods were pulled up 6 inches and another 50 gallons of 1.47% CAPS solution was injected. That process was repeated over a total of thirteen 6-inch intervals from top to bottom at each IP location, for a total vertical injection interval of 6 feet at each location.

Table 2 summarizes the operational parameters of the injection program as proposed in the Updated Work Plan as well as those for the completed injection program to compare one to the other. The proposed and completed information on **Table 2** includes the number of IPs, the number of TWPs, and the volume of CAPs, CAPs solution, and concentration of CAPs injected for each area. In addition, the injection time and average flow rates for each area are presented on **Table 2**. By comparing the baseline monitoring data to measurements collected during or slightly following injections and knowing the distance from the injection point to the TWP at which the data was collected, ERFS determined the minimum and average ROI for the treatment area. A summary of the injection logs is presented on **Table 4** and a summary of the monitoring data collected in the TWPs prior (see **Photo 5**), during (for brevity, one representative measurement), and after the injections is shown on **Table 3**. For brevity, only measurements of depth to groundwater, pH, ORP, and SC are shown on **Table 3**. During mixing operations and injections, the breathing zone in the work area and at the perimeter was monitored for odors and H_2S using a 4-gas meter and VOCs using a photoionization device.

Key observations of the injection program are summarized below:

- During mixing operations, there was a slight occasional H_2S odor within the work zone, but no readings were exhibited above background levels in the work zone or at the perimeter.
- The overall average injection flow rate for the Site was 11 gallons per minute, which was about what ERFS expected.
- Propagation of injectant fluids was evidenced by one or more of the following:
    - Decrease in the depth to groundwater table;
    - Marked increase in pH;
    - Marked decrease in ORP; and
    - Changes in SC or TDS.

- The minimum ROI was approximately 10 feet, but average ROIs were as high as 15 feet based upon responses in multiple TWPs during injections.

Based on the above summary, Amec Foster Wheeler is confident that the field implementation phase was successful.

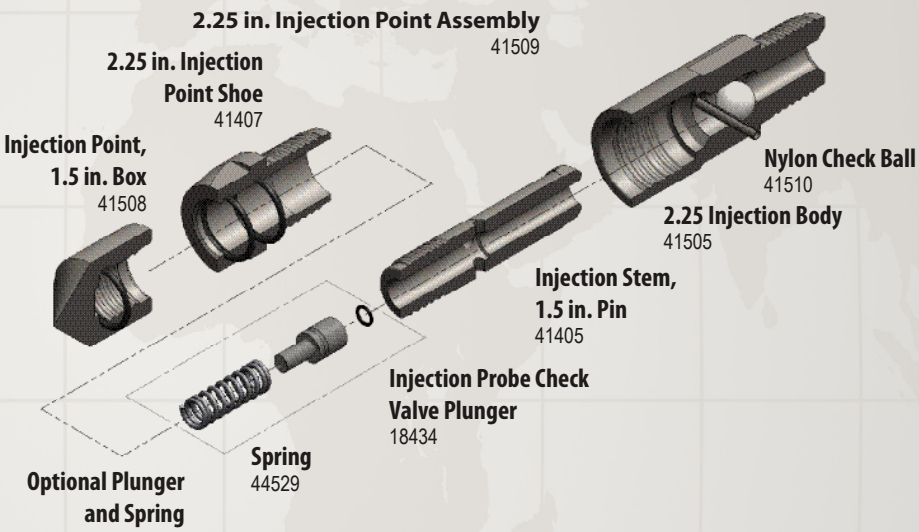
GEOPROBE® INJECTION PROBE TOOL

Geoprobe Systems®

ENVIRONMENTAL • GEOTECHNICAL • GEOTHERMAL • MINING EXPLORATION

Product Sheet

Geoprobe® 2.25 in. Injection Probe



Accurate Injection Materials Placement

• The Geoprobe® 2.25 in. Injection Probe allows for "Top Down" or "Bottom Up" injection methods. Use with the Geoprobe 2.25 Injection Pull Cap (P/N 37275).

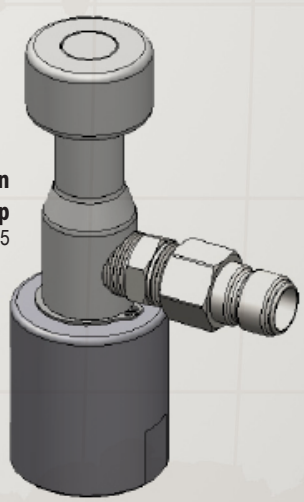
• The four horizontal injection ports provide 360 degrees influence of remediation materials.

• During advancement & retraction of the probe, the check valve system keeps subsurface materials out of the injection tool string and helps prevent injection material back flow.

Cost Effective Injection

• No need for expendable points thus giving you a cost savings per hole.

• Compatible with all Geoprobe Systems® pump configurations.



• Fast & Simple cleaning with few replaceable parts needed.

Productive Injection

• The Geoprobe® 2.25 in. Injection Probe is manufactured with Stainless Steel components and is compatible with many remediation products.

• "High Solids" materials such as cement or iron based materials are easily injected with the 2.25 in. Injection Probe.

• Quick & Easy assembly and disassembly of the probe for cleaning and simple maintenance.

[Print name below signature]

DEED NOTICE CONCERNING CONTROLS INSTALLED TO CONTAIN CHROMIUM AND HISTORIC FILL CONTAMINATION UNDERLYING THE CENTRAL PARK

This Deed Notice is made as of the __ day of _____, 2017, by ***Bayfront Redevelopment LLC, whose post office address is 115 Tabor Road, Morris Plains, New Jersey 07950***. Owner shall mean Bayfront Redevelopment LLC together with its successors and assigns, including all successors in interest in the Open Space Area Property which is the subject of this Deed Notice as described fully below.

1. THE PROPERTY. Bayfront Redevelopment LLC is the current owner in fee simple of certain real property designated as portions of ***Block 22901, Lots 5 through 10 on the tax map of the City of Jersey City, Hudson County, New Jersey***[1]; the New Jersey Department of Environmental Protection ("the Department") Program Interest Numbers for the contaminated site which includes this property are ***Hudson County Chromate Site No. 087 Program Interest (PI) No. G000008710 and Hudson County Chromate Site No. 088 PI No. G000008711*** [NJDEP PI# for non-chromium-related contaminants at the Property is #745719] and known as the Open Space Area pursuant to

[1] All references to Block 22901 Lots 5 through 10 in this Deed Notice shall mean those portions of Block 22901 Lots 5 through 10 regardless of whether the word "portion(s)" is specifically called out or not.

the First Amended Consent Decree Regarding the Remediation and Redevelopment of Study Area 6 North ("Consent Decree") which is attached hereto and is entered as an order of the Court in the following consolidated actions *JCMUA v. Honeywell International, Inc.,* D.N.J., Civ. No. 05-05955; *JCIA v. Honeywell International, Inc.,* D.N.J., Civ. No. 05-5993; and *Hackensack Riverkeeper, Inc. v. Honeywell International, Inc.,* D.N.J., Civ. No. 06-22. The approximate location of the Open Space Area is also referred to as Central Park in the Bayfront I Redevelopment Plan adopted by Jersey City on March 12, 2008 and is referred to as the Open Space Area Property herein. The Open Space Area is more particularly described in Exhibit A, which is attached hereto and made a part hereof (the "Open Space Area Property"). The Consent Decree restricts transfer, use and development of the Open Space Area Property. To the extent that there is any conflict or inconsistency between the terms of this Deed Notice and the terms of the Consent Decree, the Consent Decree shall govern.

2. REMEDIATION.

i. The Department's Bureau of State Case Management (BCM) is the entity within the Department that is responsible for the oversight of the chromium remediation of the Open Space Area Property. The matter was Case No. Hudson County Chromate Site No. 087 PI# G000008710 and Hudson County Chromate Site No. 088 PI# G000008711. The Department has approved this Deed Notice as an institutional control for the Property, which is part of the remediation of the Property.

ii. N.J.A.C. 7:26-C-7 requires the Owner, among other persons, to obtain a soil remedial action permit for the soil remedial action at the Property. That permit will contain the monitoring, maintenance and biennial certification requirements that apply to the Property.

3. SOIL AND GROUNDWATER CONTAMINATION. Honeywell International Inc. ("Honeywell") a corporation of the State of Delaware, licensed to do business in the State of New Jersey whose post office address is 115 Tabor Road, Morris Plains, New Jersey 07950, has remediated the Open Space Area Property to address chromium-related soil and non-chromium related soil and shallow groundwater contamination. The Remedial Action Work Plan (RAWP) for chromium remedial actions was approved by the Department on February 19, 2009 for Hudson County Chromate Site Nos. 087 and 088 which included the Open Space Area Property. The RAWP for non-chromium remedial actions was approved by the Department on November 10, 2009. Remedial actions for chromium were further approved pursuant to the Consent Decree. Under both the Consent Decree and the RAWP soil contamination remains in the Open Space Area Property which contains contaminants in concentrations that do not allow for the unrestricted use of the Open Space Area Property.

Deed Notice #5 encompasses the Open Space Area in SA-6 North which encompass approximately 11 acres. This deed notice area includes chromium and historic fill. The horizontal extents of the SA-6 North Open Space Area are defined by an existing soil-cement-bentonite (SCB) wall along the northern boundary with SA-7 and the hydraulic barrier walls installed on the other three sides as part of the Chromium Remedy. The engineering barrier in the SA-6 North Open Space Area consists of an engineered Resource Conservation Recovery Act (RCRA) cap that includes a gas collection system, base protective layer, geomembrane liner, geocomposite drainage layer, filter fabric, warning layer and cover soils. Deed Notice #5 also includes the northern hydraulic barrier

of SA-7. This area will be impacted by Open Space Development, therefore, the provisions of the LTMP apply and on-site oversight may be appropriate.

The soil contamination is described, including the type, concentration and specific location of such contaminants, in Exhibit B, which is attached hereto and made a part hereof. As a result of the contamination, there is a statutory requirement for this Deed Notice and engineering controls in accordance with N.J.S.A. 58:10B-13. Under the terms of the Consent Decree and this Deed Notice, Honeywell is responsible for monitoring and maintaining the soil remediation for the Open Space Area Property in perpetuity.

4. CONSIDERATION. In accordance with the Department's approval of the chromium and non-chromium RAWPs for the remediation for the Hudson County Chromate Site Nos. 087 and 088 which includes the Open Space Area Property, and in consideration of the terms and conditions of that remedial action, and in accordance with the Consent Decree, and other good and valuable considerations, Owner has agreed to subject the Open Space Area Property to certain statutory and regulatory requirements which impose restrictions upon the use of the Open Space Area Property, to restrict certain uses of the Open Space Area Property, and to provide notice to subsequent owners, lessees and operators of the restrictions and the monitoring, maintenance, and biennial certification requirements outlined in this Deed Notice and required by law, as set forth herein.

5A. RESTRICTED AREAS. Due to the presence of these contaminants, Owner has agreed, as part of the remedial action for the Open Space Area Property, to restrict the use of the Open Space Area Property (the "Restricted Areas"); a narrative description of these restrictions, along with the associated monitoring and maintenance activities and the biennial certification requirements are provided in Exhibit C, which is attached hereto and made a part hereof. Owner has also agreed to maintain a list of these restrictions on site for inspection by governmental enforcement officials.

5B. RESTRICTED LAND USES. The following statutory land use restrictions apply to the Restricted Areas:

i. The Brownfield and Contaminated Site Remediation Act, N.J.S.A. 58:10B-12.g(10), prohibits the conversion of a contaminated site, remediated to non-residential soil remediation standards that require the maintenance of engineering or institutional controls, to a child care facility, or public, private, or charter school without the Department's prior written approval, unless a presumptive remedy is implemented; and

ii. The Brownfield and Contaminated Site Remediation Act, N.J.S.A. 58:10B-12.g(12), prohibits the conversion of a landfill, with gas venting systems and or leachate collection systems, to a single family residence or a child care facility without the Department's prior written approval.

5C. ENGINEERING CONTROLS. Due to the presence and concentration of these contaminants, the Owner has also agreed, as part of the remedial action for the Open Space Area Property, to the placement of certain engineering controls on the Open Space Area Property. A narrative description of these engineering controls, along with the associated monitoring and maintenance activities and the biennial certification requirements are provided in Exhibit C. Honeywell shall be responsible

for monitoring and maintenance of engineering controls and biennial certification requirements as specified in Paragraphs 8A and 8B.

5D. LONG TERM MONITORING PLAN. Honeywell has prepared a Long Term Monitoring Plan which sets forth requirements for monitoring of the chromium remedial measures including engineering controls within the Open Space Area Property and shallow groundwater, and requirements for notification and reporting pursuant to the Consent Decree, Deed Notice and Soil Remedial Action Permit. A copy of the Long-Term Monitoring Plan is maintained by Honeywell at 115 Mount Tabor Road, Morris Plains, NJ 07950. This Deed Notice is appended to the LTMP.

6A. CHANGE IN OWNERSHIP AND REZONING.

i. The Owner and the subsequent owners and lessees, shall cause all leases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring all holders thereof to take the Property subject to the restrictions contained herein and to comply with all, and not to violate any of the conditions of this Deed Notice. Nothing contained in this Paragraph shall be construed as limiting any obligation of any person to provide any notice required by any law, regulation, or order of any governmental authority.

ii. The Owner and the subsequent owners shall provide written notice to the Department of Environmental Protection on a form provided by the Department and available at www.nj.gov/srp/forms within thirty (30) calendar days after the effective date of any conveyance, grant, gift, or other transfer, in whole or in part, of the owner's interest in the Restricted Area.

iii. The Owner and the subsequent owners shall provide written notice to the Department, on a form available from the Department at www.nj.gov/srp/forms, within thirty (30) calendar days after the owner's petition for or filing of any document initiating a rezoning of the Property to residential.

6B. SUCCESSORS AND ASSIGNS. This Deed Notice shall be binding upon Owner and upon Owner's successors and assigns, and subsequent owners, lessees and operators while each is an owner, lessee, or operator of the Property.

7A. ALTERATIONS, IMPROVEMENTS, AND DISTURBANCES.

i. The Owner and all subsequent owners and lessees shall notify any person of whom it has knowledge, including, without limitation, tenants, employees of tenants, and contractors, intending to conduct invasive work or excavate within the Restricted Areas, of the nature and location of known contamination in the Restricted Areas, and, of the precautions necessary to protect the engineering controls and minimize potential human exposure to contaminants.

ii. Except as provided in the Consent Decree and Paragraph 7B, below, no person shall make, or allow to be made, any alteration, improvement, or disturbance in, to, or about the Open Space Area Property which disturbs any engineering control at the Open Space Area Property except as (a) permitted in the Consent Decree and (b) without first obtaining the express written consent of the Department. Nothing herein shall constitute a waiver of the obligation of any person to comply

with all applicable laws and regulations including, without limitation, the applicable rules of the Occupational Safety and Health Administration. To request the consent of the Department of Environmental Protection, contact:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413

iii. Notwithstanding subparagraph 7A.ii., above, a Soil Remedial Action Permit modification is not required for any alteration, improvement, or disturbance provided that:

(A) Takes such action in conformance with the Consent Decree; and

(B) Notifies the Department of Environmental Protection of the activity by calling the DEP Hotline, at 1-877-WARN-DEP or 1-877-927-6337, within twenty-four (24) hours after the beginning of each alteration, improvement, or disturbance; and

(C) Notifies Honeywell of the activity by calling 855-727-2658; and

(D) Honeywell and/or the owner, lessee or operator restores any disturbance of an engineering control to pre-disturbance conditions within sixty (60) calendar days after the initiation of the alteration, improvement or disturbance; and

(E) Ensures that all applicable worker health and safety laws and regulations are followed during the alteration, improvement, or disturbance, and during the restoration; and

(F) Ensures that human exposure to contamination in excess of the applicable remediation standards does not occur; and

(G) The next biennial certification includes a description of the nature of the alteration, improvement, or disturbance, the dates and duration of the alteration, improvement, or disturbance, the name of key individuals and their affiliations conducting the alteration, improvement, or disturbance, a description of the notice the Owner gave to those persons prior to the disturbance, the amounts of soil generated for disposal, if any, the final disposition and any precautions taken to prevent exposure.

7B. EMERGENCIES. In the event of an emergency which presents, or may present, an unacceptable risk to the public health and safety, or to the environment, or immediate environmental concern, see N.J.S.A. 58:10C-2, any person may temporarily breach an engineering control provided that that person complies with each of the following:

i. Immediately notifies the Department of Environmental Protection of the emergency, by calling the DEP Hotline at 1-877-WARNDEP or 1-877-927-6337;

ii. Immediately notifies Honeywell of the emergency by calling 855-727-2658;

iii. Limits both the actual disturbance and the time needed for the disturbance to the minimum reasonably necessary to adequately respond to the emergency;

iv. Implements all measures necessary to limit actual or potential, present or future risk of exposure to humans or the environment to the contamination;

v. Notifies the Department of Environmental Protection when the emergency has ended by calling the DEP Hotline at 1-877-WARNDEP or 1-877-927-6337;

vi. Notifies Honeywell when the emergency has ended by calling 855-727-2658; and

vii. Honeywell restores the engineering control to the pre-emergency conditions as soon as possible, and provides a written report to the Department of Environmental Protection of such emergency and restoration efforts within sixty (60) calendar days after completion of the restoration of the engineering control. The report must include all information pertinent to the emergency, potential discharges of contaminants, and restoration measures that were implemented, which, at a minimum, should specify: (a) the nature and likely cause of the emergency, (b) the potential discharges of or exposures to contaminants, if any, that may have occurred, (c) the measures that have been taken to mitigate the effects of the emergency on human health and the environment, (d) the measures completed or implemented to restore the engineering control, and (e) the changes to the engineering control or site operation and maintenance plan to prevent recurrence of such conditions in the future. Honeywell shall submit the report to:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413

8A. MONITORING AND MAINTENANCE OF DEED NOTICE, AND PROTECTIVENESS CERTIFICATION. The persons in any way responsible, pursuant to the Spill Compensation and Control Act, N.J.S.A. 58:10-23.11a et seq., for the hazardous substances that remain at the Open Space Area Property, the persons responsible for conducting the remediation, Honeywell, the Owner, and the subsequent owners, lessees, and operators, shall monitor and maintain this Deed Notice. The subsequent owners, lessees and operators have this obligation only during their ownership, tenancy, or operation. Honeywell shall certify to the Department on a biennial basis that the remedial action that includes this Deed Notice remains protective of the public health and safety and of the environment. The specific obligations to monitor and maintain the deed notice shall include all of the following:

i. Monitoring and maintaining this Deed Notice according to the requirements in Exhibit C, to ensure that the remedial action that includes the Deed Notice continues to be protective of the public health and safety and of the environment;

ii. Conducting any additional remedial investigations and implementing any additional remedial actions, that are necessary to correct, mitigate, or abate each problem related to the protectiveness of the remedial action for the Open Space Area Property prior to the date that the certification is due to the Department pursuant to iii, below, in order to ensure that the remedial action that includes this Deed Notice remains protective of the public health and safety and of the environment.

iii. Certify to the Department of Environmental Protection as to the continued protectiveness of the remedial action that includes this Deed Notice, on a form provided by the Department and consistent with N.J.A.C. 7:26C-1.2 (a)1, every two years on the anniversary of the date stamped on the Deed Notice that indicates when the Deed Notice was recorded.

8B. MONITORING AND MAINTENANCE OF ENGINEERING CONTROLS, AND PROTECTIVENESS CERTIFICATION. Honeywell shall maintain all engineering controls at the Open Space Area Property and certify to the Department on a biennial basis that the remedial action of which each engineering control is a part remains protective of the public health and safety and of the environment. The specific obligations to monitor and maintain the engineering controls shall include the following:

i. Monitoring and maintaining each engineering control according to the requirements in Exhibit C, to ensure that the remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment;

ii. Conducting any additional remedial investigations and implementing any additional remedial actions, that are necessary to correct, mitigate, or abate each problem related to the protectiveness of the remedial action for the Open Space Area Property prior to the date that the certification is due to the Department pursuant to iii, below, in order to ensure that the remedial action that includes the engineering control remains protective of the public health and safety and of the environment.

iii. Certify to the Department of Environmental Protection as to the continued protectiveness of the remedial action that includes the engineering control, on a form provided by the Department and consistent with N.J.A.C. 7:26C-1.2 (a)1, every two years on the anniversary of the date stamped on the Deed Notice that indicates when the Deed Notice was recorded.

9. ACCESS. The Owner agrees to allow the Department, its agents and representatives access to the Property to inspect and evaluate the continued protectiveness of the remedial action that includes this Deed Notice and to conduct additional remediation to ensure the protection of the public health and safety and of the environment if the persons responsible for monitoring the protectiveness of the remedial action, as described in Paragraph 8, above, fail to conduct such remediation pursuant to this Deed Notice as required by law. The Owner, and the subsequent owners and lessees, shall also cause all leases, subleases, grants, and other written transfers of an

interest in the Restricted Areas to contain a provision expressly requiring that all holders thereof provide such access to the Department.

10. NOTICES.

i. Owner shall cause all leases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring all holders thereof to take the Open Space Area Property subject to the restrictions contained herein and to comply with all, and not to violate any of the conditions of this Deed Notice. Nothing contained in this Paragraph shall be construed as limiting any obligation of any person to provide any notice required by any law, regulation, or order of any governmental authority.

ii. Owner shall notify any person intending to conduct invasive work or excavate within the Open Space Area Property on its behalf of the nature and location of contamination and, of the precautions necessary to minimize potential human exposure to contaminants.

iii. Owner shall provide written notice to the Department of Environmental Protection at least thirty (30) calendar days before the effective date of any conveyance, grant, gift, or other transfer, in whole or in part, of the owner's interest in the Restricted Area. Any such conveyance, grant or gift must be consistent with the terms of the Consent Decree.

iv. Owner shall provide written notice to the Department within thirty (30) calendar days following the Owner's receiving notice of any petition for a rezoning of the Open Space Area Property. Any such rezoning must be consistent with the terms of the Consent Decree. The Owner shall submit the written notice to:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413.

11. ENFORCEMENT OF VIOLATIONS.

i. This Deed Notice itself is not intended to create any interest in real estate in favor of the Department of Environmental Protection, nor to create a lien against the Open Space Area Property, but merely is intended to provide notice of certain conditions and restrictions on the Open Space Area Property and to reflect the regulatory and statutory obligations imposed as a conditional remedial action for this Open Space Area Property.

ii. The restrictions provided herein may be enforceable by the Department against any person who violates this Deed Notice. To enforce violations of this Deed Notice, the Department may initiate one or more enforcement actions pursuant to N.J.S.A. 58:10-23.11, and N.J.S.A. 58:10C,

and require additional remediation and assess damages pursuant to N.J.S.A. 58:10-23.11, and N.J.S.A. 58:10C.

12. SEVERABILITY. If any court of competent jurisdiction determines that any provision of this Deed Notice requires modification, such provision shall be deemed to have been modified automatically to conform to such requirements. If a court of competent jurisdiction determines that any provision of this Deed Notice is invalid or unenforceable and the provision is of such a nature that it cannot be modified, the provision shall be deemed deleted from this instrument as if the provision had never been included herein. In either case, the remaining provisions of this Deed Notice shall remain in full force and effect.

13. MODIFICATION AND TERMINATION.

i. Any person may request in writing, at any time, that the Department modify this Deed Notice where performance of subsequent remedial actions, a change of conditions at the Open Space Area Property, or the adoption of revised remediation standards suggest that modification of the Deed Notice would be appropriate.

ii. Any person may request in writing, at any time, that the Department terminate this Deed Notice because the conditions which triggered the need for this Deed Notice are no longer applicable.

iii. Any person seeking a modification or termination of this Deed Notice must also have such modification approved by the United States District Court for the District of New Jersey pursuant to the Consent Decree until such time as the Consent Decree terminates with regard to the Open Space Area Property pursuant to the Consent Decree.

iv. This Deed Notice may be revised or terminated only upon filing of an instrument, executed by the Department, in the office of the Hudson County Register, New Jersey, expressly modifying or terminating this Deed Notice.

v. Within thirty (30) calendar days after the filing of a Termination of Deed Notice, the owner of the property shall apply to the Department for termination of the soil remedial action permit pursuant to N.J.A.C. 7:26C-7.

14A. EXHIBIT A. Exhibit A includes the following maps of the Open Space Area Property and the vicinity:

i. Exhibit A-1: Vicinity Map - A map that identifies by name the roads, and other important geographical features in the vicinity of the Open Space Area Property;

ii. Exhibit A-2: Metes and Bounds Description of Open Space Area Property- A metes and bounds description of the Open Space Area Property, including reference to tax lot and block numbers for the Open Space Area Property and a Tax Map;

iii. Exhibit A-3: Open Space Area Property Map - A scaled map of the Open Space Area Property, scaled at one inch to 200 feet or less, and if more than one map is submitted, the maps shall be presented as overlays, keyed to a base map; the map(s) shall include diagrams of major surface topographical features such as buildings, roads, and parking lots.

14B. EXHIBIT B. Exhibit B includes the following descriptions of the Restricted Areas:

i. Exhibit B-1 and B-2 (Exhibits B-1A, B-1B, B-2A, and B-2B): Restricted Area Maps - Maps for the Open Space Area that include, as applicable:

(A) As-built diagrams of each engineering control, including caps, fences, slurry walls, ground water monitoring wells, and ground water pumping system;

(B) As-built diagrams of any buildings, roads, parking lots and other structures that function as engineering controls; and

(C) Designation of all soil and/or sediment sample locations within the restricted areas that exceed any soil or sediment standard that are keyed into one of the tables described below.

ii. Exhibit B-3 (Table B-3): Restricted Area Data Tables - Table for the Open Space Area that includes:

(A) Sample location designation from Restricted Area maps (Exhibit B-1);

(B) Sample elevation based upon mean sea level;

(C) Name and chemical abstract service registry number of each contaminant with a concentration that exceeds the unrestricted use standard;

(D) The restricted and unrestricted use standards for each contaminant in the table; and

(E) The remaining concentration of each contaminant at each sample location at each elevation (or if historic fill, include data from the Department's default concentrations at N.J.A.C. 7:26E-4.6, Table 4-2).

14C. EXHIBIT C. Exhibit C includes narrative descriptions of the institutional controls and engineering controls as follows:

i. Exhibit C-1A through D. Exhibit C-1A: Deed Notice as Institutional Control; Exhibit C-1B: Consent Decree as Institutional Control (attached); Exhibit C-1C: Zoning as Intuitional Control; Exhibit C-1D: Conservation Restriction as Institutional Control (attached): Exhibit C-1 (A through D) includes a narrative description of the restrictions and obligations of this Deed Notice that are in addition to those described above, as follows:

(A) General Description of the Institutional Control:

(1) Description and estimated size of the Restricted Areas as described above;
(2) Description of the restrictions on the Open Space Area Property by operation of this Deed Notice and the other Institutional Controls; and
(3) The objective of the restrictions;

(B) Description of the monitoring necessary to determine whether:

(1) Any disturbances of the soil in the Restricted Areas did not result in the unacceptable exposure to the soil contamination;
(2) There have been any land use changes subsequent to the filing of this Deed Notice and the other Institutional Controls or the most recent biennial certification, whichever is more recent;
(3) The current land use on the Open Space Area Property is consistent with the restrictions in this Deed Notice and the other Institutional Controls;
(4) Any newly promulgated or modified requirements of applicable regulations or laws apply to the Open Space Area Property; and
(5) Any new standards, regulations, or laws apply to the Open Space Area Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice and the other Institutional Controls, and conduct the necessary sampling; and

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice and the other Institutional Controls;
(2) Land use at the Open Space Area Property is consistent with the restrictions in this Deed Notice and the other Institutional Controls; and
(3) The remedial action that includes this Deed Notice and the other Institutional Controls continues to be protective of the public health and safety and of the environment.

ii. Exhibit C-2A through C. Exhibit C-2A: Engineering Controls: Clean Fill and Soil Capping System; Exhibit C-2B: Engineering Controls: Underground Containment Walls; Exhibit C-2C: Engineering Controls: Shallow Groundwater Collection and Treatment System.

Exhibit C-2 includes a narrative description of the engineering controls as follows:

(A) General Description of the engineering control:

(1) Description of the engineering control;
(2) The objective of the engineering control; and
(3) How the engineering control is intended to function.

(B) Description of the operation and maintenance necessary to ensure that:

(1) Periodic inspections of each engineering control are performed in order to determine its integrity, operability, and effectiveness;

(2) Each engineering control continues as designed and intended to protect the public health and safety and the environment;
(3) Each alteration, excavation or disturbance of any engineering control is timely and appropriately addressed to maintain the integrity of the engineering control;
(4) The engineering control is being inspected and maintained and its integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment;
(5) A record of the self-inspection dates, name of the inspector, results of the inspection and condition(s) of the engineering control. Sampling, for example, may be necessary if it is not possible to visually evaluate the integrity/performance of the engineering control; and
(6) Any new standards, regulations, or laws apply to the Open Space Area Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

(C) Description of the following items that will be included in the biennial certification:
(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;
(2) The engineering control continues to operate as designed; and
(3) The remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment.

15. SIGNATURES. IN WITNESS WHEREOF, Owner has executed this Deed Notice as of the date first written above.

DESCRIPTION OF PROPERTY
CITY OF JERSEY CITY
HUDSON COUNTY, NEW JERSEY
PROJECT NO. 10000292C

DEED NOTICE AREA 5
BLOCK 21901 LOTS 5 THRU 10
MAY 18, 2016
REVISED: DECEMBER 7, 2016

All that certain lot, tract or parcel of land situate lying and being in the City of Jersey, in the County of Hudson and State of New Jersey, and being a portion of Lots 5 thru 10, in Block 21901, designated as Deed Notice Area 5 as shown on an exhibit entitled, "Deed Notice Area 5, SA6 North, Block 21901, Lots 5 Thru 10, City of Jersey City, Hudson County, New Jersey," prepared by Maser Consulting P.A., dated May 12, 2016, revised December 7, 2016 and being more particularly bounded and described as follows, to wit:

BEGINNING at a point in the westerly sideline of New Jersey State Highway Route 440 (112 foot wide right of way), said sideline being distant 61 feet westward at right angles to the centerline thereof, said beginning point being distant **S24° 46' 55"W, 4.16 feet** along said sideline, from its intersection with the division line between Lots 5 and 6 in Block 21901, and running; thence-

1. **N49° 06' 51"W, 488.50 feet,** running through Lot 6 and beyond, to a point in Lot 7; thence-
2. **N59° 38' 29"W, 1,519.31 feet,** running through said Lot 7 and beyond, to a point in Lot 8; thence-
3. **N45° 51' 07"E, 4.13 feet,** still running through said Lot 8, to a point in the common division line between Lot 8 and Lot 10 in Block 21901; thence-
4. **S59° 39' 05"E, 111.22 feet,** along said common division line; thence-

Running through said Lot 10, the following seven (7) courses:

5. **N28° 37' 00"E, 19.46 feet,** through the same and beyond, to a point in Lot 10; thence-
6. **N30° 01' 01"E, 48.06 feet**; thence -
7. **N19° 17' 57"W, 17.97 feet**; thence –
8. **N31° 55' 37"E, 23.15 feet**; thence –
9. **N76° 06' 19"E, 18.87 feet**; thence –
10. **N29° 16' 27"E, 36.41 feet**; thence –

11. **S65° 27' 42"E, 153.93 feet**, through said Lot 10 and beyond, to a point in Lot 9; thence –

Running through said Lot 9 the following five (5) courses:

12. **N24° 46' 55"E, 9.39 feet**; thence -

13. **S63° 20' 43"E, 154.05 feet**; thence –

14. **S64° 10' 53"E, 135.75 feet**; **thence** –

15. **S64° 26' 24"E, 187.04 feet**; **thence** –

16. **S63° 47' 42"E, 79.47 feet**, through the same and beyond, to a point in Lot 10; thence –

Running through said Lot 10 the following fourteen (14) courses:

17. **N17° 56' 34"E, 11.36 feet**; thence-

18. **N21° 49' 22"E, 38.16 feet**; thence-

19. **S64° 01' 16"E, 27.11 feet**; thence-

20. **S71° 46' 41"E, 7.00 feet**; thence -

21. **S64° 53' 57"E, 170.96 feet**; thence –

22. **S64° 26' 41"E, 145.28 feet**; thence –

23. **S21° 49' 39"W, 13.27 feet**; thence –

24. **S30° 55' 57"W, 14.90 feet**; thence –

25. **S63° 05' 16"E, 40.95 feet**; thence –

26. **S23° 59' 21"E, 5.01 feet**; thence -

27. **S09° 06' 51"W, 5.08 feet**; thence –

28. **S62° 39' 21"E, 11.92 feet**; thence –

29. **S52° 51' 45"E, 21.10 feet**; thence-

30. **S53° 17' 55"E, 88.34 feet**, through the same and beyond, to a point in Lot 5; thence -

Running through said Lot 5 the following ten (10) courses:

31. **S52° 44' 24"E, 69.21 feet**; thence –

32. **S51° 37' 08"E, 58.38 feet**; thence –

33. **S51° 38' 54"E, 66.12 feet**; thence –

34. **S50° 49' 27"E, 106.68 feet**; thence –

35. **S48° 28' 21"E, 88.28 feet**; thence –

36. **S47° 08' 10"E, 8.77 feet**; thence -

37. **S27° 42' 13"E, 2.67 feet**; thence –

38. **S51° 51' 37"E, 32.05 feet**; thence –

39. **S49° 13' 40"E, 214.67 feet**; thence -

40. **S49° 22' 28"E, 10.39 feet**, to the aforesaid westerly sideline of Route 440; thence –

41. **S24° 46' 55"W, 241.26 feet**, along said westerly sideline to the point and place of BEGINNING.

CONTAINING: 438,399 S.F. of land more or less or 10.064 acres of land more or less.

B-1A and B-1B Restricted Area Maps
B-2A and B-2B Chromium Remedy Components
B-3 Restricted Area Data Table
Portions of Block 21901, Lots 5 through 10
City of Jersey City, New Jersey

Exhibit B-1 Restricted Area Maps includes Exhibit B-1A and Exhibit B-1B (Restricted Area Soil Sample Locations).

Exhibit B-2 Chromium Remedy Components includes Exhibit B-2A chromium remedy components and B-2B cap system detail.

Exhibit B-3 is a Restricted Area Data Table indicating soil sample locations with concentrations remaining above the New Jersey Department of Environmental Protection (NJDEP) Chromium Policy and/or NJDEP Soil Quality Standards.

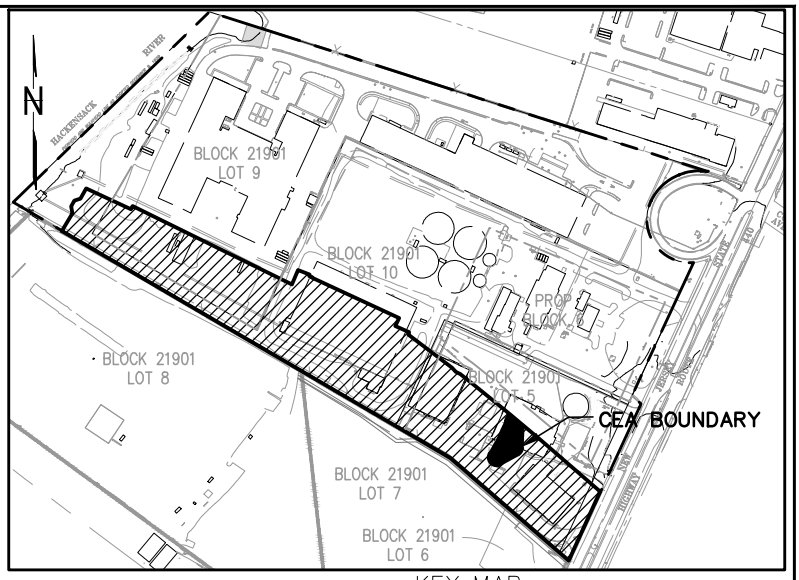
Restricted Area Map Notes:

Exhibits B-1A and B-1B indicate engineering controls. For soils with hexavalent chromium concentrations above 20 mg/kg, the engineering controls include (1) underground containment walls, and (2) a capping system consisting of: a warning layer, impervious geo-membrane liner; geo-composite drainage layer; and clean soil cover with minimum 12 inches thickness in areas where pavement is proposed; and an average of 36-inches and a minimum 24-inches thickness in areas where landscaping is proposed.

Exhibit B-2B indicates engineering controls cap system detail.

Exhibits B-1A and B-1B indicate restricted area soil sample locations with concentrations above the NJDEP Soil Cleanup Criteria (SCC). The soil contaminant of concern is hexavalent chromium above the NJDEP SCC of 20 mg/kg, benzene, methyl tert butyl ether (MTBE), and historic fill above the NJDEP SCC as shown on Exhibit B-3.

Analytical results and soil borings indicate that historic fill is present onsite and extends over the entire Restricted Area. Historic fill onsite typically consists of the following: metals, PAHs, and miscellaneous debris (including but not limited to coal fragments, brick, timber, and other construction materials).



A table summarizing maximum concentrations of typical contaminants found in Site historic fill material is included as Exhibit B-3.

Exhibits B-1A and B-1B

Deed Notice #5 SA-6 North Open Space Area

C-1 Institutional Controls
C-2 Engineering Controls
Open Space Area Portions of Block 21901, Lots 5 through 10 City of Jersey City, New Jersey

C-1 Institutional Controls

C-1 Deed Notice, Consent Decree, Zoning, and Conservation Restriction as Institutional Controls: Exhibit C-1 (A through D) for the portions of Block 21901, Lots 5 through 10, City of Jersey City, New Jersey known as the Open Space Area

i. Exhibits C-1A through D. Exhibit C-1A: Deed Notice as Institutional Control; Exhibit C-1B: Consent Decree as Institutional Control; Exhibit C-1C: Zoning as Institutional Control; Exhibit C-1D: Conservation Restriction as Institutional Control: Exhibits C-1A through C-1D include a narrative description of the restrictions and obligations of this Deed Notice and the other Institutional Controls that are in addition to those described above, as follows:

(A) General Description of the Institutional Control:

(1) Description and estimated size of the Restricted Areas as described above;

The Open Space Area Property constitutes portions of Block 21901, Lots 5 through and 10. The estimated size of the Open Space Area containing chromium-impacted soils (hexavalent chromium above 20 mg/kg) is identified Cap Area on Exhibit B-1 is estimated at approximately 10 acres.

(2) Description of the restrictions on the Open Space Area Property by operation of the Institutional Control;

The Open Space Area shall only be used for activities consistent with this Deed Notice, the Consent Decree, including, but not limited to, Paragraphs 60(j) and 60 (k) of the Consent Decree, the applicable zoning standards, and the Conservation Restriction. Intrusive activities (i.e., excavation or digging) that breach the engineering controls (as described in Exhibit C-2) will not be permitted on the Open Space Area Property except in compliance with the terms of the Consent Decree and the Long-Term Monitoring Plan developed thereunder, and this Deed Notice. See Deed Notice for additional information; subsections 7A Alterations, Improvements, Disturbances, and 7B, Emergencies.

(3) The objective of the restrictions;

The restrictions will prohibit contact with soils above the NJDEP Soil Cleanup Criteria for hexavalent chromium and Soil Remediation Standards for benzene, MTBE, and historic fill.

.

(B) Description of the monitoring necessary to determine whether:

(1) Any disturbances of the soil in the Restricted Areas did not result in the unacceptable exposure to the soil contamination;

Visual inspections of the Open Space Area Property and other monitoring as set forth in the Consent Decree and Long-Term Monitoring Plan established thereunder.

(2) There have been any land use changes subsequent to the filing of this Deed Notice or the most recent biennial certification, whichever is more recent;

Same as (B)(1).

(3) The current land use on the Open Space Area Property is consistent with the restrictions in this Deed Notice;

Same as (B)(1).

(4) Any newly promulgated or modified requirements of applicable regulations or laws apply to the site; and

Review of newly promulgated or modified requirements of applicable regulations or laws that potentially may apply to the Open Space Area Property.

(5) Any new standards, regulations, or laws apply to the Open Space Area Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

Same as (B)(4).

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) Land use at the Open Space Area Property is consistent with the restrictions in the Consent Decree, this Deed Notice, the applicable zoning standards and the Conservation Restriction; and

(3) The remedial action that includes this Deed Notice continues to be protective of the public health and safety and of the environment.

The monitoring report will be included in the biennial certification. Components of the monitoring report will include the following:

- ***A report of all conditions set forth in sections (A) and (B) above to assure that they have been adhered to, including evaluation of any available documents as a result of changes in land use or incidents.***
- ***A report that determines whether or not the land use at the Open Space Area Property has remained consistent with the restrictions in the Consent Decree, this Deed Notice, the applicable zoning standards and the Conservation Restriction.***
- ***A report that determines whether or not the Deed Notice continues to be protective of the public health and safety and the environment.***

C-2 Engineering Controls
Deed Notice #5 SA-6 North Open Space Area

Open Space Area Portions of Block 24601, Lots 5 through 10
City of Jersey City, New Jersey

Exhibits C-2A through C: Narrative description of the Engineering Controls including (A) the Clean Fill and Soil Capping System; (B) Underground Containment Walls; (C) Shallow Groundwater Collection and Treatment System as follows:

(A) General Description of the engineering controls:

(1) Description of the engineering controls;

The Engineering Controls consist of the following: (A) The engineering controls include a capping system consisting of: a root barrier, a warning layer, impervious geo-membrane liner; geo-composite drainage layer; and clean soil cover with minimum 12 inches thickness in areas where pavement is proposed; and an average of 36-inches and a minimum 24-inches thickness in areas where landscaping is proposed. For the purposes of this deed notice, the engineering controls exclude cover soils that are within 12 inches of the root barrier. (B) Engineering controls will also include underground containment walls around the perimeter of the Open Space Area. The Engineering Controls are more fully set forth in the Consent Decree.

(2) The objective of the engineering controls; and

The objective of the controls is to prevent contact with soils that exceed the hexavalent chromium standard in the NJDEP Chromium Policy, soils that are consistent with NJDEP's definition of "historic fill material" found at N.J.A.C. 7:26E-1.8, and to contain shallow groundwater above the NJDEP groundwater quality standard for total chromium.

(3) How the engineering controls are intended to function.

The soil engineering controls are intended to function as a barrier to underlying and adjacent soils that exceed the NJDEP Soil Cleanup Criteria. The groundwater engineering controls are intended to restrict the flow of shallow groundwater, and to collect and treat contaminated groundwater within the Open Space Area Property. Monitoring requirements for the engineering controls are set forth in the Long Term Monitoring Plan.

(B) Description of the operation and maintenance necessary to ensure that:

(1) Periodic inspections of each engineering control are performed in order to determine its integrity, operability, and effectiveness;

Honeywell will perform monitoring by visual inspection of the Open Space Area Property pursuant to the Consent Decree. Other monitoring activities shall be performed as set forth in the Long-Term Monitoring Plan developed pursuant to the Consent Decree.

(2) Each engineering control continues as designed and intended to protect the public health and safety and the environment;

Same as (B)(1) above.

(3) Each alteration, excavation or disturbance of any engineering control is timely and appropriately addressed to maintain the integrity of the engineering controls;

Same as (B)(1) above. Also, see the Consent Decree and the Deed Notice for additional information: subsections 7A Alterations, Improvements, Disturbances, and 7B Emergencies.

(4) The engineering controls are being inspected and maintained and their integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment;

Same as (B)(1) above.

(5) A record of the self-inspection dates, name of the inspector, results of the inspection and condition(s) of the engineering controls. Sampling, for example, may be necessary if it is not possible to visually evaluate the integrity/performance of the engineering controls; and

Records of the inspections are to be maintained as listed in (5). Should the activities carried out in conformance with the Long Term Monitoring Plan developed pursuant to the Consent Decree indicate that other activities are necessary, those activities will be listed and executed.

(6) Any new standards, regulations, or laws apply to the Open Space Area Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

A review of any new standards, regulations, or laws will be conducted. Should the review indicate that other activities are necessary, those activities will be listed and executed.

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) The engineering controls continues to operate as designed; and

(3) The remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment.

The monitoring report will be included in the biennial certification. Components of the monitoring report will include the following:

- ***A report of all conditions set forth in sections (A) and (B) above to assure that they have been adhered to, including an evaluation to determine whether or not the engineering controls are continuing to meet the original objective and intended function.***
- ***A report to determine whether or not the engineering controls continue to operate as designed.***
- ***A report to determine whether or not the engineering controls continue to be protective of the public health and safety and of the environment.***

FIRST AMENDED CONSENT DECREE REGARDING REMEDIATION AND REDEVELOPMENT OF STUDY AREA 6 NORTH

TABLE OF CONTENTS

ARTICLE I: DEFINITIONS 4

ARTICLE II: SCOPE OF THE CONSENT DECREE, JURISDICTION, AND CLAIMS RESOLVED 10

ARTICLE III: CHROMIUM REMEDIATION 11

A. CHROMIUM REMEDY 11
52. Responsibility for Implementation of Chromium Remediation. 11
53. AOC 1 and AOC 2 11
54. Scope and General Requirements of the Chromium Remedy. 12
55. AOC 1 Residential Area Soil Remedy. 14
56. AOC 1 Open Space Area Soil Remedy. 15
57. AOC 1 Additional Excavation Areas Remedy. 17
58. Shallow Groundwater Remedy. 18
59. Permits and Authorizations. 19
B. LONG-TERM MONITORING, MAINTENANCE, AND PROTECTION OF ENGINEERING AND INSTITUTIONAL CONTROLS 19
60. Protection of the AOC 1 Open Space Area. 19
61. Honeywell's Ongoing Responsibility. 30
62. Long-Term Monitoring Plan. 31
63. Long-Term Monitoring Plan Objectives. 31
64. Monitoring and Remediation Under the Long-Term Monitoring Plan. 31
65. Monitoring and Reporting to Riverkeeper and Jersey City Entities. 36
66. Notice to Stakeholders. 36
67. Annual Letter to Riverkeeper and Jersey City Entities on Notice to Stakeholders. 37
68. Future Notice to Stakeholders. 37
69. Stakeholder Enforcement. 37
C. OVERSIGHT AND ENFORCEMENT BY THE SPECIAL MASTER AND NJDEP 38
70. Federal Court Jurisdiction. 38
71. Appointment and Jurisdiction of the Special Master 38
72. Oversight of the Chromium Remedy. 38
73. Retention of Professionals. 43
74. Insurance for the Special Master. 43
75. Reimbursement of Special Master Fees and Expenses. 43
76. Expiration of Special Master's Appointment. 44
D. INITIAL FINANCIAL ASSURANCES 45
77. Chromium Remedy Letter of Credit. 45
78. Procedures for Review of the Proposed Chromium Remedy Letter of Credit. 45
79. Automatic Renewal. 46
80. Annual Right to Seek Reduction in Amount of Chromium Remedy Letter of Credit. 47
81. Bankruptcy Protection. 48
82. Exclusive Court Jurisdiction. 48
83. Application of New York Law. 48
84. Procedures upon Honeywell's Material Default of Its Obligations. 48
85. Placement of Proceeds in Court Registry Investment System Account. 50
86. Termination of Chromium Remedy Letter of Credit. 50
E. LONG-TERM FINANCIAL ASSURANCES 50

87. Long-Term Financial Assurances....50
88. Resolution of the Amount of Long-Term Financial Assurances....50
89. Costs Subject to Long-Term Financial Assurances....52
90. Long-Term Financial Assurance Mechanisms....53
91. Procedures for Review of the Proposed Long-Term Financial Assurances....56
92. Adjustment of Amount Held in Long-Term Financial Assurances....57
93. Exclusive Court Jurisdiction....58
94. Procedures upon Honeywell's Material Default of Its Obligations after the Special Master's Appointment Has Expired....59
95. Drawing on the Long-Term Letter of Credit in the Event of Honeywell's Default....60
96. Use of the Trust Fund in the Event of Honeywell's Default....60
97. Use of a Trust Fund Established Pursuant to Paragraph....60
98. Termination of the Long-Term Financial Assurances....60

ARTICLE IV: IMPLEMENTATION SCHEDULE AND TERMINATION....61

99. Schedule for Remedy and Site Preparation Implementation Activities....61
100. Termination of this Consent Decree....62
101. Procedures for Withdrawal and Termination....63
102. Good-Faith Obligation to Avoid Termination....63
103. Effect of Termination....63

ARTICLE V: ADDITIONAL PROVISIONS RELATED TO HISTORIC FILL AND SITE PREPARATION AND REDEVELOPMENT....63

104. Historic Fill Remedy....63
105. Oversight of Historic Fill Remedy....64
106. Transfer of Title of Study Areas 6 North and 7 to and from Bayfront Redevelopment LLC....64
107. Dispute Resolution Procedures....65

ARTICLE XI: NOTICE....65

108. Notice....65

ARTICLE XII: RIVERKEEPER'S ATTORNEYS' FEES....67

109. Payment of Past Fees and Expenses....67
110. Future Fees and Expenses....67

ARTICLE XIII: MISCELLANEOUS PROVISIONS....68

111. Force Majeure....68
112. JCRA and Bayfront Redevelopment LLC as Parties....68
113. Successors and Assigns....69
114. Successors to Hackensack Riverkeeper, Inc....69
115. Reservation of Rights and Claims....69
116. Governing Law and Continuing Jurisdiction....69
117. Construction....70
118. Authority to Enter into Agreement....70
119. Measures to Effectuate This Consent Decree....70
120. Modifications....70
121. Severability....70
122. Signatures....71

RECITALS

Whereas, on June 30, 2003, the district court for the District of New Jersey issued a Final Judgment in *Interfaith Community Organization v. Honeywell International Inc.*, Civ. No. 95-2097 (DMC) ("*ICO v. Honeywell*"), ordering the remediation of an area designated by the New Jersey Department of Environmental Protection ("NJDEP") as Study Area 7 by excavation of all chromium contamination on the property, under the oversight of a court-appointed Special Master;

Whereas, on or about December 23, 2005, the Jersey City Municipal Utilities Authority ("JCMUA") filed litigation styled *Jersey City Municipal Utilities Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5955 (DMC), bringing claims against Honeywell International Inc. ("Honeywell") under, *inter alia*, Section 6972 of the Resource Conservation and Recovery Act ("RCRA"), and seeking remediation of chromium contamination on property owned by JCMUA and other relief;

Whereas, on or about December 28, 2005, the Jersey City Incinerator Authority ("JCIA") filed litigation styled *Jersey City Incinerator Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5993 (DMC), bringing claims against Honeywell under, *inter alia*, Section 6972 of RCRA, and seeking remediation of chromium contamination on property owned by JCIA and other relief;

Whereas, on or about January 4, 2006, the Hackensack Riverkeeper, Inc., Captain William Sheehan, Reverend Winston Clarke, and Lawrence Baker ("Riverkeeper") filed litigation styled *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.,* D.N.J., Civ. No. 06-022 (DMC), bringing a claim against Honeywell under RCRA and seeking remediation of chromium contamination to soils, groundwater, surface waters, and sediments associated with various properties collectively designated by NJDEP as Study Areas 5, 6 North, and 6 South;

Whereas, Study Areas 6 North and South are directly adjacent to Study Area 7 on the north and south sides, respectively;

Whereas, Study Area 5 is comprised of properties to the east of Study Areas 6 North, 6 South, and 7 across Route 440;

Whereas, the property owned by JCIA and JCMUA and collectively the subject of *JCMUA v. Honeywell* and *JCIA v. Honeywell* comprises a part of Study Area 6 North;

Whereas, the City of Jersey City ("Jersey City") also owns property that comprises a part of Study Area 6 North;

Whereas, Riverkeeper also named as defendants in *Riverkeeper v. Honeywell* Jersey City, JCMUA, and JCIA (collectively the "Jersey City Entities");

Whereas, the Jersey City Entities and Honeywell also asserted cross-claims against each other in *Riverkeeper v. Honeywell*;

Whereas, *JCMUA v. Honeywell*, *JCIA v. Honeywell,* and *Riverkeeper v. Honeywell* were consolidated by the United States District Court for the District of New Jersey (hereinafter the "Consolidated Litigation");

Whereas, in the Consolidated Litigation, the Jersey City Entities and Riverkeeper have alleged that Honeywell bears responsibility for the presence and remediation of chromite ore processing residue ("COPR") and chromium in soils and groundwater on the Study Area 6 North property;

Whereas, in the Consolidated Litigation, Honeywell has alleged that the Jersey City Entities bear full responsibility for lead and other contamination on the Study Area 6 North property, and also bear an equitable share of liability for the presence and remediation of COPR and chromium in soils and groundwater on the Study Area 6 North property and for chromium and other contamination in Hackensack River sediments in the vicinity of Study Area 6 North;

Whereas, on October 9, 2007, Honeywell and Riverkeeper submitted the Consent Order on Sediment Remediation and Financial Assurances ("Sediment Consent Order"), resolving issues related to the remediation of chromium contaminated sediments in the Hackensack River in the vicinity of Study Areas 5, 6, and 7;

Whereas, the Parties to this Consent Decree each believe that it is in their mutual interest to move forward productively to resolve their differences so that they can implement environmental remediation at Study Area 6 North that ensures the continued protection of human health and the environment and so that Study Area 6 and Study Area 7 can be redeveloped in keeping with Jersey City's vision for a revitalized West Side;

Whereas, the Local Redevelopment and Housing Law, N.J.S.A. 40A:12A-1, *et seq*., as amended and supplemented (the "Redevelopment Law") provides for municipalities to participate in the redevelopment and improvement of areas in need of redevelopment;

Whereas, the portions of Study Area 6 and Study Area 7 (i) which are owned by the Jersey City Entities, (ii) which are owned by Honeywell, (iii) as to which Honeywell has a purchase and sale agreement with the current owner, or (iv) which hereafter will be acquired by a Jersey City Entity and/or Honeywell are parcels which by ordinance adopted by the City Council of Jersey City on February 27, 2008, have been determined to be "areas in need of redevelopment" under the criteria of the Redevelopment Law because of conditions prevalent on those parcels;

Whereas, the settlement which is the subject matter of this Consent Decree contemplates the environmental remediation of Study Area 6 North and redevelopment of the parcels that comprise Study Areas 6 and 7 to create a major mixed use project in an important section of Jersey City;

Whereas, each of the actions to implement this Consent Decree have been fully considered by the Parties as a means to accomplish the aforesaid purposes of this settlement;

Whereas, the consent of each of the Jersey City Entities to this Consent Decree was considered at a duly noticed and appropriate meeting of their respective governing bodies, open to the public, at which members of the public were provided an opportunity to comment on all aspects of the settlement, including, without limitation, the commitments made by the Jersey City Entities herein; and

Whereas, Honeywell and the Jersey City Entities are settling their claims, cross-claims, or counter-claims in the Consolidated Litigation against each other in the *Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc.* (hereafter "Jersey City/Honeywell Consent Order"), filed in the Consolidated Litigation simultaneously with this Consent Decree and attached as Exhibit A to this Consent Decree:

NOW, THEREFORE, IT IS HEREBY ORDERED AND DECREED AS FOLLOWS:

ARTICLE I: DEFINITIONS

For purposes of this Consent Decree, the following terms shall have the meanings set forth in this Article:

1. **AOC 1** shall mean that area of Study Area 6 North in which the hexavalent chromium concentration in the top 20 feet of soil below existing ground surfaces exceeds concentrations of 20 mg/kg and the Chromium Remedy will be implemented pursuant to Article III. AOC 1 is shown on Exhibit B.

2. **AOC 1 Additional Excavation Areas** shall mean those areas of Study Area 6 North which require excavation pursuant to paragraph 57. The AOC 1 Additional Excavation Areas are not contiguous to AOC 1. The AOC 1 Additional Excavation Areas are shown on Exhibit B.

3. **AOC 1 Open Space Area** shall mean the AOC 1 Open Space Area, as defined by paragraph 53, consisting of approximately 11 acres enclosed by the hydraulic barrier walls constructed under the Chromium Remedy, and which shall be subject to paragraph 60. The AOC 1 Open Space Area is shown on Exhibit B.

4. **AOC 2** shall mean that area of Study Area 6 North on which the Historic Fill Remedy will be implemented pursuant to Article II.B of the Jersey City/Honeywell Consent Order. AOC 2 is shown on Exhibit B.

5. **Bayfront Redevelopment LLC** shall have the meaning set forth in paragraph 4.1 of the Jersey City/Honeywell Consent Order.

6. **COPR** shall mean Chromite Ore Processing Residue.

7. **Chromium Remedy** or **Chromium Remediation** shall mean the remedy set forth in Article III.

8. **Consolidated Litigation** shall mean *Jersey City Municipal Utility Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5955 (DMC), *Jersey City Incinerator Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5993 (DMC), and *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.,* D.N.J., Civ. No. 06-022 (DMC).

9. The **Court** shall mean the United States District Court of the District of New Jersey, which has jurisdiction over the Consolidated Litigation.

10. **Deep Groundwater Remedy** shall mean the deep overburden and bedrock groundwater pump and treat remedy as required by the Order Approving the Deep Overburden Groundwater Remediation, entered on October 6, 2006, and the Stipulation on Consent Regarding the Schedule for Implementation of Deep Groundwater Remedial Actions, currently pending before the Special Master in *ICO v. Honeywell.* In the event that Riverkeeper and Honeywell reach a settlement on source control issues, the Deep Groundwater Remedy shall

include the remedy to which Riverkeeper and Honeywell have agreed. In the event that Riverkeeper and Honeywell do not reach a settlement on source control issues, the Deep Groundwater Remedy shall include the remedy ordered by the Special Master or the Court in *ICO v. Honeywell* for source control.

11. **Hackensack River Watershed Land Trust** shall mean the dedicated fund of the Hackensack Riverkeeper, Inc., established under Section 501(c) of the Internal Revenue Code for the purpose of acquiring and preserving open space within the Hackensack River watershed and administered by the Board of Trustees of the Hackensack Riverkeeper, Inc.

12. **Historic Fill** shall have the definition provided in the NJDEP Technical Requirements for Site Remediation.

13. **Historic Fill Remedy or Historic Fill Remediation** shall mean the remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order, except that the Historic Fill Remedy shall not be limited to the remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order if NJDEP requires a more stringent remedy.

14. **Honeywell** shall mean Honeywell International Inc. and its affiliates, including Kellogg Street 80 Property LLC, Kellogg Street 60 Property LLC, and Kellogg Street/440 Property LLC.

15. **Honeywell's Treatment Plant** shall mean the treatment plant currently located at 80 Kellogg Street that is used to treat, *inter alia*, chromium contaminated groundwater.

16. ***ICO v. Honeywell*** shall mean *Interfaith Community Organization v. Honeywell International Inc.,* D.N.J., Civ. No. 95-2097 (DMC).

17. **Including** shall mean including, but not limited to.

18. **JCIA** shall mean the Jersey City Incinerator Authority.

19. **JCMUA** shall mean the Jersey City Municipal Utilities Authority.

20. **JCRA** shall mean the Jersey City Redevelopment Agency.

21. **Jersey City Entities** shall mean the City of Jersey City, including the Department of Public Works ("DPW") and other agencies and branches thereof, the JCIA, and the JCMUA.

22. **Jersey City/Honeywell Consent Order** shall mean the *Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc.* entered in the Consolidated Litigation simultaneously with this Consent Decree.

23. **NJDEP** shall mean the New Jersey Department of Environmental Protection.

24. **NJDEP Chromium Directive** shall mean the Chromium Directive issued by NJDEP on February 8, 2007, and attached as Exhibit C.

25. **Party or Parties** shall mean any one or all of the signatories to this Consent Decree.

26. **RCRA** shall mean the Resource Conservation and Recovery Act, 42 U.S.C. 6901, *et seq.*, as amended.

27. **Redevelopment Agreement** shall have the meaning set forth in paragraph 4.11(e) of the Jersey City/Honeywell Consent Order.

28. **Redevelopment Area** shall mean Study Area 6 North, Study Area 6 South, and Study Area 7, collectively.

29. **Redevelopment Law** shall mean the New Jersey Local Redevelopment and Housing Law, N.J.S.A. 40A:12A1, *et seq.*, as amended and supplemented.

30. **Redevelopment Plan** shall mean the Bayfront I Redevelopment Plan as adopted by Jersey City on March 12, 2008.

31. **Riverkeeper** shall mean the plaintiffs in *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-22 (DMC), and includes the Hackensack Riverkeeper, Inc., William Sheehan, Reverend Winston Clarke, and Lawrence Baker.

32. **Sediment Consent Order** shall mean the Consent Order on Sediment Remediation and Financial Assurances, which the Parties expect will be entered by the Court in *ICO v. Honeywell* and this Consolidated Litigation.

33. **Shallow Groundwater** or **Shallow Level of Groundwater** shall mean groundwater above the meadow mat, groundwater at stratigraphically equivalent depths in locations where there is no meadow mat, and groundwater that is contaminated by recent contact with COPR or other chromium soil contamination above the meadow mat and subsequently flows downward through or past the meadow mat into the upper portion of the lacustrine sediments. This does not include groundwater found in the bedrock, the deep zone, or any plume of contamination that is in both the intermediate and deep zones, as those zones are defined in the Final Groundwater Investigation Report, prepared in *ICO v. Honeywell*, dated February 2007, p. 1-2.

34. **Site** shall mean Study Area 6 North.

35. **Site Preparation Activities** shall have the meaning set forth in paragraph 3.1 of the Jersey City/Honeywell Consent Order.

36. **Site Preparation Plan** shall have the meaning set forth in paragraph 3.2 of the Jersey City/Honeywell Consent Order.

37. **Soil** shall mean soils, historic fill, and/or COPR.

38. The **Special Master** shall mean Senator Robert G. Torricelli, appointed as the Special Master in *ICO v. Honeywell* and the Consolidated Litigation, and his successors or whomever the Court may appoint as Special Master.

39. **Stratum O** shall mean the layer composed of soft brown silty fine sand interlayered with soft gray silty clay and fine sandy to clayey silt generally located above the meadow mat below the Historic Fill and/or COPR.

40. **Study Area 6 North** shall mean that property comprising Sites 87 and 88 of the Chromate Chemical Production Waste Sites designated by NJDEP, comprising approximately 41.58 acres and including: (a) all such property owned by JCMUA located at 555 Route 440, Jersey City, New Jersey, (b) all such property owned by JCIA located at 501 Route 440, Jersey City, New Jersey; (c) all such property owned by Jersey City or its Department of Public Works and located at 575 Route 440, Jersey City, New Jersey; and (d) all such property owned by Paul Trenk consisting of Block 1290.1, Lot 2A, Jersey City, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

41. **Study Area 6 South** shall mean (a) that property currently owned by 425/445 Route 440 Property LLC consisting of Site 73, located at 200 Kellogg Street Jersey City, Hudson County, New Jersey; (b) that property currently owned by Kellogg Street 80 Property LLC consisting of Site 134, located at 100 Kellogg Street Jersey City, Hudson County, New Jersey; (c) that property currently owned by Kellogg Street 80 Property LLC consisting of Site 140 located at 80 Kellogg Street Jersey City, Hudson County, New Jersey; (d) that property currently owned by Kellogg Street 60 LLC consisting of Site 125, located at 60 Kellogg Street Jersey City, Hudson County, New Jersey; (e) that property currently owned by Kellogg Street/440 Property LLC consisting of Site 124, Jersey City, Hudson County, New Jersey; (f) that property currently owned by Kellogg St/Harsimus Cove Realty located at 150 Kellogg Street, Jersey City, Hudson County, New Jersey, (g) that property currently owned by Cordova Enterprises Ltd located at 38 Kellogg Street, Jersey City, Hudson County, New Jersey, and (g) that property currently owned by Cordova Enterprises Ltd located at 28 Kellogg Street, Jersey City, Hudson County, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

42. **Study Area 6** shall mean Study Area 6 North and Study Area 6 South, collectively.

43. **Study Area 7** shall mean (a) that property currently owned by 425/445 Route 440 Property LLC located at 425 and 445 Route 440, Jersey City, Hudson County, New Jersey, and (b) that property currently owned by Roned Realty/Edward Navlen located at 465 Route 440, Jersey City, Hudson County, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

44. **Technical Requirements for Site Remediation** shall mean the NJDEP Technical Requirements for Site Remediation, N.J.A.C. Chapter 26E, as duly and properly promulgated and amended.

45. **Unrestricted Use** shall mean that the contaminated medium is restored to a condition or quality suitable for all uses.

ARTICLE II: SCOPE OF THE CONSENT DECREE, JURISDICTION, AND CLAIMS RESOLVED

46. Except as provided in this paragraph, the terms of the Jersey City/Honeywell Consent Order shall remain in full force and effect. To the extent that any provision in the Jersey City/Honeywell Consent Order refers to the Chromium Remedy or Chromium Remediation, it shall be construed as referring to Article III of this Decree. In the event of any conflict or inconsistency between the terms of this Decree and the Jersey City/Honeywell Consent Order, the terms of this Decree govern. In the event that any action taken pursuant to the Jersey City/Honeywell Consent Order is in conflict with or inconsistent with the terms of this Decree, the terms of this Decree shall govern.

47. This Court has jurisdiction over the Parties and subject matter of the Consolidated Litigation pursuant to Section 6972 of RCRA.

48. For purposes of this Consent Decree, the Complaints in the Consolidated Litigation each state claims upon which relief may be granted against Honeywell.

49. In the event that this Decree is not terminated by one or more Parties pursuant to paragraph 100, this Consent Decree resolves, settles, and satisfies all claims by Riverkeeper against Honeywell with respect to soils and shallow groundwater at Study Area 6 North. This Consent Decree does not resolve any claims by Riverkeeper against Honeywell with respect to Study Area 6 South, Study Area 5, or groundwater at Study Area 6 North other than shallow groundwater.

50. Nothing in this Consent Decree shall be construed or interpreted to waive any claim or defense any Party has asserted or may assert against any third party in the Consolidated Litigation except as explicitly stated herein.

51. This Consent Decree does not constitute an admission of liability on the part of any Party with respect to any claims, cross-claims, or counter-claims in the Consolidated Litigation.

ARTICLE III: CHROMIUM REMEDIATION

A. Chromium Remedy

52. **Responsibility for Implementation of Chromium Remediation.** As between the Parties, Honeywell shall be responsible for and shall undertake remediation of COPR and chromium present in Study Area 6 North at Honeywell's sole cost and expense. Remediation of COPR and chromium present in Study Area 6 North shall be undertaken in accordance with the terms of this Consent Decree.

53. **AOC 1 and AOC 2.** For the purposes of remediation, Study Area 6 North shall consist of two Areas of Concern ("AOCs"), designated as AOC 1 and AOC 2 as shown on Exhibit B. AOC 1 is set forth on Exhibit B and consists of that portion of Study Area 6 North for which chromium remediation is required pursuant to paragraphs 55, 56, and 57. AOC 2 consists of the entirety of Study Area 6 North, including AOC 1, to the extent that historic fill is present in any area of Study Area 6 North. For AOC 1, the intended land use will determine the types

of remedial measures taken in the Chromium Remedy. There are two distinct land uses for AOC 1: open space and residential. As a result, AOC 1 will be further subdivided into:

(a) The AOC 1 Open Space Area, which shall comprise that portion of AOC 1 for which future use shall be restricted as provided in paragraph 60. The AOC 1 Open Space Area is shown on Exhibit B;

(b) The AOC 1 Residential Area, which shall comprise that portion of AOC 1 for which future use shall allow for residential and/or commercial and retail uses, but for which the remedial measures shall assume only a residential use . The AOC 1 Residential Area is shown on Exhibit B; and

(c) The AOC 1 Additional Excavation Areas, which consist of those portions of Study Area 6 North that require remediation pursuant to paragraph 57. The planned land use for the AOC 1 Additional Excavation Areas is residential and/or commercial and retail uses, but the remedial measures shall assume only a residential use.

54. **Scope and General Requirements of the Chromium Remedy.** The Chromium Remedy shall address shallow groundwater and soil containing hexavalent chromium in AOC 1, and shall be consistent with the requirements set forth in this Article. The Chromium Remedy set forth in this Consent Decree addresses only the shallow level of groundwater (see paragraph 58). The deep overburden and bedrock groundwater remediation, including source control, shall be addressed in a separate consent order, which shall place these issues within the jurisdiction of the Special Master in conjunction with the groundwater remedies for Study Area 7.

(a) The Chromium Remedy shall be consistent with the NJDEP Technical Requirements for Site Remediation, the Chromium Directive as issued by NJDEP on February 8, 2007 ("the NJDEP Chromium Directive"), and the Remedial Action Work Plan (with addenda) approved by NJDEP on or about February 19, 2008. This Consent Decree shall have precedence

over the Remedial Action Work Plan in the event of any inconsistency.

(b) The Chromium Remedy shall be carried out diligently, and the development and implementation of the Historic Fill Remedy shall not delay satisfaction of the milestones in the Schedule established pursuant to this paragraph. Honeywell shall propose a master Schedule for the implementation of the Chromium Remedy within 90 days of the entry of this Consent Decree, which shall include, at a minimum, the following milestones:

(i) Submission to the Special Master for all documents subject to review by the Special Master pursuant to paragraph 72(c);

(ii) Relocation of the Jersey City Entities' Study Area 6 North Operations as shall be required prior to the implementation of the Chromium Remedy;

(iii) Completion of those Site Preparation Activities necessary for the implementation of the Chromium Remedy, including remediation of the AOC 1 Additional Excavation Areas;

(iv) A final date for Honeywell's proposal of *in situ* treatment for any part of the AOC 1 Residential Area pursuant to paragraph 55(d) and a date for the final decision as to whether excavation or *in situ* treatment shall be used in the event of such a proposal;

(v) The initiation of work related to the Chromium Remedy;

(vi) The date for completion of the installation of the Chromium Remedy;

(vii) Implementation of the long-term protections of the AOC 1 Open Space Area established pursuant to paragraph 60; and

(viii) Transfer of the AOC 1 Open Space Area to Jersey City pursuant to paragraph 60(a)(iii).

(c) **Demolition and Grading Activities.** During demolition and grading activities, adequate protective measures shall be taken to protect site workers and the community

from airborne dusts and exposures to contaminated soils.

(d) **Vegetation of Clean Fill.** All clean soil fill in areas that will not involve paved roads, sidewalks, paths, walkways, or building structures shall be vegetated in such a manner to protect and maintain the required depth of clean soil fill.

55. **AOC 1 Residential Area Soil Remedy.** In the AOC 1 Residential Area, soils containing hexavalent chromium at concentrations greater than 20 mg/kg shall be excavated to a depth of 20 feet below the current ground surface in accordance with the NJDEP Chromium Directive.

(a) Those soils excavated from the AOC 1 Residential Area in which hexavalent chromium concentrations exceed 240 mg/kg shall be disposed of off-site at a waste disposal facility licensed to accept such waste.

(b) Those soils excavated from the AOC 1 Residential Area in which the hexavalent chromium concentration is less than 240 mg/kg, but greater than 20 mg/kg, shall be consolidated within the AOC 1 Open Space Area. However, any such soils which would require venting of gases shall be disposed of off-site.

(c) Soils excavated from the AOC 1 Residential Area shall be replaced with existing soils from AOC 2 or backfill soil. Any backfill soil brought to the Site shall either meet all applicable federal and NJDEP criteria, including NJDEP residential soil criteria, or comply with a beneficial soil reuse plan that is approved by NJDEP and subject to review and comment by the Parties and approval by the Special Master.

(d) In the AOC 1 Residential Area, excavation of soils containing hexavalent chromium greater than 20 mg/kg shall be the presumptive remedy. Around remaining active underground utilities or other structures, such as the bulkhead, *in situ* treatment may be considered in lieu of excavation only if Honeywell demonstrates, and all Parties, the Special

Master, and NJDEP agree that (1) excavation is technically impracticable and (2) treatment will result in hexavalent chromium concentrations of 20 mg/kg or less and no rebound will occur. If no treatment option is available, Honeywell shall propose an alternative remedial approach, subject to review and comment by the Parties and approval by the Special Master.

(e) Honeywell shall excavate all soils containing hexavalent chromium greater than 20 mg/kg in conjunction with the placement of the piping for the Deep Groundwater Remedy. Honeywell shall not propose treatment in lieu of excavation based on the location of the pipes for the Deep Groundwater Remedy or any apparent impracticability of excavating in conjunction with their installation.

56. **AOC 1 Open Space Area Soil Remedy.** In the AOC 1 Open Space Area, the soil remedy shall consist of an engineered RCRA cap to isolate contaminated soils, with gas venting, if necessary, to address the generation of methane and other naturally occurring gases in the Stratum O and/or Stratum D in the Open Space AOC. Soils consolidated under the cap, shall not require gas venting and shall not be the basis for the inclusion of gas venting as a component of the cap. The cap shall be designed and constructed so that:

(a) The cap shall consist of gas collection system, if gas venting is necessary, a base protective layer, an impervious geomembrane liner with a minimum thickness of 40 mil; a geocomposite drainage layer; a filter fabric; and a distinctive colored warning layer with markings in English and Spanish that would deter penetration of the cap in the event that digging occurred in the vicinity of the cap;

(b) All utilities, including those supporting the pump-and-treat system for groundwater remediation, with the exception of any extraction wells or collection trenches, shall be placed above the cap (but may be below the ground surface and/or contained within utility corridors). In the event that above-cap-grade gas collection and treatment is selected or is

needed to meet current or future regulatory requirements, such collection and treatment facilities are prohibited in the Open Space AOC, except for piping to connect the sub-liner collection system with the treatment facilities. Honeywell shall configure the cap so that all active piping for the wastewater treatment system operated by JCMUA, including all force mains and any connections to the emergency outfall, shall be outside the capped area. Honeywell may propose, subject to the review process in paragraph 72, to use treatment in lieu of excavation in the vicinity of the emergency outfall line if the criteria of paragraph 55(d) are satisfied; and

(c) Exclusive of roadways, the cap shall be overlain by layers of clean fill, backfill and/or overburden with an average depth of at least three feet and a minimum depth of at least two feet provided that any layer that incorporates overburden shall be below at least two feet of clean fill. Any clean fill or backfill soil brought to the Site will either meet all applicable federal and NJDEP criteria, including NJDEP residential soil criteria, or comply with a beneficial soil reuse plan that is approved by NJDEP and subject to review and comment by the Parties and approval by the Special Master. One foot of clean fill, covered with bituminous blacktop, shall be sufficient cover where roads, walkways, or other paved surfaces are located within the AOC 1 Open Space Area. All clean soil fill in areas that will not involve paved roads, walkways, or other paved surfaces shall be vegetated in such a manner as to protect and maintain the required depth of the clean soil fill and to ensure that such vegetation shall not cause any interference with or penetration of the cap.

(d) The existing overburden soils in the AOC 1 Open Space Area shall first be stripped off and set aside for use. If hexavalent chromium concentrations in the overburden exceed 20 mg/kg, the overburden shall be placed under the cap. If hexavalent chromium concentrations in the overburden do not exceed 20 mg/kg, the overburden may be placed above the cap but below the two feet of clean fill required by paragraph 56(c). Excavated hexavalent

chromium impacted soils (with concentrations between 20 mg/kg and 240 mg/kg) from the AOC 1 Residential Area shall be placed and spread in the AOC 1 Open Space Area under the cap. Excavated hexavalent chromium impacted soils (with concentrations between 20 mg/kg and 240 mg/kg) from the Study Area 6 South Development AOC (as defined in the First Amended Consent Decree Regarding Remediation and Redevelopment of Study Area 6 South and including only those portions of Study Area 6 South for which the future uses of the property may include commercial or residential development) may be placed and spread in the AOC 1 Open Space Area under the cap, provided that such soils do not require venting of gases and shall not serve as the basis for the inclusion of gas venting as part of the Study Area 6 North AOC 1 Open Space Area remedy. Both the chromium impacted soils and the previously stripped overburden shall be suitably compacted according to design specifications. Debris, to the extent it would interfere with the compaction specification requirements of the 100% Design, shall not be placed under the cap. The engineered cap shall be installed over the chromium-impacted soils exceeding 20 mg/kg hexavalent chromium.

57. **AOC 1 Additional Excavation Areas Remedy.** For those AOC 1 Additional Excavation Areas, soils containing hexavalent chromium at concentrations greater than 20 mg/kg shall be excavated to a depth of 20 feet below the current ground surface in accordance with the NJDEP Chromium Directive. Excavation of those areas comprising the AOC 1 Additional Excavation Areas shall initially be conducted in the 50-foot by 50-foot area planned in the RAWP but shall not be so limited in the event that confirmation sampling indicates that hexavalent chromium concentrations continue to exceed 20 mg/kg. Honeywell shall excavate laterally and vertically (to depths of up to 20 feet below current ground surface) until the hexavalent chromium is less than 20 mg/kg based on the results of confirmation sampling. Confirmation sampling for the AOC 1 Additional Excavation Areas shall be taken from the side

walls and bottom of the excavation, in accordance with the Technical Requirements for Site Remediation, to confirm complete removal of contaminated soils.

58. **Shallow Groundwater Remedy.** The shallow groundwater remedy shall consist of hydraulic barriers with a pump-and-treat system designed to isolate shallow groundwater and to intercept and treat shallow groundwater flowing above the meadow mat in the AOC 1 Open Space Area. The shallow groundwater remedy shall consist of the following:

(a) The existing soil/cement/bentonite wall on the boundary of Study Area 6 North and Study Area 7 shall be incorporated into the other engineering controls;

(b) Subterranean slurry walls or other hydraulic barriers shall be installed along the northern, eastern and western sides of the AOC 1 Open Space Area and keyed into the meadow mat or Stratum O or to comparable depths below ground surface;

(c) A groundwater extraction system shall be established that will consist of (i) one or more shallow extraction wells, sumps, or french drains within the AOC 1 Open Space Area; (ii) pumps; and (iii) underground piping to convey any extracted water to Honeywell's Treatment Plant;

(d) The capture zone for the shallow groundwater remedy shall include at least the entire area of contaminated shallow groundwater (except for shallow groundwater that penetrates the meadow mat and is captured by the Deep Groundwater Remedy);

(e) A plan for control of water levels shall be developed;

(f) In the event that underground structures are demolished, the plans shall address the need for special attention for structures that extend below the meadow mat in order to control needed water levels; and

(g) Honeywell shall submit such information as is required to allow NJDEP to establish a classification exception area for groundwater at the Site, in accordance with NJDEP

regulations.

59. **Permits and Authorizations.** Honeywell shall obtain all necessary federal, state, and local permits and authorizations to carry out the Chromium Remedy as set forth in this Article. The Jersey City Entities agree to cooperate with Honeywell in the applications for any such permits, authorizations, or approvals. Such cooperation shall include providing information or data with respect to permit applications, co-signing permit applications, and allowing access to Study Area 6 North to obtain information necessary for the permits.

B. Long-Term Monitoring, Maintenance, and Protection of Engineering and Institutional Controls

60. **Protection of the AOC 1 Open Space Area.** Except as provided in paragraphs 60(j) and 60(k), development in the AOC 1 Open Space Area shall be prohibited. The AOC 1 Open Space Area shall be protected against activities that may jeopardize the integrity of the cap and/or the groundwater remedial measures that shall be installed in the AOC 1 Open Space Area pursuant to the Chromium Remedy or that may impede the long-term monitoring and maintenance of the cap and/or groundwater remedial measures. It is the intention of the Parties to implement different layers of protection, which alone or in concert, impose restrictions on development, run with the land, and survive all parties. Accordingly, the following actions shall be taken pursuant to the Schedule provided in paragraph 54(b):

(a) **Ownership of and Access to the AOC 1 Open Space Area.** Ownership of and access to the AOC 1 Open Space Area shall be in accordance with the following:

(i) Pursuant to the terms of this Consent Decree and paragraph 4.3 of the Jersey City/Honeywell Consent Order, Bayfront Redevelopment LLC shall become the owner in fee simple absolute of all of the property that comprises the AOC 1 Open Space Area and shall not convey any rights or interests in such property except as provided in this Decree. At the time

of the conveyance from JCRA to Bayfront Redevelopment LLC, Bayfront Redevelopment LLC shall give Jersey City an option to buy AOC 1 Open Space Area prior to the planned transfer pursuant to paragraph 60(a)(iii). Such option to buy shall be subject to the conservation restriction imposed pursuant to paragraph 60(b). Jersey City shall exercise the option to buy the AOC 1 Open Space Area in the event that the conditions allowing for withdrawal of funds from the financial assurance mechanisms under paragraphs 84(c) or 84(d) are met;

(ii) At the time the JCRA conveys the Study Area 6 North property to Bayfront Redevelopment LLC pursuant to paragraph 4.3 of the Jersey City/Honeywell Consent Order, Bayfront Redevelopment LLC shall grant a conservation restriction for the AOC 1 Open Space Area pursuant to the requirements of paragraph 60(b);

(iii) Upon the final construction of all roads and utility corridors within the AOC 1 Open Space Area, Bayfront Development LLC shall donate good and marketable title to all the land comprising the AOC 1 Open Space Area to Jersey City. In conjunction with such donation, Bayfront Redevelopment LLC shall petition to subdivide the properties within Study Area 6 North to create a new parcel(s) comprising the AOC 1 Open Space Area. At the time of the donation, Jersey City shall grant Honeywell an easement for the purpose of monitoring and maintaining the Chromium Remedy. Jersey City shall also grant Honeywell all necessary access to the AOC 1 Open Space Area by license or such other mechanisms as may be appropriate for purposes of monitoring and maintaining the Chromium Remedy. After it acquires title pursuant to this paragraph, Jersey City shall retain ownership of the AOC 1 Open Space Area unless and until it shall have complied with the requirements of paragraph 60(a)(iv);

(iv) After it acquires title pursuant to this paragraph, Jersey City shall not convey or enter into any lease of the AOC 1 Open Space Area to any other person or entity unless it has first satisfied either of the following conditions:

(1) Jersey City has obtained the Special Master's (or if the Special Master's appointment has expired, the Court's) approval to convey the AOC 1 Open Space Area to a government entity that has the capacity and willingness to fulfill Jersey City's obligations under the Consent Decree with respect to the AOC 1 Open Space Area and such entity agrees to submit to the Court's jurisdiction and to be bound by the requirements of the Consent Decree that Jersey City has committed to fulfill with respect to protection of the AOC 1 Open Space Area pursuant to this paragraph and routine maintenance of the permissible development in the AOC 1 Open Space Area pursuant to paragraph 64(d); or

(2) The AOC 1 Open Space Area has been remediated such that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive, and Jersey City has demonstrated to the Special Master and/or the Court, as appropriate, that such remediation has been completed in accordance with all applicable requirements.

(b) **Conservation Restriction.** At the time the JCRA conveys the Study Area 6 North property to Bayfront Redevelopment LLC pursuant to paragraph 4.3 of the Jersey City/Honeywell Consent Order, but prior to the grant of the option to buy pursuant to paragraph 60(a)(i), Bayfront Redevelopment LLC shall grant an open space conservation restriction, pursuant to N.J.S.A. 13:8-B-1, *et seq.*, over the AOC 1 Open Space Area substantially in the form set forth in Exhibit D. Exhibit D is a conservation restriction that is consistent with the terms of this paragraph and this Consent Decree. The conservation restriction shall allow for the implementation, maintenance, monitoring, repair and replacement of the Chromium Remedy and development consistent with paragraphs 60(j) and 60(k), including the construction and

placement of roads and utilities. The Hackensack River Watershed Land Trust shall be the primary holder of the conservation restriction, with all rights of monitoring and enforcement. Riverkeeper shall propose an entity to serve as the secondary holder of the conservation restriction subject to comment by the Parties and review by the Special Master. The secondary holder shall have secondary rights of monitoring and enforcement.

(i) The conservation restriction shall be incorporated into this Consent Decree and made part of this Consent Decree. The final, executed conservation restriction shall be lodged with the Court and entered as an order of the Court. The conservation restriction shall be enforceable in this Court, in the same manner as this Consent Decree.

(ii) The conservation restrictions provided under this Consent Decree shall be consistent with the prohibited and permitted development of the AOC 1 Open Space Area as set forth in paragraphs 60(j) and 60(k) below.

(iii) Jersey City shall not take any action, whether through exercise of any power of eminent domain, application to the State of New Jersey for approval of a diversion of public park or recreation land, legal challenge to the validity or enforceability of the conservation restriction, or otherwise, the effect of which would be to in any way terminate, abrogate, or diminish the terms, conditions, or purposes of the conservation restriction. If, notwithstanding the preceding sentence, Jersey City proceeds with a condemnation or other action, the result of which would be to terminate, abrogate, or otherwise diminish the terms, conditions, or purposes of the conservation restriction, Jersey City shall, before taking any such action satisfy all of the conditions set forth in paragraph60(a)(iv)(2).

(iv) Notwithstanding the foregoing, the conservation restriction may be terminated upon application of any Party when no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area, whether in soils or in groundwater, in excess of the

levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive.

(c) **Deed Notice.** Upon completion of the Chromium Remedy, the AOC 1 Open Space Area shall be subjected to the deed notice substantially in the form set forth in Exhibit E that restricts future activities on the AOC 1 Open Space Area. Nothing in the deed notice shall be construed as preventing the imposition of more stringent restrictions on the development allowed in the AOC 1 Open Space Area pursuant to this paragraph and, in particular, the conservation restriction provided for in paragraph 60(b).

(d) **Recording of the Consent Decree, Conservation Restriction, and Deed Notice.** This Consent Decree, the conservation restriction imposed pursuant to paragraph 60(b), and the deed notice imposed pursuant to paragraph 60(c) shall be recorded, pursuant to N.J.S.A. 46:15-1.1, 46:16-1.1, and 46:16-2, in the office of the Hudson County Register and a conspicuous reference to the Consent Decree, conservation restriction, and deed notice shall be included in all instruments concerning title to the AOC 1 Open Space Area. Any Party shall have the right, periodically, but no more than once every 25 years, to record memoranda or other instruments that reference, incorporate, or attach this Consent Decree, the conservation restriction, the deed notice, and/or any further orders of the Court related to the AOC 1 Open Space Area in the real estate records related to the AOC 1 Open Space Area.

(e) **Zoning.** Pursuant to the Redevelopment Plan, the AOC 1 Open Space Area is designated for open space and park. Jersey City shall not amend or change this designation unless it first satisfies the requirements of paragraph 60(a)(iv)(2).

(f) **Recreation and Open Space Inventory.** Upon acquiring fee simple absolute title to the AOC 1 Open Space, Jersey City shall add those portions of the AOC 1 Open Space Area not covered by roads, the pedestrian thoroughfare, and utility corridors adjacent to

roads onto its Green Acres Program Recreation and Open Space Inventory ("ROSI") pursuant to N.J.A.C. 7:36 and shall specify in such listing that it is subject to (i) Honeywell's prior easement to monitor, maintain, repair, and replace the Chromium Remedy; (ii) the actions necessary to implement, monitor, maintain, repair, and replace the Chromium Remedy; (iii) the actions necessary to install any development permissible under paragraphs 60(j) and 60(k); and (iv) the conservation restriction imposed pursuant to paragraph 60(b). Jersey City shall also take all steps necessary or appropriate to notify the New Jersey Green Acres Program that such portions of the AOC 1 Open Space Area have been added to its ROSI, such that those portions of the AOC 1 Open Space Area shall thereafter be subject to all procedural and regulatory requirements applicable under the Green Acres Program, including prohibitions against diversion.

(g) **Eminent Domain.** If all or part of the AOC 1 Open Space Area is taken in exercise of the power of eminent domain, or acquired by purchase in lieu of condemnation, by any public, corporate, or other authority so as to terminate, abrogate, or limit the restrictions created by this Consent Decree or the conservation restriction imposed pursuant to paragraph 60(b), in whole or in part, any Party may take appropriate actions to challenge such taking if there is a reasonable legal basis for doing so. In the event that the Parties are unable to prevent a taking notwithstanding their reasonable and appropriate efforts, any Party may take appropriate actions to recover the full value of the interests in the AOC 1 Open Space Area subject to the taking or in lieu purchase, and all direct and incidental damages, costs, and fees occasioned thereby.

(h) **Environmental Covenant.** In the event that New Jersey enacts the Uniform Environmental Covenants Act or its substantial equivalent, the Parties shall address the issue of whether an environmental covenant shall be established for the AOC 1 Open Space Area under the statute. If the Parties are unable to reach agreement on establishment of an environmental

covenant, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. The Special Master shall recommend adoption of an environmental covenant if it would provide substantial additional protection for the AOC 1 Open Space Area without unreasonably harming the interests of any Party. Any Party shall have the right to seek review by the Court of the Special Master's recommendation or consideration by the Court of the dispute in the event that the Special Master's appointment has expired.

(i) **Future Protections.** Any Party shall have the right to propose consideration of additional or substitute protections for the AOC 1 Open Space Area. If the Parties are unable to reach agreement with regard to the proposal, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. The Special Master shall recommend adoption of additional or substitute protections for the AOC 1 Open Space Area if they would provide substantial additional protection for the AOC 1 Open Space Area without unreasonably harming the interests of any Party. Any Party shall have the right to seek review by the Court of the Special Master's recommendation or consideration by the Court of the dispute in the event that the Special Master's appointment has expired.

(j) **Prohibited Development in AOC 1 Open Space Area.** Only development satisfying the requirements of this paragraph and paragraph 60(k) shall be permitted in the AOC 1 Open Space Area. All other development in the AOC 1 Open Space Area shall be prohibited.

(i) Honeywell shall establish Open Space Design Standards that shall govern all development in the AOC 1 Open Space Area regardless of when the construction or installation of permissible development occurs. The Open Space Design Standards shall satisfy each of the requirements set forth in paragraph 60(j)(v) and shall set forth the requirements for development that are necessary for the protection of the integrity of the Chromium Remedy.

(ii) The Initial Development in the AOC 1 Open Space Area shall be the

development undertaken following the completion of the Chromium Remedy in the AOC 1 Open Space Area. The Initial Development may occur in one or more phases. Honeywell and Bayfront Redevelopment LLC shall prepare a Development Plan before the initiation of each phase of the Initial Development. The Initial Development Period for each phase shall consist of the period covered by the Initial Development, plus a period of 10 years following the submission of the as-built documentation for the phase pursuant to paragraph 60(j)(viii).

(iii) The Special Master shall have jurisdiction to review the Open Space Design Standards and the Development Plan(s) solely for the purpose of ensuring that any development undertaken during the Initial Development Period is consistent with this Consent Decree and with protection of the integrity of the Chromium Remedy. The Special Master's jurisdiction with regard to development in the AOC 1 Open Space Area shall run through the Initial Development Period for each phase.

(iv) Honeywell shall ensure that the requirements of this paragraph and paragraph 60(k) are satisfied with regard to any development undertaken within the Initial Development Period. Honeywell shall also ensure that any development undertaken within the Initial Development Period is designed and installed in a manner consistent with this Consent Decree and with protection of the integrity of the Chromium Remedy.

(v) Any development undertaken in the AOC 1 Open Space Area, regardless of when undertaken, shall satisfy each of the following requirements:

(1) It shall not jeopardize the integrity of the Chromium Remedy;

(2) It shall be limited to the types of development permitted under paragraph 60(k);

(3) It shall be consistent with this Consent Decree, including the conservation restriction imposed pursuant to paragraph 60(b), and the Redevelopment Plan;

however, in the event of any conflict or inconsistency between this Decree and the Redevelopment Plan, this Decree shall govern;

(4) In total, at least 75% of the AOC 1 Open Space Area, exclusive of the acreage used for roads and the pedestrian thoroughfare, shall be comprised of landscaping, as defined by paragraph 60(k)(xi);

(5) The portion of the Open Space Design Standards necessary for protection of the Chromium Remedy as related to all roads, the pedestrian thoroughfare and associated utility corridors as well as the general location of such items shall be included in the 100% Design of the Chromium Remedy;

(6) If the lowest elevation for the bedding for any utility line, including irrigation or sprinkler lines, is two feet from the top of the warning layer of the cap, the utility line shall be placed in a utility corridor;

(7) In any event, there shall be two feet of soil or more between the warning layer of the cap and the lowest elevation of the bedding for any irrigation or sprinkler lines; and

(8) No permanent concession facilities shall be permitted.

(vi) Honeywell shall submit the Open Space Design Standards and the Development Plan(s) for any development undertaken during the Initial Development Period pursuant to the requirements of paragraph 72(c), except that such documents need not be submitted to NJDEP. Following Honeywell's submission of such documents, the procedures of paragraphs 72(d) and 72(e) shall apply, except that the Special Master need not provide notice to NJDEP.

(vii) During the Initial Development Period, any development in the AOC 1 Open Space Area shall require the preparation and submission of a Development Plan pursuant

to paragraph 60(j)(vi) and such Development Plan shall be subject to review by the Special Master pursuant to paragraph 60(j)(iii).

(viii) Upon completion of each phase of the Initial Development, Honeywell shall provide as-built documentation for the Initial Development to the Special Master, Riverkeeper, and the Jersey City Entities. Upon completion of any further development during the Initial Development Period for the phase, Honeywell shall also provide as-built documentation to the Special Master, Riverkeeper, and the Jersey City Entities for the additional development. Such additional as-built documentation for a phase shall not affect the running of the Initial Development Period for the phase.

(ix) During the Initial Development Period, replacement in-kind of development features or facilities included in the Initial Development or minor modifications to the development features or facilities included in the Initial Development shall not require the preparation of a Development Plan or be subject to review by the Special Master, provided that such replacement or modification satisfies the requirements of the Open Space Design Standards, the applicable Development Plan, and paragraphs 60(j)(v) and 60(j)(x)(3)(notice requirement).

(x) After the Initial Development Period, all development is prohibited unless one of the following conditions is met:

(1) Jersey City satisfies the conditions set forth in paragraph 60(a)(iv)(2);

(2) The development is a replacement in-kind and such replacement is made in conformance with the specifications of the Open Space Design Standards, the applicable Development Plan, and paragraph 60(j)(v); or

(3) The development meets the requirements of paragraphs 60(j)(v) and 60(j)(xi), and Jersey City provides notice of its intention to alter or add to the

development undertaken in the Initial Development Period. Such notice shall be provided in writing to Honeywell, Riverkeeper, and the holders of the conservation restriction established pursuant to paragraph 60(b) at least 30 days prior to Jersey City's alteration or addition to development undertaken in the Initial Development Period. Honeywell, Riverkeeper, or any holder of the conservation restriction shall have the right to move the Court to prohibit such alteration or addition.

(xi) If any of the development features or facilities that Jersey City seeks to add pursuant to paragraph 60(j)(x) require utilities that would require utility corridors other than the utility corridors installed during the Initial Development Period, Jersey City shall obtain approval from the Court before installing such new utility corridors.

(xii) Jersey City shall provide Honeywell, Riverkeeper, and the holders of the conservation restriction established pursuant to paragraph 60(b) with an annual report that describes any alterations or additions, including those activities under paragraph 60(j)(x)(2), to the development undertaken during the Initial Development Period.

(xiii) All development features or facilities, whether included in the Initial Development or added subsequent thereto, are subject to demolition and/or removal to the extent necessary to maintain, replace, or repair the Chromium Remedy.

(k) **Permissible Development in the AOC 1 Open Space Area.** The Initial Development or any subsequent addition or alteration thereto may include any or all of the following types of development features or facilities, provided that such development features or facilities satisfy the conditions set forth in paragraph 60(j)(v):

(i) Roads and the pedestrian thoroughfare -- both crossing and running along the AOC 1 Open Space Area, but no more extensive than provided for in the diagram on page 39 of the Redevelopment Plan;

(ii) Curbing and fences;

(iii) Sidewalks, paths, walkways, and nature trails;

(iv) Utilities and utility corridors, lighting, and restrooms;

(v) Irrigation or sprinkler components or systems;

(vi) Water features;

(vii) Above-ground storm water cisterns;

(viii) Signs, including the signs or display required by paragraph 60(l);

(ix) Benches, trash receptacles, and bicycle racks;

(x) Recreational facilities, such as playground equipment, bocce ball courts, tennis courts, basketball courts, and athletic fields; and

(xi) Landscaping, including natural grasses, small trees, shrubbery, flowers, and potted plants, provided that such landscaping and the anticipated root structure of each landscaping component do not and will not jeopardize the integrity of the Chromium Remedy. Any portion of an athletic field that is covered in natural grass shall be considered landscaping for purposes of the percentage set forth in paragraph 60(j)(v)(4).

(l) **Signs or Displays.** Honeywell shall develop a permanent plan for informing visitors to the AOC 1 Open Space Area of the history of the chromium production, contamination, and its remediation. Such plan shall provide for appropriate signs or displays that communicate this information. Such plan shall be subject to review and comment by the Parties and approval by the Special Master.

61. **Honeywell's Ongoing Responsibility.** Honeywell shall be responsible for implementing, monitoring, maintaining, repairing and replacing the Chromium Remedy in perpetuity. Honeywell shall satisfy this responsibility through establishment and implementation of a Long-Term Monitoring Plan. In the event that Honeywell ceases to exist without a

successor-in-interest or its obligations under this Consent Decree are stayed or limited due to a bankruptcy petition, the Court shall appoint an independent third-party fiduciary who shall be responsible for implementing, monitoring, maintaining, repairing and replacing the Chromium Remedy pursuant to the requirements of this Consent Decree and the Long-Term Monitoring Plan, unless Jersey City volunteers to assume these responsibilities for the Chromium Remedy.

62. **Long-Term Monitoring Plan.** In consultation with the Parties, and subject to approval by the Special Master and NJDEP, Honeywell shall develop a Long-Term Monitoring Plan to ensure the ongoing effectiveness of the Chromium Remedy to meet the objectives set forth in paragraphs 56, 58, and 63. The Long-Term Monitoring Plan shall be consistent with the applicable EPA policies and guidance, including, among others, EPA's Comprehensive Five Year Review Guidance (2001) (or any subsequent revision) and with NJDEP's Technical Requirements for Site Remediation (or any subsequent revision).

63. **Long-Term Monitoring Plan Objectives.** Honeywell shall design the Long-Term Monitoring Plan to satisfy each of the following objectives:

(a) Provide monitoring to ensure that the integrity and effectiveness of the Chromium Remedy are maintained; and

(b) Provide monitoring to ensure that the restrictions of the institutional controls are being satisfied, including the prohibition on development in the AOC 1 Open Space Area.

64. **Monitoring and Remediation Under the Long-Term Monitoring Plan.** The Long-Term Monitoring Plan shall include the monitoring and remediation activities set forth in this paragraph and other monitoring and remediation activities, if necessary, to meet the objectives of paragraph 63. Honeywell shall provide Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP with annual reports on activities conducted under the Long-Term Monitoring Plan.

(a) **Monitoring Activities in the Long-Term Monitoring Plan.** Honeywell shall undertake the following monitoring activities at intervals to be specified in the Long-Term Monitoring Plan, but no less frequently than set forth below, and, if the monitoring shows it is necessary, Honeywell shall also undertake the remediation activities as set forth below:

(i) Quarterly visual inspection monitoring of the AOC 1 Open Space Area to ensure that it is not being put to any use that is inconsistent with paragraphs 60(j) and 60(k) or any use that may compromise the integrity of the Chromium Remedy. The Long-Term Monitoring Plan shall include an inventory of the prohibited and permissible uses pursuant to paragraph 60 and a corresponding checklist to be used by the individuals conducting the monitoring. If Honeywell determines that the AOC 1 Open Space Area is being used in a manner inconsistent with the protections or the integrity and effectiveness of the Chromium Remedy, Honeywell shall act as soon as possible to cause such use to cease and, if there has been damage to the Chromium Remedy, to repair or replace it to original specifications or to a level of protection equivalent to the original Chromium Remedy;

(ii) Quarterly visual inspection monitoring of the AOC 1 Open Space Area grade and slope to identify whether erosion has occurred or is occurring. Honeywell shall remediate any significant erosion.

(iii) Quarterly visual inspection monitoring to determine whether noticeable differential settlement or subsidence has occurred or is occurring in the AOC 1 Open Space Area such that the integrity of the Chromium Remedy may be materially impaired. If evidence of differential settlement or subsidence is found, Honeywell shall propose further investigative measures. Honeywell shall remediate any differential settlement or subsidence that is beyond the degree of differential settlement/subsidence allowed for in the 100% Design

and repair the cap and/or the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(iv) A baseline topographic survey at the completion of the Chromium Remedy and three additional surveys conducted at five-year intervals beginning five years after the conduct of the baseline survey. The topographic survey shall be of sufficient precision and accuracy to present the results as one-foot contours;

(v) Quarterly visual inspection monitoring to determine whether the Chromium Remedy in the AOC 1 Open Space Area has been disturbed. Any evidence of the distinctive warning layer materials or any other cap materials as described in paragraph 56(a) at the surface is an indication that the cap has been disturbed. In such an event, Honeywell shall propose further investigative measures to evaluate whether the integrity of the cap has been compromised. In the event that the investigative measures show that the cap integrity has been compromised, Honeywell shall repair or replace the cap and the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(vi) Quarterly visual inspection monitoring to ensure that burrowing animals are not materially impairing the integrity of the Chromium Remedy. If evidence of burrowing animals is found, Honeywell shall follow humane removal procedures and repair or replace the cap and the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(vii) Quarterly visual inspection monitoring of the vegetative cover in the AOC 1 Open Space Area to ensure that vegetative cover is in conformance with the landscaping provisions of the 100% Design and the Redevelopment Plan and will not materially impair the integrity of the Chromium Remedy. Maintenance of the vegetative cover shall include, at a

minimum, mowing to ensure that tree species cannot become established and removal of any other vegetation with the potential to damage the Chromium Remedy;

(viii) Quarterly groundwater monitoring to ensure that groundwater levels are maintained in accordance with the requirement to maintain an outward gradient from Study Area 7 and in accordance with the water level control plan developed pursuant to paragraph 58(e);

(ix) Monitoring of vented gases and the gas venting system to ensure proper operation of the system, to evaluate any degradation of the system, to assess the need for treatment of vented gases, either initial, subsequent, or further depending on whether treatment has been previously provided, and to detect any condition that might endanger public health or safety. Such monitoring shall be conducted on a monthly basis for at least one year and, if the readings are stable, such monitoring may be conducted thereafter on a quarterly basis; and

(x) Any additional monitoring as required by specific details added in the design phase of the AOC 1 Open Space Area.

(b) **Procedures for Proposing Changes to the Long-Term Monitoring Plan.** Any Party may, from time to time, propose changes to the scope of the monitoring activities under the Long-Term Monitoring Plan. If the Parties agree, the Long-Monitoring Plan shall be so changed subject to approval by NJDEP and by the Special Master, if his appointment has not terminated, or otherwise, by the Court. If the Parties are unable to reach agreement over alterations to the monitoring and the Special Master's appointment has not terminated under this Consent Decree, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation. In the event that the dispute arises after the Special Master's appointment has terminated, any Party may file a motion seeking a resolution of the dispute by

the Court.

(c) **Contingency Plan.** As part of the Long-Term Monitoring Plan, Honeywell shall develop a contingency plan to ensure the integrity of the remediation in the event of any planned penetration of the cap or otherwise planned activity that compromises the cap or any unplanned event or accident that penetrates the cap or otherwise compromises the integrity of the Chromium Remedy. The contingency plan shall include, at a minimum, an annually updated plan to notify the relevant persons, including the Special Master, NJDEP, and the Parties, of (i) the event penetrating the cap, compromising the cap, or compromising the integrity of the Chromium Remedy; (ii) the general steps to be taken to identify the extent of the problem; and (iii) the standards for remedying the problem.

(d) **Routine Maintenance.** The title owner of the AOC 1 Open Space Area shall conduct maintenance of the AOC 1 Open Space Area features or facilities that are permissible under paragraphs 60(j) and 60(k). The maintenance workers shall be trained in maintenance procedures that do not jeopardize the integrity of the Chromium Remedy. The training shall include the identification and reporting of any uses or features that are not permissible in the AOC 1 Open Space Area or that may jeopardize the integrity of the Chromium Remedy. Honeywell shall provide all training materials. The title owner of AOC 1 Open Space Area shall annually provide to the other Parties and the Special Master a report describing the training which has been provided to its maintenance workers. The title owner of the AOC 1 Open Space Area shall also provide to the Parties and the Special Master notice of any violations of the restrictions relating to the AOC 1 Open Space Area identified by its workers during routine maintenance.

(e) **Recordkeeping.** Honeywell shall maintain written logs or other records of those monitoring and remediation activities undertaken pursuant to the Long-Term Monitoring

Plan. Such logs shall be provided to Riverkeeper and the Jersey City Entities on a quarterly basis.

65. **Monitoring and Reporting to Riverkeeper and Jersey City Entities.** Riverkeeper and Jersey City Entities shall be provided with all documents submitted to NJDEP and/or the Special Master with respect to the Chromium Remedy, including the documents identified in paragraph 72(c).

66. **Notice to Stakeholders.** All residents, regardless of whether they are owners or lessees, and all commercial tenants on Study Areas 6 and 7 are hereby deemed stakeholders. Honeywell shall ensure that all stakeholders shall be provided at the time of their purchase or lease with notice of the contamination, the remedial actions that have been undertaken or are planned, and the importance of reporting activities that may appear to jeopardize the integrity of the engineering controls. Notice shall be accomplished in the following manner:

(a) Bold or otherwise conspicuous language on the first page of the deed provided to all purchasers in the Residential Area;

(b) A summary notice of the Chromium Remedy which:

(i) Has been subject to review and comment by the Parties and approval by the Special Master; and

(ii) Provides a reference to public websites and libraries and/or the future equivalents thereof, where the following can be found:

(1) Zoning and other Jersey City maps showing the AOC 1 Open Space Area; and

(2) Documents describing the contamination and the remediation, including:

(a) This Consent Decree;

(b) The Remedial Investigation Report and the Final Remedial Action Report,

(c) The annual reports on long-term monitoring and maintenance and repair activities as required by paragraph 64 and annual reports on changes to the Initial Development as required by paragraph 60(j)(xii); and

(d) The Long-Term Monitoring Plan.

(c) The provision of the maps and documents referred to in paragraph 66(b)(ii) to the public via websites and libraries and/or the future equivalents thereof; and

(d) Notices to lessees and commercial tenants in all lease documents.

67. **Annual Letter to Riverkeeper and Jersey City Entities on Notice to Stakeholders.** Each year beginning one year after the issuance of the first notice in a deed or lease pursuant to paragraph 66, Honeywell shall provide a letter to the Riverkeeper and the Jersey City Entities documenting its compliance with paragraph 66.

68. **Future Notice to Stakeholders.** Honeywell shall ensure that all stakeholders are provided with notice, at least annually, of long-term monitoring activities and any additional remediation activities undertaken with respect to the Chromium Remedy. Such notice shall be accomplished by notices on websites or future equivalents thereof, including Jersey City websites, any websites created to provide information about the Chromium Remediation or redevelopment of the Redevelopment Area, and one or more of the following:

(a) Any community message board or other similar site used and/or maintained by stakeholders or the manager(s) of the Redevelopment Area;

(b) Mailings to all stakeholders; and

(c) Posters and flyers throughout the Redevelopment Area.

69. **Stakeholder Enforcement.** Any stakeholder shall have the right to enforce the

remedial obligations of this Consent Decree in the Court, including post-implementation monitoring and maintenance obligations, and the terms of any deed notice or use restriction.

C. Oversight and Enforcement by the Special Master and NJDEP

70. **Federal Court Jurisdiction.** The Court shall retain jurisdiction for the purpose of overseeing and enforcing this Consent Decree and to review any issue or dispute which is not resolved through the oversight process described in Article III.C.

71. **Appointment and Jurisdiction of the Special Master.** The Chromium Remedy provided for in this Consent Decree is hereby referred to a Special Master pursuant to Rule 53 of the Federal Rules of Civil Procedure. The Special Master is appointed in the Consolidated Litigation for the purpose of overseeing and enforcing the Chromium Remedy, the first five years of long-term monitoring of the Chromium Remedy, financial assurances for the Chromium Remedy, and the Initial Development Period for each phase of development in the AOC 1 Open Space Area. The Special Master is also appointed in the Consolidated Litigation for the limited purpose of ensuring that the scheduling and implementation of the Historic Fill Remedy, the site preparation activities, and the site redevelopment activities described in the Jersey City/Honeywell Consent Order, Articles II.B, III, and IV, do not undermine the integrity of, unreasonably interfere with, or unnecessarily delay the effectuation of the Chromium Remedy, the Study Area 7 remedies, and other remedies within his jurisdiction as of the date of entry of this Consent Decree. The Special Master shall have jurisdiction over all matters for which he is appointed.

72. **Oversight of the Chromium Remedy.**

(a) **NJDEP Authority.** NJDEP shall retain its full statutory and regulatory authority with respect to the Study Area 6 North site, including (i) permitting authority; (ii) authority to review and approve the Remedial Action Work Plan, 100% Design, and final

Remedial Action Report for the Chromium Remedy; and (iii) authority to issue a no further action letter.

(b) **Special Master Responsibilities.** The Special Master shall have the following responsibilities:

(i) Ensuring that Honeywell's implementation of the Chromium Remedy satisfies the requirements of this Consent Decree;

(ii) Ensuring that Honeywell's implementation of the Chromium Remedy conforms with federal, state, and local permit requirements;

(iii) Establishing a reasonable schedule for the implementation of the Chromium Remedy and monitoring conformance with it;

(iv) Reviewing monthly progress reports and conducting periodic meetings with the Parties to review the progress of the implementation of the Chromium Remedy. NJDEP shall be invited, but not required, to participate in these meetings and the decision as to whether to participate shall be left to NJDEP's sole discretion;

(v) Submitting quarterly progress reports to the Court;

(vi) Overseeing the financial assurances established pursuant to paragraphs 77 through 86, and, until the expiration of his term pursuant to paragraph 76, overseeing the financial assurances established pursuant to paragraphs 87 through 98;

(vii) Coordinating review of the documents as provided in paragraphs 72(c) through 72(f);

(viii) Overseeing all development undertaken in the AOC 1 Open Space Area during the Initial Development Period pursuant to paragraph 60(j)(iii); and

(ix) To the extent that, in matters within the jurisdiction of the Special Master as set forth herein, a dispute arises between the Parties with respect to implementation of the Chromium Remedy, issuing a recommendation to the Court with respect to the dispute.

(c) **Submission of Documents by Honeywell.** Honeywell shall submit the following documents to Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP:

(i) An overall schedule with milestones for the design and implementation of the remedy ("Schedule");

(ii) Design drawings and specifications at the 50% level;

(iii) Design drawings and specifications at the 100% level (after selection of the contractor) (hereafter "100% Design");

(iv) The data validation plan, including quality control and quality assurance protocols;

(v) The site-wide master health and safety plan;

(vi) The Long-Term Monitoring Plan;

(vii) The final Remedial Action Report or final construction report (including as-built drawings and such other reports as may be prepared of the remedy as implemented);

(viii) A report reviewing measured groundwater levels for the groundwater remedy;

(ix) Documents required during the Initial Development Period pursuant to paragraphs 60(j)(vi), 60(j)(vii), and 60(j)(viii) ; and

(x) Other post-implementation monitoring reports as required by the Long-Term Monitoring Plan.

(d) **Comment on Submitted Documents.** For each of the documents submitted by Honeywell pursuant to paragraph 72(c), the Special Master shall establish a schedule for the submission of comments and responses to comments. For each of the documents submitted, Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP shall have the right to submit comments to Honeywell. Honeywell shall address all received comments and submit a revised document. The revised document shall be submitted by Honeywell to Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP. The revised document shall be subject to review and approval pursuant to paragraph 72(e).

(e) **Review and Approval of the Submitted/Revised Document**

(i) **Scope of Review.** All documents submitted by Honeywell, pursuant to paragraph 72(c) and 72(d), shall be subject to review and approval by the Special Master in accordance with the following procedure. All such documents, except the Schedule and the 100% Design, shall be subject to the review and approval process and shall not require an order of the Court. The Schedule and 100% Design documents shall be subject to the review and approval process, but shall also require an order of the Court as provided in paragraph 72(f). A document shall be approved if the document (1) complies with this Consent Decree; (2) complies with the Remedial Action Work Plan for the Chromium Remedy; and (3) complies with the Schedule and 100% Design.

(ii) **Procedure.** Prior to making a decision on a document, the Special Master shall notify NJDEP of his intention to rule on the document or make a recommendation to the Court on the document. Such notice shall notify NJDEP that the Special Master will consider any comments NJDEP wishes to submit on the document if such comments are submitted within 30 days of NJDEP's receipt of the notice. NJDEP shall in its sole discretion determine whether to submit comments to the Special Master.

(iii) **Court Review.** If any Party objects to the Special Master's recommendation to the Court or approval of any document pursuant to this paragraph, that Party may seek further relief from the Court with respect to the document.

(f) **Schedule and 100% Design Documents.** As to the Schedule and the 100% Design documents, Honeywell shall have the responsibility, within 30 days of the Special Master's approval of each document, of (i) moving for entry of an order by the Court approving the document as approved by the Special Master; or (ii) filing objections with the Court to the Special Master's approval (and any recommendations contained therein) and moving for entry of the Schedule or 100% Design (including any such recommendations of the Special Master to which Honeywell agrees). Riverkeeper and the Jersey City Entities shall have the right in these proceedings to raise any objections they might have to the Schedule or 100% Design as approved by the Special Master or to the submission by Honeywell to the Court. NJDEP shall receive notice of any motion filed with respect to the Schedule or the 100% Design.

(g) **Flexibility in 50% and 100% Design Documents**. The Parties recognize that work conducted to implement the Chromium Remedy may be conducted by Honeywell contractors and that Honeywell may establish performance-based criteria or specifications for its contractors. As a result, the Parties recognize that the 50% Design and 100% Design documents for the Chromium Remedy may include performance-based standards, criteria, and specifications. These documents shall be sufficiently prescriptive to enable the Parties and the Special Master to evaluate their conformance with the Remedial Action Work Plan and this Consent Decree. The Parties also recognize that the 100% Design will be completed after Honeywell has selected a contractor. The Parties further recognize that completing the 100% Design after the selection of the contractor(s) shall not make the 100% Design subject to any less

stringent or more deferential review. Honeywell's commitment to the contractor(s) shall not be cause to limit review by the Parties and the Special Master.

(h) **Changes to the Schedule**. The Parties recognize that changes to individual line items in the Schedule will occur. To the extent that (i) the Parties and the Special Master agree that such changes do not have a material impact on satisfaction of the Schedule milestones established for items set forth in paragraph 54(b); and (ii) such changes do not require modifications to any necessary permits or authorizations for the Chromium Remedy, such changes may be made upon agreement of the Parties and the Special Master without further order of the Court.

73. **Retention of Professionals.** The Special Master may retain the services of professionals and/or other technical personnel, as reasonably needed, to fulfill his obligations under this Consent Decree, and for which he will be reimbursed pursuant to paragraph 75.

74. **Insurance for the Special Master.** The Special Master shall obtain insurance coverage relating to the performance of the Special Master's duties and responsibilities under this Consent Decree. Such coverage shall be similar to the Special Master's existing coverage in *ICO v. Honeywell*, procured pursuant to the Court's November 11, 2005 Stipulation and Order Regarding Special Master's Application to Procure Insurance Coverage, and as extended to the Consolidated Litigation by the Consent Order on Sediment Remediation and Financial Assurances ("Sediment Consent Order"). The insurance coverage shall be sufficiently extended in duration and scope to cover all additional duties and responsibilities as set forth hereunder. Honeywell shall pay the premiums and other administrative costs of the Special Master's insurance.

75. **Reimbursement of Special Master Fees and Expenses.** The Special Master shall submit fee applications to the Court for approval of reasonable fees and expenses incurred in the

oversight of matters referred to him pursuant to this Consent Decree. Any Party may raise with the Court objections to such fee applications. Upon approval of a fee application by the Court, the reimbursement of the Special Master's fees and expenses shall be made from the escrow fund previously established by Honeywell for the purpose of paying the Special Master's fees and expenses in *ICO v. Honeywell* pursuant to this Court's September 15, 2003 Order Setting Financial Assurances and extended to the Consolidated Litigation by the Sediment Consent Order.

76. **Expiration of Special Master's Appointment.** The Special Master's appointment under this Consent Decree shall expire after Honeywell has completed the first five years of long-term monitoring of the Chromium Remedy and the Initial Development Period for each phase of development has been concluded as provided in paragraph 60(j)(ii). However, solely to the extent that the Special Master is still supervising other portions of the Consolidated Litigation or *ICO v. Honeywell* after Honeywell has completed the first five years of long-term monitoring of the Chromium Remedy or the Initial Development Period for each phase of development as provided in paragraph 60(j)(ii), whichever is later, the Special Master shall continue to have jurisdiction under this Consent Decree until he has completed his specifically enumerated responsibilities under the Final Judgment in *ICO v. Honeywell*, the Sediment Consent Order, the Deep Groundwater Consent Order, and any other future orders, decrees, or judgments in *ICO v. Honeywell* and the Consolidated Litigation. Enumerated responsibilities under any order, decree, or judgment shall include only those tasks specifically assigned to the Special Master in the order, decree, or judgment. Enumerated responsibilities shall not include any continued jurisdiction exercised over long-term monitoring beyond the initial period specified in the order, decree, or judgment. For example, the Special Master has jurisdiction over the first five years of long-term monitoring under the Sediment Consent Order. Oversight during these five years shall

be an enumerated responsibility, but any continued oversight of long-term monitoring, pursuant to the extension of the Special Master's jurisdiction beyond the first five years, as provided in paragraph 60 of the Sediment Consent Order, shall not be an enumerated responsibility. Such extensions of jurisdiction shall be effective only so long as specific enumerated responsibilities in any order, decree, or judgment have not been fulfilled.

D. Initial Financial Assurances

77. **Chromium Remedy Letter of Credit.** Honeywell shall obtain a one-year, irrevocable letter of credit (the "Chromium Remedy Letter of Credit") to be automatically renewed annually in an amount equal to the "Remedial Costs Subject to Financial Assurance."

(a) Remedial Costs Subject to Financial Assurance shall mean:

(i) The costs of implementing the Chromium Remedy;

(ii) The costs of monitoring and maintenance activities, as required by the Long-Term Monitoring Plan, for five years; and

(iii) A contingency of 25% with respect to those costs listed in paragraphs 77(a)(i) and 77(a)(ii).

(b) The Chromium Remedy Letter of Credit shall be issued by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution, provided that in either case, the financial institution shall be acceptable to the Special Master.

78. **Procedures for Review of the Proposed Chromium Remedy Letter of Credit.** No later than 60 days after entry by the Court of this Consent Decree, Honeywell shall submit to Riverkeeper, Jersey City Entities, and the Special Master for their review the proposed (a) amount of the Chromium Remedy Letter of Credit; (b) form of the Chromium Remedy Letter of Credit; and (c) name of the institution that will issue the Chromium Remedy Letter of Credit. If

Riverkeeper or the Jersey City Entities do not agree to the terms of the Chromium Remedy Letter of Credit, the Parties shall meet and confer in an effort to resolve their differences. If the Parties are unable to reach agreement over the terms of the Chromium Remedy Letter of Credit, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation regarding the terms of the Chromium Remedy Letter of Credit.

79. **Automatic Renewal.** The Chromium Remedy Letter of Credit shall be automatically renewed annually unless (a) no later than 120 days prior to the anniversary of the Chromium Remedy Letter of Credit issue date, the issuer provides notice of nonrenewal or (b) Honeywell seeks a reduction in the Chromium Remedy Letter of Credit, pursuant to paragraph 80, to correspond to the reduced estimate of Remedial Costs Subject to Financial Assurances. If the issuer provides notice of nonrenewal, Honeywell shall obtain a replacement irrevocable Chromium Remedy Letter of Credit at least 95 days prior to the expiration date of the existing Chromium Remedy Letter of Credit. If Honeywell is not otherwise in default as provided in Article III.D, the Special Master shall direct the cancellation of the prior Chromium Remedy Letter of Credit within 91 days after delivery to the Special Master of any replacement of a Chromium Remedy Letter of Credit. In the event that the Special Master is entitled to draw upon a Chromium Remedy Letter of Credit because there are two Chromium Remedy Letters of Credit currently in place, the Special Master shall not draw an aggregate amount in excess of the highest valued Chromium Remedy Letter of Credit. Upon Honeywell's request, the Special Master may, at his option, decide not to require overlapping letters of credit in any year based on Honeywell's financial strength in that year, provided that Honeywell has submitted all necessary information so that the Special Master can make his determination at least 150 days prior to the expiration of the Chromium Remedy Letter of Credit.

80. **Annual Right to Seek Reduction in Amount of Chromium Remedy Letter of Credit.** Honeywell shall have the right annually to seek a reduction in the Chromium Remedy Letter of Credit. At the time of seeking such reduction, Honeywell shall submit to the Riverkeeper, the Jersey City Entities, and the Special Master an estimate of the remaining Remedial Costs Subject to Financial Assurance, including the contingency as described in paragraph 77(a)(iii), and shall seek adjustment of the Chromium Remedy Letter of Credit so that the total estimated amount of remaining Remedial Costs Subject to Financial Assurance are covered by the Chromium Remedy Letter of Credit. However, the adjustment shall not result in reducing the Chromium Remedy Letter of Credit to an amount below the remaining estimated costs under paragraphs 77(a)(i) and 77(a)(ii), plus a contingency of 25% of the remaining estimated costs under paragraphs 77(a)(i) and 77(a)(ii), and shall not result in reducing the Chromium Remedy Letter of Credit to an amount less than $20,000,000 as expressed in 2008 dollars unless long-term financial assurances are in place pursuant to Article III.E. Before making any request to reduce the amount or modify the terms of the Chromium Remedy Letter of Credit, Honeywell shall first confer with the Riverkeeper and the Jersey City Entities in an effort to reach agreement on the modified amount or terms of the Chromium Remedy Letter of Credit. If the Parties are unable to reach agreement over the modified amount or terms of the Chromium Remedy Letter of Credit, the Parties shall submit the dispute to the Special Master, who shall resolve the dispute. Any Party shall have the right to seek review by the Court of the Special Master's decision regarding the modified amount or terms of the Chromium Remedy Letter of Credit. Upon agreement on the amount of the reduction or modified terms of the Chromium Remedy Letter of Credit (or upon order of the Court directing that the Chromium Remedy Letter of Credit be reduced to an identified amount or otherwise modified), Honeywell shall obtain a replacement Chromium Remedy Letter of Credit in such amount and with such

terms. If Honeywell is not otherwise in default as provided in Article III.D and the issuer of the primary Chromium Remedy Letter of Credit has not provided notice of non-renewal, within 30 days after delivery to the Special Master of any replacement of a Chromium Remedy Letter of Credit, the Special Master shall direct the cancellation of the prior Chromium Remedy Letter of Credit.

81. **Bankruptcy Protection.** Neither the Chromium Remedy Letter of Credit nor the proceeds of the Chromium Remedy Letter of Credit shall be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy. The Chromium Remedy Letter of Credit shall contain the language necessary to assure that neither the Chromium Remedy Letter of Credit nor the proceeds of the Chromium Remedy Letter of Credit shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

82. **Exclusive Court Jurisdiction.** The Chromium Remedy Letter of Credit shall recite that the issuer submits to the exclusive jurisdiction of this Court for any and all disputes arising under the Letter of Credit.

83. **Application of New York Law.** The provisions of the Uniform Customs and Practice ("UCP") for Documentary Credits (1993 Revision) International Chamber of Commerce Publication #500 and New York law shall apply to the Chromium Remedy Letter of Credit.

84. **Procedures upon Honeywell's Material Default of Its Obligations.** During the period in which the Special Master has jurisdiction pursuant to paragraph 71, the Chromium Remedy Letter of Credit shall be payable to the Special Master and shall not, prior to its expiration date, be revoked or terminated except consistent with this Consent Decree and with the consent of the Special Master and approval by the Court. The Special Master's ability to draw upon the Chromium Remedy Letter of Credit shall not be limited by any agreement between Honeywell and the issuer. The Special Master may, without further order or notice to

this Court, draw upon the Chromium Remedy Letter of Credit upon the occurrence of default by Honeywell, which shall include:

(a) The failure of Honeywell, in the event that notice is given pursuant to paragraph 79 to deliver a replacement Chromium Remedy Letter of Credit at least 95 days prior to the expiration date of the existing Chromium Remedy Letter of Credit;

(b) The material failure of Honeywell to proceed with diligence and in good faith to carry out the terms of this Consent Decree and the continuance of such a material breach for a period of 15 days after written notice to Honeywell thereof and either (i) Honeywell, in the opinion of the Special Master without further input from the Parties, shall have failed to cure the breach; (ii) during the 15-day period, the Court has not entered an order to prevent the Special Master from drawing on the Chromium Remedy Letter of Credit; or (iii) the Court or the Special Master has not granted Honeywell additional time to cure the breach;

(c) The filing by Honeywell of a petition seeking relief, or the granting of relief, under the Federal Bankruptcy Code or any similar federal or state statute; any assignment for the benefit of creditors made by Honeywell; the involuntary filing of any of the foregoing against Honeywell if involuntary filing has not been dismissed within 60 days; the appointment of a custodian, receiver, liquidator, or trustee, or other similar official for Honeywell or for a substantial part of Honeywell's property; any action by Honeywell to effect any of the foregoing; or if Honeywell becomes insolvent as defined in Section 101(32) of the Federal Bankruptcy Code; or

(d) The dissolution, liquidation, merger, consolidation, or reorganization of Honeywell or the institution of any proceeding to effect any of the foregoing, other than under paragraph 84(c) above, and the failure of Honeywell to provide assurance to the Special Master, within 15 days after written notice, that such an event will not impair Honeywell's ability to

carry out the terms of this Consent Decree.

85. **Placement of Proceeds in Court Registry Investment System Account.** In the event that the Special Master draws upon the Chromium Remedy Letter of Credit due to an event of default, the Special Master shall place the proceeds of the Chromium Remedy Letter of Credit which represent the remaining estimated Chromium Remedy costs under paragraphs 77(a)(i), plus a contingency of 25% of the remaining estimated costs under paragraph 77(a)(i), in an account with the Court Registry Investment System in accordance with Local Civil Rule 67.1 and not expend the proceeds of the Letter of Credit without further order of this Court. The Special Master shall place all additional proceeds of the Chromium Remedy Letter of Credit in a trust fund pursuant to paragraph 90(b)(v).

86. **Termination of Chromium Remedy Letter of Credit.** The Chromium Remedy Letter of Credit may be withdrawn in its entirety upon the satisfaction of all of the following:

(a) The implementation of the Chromium Remedy; and

(b) Establishment of long-term financial assurance pursuant to Article III.E.

E. Long-Term Financial Assurances

87. **Long-Term Financial Assurances.** Honeywell shall fund long-term financial assurances to ensure that the activities set forth in paragraph 89(a) are carried out regardless of whether Honeywell is financially able to carry out such activities in perpetuity.

88. **Resolution of the Amount of Long-Term Financial Assurances.** The Parties have agreed to the following options with regard to how the long-term financial assurances shall be determined:

(a) If the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less,

and agree on the amount of funding needed, Honeywell shall provide long-term financial assurances as required by Article III.E.

(b) If the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less, but disagree on the amount of funding needed, Honeywell shall provide long-term financial assurances as required by Article III.E except that the dispute as to the amount of the long-term financial assurances shall be submitted to the Special Master pursuant to paragraph 91.

(c) If the Parties do not agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less, or the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is greater than $10,000,000, the Parties shall seek resolution by the Court of the long-term financial assurances issues, including (i) the type of financial assurances to be provided; (ii) the scope of the financial assurances; (iii) the amount of the financial assurances; and (iv) the duration of the financial assurances. In the event that the Parties seek resolution by the Court, the provisions of paragraphs 90 through 98 shall not apply.

(d) Within 60 days of the entry of this Consent Decree, the Parties shall determine which option under this paragraph shall apply. In the event that the Parties determine that paragraph 88(c) applies, Riverkeeper shall initiate the proceedings by moving the Court for the imposition of long-term financial assurances.

(e) If the Parties determine that they are proceeding under paragraph 88(c), Honeywell shall maintain the Chromium Remedy Letter of Credit required by paragraph 77 in an amount equal to at least $20,000,000 in 2008 dollars until such time as the long-term financial assurances ordered by the Court are in place. In the event of any default by Honeywell pursuant

to paragraph 84 while the Chromium Remedy Letter of Credit is in place, the provisions of paragraph 90(b)(v) for the placement of the proceeds that exceed the remaining estimated Chromium Remedy costs under paragraph 77(a)(i) plus a contingency of 25% of the remaining estimated costs under paragraph 77(a)(i), shall apply.

89. **Costs Subject to Long-Term Financial Assurances.**

(a) Long-term financial assurances shall provide enough funds to cover the costs of the following activities:

(i) Perpetual monitoring and maintenance of the Chromium Remedy, including installation, operation and monitoring of any above-cap-grade gas collection and/or treatment system as may be necessary, but such system is not part of the 100% Design;

(ii) Perpetual operation of the shallow groundwater pump-and-treat remedy;

(iii) Perpetual repair of the cap;

(iv) Perpetual replacement of the cap on a 75-year replacement interval; and

(v) In the event that Honeywell selects a trust fund pursuant to paragraph 90(a), the perpetual administration of the trust fund.

(b) The costs that shall be subject to financial assurances is an amount that will provide the full payment for each of the activities set forth in paragraphs 89(a)(i) through 89(a)(v) plus a 25% contingency when the activities in paragraphs 89(a)(i) through 89(a)(v) are expected to be performed. The costs subject to financial assurances are forward looking because they state an amount valued at the time the funds are needed. As such, they shall be stated in contemporary time as the present value (calculated on the basis of a discount rate of 4.75%) of

the estimated future costs of the activities specified in paragraphs 89(a)(i) through 89(a)(v), plus a 25% contingency on those costs.

90. **Long-Term Financial Assurance Mechanisms.** Honeywell shall provide long-term financial assurances in the amount of the costs subject to long-term financial assurances in the form of a trust fund, a letter of credit, or some combination of the two. The selected mechanism(s) shall satisfy the following requirements:

(a) **Trust Fund.** In the event that Honeywell selects a trust fund, Honeywell shall create a trust fund such that it can provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary.

(i) The trust fund shall be at arm's length from Honeywell and shall not be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy, dissolution, privatization, or sale. The trust fund agreement shall contain the language necessary to assure that neither the trust fund nor the earnings of the trust fund shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

(ii) The trust fund shall be managed by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution acceptable to Riverkeeper and the Jersey City Entities or approved by the Court. In the event that the financial institution managing the trust fund declares bankruptcy, the Court shall withdraw the funds and appoint another financial institution meeting the requirements of this paragraph to manage the trust.

(iii) No more frequently than once per year, Honeywell may apply to the Court for an order directing the trust manager to reimburse Honeywell for any costs that it has incurred to carry out the activities set forth in paragraphs 89(a)(i) through 89(a)(iv).

(b) **Long-Term Letter of Credit.** In the event that Honeywell selects a letter of credit, Honeywell shall obtain a one-year irrevocable letter of credit (the "Long-Term Letter of Credit") to be automatically renewed annually in an amount that provides sufficient funds such that a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a), could be created. The Long-Term Letter of Credit-funded trust, plus any trust fund established under paragraph 90(a), shall provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. The amount of any Long-Term Letter of Credit shall therefore be adjusted periodically as the cap replacement interval is approached because, for example, the money needed in the 10th year to fund a trust that can provide for replacement of the cap in the 75th year is much less than the money that would be needed in the 40th year. Such periodic adjustments shall be proposed and approved by the Court in conjunction with the adjustments under paragraph 92.

(i) Neither the Long-Term Letter of Credit nor the proceeds of the Long-Term Letter of Credit shall be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy, dissolution, privatization, or sale. The Long-Term Letter of Credit shall contain the language necessary to assure that neither the Long-Term Letter of Credit nor the proceeds of the Long-Term Letter of Credit shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

(ii) The Long-Term Letter of Credit shall be issued by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution acceptable to Riverkeeper and the Jersey City Entities or approved by the Court. In the event that the financial institution issuing the Long-Term Letter of Credit declares bankruptcy, the Court shall authorize the drawing of funds from the Long-Term Letter of Credit

and shall deposit those funds in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

(iii) The provisions of the Uniform Customs and Practice ("UCP") for Documentary Credits (1993 Revision) International Chamber of Commerce Publication #500 and New York law shall apply to the Long-Term Letter of Credit.

(iv) The Long-Term Letter of Credit shall be automatically renewed annually, unless, no later than 120 days prior to the anniversary of the Long-Term Letter of Credit issue date, the issuer provides notice of non-renewal. If the issuer provides notice of non-renewal, Honeywell shall obtain a replacement irrevocable Long-Term Letter of Credit at least 95 days prior to the expiration date of the existing Long-Term Letter of Credit. If Honeywell is not otherwise in default as provided in this Article, the Court shall direct the cancellation of the prior Long-Term Letter of Credit within 91 days after delivery to the Court of any replacement of a Long-Term Letter of Credit. In the event that the Court is entitled to draw upon a Long-Term Letter of Credit when there are two Letters of Credit currently in place, the Court shall not draw an aggregate amount in excess of the highest valued Long-Term Letter of Credit.

(v) Prior to the expiration of the Special Master's appointment pursuant to paragraph 76, the Long-Term Letter of Credit shall be payable to the Special Master. During the time the Long-Term Letter of Credit is payable to the Special Master, the Special Master may draw on the Long-Term Letter of Credit as provided in paragraph 84. In the event that the Special Master draws upon the Long-Term Letter of Credit due to an event of default, the Special Master shall place the proceeds of the Long-Term Letter of Credit in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a). After the Special Master's appointment expires pursuant to paragraph 76, the Long-Term Letter of Credit shall be payable to the Court and, in the event that the Court draws

on the Long-Term Letter of Credit, the Court shall place the proceeds of the Long-Term Letter of Credit in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

(vi) Whether the Long-Term Letter of Credit is payable to the Special Master or the Court, it shall not, prior to its expiration date, be revoked or terminated by Honeywell except consistent with this Consent Decree and with the approval of the Court. The ability of the Special Master or the Court to draw upon the Long-Term Letter of Credit shall not be limited by any agreement between Honeywell and the issuer.

(vii) In the event that the Long-Term Letter of Credit is drawn upon and invested pursuant to paragraph 90(b)(ii), 90(b)(v) or 95 and Honeywell has also selected a trust fund pursuant to paragraph 90(a), resulting in the existence of two trust funds, the two trust funds shall be managed so as to ensure that the combined amount of the trust funds is sufficient to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary.

(c) **Combination.** Honeywell may use some combination of a trust fund and a letter of credit to achieve the requirements of this paragraph. However, if a combination is used, Honeywell shall ensure that the combined amount of financial assurances is sufficient to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. The trust fund and the letter of credit shall otherwise satisfy all the requirements of paragraphs 90(a) and 90(b).

91. **Procedures for Review of the Proposed Long-Term Financial Assurances.** In the event that the Parties have determined that they are proceeding pursuant to paragraph 88(a) or 88(b), no later than 120 days after the determination under paragraph 88(d), Honeywell shall submit to Riverkeeper, the Jersey City Entities, and the Special Master, for their review (a) the

amount of the proposed long-term financial assurances; (b) the form(s) of the proposed long-term financial assurance mechanisms; and (c) the name(s) of the institution proposed to manage or issue the long-term financial assurances. If Riverkeeper and the Jersey City Entities agree to the terms of the proposed long-term financial assurances, within 60 days of such agreement, Honeywell shall create a trust fund and/or secure a Long-Term Letter of Credit on those terms. If the Parties are unable to reach agreement over the terms of the long-term financial assurances, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation regarding the terms of the financial assurances. In any event, until the long-term financial assurances have been put into place, Honeywell shall maintain the Chromium Remedy Letter of Credit and the requirements of paragraphs 88(e) and 90(b)(v) shall apply to the Chromium Remedy Letter of Credit.

92. **Adjustment of Amount Held in Long-Term Financial Assurances.** Every five years as marked from the establishment of the first long-term financial assurances pursuant to paragraph 90, the Parties shall report to the Court whether the long-term financial assurances are adequately funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. At such time as the Parties report to the Court, any Party may seek an adjustment in the amount of the long-term financial assurances. The Party seeking an adjustment must demonstrate that the long-term financial assurances are under-funded or over-funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. Such demonstration shall reflect the actual costs of implementing the remedy and/or any replacement of the remedy, once such actual costs are available. The demonstration shall also reflect the costs of work completed to date and the actual lifetime of the cap, once the

cap has been replaced or has passed a replacement interval without requiring replacement. The demonstration shall further reflect the actual performance of the fund and its ability to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. Any demonstration shall be forward looking and shall be based upon estimates of what the activities in paragraphs 89(a)(i) through 89(a)(v) are expected to cost at the time they must be performed and the amount of funding projected to be available to undertake such activities at the time they must be performed. If, after reviewing the submission(s) received from the Parties, the Court determines that the long-term financial assurances are under-funded or over-funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary, the Court shall order an adjustment in the amount held in the long-term financial assurances to overcome the shortage or overage. In the event that the Court determines that the long-term financial assurances are under-funded, it shall order Honeywell to increase the amount held in the long-term financial assurances. In the event that the Court determines that any trust fund established pursuant to paragraph 90(a) is over-funded, the Court shall issue an order directing the trust manager to pay the overage to Honeywell. In the event that the Court determines that the Long-Term Letter of Credit is over-funded, the Court shall issue an order permitting Honeywell to reduce the amount covered during the next annual renewal of the Long-Term Letter of Credit pursuant to paragraph 90(b)(iv). Any adjustment to the amount of the Long-Term Letter of Credit pursuant to this paragraph shall be in addition to any adjustment of the amount of the Long-Term Letter of Credit required pursuant to paragraph 90(b).

93. **Exclusive Court Jurisdiction.** The trust fund agreement and/or the Long-Term Letter of Credit shall recite that the trust fund manager and/or issuer of the Long-Term Letter of Credit submit to the exclusive jurisdiction of this Court for any and all disputes arising under the

trust fund or the Long-Term Letter of Credit. The requirements of this paragraph shall apply whether the trust fund is established pursuant to paragraph 90(a), 90(b)(ii), 90(b)(v), or 95.

94. **Procedures upon Honeywell's Material Default of Its Obligations after the Special Master's Appointment Has Expired.** Upon the occurrence of default by Honeywell, after the Special Master's appointment has expired, Riverkeeper or the Jersey City Entities may move the Court on an expedited basis for an order to withdraw funds from the trust fund or to draw on the Long-Term Letter of Credit. Default shall include:

(a) The failure of Honeywell, in the event that notice is given pursuant to paragraph 90(b)(iv) to deliver a replacement Long-Term Letter of Credit at least 95 days prior to the expiration date of the existing Long-Term Letter of Credit;

(b) The material failure of Honeywell to proceed with diligence and in good faith to carry out the terms of this Consent Decree and the continuance of such a material breach for a period of 30 days after written notice by Riverkeeper or the Jersey City Entities to Honeywell of the alleged material failure, unless Honeywell cures the alleged breach within the 30-day notice period or such longer period as the Parties may agree to or the Court may order;

(c) The filing by Honeywell of a petition seeking relief, or the granting of relief, under the Federal Bankruptcy Code or any similar federal or state statute; any assignment for the benefit of creditors made by Honeywell; the involuntary filing of any of the foregoing against Honeywell if the involuntary filing is not dismissed within 60 days; the appointment of a custodian, receiver, liquidator, trustee, or other similar official for Honeywell or for a substantial part of Honeywell's property; any action by Honeywell to effect any of the foregoing; or if Honeywell becomes insolvent as defined in Section 101(32) of the Federal Bankruptcy Code; or

(d) The dissolution, liquidation, merger, consolidation, or reorganization of Honeywell or the institution of any proceeding to effect any of the foregoing, other than under

paragraph 94(c), if Honeywell fails to provide assurance to Riverkeeper, the Jersey City Entities, and the Court, within 15 days after written notice, that such an event will not impair Honeywell's ability to carry out the terms of this Consent Decree.

95. **Drawing on the Long-Term Letter of Credit in the Event of Honeywell's Default.** If the Court grants any motion by Riverkeeper or the Jersey City Entities pursuant to paragraph 94 to draw on the Long-Term Letter of Credit, the sum approved by the Court's order granting the motion shall be paid from the Long-Term Letter of Credit into a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

96. **Use of the Trust Fund in the Event of Honeywell's Default**. In the event of Honeywell's default, the money in the trust fund established pursuant to paragraph 90(a) shall be available to meet the obligations of paragraph 89(a). Riverkeeper and/or the Jersey City Entities shall file motions with the Court seeking orders directing how the money in the trust fund shall be used. The Court shall consider motions on an expedited basis and shall enter appropriate orders. The Court may enter an order allowing for automatic withdrawal of regular expenses without separate motion to the Court by Riverkeeper or the Jersey City Entities.

97. **Use of a Trust Fund Established Pursuant to Paragraph 85, 90(b)(ii), 90(b)(v), or 95.** In the event that a trust fund is established pursuant to paragraph 85, 90(b)(ii), 90(b)(v), or 95, the money in the trust fund shall be available to meet the obligations of paragraph 89(a). Riverkeeper and/or the Jersey City Entities shall file motions with the Court seeking orders directing how the money in the trust fund shall be used. The Court shall consider motions on an expedited basis and shall enter appropriate orders. The Court may enter an order allowing for automatic withdrawal of regular expenses without separate motion to the Court by Riverkeeper or the Jersey City Entities.

98. **Termination of the Long-Term Financial Assurances.** Honeywell's obligations

under Article III.E shall be terminated and the long-term financial assurance mechanisms shall be terminated when the Court finds that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area or on the Site, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive. Upon determining that long-term financial assurances may be terminated, the Court shall order that any Long-Term Letter of Credit may be withdrawn in its entirety and any trust fund may be terminated. In conjunction with its order terminating any trust fund, the Court in its discretion shall designate a recipient(s) of any remaining trust funds.

ARTICLE IV: IMPLEMENTATION SCHEDULE AND TERMINATION

99. **Schedule for Remedy and Site Preparation Implementation Activities.** The Chromium Remedy under Article III and the Historic Fill Remedy under Article II.B of the Jersey City/Honeywell Consent Order and Site Preparation Activities under Article III of the Jersey City/Honeywell Consent Order shall be undertaken by the Parties in accordance with the following anticipated schedule, recognizing that this schedule may be further modified in writing by agreement of the Parties and with the approval of the Court:

(a) By October 1, 2008, the Jersey City Entities and Honeywell shall develop a Site Preparation Plan, pursuant to paragraph 3.2 of the Jersey City/Honeywell Consent Order, for all Site Preparation Activities necessary to undertake the Chromium Remedy;

(b) No later than June 18, 2009, Honeywell shall submit to NJDEP a remedial design document for the Chromium Remedy;

(c) No later than September 1, 2009, Honeywell shall submit all applications for permits and authorizations for the performance of the Chromium Remedy to all appropriate local, state, and federal government entities;

(d) Honeywell shall use its best efforts to complete the Chromium Remedy no later than four years after all appropriate applications and authorizations for the performance of the Chromium Remedy have been obtained;

(e) By May 1, 2008, Honeywell and the Jersey City Entities shall submit a work plan for further Remedial Investigation for AOC 2 to NJDEP; and

(f) By December 1, 2008, Honeywell and the Jersey City Entities shall submit a Remedial Action Selection Report and Remedial Action Workplan for the Historic Fill Remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order. The Workplan shall contain a schedule for implementation of the Historic Fill Remedy.

100. **Termination of this Consent Decree.** This Consent Decree shall terminate upon the withdrawal of any Party as provided for in this paragraph. Any Party may elect to withdraw from this Consent Decree due to the occurrence of one or more of the following events, provided that such Party provides written notice of withdrawal to the other Parties pursuant to paragraph 108:

(a) The Court fails to enter the Jersey City/Honeywell Consent Order or this Consent Decree or either the Jersey City/Honeywell Consent Order or this Consent Decree is determined to be invalid on appeal;

(b) JCRA fails to take those actions required under paragraphs 4.11(a), (b), and (c) of the Jersey City/Honeywell Consent Order within nine months of entry of this Consent Decree; or

(c) JCRA fails to approve a Redevelopment Agreement between Bayfront Redevelopment LLC and JCRA pursuant to paragraph 4.11(e) of the Jersey City/Honeywell Consent Order within 12 months of entry of this Consent Decree.

101. **Procedures for Withdrawal and Termination.** Any Party electing to withdraw pursuant to paragraph 100 and thereby terminate this Consent Decree shall provide written notice of such withdrawal and termination to all other Parties within 30 days of the occurrence giving rise to the decision to withdraw. If any Party objects to termination of the Consent Decree, or believes that the conditions set forth in paragraph 100 have not been met, such objecting Party may move the Court for an expedited hearing on the issue of whether the conditions for termination have been effectuated.

102. **Good-Faith Obligation to Avoid Termination.** The Parties agree that they will each endeavor to fulfill the terms of this Consent Decree, that they will work diligently and in good faith to meet their obligations hereunder, and that they will promptly and timely take all reasonable steps to give effect to this Consent Decree and to avoid termination under paragraph 100.

103. **Effect of Termination.** If this Consent Decree is terminated pursuant to paragraph 100, the Consent Decree shall no longer be binding on the Parties and shall be of no further effect. In the event that this Consent Decree is terminated by one or more Parties pursuant to paragraph 100, each Party to this Consent Decree reserves all of its rights, claims, and defenses (both legal and factual) against the other Parties with respect to the matters at issue in the Consolidated Litigation and each Party remains free to pursue such rights, claims, and defenses.

ARTICLE V: ADDITIONAL PROVISIONS RELATED TO HISTORIC FILL AND SITE PREPARATION AND REDEVELOPMENT

104. **Historic Fill Remedy**. This Consent Decree shall adopt and incorporate the terms of Article II.B of the Jersey City/Honeywell Consent Order with respect to the Historic Fill Remedy. The Historic Fill Remedy shall not be limited to the activities set forth in Article II.B of the Jersey City/Honeywell Consent Order in the event that NJDEP requires a more extensive remedy. The Historic Fill Remedy shall be compatible with the Chromium Remedy such that no

part of the Historic Fill Remedy shall interfere with the installation, maintenance, and monitoring of the Chromium Remedy. In addition, the Historic Fill Remedy for any discharge of non-chromium contaminants to the Hackensack River shall not interfere with the remedies under the Sediment Consent Order, including the source control remedies. In the event that Jersey City conducts the Historic Fill Remedy instead of Honeywell, the terms of this paragraph shall still apply.

105. **Oversight of Historic Fill Remedy**. Paragraph 2.11 of the Jersey City/Honeywell Consent Order shall apply only to the Historic Fill Remedy, not the Chromium Remedy. The Progress Reports provided for in paragraphs 2.12 and 3.7 of the Jersey City/Honeywell Consent Order shall be provided to Riverkeeper and the Special Master at the time they are submitted.

106. **Transfer of Title of Study Areas 6 North and 7 to and from Bayfront Redevelopment LLC**. The transfer of title of Study Area 6 North and Study Area 7 properties to Bayfront Redevelopment LLC pursuant to the Jersey City/Honeywell Consent Order and any subsequent transfers shall not impede Honeywell's obligations to (a) complete the remediation of Study Area 7 and implement the Final Judgment and subsequent orders in *ICO v. Honeywell* or (b) complete the Chromium Remedy and conduct long-term monitoring and fulfill its other obligations set forth in this Consent Decree. Such transfers of Study Areas 6 North and Study Area 7 shall not include a transfer of Honeywell's obligations to implement the Final Judgment and subsequent orders in *ICO v. Honeywell* or a transfer of Honeywell's obligations under this Consent Decree, but shall include a right of access or any other right required by Honeywell to complete the remediation. Any subsequent transfer of Study Area 6 North or Study Area 7 from Bayfront Redevelopment LLC to a redeveloper or other party shall provide all necessary agreements to allow Honeywell all necessary access to Study Area 6 North and Study Area 7 for purposes of completing Honeywell's obligations with respect to Study Area 6 North under this

Consent Decree and completing the Study Area 7 remediation and implementing the Final Judgment and subsequent orders in *ICO v. Honeywell*.

107. **Dispute Resolution Procedures.** The provisions of Article VIII of the Jersey City/Honeywell Consent Order do not apply to any disputes regarding or impacting the Chromium Remedy, which shall be resolved as provided in paragraph 72. The provisions of Article VIII of the Jersey City/Honeywell Consent Order shall apply to disputes between the Jersey City Entities and Honeywell regarding the Historic Fill Remedy and other obligations provided in the Jersey City/Honeywell Consent Order, except to the extent that such disputes may affect the Chromium Remedy. If any such dispute may affect the Chromium Remedy, it shall be resolved as provided in paragraph 72. Honeywell shall provide Riverkeeper with a copy of each notice of any breach provided under paragraph 8.1 of the Jersey City/Honeywell Consent Order within 10 days of Honeywell's receipt or issuance of such notice. Honeywell shall provide Riverkeeper with a copy of any written resolution of a dispute pursuant to paragraph 8.2 within 10 days of the resolution.

ARTICLE XI: NOTICE

108. **Notice.** Any and all notices given in connection with this Consent Decree shall be deemed adequately given only if in writing and addressed to the Party for whom such notices are intended at the addresses set forth in this paragraph. All notices shall be sent by Federal Express or other nationally recognized overnight messenger service or by first-class registered or certified mail, postage prepaid, return receipt requested. A written notice shall be deemed to have been given to the recipient party on the earlier of (a) the date it shall be delivered to the address set forth in this paragraph; (b) the date delivery shall have been refused at the address set forth in this paragraph; or (c) with respect to notices sent by mail, the date as of which the postal service shall have indicated such notice to be undeliverable at the address set forth in this paragraph.

Any and all notices referred to in this Consent Decree, or which any Party desires to give to the other, shall be addressed as follows:

If to Honeywell and/or
Bayfront Redevelopment LLC :

Tom Byrne, Esq.
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-2775

If to Riverkeeper:

Bruce J. Terris
Carolyn Smith Pravlik
Kathleen L. Millian
Terris, Pravlik & Millian, LLP
1121 12th St., N.W.
Washington, DC 20005-4632
(202) 682-2100

With copies to:

John Morris
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-4003

If to Jersey City:

William Matsikoudis
Corporation Counsel
City of Jersey City
280 Grove Street
Jersey City, NJ 07305
(201) 547-4667

If to JCIA:

David L. Isabel
Golub & Isabel, PC
160 Littleton Road
Parsippany, NJ 07054
(973) 968-3377

If to JCMUA:

Sam Della Fera Jr.
Trenk, DiPasquale, Webster,
Della Ferra & Sodono, P.C.
347 Mount Pleasant Ave.
West Orange, NJ 07052
(973) 243-8600

If to JCRA:

Robert Antonichello
Executive Director
30 Montgomery Street
Jersey City, NJ 07302
(201) 547-5810

Any party may change its designated recipients or addresses for notice in this paragraph by providing written notice of such change to all other Parties.

ARTICLE XII: RIVERKEEPER'S ATTORNEYS' FEES

109. **Payment of Past Fees and Expenses.** Within 30 days of the entry of this Consent Decree, Honeywell shall pay Terris, Pravlik & Millian, LLP the sum of $1,513,217.15 which represents the following:

(a) A compromise of the attorneys' fees incurred by Riverkeeper in the litigation of Study Area 6 North portion of *Riverkeeper v. Honeywell* through March 27, 2008; and

(b) $187,862.27 in out-of-pocket expenses representing 50% of the expenses incurred by Riverkeeper in *Riverkeeper v. Honeywell* from the inception of the litigation after deducting the expenses to be paid pursuant to the Sediment Consent Order.

Payment of the sum of $1,513,217.15 shall be in full satisfaction of all obligations, duties, and responsibilities of Honeywell with respect to the $1,556,747.46 in fees and expenses that Riverkeeper claimed with regard to the above described fees and expenses.

110. **Future Fees and Expenses.** Honeywell shall reimburse Riverkeeper's attorneys for reasonable fees and expenses incurred: (a) in negotiating this Consent Decree after March 27, 2008; (b) in the monitoring and enforcement of this Consent Decree; and (c) in participation in the Special Master process established pursuant to this Consent Decree. Honeywell shall also reimburse Riverkeeper for reasonable attorneys' fees and expenses for Riverkeeper's review of and participation in the Long-Term Monitoring Plan and monitoring and enforcement of this Consent Decree following the term of the Special Master. In the event that any dispute arises between the Parties under this Consent Decree that must be resolved by the Court, Riverkeeper shall be entitled to recover its attorneys' fees and expenses for litigation of the dispute to the extent allowed by federal law. Riverkeeper and Honeywell shall use the same informal procedure for attempting to settle fees issues as has been used for post-judgment monitoring fees in *ICO v. Honeywell*. In the event that Riverkeeper and Honeywell are unable to reach a

settlement on fees, Riverkeeper shall apply to the Court for an award of attorneys' fees and expenses. If Honeywell objects to only a portion of the Riverkeeper's statement of attorneys' fees and expenses, Honeywell shall pay the undisputed portion within 60 days of Riverkeeper's submittal of the statement to Honeywell. The Court shall resolve any objections to Riverkeeper's statement of attorneys' fees and expenses and shall enter an appropriate Order.

ARTICLE XIII: MISCELLANEOUS PROVISIONS

111. **Force Majeure.** Force Majeure, for the purposes of this Consent Decree, is defined as an event arising from causes beyond the control of any Party or Parties (or their agents, contractors, subcontractors, representatives, or assigns) which could not have been overcome by reasonable diligence and which delays or prevents the performance of any obligation under this Consent Decree. Examples of events which may constitute force majeure include the refusal of any federal or state governmental authority to grant a permit or authorization necessary for the completion of actions required by this Consent Decree, floods, hurricanes, tornadoes, and other extraordinary weather events, earthquakes and other natural disasters, terrorist attacks, war, and other national emergencies. Examples of events that are not force majeure events include normal inclement weather, increased costs or expense, the failure to timely and fully apply for a permit or authorization necessary for the completion of actions required by this Consent Decree, or financial difficulty of any Party. The Party claiming force majeure shall bear the burden of showing an event was a force majeure event.

112. **JCRA and Bayfront Redevelopment LLC as Parties.** As signatories to this Consent Decree, JCRA and Bayfront Redevelopment LLC subject themselves to the Court's jurisdiction for the purpose of enforcing this Consent Decree and agree to be bound by this Consent Decree. This Consent Decree shall be fully enforceable against JCRA and Bayfront Redevelopment LLC.

113. **Successors and Assigns.** This Consent Decree shall be binding upon and shall inure to the benefit of the successors, assigns, heirs, corporate parents, subsidiaries, and affiliates of each Party. No assignment or delegation of the obligations hereunder shall release the assigning Party from its obligations under this Consent Decree.

114. **Successors to Hackensack Riverkeeper, Inc.** In the event that Hackensack Riverkeeper, Inc. disbands or otherwise ceases operations, it shall assign its rights under this Consent Decree to another qualified nonprofit organization. A nonprofit organization shall be qualified for assignment under this Consent Decree if it is a charitable organization under Section 501(c)(3) of the Internal Revenue Code or its substantial equivalent and has an established record of working to enhance or preserve the ecology, natural habitat, or environment. Any such assignment shall be subject to approval by the Court and Honeywell shall have the right to object to any proposed assignment. Any successor organization shall have the duty to assign its rights under this Consent Decree to another qualified nonprofit organization in the event that the successor disbands or otherwise ceases operations. In the event that a successor is not appointed at any given time, the New Jersey Attorney General or equivalent officer shall appoint a successor subject to approval by the Court and objection by Honeywell.

115. **Reservation of Rights and Claims**. Except as set forth expressly herein, this Consent Decree does not affect in any way any of the Parties' claims or defenses against third parties who have not signed the Consent Decree.

116. **Governing Law and Continuing Jurisdiction.** The Court shall retain jurisdiction over the matters addressed in this Consent Decree for purposes of enabling the Parties to apply to the Court for any further order as may be necessary to construe, carry out, or enforce the terms of this Consent Decree. This Consent Decree shall be interpreted and enforced under the laws of

the United States and the State of New Jersey by the United States District Court for the District of New Jersey.

117. **Construction.** Questions regarding the interpretation of this Consent Decree shall not be resolved against any Party on the ground that this Consent Decree has been drafted by that Party. This Consent Decree is the result of review, negotiation, and compromise by each Party.

118. **Authority to Enter into Agreement.** The undersigned representative for each Party represents, certifies, and warrants that he or she is duly authorized by the Party whom he or she represents to enter into the terms of this Consent Decree and bind such Party legally to this Consent Decree.

119. **Measures to Effectuate This Consent Decree.** The Jersey City Entities and JCRA shall take all appropriate steps to ensure that this Consent Decree has been (and that actions required hereunder will be) duly considered, ratified, and approved. Such steps include consideration of this Consent Decree at a meeting of the City Council, open to the public, at which members of the public have the opportunity to comment on all aspects of the Settlement, including the commitments made by Jersey City; and consideration by and approval of the commissioners of the JCIA, JCMUA, and JCRA.

120. **Modifications.** This Consent Decree may be modified by mutual agreement of the Parties but such agreement must be in writing, duly and properly signed by all Parties, and shall be submitted to the Court for approval.

121. **Severability.** Each of the provisions in paragraph 60 of this Consent Decree shall be deemed severable and, in the event that one or more of such provisions is deemed invalid or unenforceable, it shall not affect the validity or enforceability of the other provisions of the Consent Decree.

122. **Signatures.** This Consent Decree may be signed simultaneously or in counterparts by the respective signatories, which shall be as fully valid and binding as if a single document was signed by all of the signatories. This Consent Decree may be signed electronically by any or all signatories, and such electronic signature shall be as fully valid and binding as a hand-written signature.

CONSERVATION RESTRICTION

This **CONSERVATION RESTRICTION** ("Conservation Restriction"), made on this 12th day of December, 2008, between BAYFRONT REDEVELOPMENT LLC, a limited liability company, having an address at c/o Honeywell International Inc., 101 Columbia Turnpike, Morristown, New Jersey 07962 (hereafter the "Grantor"), HONEYWELL INTERNATIONAL INC., a corporation of the State of Delaware, having an address at 101 Columbia Turnpike, Morristown, New Jersey 07962, and THE HACKENSACK WATERSHED LAND TRUST, a non-profit Corporation of the State of New Jersey with offices at 231 Main Street, Hackensack, New Jersey 07061 (hereafter "Grantee").

WHEREAS, the Grantee, is a non-profit corporation incorporated under the laws of the State of New Jersey as a tax exempt public charity under Section 501(c)(3) and 509(a)(1) of the Internal Revenue Code; is qualified under section 170(h) of the Internal Revenue Code to receive conservation contributions; is a charitable conservancy within the meaning of N.J.S.A. 13:8B-2(a); is qualified to do business in the State of New Jersey; and whose purpose is to preserve natural areas for scientific, charitable, educational, and aesthetic purposes; and

WHEREAS, Grantor is the owner in fee simple of certain AOC 1 Open Space Property consisting of approximately 11 acres and now known and designated as a portion of Block 1290.1, Lots 2D and 2E and Block 1290.1, Lot 16A.99 on the Tax Map of the City of Jersey City, as described in Schedule A and Exhibit A attached hereto (the "AOC 1 Open Space Property"); and

WHEREAS, the AOC 1 Open Space Property is subject to a certain Option to Purchase in favor of the City of Jersey City which may be exercised upon the occurrence of certain conditions, which is being recorded simultaneously with this Conservation Restriction, and which provides for purchase subject to this Conservation Restriction; and

WHEREAS, on or about December 23, 2005, the Jersey City Municipal Utilities Authority ("JCMUA") filed litigation styled *Jersey City Municipal Utilities Authority v. Honeywell International Inc.*, D.N.J., Civ. No. 05-5955 (DMC), bringing claims against Honeywell International Inc. ("Honeywell") under, *inter alia*, Section 6972 of the Resource Conservation and Recovery Act ("RCRA"), and seeking remediation of chromium contamination on property then-owned by JCMUA, which included the area known as the AOC 1 Open Space Property; and

WHEREAS, on or about December 28, 2005, the Jersey City Incinerator Authority ("JCIA") filed litigation styled *Jersey City Incinerator Authority v. Honeywell International Inc.*, D.N.J., Civ. No. 05-5993 (DMC), bringing claims against Honeywell under, *inter alia*, Section 6972 of RCRA, and seeking remediation of chromium contamination on property then-owned by JCIA, which included the area known as the AOC 1 Open Space Property; and

WHEREAS, on or about January 4, 2006, the Hackensack Riverkeeper, Inc., ("Riverkeeper") filed litigation styled *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-022 (DMC), bringing a claim against Honeywell under RCRA and seeking remediation of chromium contamination to soils, groundwater,

surface waters, and sediments associated with various properties collectively designated by NJDEP as Study Areas 5, 6 North, and 6 South;

WHEREAS, Study Area 6 North includes the properties previously owned by JCMUA, JCIA, and the City of Jersey City and includes the AOC 1 Open Space Property.

WHEREAS, *JCMUA v. Honeywell*, *JCIA v. Honeywell,* and *Riverkeeper v. Honeywell* were consolidated by the United States District Court for the District of New Jersey (hereinafter the "Consolidated Litigation"); and

WHEREAS, the Consolidated Litigation was resolved, in part, by the "Consent Decree Regarding Remediation and Redevelopment of Study Area 6 North" (hereinafter the "Consent Decree"), which decree is being recorded simultaneously with this Conservation Restriction; and

WHEREAS, the AOC 1 Open Space Property is being remediated for chromium contamination and following the remediation, development of the AOC 1 Open Space Property is prohibited except in the limited circumstances set forth in the Consent Decree and this Conservation Restriction; and

WHEREAS, subject to certain roadway and utility improvements affecting portions of the AOC 1 Open Space Property, and consistent with the terms of the Consent Decree and this Conservation Restriction, the AOC 1 Open Space Property will, following implementation of the Chromium Remedy as defined in the Consent Decree, be re-developed from commercial/industrial purposes to open space/public park purposes. Following the remediation, the AOC 1 Open Space Property will be established as a predominantly green open space with associated pedestrian walkways

and outdoor recreation facilities for the use and enjoyment of the public, while serving to protect the long-term integrity of the Chromium Remedy; and

WHEREAS, pursuant to the Bayfront I Redevelopment Plan, adopted by Jersey City on March 12, 2008, the AOC 1 Open Space Property has been zoned for open space and park use and certain roadways and utility improvements; and

WHEREAS, the AOC 1 Open Space Property is subject to certain provisions in the Consent Decree; and

WHEREAS, paragraph 60(b) of the Consent Decree provides that Bayfront Redevelopment LLC shall grant an open space conservation restriction over the AOC 1 Open Space Property; and

WHEREAS, the parties hereto wish to set forth certain terms and conditions that will restrict future uses of, and activities on, the AOC 1 Open Space Property and assure appropriate monitoring and enforcement of the conservation, open space, parks, and recreation purposes of this Conservation Restriction.

NOW THEREFORE, WITNESSETH: For and in consideration of the sum of One Dollar ($1.00) and other good and valuable consideration paid by Grantee to Grantor, the receipt and sufficiency of which is acknowledged by Grantor, and in consideration of the covenants hereinafter contained, the parties to this Conservation Restriction, intending to be legally bound, do

HEREBY AGREE AS FOLLOWS:

1. **Purpose**. It is the purpose of this Conservation Restriction to protect and preserve the AOC 1 Open Space Property; to permit Honeywell to implement, monitor, maintain, repair, and replace the Chromium Remedy; to prevent any use of the AOC 1

Open Space Property that will significantly impair or interfere with the purposes of the Consent Decree; and to preserve the AOC 1 Open Space Property as predominantly green open space with associated pedestrian walkways and outdoor recreation facilities for the use and enjoyment of the public. However, nothing in this Conservation Restriction shall grant a public right of access to enter upon, or use, the AOC 1 Open Space Property, or any portion thereof, during the time that the Chromium Remedy required by the Consent Decree is being implemented. Thereafter, Grantor and Grantee intend that this Conservation Restriction will confine the use of the AOC 1 Open Space Property to such activities as are consistent with the purpose of the Consent Decree. In the event of any conflict between the Consent Decree and this Conservation Restriction, the Consent Decree shall control.

2. **Title**. Grantor covenants and represents that Grantor is the sole owner and is seized of the AOC 1 Open Space Property in fee simple and has good right to grant and convey this Conservation Restriction and that Grantee(s) shall have the use of, and enjoyment of, the benefits derived from and existing out of this Conservation Restriction.

3. **Definitions**.

3.1 Capitalized terms in this Conservation Restriction which are not defined herein shall have the meaning ascribed to them in the Consent Decree.

3.2 AOC 1 Open Space Property shall mean the property consisting of approximately 11 acres and now known and designated as a portion of Block 1290.1, Lots 2D, 2E, and Block 1290.1, Lot 16A.99 on the Tax Map of the City of Jersey City, as described more fully in Schedule A and Exhibit A attached hereto. The AOC 1 Open

Space Property is the same property as the AOC 1 Open Space Area in the Consent Decree.

3.3 Bayfront Redevelopment LLC shall mean the limited liability company created by Honeywell for the purposes described in paragraph 4.1 of the Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc., filed simultaneously with the Consent Decree in the Consolidated Litigation.

3.4 Consent Decree shall mean the Consent Decree Regarding Remediation and Redevelopment of Study Area 6 North, entered in the Consolidated Litigation and being recorded simultaneously with this Conservation Restriction.

3.5 Consolidated Litigation shall mean *Jersey City Municipal Utilities Authority v. Honeywell International Inc.*, D.N.J., Civ. No. 05-5955 (DMC), *Jersey City Incinerator Authority v. Honeywell International Inc.*, D.N.J., Civ. No. 05-5993 (DMC), and *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-022 (DMC).

3.6 The Court shall mean the United States District Court for the District of New Jersey, which has jurisdiction over the Consolidated Litigation.

3.7 Hackensack River Watershed Land Trust shall mean the dedicated fund of the Hackensack Riverkeeper, Inc., established under Section 501(c) of the Internal Revenue Code for the purpose of acquiring and preserving open space within the Hackensack River watershed and administered by the Board of Trustees of the Hackensack Riverkeeper, Inc.

3.8 Holders of this Conservation Restriction shall mean Grantee and its successors and assigns and, in the event a Secondary Grantee is designated pursuant to paragraph 7.3, its successors and assigns.

3.9 Honeywell shall mean Honeywell International Inc.

3.10 Grantee shall mean Hackensack Watershed Land Trust and/or its designated successors and assigns. Grantee shall also mean the Secondary Grantee, in the event that the Secondary Grantee is designated pursuant to paragraph 7.3, and must fill the role of Grantee pursuant to paragraph 7.4.

3.11 Grantor shall mean Bayfront Redevelopment LLC as the current holder of the fee simple title to the AOC 1 Open Space Property and any subsequent holder of the fee simple title to the AOC 1 Open Space Property, including Jersey City.

3.12 Jersey City shall mean the City of Jersey City, New Jersey.

3.13 The Jersey City Entities shall mean the City of Jersey City, including the Department of Public Works ("DPW") and other agencies and branches thereof, the JCIA, and the JCMUA.

3.14 Party or Parties shall mean any one or all of the signatories to the Consent Decree.

3.15 Qualified Holder shall mean (a) an organization exempt from federal income taxation under Section 501(c)(3) of the Internal Revenue Code that satisfies the requirements to be a qualified organization within the meaning of Section 170(h)(3) of the Internal Revenue Code, or under any substantially similar provision of any successor tax code, and that is authorized to hold a conservation restriction with respect to property located within the State of New Jersey, (b) any trust or other entity

created by the legislature of the State of New Jersey or by Hudson County for substantially similar purposes, or (c) the State of New Jersey, Hudson County, or any other public body in New Jersey that is empowered to hold and administer a conservation restriction.

3.16 Riverkeeper shall mean the plaintiffs in *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-22 (DMC), and includes the Hackensack Riverkeeper, Inc., William Sheehan, Reverend Winston Clarke, and Lawrence Baker.

3.17 Secondary Grantee shall mean a qualified holder designated by Grantee pursuant to paragraph 7.3.

3.18 The Special Master shall mean Senator Robert G. Torricelli, appointed as the Special Master in *ICO v. Honeywell* and the Consolidated Litigation, and his successors or whomever the Court may appoint as Special Master.

4. **Conservation Restriction**.

4.1 Grant. Grantor hereby grants and conveys to Grantee, a non-public conservation restriction on, over and across the AOC 1 Open Space Property as is depicted on the recorded Plat, which area is described in Schedule A and Exhibit A attached hereto and made a part hereof.

4.2 Grantor's Retained Responsibilities. Grantor retains all responsibilities and shall bear all costs and liabilities of any kind related to the ownership of the AOC 1 Open Space Property, including the payment of taxes. Grantor shall keep Grantee's interest in the AOC 1 Open Space Property free of any liens arising out of any work performed for, materials furnished to, or obligations incurred by

Grantor. Honeywell shall be solely responsible for the implementation, monitoring, maintenance, repair, and replacement of the Chromium Remedy in the AOC 1 Open Space Property as provided for under the Consent Decree. Neither Grantee nor Secondary Grantee, if such a grantee is designated pursuant to paragraph 7.3, shall have any responsibility whatsoever with respect to the implementation, monitoring, maintenance, repair, and/or replacement of the Chromium Remedy in the AOC 1 Open Space Property.

4.3 Recordation, Notice in Future Instruments. This Conservation Restriction shall be recorded in the office of the Hudson County Register and a conspicuous reference to this Conservation Restriction shall be included in all instruments concerning title to the AOC 1 Open Space Property. Any Party to the Consent Decree and Grantee shall have the right, periodically, but no more than once every 25 years, to record memoranda or other instruments that reference, incorporate, or attach this Conservation Restriction in the real estate records related to the AOC 1 Open Space Property. This right of recordation shall be exercised in conjunction with the right of recordation provided in paragraph 60(d) of the Consent Decree.

4.4 Notice of Future Transfers. Grantor shall give written notice to Grantee(s) of any sale, lease, or other transfer of any interest in the Property not later than ten days following the date of such sale, lease, or transfer, which notice shall include the name and address of each party to whom an interest was sold, leased, or transferred. However, sales, leases, or transfers other than in accordance with the terms of paragraph 60 of the Consent Decree are prohibited.

5. **Permitted Activities.**

5.1 Remediation and Redevelopment as Open Space/Public Park. Grantor and/or Honeywell shall be permitted to undertake all activities reasonably required in connection with: (i) the implementation, maintenance, monitoring, repair, and replacement of the Chromium Remedy consistent with the Consent Decree, (ii) the construction of roads and associated utilities at the AOC 1 Open Space Property as permitted by the Consent Decree, and (iii) such further development of the AOC 1 Open Space Property into an open space/public park as is consistent with paragraphs 60(j) and 60(k) of the Consent Decree and paragraphs 5.2 and 5.3 of this Conservation Restriction. In addition, the Jersey City Entity Study Area 6 North Operations (as defined in the Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc. attached as Exhibit A to the Consent Decree) shall be allowed to continue on the AOC 1 Open Space Property until such time as those Operations are relocated prior to implementation of the Chromium Remedy pursuant to the Consent Decree.

5.2 Prohibited Development in the AOC 1 Open Space Property. Only development satisfying the requirements of this paragraph, paragraph 5.3 of this Conservation Restriction, and the requirements of paragraphs 60(j) and 60(k) of the Consent Decree shall be permitted in the AOC 1 Open Space Area. All other development in the AOC 1 Open Space Area shall be prohibited.

(a) Honeywell shall establish Open Space Design Standards that shall govern all development in the AOC 1 Open Space Property, regardless of when the construction or installation of permissible development occurs. The Open

Space Design Standards shall satisfy each of the requirements set forth in paragraph 60(j)(v) of the Consent Decree and paragraph 5.2(e) of this Conservation Restriction, and shall set forth the requirements for development that are necessary for the protection of the integrity of the Chromium Remedy, installed pursuant to the Consent Decree.

(b) The Initial Development in the AOC 1 Open Space Property shall be the development undertaken following the completion of the Chromium Remedy in the AOC 1 Open Space Property, pursuant to the Consent Decree. The Initial Development may occur in one or more phases. Honeywell and Bayfront Redevelopment LLC shall prepare a Development Plan before the initiation of each phase of the Initial Development. The Initial Development Period for each phase shall consist of the period covered by the Initial Development, plus a period of 10 years following the submission of the as-built documentation for the phase pursuant to paragraph 60(j)(viii) of the Consent Decree and paragraph 5.2(h) of this Conservation Restriction.

(c) The Special Master, appointed in the Consolidated Litigation pursuant to the Consent Decree, shall have jurisdiction to review the Open Space Design Standards and the Development Plan(s) solely for the purpose of ensuring that any development undertaken during the Initial Development Period is consistent with the Consent Decree and with protection of the integrity of the Chromium Remedy. The Special Master's jurisdiction with regard to development in the AOC 1 Open Space Area shall run through the Initial Development Period for each phase.

(d) Honeywell shall ensure that the requirements of this

paragraph, paragraph 5.3 of this Conservation Restriction, and of paragraphs 60(j) and 60(k) of the Consent Decree are satisfied with regard to any development undertaken within the Initial Development Period. Honeywell shall also ensure that any development undertaken within the Initial Development Period is designed and installed in a manner consistent with the requirements of the Consent Decree and with protection of the integrity of the Chromium Remedy installed pursuant to the Consent Decree.

(e) Any development undertaken in the AOC 1 Open Space Property, regardless of when undertaken, shall satisfy each of the following requirements:

(i) It shall not jeopardize the integrity of the Chromium Remedy installed pursuant to the Consent Decree;

(ii) It shall be limited to the types of development permitted under paragraph 60(k) of the Consent Decree and paragraph 5.3 of this Conservation Restriction;

(iii) It shall be consistent with this Conservation Restriction, the Consent Decree, and the Redevelopment Plan; however, in the event of any conflict or inconsistency between this Conservation Restriction, the Consent Decree, and the Redevelopment Plan, the Consent Decree shall govern;

(iv) In total, at least 75% of the AOC 1 Open Space Property, exclusive of the acreage used for roads and the pedestrian thoroughfare, shall be comprised of landscaping, as defined by paragraph 60(k)(xi) of the Consent Decree and paragraph 5.3(k) of this Conservation Restriction;

(v) The portion of the Open Space Design Standards

necessary for protection of the Chromium Remedy as related to all roads, the pedestrian thoroughfare and associated utility corridors as well as the general location of such items shall be included in the 100% Design of the Chromium Remedy, which is subject to review and approval pursuant to the terms of the Consent Decree;

(vi) If the lowest elevation for the bedding for any utility line, including irrigation or sprinkler lines, is two feet from the top of the warning layer of the cap, the utility line shall be placed in a utility corridor;

(vii) In any event, there shall be two feet of soil or more between the warning layer of the cap and the lowest elevation of the bedding for any irrigation or sprinkler lines; and

(viii) No permanent concession facilities shall be permitted.

(f) Honeywell shall submit the Open Space Design Standards and the Development Plan(s) for any development undertaken during the Initial Development Period pursuant to the requirements of paragraph 72(c) of the Consent Decree, except that such documents need not be submitted to NJDEP. Following Honeywell's submission of such documents, the procedures of paragraphs 72(d) and 72(e) of the Consent Decree shall apply, except that the Special Master need not provide notice to NJDEP.

(g) During the Initial Development Period, any development in the AOC 1 Open Space Area shall require the preparation and submission of a Development Plan pursuant to paragraph 60(j)(vi) of the Consent Decree and paragraph 5.2(f) of this Conservation Restriction, and such Development Plan shall be subject to review by the Special Master pursuant to paragraph 60(j)(iii) of the Consent

Decree and paragraph 5.2(c) of this Conservation Restriction.

(h) Upon completion of each phase of the Initial Development, Honeywell shall provide as-built documentation for the Initial Development to the Special Master, Riverkeeper, and the Jersey City Entities. Upon completion of any further development during the Initial Development Period for the phase, Honeywell shall also provide as-built documentation to the Special Master, Riverkeeper, and the Jersey City Entities for the additional development. Such additional as-built documentation for a phase shall not affect the running of the Initial Development Period for the phase.

(i) During the Initial Development Period, replacement in-kind of development features or facilities included in the Initial Development or minor modifications to the development features or facilities included in the Initial Development shall not require the preparation of a Development Plan or be subject to review by the Special Master, provided that such replacement or modification satisfies the requirements of the Open Space Design Standards, the applicable Development Plan, paragraphs 60(j)(v) and 60(j)(x)(3)(notice requirement) of the Consent Decree and paragraphs 5.2(e) and 5.2(j)(iii) of this Conservation Restriction.

(j) After the Initial Development Period, all development is prohibited unless one of the following conditions is met:

(i) The AOC 1 Open Space Property has been remediated such that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Property, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive

standards for Unrestricted Use in place at the time, whichever is more restrictive, and Jersey City has demonstrated to the Special Master and/or the Court, as appropriate, that such remediation has been completed in accordance with all applicable requirements.

(ii) The development is a replacement in-kind and such replacement is made in conformance with the specifications of the Open Space Design Standards, the applicable Development Plan, paragraph 60(j)(v) of the Consent Decree and paragraph 5.2(e) of this Conservation Restriction; or

(iii) The development meets the requirements of paragraphs 60(j)(v) and 60(j)(xi) of the Consent Decree and paragraphs 5.2(e) and 5.2(k) of this Conservation Restriction, and Jersey City provides notice of its intention to alter or add to the development undertaken in the Initial Development Period. Such notice shall be provided in writing to Honeywell, Riverkeeper, and the holders of this Conservation Restriction at least 30 days prior to Jersey City's alteration or addition to development undertaken in the Initial Development Period. Honeywell, Riverkeeper, or any holder of this Conservation Restriction shall have the right to move the Court to prohibit such alteration or addition.

(k) If any of the development features or facilities that Jersey City seeks to add, pursuant to paragraph 60(j)(x) of the Consent Decree and paragraph 5.2(j) of this Conservation Restriction, require utilities that would require utility corridors other than the utility corridors installed during the Initial Development Period, Jersey City shall obtain approval from the Court before installing such new utility corridors.

(l) Jersey City shall provide Honeywell, Riverkeeper, and the

holders of this Conservation Restriction with an annual report that describes any alterations or additions, including those activities under paragraph 60(j)(x)(2) of the Consent Decree and 5.2(j)(ii) of this Conservation Restriction, to the development undertaken during the Initial Development Period.

(m) All development features or facilities, whether included in the Initial Development or added subsequent thereto, are subject to demolition and/or removal to the extent necessary to maintain, replace, or repair the Chromium Remedy required by the Consent Decree.

5.3 The Initial Development or any subsequent addition or alteration thereto may include any or all of the following types of development features or facilities, provided that such development features or facilities satisfy the conditions set forth in paragraph 60(j)(v) of the Consent Decree and paragraph 5.2(e) of this Conservation Restriction:

(a) Roads and the pedestrian thoroughfare -- both crossing and running along the AOC 1 Open Space Property, but no more extensive than provided for in the diagram on page 39 of the Redevelopment Plan;

(b) Curbing and fences;

(c) Sidewalks, paths, walkways, and nature trails;

(d) Utilities and utility corridors, lighting, and restrooms;

(e) Irrigation or sprinkler components or systems;

(f) Water features;

(g) Above-ground storm water cisterns;

(h) Signs, including the signs or display required by paragraph

60(l) of the Consent Decree;

(i) Benches, trash receptacles, and bicycle racks;

(j) Recreational facilities, such as playground equipment, bocce ball courts, tennis courts, basketball courts, and athletic fields; and

(k) Landscaping, including natural grasses, small trees, shrubbery, flowers, and potted plants, provided that such landscaping and the anticipated root structure of each landscaping component do not and will not jeopardize the integrity of the Chromium Remedy. Any portion of an athletic field that is covered in natural grass shall be considered landscaping for purposes of the percentage set forth in paragraph 60(j)(v)(4) of the Consent Decree and paragraph 5.2(e)(iv) of this Conservation Restriction.

5.4 Easement for Monitoring, Maintenance, Repair, and Replacement: As between Grantor and Grantee, Honeywell shall remain solely responsible for monitoring, maintenance, repair, and replacement of the Chromium Remedy in accordance with the Consent Decree and shall reserve, or obtain a grant of, an easement for the purpose of such monitoring, maintenance, repair, and replacement. Neither Grantee nor Secondary Grantee, if such grantee is designated pursuant to paragraph 7.3, shall have any responsibility whatsoever with respect to the implementation, monitoring, maintenance, repair, and/or replacement of the Chromium Remedy in the AOC 1 Open Space Property. Honeywell shall be entitled to promptly record such reservation and/or easement and Grantee agrees that the terms, conditions, and restrictions and purposes of such reservation and/or easement, or reference thereto, will be inserted in any subsequent deed or other legal instrument by

which the City of Jersey City, Grantor, or Grantee divests either a real property or other recordable interest in the AOC 1 Open Space Property.

6. **Prohibited Activities.** Development at the AOC 1 Open Space Property is prohibited, except insofar as it meets the requirements of the Consent Decree and of paragraph 5 of this Conservation Restriction.

7. **Grantee's Rights.** To accomplish the purpose of this Conservation Restriction, the following rights are conveyed to Grantee:

7.1 Right of Entry. The right to enter the AOC 1 Open Space Property during the implementation of the Chromium Remedy pursuant to the Consent Decree at reasonable times and with prior notice for the purpose of: (a) inspecting the AOC 1 Open Space Property to determine if Grantor is complying with the covenants and purposes of this Conservation Restriction; (b) enforcing the terms of this Conservation Restriction; and (c) taking any and all actions with respect to the AOC 1 Open Space Property as may be legal, necessary and appropriate, to remedy or abate any material violations hereof. After the Chromium Remedy has been implemented, Grantee shall have the right to enter the AOC 1 Open Space Property at reasonable times for the purposes above without the need for prior notice.

7.2 Enforcement. The right to prevent any improvement, activity on, or use of, the AOC 1 Open Space Property that is inconsistent with the purpose of this Conservation Restriction and to require the restoration of such areas or features of the AOC 1 Open Space Property that may be damaged by any inconsistent improvement or use. For purposes of the enforcement of this Conservation Restriction, Grantee agrees

to pursue such enforcement solely before the Court in the Consolidated Litigation and to submit to the jurisdiction of that Court.

7.3 Designation of Secondary Grantee. Grantee has the right to designate a Qualified Holder as a Secondary Grantee with the written consent of Grantor, which consent will not be unreasonably withheld. Within 60 days of such designation, this Conservation Restriction shall be modified by the Parties and duly recorded.

7.4 Allocation of Responsibilities between Grantee and Secondary Grantee. In the event a Secondary Grantee is designated pursuant to paragraph 7.3, then the following shall apply: for so long as Grantee, or any successor in interest to Grantee, remains a holder of this Conservation Restriction, and unless and until Grantee and Secondary Grantee or their respective successors or assigns shall otherwise agree in a writing executed by them in recordable form and delivered to Grantor, Grantee shall be delegated the primary responsibility for monitoring and enforcing compliance with the terms of this Conservation Restriction. In connection therewith, Grantee, or its successors and assigns, shall have sole power and authority, as between Grantee and Secondary Grantee of this Conservation Restriction, to grant or withhold any and all other consents or approvals that may be required to be obtained by Grantor under the terms of this Conservation Restriction. Notwithstanding the foregoing, Secondary Grantee shall be entitled to receive a copy of all notices required to be given to Grantee, and shall be provided with a copy of all requests for approval submitted by Grantor and all written approvals, or denials thereof, given pursuant to this Conservation Restriction. Secondary Grantee's right to exercise rights and remedies

conferred by this Conservation Restriction upon Grantee, other than as provided in this paragraph, shall become effective upon Grantee's dissolution, in the event that Grantee has failed to name a successor.

8. **Grantee's Remedies**.

8.1 Proceedings upon Violation. In the event that Grantee becomes aware of a violation of the terms of this Conservation Restriction, Grantee shall promptly give notice to Grantor, Honeywell, the Jersey City Entities, and Riverkeeper of such violation via certified mail, return receipt requested, and request corrective action sufficient to abate such violation and restore the AOC 1 Open Space Property as closely as possible to the condition that would have existed had there been no violation. Failure by Grantor or Honeywell to cause discontinuance, abatement, or initiate such other corrective action as may be required by the Consent Decree within 90 days after receipt of such notice, or such longer period as may be necessary if the violation cannot reasonably be cured within 90 days, shall entitle Grantee to move the Court to enforce the terms of this Conservation Restriction; to require the restoration of the AOC 1 Open Space Property to its previous condition; and/or to enjoin compliance. If Grantee believes that circumstances are such that immediate action is required to prevent or mitigate significant additional harm or damage to the AOC 1 Open Space Property, Grantee may pursue its remedies without waiting for any period provided for cure to expire and without prior notice.

8.2 Proceedings upon Alteration or Addition to Development. Grantee shall have the right to participate in proceedings under paragraph 5.2(j)(iii) of this

Conservation Restriction and paragraph 60(j)(x)(3) of the Consent Decree to prohibit any alterations or additions to the development in the AOC 1 Open Space Property.

8.3 Forbearance. Any forbearance by Grantee to exercise its rights under this Conservation Restriction in the event of any breach of any term of this Conservation Restriction by Grantor shall not be deemed or construed to be a waiver by Grantee of such term or of any subsequent breach of the same or any other term of this Conservation Restriction or of any of Grantee's rights under this Conservation Restriction. No delay or omission by Grantee in the exercise of any right or remedy upon any breach by Grantor shall impair such right or remedy or be construed as a waiver. Grantor shall not be entitled to assert any defense based upon laches, estoppel, or prescription with respect to any violation of this Conservation Restriction as to which Grantee was not specifically notified by Grantor in writing.

9. **Parties Subject to Conservation Restriction**. The covenants agreed to and the terms, conditions, and restrictions imposed by this grant shall be binding upon Grantor, its lessees, agents, personal representatives, successors, assigns, and all other successors in interest to Grantor. The covenants agreed to and the terms, conditions, and restrictions imposed by this grant shall be binding upon Grantee(s), their lessees, agents, personal representatives, successors, assigns, and all other successors in interest to Grantee(s).

10. **Termination**.

10.1 This Conservation Restriction is intended to be of unlimited duration, subject only to termination as provided in paragraph 10.2 of this Conservation

Restriction, and therefore may not be terminated solely by mutual agreement of Grantor and Grantee.

10.2 This Conservation Restriction may be terminated upon application to the Court of any Party to the Consent Decree when no hexavalent or total chromium contamination remains in AOC 1 Open Space Property, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive. Upon Court approval of termination of this Conservation Restriction, Grantor shall conduct a public hearing in accordance with N.J.S.A 13:8B-5 and Grantee(s) shall release the Conservation Restriction and shall execute, at the request of Grantor, a release of this Conservation Restriction and any other instrument to that effect deemed necessary or desirable.

11. **Assignment.**

11.1 Right to Assign. Grantee, and any future assignee of this Conservation Restriction, may with the prior written consent of Grantor, which consent will not be unreasonably withheld, transfer and assign this Conservation Restriction and the rights and obligations created hereby, in whole or in part, to one or more Qualified Holders as defined in paragraph 3.15 The assignee shall simultaneously with such assignment assume the obligation to carry out the conservation purposes for which this Conservation Restriction is granted.

11.2 Executory Limitation. In the event that a Secondary Grantee has been designated pursuant to paragraph 7.3 and the Grantee dissolves without having assigned all of it rights and interest in the Property and delegated all of its

responsibilities under this Conservation Restriction to one or more Qualified Holders, such rights and responsibilities shall be vested in the Secondary Grantee pursuant to paragraph 7.4. In the event that a Secondary Grantee is not designated pursuant to paragraph 7.3 and the Grantee dissolves without having assigned all of its rights and interest in the Property and delegated all of its responsibilities under this Conservation Restriction to one or more Qualified Holders, such rights and responsibilities shall be vested in another Qualified Holder pursuant to a *cy pres* proceeding in the Court. Grantor and Honeywell shall have the right to appear in any such proceeding as interested parties. In the event that a Secondary Grantee is designated pursuant to paragraph 7.3, and such Secondary Grantee dissolves without having assigned all of its rights and interest in the Property and delegated all of its responsibilities under this Conservation Restriction to one or more Qualified Holders, Grantee may designate another Secondary Grantee pursuant to paragraph 7.3.

11.3 Release of Grantee's Further Obligations. The holder or holders of this Conservation Restriction immediately before any assignment or judicial re-vesting pursuant to paragraph 11.2 shall thereafter have no further obligation to monitor compliance with, or enforce the provisions of, this Conservation Restriction, provided that the assignee meets the requirements set forth above and has assumed the obligation to monitor and enforce this Conservation Restriction.

12. **Miscellaneous Provisions.**

12.1 Severability. If any provision of this Conservation Restriction or the application thereof to any person or circumstances is found to be invalid, the remaining provisions of this Conservation Restriction, and the application of such provisions to

persons or circumstances other than those as to which it is found to be invalid, shall not be affected.

12.2 Successors and Assigns. The term "Grantor" shall include Grantor and Grantor's heirs, executors, administrators, successors, and assigns. The term "Grantor" shall also mean the masculine, feminine, corporate, singular, or plural of the word as needed in the context of its use.

12.3 No Third-Party Beneficiaries. The parties hereto intend that there be no third-party beneficiaries to this Conservation Restriction, except the Parties to the Consent Decree.

12.4 Captions. The captions herein have been inserted solely for convenience of reference and are not a part of this Conservation Restriction and shall have no effect upon construction or interpretation.

12.5 Notices. Any notices required in this Conservation Restriction shall be sent by registered or certified mail to the persons at the following addresses. Any party listed below may change the recipient or location for receipt of such notice by sending written notice of such change to the other Parties listed below:

(a) If to Grantor:

Tom Byrne, Esq.
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-2775

(b) With copy to:

John Morris
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962

(973) 455-4003

(c) If to Grantee Hackensack River Watershed Land Trust:

William Sheehan
231 Main Street
Hackensack, NJ 07601

(d) If to Jersey City:

William Matsikoudis
Corporation Counsel
City of Jersey City
280 Grove Street
Jersey City, NJ 07305
(201) 547-4667

12.6 Amendment. This Conservation Restriction may be amended only with the written consent of Grantee and Grantor and of the Parties to the Consent Decree. Any such amendment shall be consistent with the purpose of the Consent Decree and this Conservation Restriction and shall comply with any applicable requirements of N.J.S.A. 13:8B-1 et seq.

12.7 No Extinguishment through Merger. If Grantee comes to own all or any portion of the fee interest in the AOC 1 Open Space Property, (a) Grantee, as successor in title to Grantor, shall observe and be bound by the obligations of Grantor and the restrictions imposed upon the AOC 1 Open Space Property by this Conservation Restriction, (b) in view of the public interest in its enforcement, this Conservation Restriction shall survive such simultaneous ownership of fee and Conservation Restriction interests in the AOC 1 Open Space Property, and shall not be extinguished notwithstanding any otherwise applicable legal doctrine under which such property interests would or might be merged, and (c) Grantee shall, as promptly as practicable, either assign its interests in this Conservation Restriction to another

Qualified Holder in conformity with the requirements of this paragraph or divest itself of its fee interest in the AOC 1 Open Space Property. Any instrument of assignment of this Conservation Restriction or the rights conveyed herein shall refer to the provisions of this paragraph, and shall contain language necessary to continue it in force.

IN WITNESS WHEREOF, the parties hereunto set their hands and seals the day and year first above written.

Schedule A
MAXIMUM LEGAL DESCRIPTION
PRE-REMEDIATION AOC 1 OPEN SPACE PROPERTY
BLOCK 1290.1 Lots 2D, 2E, 14H, 14J, 15B, 15D and 16A.99
CITY OF JERSEY CITY
HUDSON COUNTY, NEW JERSEY

The AOC 1 Open Space Property that is the subject of this Conservation Restriction is intended to consist of a parcel of land which will be bounded by underground Hydraulic Barrier Walls that have not been fully constructed as of the date of this instrument. Accordingly, the parties agree that until such time as construction of the Hydraulic Barrier Walls is completed and an Amended Conservation Restriction is approved by the Court as provided below, the legal description of the AOC 1 Open Space Property shall be as set forth in the survey and diagram attached hereto as Exhibit A. The parties further agree that such legal description is subject to revision as provided herein.

Upon completion of construction of the Hydraulic Barrier Walls, Grantor will cause the AOC 1 Open Space Property to be re-surveyed (the "As-Built Survey") with the perimeter of the AOC 1 Open Space Property to be the outer facing wall of the Hydraulic Barrier Walls, as constructed. Grantor shall further cause a metes and bounds description (the "As-Built Description") to be prepared based on the As-Built Survey. Following preparation of the As-Built Description, Grantor shall request that the Court amend the order which, pursuant to paragraph 60(b)(i) of the Consent Decree, embodies this Conservation Restriction ("the Conservation Restriction Order"), by substituting the As-Built Description for the metes and bounds description set forth in Exhibit A and thereby creating an Amended Conservation Restriction. Once the Conservation Restriction Order is so amended by the Court, Grantor shall record the Amended Conservation Restriction in the office of the Hudson County Register, without the need for execution or consent, written or otherwise, by Grantee.

Upon recording the Amended Conservation Restriction, the As-Built Description shall supersede, replace and make null and void the legal description set forth in Exhibit A to this Conservation Restriction.

LEGAL DESCRIPTION
PROPOSED OPEN SPACE AREA
BLOCK 1290.1 LOTS 2D, 2E, 14H, 14J and 16A.99
CITY OF JERSEY CITY
HUDSON COUNTY, NEW JERSEY

A Parcel of land described herein located in Block 1290.1, Lots 2D, 2E, 14H, 14J and 16A.99, City of Jersey City, Hudson County, New Jersey, and being more particularly described as follows:

Beginning at the intersection of the westerly sideline of New Jersey State Highway Route 440 and the division line between Block 1290.1, Lots 14D and 16A.99, and running; thence,

1. Along said division line, North 49 degrees 06 minutes 05 seconds West, 257.00 feet to the division line between Lots 14D and 14H; thence,

2. Along said division line, South 24 degrees 46 minutes 55 seconds West 6 feet more or less to the southerly face of an existing Hydraulic Barrier Wall; thence,

Running through Lots 14H and 14J in Block 1290.1, along said southerly wall face, the following two (2) courses:

3. North 49 degrees 06 minutes 05 seconds West, 232.64 feet; thence,

4. North 59 degrees 39 minutes 05 seconds West, 1584.08 feet to the westerly line of said Lot 14J; thence,

5. Along said westerly line, and along the westerly line of Lot 2D in Block 1290.1, North 45 degrees 52 minutes 45 seconds East, 70.6 feet more or less to the intersection of the same with the southerly building line as extended, of an outfall structure building; thence,

6. Running through Lot 2D along said line, South 45 degrees 40 minutes 26 seconds East, 60.73 feet; thence,

7. Along the same, North 44 degrees 19 minutes 34 seconds East, 22.58 feet; thence,

8. Along the same, North 45 degrees 40 minutes 26 seconds West, 7.05 feet; thence,

9. Along the same, North 44 degrees 19 minutes 34 seconds East, 5.38 feet; thence,

10. Along the same, North 45 degrees 40 minutes 26 seconds West, 1.44 feet; thence,

11. Along the same, North 44 degrees 19 minutes 34 seconds East, 5.24 feet to the intersection of the same with the outer wall of an existing JCMUA 72" underground sanitary sewer force main pipe (being the side facing the herein described open space lands); thence,

12. Along said outer pipe wall, North 68 degrees 14 minutes 24 seconds East, 110.05 feet; thence,

13. Along the same, North 26 degrees 00 minutes 52 seconds East, 5.35 feet to the southerly building line of another outfall structure building; thence,

14. Along said building line, South 63 degrees 59 minutes 08 seconds East, 3.40 feet; thence,

15. Along the same, North 26 degrees 00 minutes 52 seconds East, 5.26 feet to the aforementioned outer wall of an existing JCMUA 72" underground sanitary sewer force main pipe; thence,

16. Along said outer pipe wall, South 64 degrees 15 minutes 52 seconds East, 298.76 feet; thence,

17. Along the same, South 63 degrees 39 minutes 08 seconds East, 195.65 feet; thence

18. Along the same, South 65 degrees 19 minutes 16 seconds East, 113.04 feet; thence,

19. Along the same, South 67 degrees 09 minutes 18 seconds East, 103.49 feet; thence,

20. Along the same, North 23 degrees 08 minutes 40 seconds East, 53.16 feet to a point of non-tangent curvature in the northerly curb line of a proposed road to be known as Stegman Boulevard, as shown on Exhibit 7 of the "Bayfront I Development Plan" prepared for the City of Jersey City by A. Nelessen Associates, Inc, dated February 13, 2008; thence,

Running through Lots 2D, 2E, and 16A.99, along said proposed northerly curb line the following five (5) courses:

20. Along a non-tangent curve to the right having a radius of 1036.00 feet, a central angle of 06 degrees 49 minutes 53 seconds and an arc length of 123.52 feet and a chord bearing of South 66 degrees 53 minutes 53 seconds East, a chord distance of 123.45 feet to a point of compound curvature; thence,

21. Along a curve to the right having a radius of 1458.00 feet, a central angle of 09 degrees 39 minutes 52 seconds and an arc length of 245.93 feet to a point of tangency; thence,

22. South 53 degrees 49 minutes 05 seconds East, 74.81 feet to a point of curvature; thence,

23. Along a curve to the right having a radius of 6213.00 feet, a central angle of 04 degrees 27 minutes 15.8 seconds and an arc length of 483.02 feet to a point of tangency; thence,

24. South 49 degrees 21 minutes 50 seconds East, 272.98 feet to the aforementioned Route 440 westerly sideline; thence,

25. Along said westerly sideline, South 24 degrees 46 minutes 55 seconds West, 274.45 feet to the point and place of beginning.

Containing 11.8 acres of land more or less as described herein.

Subject to a field survey of the proposed hydraulic barrier walls upon completion of their installation.

Subject to all existing easements, rights-of-way and reservations of record.

The above described premises being also depicted on the diagram included as part of this Exhibit A.

DEED NOTICE CONCERNING CONTROLS INSTALLED FOR CHROMIUM CONTAMINATION UNDERLYING THE PROPERTY

This Deed Notice is made as of the __ day of _____, 2017, ***Bayfront Redevelopment LLC, whose post office address is 115 Tabor Road, Morris Plains, New Jersey 07950***. Owner shall mean Bayfront Redevelopment, LLC together with its successors and assigns, including all successors in interest in the Property which is the subject of this Deed Notice as described fully below. Block 21901 Lot 5 is currently owned by Bayfront Redevelopment, LLC.

1. THE PROPERTY. Bayfront Redevelopment, LLC is the current owner in fee simple of certain real property designated as a portion of ***Block 21901, Lot 5 on the tax map of the City of Jersey City, Hudson County, New Jersey[1].*** The New Jersey Department of Environmental Protection (NJDEP) Program Interest Number for the contaminated site which includes this property is ***Hudson County Chromate Site No. 088 Program Interest (PI) # G000008711*** [NJDEP PI# for non-chromium-related contaminants at the Property is #745719]. The Property is the Deferred Area which is part of Site 088. Remediation of hexavalent chromium is pursuant to the First Amended Consent Decree Regarding the Remediation and Redevelopment of Study Area 6 North ("Consent Decree") which is attached hereto and is entered as an order of the Court in the following consolidated actions *JCMUA v. Honeywell International, Inc.,* D.N.J., Civ. No. 05-

[1] All references to Block 21901 Lot 5 in this Deed Notice shall mean those portions of Block 21901 Lot 5 regardless of whether the word "portion(s)" is specifically called out or not.

05955; *JCIA v. Honeywell International, Inc.*, D.N.J., Civ. No. 05-5993; and *Hackensack Riverkeeper, Inc. v. Honeywell International, Inc.*, D.N.J., Civ. No. 06-22. The Consent Decree restricts transfer, use and development of the Property. To the extent that there is any conflict or inconsistency between the terms of this Deed Notice and the terms of the Consent Decree, the Consent Decree shall govern.

2. REMEDIATION.

i. The Department's Bureau of State Case Management (BCM) is the entity within the Department that is responsible for the oversight of the chromium remediation of SA-6 North and the Property. The matter is Case No. Hudson County Chromate Site No. 088 PI# G000008711. The Department has approved this Deed Notice as an institutional control for the Property, which is part of the remediation of the Property.

ii. N.J.A.C. 7:26-C-7 requires the Owner, among other persons, to obtain a soil remedial action permit for the soil remedial action at the Property. That permit will contain the monitoring, maintenance and biennial certification requirements that apply to the Property.

3. SOIL AND GROUNDWATER CONTAMINATION. Honeywell International Inc. ("Honeywell") a corporation of the State of Delaware, licensed to do business in the State of New Jersey whose post office address is 115 Tabor Road, Morris Plains, New Jersey 07950, has remediated the Property to address chromium-related soil contamination. The Remedial Action Work Plan (RAWP) was approved by the Department on February 19, 2009 for Hudson County Chromate Site No. 088, which included portions of the Property. Remedial actions were further approved pursuant to the Consent Decree. Under both the Consent Decree and the RAWP soil contamination remains in the Property which contains contaminants in concentrations that do not allow for the unrestricted use of the Property.

Deed Notice Area #6 is an approximately 4,000 square foot strip of land on SA-6 North adjacent to the Route 440 ROW where a Public Service Electric & Gas (PSE&G) gas main is located north of the SA-6 North Open Space Area. PSE&G owns and operates a 24-inch high pressure gas main within the ROW in this area. In the 100% Design Report, Honeywell indicated its intention of deferring excavation of chromium-impacted soil within the Deed Notice Area #6 footprint until such time that the gas main is relocated during the future Route 440 Road Widening Project. Excavation of residual chromium-impacted soil along the eastern edge of the SA-6 North property line in this area will be coordinated with the relocation of the gas main during the Route 440 Road Widening Project. Once the remediation of this area is complete in accordance with the RAR, Honeywell will terminate the deed notice.

The soil contamination is described, including the type, concentration and specific location of such contaminants, in Exhibit B, which is attached hereto and made a part hereof. As a result of the contamination, there is a statutory requirement for this Deed Notice and engineering controls in accordance with N.J.S.A. 58:10B-13. Under the terms of the Consent Decree and this Deed Notice, Honeywell is responsible for monitoring and maintaining the soil remediation for the Property in perpetuity or until remediation is implemented that renders this Deed Notice unnecessary.

4. CONSIDERATION. In accordance with the Department's approval of the chromium RAWP for the remediation of Hudson County Chromate Site Nos. 087 and 088 which includes the Property, and in consideration of the terms and conditions of that approval, and in accordance with the Consent Decree, and other good and valuable considerations, Owner has agreed to subject the Property to certain statutory and regulatory requirements which impose restrictions upon the use of the Property, to restrict certain uses of the Property, and to provide notice to subsequent owners, lessees and operators of the restrictions and the monitoring, maintenance, and biennial certification requirements outlined in this Deed Notice and required by law, as set forth herein.

5A. RESTRICTED AREAS. Due to the presence of these contaminants, Owner has agreed, as part of the remedial action for the Property, to restrict the use of the Property (the "Restricted Areas"); a narrative description of these restrictions, along with the associated monitoring and maintenance activities and the biennial certification requirements are provided in Exhibit C, which is attached hereto and made a part hereof. Owner has also agreed to maintain a list of these restrictions on site for inspection by governmental enforcement officials.

5B. RESTRICTED LAND USES. The following statutory land use restrictions apply to the Restricted Areas:

i. The Brownfield and Contaminated Site Remediation Act, N.J.S.A. 58:10B-12.g(10), prohibits the conversion of a contaminated site, remediated to non-residential soil remediation standards that require the maintenance of engineering or institutional controls, to a child care facility, or public, private, or charter school without the Department's prior written approval, unless a presumptive remedy is implemented; and

ii. The Brownfield and Contaminated Site Remediation Act, N.J.S.A. 58:10B-12.g(12), prohibits the conversion of a landfill, with gas venting systems and or leachate collection systems, to a single family residence or a child care facility without the Department's prior written approval.

5C. ENGINEERING CONTROLS. Due to the presence and concentration of these contaminants, the Owner has also agreed, as part of the remedial action for the Property, to the placement of certain engineering controls on the Property. A narrative description of these engineering controls, along with the associated monitoring and maintenance activities and the biennial certification requirements are provided in Exhibit C. Honeywell shall be responsible for monitoring and maintenance of engineering controls and biennial certification requirements as specified in Paragraphs 8A and 8B.

5D. LONG TERM MONITORING PLAN. Honeywell has prepared a Long Term Monitoring Plan (LTMP) which sets forth requirements for monitoring of the chromium remedial measures including engineering controls within the Property and shallow groundwater, and requirements for notification and reporting pursuant to the Consent Decree, Deed Notice and Soil Remedial Action Permit. A copy of the LTMP is maintained by Honeywell at 115 Mount Tabor Road, Morris Plains, NJ 07950. This Deed Notice is appended to the LTMP.

6A. CHANGE IN OWNERSHIP AND REZONING.

i. The Owner and the subsequent owners and lessees, shall cause all leases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring all holders thereof to take the Property subject to the restrictions contained herein and to comply with all, and not to violate any of the conditions of this Deed Notice. Nothing contained in this Paragraph shall be construed as limiting any obligation of any person to provide any notice required by any law, regulation, or order of any governmental authority.

ii. The Owner and the subsequent owners shall provide written notice to the Department of Environmental Protection on a form provided by the Department and available at www.nj.gov/srp/forms within thirty (30) calendar days after the effective date of any conveyance, grant, gift, or other transfer, in whole or in part, of the owner's interest in the Restricted Area.

iii. The Owner and the subsequent owners shall provide written notice to the Department, on a form available from the Department at www.nj.gov/srp/forms, within thirty (30) calendar days after the owner's petition for or filing of any document initiating a rezoning of the Property to residential.

6B. SUCCESSORS AND ASSIGNS. This Deed Notice shall be binding upon Owner and upon Owner's successors and assigns, and subsequent owners, lessees and operators while each is an owner, lessee, or operator of the Property.

7A. ALTERATIONS, IMPROVEMENTS, AND DISTURBANCES.

i. The Owner and all subsequent owners and lessees shall notify any person of whom it has knowledge, including, without limitation, tenants, employees of tenants, and contractors, intending to conduct invasive work or excavate within the Restricted Areas, of the nature and location of known contamination in the Restricted Areas, and, of the precautions necessary to protect the engineering controls and minimize potential human exposure to contaminants.

ii. Except as provided in the Consent Decree and Paragraph 7B, below, no person shall make, or allow to be made, any alteration, improvement, or disturbance in, to, or about the Property which disturbs any engineering control at the Property except as (a) permitted in the Consent Decree and (b) without first obtaining the express written consent of the Department. Nothing herein shall constitute a waiver of the obligation of any person to comply with all applicable laws and regulations including, without limitation, the applicable rules of the Occupational Safety and Health Administration. To request the consent of the Department of Environmental Protection, contact:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413

iii. Notwithstanding subparagraph 7A.ii., above, a Soil Remedial Action Permit modification is not required for any alteration, improvement, or disturbance provided that:

(A) Takes such action in conformance with the Consent Decree; and

(B) Notifies the Department of Environmental Protection of the activity by calling the DEP Hotline, at 1-877-WARN-DEP or 1-877-927-6337, within twenty-four (24) hours after the beginning of each alteration, improvement, or disturbance; and

(C) Notifies Honeywell of the activity by calling 855-727-2658; and

(D) Honeywell and/or the owner, lessee or operator restores any disturbance of an engineering control to pre-disturbance conditions within sixty (60) calendar days after the initiation of the alteration, improvement or disturbance; and

(E) Ensures that all applicable worker health and safety laws and regulations are followed during the alteration, improvement, or disturbance, and during the restoration; and

(F) Ensures that human exposure to contamination in excess of the applicable remediation standards does not occur; and

(G) The next biennial certification includes a description of the nature of the alteration, improvement, or disturbance, the dates and duration of the alteration, improvement, or disturbance, the name of key individuals and their affiliations conducting the alteration, improvement, or disturbance, a description of the notice the Owner gave to those persons prior to the disturbance, the amounts of soil generated for disposal, if any, the final disposition and any precautions taken to prevent exposure.

7B. EMERGENCIES. In the event of an emergency which presents, or may present, an unacceptable risk to the public health and safety, or to the environment, or immediate environmental concern, see N.J.S.A. 58:10C-2, any person may temporarily breach an engineering control provided that that person complies with each of the following:

i. Immediately notifies the Department of Environmental Protection of the emergency, by calling the DEP Hotline at 1-877-WARNDEP or 1-877-927-6337;

ii. Immediately notifies Honeywell of the emergency by calling 855-727-2658;

iii. Limits both the actual disturbance and the time needed for the disturbance to the minimum reasonably necessary to adequately respond to the emergency;

iv. Implements all measures necessary to limit actual or potential, present or future risk of exposure to humans or the environment to the contamination;

v. Notifies the Department of Environmental Protection when the emergency has ended by calling the DEP Hotline at 1-877-WARNDEP or 1-877-927-6337;

vi. Notifies Honeywell when the emergency has ended by calling 855-727-2658; and

vii. Honeywell restores the engineering control to the pre-emergency conditions as soon as possible, and provides a written report to the Department of Environmental Protection of such emergency and restoration efforts within sixty (60) calendar days after completion of the restoration of the engineering control. The report must include all information pertinent to the emergency, potential discharges of contaminants, and restoration measures that were implemented, which, at a minimum, should specify: (a) the nature and likely cause of the emergency, (b) the potential discharges of or exposures to contaminants, if any, that may have occurred, (c) the measures that have been taken to mitigate the effects of the emergency on human health and the environment, (d) the measures completed or implemented to restore the engineering control, and (e) the changes to the engineering control or site operation and maintenance plan to prevent recurrence of such conditions in the future. Honeywell shall submit the report to:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413

8A. MONITORING AND MAINTENANCE OF DEED NOTICE, AND PROTECTIVENESS CERTIFICATION. The persons in any way responsible, pursuant to the Spill Compensation and Control Act, N.J.S.A. 58:10-23.11a et seq., for the hazardous substances that remain at the Property, the persons responsible for conducting the remediation, Honeywell, the Owner, and the subsequent owners, lessees, and operators, shall monitor and maintain this Deed Notice. The subsequent owners, lessees and operators have this obligation only during their ownership, tenancy, or operation. Honeywell shall certify to the Department on a biennial basis that the remedial action that includes this Deed Notice remains protective of the public health and safety and of the environment. The specific obligations to monitor and maintain the deed notice shall include all of the following:

i. Monitoring and maintaining this Deed Notice according to the requirements in Exhibit C, to ensure that the remedial action that includes the Deed Notice continues to be protective of the public health and safety and of the environment;

ii. Conducting any additional remedial investigations and implementing any additional remedial actions, that are necessary to correct, mitigate, or abate each problem related to the protectiveness of the remedial action for the Property prior to the date that the certification is due to the Department pursuant to iii, below, in order to ensure that the remedial action that includes this Deed Notice remains protective of the public health and safety and of the environment.

iii. Certify to the Department of Environmental Protection as to the continued protectiveness of the remedial action that includes this Deed Notice, on a form provided by the Department and

consistent with N.J.A.C. 7:26C-1.2 (a)1, every two years on the anniversary of the date stamped on the Deed Notice that indicates when the Deed Notice was recorded.

8B. MONITORING AND MAINTENANCE OF ENGINEERING CONTROLS, AND PROTECTIVENESS CERTIFICATION. Honeywell shall maintain all engineering controls at the Property and certify to the Department on a biennial basis that the remedial action of which each engineering control is a part remains protective of the public health and safety and of the environment. The specific obligations to monitor and maintain the engineering controls shall include the following:

i. Monitoring and maintaining each engineering control according to the requirements in Exhibit C, to ensure that the remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment;

ii. Conducting any additional remedial investigations and implementing any additional remedial actions, that are necessary to correct, mitigate, or abate each problem related to the protectiveness of the remedial action for the Property prior to the date that the certification is due to the Department pursuant to iii, below, in order to ensure that the remedial action that includes the engineering control remains protective of the public health and safety and of the environment.

iii. Certify to the Department of Environmental Protection as to the continued protectiveness of the remedial action that includes the engineering control, on a form provided by the Department and consistent with N.J.A.C. 7:26C-1.2 (a)1, every two years on the anniversary of the date stamped on the Deed Notice that indicates when the Deed Notice was recorded.

9. ACCESS. The Owner agrees to allow the Department, its agents and representatives access to the Property to inspect and evaluate the continued protectiveness of the remedial action that includes this Deed Notice and to conduct additional remediation to ensure the protection of the public health and safety and of the environment if the persons responsible for monitoring the protectiveness of the remedial action, as described in Paragraph 8, above, fail to conduct such remediation pursuant to this Deed Notice as required by law. The Owner, and the subsequent owners and lessees, shall also cause all leases, subleases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring that all holders thereof provide such access to the Department.

10. NOTICES.

i. Owner shall cause all leases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring all holders thereof to take the Property subject to the restrictions contained herein and to comply with all, and not to violate any of the conditions of this Deed Notice. Nothing contained in this Paragraph shall be construed as limiting any obligation of any person to provide any notice required by any law, regulation, or order of any governmental authority.

ii. Owner shall notify any person intending to conduct invasive work or excavate within the Property on its behalf of the nature and location of contamination and, of the precautions necessary to minimize potential human exposure to contaminants.

iii. Owner shall provide written notice to the Department of Environmental Protection at least thirty (30) calendar days before the effective date of any conveyance, grant, gift, or other transfer, in whole or in part, of the owner's interest in the Restricted Area. Any such conveyance, grant or gift must be consistent with the terms of the Consent Decree.

iv. Owner shall provide written notice to the Department within thirty (30) calendar days following the Owner's receiving notice of any petition for a rezoning of the Property. Any such rezoning must be consistent with the terms of the Consent Decree. The Owner shall submit the written notice to:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413.

11. ENFORCEMENT OF VIOLATIONS.

i. This Deed Notice itself is not intended to create any interest in real estate in favor of the Department of Environmental Protection, nor to create a lien against the Property, but merely is intended to provide notice of certain conditions and restrictions on the Property and to reflect the regulatory and statutory obligations imposed as a conditional remedial action for this Property.

ii. The restrictions provided herein may be enforceable by the Department against any person who violates this Deed Notice. To enforce violations of this Deed Notice, the Department may initiate one or more enforcement actions pursuant to N.J.S.A. 58:10-23.11, and N.J.S.A. 58:10C, and require additional remediation and assess damages pursuant to N.J.S.A. 58:10-23.11, and N.J.S.A. 58:10C.

12. SEVERABILITY. If any court of competent jurisdiction determines that any provision of this Deed Notice requires modification, such provision shall be deemed to have been modified automatically to conform to such requirements. If a court of competent jurisdiction determines that any provision of this Deed Notice is invalid or unenforceable and the provision is of such a nature that it cannot be modified, the provision shall be deemed deleted from this instrument as if the provision had never been included herein. In either case, the remaining provisions of this Deed Notice shall remain in full force and effect.

13. MODIFICATION AND TERMINATION.

i. Any person may request in writing, at any time, that the Department modify this Deed Notice where performance of subsequent remedial actions, a change of conditions at the Property, or the adoption of revised remediation standards suggest that modification of the Deed Notice would be appropriate.

ii. Any person may request in writing, at any time, that the Department terminate this Deed Notice because the conditions which triggered the need for this Deed Notice are no longer applicable.

iii. Any person seeking a modification or termination of this Deed Notice must also have such modification approved by the United States District Court for the District of New Jersey pursuant to the Consent Decree until such time as the Consent Decree terminates with regard to the Property pursuant to the Consent Decree.

iv. This Deed Notice may be revised or terminated only upon filing of an instrument, executed by the Department, in the office of the Hudson County Register, New Jersey, expressly modifying or terminating this Deed Notice.

v. Within thirty (30) calendar days after the filing of a Termination of Deed Notice, the owner of the property shall apply to the Department for termination of the soil remedial action permit pursuant to N.J.A.C. 7:26C-7.

14A. EXHIBIT A. Exhibit A includes the following maps of the Property and the vicinity:

i. Exhibit A-1: Vicinity Map - A map that identifies by name the roads, and other important geographical features in the vicinity of the Property;

ii. Exhibit A-2: Metes and Bounds Description - A metes and bounds description of the Property, including reference to tax lot and block numbers for the Property and a Tax Map;

iii. Exhibit A-3: Property Map - A scaled map of the Property, scaled at one inch to 200 feet or less, and if more than one map is submitted, the maps shall be presented as overlays, keyed to a base map; the map(s) shall include diagrams of major surface topographical features such as buildings, roads, and parking lots.

14B. EXHIBIT B. Exhibit B includes the following descriptions of the Restricted Areas:

i. Exhibit B-1: Restricted Area Map - Maps for the Property that include, as applicable:

(A) As-built diagrams of each engineering control, including caps, fences, slurry walls, ground water monitoring wells, and ground water pumping system;

(B) As-built diagrams of any buildings, roads, parking lots and other structures that function as engineering controls; and

(C) Designation of all soil and/or sediment sample locations within the restricted areas that exceed any soil or sediment standard that are keyed into one of the tables described below.

ii. Exhibit B-2 (Table B-2): Restricted Area Data Tables - Table for the Property that includes:

(A) Sample location designation from Restricted Area maps (Exhibit B-1);

(B) Sample elevation based upon mean sea level;

(C) Name and chemical abstract service registry number of each contaminant with a concentration that exceeds the unrestricted use standard;

(D) The restricted and unrestricted use standards for each contaminant in the table; and

(E) The remaining concentration of each contaminant at each sample location at each elevation (or if historic fill, include data from the Department's default concentrations at N.J.A.C. 7:26E-4.6, Table 4-2).

14C. EXHIBIT C. Exhibit C includes narrative descriptions of the institutional controls and engineering controls as follows:

i. Exhibit C-1A through C-1C. Exhibit C-1A: Deed Notice as Institutional Control; Exhibit C-1B: Consent Decree as Institutional Control (attached); Exhibit C-1C: Zoning as Intuitional Control; includes a narrative description of the restrictions and obligations of this Deed Notice that are in addition to those described above, as follows:

(A) General Description of the Institutional Control:
(1) Description and estimated size of the Restricted Areas as described above;
(2) Description of the restrictions on the Property by operation of this Deed Notice and the other Institutional Controls; and
(3) The objective of the restrictions;

(B) Description of the monitoring necessary to determine whether:
(1) Any disturbances of the soil in the Restricted Areas did not result in the unacceptable exposure to the soil contamination;
(2) There have been any land use changes subsequent to the filing of this Deed Notice and the other Institutional Controls or the most recent biennial certification, whichever is more recent;
(3) The current land use on the Property is consistent with the restrictions in this Deed Notice and the other Institutional Controls;
(4) Any newly promulgated or modified requirements of applicable regulations or laws apply to the Property; and
(5) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice and the other Institutional Controls, and conduct the necessary sampling; and

(C) Description of the following items that will be included in the biennial certification:
(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of

the remedial action that includes this Deed Notice and the other Institutional Controls;
(2) Land use at the Property is consistent with the restrictions in this Deed Notice and the other Institutional Controls; and
(3) The remedial action that includes this Deed Notice and the other Institutional Controls continues to be protective of the public health and safety and of the environment.

ii. Exhibit C-2. Exhibit C-2: Engineering Controls: Asphalt Cover;

Exhibit C-2 includes a narrative description of the engineering controls as follows:

(A) General Description of the engineering control:
(1) Description of the engineering control;
(2) The objective of the engineering control; and
(3) How the engineering control is intended to function.

(B) Description of the operation and maintenance necessary to ensure that:
(1) Periodic inspections of each engineering control are performed in order to determine its integrity, operability, and effectiveness;
(2) Each engineering control continues as designed and intended to protect the public health and safety and the environment;
(3) Each alteration, excavation or disturbance of any engineering control is timely and appropriately addressed to maintain the integrity of the engineering control;
(4) The engineering control is being inspected and maintained and its integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment;
(5) A record of the self-inspection dates, name of the inspector, results of the inspection and condition(s) of the engineering control. Sampling, for example, may be necessary if it is not possible to visually evaluate the integrity/performance of the engineering control; and
(6) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

(C) Description of the following items that will be included in the biennial certification:
(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;
(2) The engineering control continues to operate as designed; and
(3) The remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment.

DESCRIPTION OF PROPERTY
CITY OF JERSEY CITY
HUDSON COUNTY, NEW JERSEY
PROJECT NO. 10000292R

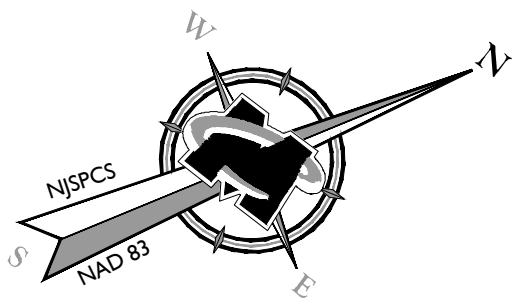
DEED NOTICE AREA 6
BLOCK 21901, LOT 5
MAY 18, 2016
REVISED OCTOBER 13, 2016

All that certain lot, tract or parcel of land situate lying and being in the City of Jersey, in the County of Hudson and State of New Jersey, and being a portion of Lot 5 in Block 21901, designated as Deed Notice Area 6 as shown on an exhibit entitled, "Deed Notice Area 6, SA6 North, Block 21901, Lot 5, City of Jersey City, Hudson County, New Jersey," prepared by Maser Consulting P.A., dated April 12, 2016, revised October 7, 2016 and being more particularly bounded and described as follows, to wit:

BEGINNING at the intersection of the westerly line of New Jersey State Highway Route 440 (112 foot wide right of way), with the division line between Lots 4 and 5 in Block 21901 and running; thence–

1. Along said westerly line of Route 440, **S 24° 46' 55" W, 302.60 feet**; thence-

Running through a portion of Lot 5 in Block 21601, the following four (4) courses:



2. **N 49° 22' 28" W, 10.39 feet**; thence-
3. **N 24° 46' 55" E, 90.73 feet**; thence-
4. **N 20° 13' 05" W, 7.07 feet**; thence -
5. **N 24° 46' 55" E, 208.35 feet,** to the aforesaid division line between Lots 4 and 5 in Block 21901; thence –
6. Along said division line, **S 49° 08' 25" E, 15.61 feet**, to the point and place of **BEGINNING.**

CONTAINING: 4,077 S.F. of land more or less or 0.094 acre of land more or less.

NOTE:

1. REFER TO CONSTRUCTION CONTROL GRID FIGURE AND ATTACHED TABLES FOR SURVEY DOCUMENTATION OF 6 INCH GRAVEL HISTORIC FILL CAP INSTALLATION.
2. OPEN SPACE CAP AREA WITHIN LIMITS OF THE BARRIER WALLS IS COVERED WITH CLEAN IMPORTED SOILS TO THE DEPTHS IDENTIFIED IN THE DESIGN. THE VEGETATED SLOPE WITHIN THE DEVELOPMENT AREA IS COVERED WITH A MINIMUM OF 12 INCHES OF CLEAN IMPORTED FILL. THE VEGETATED SLOPE ALONG SA-7 WAS CONSTRUCTED ENTIRELY FROM CLEAN IMPORTED FILL.
3. REMAINING RESTORATION AREAS IDENTIFIED ON THE CHROMIUM REMEDY 100% DESIGN DRAWINGS WILL BE ADDRESSED AS PART OF THE NON CHROMIUM REMEDIATION WORK CURRENTLY BEING COMPLETED. FINAL RESTORATION OF ALL AREAS IS SCHEDULED TO BE COMPLETE IN MARCH 2017.

EXHIBIT C
Deed Notice #6 SA-6 North Route 440 Deferred Area

C-1 Institutional Controls
C-2 Engineering Controls
A portion of Block 21901, Lot 5
City of Jersey City, New Jersey

C-1 Institutional Controls

C-1 Deed Notice, Consent Decree, Zoning as Institutional Controls: Exhibit C-1 (A through C) for that portion of Block 21901, Lot 5, City of Jersey City, New Jersey known as the Deferred Area.

Exhibits C-1A through C-1C. Exhibit C-1A: Deed Notice as Institutional Control; Exhibit C-1B: Consent Decree as Institutional Control: Exhibit C-1C Zoning as Institutional Control: Exhibits C-1A through C-1C include a narrative description of the restrictions and obligations of this Deed Notice and the other Institutional Controls that are in addition to those described above, as follows:

(A) General Description of the Institutional Control:

(1) Description and estimated size of the Restricted Areas as described above;

The Property constitutes a portion of Block 21901, Lot 5. The estimated size of the Area containing chromium-impacted soils (hexavalent chromium above 20 mg/kg) as identified on Exhibit B-1 is estimated at approximately 4,000 square feet or approximately 0.09 acres.

(2) Description of the restrictions on the Property by operation of the Institutional Control;

The Property shall only be used for activities consistent with this Deed Notice, the Consent Decree, including, but not limited to, Paragraphs 60(j) and 60(k) of the Consent Decree, and the applicable zoning standards. Intrusive activities (i.e., excavation or digging) that breach the engineering controls (as described in Exhibit C-2) will not be permitted on the Property except in compliance with the terms of the Consent Decree, and this Deed Notice. See Deed Notice for additional information; subsections 7A Alterations, Improvements, Disturbances, and 7B, Emergencies.

(3) The objective of the restrictions;

The restrictions will prohibit contact with soils above the NJDEP Soil Cleanup Criteria for hexavalent chromium.

(B) Description of the monitoring necessary to determine whether:

(1) Any disturbances of the soil in the Restricted Areas did not result in the unacceptable exposure to the soil contamination;

Visual inspections of the Property and other monitoring as set forth in the Consent Decree.

(2) There have been any land use changes subsequent to the filing of this Deed Notice or the most recent biennial certification, whichever is more recent;

Same as (B)(1).

(3) The current land use on the Property is consistent with the restrictions in this Deed Notice;

Same as (B)(1).

(4) Any newly promulgated or modified requirements of applicable regulations or laws apply to the site; and

Review of newly promulgated or modified requirements of applicable regulations or laws that potentially may apply to the site.

(5) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

Same as (B)(4).

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) Land use at the Property is consistent with the restrictions in the Consent Decree, this Deed Notice, the applicable zoning standards; and

(3) The remedial action that includes this Deed Notice continues to be protective of the public health and safety and of the environment.

The monitoring report will be included in the biennial certification. Components of the monitoring report will include the following:

- ***A report of all conditions set forth in sections (A) and (B) above to assure that they have been adhered to, including evaluation of any available documents as a result of changes in land use or incidents.***
- ***A report that determines whether or not the land use at the Property has remained consistent with the restrictions in the Consent Decree, this Deed Notice,* and *the applicable zoning standards.***
- ***A report that determines whether or not the Deed Notice continues to be protective of the public health and safety and the environment.***

C-2 Engineering Controls
Deed Notice #6 SA-6 North Route 440 Deferred Area

A portion of Block 21901, Lot 5
City of Jersey City, New Jersey

Exhibits C-2A through C: Narrative description of the Engineering Controls including Clean Fill as follows:

(A) General Description of the engineering controls:

(1) Description of the engineering controls;

The Engineering Control consists of a cap consisting of a geotextile demarcation fabric overlain by 6-inches of gravel.

(2) The objective of the engineering controls; and

The objective of the controls is to prevent contact with soils above the NJDEP Chromium Policy for hexavalent chromium.

(3) How the engineering controls are intended to function.

The soil engineering controls are intended to function as a barrier to underlying and adjacent soils that exceed the NJDEP Chromium Policy Criteria within the Property.

(B) Description of the operation and maintenance necessary to ensure that:

(1) Periodic inspections of each engineering control are performed in order to determine its integrity, operability, and effectiveness;

Honeywell will perform monitoring by visual inspection of the Property pursuant to the Consent Decree.

(2) Each engineering control continues as designed and intended to protect the public health and safety and the environment;

Same as (B)(1) above.

(3) Each alteration, excavation or disturbance of any engineering control is timely and appropriately addressed to maintain the integrity of the engineering controls;

Same as (B)(1) above. Also, see the Consent Decree and the Deed Notice for additional information: subsections 7A Alterations, Improvements, Disturbances, and 7B Emergencies.

(4) The engineering controls are being inspected and maintained and their integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment;

Same as (B)(1) above.

(5) A record of the self-inspection dates, name of the inspector, results of the inspection and condition(s) of the engineering controls. Sampling, for example, may be necessary if it is not possible to visually evaluate the integrity/performance of the engineering controls; and

Records of the inspections are to be maintained as listed in (5).

(6) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

A review of any new standards, regulations, or laws will be conducted. Should the review indicate that other activities are necessary, those activities will be listed and executed.

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) The engineering controls continues to operate as designed; and

(3) The remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment.

The monitoring report will be included in the biennial certification. Components of the monitoring report will include the following:

- ***A report of all conditions set forth in sections (A) and (B) above to assure that they have been adhered to, including an evaluation to determine whether or not the engineering controls are continuing to meet the original objective and intended function.***
- ***A report to determine whether or not the engineering controls continue to operate as designed.***
- ***A report to determine whether or not the engineering controls continue to be protective of the public health and safety and of the environment.***

120. Modifications....70
121. Severability....70
122. Signatures....71

RECITALS

Whereas, on June 30, 2003, the district court for the District of New Jersey issued a Final Judgment in *Interfaith Community Organization v. Honeywell International Inc.*, Civ. No. 95-2097 (DMC) ("*ICO v. Honeywell*"), ordering the remediation of an area designated by the New Jersey Department of Environmental Protection ("NJDEP") as Study Area 7 by excavation of all chromium contamination on the property, under the oversight of a court-appointed Special Master;

Whereas, on or about December 23, 2005, the Jersey City Municipal Utilities Authority ("JCMUA") filed litigation styled *Jersey City Municipal Utilities Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5955 (DMC), bringing claims against Honeywell International Inc. ("Honeywell") under, *inter alia*, Section 6972 of the Resource Conservation and Recovery Act ("RCRA"), and seeking remediation of chromium contamination on property owned by JCMUA and other relief;

Whereas, on or about December 28, 2005, the Jersey City Incinerator Authority ("JCIA") filed litigation styled *Jersey City Incinerator Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5993 (DMC), bringing claims against Honeywell under, *inter alia*, Section 6972 of RCRA, and seeking remediation of chromium contamination on property owned by JCIA and other relief;

Whereas, on or about January 4, 2006, the Hackensack Riverkeeper, Inc., Captain William Sheehan, Reverend Winston Clarke, and Lawrence Baker ("Riverkeeper") filed litigation styled *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.,* D.N.J., Civ. No. 06-022 (DMC), bringing a claim against Honeywell under RCRA and seeking remediation of chromium contamination to soils, groundwater, surface waters, and sediments associated with various properties collectively designated by NJDEP as Study Areas 5, 6 North, and 6 South;

Whereas, Study Areas 6 North and South are directly adjacent to Study Area 7 on the north and south sides, respectively;

Whereas, Study Area 5 is comprised of properties to the east of Study Areas 6 North, 6 South, and 7 across Route 440;

Whereas, the property owned by JCIA and JCMUA and collectively the subject of *JCMUA v. Honeywell* and *JCIA v. Honeywell* comprises a part of Study Area 6 North;

Whereas, the City of Jersey City ("Jersey City") also owns property that comprises a part of Study Area 6 North;

Whereas, Riverkeeper also named as defendants in *Riverkeeper v. Honeywell* Jersey City, JCMUA, and JCIA (collectively the "Jersey City Entities");

Whereas, the Jersey City Entities and Honeywell also asserted cross-claims against each other in *Riverkeeper v. Honeywell*;

Whereas, *JCMUA v. Honeywell*, *JCIA v. Honeywell,* and *Riverkeeper v. Honeywell* were consolidated by the United States District Court for the District of New Jersey (hereinafter the "Consolidated Litigation");

Whereas, in the Consolidated Litigation, the Jersey City Entities and Riverkeeper have alleged that Honeywell bears responsibility for the presence and remediation of chromite ore processing residue ("COPR") and chromium in soils and groundwater on the Study Area 6 North property;

Whereas, in the Consolidated Litigation, Honeywell has alleged that the Jersey City Entities bear full responsibility for lead and other contamination on the Study Area 6 North property, and also bear an equitable share of liability for the presence and remediation of COPR and chromium in soils and groundwater on the Study Area 6 North property and for chromium and other contamination in Hackensack River sediments in the vicinity of Study Area 6 North;

Whereas, on October 9, 2007, Honeywell and Riverkeeper submitted the Consent Order on Sediment Remediation and Financial Assurances ("Sediment Consent Order"), resolving issues related to the remediation of chromium contaminated sediments in the Hackensack River in the vicinity of Study Areas 5, 6, and 7;

Whereas, the Parties to this Consent Decree each believe that it is in their mutual interest to move forward productively to resolve their differences so that they can implement environmental remediation at Study Area 6 North that ensures the continued protection of human health and the environment and so that Study Area 6 and Study Area 7 can be redeveloped in keeping with Jersey City's vision for a revitalized West Side;

Whereas, the Local Redevelopment and Housing Law, N.J.S.A. 40A:12A-1, *et seq*., as amended and supplemented (the "Redevelopment Law") provides for municipalities to participate in the redevelopment and improvement of areas in need of redevelopment;

Whereas, the portions of Study Area 6 and Study Area 7 (i) which are owned by the Jersey City Entities, (ii) which are owned by Honeywell, (iii) as to which Honeywell has a purchase and sale agreement with the current owner, or (iv) which hereafter will be acquired by a Jersey City Entity and/or Honeywell are parcels which by ordinance adopted by the City Council of Jersey City on February 27, 2008, have been determined to be "areas in need of redevelopment" under the criteria of the Redevelopment Law because of conditions prevalent on those parcels;

Whereas, the settlement which is the subject matter of this Consent Decree contemplates the environmental remediation of Study Area 6 North and redevelopment of the parcels that comprise Study Areas 6 and 7 to create a major mixed use project in an important section of Jersey City;

Whereas, each of the actions to implement this Consent Decree have been fully considered by the Parties as a means to accomplish the aforesaid purposes of this settlement;

Whereas, the consent of each of the Jersey City Entities to this Consent Decree was considered at a duly noticed and appropriate meeting of their respective governing bodies, open to the public, at which members of the public were provided an opportunity to comment on all aspects of the settlement, including, without limitation, the commitments made by the Jersey City Entities herein; and

Whereas, Honeywell and the Jersey City Entities are settling their claims, cross-claims, or counter-claims in the Consolidated Litigation against each other in the *Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc.* (hereafter "Jersey City/Honeywell Consent Order"), filed in the Consolidated Litigation simultaneously with this Consent Decree and attached as Exhibit A to this Consent Decree:

NOW, THEREFORE, IT IS HEREBY ORDERED AND DECREED AS FOLLOWS:

ARTICLE I: DEFINITIONS

For purposes of this Consent Decree, the following terms shall have the meanings set forth in this Article:

1. **AOC 1** shall mean that area of Study Area 6 North in which the hexavalent chromium concentration in the top 20 feet of soil below existing ground surfaces exceeds concentrations of 20 mg/kg and the Chromium Remedy will be implemented pursuant to Article III. AOC 1 is shown on Exhibit B.

2. **AOC 1 Additional Excavation Areas** shall mean those areas of Study Area 6 North which require excavation pursuant to paragraph 57. The AOC 1 Additional Excavation Areas are not contiguous to AOC 1. The AOC 1 Additional Excavation Areas are shown on Exhibit B.

3. **AOC 1 Open Space Area** shall mean the AOC 1 Open Space Area, as defined by paragraph 53, consisting of approximately 11 acres enclosed by the hydraulic barrier walls constructed under the Chromium Remedy, and which shall be subject to paragraph 60. The AOC 1 Open Space Area is shown on Exhibit B.

4. **AOC 2** shall mean that area of Study Area 6 North on which the Historic Fill Remedy will be implemented pursuant to Article II.B of the Jersey City/Honeywell Consent Order. AOC 2 is shown on Exhibit B.

5. **Bayfront Redevelopment LLC** shall have the meaning set forth in paragraph 4.1 of the Jersey City/Honeywell Consent Order.

6. **COPR** shall mean Chromite Ore Processing Residue.

7. **Chromium Remedy** or **Chromium Remediation** shall mean the remedy set forth in Article III.

8. **Consolidated Litigation** shall mean *Jersey City Municipal Utility Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5955 (DMC), *Jersey City Incinerator Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5993 (DMC), and *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.,* D.N.J., Civ. No. 06-022 (DMC).

9. The **Court** shall mean the United States District Court of the District of New Jersey, which has jurisdiction over the Consolidated Litigation.

10. **Deep Groundwater Remedy** shall mean the deep overburden and bedrock groundwater pump and treat remedy as required by the Order Approving the Deep Overburden Groundwater Remediation, entered on October 6, 2006, and the Stipulation on Consent Regarding the Schedule for Implementation of Deep Groundwater Remedial Actions, currently pending before the Special Master in *ICO v. Honeywell.* In the event that Riverkeeper and Honeywell reach a settlement on source control issues, the Deep Groundwater Remedy shall

include the remedy to which Riverkeeper and Honeywell have agreed. In the event that Riverkeeper and Honeywell do not reach a settlement on source control issues, the Deep Groundwater Remedy shall include the remedy ordered by the Special Master or the Court in *ICO v. Honeywell* for source control.

11. **Hackensack River Watershed Land Trust** shall mean the dedicated fund of the Hackensack Riverkeeper, Inc., established under Section 501(c) of the Internal Revenue Code for the purpose of acquiring and preserving open space within the Hackensack River watershed and administered by the Board of Trustees of the Hackensack Riverkeeper, Inc.

12. **Historic Fill** shall have the definition provided in the NJDEP Technical Requirements for Site Remediation.

13. **Historic Fill Remedy or Historic Fill Remediation** shall mean the remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order, except that the Historic Fill Remedy shall not be limited to the remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order if NJDEP requires a more stringent remedy.

14. **Honeywell** shall mean Honeywell International Inc. and its affiliates, including Kellogg Street 80 Property LLC, Kellogg Street 60 Property LLC, and Kellogg Street/440 Property LLC.

15. **Honeywell's Treatment Plant** shall mean the treatment plant currently located at 80 Kellogg Street that is used to treat, *inter alia*, chromium contaminated groundwater.

16. ***ICO v. Honeywell*** shall mean *Interfaith Community Organization v. Honeywell International Inc.,* D.N.J., Civ. No. 95-2097 (DMC).

17. **Including** shall mean including, but not limited to.

18. **JCIA** shall mean the Jersey City Incinerator Authority.

19. **JCMUA** shall mean the Jersey City Municipal Utilities Authority.

20. **JCRA** shall mean the Jersey City Redevelopment Agency.

21. **Jersey City Entities** shall mean the City of Jersey City, including the Department of Public Works ("DPW") and other agencies and branches thereof, the JCIA, and the JCMUA.

22. **Jersey City/Honeywell Consent Order** shall mean the *Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc.* entered in the Consolidated Litigation simultaneously with this Consent Decree.

23. **NJDEP** shall mean the New Jersey Department of Environmental Protection.

24. **NJDEP Chromium Directive** shall mean the Chromium Directive issued by NJDEP on February 8, 2007, and attached as Exhibit C.

25. **Party or Parties** shall mean any one or all of the signatories to this Consent Decree.

26. **RCRA** shall mean the Resource Conservation and Recovery Act, 42 U.S.C. 6901, *et seq.*, as amended.

27. **Redevelopment Agreement** shall have the meaning set forth in paragraph 4.11(e) of the Jersey City/Honeywell Consent Order.

28. **Redevelopment Area** shall mean Study Area 6 North, Study Area 6 South, and Study Area 7, collectively.

29. **Redevelopment Law** shall mean the New Jersey Local Redevelopment and Housing Law, N.J.S.A. 40A:12A1, *et seq.*, as amended and supplemented.

30. **Redevelopment Plan** shall mean the Bayfront I Redevelopment Plan as adopted by Jersey City on March 12, 2008.

31. **Riverkeeper** shall mean the plaintiffs in *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-22 (DMC), and includes the Hackensack Riverkeeper, Inc., William Sheehan, Reverend Winston Clarke, and Lawrence Baker.

32. **Sediment Consent Order** shall mean the Consent Order on Sediment Remediation and Financial Assurances, which the Parties expect will be entered by the Court in *ICO v. Honeywell* and this Consolidated Litigation.

33. **Shallow Groundwater** or **Shallow Level of Groundwater** shall mean groundwater above the meadow mat, groundwater at stratigraphically equivalent depths in locations where there is no meadow mat, and groundwater that is contaminated by recent contact with COPR or other chromium soil contamination above the meadow mat and subsequently flows downward through or past the meadow mat into the upper portion of the lacustrine sediments. This does not include groundwater found in the bedrock, the deep zone, or any plume of contamination that is in both the intermediate and deep zones, as those zones are defined in the Final Groundwater Investigation Report, prepared in *ICO v. Honeywell*, dated February 2007, p. 1-2.

34. **Site** shall mean Study Area 6 North.

35. **Site Preparation Activities** shall have the meaning set forth in paragraph 3.1 of the Jersey City/Honeywell Consent Order.

36. **Site Preparation Plan** shall have the meaning set forth in paragraph 3.2 of the Jersey City/Honeywell Consent Order.

37. **Soil** shall mean soils, historic fill, and/or COPR.

38. The **Special Master** shall mean Senator Robert G. Torricelli, appointed as the Special Master in *ICO v. Honeywell* and the Consolidated Litigation, and his successors or whomever the Court may appoint as Special Master.

39. **Stratum O** shall mean the layer composed of soft brown silty fine sand interlayered with soft gray silty clay and fine sandy to clayey silt generally located above the meadow mat below the Historic Fill and/or COPR.

40. **Study Area 6 North** shall mean that property comprising Sites 87 and 88 of the Chromate Chemical Production Waste Sites designated by NJDEP, comprising approximately 41.58 acres and including: (a) all such property owned by JCMUA located at 555 Route 440, Jersey City, New Jersey, (b) all such property owned by JCIA located at 501 Route 440, Jersey City, New Jersey; (c) all such property owned by Jersey City or its Department of Public Works and located at 575 Route 440, Jersey City, New Jersey; and (d) all such property owned by Paul Trenk consisting of Block 1290.1, Lot 2A, Jersey City, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

41. **Study Area 6 South** shall mean (a) that property currently owned by 425/445 Route 440 Property LLC consisting of Site 73, located at 200 Kellogg Street Jersey City, Hudson County, New Jersey; (b) that property currently owned by Kellogg Street 80 Property LLC consisting of Site 134, located at 100 Kellogg Street Jersey City, Hudson County, New Jersey; (c) that property currently owned by Kellogg Street 80 Property LLC consisting of Site 140 located at 80 Kellogg Street Jersey City, Hudson County, New Jersey; (d) that property currently owned by Kellogg Street 60 LLC consisting of Site 125, located at 60 Kellogg Street Jersey City, Hudson County, New Jersey; (e) that property currently owned by Kellogg Street/440 Property LLC consisting of Site 124, Jersey City, Hudson County, New Jersey; (f) that property currently owned by Kellogg St/Harsimus Cove Realty located at 150 Kellogg Street, Jersey City, Hudson County, New Jersey, (g) that property currently owned by Cordova Enterprises Ltd located at 38 Kellogg Street, Jersey City, Hudson County, New Jersey, and (g) that property currently owned by Cordova Enterprises Ltd located at 28 Kellogg Street, Jersey City, Hudson County, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

42. **Study Area 6** shall mean Study Area 6 North and Study Area 6 South, collectively.

43. **Study Area 7** shall mean (a) that property currently owned by 425/445 Route 440 Property LLC located at 425 and 445 Route 440, Jersey City, Hudson County, New Jersey, and (b) that property currently owned by Roned Realty/Edward Navlen located at 465 Route 440, Jersey City, Hudson County, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

44. **Technical Requirements for Site Remediation** shall mean the NJDEP Technical Requirements for Site Remediation, N.J.A.C. Chapter 26E, as duly and properly promulgated and amended.

45. **Unrestricted Use** shall mean that the contaminated medium is restored to a condition or quality suitable for all uses.

ARTICLE II: SCOPE OF THE CONSENT DECREE, JURISDICTION, AND CLAIMS RESOLVED

46. Except as provided in this paragraph, the terms of the Jersey City/Honeywell Consent Order shall remain in full force and effect. To the extent that any provision in the Jersey City/Honeywell Consent Order refers to the Chromium Remedy or Chromium Remediation, it shall be construed as referring to Article III of this Decree. In the event of any conflict or inconsistency between the terms of this Decree and the Jersey City/Honeywell Consent Order, the terms of this Decree govern. In the event that any action taken pursuant to the Jersey City/Honeywell Consent Order is in conflict with or inconsistent with the terms of this Decree, the terms of this Decree shall govern.

47. This Court has jurisdiction over the Parties and subject matter of the Consolidated Litigation pursuant to Section 6972 of RCRA.

48. For purposes of this Consent Decree, the Complaints in the Consolidated Litigation each state claims upon which relief may be granted against Honeywell.

49. In the event that this Decree is not terminated by one or more Parties pursuant to paragraph 100, this Consent Decree resolves, settles, and satisfies all claims by Riverkeeper against Honeywell with respect to soils and shallow groundwater at Study Area 6 North. This Consent Decree does not resolve any claims by Riverkeeper against Honeywell with respect to Study Area 6 South, Study Area 5, or groundwater at Study Area 6 North other than shallow groundwater.

50. Nothing in this Consent Decree shall be construed or interpreted to waive any claim or defense any Party has asserted or may assert against any third party in the Consolidated Litigation except as explicitly stated herein.

51. This Consent Decree does not constitute an admission of liability on the part of any Party with respect to any claims, cross-claims, or counter-claims in the Consolidated Litigation.

ARTICLE III: CHROMIUM REMEDIATION

A. Chromium Remedy

52. **Responsibility for Implementation of Chromium Remediation.** As between the Parties, Honeywell shall be responsible for and shall undertake remediation of COPR and chromium present in Study Area 6 North at Honeywell's sole cost and expense. Remediation of COPR and chromium present in Study Area 6 North shall be undertaken in accordance with the terms of this Consent Decree.

53. **AOC 1 and AOC 2.** For the purposes of remediation, Study Area 6 North shall consist of two Areas of Concern ("AOCs"), designated as AOC 1 and AOC 2 as shown on Exhibit B. AOC 1 is set forth on Exhibit B and consists of that portion of Study Area 6 North for which chromium remediation is required pursuant to paragraphs 55, 56, and 57. AOC 2 consists of the entirety of Study Area 6 North, including AOC 1, to the extent that historic fill is present in any area of Study Area 6 North. For AOC 1, the intended land use will determine the types

of remedial measures taken in the Chromium Remedy. There are two distinct land uses for AOC 1: open space and residential. As a result, AOC 1 will be further subdivided into:

(a) The AOC 1 Open Space Area, which shall comprise that portion of AOC 1 for which future use shall be restricted as provided in paragraph 60. The AOC 1 Open Space Area is shown on Exhibit B;

(b) The AOC 1 Residential Area, which shall comprise that portion of AOC 1 for which future use shall allow for residential and/or commercial and retail uses, but for which the remedial measures shall assume only a residential use . The AOC 1 Residential Area is shown on Exhibit B; and

(c) The AOC 1 Additional Excavation Areas, which consist of those portions of Study Area 6 North that require remediation pursuant to paragraph 57. The planned land use for the AOC 1 Additional Excavation Areas is residential and/or commercial and retail uses, but the remedial measures shall assume only a residential use.

54. **Scope and General Requirements of the Chromium Remedy.** The Chromium Remedy shall address shallow groundwater and soil containing hexavalent chromium in AOC 1, and shall be consistent with the requirements set forth in this Article. The Chromium Remedy set forth in this Consent Decree addresses only the shallow level of groundwater (see paragraph 58). The deep overburden and bedrock groundwater remediation, including source control, shall be addressed in a separate consent order, which shall place these issues within the jurisdiction of the Special Master in conjunction with the groundwater remedies for Study Area 7.

(a) The Chromium Remedy shall be consistent with the NJDEP Technical Requirements for Site Remediation, the Chromium Directive as issued by NJDEP on February 8, 2007 ("the NJDEP Chromium Directive"), and the Remedial Action Work Plan (with addenda) approved by NJDEP on or about February 19, 2008. This Consent Decree shall have precedence

over the Remedial Action Work Plan in the event of any inconsistency.

(b) The Chromium Remedy shall be carried out diligently, and the development and implementation of the Historic Fill Remedy shall not delay satisfaction of the milestones in the Schedule established pursuant to this paragraph. Honeywell shall propose a master Schedule for the implementation of the Chromium Remedy within 90 days of the entry of this Consent Decree, which shall include, at a minimum, the following milestones:

(i) Submission to the Special Master for all documents subject to review by the Special Master pursuant to paragraph 72(c);

(ii) Relocation of the Jersey City Entities' Study Area 6 North Operations as shall be required prior to the implementation of the Chromium Remedy;

(iii) Completion of those Site Preparation Activities necessary for the implementation of the Chromium Remedy, including remediation of the AOC 1 Additional Excavation Areas;

(iv) A final date for Honeywell's proposal of *in situ* treatment for any part of the AOC 1 Residential Area pursuant to paragraph 55(d) and a date for the final decision as to whether excavation or *in situ* treatment shall be used in the event of such a proposal;

(v) The initiation of work related to the Chromium Remedy;

(vi) The date for completion of the installation of the Chromium Remedy;

(vii) Implementation of the long-term protections of the AOC 1 Open Space Area established pursuant to paragraph 60; and

(viii) Transfer of the AOC 1 Open Space Area to Jersey City pursuant to paragraph 60(a)(iii).

(c) **Demolition and Grading Activities.** During demolition and grading activities, adequate protective measures shall be taken to protect site workers and the community

from airborne dusts and exposures to contaminated soils.

(d) **Vegetation of Clean Fill.** All clean soil fill in areas that will not involve paved roads, sidewalks, paths, walkways, or building structures shall be vegetated in such a manner to protect and maintain the required depth of clean soil fill.

55. **AOC 1 Residential Area Soil Remedy.** In the AOC 1 Residential Area, soils containing hexavalent chromium at concentrations greater than 20 mg/kg shall be excavated to a depth of 20 feet below the current ground surface in accordance with the NJDEP Chromium Directive.

(a) Those soils excavated from the AOC 1 Residential Area in which hexavalent chromium concentrations exceed 240 mg/kg shall be disposed of off-site at a waste disposal facility licensed to accept such waste.

(b) Those soils excavated from the AOC 1 Residential Area in which the hexavalent chromium concentration is less than 240 mg/kg, but greater than 20 mg/kg, shall be consolidated within the AOC 1 Open Space Area. However, any such soils which would require venting of gases shall be disposed of off-site.

(c) Soils excavated from the AOC 1 Residential Area shall be replaced with existing soils from AOC 2 or backfill soil. Any backfill soil brought to the Site shall either meet all applicable federal and NJDEP criteria, including NJDEP residential soil criteria, or comply with a beneficial soil reuse plan that is approved by NJDEP and subject to review and comment by the Parties and approval by the Special Master.

(d) In the AOC 1 Residential Area, excavation of soils containing hexavalent chromium greater than 20 mg/kg shall be the presumptive remedy. Around remaining active underground utilities or other structures, such as the bulkhead, *in situ* treatment may be considered in lieu of excavation only if Honeywell demonstrates, and all Parties, the Special

Master, and NJDEP agree that (1) excavation is technically impracticable and (2) treatment will result in hexavalent chromium concentrations of 20 mg/kg or less and no rebound will occur. If no treatment option is available, Honeywell shall propose an alternative remedial approach, subject to review and comment by the Parties and approval by the Special Master.

(e) Honeywell shall excavate all soils containing hexavalent chromium greater than 20 mg/kg in conjunction with the placement of the piping for the Deep Groundwater Remedy. Honeywell shall not propose treatment in lieu of excavation based on the location of the pipes for the Deep Groundwater Remedy or any apparent impracticability of excavating in conjunction with their installation.

56. **AOC 1 Open Space Area Soil Remedy.** In the AOC 1 Open Space Area, the soil remedy shall consist of an engineered RCRA cap to isolate contaminated soils, with gas venting, if necessary, to address the generation of methane and other naturally occurring gases in the Stratum O and/or Stratum D in the Open Space AOC. Soils consolidated under the cap, shall not require gas venting and shall not be the basis for the inclusion of gas venting as a component of the cap. The cap shall be designed and constructed so that:

(a) The cap shall consist of gas collection system, if gas venting is necessary, a base protective layer, an impervious geomembrane liner with a minimum thickness of 40 mil; a geocomposite drainage layer; a filter fabric; and a distinctive colored warning layer with markings in English and Spanish that would deter penetration of the cap in the event that digging occurred in the vicinity of the cap;

(b) All utilities, including those supporting the pump-and-treat system for groundwater remediation, with the exception of any extraction wells or collection trenches, shall be placed above the cap (but may be below the ground surface and/or contained within utility corridors). In the event that above-cap-grade gas collection and treatment is selected or is

needed to meet current or future regulatory requirements, such collection and treatment facilities are prohibited in the Open Space AOC, except for piping to connect the sub-liner collection system with the treatment facilities. Honeywell shall configure the cap so that all active piping for the wastewater treatment system operated by JCMUA, including all force mains and any connections to the emergency outfall, shall be outside the capped area. Honeywell may propose, subject to the review process in paragraph 72, to use treatment in lieu of excavation in the vicinity of the emergency outfall line if the criteria of paragraph 55(d) are satisfied; and

(c) Exclusive of roadways, the cap shall be overlain by layers of clean fill, backfill and/or overburden with an average depth of at least three feet and a minimum depth of at least two feet provided that any layer that incorporates overburden shall be below at least two feet of clean fill. Any clean fill or backfill soil brought to the Site will either meet all applicable federal and NJDEP criteria, including NJDEP residential soil criteria, or comply with a beneficial soil reuse plan that is approved by NJDEP and subject to review and comment by the Parties and approval by the Special Master. One foot of clean fill, covered with bituminous blacktop, shall be sufficient cover where roads, walkways, or other paved surfaces are located within the AOC 1 Open Space Area. All clean soil fill in areas that will not involve paved roads, walkways, or other paved surfaces shall be vegetated in such a manner as to protect and maintain the required depth of the clean soil fill and to ensure that such vegetation shall not cause any interference with or penetration of the cap.

(d) The existing overburden soils in the AOC 1 Open Space Area shall first be stripped off and set aside for use. If hexavalent chromium concentrations in the overburden exceed 20 mg/kg, the overburden shall be placed under the cap. If hexavalent chromium concentrations in the overburden do not exceed 20 mg/kg, the overburden may be placed above the cap but below the two feet of clean fill required by paragraph 56(c). Excavated hexavalent

chromium impacted soils (with concentrations between 20 mg/kg and 240 mg/kg) from the AOC 1 Residential Area shall be placed and spread in the AOC 1 Open Space Area under the cap. Excavated hexavalent chromium impacted soils (with concentrations between 20 mg/kg and 240 mg/kg) from the Study Area 6 South Development AOC (as defined in the First Amended Consent Decree Regarding Remediation and Redevelopment of Study Area 6 South and including only those portions of Study Area 6 South for which the future uses of the property may include commercial or residential development) may be placed and spread in the AOC 1 Open Space Area under the cap, provided that such soils do not require venting of gases and shall not serve as the basis for the inclusion of gas venting as part of the Study Area 6 North AOC 1 Open Space Area remedy. Both the chromium impacted soils and the previously stripped overburden shall be suitably compacted according to design specifications. Debris, to the extent it would interfere with the compaction specification requirements of the 100% Design, shall not be placed under the cap. The engineered cap shall be installed over the chromium-impacted soils exceeding 20 mg/kg hexavalent chromium.

57. **AOC 1 Additional Excavation Areas Remedy.** For those AOC 1 Additional Excavation Areas, soils containing hexavalent chromium at concentrations greater than 20 mg/kg shall be excavated to a depth of 20 feet below the current ground surface in accordance with the NJDEP Chromium Directive. Excavation of those areas comprising the AOC 1 Additional Excavation Areas shall initially be conducted in the 50-foot by 50-foot area planned in the RAWP but shall not be so limited in the event that confirmation sampling indicates that hexavalent chromium concentrations continue to exceed 20 mg/kg. Honeywell shall excavate laterally and vertically (to depths of up to 20 feet below current ground surface) until the hexavalent chromium is less than 20 mg/kg based on the results of confirmation sampling. Confirmation sampling for the AOC 1 Additional Excavation Areas shall be taken from the side

walls and bottom of the excavation, in accordance with the Technical Requirements for Site Remediation, to confirm complete removal of contaminated soils.

58. **Shallow Groundwater Remedy.** The shallow groundwater remedy shall consist of hydraulic barriers with a pump-and-treat system designed to isolate shallow groundwater and to intercept and treat shallow groundwater flowing above the meadow mat in the AOC 1 Open Space Area. The shallow groundwater remedy shall consist of the following:

(a) The existing soil/cement/bentonite wall on the boundary of Study Area 6 North and Study Area 7 shall be incorporated into the other engineering controls;

(b) Subterranean slurry walls or other hydraulic barriers shall be installed along the northern, eastern and western sides of the AOC 1 Open Space Area and keyed into the meadow mat or Stratum O or to comparable depths below ground surface;

(c) A groundwater extraction system shall be established that will consist of (i) one or more shallow extraction wells, sumps, or french drains within the AOC 1 Open Space Area; (ii) pumps; and (iii) underground piping to convey any extracted water to Honeywell's Treatment Plant;

(d) The capture zone for the shallow groundwater remedy shall include at least the entire area of contaminated shallow groundwater (except for shallow groundwater that penetrates the meadow mat and is captured by the Deep Groundwater Remedy);

(e) A plan for control of water levels shall be developed;

(f) In the event that underground structures are demolished, the plans shall address the need for special attention for structures that extend below the meadow mat in order to control needed water levels; and

(g) Honeywell shall submit such information as is required to allow NJDEP to establish a classification exception area for groundwater at the Site, in accordance with NJDEP

regulations.

59. **Permits and Authorizations.** Honeywell shall obtain all necessary federal, state, and local permits and authorizations to carry out the Chromium Remedy as set forth in this Article. The Jersey City Entities agree to cooperate with Honeywell in the applications for any such permits, authorizations, or approvals. Such cooperation shall include providing information or data with respect to permit applications, co-signing permit applications, and allowing access to Study Area 6 North to obtain information necessary for the permits.

B. Long-Term Monitoring, Maintenance, and Protection of Engineering and Institutional Controls

60. **Protection of the AOC 1 Open Space Area.** Except as provided in paragraphs 60(j) and 60(k), development in the AOC 1 Open Space Area shall be prohibited. The AOC 1 Open Space Area shall be protected against activities that may jeopardize the integrity of the cap and/or the groundwater remedial measures that shall be installed in the AOC 1 Open Space Area pursuant to the Chromium Remedy or that may impede the long-term monitoring and maintenance of the cap and/or groundwater remedial measures. It is the intention of the Parties to implement different layers of protection, which alone or in concert, impose restrictions on development, run with the land, and survive all parties. Accordingly, the following actions shall be taken pursuant to the Schedule provided in paragraph 54(b):

(a) **Ownership of and Access to the AOC 1 Open Space Area.** Ownership of and access to the AOC 1 Open Space Area shall be in accordance with the following:

(i) Pursuant to the terms of this Consent Decree and paragraph 4.3 of the Jersey City/Honeywell Consent Order, Bayfront Redevelopment LLC shall become the owner in fee simple absolute of all of the property that comprises the AOC 1 Open Space Area and shall not convey any rights or interests in such property except as provided in this Decree. At the time

of the conveyance from JCRA to Bayfront Redevelopment LLC, Bayfront Redevelopment LLC shall give Jersey City an option to buy AOC 1 Open Space Area prior to the planned transfer pursuant to paragraph 60(a)(iii). Such option to buy shall be subject to the conservation restriction imposed pursuant to paragraph 60(b). Jersey City shall exercise the option to buy the AOC 1 Open Space Area in the event that the conditions allowing for withdrawal of funds from the financial assurance mechanisms under paragraphs 84(c) or 84(d) are met;

(ii) At the time the JCRA conveys the Study Area 6 North property to Bayfront Redevelopment LLC pursuant to paragraph 4.3 of the Jersey City/Honeywell Consent Order, Bayfront Redevelopment LLC shall grant a conservation restriction for the AOC 1 Open Space Area pursuant to the requirements of paragraph 60(b);

(iii) Upon the final construction of all roads and utility corridors within the AOC 1 Open Space Area, Bayfront Development LLC shall donate good and marketable title to all the land comprising the AOC 1 Open Space Area to Jersey City. In conjunction with such donation, Bayfront Redevelopment LLC shall petition to subdivide the properties within Study Area 6 North to create a new parcel(s) comprising the AOC 1 Open Space Area. At the time of the donation, Jersey City shall grant Honeywell an easement for the purpose of monitoring and maintaining the Chromium Remedy. Jersey City shall also grant Honeywell all necessary access to the AOC 1 Open Space Area by license or such other mechanisms as may be appropriate for purposes of monitoring and maintaining the Chromium Remedy. After it acquires title pursuant to this paragraph, Jersey City shall retain ownership of the AOC 1 Open Space Area unless and until it shall have complied with the requirements of paragraph 60(a)(iv);

(iv) After it acquires title pursuant to this paragraph, Jersey City shall not convey or enter into any lease of the AOC 1 Open Space Area to any other person or entity unless it has first satisfied either of the following conditions:

(1) Jersey City has obtained the Special Master's (or if the Special Master's appointment has expired, the Court's) approval to convey the AOC 1 Open Space Area to a government entity that has the capacity and willingness to fulfill Jersey City's obligations under the Consent Decree with respect to the AOC 1 Open Space Area and such entity agrees to submit to the Court's jurisdiction and to be bound by the requirements of the Consent Decree that Jersey City has committed to fulfill with respect to protection of the AOC 1 Open Space Area pursuant to this paragraph and routine maintenance of the permissible development in the AOC 1 Open Space Area pursuant to paragraph 64(d); or

(2) The AOC 1 Open Space Area has been remediated such that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive, and Jersey City has demonstrated to the Special Master and/or the Court, as appropriate, that such remediation has been completed in accordance with all applicable requirements.

(b) **Conservation Restriction.** At the time the JCRA conveys the Study Area 6 North property to Bayfront Redevelopment LLC pursuant to paragraph 4.3 of the Jersey City/Honeywell Consent Order, but prior to the grant of the option to buy pursuant to paragraph 60(a)(i), Bayfront Redevelopment LLC shall grant an open space conservation restriction, pursuant to N.J.S.A. 13:8-B-1, *et seq.*, over the AOC 1 Open Space Area substantially in the form set forth in Exhibit D. Exhibit D is a conservation restriction that is consistent with the terms of this paragraph and this Consent Decree. The conservation restriction shall allow for the implementation, maintenance, monitoring, repair and replacement of the Chromium Remedy and development consistent with paragraphs 60(j) and 60(k), including the construction and

placement of roads and utilities. The Hackensack River Watershed Land Trust shall be the primary holder of the conservation restriction, with all rights of monitoring and enforcement. Riverkeeper shall propose an entity to serve as the secondary holder of the conservation restriction subject to comment by the Parties and review by the Special Master. The secondary holder shall have secondary rights of monitoring and enforcement.

(i) The conservation restriction shall be incorporated into this Consent Decree and made part of this Consent Decree. The final, executed conservation restriction shall be lodged with the Court and entered as an order of the Court. The conservation restriction shall be enforceable in this Court, in the same manner as this Consent Decree.

(ii) The conservation restrictions provided under this Consent Decree shall be consistent with the prohibited and permitted development of the AOC 1 Open Space Area as set forth in paragraphs 60(j) and 60(k) below.

(iii) Jersey City shall not take any action, whether through exercise of any power of eminent domain, application to the State of New Jersey for approval of a diversion of public park or recreation land, legal challenge to the validity or enforceability of the conservation restriction, or otherwise, the effect of which would be to in any way terminate, abrogate, or diminish the terms, conditions, or purposes of the conservation restriction. If, notwithstanding the preceding sentence, Jersey City proceeds with a condemnation or other action, the result of which would be to terminate, abrogate, or otherwise diminish the terms, conditions, or purposes of the conservation restriction, Jersey City shall, before taking any such action satisfy all of the conditions set forth in paragraph60(a)(iv)(2).

(iv) Notwithstanding the foregoing, the conservation restriction may be terminated upon application of any Party when no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area, whether in soils or in groundwater, in excess of the

levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive.

(c) **Deed Notice.** Upon completion of the Chromium Remedy, the AOC 1 Open Space Area shall be subjected to the deed notice substantially in the form set forth in Exhibit E that restricts future activities on the AOC 1 Open Space Area. Nothing in the deed notice shall be construed as preventing the imposition of more stringent restrictions on the development allowed in the AOC 1 Open Space Area pursuant to this paragraph and, in particular, the conservation restriction provided for in paragraph 60(b).

(d) **Recording of the Consent Decree, Conservation Restriction, and Deed Notice.** This Consent Decree, the conservation restriction imposed pursuant to paragraph 60(b), and the deed notice imposed pursuant to paragraph 60(c) shall be recorded, pursuant to N.J.S.A. 46:15-1.1, 46:16-1.1, and 46:16-2, in the office of the Hudson County Register and a conspicuous reference to the Consent Decree, conservation restriction, and deed notice shall be included in all instruments concerning title to the AOC 1 Open Space Area. Any Party shall have the right, periodically, but no more than once every 25 years, to record memoranda or other instruments that reference, incorporate, or attach this Consent Decree, the conservation restriction, the deed notice, and/or any further orders of the Court related to the AOC 1 Open Space Area in the real estate records related to the AOC 1 Open Space Area.

(e) **Zoning.** Pursuant to the Redevelopment Plan, the AOC 1 Open Space Area is designated for open space and park. Jersey City shall not amend or change this designation unless it first satisfies the requirements of paragraph 60(a)(iv)(2).

(f) **Recreation and Open Space Inventory.** Upon acquiring fee simple absolute title to the AOC 1 Open Space, Jersey City shall add those portions of the AOC 1 Open Space Area not covered by roads, the pedestrian thoroughfare, and utility corridors adjacent to

roads onto its Green Acres Program Recreation and Open Space Inventory ("ROSI") pursuant to N.J.A.C. 7:36 and shall specify in such listing that it is subject to (i) Honeywell's prior easement to monitor, maintain, repair, and replace the Chromium Remedy; (ii) the actions necessary to implement, monitor, maintain, repair, and replace the Chromium Remedy; (iii) the actions necessary to install any development permissible under paragraphs 60(j) and 60(k); and (iv) the conservation restriction imposed pursuant to paragraph 60(b). Jersey City shall also take all steps necessary or appropriate to notify the New Jersey Green Acres Program that such portions of the AOC 1 Open Space Area have been added to its ROSI, such that those portions of the AOC 1 Open Space Area shall thereafter be subject to all procedural and regulatory requirements applicable under the Green Acres Program, including prohibitions against diversion.

(g) **Eminent Domain.** If all or part of the AOC 1 Open Space Area is taken in exercise of the power of eminent domain, or acquired by purchase in lieu of condemnation, by any public, corporate, or other authority so as to terminate, abrogate, or limit the restrictions created by this Consent Decree or the conservation restriction imposed pursuant to paragraph 60(b), in whole or in part, any Party may take appropriate actions to challenge such taking if there is a reasonable legal basis for doing so. In the event that the Parties are unable to prevent a taking notwithstanding their reasonable and appropriate efforts, any Party may take appropriate actions to recover the full value of the interests in the AOC 1 Open Space Area subject to the taking or in lieu purchase, and all direct and incidental damages, costs, and fees occasioned thereby.

(h) **Environmental Covenant.** In the event that New Jersey enacts the Uniform Environmental Covenants Act or its substantial equivalent, the Parties shall address the issue of whether an environmental covenant shall be established for the AOC 1 Open Space Area under the statute. If the Parties are unable to reach agreement on establishment of an environmental

covenant, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. The Special Master shall recommend adoption of an environmental covenant if it would provide substantial additional protection for the AOC 1 Open Space Area without unreasonably harming the interests of any Party. Any Party shall have the right to seek review by the Court of the Special Master's recommendation or consideration by the Court of the dispute in the event that the Special Master's appointment has expired.

(i) **Future Protections.** Any Party shall have the right to propose consideration of additional or substitute protections for the AOC 1 Open Space Area. If the Parties are unable to reach agreement with regard to the proposal, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. The Special Master shall recommend adoption of additional or substitute protections for the AOC 1 Open Space Area if they would provide substantial additional protection for the AOC 1 Open Space Area without unreasonably harming the interests of any Party. Any Party shall have the right to seek review by the Court of the Special Master's recommendation or consideration by the Court of the dispute in the event that the Special Master's appointment has expired.

(j) **Prohibited Development in AOC 1 Open Space Area.** Only development satisfying the requirements of this paragraph and paragraph 60(k) shall be permitted in the AOC 1 Open Space Area. All other development in the AOC 1 Open Space Area shall be prohibited.

(i) Honeywell shall establish Open Space Design Standards that shall govern all development in the AOC 1 Open Space Area regardless of when the construction or installation of permissible development occurs. The Open Space Design Standards shall satisfy each of the requirements set forth in paragraph 60(j)(v) and shall set forth the requirements for development that are necessary for the protection of the integrity of the Chromium Remedy.

(ii) The Initial Development in the AOC 1 Open Space Area shall be the

development undertaken following the completion of the Chromium Remedy in the AOC 1 Open Space Area. The Initial Development may occur in one or more phases. Honeywell and Bayfront Redevelopment LLC shall prepare a Development Plan before the initiation of each phase of the Initial Development. The Initial Development Period for each phase shall consist of the period covered by the Initial Development, plus a period of 10 years following the submission of the as-built documentation for the phase pursuant to paragraph 60(j)(viii).

(iii) The Special Master shall have jurisdiction to review the Open Space Design Standards and the Development Plan(s) solely for the purpose of ensuring that any development undertaken during the Initial Development Period is consistent with this Consent Decree and with protection of the integrity of the Chromium Remedy. The Special Master's jurisdiction with regard to development in the AOC 1 Open Space Area shall run through the Initial Development Period for each phase.

(iv) Honeywell shall ensure that the requirements of this paragraph and paragraph 60(k) are satisfied with regard to any development undertaken within the Initial Development Period. Honeywell shall also ensure that any development undertaken within the Initial Development Period is designed and installed in a manner consistent with this Consent Decree and with protection of the integrity of the Chromium Remedy.

(v) Any development undertaken in the AOC 1 Open Space Area, regardless of when undertaken, shall satisfy each of the following requirements:

(1) It shall not jeopardize the integrity of the Chromium Remedy;

(2) It shall be limited to the types of development permitted under paragraph 60(k);

(3) It shall be consistent with this Consent Decree, including the conservation restriction imposed pursuant to paragraph 60(b), and the Redevelopment Plan;

however, in the event of any conflict or inconsistency between this Decree and the Redevelopment Plan, this Decree shall govern;

(4) In total, at least 75% of the AOC 1 Open Space Area, exclusive of the acreage used for roads and the pedestrian thoroughfare, shall be comprised of landscaping, as defined by paragraph 60(k)(xi);

(5) The portion of the Open Space Design Standards necessary for protection of the Chromium Remedy as related to all roads, the pedestrian thoroughfare and associated utility corridors as well as the general location of such items shall be included in the 100% Design of the Chromium Remedy;

(6) If the lowest elevation for the bedding for any utility line, including irrigation or sprinkler lines, is two feet from the top of the warning layer of the cap, the utility line shall be placed in a utility corridor;

(7) In any event, there shall be two feet of soil or more between the warning layer of the cap and the lowest elevation of the bedding for any irrigation or sprinkler lines; and

(8) No permanent concession facilities shall be permitted.

(vi) Honeywell shall submit the Open Space Design Standards and the Development Plan(s) for any development undertaken during the Initial Development Period pursuant to the requirements of paragraph 72(c), except that such documents need not be submitted to NJDEP. Following Honeywell's submission of such documents, the procedures of paragraphs 72(d) and 72(e) shall apply, except that the Special Master need not provide notice to NJDEP.

(vii) During the Initial Development Period, any development in the AOC 1 Open Space Area shall require the preparation and submission of a Development Plan pursuant

to paragraph 60(j)(vi) and such Development Plan shall be subject to review by the Special Master pursuant to paragraph 60(j)(iii).

(viii) Upon completion of each phase of the Initial Development, Honeywell shall provide as-built documentation for the Initial Development to the Special Master, Riverkeeper, and the Jersey City Entities. Upon completion of any further development during the Initial Development Period for the phase, Honeywell shall also provide as-built documentation to the Special Master, Riverkeeper, and the Jersey City Entities for the additional development. Such additional as-built documentation for a phase shall not affect the running of the Initial Development Period for the phase.

(ix) During the Initial Development Period, replacement in-kind of development features or facilities included in the Initial Development or minor modifications to the development features or facilities included in the Initial Development shall not require the preparation of a Development Plan or be subject to review by the Special Master, provided that such replacement or modification satisfies the requirements of the Open Space Design Standards, the applicable Development Plan, and paragraphs 60(j)(v) and 60(j)(x)(3)(notice requirement).

(x) After the Initial Development Period, all development is prohibited unless one of the following conditions is met:

(1) Jersey City satisfies the conditions set forth in paragraph 60(a)(iv)(2);

(2) The development is a replacement in-kind and such replacement is made in conformance with the specifications of the Open Space Design Standards, the applicable Development Plan, and paragraph 60(j)(v); or

(3) The development meets the requirements of paragraphs 60(j)(v) and 60(j)(xi), and Jersey City provides notice of its intention to alter or add to the

development undertaken in the Initial Development Period. Such notice shall be provided in writing to Honeywell, Riverkeeper, and the holders of the conservation restriction established pursuant to paragraph 60(b) at least 30 days prior to Jersey City's alteration or addition to development undertaken in the Initial Development Period. Honeywell, Riverkeeper, or any holder of the conservation restriction shall have the right to move the Court to prohibit such alteration or addition.

(xi) If any of the development features or facilities that Jersey City seeks to add pursuant to paragraph 60(j)(x) require utilities that would require utility corridors other than the utility corridors installed during the Initial Development Period, Jersey City shall obtain approval from the Court before installing such new utility corridors.

(xii) Jersey City shall provide Honeywell, Riverkeeper, and the holders of the conservation restriction established pursuant to paragraph 60(b) with an annual report that describes any alterations or additions, including those activities under paragraph 60(j)(x)(2), to the development undertaken during the Initial Development Period.

(xiii) All development features or facilities, whether included in the Initial Development or added subsequent thereto, are subject to demolition and/or removal to the extent necessary to maintain, replace, or repair the Chromium Remedy.

(k) **Permissible Development in the AOC 1 Open Space Area.** The Initial Development or any subsequent addition or alteration thereto may include any or all of the following types of development features or facilities, provided that such development features or facilities satisfy the conditions set forth in paragraph 60(j)(v):

(i) Roads and the pedestrian thoroughfare -- both crossing and running along the AOC 1 Open Space Area, but no more extensive than provided for in the diagram on page 39 of the Redevelopment Plan;

(ii) Curbing and fences;

(iii) Sidewalks, paths, walkways, and nature trails;

(iv) Utilities and utility corridors, lighting, and restrooms;

(v) Irrigation or sprinkler components or systems;

(vi) Water features;

(vii) Above-ground storm water cisterns;

(viii) Signs, including the signs or display required by paragraph 60(l);

(ix) Benches, trash receptacles, and bicycle racks;

(x) Recreational facilities, such as playground equipment, bocce ball courts, tennis courts, basketball courts, and athletic fields; and

(xi) Landscaping, including natural grasses, small trees, shrubbery, flowers, and potted plants, provided that such landscaping and the anticipated root structure of each landscaping component do not and will not jeopardize the integrity of the Chromium Remedy. Any portion of an athletic field that is covered in natural grass shall be considered landscaping for purposes of the percentage set forth in paragraph 60(j)(v)(4).

(l) **Signs or Displays.** Honeywell shall develop a permanent plan for informing visitors to the AOC 1 Open Space Area of the history of the chromium production, contamination, and its remediation. Such plan shall provide for appropriate signs or displays that communicate this information. Such plan shall be subject to review and comment by the Parties and approval by the Special Master.

61. **Honeywell's Ongoing Responsibility.** Honeywell shall be responsible for implementing, monitoring, maintaining, repairing and replacing the Chromium Remedy in perpetuity. Honeywell shall satisfy this responsibility through establishment and implementation of a Long-Term Monitoring Plan. In the event that Honeywell ceases to exist without a

successor-in-interest or its obligations under this Consent Decree are stayed or limited due to a bankruptcy petition, the Court shall appoint an independent third-party fiduciary who shall be responsible for implementing, monitoring, maintaining, repairing and replacing the Chromium Remedy pursuant to the requirements of this Consent Decree and the Long-Term Monitoring Plan, unless Jersey City volunteers to assume these responsibilities for the Chromium Remedy.

62. **Long-Term Monitoring Plan.** In consultation with the Parties, and subject to approval by the Special Master and NJDEP, Honeywell shall develop a Long-Term Monitoring Plan to ensure the ongoing effectiveness of the Chromium Remedy to meet the objectives set forth in paragraphs 56, 58, and 63. The Long-Term Monitoring Plan shall be consistent with the applicable EPA policies and guidance, including, among others, EPA's Comprehensive Five Year Review Guidance (2001) (or any subsequent revision) and with NJDEP's Technical Requirements for Site Remediation (or any subsequent revision).

63. **Long-Term Monitoring Plan Objectives.** Honeywell shall design the Long-Term Monitoring Plan to satisfy each of the following objectives:

(a) Provide monitoring to ensure that the integrity and effectiveness of the Chromium Remedy are maintained; and

(b) Provide monitoring to ensure that the restrictions of the institutional controls are being satisfied, including the prohibition on development in the AOC 1 Open Space Area.

64. **Monitoring and Remediation Under the Long-Term Monitoring Plan.** The Long-Term Monitoring Plan shall include the monitoring and remediation activities set forth in this paragraph and other monitoring and remediation activities, if necessary, to meet the objectives of paragraph 63. Honeywell shall provide Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP with annual reports on activities conducted under the Long-Term Monitoring Plan.

(a) **Monitoring Activities in the Long-Term Monitoring Plan.** Honeywell shall undertake the following monitoring activities at intervals to be specified in the Long-Term Monitoring Plan, but no less frequently than set forth below, and, if the monitoring shows it is necessary, Honeywell shall also undertake the remediation activities as set forth below:

(i) Quarterly visual inspection monitoring of the AOC 1 Open Space Area to ensure that it is not being put to any use that is inconsistent with paragraphs 60(j) and 60(k) or any use that may compromise the integrity of the Chromium Remedy. The Long-Term Monitoring Plan shall include an inventory of the prohibited and permissible uses pursuant to paragraph 60 and a corresponding checklist to be used by the individuals conducting the monitoring. If Honeywell determines that the AOC 1 Open Space Area is being used in a manner inconsistent with the protections or the integrity and effectiveness of the Chromium Remedy, Honeywell shall act as soon as possible to cause such use to cease and, if there has been damage to the Chromium Remedy, to repair or replace it to original specifications or to a level of protection equivalent to the original Chromium Remedy;

(ii) Quarterly visual inspection monitoring of the AOC 1 Open Space Area grade and slope to identify whether erosion has occurred or is occurring. Honeywell shall remediate any significant erosion.

(iii) Quarterly visual inspection monitoring to determine whether noticeable differential settlement or subsidence has occurred or is occurring in the AOC 1 Open Space Area such that the integrity of the Chromium Remedy may be materially impaired. If evidence of differential settlement or subsidence is found, Honeywell shall propose further investigative measures. Honeywell shall remediate any differential settlement or subsidence that is beyond the degree of differential settlement/subsidence allowed for in the 100% Design

and repair the cap and/or the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(iv) A baseline topographic survey at the completion of the Chromium Remedy and three additional surveys conducted at five-year intervals beginning five years after the conduct of the baseline survey. The topographic survey shall be of sufficient precision and accuracy to present the results as one-foot contours;

(v) Quarterly visual inspection monitoring to determine whether the Chromium Remedy in the AOC 1 Open Space Area has been disturbed. Any evidence of the distinctive warning layer materials or any other cap materials as described in paragraph 56(a) at the surface is an indication that the cap has been disturbed. In such an event, Honeywell shall propose further investigative measures to evaluate whether the integrity of the cap has been compromised. In the event that the investigative measures show that the cap integrity has been compromised, Honeywell shall repair or replace the cap and the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(vi) Quarterly visual inspection monitoring to ensure that burrowing animals are not materially impairing the integrity of the Chromium Remedy. If evidence of burrowing animals is found, Honeywell shall follow humane removal procedures and repair or replace the cap and the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(vii) Quarterly visual inspection monitoring of the vegetative cover in the AOC 1 Open Space Area to ensure that vegetative cover is in conformance with the landscaping provisions of the 100% Design and the Redevelopment Plan and will not materially impair the integrity of the Chromium Remedy. Maintenance of the vegetative cover shall include, at a

minimum, mowing to ensure that tree species cannot become established and removal of any other vegetation with the potential to damage the Chromium Remedy;

(viii) Quarterly groundwater monitoring to ensure that groundwater levels are maintained in accordance with the requirement to maintain an outward gradient from Study Area 7 and in accordance with the water level control plan developed pursuant to paragraph 58(e);

(ix) Monitoring of vented gases and the gas venting system to ensure proper operation of the system, to evaluate any degradation of the system, to assess the need for treatment of vented gases, either initial, subsequent, or further depending on whether treatment has been previously provided, and to detect any condition that might endanger public health or safety. Such monitoring shall be conducted on a monthly basis for at least one year and, if the readings are stable, such monitoring may be conducted thereafter on a quarterly basis; and

(x) Any additional monitoring as required by specific details added in the design phase of the AOC 1 Open Space Area.

(b) **Procedures for Proposing Changes to the Long-Term Monitoring Plan.** Any Party may, from time to time, propose changes to the scope of the monitoring activities under the Long-Term Monitoring Plan. If the Parties agree, the Long-Monitoring Plan shall be so changed subject to approval by NJDEP and by the Special Master, if his appointment has not terminated, or otherwise, by the Court. If the Parties are unable to reach agreement over alterations to the monitoring and the Special Master's appointment has not terminated under this Consent Decree, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation. In the event that the dispute arises after the Special Master's appointment has terminated, any Party may file a motion seeking a resolution of the dispute by

the Court.

(c) **Contingency Plan.** As part of the Long-Term Monitoring Plan, Honeywell shall develop a contingency plan to ensure the integrity of the remediation in the event of any planned penetration of the cap or otherwise planned activity that compromises the cap or any unplanned event or accident that penetrates the cap or otherwise compromises the integrity of the Chromium Remedy. The contingency plan shall include, at a minimum, an annually updated plan to notify the relevant persons, including the Special Master, NJDEP, and the Parties, of (i) the event penetrating the cap, compromising the cap, or compromising the integrity of the Chromium Remedy; (ii) the general steps to be taken to identify the extent of the problem; and (iii) the standards for remedying the problem.

(d) **Routine Maintenance.** The title owner of the AOC 1 Open Space Area shall conduct maintenance of the AOC 1 Open Space Area features or facilities that are permissible under paragraphs 60(j) and 60(k). The maintenance workers shall be trained in maintenance procedures that do not jeopardize the integrity of the Chromium Remedy. The training shall include the identification and reporting of any uses or features that are not permissible in the AOC 1 Open Space Area or that may jeopardize the integrity of the Chromium Remedy. Honeywell shall provide all training materials. The title owner of AOC 1 Open Space Area shall annually provide to the other Parties and the Special Master a report describing the training which has been provided to its maintenance workers. The title owner of the AOC 1 Open Space Area shall also provide to the Parties and the Special Master notice of any violations of the restrictions relating to the AOC 1 Open Space Area identified by its workers during routine maintenance.

(e) **Recordkeeping.** Honeywell shall maintain written logs or other records of those monitoring and remediation activities undertaken pursuant to the Long-Term Monitoring

Plan. Such logs shall be provided to Riverkeeper and the Jersey City Entities on a quarterly basis.

65. **Monitoring and Reporting to Riverkeeper and Jersey City Entities.** Riverkeeper and Jersey City Entities shall be provided with all documents submitted to NJDEP and/or the Special Master with respect to the Chromium Remedy, including the documents identified in paragraph 72(c).

66. **Notice to Stakeholders.** All residents, regardless of whether they are owners or lessees, and all commercial tenants on Study Areas 6 and 7 are hereby deemed stakeholders. Honeywell shall ensure that all stakeholders shall be provided at the time of their purchase or lease with notice of the contamination, the remedial actions that have been undertaken or are planned, and the importance of reporting activities that may appear to jeopardize the integrity of the engineering controls. Notice shall be accomplished in the following manner:

(a) Bold or otherwise conspicuous language on the first page of the deed provided to all purchasers in the Residential Area;

(b) A summary notice of the Chromium Remedy which:

(i) Has been subject to review and comment by the Parties and approval by the Special Master; and

(ii) Provides a reference to public websites and libraries and/or the future equivalents thereof, where the following can be found:

(1) Zoning and other Jersey City maps showing the AOC 1 Open Space Area; and

(2) Documents describing the contamination and the remediation, including:

(a) This Consent Decree;

(b) The Remedial Investigation Report and the Final Remedial Action Report,

(c) The annual reports on long-term monitoring and maintenance and repair activities as required by paragraph 64 and annual reports on changes to the Initial Development as required by paragraph 60(j)(xii); and

(d) The Long-Term Monitoring Plan.

(c) The provision of the maps and documents referred to in paragraph 66(b)(ii) to the public via websites and libraries and/or the future equivalents thereof; and

(d) Notices to lessees and commercial tenants in all lease documents.

67. **Annual Letter to Riverkeeper and Jersey City Entities on Notice to Stakeholders.** Each year beginning one year after the issuance of the first notice in a deed or lease pursuant to paragraph 66, Honeywell shall provide a letter to the Riverkeeper and the Jersey City Entities documenting its compliance with paragraph 66.

68. **Future Notice to Stakeholders.** Honeywell shall ensure that all stakeholders are provided with notice, at least annually, of long-term monitoring activities and any additional remediation activities undertaken with respect to the Chromium Remedy. Such notice shall be accomplished by notices on websites or future equivalents thereof, including Jersey City websites, any websites created to provide information about the Chromium Remediation or redevelopment of the Redevelopment Area, and one or more of the following:

(a) Any community message board or other similar site used and/or maintained by stakeholders or the manager(s) of the Redevelopment Area;

(b) Mailings to all stakeholders; and

(c) Posters and flyers throughout the Redevelopment Area.

69. **Stakeholder Enforcement.** Any stakeholder shall have the right to enforce the

remedial obligations of this Consent Decree in the Court, including post-implementation monitoring and maintenance obligations, and the terms of any deed notice or use restriction.

C. Oversight and Enforcement by the Special Master and NJDEP

70. **Federal Court Jurisdiction.** The Court shall retain jurisdiction for the purpose of overseeing and enforcing this Consent Decree and to review any issue or dispute which is not resolved through the oversight process described in Article III.C.

71. **Appointment and Jurisdiction of the Special Master.** The Chromium Remedy provided for in this Consent Decree is hereby referred to a Special Master pursuant to Rule 53 of the Federal Rules of Civil Procedure. The Special Master is appointed in the Consolidated Litigation for the purpose of overseeing and enforcing the Chromium Remedy, the first five years of long-term monitoring of the Chromium Remedy, financial assurances for the Chromium Remedy, and the Initial Development Period for each phase of development in the AOC 1 Open Space Area. The Special Master is also appointed in the Consolidated Litigation for the limited purpose of ensuring that the scheduling and implementation of the Historic Fill Remedy, the site preparation activities, and the site redevelopment activities described in the Jersey City/Honeywell Consent Order, Articles II.B, III, and IV, do not undermine the integrity of, unreasonably interfere with, or unnecessarily delay the effectuation of the Chromium Remedy, the Study Area 7 remedies, and other remedies within his jurisdiction as of the date of entry of this Consent Decree. The Special Master shall have jurisdiction over all matters for which he is appointed.

72. **Oversight of the Chromium Remedy.**

(a) **NJDEP Authority.** NJDEP shall retain its full statutory and regulatory authority with respect to the Study Area 6 North site, including (i) permitting authority; (ii) authority to review and approve the Remedial Action Work Plan, 100% Design, and final

Remedial Action Report for the Chromium Remedy; and (iii) authority to issue a no further action letter.

(b) **Special Master Responsibilities.** The Special Master shall have the following responsibilities:

(i) Ensuring that Honeywell's implementation of the Chromium Remedy satisfies the requirements of this Consent Decree;

(ii) Ensuring that Honeywell's implementation of the Chromium Remedy conforms with federal, state, and local permit requirements;

(iii) Establishing a reasonable schedule for the implementation of the Chromium Remedy and monitoring conformance with it;

(iv) Reviewing monthly progress reports and conducting periodic meetings with the Parties to review the progress of the implementation of the Chromium Remedy. NJDEP shall be invited, but not required, to participate in these meetings and the decision as to whether to participate shall be left to NJDEP's sole discretion;

(v) Submitting quarterly progress reports to the Court;

(vi) Overseeing the financial assurances established pursuant to paragraphs 77 through 86, and, until the expiration of his term pursuant to paragraph 76, overseeing the financial assurances established pursuant to paragraphs 87 through 98;

(vii) Coordinating review of the documents as provided in paragraphs 72(c) through 72(f);

(viii) Overseeing all development undertaken in the AOC 1 Open Space Area during the Initial Development Period pursuant to paragraph 60(j)(iii); and

(ix) To the extent that, in matters within the jurisdiction of the Special Master as set forth herein, a dispute arises between the Parties with respect to implementation of the Chromium Remedy, issuing a recommendation to the Court with respect to the dispute.

(c) **Submission of Documents by Honeywell.** Honeywell shall submit the following documents to Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP:

(i) An overall schedule with milestones for the design and implementation of the remedy ("Schedule");

(ii) Design drawings and specifications at the 50% level;

(iii) Design drawings and specifications at the 100% level (after selection of the contractor) (hereafter "100% Design");

(iv) The data validation plan, including quality control and quality assurance protocols;

(v) The site-wide master health and safety plan;

(vi) The Long-Term Monitoring Plan;

(vii) The final Remedial Action Report or final construction report (including as-built drawings and such other reports as may be prepared of the remedy as implemented);

(viii) A report reviewing measured groundwater levels for the groundwater remedy;

(ix) Documents required during the Initial Development Period pursuant to paragraphs 60(j)(vi), 60(j)(vii), and 60(j)(viii) ; and

(x) Other post-implementation monitoring reports as required by the Long-Term Monitoring Plan.

(d) **Comment on Submitted Documents.** For each of the documents submitted by Honeywell pursuant to paragraph 72(c), the Special Master shall establish a schedule for the submission of comments and responses to comments. For each of the documents submitted, Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP shall have the right to submit comments to Honeywell. Honeywell shall address all received comments and submit a revised document. The revised document shall be submitted by Honeywell to Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP. The revised document shall be subject to review and approval pursuant to paragraph 72(e).

(e) **Review and Approval of the Submitted/Revised Document**

(i) **Scope of Review.** All documents submitted by Honeywell, pursuant to paragraph 72(c) and 72(d), shall be subject to review and approval by the Special Master in accordance with the following procedure. All such documents, except the Schedule and the 100% Design, shall be subject to the review and approval process and shall not require an order of the Court. The Schedule and 100% Design documents shall be subject to the review and approval process, but shall also require an order of the Court as provided in paragraph 72(f). A document shall be approved if the document (1) complies with this Consent Decree; (2) complies with the Remedial Action Work Plan for the Chromium Remedy; and (3) complies with the Schedule and 100% Design.

(ii) **Procedure.** Prior to making a decision on a document, the Special Master shall notify NJDEP of his intention to rule on the document or make a recommendation to the Court on the document. Such notice shall notify NJDEP that the Special Master will consider any comments NJDEP wishes to submit on the document if such comments are submitted within 30 days of NJDEP's receipt of the notice. NJDEP shall in its sole discretion determine whether to submit comments to the Special Master.

(iii) **Court Review.** If any Party objects to the Special Master's recommendation to the Court or approval of any document pursuant to this paragraph, that Party may seek further relief from the Court with respect to the document.

(f) **Schedule and 100% Design Documents.** As to the Schedule and the 100% Design documents, Honeywell shall have the responsibility, within 30 days of the Special Master's approval of each document, of (i) moving for entry of an order by the Court approving the document as approved by the Special Master; or (ii) filing objections with the Court to the Special Master's approval (and any recommendations contained therein) and moving for entry of the Schedule or 100% Design (including any such recommendations of the Special Master to which Honeywell agrees). Riverkeeper and the Jersey City Entities shall have the right in these proceedings to raise any objections they might have to the Schedule or 100% Design as approved by the Special Master or to the submission by Honeywell to the Court. NJDEP shall receive notice of any motion filed with respect to the Schedule or the 100% Design.

(g) **Flexibility in 50% and 100% Design Documents**. The Parties recognize that work conducted to implement the Chromium Remedy may be conducted by Honeywell contractors and that Honeywell may establish performance-based criteria or specifications for its contractors. As a result, the Parties recognize that the 50% Design and 100% Design documents for the Chromium Remedy may include performance-based standards, criteria, and specifications. These documents shall be sufficiently prescriptive to enable the Parties and the Special Master to evaluate their conformance with the Remedial Action Work Plan and this Consent Decree. The Parties also recognize that the 100% Design will be completed after Honeywell has selected a contractor. The Parties further recognize that completing the 100% Design after the selection of the contractor(s) shall not make the 100% Design subject to any less

stringent or more deferential review. Honeywell's commitment to the contractor(s) shall not be cause to limit review by the Parties and the Special Master.

(h) **Changes to the Schedule**. The Parties recognize that changes to individual line items in the Schedule will occur. To the extent that (i) the Parties and the Special Master agree that such changes do not have a material impact on satisfaction of the Schedule milestones established for items set forth in paragraph 54(b); and (ii) such changes do not require modifications to any necessary permits or authorizations for the Chromium Remedy, such changes may be made upon agreement of the Parties and the Special Master without further order of the Court.

73. **Retention of Professionals.** The Special Master may retain the services of professionals and/or other technical personnel, as reasonably needed, to fulfill his obligations under this Consent Decree, and for which he will be reimbursed pursuant to paragraph 75.

74. **Insurance for the Special Master.** The Special Master shall obtain insurance coverage relating to the performance of the Special Master's duties and responsibilities under this Consent Decree. Such coverage shall be similar to the Special Master's existing coverage in *ICO v. Honeywell*, procured pursuant to the Court's November 11, 2005 Stipulation and Order Regarding Special Master's Application to Procure Insurance Coverage, and as extended to the Consolidated Litigation by the Consent Order on Sediment Remediation and Financial Assurances ("Sediment Consent Order"). The insurance coverage shall be sufficiently extended in duration and scope to cover all additional duties and responsibilities as set forth hereunder. Honeywell shall pay the premiums and other administrative costs of the Special Master's insurance.

75. **Reimbursement of Special Master Fees and Expenses.** The Special Master shall submit fee applications to the Court for approval of reasonable fees and expenses incurred in the

oversight of matters referred to him pursuant to this Consent Decree. Any Party may raise with the Court objections to such fee applications. Upon approval of a fee application by the Court, the reimbursement of the Special Master's fees and expenses shall be made from the escrow fund previously established by Honeywell for the purpose of paying the Special Master's fees and expenses in *ICO v. Honeywell* pursuant to this Court's September 15, 2003 Order Setting Financial Assurances and extended to the Consolidated Litigation by the Sediment Consent Order.

76. **Expiration of Special Master's Appointment.** The Special Master's appointment under this Consent Decree shall expire after Honeywell has completed the first five years of long-term monitoring of the Chromium Remedy and the Initial Development Period for each phase of development has been concluded as provided in paragraph 60(j)(ii). However, solely to the extent that the Special Master is still supervising other portions of the Consolidated Litigation or *ICO v. Honeywell* after Honeywell has completed the first five years of long-term monitoring of the Chromium Remedy or the Initial Development Period for each phase of development as provided in paragraph 60(j)(ii), whichever is later, the Special Master shall continue to have jurisdiction under this Consent Decree until he has completed his specifically enumerated responsibilities under the Final Judgment in *ICO v. Honeywell*, the Sediment Consent Order, the Deep Groundwater Consent Order, and any other future orders, decrees, or judgments in *ICO v. Honeywell* and the Consolidated Litigation. Enumerated responsibilities under any order, decree, or judgment shall include only those tasks specifically assigned to the Special Master in the order, decree, or judgment. Enumerated responsibilities shall not include any continued jurisdiction exercised over long-term monitoring beyond the initial period specified in the order, decree, or judgment. For example, the Special Master has jurisdiction over the first five years of long-term monitoring under the Sediment Consent Order. Oversight during these five years shall

be an enumerated responsibility, but any continued oversight of long-term monitoring, pursuant to the extension of the Special Master's jurisdiction beyond the first five years, as provided in paragraph 60 of the Sediment Consent Order, shall not be an enumerated responsibility. Such extensions of jurisdiction shall be effective only so long as specific enumerated responsibilities in any order, decree, or judgment have not been fulfilled.

D. Initial Financial Assurances

77. **Chromium Remedy Letter of Credit.** Honeywell shall obtain a one-year, irrevocable letter of credit (the "Chromium Remedy Letter of Credit") to be automatically renewed annually in an amount equal to the "Remedial Costs Subject to Financial Assurance."

(a) Remedial Costs Subject to Financial Assurance shall mean:

(i) The costs of implementing the Chromium Remedy;

(ii) The costs of monitoring and maintenance activities, as required by the Long-Term Monitoring Plan, for five years; and

(iii) A contingency of 25% with respect to those costs listed in paragraphs 77(a)(i) and 77(a)(ii).

(b) The Chromium Remedy Letter of Credit shall be issued by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution, provided that in either case, the financial institution shall be acceptable to the Special Master.

78. **Procedures for Review of the Proposed Chromium Remedy Letter of Credit.** No later than 60 days after entry by the Court of this Consent Decree, Honeywell shall submit to Riverkeeper, Jersey City Entities, and the Special Master for their review the proposed (a) amount of the Chromium Remedy Letter of Credit; (b) form of the Chromium Remedy Letter of Credit; and (c) name of the institution that will issue the Chromium Remedy Letter of Credit. If

Riverkeeper or the Jersey City Entities do not agree to the terms of the Chromium Remedy Letter of Credit, the Parties shall meet and confer in an effort to resolve their differences. If the Parties are unable to reach agreement over the terms of the Chromium Remedy Letter of Credit, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation regarding the terms of the Chromium Remedy Letter of Credit.

79. **Automatic Renewal.** The Chromium Remedy Letter of Credit shall be automatically renewed annually unless (a) no later than 120 days prior to the anniversary of the Chromium Remedy Letter of Credit issue date, the issuer provides notice of nonrenewal or (b) Honeywell seeks a reduction in the Chromium Remedy Letter of Credit, pursuant to paragraph 80, to correspond to the reduced estimate of Remedial Costs Subject to Financial Assurances. If the issuer provides notice of nonrenewal, Honeywell shall obtain a replacement irrevocable Chromium Remedy Letter of Credit at least 95 days prior to the expiration date of the existing Chromium Remedy Letter of Credit. If Honeywell is not otherwise in default as provided in Article III.D, the Special Master shall direct the cancellation of the prior Chromium Remedy Letter of Credit within 91 days after delivery to the Special Master of any replacement of a Chromium Remedy Letter of Credit. In the event that the Special Master is entitled to draw upon a Chromium Remedy Letter of Credit because there are two Chromium Remedy Letters of Credit currently in place, the Special Master shall not draw an aggregate amount in excess of the highest valued Chromium Remedy Letter of Credit. Upon Honeywell's request, the Special Master may, at his option, decide not to require overlapping letters of credit in any year based on Honeywell's financial strength in that year, provided that Honeywell has submitted all necessary information so that the Special Master can make his determination at least 150 days prior to the expiration of the Chromium Remedy Letter of Credit.

80. **Annual Right to Seek Reduction in Amount of Chromium Remedy Letter of Credit.** Honeywell shall have the right annually to seek a reduction in the Chromium Remedy Letter of Credit. At the time of seeking such reduction, Honeywell shall submit to the Riverkeeper, the Jersey City Entities, and the Special Master an estimate of the remaining Remedial Costs Subject to Financial Assurance, including the contingency as described in paragraph 77(a)(iii), and shall seek adjustment of the Chromium Remedy Letter of Credit so that the total estimated amount of remaining Remedial Costs Subject to Financial Assurance are covered by the Chromium Remedy Letter of Credit. However, the adjustment shall not result in reducing the Chromium Remedy Letter of Credit to an amount below the remaining estimated costs under paragraphs 77(a)(i) and 77(a)(ii), plus a contingency of 25% of the remaining estimated costs under paragraphs 77(a)(i) and 77(a)(ii), and shall not result in reducing the Chromium Remedy Letter of Credit to an amount less than $20,000,000 as expressed in 2008 dollars unless long-term financial assurances are in place pursuant to Article III.E. Before making any request to reduce the amount or modify the terms of the Chromium Remedy Letter of Credit, Honeywell shall first confer with the Riverkeeper and the Jersey City Entities in an effort to reach agreement on the modified amount or terms of the Chromium Remedy Letter of Credit. If the Parties are unable to reach agreement over the modified amount or terms of the Chromium Remedy Letter of Credit, the Parties shall submit the dispute to the Special Master, who shall resolve the dispute. Any Party shall have the right to seek review by the Court of the Special Master's decision regarding the modified amount or terms of the Chromium Remedy Letter of Credit. Upon agreement on the amount of the reduction or modified terms of the Chromium Remedy Letter of Credit (or upon order of the Court directing that the Chromium Remedy Letter of Credit be reduced to an identified amount or otherwise modified), Honeywell shall obtain a replacement Chromium Remedy Letter of Credit in such amount and with such

terms. If Honeywell is not otherwise in default as provided in Article III.D and the issuer of the primary Chromium Remedy Letter of Credit has not provided notice of non-renewal, within 30 days after delivery to the Special Master of any replacement of a Chromium Remedy Letter of Credit, the Special Master shall direct the cancellation of the prior Chromium Remedy Letter of Credit.

81. **Bankruptcy Protection.** Neither the Chromium Remedy Letter of Credit nor the proceeds of the Chromium Remedy Letter of Credit shall be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy. The Chromium Remedy Letter of Credit shall contain the language necessary to assure that neither the Chromium Remedy Letter of Credit nor the proceeds of the Chromium Remedy Letter of Credit shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

82. **Exclusive Court Jurisdiction.** The Chromium Remedy Letter of Credit shall recite that the issuer submits to the exclusive jurisdiction of this Court for any and all disputes arising under the Letter of Credit.

83. **Application of New York Law.** The provisions of the Uniform Customs and Practice ("UCP") for Documentary Credits (1993 Revision) International Chamber of Commerce Publication #500 and New York law shall apply to the Chromium Remedy Letter of Credit.

84. **Procedures upon Honeywell's Material Default of Its Obligations.** During the period in which the Special Master has jurisdiction pursuant to paragraph 71, the Chromium Remedy Letter of Credit shall be payable to the Special Master and shall not, prior to its expiration date, be revoked or terminated except consistent with this Consent Decree and with the consent of the Special Master and approval by the Court. The Special Master's ability to draw upon the Chromium Remedy Letter of Credit shall not be limited by any agreement between Honeywell and the issuer. The Special Master may, without further order or notice to

this Court, draw upon the Chromium Remedy Letter of Credit upon the occurrence of default by Honeywell, which shall include:

(a) The failure of Honeywell, in the event that notice is given pursuant to paragraph 79 to deliver a replacement Chromium Remedy Letter of Credit at least 95 days prior to the expiration date of the existing Chromium Remedy Letter of Credit;

(b) The material failure of Honeywell to proceed with diligence and in good faith to carry out the terms of this Consent Decree and the continuance of such a material breach for a period of 15 days after written notice to Honeywell thereof and either (i) Honeywell, in the opinion of the Special Master without further input from the Parties, shall have failed to cure the breach; (ii) during the 15-day period, the Court has not entered an order to prevent the Special Master from drawing on the Chromium Remedy Letter of Credit; or (iii) the Court or the Special Master has not granted Honeywell additional time to cure the breach;

(c) The filing by Honeywell of a petition seeking relief, or the granting of relief, under the Federal Bankruptcy Code or any similar federal or state statute; any assignment for the benefit of creditors made by Honeywell; the involuntary filing of any of the foregoing against Honeywell if involuntary filing has not been dismissed within 60 days; the appointment of a custodian, receiver, liquidator, or trustee, or other similar official for Honeywell or for a substantial part of Honeywell's property; any action by Honeywell to effect any of the foregoing; or if Honeywell becomes insolvent as defined in Section 101(32) of the Federal Bankruptcy Code; or

(d) The dissolution, liquidation, merger, consolidation, or reorganization of Honeywell or the institution of any proceeding to effect any of the foregoing, other than under paragraph 84(c) above, and the failure of Honeywell to provide assurance to the Special Master, within 15 days after written notice, that such an event will not impair Honeywell's ability to

carry out the terms of this Consent Decree.

85. **Placement of Proceeds in Court Registry Investment System Account.** In the event that the Special Master draws upon the Chromium Remedy Letter of Credit due to an event of default, the Special Master shall place the proceeds of the Chromium Remedy Letter of Credit which represent the remaining estimated Chromium Remedy costs under paragraphs 77(a)(i), plus a contingency of 25% of the remaining estimated costs under paragraph 77(a)(i), in an account with the Court Registry Investment System in accordance with Local Civil Rule 67.1 and not expend the proceeds of the Letter of Credit without further order of this Court. The Special Master shall place all additional proceeds of the Chromium Remedy Letter of Credit in a trust fund pursuant to paragraph 90(b)(v).

86. **Termination of Chromium Remedy Letter of Credit.** The Chromium Remedy Letter of Credit may be withdrawn in its entirety upon the satisfaction of all of the following:

(a) The implementation of the Chromium Remedy; and

(b) Establishment of long-term financial assurance pursuant to Article III.E.

E. Long-Term Financial Assurances

87. **Long-Term Financial Assurances.** Honeywell shall fund long-term financial assurances to ensure that the activities set forth in paragraph 89(a) are carried out regardless of whether Honeywell is financially able to carry out such activities in perpetuity.

88. **Resolution of the Amount of Long-Term Financial Assurances.** The Parties have agreed to the following options with regard to how the long-term financial assurances shall be determined:

(a) If the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less,

and agree on the amount of funding needed, Honeywell shall provide long-term financial assurances as required by Article III.E.

(b) If the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less, but disagree on the amount of funding needed, Honeywell shall provide long-term financial assurances as required by Article III.E except that the dispute as to the amount of the long-term financial assurances shall be submitted to the Special Master pursuant to paragraph 91.

(c) If the Parties do not agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less, or the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is greater than $10,000,000, the Parties shall seek resolution by the Court of the long-term financial assurances issues, including (i) the type of financial assurances to be provided; (ii) the scope of the financial assurances; (iii) the amount of the financial assurances; and (iv) the duration of the financial assurances. In the event that the Parties seek resolution by the Court, the provisions of paragraphs 90 through 98 shall not apply.

(d) Within 60 days of the entry of this Consent Decree, the Parties shall determine which option under this paragraph shall apply. In the event that the Parties determine that paragraph 88(c) applies, Riverkeeper shall initiate the proceedings by moving the Court for the imposition of long-term financial assurances.

(e) If the Parties determine that they are proceeding under paragraph 88(c), Honeywell shall maintain the Chromium Remedy Letter of Credit required by paragraph 77 in an amount equal to at least $20,000,000 in 2008 dollars until such time as the long-term financial assurances ordered by the Court are in place. In the event of any default by Honeywell pursuant

to paragraph 84 while the Chromium Remedy Letter of Credit is in place, the provisions of paragraph 90(b)(v) for the placement of the proceeds that exceed the remaining estimated Chromium Remedy costs under paragraph 77(a)(i) plus a contingency of 25% of the remaining estimated costs under paragraph 77(a)(i), shall apply.

89. **Costs Subject to Long-Term Financial Assurances.**

(a) Long-term financial assurances shall provide enough funds to cover the costs of the following activities:

(i) Perpetual monitoring and maintenance of the Chromium Remedy, including installation, operation and monitoring of any above-cap-grade gas collection and/or treatment system as may be necessary, but such system is not part of the 100% Design;

(ii) Perpetual operation of the shallow groundwater pump-and-treat remedy;

(iii) Perpetual repair of the cap;

(iv) Perpetual replacement of the cap on a 75-year replacement interval; and

(v) In the event that Honeywell selects a trust fund pursuant to paragraph 90(a), the perpetual administration of the trust fund.

(b) The costs that shall be subject to financial assurances is an amount that will provide the full payment for each of the activities set forth in paragraphs 89(a)(i) through 89(a)(v) plus a 25% contingency when the activities in paragraphs 89(a)(i) through 89(a)(v) are expected to be performed. The costs subject to financial assurances are forward looking because they state an amount valued at the time the funds are needed. As such, they shall be stated in contemporary time as the present value (calculated on the basis of a discount rate of 4.75%) of

the estimated future costs of the activities specified in paragraphs 89(a)(i) through 89(a)(v), plus a 25% contingency on those costs.

90. **Long-Term Financial Assurance Mechanisms.** Honeywell shall provide long-term financial assurances in the amount of the costs subject to long-term financial assurances in the form of a trust fund, a letter of credit, or some combination of the two. The selected mechanism(s) shall satisfy the following requirements:

(a) **Trust Fund.** In the event that Honeywell selects a trust fund, Honeywell shall create a trust fund such that it can provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary.

(i) The trust fund shall be at arm's length from Honeywell and shall not be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy, dissolution, privatization, or sale. The trust fund agreement shall contain the language necessary to assure that neither the trust fund nor the earnings of the trust fund shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

(ii) The trust fund shall be managed by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution acceptable to Riverkeeper and the Jersey City Entities or approved by the Court. In the event that the financial institution managing the trust fund declares bankruptcy, the Court shall withdraw the funds and appoint another financial institution meeting the requirements of this paragraph to manage the trust.

(iii) No more frequently than once per year, Honeywell may apply to the Court for an order directing the trust manager to reimburse Honeywell for any costs that it has incurred to carry out the activities set forth in paragraphs 89(a)(i) through 89(a)(iv).

(b) **Long-Term Letter of Credit.** In the event that Honeywell selects a letter of credit, Honeywell shall obtain a one-year irrevocable letter of credit (the "Long-Term Letter of Credit") to be automatically renewed annually in an amount that provides sufficient funds such that a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a), could be created. The Long-Term Letter of Credit-funded trust, plus any trust fund established under paragraph 90(a), shall provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. The amount of any Long-Term Letter of Credit shall therefore be adjusted periodically as the cap replacement interval is approached because, for example, the money needed in the 10th year to fund a trust that can provide for replacement of the cap in the 75th year is much less than the money that would be needed in the 40th year. Such periodic adjustments shall be proposed and approved by the Court in conjunction with the adjustments under paragraph 92.

(i) Neither the Long-Term Letter of Credit nor the proceeds of the Long-Term Letter of Credit shall be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy, dissolution, privatization, or sale. The Long-Term Letter of Credit shall contain the language necessary to assure that neither the Long-Term Letter of Credit nor the proceeds of the Long-Term Letter of Credit shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

(ii) The Long-Term Letter of Credit shall be issued by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution acceptable to Riverkeeper and the Jersey City Entities or approved by the Court. In the event that the financial institution issuing the Long-Term Letter of Credit declares bankruptcy, the Court shall authorize the drawing of funds from the Long-Term Letter of Credit

and shall deposit those funds in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

(iii) The provisions of the Uniform Customs and Practice ("UCP") for Documentary Credits (1993 Revision) International Chamber of Commerce Publication #500 and New York law shall apply to the Long-Term Letter of Credit.

(iv) The Long-Term Letter of Credit shall be automatically renewed annually, unless, no later than 120 days prior to the anniversary of the Long-Term Letter of Credit issue date, the issuer provides notice of non-renewal. If the issuer provides notice of non-renewal, Honeywell shall obtain a replacement irrevocable Long-Term Letter of Credit at least 95 days prior to the expiration date of the existing Long-Term Letter of Credit. If Honeywell is not otherwise in default as provided in this Article, the Court shall direct the cancellation of the prior Long-Term Letter of Credit within 91 days after delivery to the Court of any replacement of a Long-Term Letter of Credit. In the event that the Court is entitled to draw upon a Long-Term Letter of Credit when there are two Letters of Credit currently in place, the Court shall not draw an aggregate amount in excess of the highest valued Long-Term Letter of Credit.

(v) Prior to the expiration of the Special Master's appointment pursuant to paragraph 76, the Long-Term Letter of Credit shall be payable to the Special Master. During the time the Long-Term Letter of Credit is payable to the Special Master, the Special Master may draw on the Long-Term Letter of Credit as provided in paragraph 84. In the event that the Special Master draws upon the Long-Term Letter of Credit due to an event of default, the Special Master shall place the proceeds of the Long-Term Letter of Credit in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a). After the Special Master's appointment expires pursuant to paragraph 76, the Long-Term Letter of Credit shall be payable to the Court and, in the event that the Court draws

on the Long-Term Letter of Credit, the Court shall place the proceeds of the Long-Term Letter of Credit in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

(vi) Whether the Long-Term Letter of Credit is payable to the Special Master or the Court, it shall not, prior to its expiration date, be revoked or terminated by Honeywell except consistent with this Consent Decree and with the approval of the Court. The ability of the Special Master or the Court to draw upon the Long-Term Letter of Credit shall not be limited by any agreement between Honeywell and the issuer.

(vii) In the event that the Long-Term Letter of Credit is drawn upon and invested pursuant to paragraph 90(b)(ii), 90(b)(v) or 95 and Honeywell has also selected a trust fund pursuant to paragraph 90(a), resulting in the existence of two trust funds, the two trust funds shall be managed so as to ensure that the combined amount of the trust funds is sufficient to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary.

(c) **Combination.** Honeywell may use some combination of a trust fund and a letter of credit to achieve the requirements of this paragraph. However, if a combination is used, Honeywell shall ensure that the combined amount of financial assurances is sufficient to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. The trust fund and the letter of credit shall otherwise satisfy all the requirements of paragraphs 90(a) and 90(b).

91. **Procedures for Review of the Proposed Long-Term Financial Assurances.** In the event that the Parties have determined that they are proceeding pursuant to paragraph 88(a) or 88(b), no later than 120 days after the determination under paragraph 88(d), Honeywell shall submit to Riverkeeper, the Jersey City Entities, and the Special Master, for their review (a) the

amount of the proposed long-term financial assurances; (b) the form(s) of the proposed long-term financial assurance mechanisms; and (c) the name(s) of the institution proposed to manage or issue the long-term financial assurances. If Riverkeeper and the Jersey City Entities agree to the terms of the proposed long-term financial assurances, within 60 days of such agreement, Honeywell shall create a trust fund and/or secure a Long-Term Letter of Credit on those terms. If the Parties are unable to reach agreement over the terms of the long-term financial assurances, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation regarding the terms of the financial assurances. In any event, until the long-term financial assurances have been put into place, Honeywell shall maintain the Chromium Remedy Letter of Credit and the requirements of paragraphs 88(e) and 90(b)(v) shall apply to the Chromium Remedy Letter of Credit.

92. **Adjustment of Amount Held in Long-Term Financial Assurances.** Every five years as marked from the establishment of the first long-term financial assurances pursuant to paragraph 90, the Parties shall report to the Court whether the long-term financial assurances are adequately funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. At such time as the Parties report to the Court, any Party may seek an adjustment in the amount of the long-term financial assurances. The Party seeking an adjustment must demonstrate that the long-term financial assurances are under-funded or over-funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. Such demonstration shall reflect the actual costs of implementing the remedy and/or any replacement of the remedy, once such actual costs are available. The demonstration shall also reflect the costs of work completed to date and the actual lifetime of the cap, once the

cap has been replaced or has passed a replacement interval without requiring replacement. The demonstration shall further reflect the actual performance of the fund and its ability to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. Any demonstration shall be forward looking and shall be based upon estimates of what the activities in paragraphs 89(a)(i) through 89(a)(v) are expected to cost at the time they must be performed and the amount of funding projected to be available to undertake such activities at the time they must be performed. If, after reviewing the submission(s) received from the Parties, the Court determines that the long-term financial assurances are under-funded or over-funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary, the Court shall order an adjustment in the amount held in the long-term financial assurances to overcome the shortage or overage. In the event that the Court determines that the long-term financial assurances are under-funded, it shall order Honeywell to increase the amount held in the long-term financial assurances. In the event that the Court determines that any trust fund established pursuant to paragraph 90(a) is over-funded, the Court shall issue an order directing the trust manager to pay the overage to Honeywell. In the event that the Court determines that the Long-Term Letter of Credit is over-funded, the Court shall issue an order permitting Honeywell to reduce the amount covered during the next annual renewal of the Long-Term Letter of Credit pursuant to paragraph 90(b)(iv). Any adjustment to the amount of the Long-Term Letter of Credit pursuant to this paragraph shall be in addition to any adjustment of the amount of the Long-Term Letter of Credit required pursuant to paragraph 90(b).

93. **Exclusive Court Jurisdiction.** The trust fund agreement and/or the Long-Term Letter of Credit shall recite that the trust fund manager and/or issuer of the Long-Term Letter of Credit submit to the exclusive jurisdiction of this Court for any and all disputes arising under the

trust fund or the Long-Term Letter of Credit. The requirements of this paragraph shall apply whether the trust fund is established pursuant to paragraph 90(a), 90(b)(ii), 90(b)(v), or 95.

94. **Procedures upon Honeywell's Material Default of Its Obligations after the Special Master's Appointment Has Expired.** Upon the occurrence of default by Honeywell, after the Special Master's appointment has expired, Riverkeeper or the Jersey City Entities may move the Court on an expedited basis for an order to withdraw funds from the trust fund or to draw on the Long-Term Letter of Credit. Default shall include:

(a) The failure of Honeywell, in the event that notice is given pursuant to paragraph 90(b)(iv) to deliver a replacement Long-Term Letter of Credit at least 95 days prior to the expiration date of the existing Long-Term Letter of Credit;

(b) The material failure of Honeywell to proceed with diligence and in good faith to carry out the terms of this Consent Decree and the continuance of such a material breach for a period of 30 days after written notice by Riverkeeper or the Jersey City Entities to Honeywell of the alleged material failure, unless Honeywell cures the alleged breach within the 30-day notice period or such longer period as the Parties may agree to or the Court may order;

(c) The filing by Honeywell of a petition seeking relief, or the granting of relief, under the Federal Bankruptcy Code or any similar federal or state statute; any assignment for the benefit of creditors made by Honeywell; the involuntary filing of any of the foregoing against Honeywell if the involuntary filing is not dismissed within 60 days; the appointment of a custodian, receiver, liquidator, trustee, or other similar official for Honeywell or for a substantial part of Honeywell's property; any action by Honeywell to effect any of the foregoing; or if Honeywell becomes insolvent as defined in Section 101(32) of the Federal Bankruptcy Code; or

(d) The dissolution, liquidation, merger, consolidation, or reorganization of Honeywell or the institution of any proceeding to effect any of the foregoing, other than under

paragraph 94(c), if Honeywell fails to provide assurance to Riverkeeper, the Jersey City Entities, and the Court, within 15 days after written notice, that such an event will not impair Honeywell's ability to carry out the terms of this Consent Decree.

95. **Drawing on the Long-Term Letter of Credit in the Event of Honeywell's Default.** If the Court grants any motion by Riverkeeper or the Jersey City Entities pursuant to paragraph 94 to draw on the Long-Term Letter of Credit, the sum approved by the Court's order granting the motion shall be paid from the Long-Term Letter of Credit into a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

96. **Use of the Trust Fund in the Event of Honeywell's Default**. In the event of Honeywell's default, the money in the trust fund established pursuant to paragraph 90(a) shall be available to meet the obligations of paragraph 89(a). Riverkeeper and/or the Jersey City Entities shall file motions with the Court seeking orders directing how the money in the trust fund shall be used. The Court shall consider motions on an expedited basis and shall enter appropriate orders. The Court may enter an order allowing for automatic withdrawal of regular expenses without separate motion to the Court by Riverkeeper or the Jersey City Entities.

97. **Use of a Trust Fund Established Pursuant to Paragraph 85, 90(b)(ii), 90(b)(v), or 95.** In the event that a trust fund is established pursuant to paragraph 85, 90(b)(ii), 90(b)(v), or 95, the money in the trust fund shall be available to meet the obligations of paragraph 89(a). Riverkeeper and/or the Jersey City Entities shall file motions with the Court seeking orders directing how the money in the trust fund shall be used. The Court shall consider motions on an expedited basis and shall enter appropriate orders. The Court may enter an order allowing for automatic withdrawal of regular expenses without separate motion to the Court by Riverkeeper or the Jersey City Entities.

98. **Termination of the Long-Term Financial Assurances.** Honeywell's obligations

under Article III.E shall be terminated and the long-term financial assurance mechanisms shall be terminated when the Court finds that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area or on the Site, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive. Upon determining that long-term financial assurances may be terminated, the Court shall order that any Long-Term Letter of Credit may be withdrawn in its entirety and any trust fund may be terminated. In conjunction with its order terminating any trust fund, the Court in its discretion shall designate a recipient(s) of any remaining trust funds.

ARTICLE IV: IMPLEMENTATION SCHEDULE AND TERMINATION

99. **Schedule for Remedy and Site Preparation Implementation Activities.** The Chromium Remedy under Article III and the Historic Fill Remedy under Article II.B of the Jersey City/Honeywell Consent Order and Site Preparation Activities under Article III of the Jersey City/Honeywell Consent Order shall be undertaken by the Parties in accordance with the following anticipated schedule, recognizing that this schedule may be further modified in writing by agreement of the Parties and with the approval of the Court:

(a) By October 1, 2008, the Jersey City Entities and Honeywell shall develop a Site Preparation Plan, pursuant to paragraph 3.2 of the Jersey City/Honeywell Consent Order, for all Site Preparation Activities necessary to undertake the Chromium Remedy;

(b) No later than June 18, 2009, Honeywell shall submit to NJDEP a remedial design document for the Chromium Remedy;

(c) No later than September 1, 2009, Honeywell shall submit all applications for permits and authorizations for the performance of the Chromium Remedy to all appropriate local, state, and federal government entities;

(d) Honeywell shall use its best efforts to complete the Chromium Remedy no later than four years after all appropriate applications and authorizations for the performance of the Chromium Remedy have been obtained;

(e) By May 1, 2008, Honeywell and the Jersey City Entities shall submit a work plan for further Remedial Investigation for AOC 2 to NJDEP; and

(f) By December 1, 2008, Honeywell and the Jersey City Entities shall submit a Remedial Action Selection Report and Remedial Action Workplan for the Historic Fill Remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order. The Workplan shall contain a schedule for implementation of the Historic Fill Remedy.

100. **Termination of this Consent Decree.** This Consent Decree shall terminate upon the withdrawal of any Party as provided for in this paragraph. Any Party may elect to withdraw from this Consent Decree due to the occurrence of one or more of the following events, provided that such Party provides written notice of withdrawal to the other Parties pursuant to paragraph 108:

(a) The Court fails to enter the Jersey City/Honeywell Consent Order or this Consent Decree or either the Jersey City/Honeywell Consent Order or this Consent Decree is determined to be invalid on appeal;

(b) JCRA fails to take those actions required under paragraphs 4.11(a), (b), and (c) of the Jersey City/Honeywell Consent Order within nine months of entry of this Consent Decree; or

(c) JCRA fails to approve a Redevelopment Agreement between Bayfront Redevelopment LLC and JCRA pursuant to paragraph 4.11(e) of the Jersey City/Honeywell Consent Order within 12 months of entry of this Consent Decree.

101. **Procedures for Withdrawal and Termination.** Any Party electing to withdraw pursuant to paragraph 100 and thereby terminate this Consent Decree shall provide written notice of such withdrawal and termination to all other Parties within 30 days of the occurrence giving rise to the decision to withdraw. If any Party objects to termination of the Consent Decree, or believes that the conditions set forth in paragraph 100 have not been met, such objecting Party may move the Court for an expedited hearing on the issue of whether the conditions for termination have been effectuated.

102. **Good-Faith Obligation to Avoid Termination.** The Parties agree that they will each endeavor to fulfill the terms of this Consent Decree, that they will work diligently and in good faith to meet their obligations hereunder, and that they will promptly and timely take all reasonable steps to give effect to this Consent Decree and to avoid termination under paragraph 100.

103. **Effect of Termination.** If this Consent Decree is terminated pursuant to paragraph 100, the Consent Decree shall no longer be binding on the Parties and shall be of no further effect. In the event that this Consent Decree is terminated by one or more Parties pursuant to paragraph 100, each Party to this Consent Decree reserves all of its rights, claims, and defenses (both legal and factual) against the other Parties with respect to the matters at issue in the Consolidated Litigation and each Party remains free to pursue such rights, claims, and defenses.

ARTICLE V: ADDITIONAL PROVISIONS RELATED TO HISTORIC FILL AND SITE PREPARATION AND REDEVELOPMENT

104. **Historic Fill Remedy**. This Consent Decree shall adopt and incorporate the terms of Article II.B of the Jersey City/Honeywell Consent Order with respect to the Historic Fill Remedy. The Historic Fill Remedy shall not be limited to the activities set forth in Article II.B of the Jersey City/Honeywell Consent Order in the event that NJDEP requires a more extensive remedy. The Historic Fill Remedy shall be compatible with the Chromium Remedy such that no

part of the Historic Fill Remedy shall interfere with the installation, maintenance, and monitoring of the Chromium Remedy. In addition, the Historic Fill Remedy for any discharge of non-chromium contaminants to the Hackensack River shall not interfere with the remedies under the Sediment Consent Order, including the source control remedies. In the event that Jersey City conducts the Historic Fill Remedy instead of Honeywell, the terms of this paragraph shall still apply.

105. **Oversight of Historic Fill Remedy**. Paragraph 2.11 of the Jersey City/Honeywell Consent Order shall apply only to the Historic Fill Remedy, not the Chromium Remedy. The Progress Reports provided for in paragraphs 2.12 and 3.7 of the Jersey City/Honeywell Consent Order shall be provided to Riverkeeper and the Special Master at the time they are submitted.

106. **Transfer of Title of Study Areas 6 North and 7 to and from Bayfront Redevelopment LLC**. The transfer of title of Study Area 6 North and Study Area 7 properties to Bayfront Redevelopment LLC pursuant to the Jersey City/Honeywell Consent Order and any subsequent transfers shall not impede Honeywell's obligations to (a) complete the remediation of Study Area 7 and implement the Final Judgment and subsequent orders in *ICO v. Honeywell* or (b) complete the Chromium Remedy and conduct long-term monitoring and fulfill its other obligations set forth in this Consent Decree. Such transfers of Study Areas 6 North and Study Area 7 shall not include a transfer of Honeywell's obligations to implement the Final Judgment and subsequent orders in *ICO v. Honeywell* or a transfer of Honeywell's obligations under this Consent Decree, but shall include a right of access or any other right required by Honeywell to complete the remediation. Any subsequent transfer of Study Area 6 North or Study Area 7 from Bayfront Redevelopment LLC to a redeveloper or other party shall provide all necessary agreements to allow Honeywell all necessary access to Study Area 6 North and Study Area 7 for purposes of completing Honeywell's obligations with respect to Study Area 6 North under this

Consent Decree and completing the Study Area 7 remediation and implementing the Final Judgment and subsequent orders in *ICO v. Honeywell*.

107. **Dispute Resolution Procedures.** The provisions of Article VIII of the Jersey City/Honeywell Consent Order do not apply to any disputes regarding or impacting the Chromium Remedy, which shall be resolved as provided in paragraph 72. The provisions of Article VIII of the Jersey City/Honeywell Consent Order shall apply to disputes between the Jersey City Entities and Honeywell regarding the Historic Fill Remedy and other obligations provided in the Jersey City/Honeywell Consent Order, except to the extent that such disputes may affect the Chromium Remedy. If any such dispute may affect the Chromium Remedy, it shall be resolved as provided in paragraph 72. Honeywell shall provide Riverkeeper with a copy of each notice of any breach provided under paragraph 8.1 of the Jersey City/Honeywell Consent Order within 10 days of Honeywell's receipt or issuance of such notice. Honeywell shall provide Riverkeeper with a copy of any written resolution of a dispute pursuant to paragraph 8.2 within 10 days of the resolution.

ARTICLE XI: NOTICE

108. **Notice.** Any and all notices given in connection with this Consent Decree shall be deemed adequately given only if in writing and addressed to the Party for whom such notices are intended at the addresses set forth in this paragraph. All notices shall be sent by Federal Express or other nationally recognized overnight messenger service or by first-class registered or certified mail, postage prepaid, return receipt requested. A written notice shall be deemed to have been given to the recipient party on the earlier of (a) the date it shall be delivered to the address set forth in this paragraph; (b) the date delivery shall have been refused at the address set forth in this paragraph; or (c) with respect to notices sent by mail, the date as of which the postal service shall have indicated such notice to be undeliverable at the address set forth in this paragraph.

Any and all notices referred to in this Consent Decree, or which any Party desires to give to the other, shall be addressed as follows:

If to Honeywell and/or
Bayfront Redevelopment LLC :

Tom Byrne, Esq.
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-2775

If to Riverkeeper:

Bruce J. Terris
Carolyn Smith Pravlik
Kathleen L. Millian
Terris, Pravlik & Millian, LLP
1121 12th St., N.W.
Washington, DC 20005-4632
(202) 682-2100

With copies to:

John Morris
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-4003

If to Jersey City:

William Matsikoudis
Corporation Counsel
City of Jersey City
280 Grove Street
Jersey City, NJ 07305
(201) 547-4667

If to JCIA:

David L. Isabel
Golub & Isabel, PC
160 Littleton Road
Parsippany, NJ 07054
(973) 968-3377

If to JCMUA:

Sam Della Fera Jr.
Trenk, DiPasquale, Webster,
Della Ferra & Sodono, P.C.
347 Mount Pleasant Ave.
West Orange, NJ 07052
(973) 243-8600

If to JCRA:

Robert Antonichello
Executive Director
30 Montgomery Street
Jersey City, NJ 07302
(201) 547-5810

Any party may change its designated recipients or addresses for notice in this paragraph by providing written notice of such change to all other Parties.

ARTICLE XII: RIVERKEEPER'S ATTORNEYS' FEES

109. **Payment of Past Fees and Expenses.** Within 30 days of the entry of this Consent Decree, Honeywell shall pay Terris, Pravlik & Millian, LLP the sum of $1,513,217.15 which represents the following:

(a) A compromise of the attorneys' fees incurred by Riverkeeper in the litigation of Study Area 6 North portion of *Riverkeeper v. Honeywell* through March 27, 2008; and

(b) $187,862.27 in out-of-pocket expenses representing 50% of the expenses incurred by Riverkeeper in *Riverkeeper v. Honeywell* from the inception of the litigation after deducting the expenses to be paid pursuant to the Sediment Consent Order.

Payment of the sum of $1,513,217.15 shall be in full satisfaction of all obligations, duties, and responsibilities of Honeywell with respect to the $1,556,747.46 in fees and expenses that Riverkeeper claimed with regard to the above described fees and expenses.

110. **Future Fees and Expenses.** Honeywell shall reimburse Riverkeeper's attorneys for reasonable fees and expenses incurred: (a) in negotiating this Consent Decree after March 27, 2008; (b) in the monitoring and enforcement of this Consent Decree; and (c) in participation in the Special Master process established pursuant to this Consent Decree. Honeywell shall also reimburse Riverkeeper for reasonable attorneys' fees and expenses for Riverkeeper's review of and participation in the Long-Term Monitoring Plan and monitoring and enforcement of this Consent Decree following the term of the Special Master. In the event that any dispute arises between the Parties under this Consent Decree that must be resolved by the Court, Riverkeeper shall be entitled to recover its attorneys' fees and expenses for litigation of the dispute to the extent allowed by federal law. Riverkeeper and Honeywell shall use the same informal procedure for attempting to settle fees issues as has been used for post-judgment monitoring fees in *ICO v. Honeywell*. In the event that Riverkeeper and Honeywell are unable to reach a

settlement on fees, Riverkeeper shall apply to the Court for an award of attorneys' fees and expenses. If Honeywell objects to only a portion of the Riverkeeper's statement of attorneys' fees and expenses, Honeywell shall pay the undisputed portion within 60 days of Riverkeeper's submittal of the statement to Honeywell. The Court shall resolve any objections to Riverkeeper's statement of attorneys' fees and expenses and shall enter an appropriate Order.

ARTICLE XIII: MISCELLANEOUS PROVISIONS

111. **Force Majeure.** Force Majeure, for the purposes of this Consent Decree, is defined as an event arising from causes beyond the control of any Party or Parties (or their agents, contractors, subcontractors, representatives, or assigns) which could not have been overcome by reasonable diligence and which delays or prevents the performance of any obligation under this Consent Decree. Examples of events which may constitute force majeure include the refusal of any federal or state governmental authority to grant a permit or authorization necessary for the completion of actions required by this Consent Decree, floods, hurricanes, tornadoes, and other extraordinary weather events, earthquakes and other natural disasters, terrorist attacks, war, and other national emergencies. Examples of events that are not force majeure events include normal inclement weather, increased costs or expense, the failure to timely and fully apply for a permit or authorization necessary for the completion of actions required by this Consent Decree, or financial difficulty of any Party. The Party claiming force majeure shall bear the burden of showing an event was a force majeure event.

112. **JCRA and Bayfront Redevelopment LLC as Parties.** As signatories to this Consent Decree, JCRA and Bayfront Redevelopment LLC subject themselves to the Court's jurisdiction for the purpose of enforcing this Consent Decree and agree to be bound by this Consent Decree. This Consent Decree shall be fully enforceable against JCRA and Bayfront Redevelopment LLC.

113. **Successors and Assigns.** This Consent Decree shall be binding upon and shall inure to the benefit of the successors, assigns, heirs, corporate parents, subsidiaries, and affiliates of each Party. No assignment or delegation of the obligations hereunder shall release the assigning Party from its obligations under this Consent Decree.

114. **Successors to Hackensack Riverkeeper, Inc.** In the event that Hackensack Riverkeeper, Inc. disbands or otherwise ceases operations, it shall assign its rights under this Consent Decree to another qualified nonprofit organization. A nonprofit organization shall be qualified for assignment under this Consent Decree if it is a charitable organization under Section 501(c)(3) of the Internal Revenue Code or its substantial equivalent and has an established record of working to enhance or preserve the ecology, natural habitat, or environment. Any such assignment shall be subject to approval by the Court and Honeywell shall have the right to object to any proposed assignment. Any successor organization shall have the duty to assign its rights under this Consent Decree to another qualified nonprofit organization in the event that the successor disbands or otherwise ceases operations. In the event that a successor is not appointed at any given time, the New Jersey Attorney General or equivalent officer shall appoint a successor subject to approval by the Court and objection by Honeywell.

115. **Reservation of Rights and Claims**. Except as set forth expressly herein, this Consent Decree does not affect in any way any of the Parties' claims or defenses against third parties who have not signed the Consent Decree.

116. **Governing Law and Continuing Jurisdiction.** The Court shall retain jurisdiction over the matters addressed in this Consent Decree for purposes of enabling the Parties to apply to the Court for any further order as may be necessary to construe, carry out, or enforce the terms of this Consent Decree. This Consent Decree shall be interpreted and enforced under the laws of

the United States and the State of New Jersey by the United States District Court for the District of New Jersey.

117. **Construction.** Questions regarding the interpretation of this Consent Decree shall not be resolved against any Party on the ground that this Consent Decree has been drafted by that Party. This Consent Decree is the result of review, negotiation, and compromise by each Party.

118. **Authority to Enter into Agreement.** The undersigned representative for each Party represents, certifies, and warrants that he or she is duly authorized by the Party whom he or she represents to enter into the terms of this Consent Decree and bind such Party legally to this Consent Decree.

119. **Measures to Effectuate This Consent Decree.** The Jersey City Entities and JCRA shall take all appropriate steps to ensure that this Consent Decree has been (and that actions required hereunder will be) duly considered, ratified, and approved. Such steps include consideration of this Consent Decree at a meeting of the City Council, open to the public, at which members of the public have the opportunity to comment on all aspects of the Settlement, including the commitments made by Jersey City; and consideration by and approval of the commissioners of the JCIA, JCMUA, and JCRA.

120. **Modifications.** This Consent Decree may be modified by mutual agreement of the Parties but such agreement must be in writing, duly and properly signed by all Parties, and shall be submitted to the Court for approval.

121. **Severability.** Each of the provisions in paragraph 60 of this Consent Decree shall be deemed severable and, in the event that one or more of such provisions is deemed invalid or unenforceable, it shall not affect the validity or enforceability of the other provisions of the Consent Decree.

122. **Signatures.** This Consent Decree may be signed simultaneously or in counterparts by the respective signatories, which shall be as fully valid and binding as if a single document was signed by all of the signatories. This Consent Decree may be signed electronically by any or all signatories, and such electronic signature shall be as fully valid and binding as a hand-written signature.

DEED NOTICE CONCERNING CONTROLS INSTALLED FOR CHROMIUM CONTAMINATION UNDERLYING THE PROPERTY

This Deed Notice is made as of the __ day of _____, 2017, by ***Bayfront Redevelopment LLC, whose post office address is 115 Tabor Road, Morris Plains, New Jersey 07950***. Owner shall mean Bayfront Redevelopment LLC together with its successors and assigns, including all successors in interest in the Property which is the subject of this Deed Notice as described fully below.

1. THE PROPERTY. Bayfront Redevelopment, LLC is the current owner in fee simple of certain real property designated as portions of ***Block 21901, Lots 9 and 10 on the tax map of the City of Jersey City, Hudson County, New Jersey[1].*** The New Jersey Department of Environmental Protection (NJDEP) Program Interest Number for the contaminated site which includes this property is ***Hudson County Chromate Site No. 087 PI # G000008710*** [NJDEP PI# for non-chromium-related contaminants at the Property is #745719]. The Property is also part of the as Site 087 pursuant to the First Amended Consent Decree Regarding the Remediation and Redevelopment of Study Area 6 North ("Consent Decree") which is attached hereto as Exhibit D and is entered as an order of the Court in the following consolidated actions *JCMUA v. Honeywell International*,

[1] All references to Block 21901 Lots 9 and 10 in this Deed Notice shall mean those portions of Block 21901 Lots 9 and 10 regardless of whether the word "portion(s)" is specifically called out or not.

Inc., D.N.J., Civ. No. 05-05955; *JCIA v. Honeywell International, Inc.*, D.N.J., Civ. No. 05-5993; and *Hackensack Riverkeeper, Inc. v. Honeywell International, Inc.*, D.N.J., Civ. No. 06-22. The Consent Decree restricts transfer, use and development of the Property. To the extent that there is any conflict or inconsistency between the terms of this Deed Notice and the terms of the Consent Decree, the Consent Decree shall govern.

2. REMEDIATION.

i. The Department's Bureau of State Case Management (BCM) is the entity within the Department that is responsible for the oversight of the remediation of the SA-6 North. The matter is Case No. Hudson County Chromate Site No. 087 PI# G000008710. The Department has approved this Deed Notice as an institutional control for the Property, which is part of the remediation of the Property.

ii. N.J.A.C. 7:26-C-7 requires the Owner, among other persons, to obtain a soil remedial action permit for the soil remedial action at the Property. That permit will contain the monitoring, maintenance and biennial certification requirements that apply to the Property.

3. SOIL AND GROUNDWATER CONTAMINATION. Honeywell International Inc. ("Honeywell") a corporation of the State of Delaware, licensed to do business in the State of New Jersey whose post office address is 115 Tabor Road, Morris Plains, New Jersey 07950, has remediated the Property to address chromium-related soil and shallow groundwater contamination. The Remedial Action Work Plan (RAWP) was approved by the Department on February 19, 2009 for Hudson County Chromate Site Nos. 087 and 088, which included portions of the Property. Remedial actions were further approved pursuant to the Consent Decree. Under both the Consent Decree and the RAWP soil contamination remains in the Property which contains contaminants in concentrations that do not allow for the unrestricted use of the Property.

Deed Notice #7 is the in-situ treatment area 10 (TA-10) located immediately north of the SA-6 North Open Space Area hydraulic barrier and overlies a section of the 72-inch force main. Due to the proximity of the force main, excavation of impacted soils in TA-10 is technically impracticable. Therefore, Honeywell implemented an in-situ treatment in this area in lieu of excavation. A portion of this area, subarea TA-10-1, is still under in-situ treatment and post-remedy soil sampling. This area is approximately 800 square feet. The remainder of the TA-10, the portion of subarea TA-10-1 that lies south of the northern curbline of the future Stegman Boulevard and subareas TA-10-2 and TA-10-3, will be capped by Stegman Boulevard and is an approximately 7,600 square foot area. Deed Notice Area #7 is comprised of two tracts of land; Tract 1 is south of the northern curbline of the future Stegman Boulevard and Tract 2 is north of this curbline and is the portion of TA-10 where in-situ treatment was implemented. Once the remedial objectives for soils are met in Tract 2, the Tract 2 portion of Deed Notice #7 will be terminated. Additionally, the existing Conservation Restriction for the SA-6 North Open Space Area will be expanded to encompass the Tract 1 portion of the Deed Notice Area #7. Because of its proximity to the SA-6 North Open Space Area, this area could be incidentally impacted by Open Space Development, therefore, some provisions of the LTMP may apply and on-site oversight during Open Space Development may be appropriate.

The soil contamination is described, including the type, concentration and specific location of such contaminants, in Exhibit B, which is attached hereto and made a part hereof. As a result of the contamination, there is a statutory requirement for this Deed Notice and engineering controls in accordance with N.J.S.A. 58:10B-13. Under the terms of the Consent Decree and this Deed Notice, Honeywell is responsible for monitoring and maintaining the soil remediation for the Property in perpetuity or until remediation is implemented that renders this Deed Notice unnecessary.

4. CONSIDERATION. In accordance with the Department's approval of the chromium RAWP for the remediation for the Hudson County Chromate Site Nos. 087 and 088 which includes the Property, and in consideration of the terms and conditions of that approval, and in accordance with the Consent Decree, and other good and valuable considerations, Owner has agreed to subject the Property to certain statutory and regulatory requirements which impose restrictions upon the use of the Property, to restrict certain uses of the Property, and to provide notice to subsequent owners, lessees and operators of the restrictions and the monitoring, maintenance, and biennial certification requirements outlined in this Deed Notice and required by law, as set forth herein.

5A. RESTRICTED AREAS. Due to the presence of these contaminants, Owner has agreed, as part of the remedial action for the Property, to restrict the use of the Property (the "Restricted Areas"); a narrative description of these restrictions, along with the associated monitoring and maintenance activities and the biennial certification requirements are provided in Exhibit C, which is attached hereto and made a part hereof. Owner has also agreed to maintain a list of these restrictions on site for inspection by governmental enforcement officials.

5B. RESTRICTED LAND USES. The following statutory land use restrictions apply to the Restricted Areas:

i. The Brownfield and Contaminated Site Remediation Act, N.J.S.A. 58:10B-12.g(10), prohibits the conversion of a contaminated site, remediated to non-residential soil remediation standards that require the maintenance of engineering or institutional controls, to a child care facility, or public, private, or charter school without the Department's prior written approval, unless a presumptive remedy is implemented; and

ii. The Brownfield and Contaminated Site Remediation Act, N.J.S.A. 58:10B-12.g(12), prohibits the conversion of a landfill, with gas venting systems and or leachate collection systems, to a single family residence or a child care facility without the Department's prior written approval.

5C. ENGINEERING CONTROLS. Due to the presence and concentration of these contaminants, the Owner has also agreed, as part of the remedial action for the Property, to the placement of certain engineering controls on the Property. A narrative description of these engineering controls, along with the associated monitoring and maintenance activities and the biennial certification requirements are provided in Exhibit C. Honeywell shall be responsible for monitoring and maintenance of engineering controls and biennial certification requirements as specified in Paragraphs 8A and 8B.

5D. LONG TERM MONITORING PLAN. Honeywell has prepared a Long Term Monitoring Plan (LTMP) which sets forth requirements for monitoring of the chromium remedial measures including engineering controls within the Property and shallow groundwater, and requirements for

notification and reporting pursuant to the Consent Decree, Deed Notice and Soil Remedial Action Permit. A copy of the LTMP is maintained by Honeywell at 115 Mount Tabor Road, Morris Plains, NJ 07950. This Deed Notice is appended to the LTMP.

6A. CHANGE IN OWNERSHIP AND REZONING.

i. The Owner and the subsequent owners and lessees, shall cause all leases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring all holders thereof to take the Property subject to the restrictions contained herein and to comply with all, and not to violate any of the conditions of this Deed Notice. Nothing contained in this Paragraph shall be construed as limiting any obligation of any person to provide any notice required by any law, regulation, or order of any governmental authority.

ii. The Owner and the subsequent owners shall provide written notice to the Department of Environmental Protection on a form provided by the Department and available at www.nj.gov/srp/forms within thirty (30) calendar days after the effective date of any conveyance, grant, gift, or other transfer, in whole or in part, of the owner's interest in the Restricted Area.

iii. The Owner and the subsequent owners shall provide written notice to the Department, on a form available from the Department at www.nj.gov/srp/forms, within thirty (30) calendar days after the owner's petition for or filing of any document initiating a rezoning of the Property to residential.

6B. SUCCESSORS AND ASSIGNS. This Deed Notice shall be binding upon Owner and upon Owner's successors and assigns, and subsequent owners, lessees and operators while each is an owner, lessee, or operator of the Property.

7A. ALTERATIONS, IMPROVEMENTS, AND DISTURBANCES.

i. The Owner and all subsequent owners and lessees shall notify any person of whom it has knowledge, including, without limitation, tenants, employees of tenants, and contractors, intending to conduct invasive work or excavate within the Restricted Areas, of the nature and location of known contamination in the Restricted Areas, and, of the precautions necessary to protect the engineering controls and minimize potential human exposure to contaminants.

ii. Except as provided in the Consent Decree and Paragraph 7B, below, no person shall make, or allow to be made, any alteration, improvement, or disturbance in, to, or about the Property which disturbs any engineering control at the Property except as (a) permitted in the Consent Decree and (b) without first obtaining the express written consent of the Department. Nothing herein shall constitute a waiver of the obligation of any person to comply with all applicable laws and regulations including, without limitation, the applicable rules of the Occupational Safety and Health Administration. To request the consent of the Department of Environmental Protection, contact:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413

iii. Notwithstanding subparagraph 7A.ii., above, a Soil Remedial Action Permit modification is not required for any alteration, improvement, or disturbance provided that:

(A) Takes such action in conformance with the Consent Decree; and

(B) Notifies the Department of Environmental Protection of the activity by calling the DEP Hotline, at 1-877-WARN-DEP or 1-877-927-6337, within twenty-four (24) hours after the beginning of each alteration, improvement, or disturbance; and

(C) Notifies Honeywell of the activity by calling 855-727-2658; and

(D) Honeywell and/or the owner, lessee or operator restores any disturbance of an engineering control to pre-disturbance conditions within sixty (60) calendar days after the initiation of the alteration, improvement or disturbance; and

(E) Ensures that all applicable worker health and safety laws and regulations are followed during the alteration, improvement, or disturbance, and during the restoration; and

(F) Ensures that human exposure to contamination in excess of the applicable remediation standards does not occur; and

(G) The next biennial certification includes a description of the nature of the alteration, improvement, or disturbance, the dates and duration of the alteration, improvement, or disturbance, the name of key individuals and their affiliations conducting the alteration, improvement, or disturbance, a description of the notice the Owner gave to those persons prior to the disturbance, the amounts of soil generated for disposal, if any, the final disposition and any precautions taken to prevent exposure.

7B. EMERGENCIES. In the event of an emergency which presents, or may present, an unacceptable risk to the public health and safety, or to the environment, or immediate environmental concern, see N.J.S.A. 58:10C-2, any person may temporarily breach an engineering control provided that that person complies with each of the following:

i. Immediately notifies the Department of Environmental Protection of the emergency, by calling the DEP Hotline at 1-877-WARNDEP or 1-877-927-6337;

ii. Immediately notifies Honeywell of the emergency by calling 855-727-2658;

iii. Limits both the actual disturbance and the time needed for the disturbance to the minimum reasonably necessary to adequately respond to the emergency;

iv. Implements all measures necessary to limit actual or potential, present or future risk of exposure to humans or the environment to the contamination;

v. Notifies the Department of Environmental Protection when the emergency has ended by calling the DEP Hotline at 1-877-WARNDEP or 1-877-927-6337;

vi. Notifies Honeywell when the emergency has ended by calling 855-727-2658; and

vii. Honeywell restores the engineering control to the pre-emergency conditions as soon as possible, and provides a written report to the Department of Environmental Protection of such emergency and restoration efforts within sixty (60) calendar days after completion of the restoration of the engineering control. The report must include all information pertinent to the emergency, potential discharges of contaminants, and restoration measures that were implemented, which, at a minimum, should specify: (a) the nature and likely cause of the emergency, (b) the potential discharges of or exposures to contaminants, if any, that may have occurred, (c) the measures that have been taken to mitigate the effects of the emergency on human health and the environment, (d) the measures completed or implemented to restore the engineering control, and (e) the changes to the engineering control or site operation and maintenance plan to prevent recurrence of such conditions in the future. Honeywell shall submit the report to:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413

8A. MONITORING AND MAINTENANCE OF DEED NOTICE, AND PROTECTIVENESS CERTIFICATION. The persons in any way responsible, pursuant to the Spill Compensation and Control Act, N.J.S.A. 58:10-23.11a et seq., for the hazardous substances that remain at the Property, the persons responsible for conducting the remediation, Honeywell, the Owner, and the subsequent owners, lessees, and operators, shall monitor and maintain this Deed Notice. The subsequent owners, lessees and operators have this obligation only during their ownership, tenancy, or operation. Honeywell shall certify to the Department on a biennial basis that the remedial action that includes this Deed Notice remains protective of the public health and safety and of the environment. The specific obligations to monitor and maintain the deed notice shall include all of the following:

i. Monitoring and maintaining this Deed Notice according to the requirements in Exhibit C, to ensure that the remedial action that includes the Deed Notice continues to be protective of the public health and safety and of the environment;

ii. Conducting any additional remedial investigations and implementing any additional remedial actions, that are necessary to correct, mitigate, or abate each problem related to the protectiveness of the remedial action for the Property prior to the date that the certification is due to the Department pursuant to iii, below, in order to ensure that the remedial action that includes this Deed Notice remains protective of the public health and safety and of the environment.

iii. Certify to the Department of Environmental Protection as to the continued protectiveness of the remedial action that includes this Deed Notice, on a form provided by the Department and consistent with N.J.A.C. 7:26C-1.2 (a)1, every two years on the anniversary of the date stamped on the Deed Notice that indicates when the Deed Notice was recorded.

8B. MONITORING AND MAINTENANCE OF ENGINEERING CONTROLS, AND PROTECTIVENESS CERTIFICATION. Honeywell shall maintain all engineering controls at the Property and certify to the Department on a biennial basis that the remedial action of which each engineering control is a part remains protective of the public health and safety and of the environment. The specific obligations to monitor and maintain the engineering controls shall include the following:

i. Monitoring and maintaining each engineering control according to the requirements in Exhibit C, to ensure that the remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment;

ii. Conducting any additional remedial investigations and implementing any additional remedial actions, that are necessary to correct, mitigate, or abate each problem related to the protectiveness of the remedial action for the Property prior to the date that the certification is due to the Department pursuant to iii, below, in order to ensure that the remedial action that includes the engineering control remains protective of the public health and safety and of the environment.

iii. Certify to the Department of Environmental Protection as to the continued protectiveness of the remedial action that includes the engineering control, on a form provided by the Department and consistent with N.J.A.C. 7:26C-1.2 (a)1, every two years on the anniversary of the date stamped on the Deed Notice that indicates when the Deed Notice was recorded.

9. ACCESS. The Owner agrees to allow the Department, its agents and representatives access to the Property to inspect and evaluate the continued protectiveness of the remedial action that includes this Deed Notice and to conduct additional remediation to ensure the protection of the public health and safety and of the environment if the persons responsible for monitoring the protectiveness of the remedial action, as described in Paragraph 8, above, fail to conduct such remediation pursuant to this Deed Notice as required by law. The Owner, and the subsequent owners and lessees, shall also cause all leases, subleases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring that all holders thereof provide such access to the Department.

10. NOTICES.

i. Owner shall cause all leases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring all holders thereof to take the Property subject to the restrictions contained herein and to comply with all, and not to violate any of the conditions of this Deed Notice. Nothing contained in this Paragraph shall be construed as limiting any obligation of any person to provide any notice required by any law, regulation, or order of any governmental authority.

ii. Owner shall notify any person intending to conduct invasive work or excavate within the Property on its behalf of the nature and location of contamination and, of the precautions necessary to minimize potential human exposure to contaminants.

iii. Owner shall provide written notice to the Department of Environmental Protection at least thirty (30) calendar days before the effective date of any conveyance, grant, gift, or other transfer, in whole or in part, of the owner's interest in the Restricted Area. Any such conveyance, grant or gift must be consistent with the terms of the Consent Decree.

iv. Owner shall provide written notice to the Department within thirty (30) calendar days following the Owner's receiving notice of any petition for a rezoning of the Property. Any such rezoning must be consistent with the terms of the Consent Decree. The Owner shall submit the written notice to:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413.

11. ENFORCEMENT OF VIOLATIONS.

i. This Deed Notice itself is not intended to create any interest in real estate in favor of the Department of Environmental Protection, nor to create a lien against the Property, but merely is intended to provide notice of certain conditions and restrictions on the Property and to reflect the regulatory and statutory obligations imposed as a conditional remedial action for this Property.

ii. The restrictions provided herein may be enforceable by the Department against any person who violates this Deed Notice. To enforce violations of this Deed Notice, the Department may initiate one or more enforcement actions pursuant to N.J.S.A. 58:10-23.11, and N.J.S.A. 58:10C, and require additional remediation and assess damages pursuant to N.J.S.A. 58:10-23.11, and N.J.S.A. 58:10C.

12. SEVERABILITY. If any court of competent jurisdiction determines that any provision of this Deed Notice requires modification, such provision shall be deemed to have been modified automatically to conform to such requirements. If a court of competent jurisdiction determines that any provision of this Deed Notice is invalid or unenforceable and the provision is of such a nature

that it cannot be modified, the provision shall be deemed deleted from this instrument as if the provision had never been included herein. In either case, the remaining provisions of this Deed Notice shall remain in full force and effect.

13. MODIFICATION AND TERMINATION.

i. Any person may request in writing, at any time, that the Department modify this Deed Notice where performance of subsequent remedial actions, a change of conditions at the Property, or the adoption of revised remediation standards suggest that modification of the Deed Notice would be appropriate.

ii. Any person may request in writing, at any time, that the Department terminate this Deed Notice because the conditions which triggered the need for this Deed Notice are no longer applicable.

iii. Any person seeking a modification or termination of this Deed Notice must also have such modification approved by the United States District Court for the District of New Jersey pursuant to the Consent Decree until such time as the Consent Decree terminates with regard to the Property pursuant to the Consent Decree.

iv. This Deed Notice may be revised or terminated only upon filing of an instrument, executed by the Department, in the office of the Hudson County Register, New Jersey, expressly modifying or terminating this Deed Notice.

v. Within thirty (30) calendar days after the filing of a Termination of Deed Notice, the owner of the property shall apply to the Department for termination of the soil remedial action permit pursuant to N.J.A.C. 7:26C-7.

14A. EXHIBIT A. Exhibit A includes the following maps of the Property and the vicinity:

i. Exhibit A-1: Vicinity Map - A map that identifies by name the roads, and other important geographical features in the vicinity of the Property;

ii. Exhibit A-2: Metes and Bounds Description - A metes and bounds description of the Property, including reference to tax lot and block numbers for the Property and a Tax Map;

iii. Exhibit A-3: Property Map - A scaled map of the Property, scaled at one inch to 200 feet or less, and if more than one map is submitted, the maps shall be presented as overlays, keyed to a base map; the map(s) shall include diagrams of major surface topographical features such as buildings, roads, and parking lots.

14B. EXHIBIT B. Exhibit B includes the following descriptions of the Restricted Areas:

i. Exhibit B-1: Restricted Area Map - Maps for the Property that include, as applicable:

(A) As-built diagrams of each engineering control, including caps, fences, slurry walls, ground water monitoring wells, and ground water pumping system;

(B) As-built diagrams of any buildings, roads, parking lots and other structures that function as engineering controls; and

(C) Designation of all soil and/or sediment sample locations within the restricted areas that exceed any soil or sediment standard that are keyed into one of the tables described below.

ii. Exhibit B-2 (Table B-2): Restricted Area Data Tables - Table for the Property that includes:

(A) Sample location designation from Restricted Area maps (Exhibit B-1);

(B) Sample elevation based upon mean sea level;

(C) Name and chemical abstract service registry number of each contaminant with a concentration that exceeds the unrestricted use standard;

(D) The restricted and unrestricted use standards for each contaminant in the table; and

(E) The remaining concentration of each contaminant at each sample location at each elevation (or if historic fill, include data from the Department's default concentrations at N.J.A.C. 7:26E-4.6, Table 4-2).

14C. EXHIBIT C. Exhibit C includes narrative descriptions of the institutional controls and engineering controls as follows:

i. Exhibit C-1A through C-1C. Exhibit C-1-A: Deed Notice as Institutional Control; Exhibit C-1-B: Consent Decree as Institutional Control; and Exhibit C-1C Zoning as Institutional Control: Exhibit C-1 includes a narrative description of the restrictions and obligations of this Deed Notice that are in addition to those described above, as follows:

(A) General Description of the Institutional Control:
(1) Description and estimated size of the Restricted Areas as described above;
(2) Description of the restrictions on the Property by operation of this Deed Notice and the other Institutional Controls; and
(3) The objective of the restrictions;

(B) Description of the monitoring necessary to determine whether:
(1) Any disturbances of the soil in the Restricted Areas did not result in the unacceptable exposure to the soil contamination;
(2) There have been any land use changes subsequent to the filing of this Deed Notice and the other Institutional Controls or the most recent biennial certification, whichever is more recent;
(3) The current land use on the Property is consistent with the restrictions in this Deed Notice and the other Institutional Controls;

(4) Any newly promulgated or modified requirements of applicable regulations or laws apply to the Property; and
(5) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice and the other Institutional Controls, and conduct the necessary sampling; and

(C) Description of the following items that will be included in the biennial certification:
(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice and the other Institutional Controls;
(2) Land use at the Property is consistent with the restrictions in this Deed Notice and the other Institutional Controls; and
(3) The remedial action that includes this Deed Notice and the other Institutional Controls continues to be protective of the public health and safety and of the environment.

ii. Exhibit C-2. Exhibit C-2: Engineering Controls: Asphalt Cover;

Exhibit C-2 includes a narrative description of the engineering controls as follows:

(A) General Description of the engineering control:
(1) Description of the engineering control;
(2) The objective of the engineering control; and
(3) How the engineering control is intended to function.

(B) Description of the operation and maintenance necessary to ensure that:
(1) Periodic inspections of each engineering control are performed in order to determine its integrity, operability, and effectiveness;
(2) Each engineering control continues as designed and intended to protect the public health and safety and the environment;
(3) Each alteration, excavation or disturbance of any engineering control is timely and appropriately addressed to maintain the integrity of the engineering control;
(4) The engineering control is being inspected and maintained and its integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment;
(5) A record of the self-inspection dates, name of the inspector, results of the inspection and condition(s) of the engineering control. Sampling, for example, may be necessary if it is not possible to visually evaluate the integrity/performance of the engineering control; and
(6) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) The engineering control continues to operate as designed; and

(3) The remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment.

DESCRIPTION OF PROPERTY
CITY OF JERSEY CITY
HUDSON COUNTY, NEW JERSEY
PROJECT NO. 10000292C

DEED NOTICE AREA 7
BLOCK 21901 LOTS 9 AND 10
MAY 18, 2016
REVISED: DECEMBER 7, 2016

All that certain lot, tract or parcel of land situate lying and being in the City of Jersey, in the County of Hudson and State of New Jersey, and being a portion of Lots 9 and 10 Block 21901, designated as Deed Notice Area 7 as shown on an exhibit entitled, "Deed Notice Area 7, SA6 North, Block 21901, Lots 9 And 10, City of Jersey City, Hudson County, New Jersey," prepared by Maser Consulting P.A., dated April 12, 2016, revised December 7, 2016 and being more particularly bounded and described as follows, to wit:

TRACT I:

COMENCING at the intersection of the westerly line of Lots 8 and 10, in Block 21901 with the division line between said lots as shown on the aforesaid exhibit; thence-

A. **S59° 39'05"E, 176.32 feet**, along said division line to the intersection of the same with the third course of an area designated as Deed Notice Area 5; thence-

Running along the westerly and northerly lines of said Deed Notice Area 5, the following ten (10) courses:

B. **N28° 37' 00"E, 19.46 feet**; thence-
C. **N30° 01' 01"E, 48.06 feet**; thence -
D. **N19° 17' 57"W, 17.97 feet**; thence –
E. **N31° 55' 37"E, 23.15 feet**; thence –
F. **N76° 06' 19"E, 18.87 feet**; thence –
G. **N29° 16' 27"E, 36.41 feet**; thence –
H. **S65° 27' 42"E, 153.93 feet**, through said Lot 10 and beyond, to a point in Lot 9; thence –

Running through said Lot 9 the following three (3) courses:

I. **N24° 46' 55"E, 9.39 feet**; thence -
J. **S63° 20' 43"E, 154.05 feet**; thence –
K. **S64° 10' 53"E, 3.13 feet**, to the True Point of **BEGINNING**, and running; thence-

Continuing through said Lot 9 the following thirteen (13) courses:

1. **N89° 06' 30"E, 10.85 feet**; thence-

2. **S71° 33' 46"E, 49.04 feet**; thence-

3. **N64° 44' 16"E, 48.64 feet**; thence -

4. **S71° 27' 06"E, 29.23 feet**; thence –

5. **S20° 45' 38"W, 20.55 feet** ; thence –
6. **S06° 10' 50"W, 25.40 feet**; thence –
7. **S43° 02' 17"E, 20.42 feet**; thence –
8. **S75° 55' 23"E, 91.65 feet**; thence -
9. **N69° 31' 56"E, 18.75 feet**; thence –
10. **S73° 19' 46"E, 15.58 feet**; thence –
11. **S31° 22' 02"E, 27.50 feet**; thence –
12. **S63° 54' 38"E, 73.11 feet** to a point in Lot 10; thence –
13. **S53° 29' 05"E, 36.52 feet,** through Lot 10 to a point in the sixteenth (16th) course of the aforesaid Deed Notice Area 5; thence-

Running along the northerly line of said Deed Notice Area 5, the following five (5) courses:

14. **S21° 49' 22"W, 2.06 feet**; thence-
15. **S17° 56' 34"W, 11.36 feet**; thence-
16. **N63° 47' 42"W, 79.47 feet,** thence -
17. **N64° 26' 24"W, 187.04 feet,** thence –
18. **N64° 10' 53"W, 132.62 feet** to the Point and Place of BEGINNING.

CONTAINING: 7,594 S.F. of land more or less or 0.174 acres of land more or less.

TRACT II:

COMENCING at the intersection of the westerly line of Lots 8 and 10, in Block 21901 with the division line between said lots as shown on the aforesaid exhibit; thence-

A. **S59° 39'05"E, 176.32 feet**, along said division line to the intersection of the same with the third course of an area designated as Deed Notice Area 5; thence-

Running along the westerly and northerly lines of said Deed Notice Area 5, the following thirteen (13) courses:

B. **N28° 37' 00"E, 19.46 feet**; thence-
C. **N30° 01' 01"E, 48.06 feet**; thence -
D. **N19° 17' 57"W, 17.97 feet**; thence –
E. **N31° 55' 37"E, 23.15 feet**; thence –
F. **N76° 06' 19"E, 18.87 feet**; thence –
G. **N29° 16' 27"E, 36.41 feet**; thence –
H. **S65° 27' 42"E, 153.93 feet**, through said Lot 10 and beyond, to a point in Lot 9; thence –

Running through said Lot 9 the following six (6) courses:

I. **N24° 46' 55"E, 9.39 feet**; thence -
J. **S63° 20' 43"E, 154.05 feet**; thence –
K. **S64° 10' 53"E, 3.13 feet**; thence –
L. **N89° 06' 30"E, 10.85 feet**; thence-
M. **S71° 33' 46"E, 49.04 feet**; thence-
N. **N64° 44' 16"E, 48.64 feet**, to the 4th corner of Tract I, as described herein, and True Point of **BEGINNING**, and running; thence-

Continuing through said Lot 9 the following five (5) courses:

19. **N64° 44' 16"E, 2.98 feet**; thence –

20. **S06° 31' 46"E, 21.50 feet**; thence –

21. **S79° 41' 26"E, 32.97 feet**; thence –

22. **S20° 45' 38"W, 27.84 feet** ; thence –

23. **S71° 27' 06"E, 29.23 feet** to the Point and Place of **BEGINNING**.

CONTAINING: 762 S.F. of land more or less or 0.017 acres of land more or less.

Exhibit B-1 Restricted Area Map includes Exhibit B-1 (Restricted Area and Soil Sample Locations).

Exhibit B-2 is a Restricted Area Data Table indicating soil sample locations with concentrations remaining above the NJDEP Chromium Policy.

Restricted Area Map Notes:

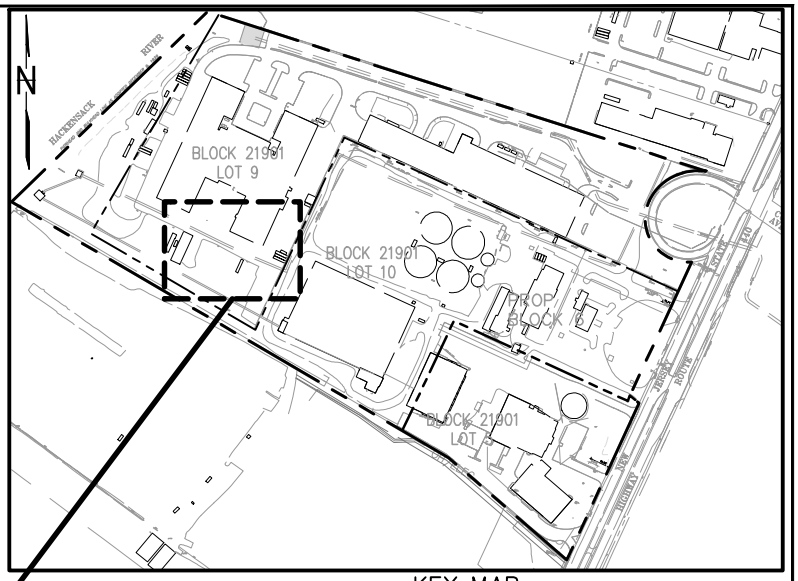

Exhibit B-1 indicates engineering controls chromium remedy components. For soils with hexavalent chromium concentrations above 20 mg/kg, the engineering control is 12 feet of clean soil and an asphalt cap.

Deed Notice #7 TA-10

C-1 Institutional Controls
C-2 Engineering Controls
Portions of Block 21901, Lots 9 and 10
City of Jersey City, New Jersey

C-1 Institutional Controls

C-1 Deed Notice, Consent Decree, Zoning as Institutional Controls: Exhibit C-1 (A through C) for portions of Block 21901, Lots 9 and 10, City of Jersey City, New Jersey known as the TA-10 Area

Exhibits C-1A through C-1C. Exhibit C-1-A: Deed Notice as Institutional Control; Exhibit C-1-B: Consent Decree as Institutional Control; Exhibit C-1C Zoning as Institutional Control: Exhibits C-1A through C-1C include a narrative description of the restrictions and obligations of this Deed Notice and the other Institutional Controls that are in addition to those described above, as follows:

(A) General Description of the Institutional Control:

(1) Description and estimated size of the Restricted Areas as described above;

The Property constitutes portions of Block 21901, Lots 9 and 10. The estimated size of the Area containing chromium-impacted soils (hexavalent chromium above 20 mg/kg) is identified on Exhibit B-1 is estimated at approximately 8,400 square feet or approximately 0.19 acres.

(2) Description of the restrictions on the Property by operation of the Institutional Control;

The Property shall only be used for activities consistent with this Deed Notice, the Consent Decree, including, but not limited to, Paragraphs 60(j) and 60(k) of the Consent Decree, and the applicable zoning standards. Intrusive activities (i.e., excavation or digging) that breach the engineering controls (as described in Exhibit C-2) will not be permitted on the Property except in compliance with the terms of the Consent Decree, and this Deed Notice. See Deed Notice for additional information; subsections 7A Alterations, Improvements, Disturbances, and 7B, Emergencies.

(3) The objective of the restrictions;

The restrictions will prohibit contact with soils above the NJDEP Soil Cleanup Criteria for hexavalent chromium.

(B) Description of the monitoring necessary to determine whether:

(1) Any disturbances of the soil in the Restricted Areas did not result in the unacceptable exposure to the soil contamination;

Visual inspections of the Property and other monitoring as set forth in the Consent Decree.

(2) There have been any land use changes subsequent to the filing of this Deed Notice or the most recent biennial certification, whichever is more recent;

Same as (B)(1).

(3) The current land use on the Property is consistent with the restrictions in this Deed Notice;

Same as (B)(1).

(4) Any newly promulgated or modified requirements of applicable regulations or laws apply to the site; and

Review of newly promulgated or modified requirements of applicable regulations or laws that potentially may apply to the site.

(5) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

Same as (B)(4).

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) Land use at the Property is consistent with the restrictions in the Consent Decree, this Deed Notice, the applicable zoning standards; and

(3) The remedial action that includes this Deed Notice continues to be protective of the public health and safety and of the environment.

The monitoring report will be included in the biennial certification. Components of the monitoring report will include the following:

- ***A report of all conditions set forth in sections (A) and (B) above to assure that they have been adhered to, including evaluation of any available documents as a result of changes in land use or incidents.***
- ***A report that determines whether or not the land use at the Property has remained consistent with the restrictions in the Consent Decree, this Deed Notice,* and *the applicable zoning standards.***
- ***A report that determines whether or not the Deed Notice continues to be protective of the public health and safety and the environment.***

C-2 Engineering Controls
Deed Notice #7 TA-10

Portions of Block 21901, Lots 9 and 10
City of Jersey City, New Jersey

Exhibits C-2A through C: Narrative description of the Engineering Controls including Clean Fill as follows:

(A) General Description of the engineering controls:

(1) Description of the engineering controls;

The Engineering Control consists of 12 feet of clean soil and an asphalt cap.

(2) The objective of the engineering controls; and

The objective of the controls is to prevent contact with soils above the NJDEP Chromium Policy for hexavalent chromium.

(3) How the engineering controls are intended to function.

The soil engineering controls are intended to function as a barrier to underlying and adjacent soils that exceed the NJDEP Chromium Policy Criteria within the Property.

(B) Description of the operation and maintenance necessary to ensure that:

(1) Periodic inspections of each engineering control are performed in order to determine its integrity, operability, and effectiveness;

Honeywell will perform monitoring by visual inspection of the Property pursuant to the Consent Decree.

(2) Each engineering control continues as designed and intended to protect the public health and safety and the environment;

Same as (B)(1) above.

(3) Each alteration, excavation or disturbance of any engineering control is timely and appropriately addressed to maintain the integrity of the engineering controls;

Same as (B)(1) above. Also, see the Consent Decree and the Deed Notice for additional information: subsections 7A Alterations, Improvements, Disturbances, and 7B Emergencies.

(4) The engineering controls are being inspected and maintained and their integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment;

Same as (B)(1) above.

(5) A record of the self-inspection dates, name of the inspector, results of the inspection and condition(s) of the engineering controls. Sampling, for example, may be necessary if it is not possible to visually evaluate the integrity/performance of the engineering controls; and

Records of the inspections are to be maintained as listed in (5).

(6) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

A review of any new standards, regulations, or laws will be conducted. Should the review indicate that other activities are necessary, those activities will be listed and executed.

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) The engineering controls continues to operate as designed; and

(3) The remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment.

The monitoring report will be included in the biennial certification. Components of the monitoring report will include the following:

- ***A report of all conditions set forth in sections (A) and (B) above to assure that they have been adhered to, including an evaluation to determine whether or not the engineering controls are continuing to meet the original objective and intended function.***
- ***A report to determine whether or not the engineering controls continue to operate as designed.***
- ***A report to determine whether or not the engineering controls continue to be protective of the public health and safety and of the environment***

RECITALS

Whereas, on June 30, 2003, the district court for the District of New Jersey issued a Final Judgment in *Interfaith Community Organization v. Honeywell International Inc.*, Civ. No. 95-2097 (DMC) ("*ICO v. Honeywell*"), ordering the remediation of an area designated by the New Jersey Department of Environmental Protection ("NJDEP") as Study Area 7 by excavation of all chromium contamination on the property, under the oversight of a court-appointed Special Master;

Whereas, on or about December 23, 2005, the Jersey City Municipal Utilities Authority ("JCMUA") filed litigation styled *Jersey City Municipal Utilities Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5955 (DMC), bringing claims against Honeywell International Inc. ("Honeywell") under, *inter alia*, Section 6972 of the Resource Conservation and Recovery Act ("RCRA"), and seeking remediation of chromium contamination on property owned by JCMUA and other relief;

Whereas, on or about December 28, 2005, the Jersey City Incinerator Authority ("JCIA") filed litigation styled *Jersey City Incinerator Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5993 (DMC), bringing claims against Honeywell under, *inter alia*, Section 6972 of RCRA, and seeking remediation of chromium contamination on property owned by JCIA and other relief;

Whereas, on or about January 4, 2006, the Hackensack Riverkeeper, Inc., Captain William Sheehan, Reverend Winston Clarke, and Lawrence Baker ("Riverkeeper") filed litigation styled *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.,* D.N.J., Civ. No. 06-022 (DMC), bringing a claim against Honeywell under RCRA and seeking remediation of chromium contamination to soils, groundwater, surface waters, and sediments associated with various properties collectively designated by NJDEP as Study Areas 5, 6 North, and 6 South;

Whereas, Study Areas 6 North and South are directly adjacent to Study Area 7 on the north and south sides, respectively;

Whereas, Study Area 5 is comprised of properties to the east of Study Areas 6 North, 6 South, and 7 across Route 440;

Whereas, the property owned by JCIA and JCMUA and collectively the subject of *JCMUA v. Honeywell* and *JCIA v. Honeywell* comprises a part of Study Area 6 North;

Whereas, the City of Jersey City ("Jersey City") also owns property that comprises a part of Study Area 6 North;

Whereas, Riverkeeper also named as defendants in *Riverkeeper v. Honeywell* Jersey City, JCMUA, and JCIA (collectively the "Jersey City Entities");

Whereas, the Jersey City Entities and Honeywell also asserted cross-claims against each other in *Riverkeeper v. Honeywell*;

Whereas, *JCMUA v. Honeywell*, *JCIA v. Honeywell,* and *Riverkeeper v. Honeywell* were consolidated by the United States District Court for the District of New Jersey (hereinafter the "Consolidated Litigation");

Whereas, in the Consolidated Litigation, the Jersey City Entities and Riverkeeper have alleged that Honeywell bears responsibility for the presence and remediation of chromite ore processing residue ("COPR") and chromium in soils and groundwater on the Study Area 6 North property;

Whereas, in the Consolidated Litigation, Honeywell has alleged that the Jersey City Entities bear full responsibility for lead and other contamination on the Study Area 6 North property, and also bear an equitable share of liability for the presence and remediation of COPR and chromium in soils and groundwater on the Study Area 6 North property and for chromium and other contamination in Hackensack River sediments in the vicinity of Study Area 6 North;

Whereas, on October 9, 2007, Honeywell and Riverkeeper submitted the Consent Order on Sediment Remediation and Financial Assurances ("Sediment Consent Order"), resolving issues related to the remediation of chromium contaminated sediments in the Hackensack River in the vicinity of Study Areas 5, 6, and 7;

Whereas, the Parties to this Consent Decree each believe that it is in their mutual interest to move forward productively to resolve their differences so that they can implement environmental remediation at Study Area 6 North that ensures the continued protection of human health and the environment and so that Study Area 6 and Study Area 7 can be redeveloped in keeping with Jersey City's vision for a revitalized West Side;

Whereas, the Local Redevelopment and Housing Law, N.J.S.A. 40A:12A-1, *et seq*., as amended and supplemented (the "Redevelopment Law") provides for municipalities to participate in the redevelopment and improvement of areas in need of redevelopment;

Whereas, the portions of Study Area 6 and Study Area 7 (i) which are owned by the Jersey City Entities, (ii) which are owned by Honeywell, (iii) as to which Honeywell has a purchase and sale agreement with the current owner, or (iv) which hereafter will be acquired by a Jersey City Entity and/or Honeywell are parcels which by ordinance adopted by the City Council of Jersey City on February 27, 2008, have been determined to be "areas in need of redevelopment" under the criteria of the Redevelopment Law because of conditions prevalent on those parcels;

Whereas, the settlement which is the subject matter of this Consent Decree contemplates the environmental remediation of Study Area 6 North and redevelopment of the parcels that comprise Study Areas 6 and 7 to create a major mixed use project in an important section of Jersey City;

Whereas, each of the actions to implement this Consent Decree have been fully considered by the Parties as a means to accomplish the aforesaid purposes of this settlement;

Whereas, the consent of each of the Jersey City Entities to this Consent Decree was considered at a duly noticed and appropriate meeting of their respective governing bodies, open to the public, at which members of the public were provided an opportunity to comment on all aspects of the settlement, including, without limitation, the commitments made by the Jersey City Entities herein; and

Whereas, Honeywell and the Jersey City Entities are settling their claims, cross-claims, or counter-claims in the Consolidated Litigation against each other in the *Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc.* (hereafter "Jersey City/Honeywell Consent Order"), filed in the Consolidated Litigation simultaneously with this Consent Decree and attached as Exhibit A to this Consent Decree:

NOW, THEREFORE, IT IS HEREBY ORDERED AND DECREED AS FOLLOWS:

ARTICLE I: DEFINITIONS

For purposes of this Consent Decree, the following terms shall have the meanings set forth in this Article:

1. **AOC 1** shall mean that area of Study Area 6 North in which the hexavalent chromium concentration in the top 20 feet of soil below existing ground surfaces exceeds concentrations of 20 mg/kg and the Chromium Remedy will be implemented pursuant to Article III. AOC 1 is shown on Exhibit B.

2. **AOC 1 Additional Excavation Areas** shall mean those areas of Study Area 6 North which require excavation pursuant to paragraph 57. The AOC 1 Additional Excavation Areas are not contiguous to AOC 1. The AOC 1 Additional Excavation Areas are shown on Exhibit B.

3. **AOC 1 Open Space Area** shall mean the AOC 1 Open Space Area, as defined by paragraph 53, consisting of approximately 11 acres enclosed by the hydraulic barrier walls constructed under the Chromium Remedy, and which shall be subject to paragraph 60. The AOC 1 Open Space Area is shown on Exhibit B.

4. **AOC 2** shall mean that area of Study Area 6 North on which the Historic Fill Remedy will be implemented pursuant to Article II.B of the Jersey City/Honeywell Consent Order. AOC 2 is shown on Exhibit B.

5. **Bayfront Redevelopment LLC** shall have the meaning set forth in paragraph 4.1 of the Jersey City/Honeywell Consent Order.

6. **COPR** shall mean Chromite Ore Processing Residue.

7. **Chromium Remedy** or **Chromium Remediation** shall mean the remedy set forth in Article III.

8. **Consolidated Litigation** shall mean *Jersey City Municipal Utility Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5955 (DMC), *Jersey City Incinerator Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5993 (DMC), and *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.,* D.N.J., Civ. No. 06-022 (DMC).

9. The **Court** shall mean the United States District Court of the District of New Jersey, which has jurisdiction over the Consolidated Litigation.

10. **Deep Groundwater Remedy** shall mean the deep overburden and bedrock groundwater pump and treat remedy as required by the Order Approving the Deep Overburden Groundwater Remediation, entered on October 6, 2006, and the Stipulation on Consent Regarding the Schedule for Implementation of Deep Groundwater Remedial Actions, currently pending before the Special Master in *ICO v. Honeywell.* In the event that Riverkeeper and Honeywell reach a settlement on source control issues, the Deep Groundwater Remedy shall

include the remedy to which Riverkeeper and Honeywell have agreed. In the event that Riverkeeper and Honeywell do not reach a settlement on source control issues, the Deep Groundwater Remedy shall include the remedy ordered by the Special Master or the Court in *ICO v. Honeywell* for source control.

11. **Hackensack River Watershed Land Trust** shall mean the dedicated fund of the Hackensack Riverkeeper, Inc., established under Section 501(c) of the Internal Revenue Code for the purpose of acquiring and preserving open space within the Hackensack River watershed and administered by the Board of Trustees of the Hackensack Riverkeeper, Inc.

12. **Historic Fill** shall have the definition provided in the NJDEP Technical Requirements for Site Remediation.

13. **Historic Fill Remedy or Historic Fill Remediation** shall mean the remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order, except that the Historic Fill Remedy shall not be limited to the remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order if NJDEP requires a more stringent remedy.

14. **Honeywell** shall mean Honeywell International Inc. and its affiliates, including Kellogg Street 80 Property LLC, Kellogg Street 60 Property LLC, and Kellogg Street/440 Property LLC.

15. **Honeywell's Treatment Plant** shall mean the treatment plant currently located at 80 Kellogg Street that is used to treat, *inter alia*, chromium contaminated groundwater.

16. ***ICO v. Honeywell*** shall mean *Interfaith Community Organization v. Honeywell International Inc.,* D.N.J., Civ. No. 95-2097 (DMC).

17. **Including** shall mean including, but not limited to.

18. **JCIA** shall mean the Jersey City Incinerator Authority.

19. **JCMUA** shall mean the Jersey City Municipal Utilities Authority.

20. **JCRA** shall mean the Jersey City Redevelopment Agency.

21. **Jersey City Entities** shall mean the City of Jersey City, including the Department of Public Works ("DPW") and other agencies and branches thereof, the JCIA, and the JCMUA.

22. **Jersey City/Honeywell Consent Order** shall mean the *Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc.* entered in the Consolidated Litigation simultaneously with this Consent Decree.

23. **NJDEP** shall mean the New Jersey Department of Environmental Protection.

24. **NJDEP Chromium Directive** shall mean the Chromium Directive issued by NJDEP on February 8, 2007, and attached as Exhibit C.

25. **Party or Parties** shall mean any one or all of the signatories to this Consent Decree.

26. **RCRA** shall mean the Resource Conservation and Recovery Act, 42 U.S.C. 6901, *et seq.*, as amended.

27. **Redevelopment Agreement** shall have the meaning set forth in paragraph 4.11(e) of the Jersey City/Honeywell Consent Order.

28. **Redevelopment Area** shall mean Study Area 6 North, Study Area 6 South, and Study Area 7, collectively.

29. **Redevelopment Law** shall mean the New Jersey Local Redevelopment and Housing Law, N.J.S.A. 40A:12A1, *et seq.*, as amended and supplemented.

30. **Redevelopment Plan** shall mean the Bayfront I Redevelopment Plan as adopted by Jersey City on March 12, 2008.

31. **Riverkeeper** shall mean the plaintiffs in *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-22 (DMC), and includes the Hackensack Riverkeeper, Inc., William Sheehan, Reverend Winston Clarke, and Lawrence Baker.

32. **Sediment Consent Order** shall mean the Consent Order on Sediment Remediation and Financial Assurances, which the Parties expect will be entered by the Court in *ICO v. Honeywell* and this Consolidated Litigation.

33. **Shallow Groundwater** or **Shallow Level of Groundwater** shall mean groundwater above the meadow mat, groundwater at stratigraphically equivalent depths in locations where there is no meadow mat, and groundwater that is contaminated by recent contact with COPR or other chromium soil contamination above the meadow mat and subsequently flows downward through or past the meadow mat into the upper portion of the lacustrine sediments. This does not include groundwater found in the bedrock, the deep zone, or any plume of contamination that is in both the intermediate and deep zones, as those zones are defined in the Final Groundwater Investigation Report, prepared in *ICO v. Honeywell*, dated February 2007, p. 1-2.

34. **Site** shall mean Study Area 6 North.

35. **Site Preparation Activities** shall have the meaning set forth in paragraph 3.1 of the Jersey City/Honeywell Consent Order.

36. **Site Preparation Plan** shall have the meaning set forth in paragraph 3.2 of the Jersey City/Honeywell Consent Order.

37. **Soil** shall mean soils, historic fill, and/or COPR.

38. The **Special Master** shall mean Senator Robert G. Torricelli, appointed as the Special Master in *ICO v. Honeywell* and the Consolidated Litigation, and his successors or whomever the Court may appoint as Special Master.

39. **Stratum O** shall mean the layer composed of soft brown silty fine sand interlayered with soft gray silty clay and fine sandy to clayey silt generally located above the meadow mat below the Historic Fill and/or COPR.

40. **Study Area 6 North** shall mean that property comprising Sites 87 and 88 of the Chromate Chemical Production Waste Sites designated by NJDEP, comprising approximately 41.58 acres and including: (a) all such property owned by JCMUA located at 555 Route 440, Jersey City, New Jersey, (b) all such property owned by JCIA located at 501 Route 440, Jersey City, New Jersey; (c) all such property owned by Jersey City or its Department of Public Works and located at 575 Route 440, Jersey City, New Jersey; and (d) all such property owned by Paul Trenk consisting of Block 1290.1, Lot 2A, Jersey City, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

41. **Study Area 6 South** shall mean (a) that property currently owned by 425/445 Route 440 Property LLC consisting of Site 73, located at 200 Kellogg Street Jersey City, Hudson County, New Jersey; (b) that property currently owned by Kellogg Street 80 Property LLC consisting of Site 134, located at 100 Kellogg Street Jersey City, Hudson County, New Jersey; (c) that property currently owned by Kellogg Street 80 Property LLC consisting of Site 140 located at 80 Kellogg Street Jersey City, Hudson County, New Jersey; (d) that property currently owned by Kellogg Street 60 LLC consisting of Site 125, located at 60 Kellogg Street Jersey City, Hudson County, New Jersey; (e) that property currently owned by Kellogg Street/440 Property LLC consisting of Site 124, Jersey City, Hudson County, New Jersey; (f) that property currently owned by Kellogg St/Harsimus Cove Realty located at 150 Kellogg Street, Jersey City, Hudson County, New Jersey, (g) that property currently owned by Cordova Enterprises Ltd located at 38 Kellogg Street, Jersey City, Hudson County, New Jersey, and (g) that property currently owned by Cordova Enterprises Ltd located at 28 Kellogg Street, Jersey City, Hudson County, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

42. **Study Area 6** shall mean Study Area 6 North and Study Area 6 South, collectively.

43. **Study Area 7** shall mean (a) that property currently owned by 425/445 Route 440 Property LLC located at 425 and 445 Route 440, Jersey City, Hudson County, New Jersey, and (b) that property currently owned by Roned Realty/Edward Navlen located at 465 Route 440, Jersey City, Hudson County, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

44. **Technical Requirements for Site Remediation** shall mean the NJDEP Technical Requirements for Site Remediation, N.J.A.C. Chapter 26E, as duly and properly promulgated and amended.

45. **Unrestricted Use** shall mean that the contaminated medium is restored to a condition or quality suitable for all uses.

ARTICLE II: SCOPE OF THE CONSENT DECREE, JURISDICTION, AND CLAIMS RESOLVED

46. Except as provided in this paragraph, the terms of the Jersey City/Honeywell Consent Order shall remain in full force and effect. To the extent that any provision in the Jersey City/Honeywell Consent Order refers to the Chromium Remedy or Chromium Remediation, it shall be construed as referring to Article III of this Decree. In the event of any conflict or inconsistency between the terms of this Decree and the Jersey City/Honeywell Consent Order, the terms of this Decree govern. In the event that any action taken pursuant to the Jersey City/Honeywell Consent Order is in conflict with or inconsistent with the terms of this Decree, the terms of this Decree shall govern.

47. This Court has jurisdiction over the Parties and subject matter of the Consolidated Litigation pursuant to Section 6972 of RCRA.

48. For purposes of this Consent Decree, the Complaints in the Consolidated Litigation each state claims upon which relief may be granted against Honeywell.

49. In the event that this Decree is not terminated by one or more Parties pursuant to paragraph 100, this Consent Decree resolves, settles, and satisfies all claims by Riverkeeper against Honeywell with respect to soils and shallow groundwater at Study Area 6 North. This Consent Decree does not resolve any claims by Riverkeeper against Honeywell with respect to Study Area 6 South, Study Area 5, or groundwater at Study Area 6 North other than shallow groundwater.

50. Nothing in this Consent Decree shall be construed or interpreted to waive any claim or defense any Party has asserted or may assert against any third party in the Consolidated Litigation except as explicitly stated herein.

51. This Consent Decree does not constitute an admission of liability on the part of any Party with respect to any claims, cross-claims, or counter-claims in the Consolidated Litigation.

ARTICLE III: CHROMIUM REMEDIATION

A. Chromium Remedy

52. **Responsibility for Implementation of Chromium Remediation.** As between the Parties, Honeywell shall be responsible for and shall undertake remediation of COPR and chromium present in Study Area 6 North at Honeywell's sole cost and expense. Remediation of COPR and chromium present in Study Area 6 North shall be undertaken in accordance with the terms of this Consent Decree.

53. **AOC 1 and AOC 2.** For the purposes of remediation, Study Area 6 North shall consist of two Areas of Concern ("AOCs"), designated as AOC 1 and AOC 2 as shown on Exhibit B. AOC 1 is set forth on Exhibit B and consists of that portion of Study Area 6 North for which chromium remediation is required pursuant to paragraphs 55, 56, and 57. AOC 2 consists of the entirety of Study Area 6 North, including AOC 1, to the extent that historic fill is present in any area of Study Area 6 North. For AOC 1, the intended land use will determine the types

of remedial measures taken in the Chromium Remedy. There are two distinct land uses for AOC 1: open space and residential. As a result, AOC 1 will be further subdivided into:

(a) The AOC 1 Open Space Area, which shall comprise that portion of AOC 1 for which future use shall be restricted as provided in paragraph 60. The AOC 1 Open Space Area is shown on Exhibit B;

(b) The AOC 1 Residential Area, which shall comprise that portion of AOC 1 for which future use shall allow for residential and/or commercial and retail uses, but for which the remedial measures shall assume only a residential use . The AOC 1 Residential Area is shown on Exhibit B; and

(c) The AOC 1 Additional Excavation Areas, which consist of those portions of Study Area 6 North that require remediation pursuant to paragraph 57. The planned land use for the AOC 1 Additional Excavation Areas is residential and/or commercial and retail uses, but the remedial measures shall assume only a residential use.

54. **Scope and General Requirements of the Chromium Remedy.** The Chromium Remedy shall address shallow groundwater and soil containing hexavalent chromium in AOC 1, and shall be consistent with the requirements set forth in this Article. The Chromium Remedy set forth in this Consent Decree addresses only the shallow level of groundwater (see paragraph 58). The deep overburden and bedrock groundwater remediation, including source control, shall be addressed in a separate consent order, which shall place these issues within the jurisdiction of the Special Master in conjunction with the groundwater remedies for Study Area 7.

(a) The Chromium Remedy shall be consistent with the NJDEP Technical Requirements for Site Remediation, the Chromium Directive as issued by NJDEP on February 8, 2007 ("the NJDEP Chromium Directive"), and the Remedial Action Work Plan (with addenda) approved by NJDEP on or about February 19, 2008. This Consent Decree shall have precedence

over the Remedial Action Work Plan in the event of any inconsistency.

(b) The Chromium Remedy shall be carried out diligently, and the development and implementation of the Historic Fill Remedy shall not delay satisfaction of the milestones in the Schedule established pursuant to this paragraph. Honeywell shall propose a master Schedule for the implementation of the Chromium Remedy within 90 days of the entry of this Consent Decree, which shall include, at a minimum, the following milestones:

(i) Submission to the Special Master for all documents subject to review by the Special Master pursuant to paragraph 72(c);

(ii) Relocation of the Jersey City Entities' Study Area 6 North Operations as shall be required prior to the implementation of the Chromium Remedy;

(iii) Completion of those Site Preparation Activities necessary for the implementation of the Chromium Remedy, including remediation of the AOC 1 Additional Excavation Areas;

(iv) A final date for Honeywell's proposal of *in situ* treatment for any part of the AOC 1 Residential Area pursuant to paragraph 55(d) and a date for the final decision as to whether excavation or *in situ* treatment shall be used in the event of such a proposal;

(v) The initiation of work related to the Chromium Remedy;

(vi) The date for completion of the installation of the Chromium Remedy;

(vii) Implementation of the long-term protections of the AOC 1 Open Space Area established pursuant to paragraph 60; and

(viii) Transfer of the AOC 1 Open Space Area to Jersey City pursuant to paragraph 60(a)(iii).

(c) **Demolition and Grading Activities.** During demolition and grading activities, adequate protective measures shall be taken to protect site workers and the community

from airborne dusts and exposures to contaminated soils.

(d) **Vegetation of Clean Fill.** All clean soil fill in areas that will not involve paved roads, sidewalks, paths, walkways, or building structures shall be vegetated in such a manner to protect and maintain the required depth of clean soil fill.

55. **AOC 1 Residential Area Soil Remedy.** In the AOC 1 Residential Area, soils containing hexavalent chromium at concentrations greater than 20 mg/kg shall be excavated to a depth of 20 feet below the current ground surface in accordance with the NJDEP Chromium Directive.

(a) Those soils excavated from the AOC 1 Residential Area in which hexavalent chromium concentrations exceed 240 mg/kg shall be disposed of off-site at a waste disposal facility licensed to accept such waste.

(b) Those soils excavated from the AOC 1 Residential Area in which the hexavalent chromium concentration is less than 240 mg/kg, but greater than 20 mg/kg, shall be consolidated within the AOC 1 Open Space Area. However, any such soils which would require venting of gases shall be disposed of off-site.

(c) Soils excavated from the AOC 1 Residential Area shall be replaced with existing soils from AOC 2 or backfill soil. Any backfill soil brought to the Site shall either meet all applicable federal and NJDEP criteria, including NJDEP residential soil criteria, or comply with a beneficial soil reuse plan that is approved by NJDEP and subject to review and comment by the Parties and approval by the Special Master.

(d) In the AOC 1 Residential Area, excavation of soils containing hexavalent chromium greater than 20 mg/kg shall be the presumptive remedy. Around remaining active underground utilities or other structures, such as the bulkhead, *in situ* treatment may be considered in lieu of excavation only if Honeywell demonstrates, and all Parties, the Special

Master, and NJDEP agree that (1) excavation is technically impracticable and (2) treatment will result in hexavalent chromium concentrations of 20 mg/kg or less and no rebound will occur. If no treatment option is available, Honeywell shall propose an alternative remedial approach, subject to review and comment by the Parties and approval by the Special Master.

(e) Honeywell shall excavate all soils containing hexavalent chromium greater than 20 mg/kg in conjunction with the placement of the piping for the Deep Groundwater Remedy. Honeywell shall not propose treatment in lieu of excavation based on the location of the pipes for the Deep Groundwater Remedy or any apparent impracticability of excavating in conjunction with their installation.

56. **AOC 1 Open Space Area Soil Remedy.** In the AOC 1 Open Space Area, the soil remedy shall consist of an engineered RCRA cap to isolate contaminated soils, with gas venting, if necessary, to address the generation of methane and other naturally occurring gases in the Stratum O and/or Stratum D in the Open Space AOC. Soils consolidated under the cap, shall not require gas venting and shall not be the basis for the inclusion of gas venting as a component of the cap. The cap shall be designed and constructed so that:

(a) The cap shall consist of gas collection system, if gas venting is necessary, a base protective layer, an impervious geomembrane liner with a minimum thickness of 40 mil; a geocomposite drainage layer; a filter fabric; and a distinctive colored warning layer with markings in English and Spanish that would deter penetration of the cap in the event that digging occurred in the vicinity of the cap;

(b) All utilities, including those supporting the pump-and-treat system for groundwater remediation, with the exception of any extraction wells or collection trenches, shall be placed above the cap (but may be below the ground surface and/or contained within utility corridors). In the event that above-cap-grade gas collection and treatment is selected or is

needed to meet current or future regulatory requirements, such collection and treatment facilities are prohibited in the Open Space AOC, except for piping to connect the sub-liner collection system with the treatment facilities. Honeywell shall configure the cap so that all active piping for the wastewater treatment system operated by JCMUA, including all force mains and any connections to the emergency outfall, shall be outside the capped area. Honeywell may propose, subject to the review process in paragraph 72, to use treatment in lieu of excavation in the vicinity of the emergency outfall line if the criteria of paragraph 55(d) are satisfied; and

(c) Exclusive of roadways, the cap shall be overlain by layers of clean fill, backfill and/or overburden with an average depth of at least three feet and a minimum depth of at least two feet provided that any layer that incorporates overburden shall be below at least two feet of clean fill. Any clean fill or backfill soil brought to the Site will either meet all applicable federal and NJDEP criteria, including NJDEP residential soil criteria, or comply with a beneficial soil reuse plan that is approved by NJDEP and subject to review and comment by the Parties and approval by the Special Master. One foot of clean fill, covered with bituminous blacktop, shall be sufficient cover where roads, walkways, or other paved surfaces are located within the AOC 1 Open Space Area. All clean soil fill in areas that will not involve paved roads, walkways, or other paved surfaces shall be vegetated in such a manner as to protect and maintain the required depth of the clean soil fill and to ensure that such vegetation shall not cause any interference with or penetration of the cap.

(d) The existing overburden soils in the AOC 1 Open Space Area shall first be stripped off and set aside for use. If hexavalent chromium concentrations in the overburden exceed 20 mg/kg, the overburden shall be placed under the cap. If hexavalent chromium concentrations in the overburden do not exceed 20 mg/kg, the overburden may be placed above the cap but below the two feet of clean fill required by paragraph 56(c). Excavated hexavalent

chromium impacted soils (with concentrations between 20 mg/kg and 240 mg/kg) from the AOC 1 Residential Area shall be placed and spread in the AOC 1 Open Space Area under the cap. Excavated hexavalent chromium impacted soils (with concentrations between 20 mg/kg and 240 mg/kg) from the Study Area 6 South Development AOC (as defined in the First Amended Consent Decree Regarding Remediation and Redevelopment of Study Area 6 South and including only those portions of Study Area 6 South for which the future uses of the property may include commercial or residential development) may be placed and spread in the AOC 1 Open Space Area under the cap, provided that such soils do not require venting of gases and shall not serve as the basis for the inclusion of gas venting as part of the Study Area 6 North AOC 1 Open Space Area remedy. Both the chromium impacted soils and the previously stripped overburden shall be suitably compacted according to design specifications. Debris, to the extent it would interfere with the compaction specification requirements of the 100% Design, shall not be placed under the cap. The engineered cap shall be installed over the chromium-impacted soils exceeding 20 mg/kg hexavalent chromium.

57. **AOC 1 Additional Excavation Areas Remedy.** For those AOC 1 Additional Excavation Areas, soils containing hexavalent chromium at concentrations greater than 20 mg/kg shall be excavated to a depth of 20 feet below the current ground surface in accordance with the NJDEP Chromium Directive. Excavation of those areas comprising the AOC 1 Additional Excavation Areas shall initially be conducted in the 50-foot by 50-foot area planned in the RAWP but shall not be so limited in the event that confirmation sampling indicates that hexavalent chromium concentrations continue to exceed 20 mg/kg. Honeywell shall excavate laterally and vertically (to depths of up to 20 feet below current ground surface) until the hexavalent chromium is less than 20 mg/kg based on the results of confirmation sampling. Confirmation sampling for the AOC 1 Additional Excavation Areas shall be taken from the side

walls and bottom of the excavation, in accordance with the Technical Requirements for Site Remediation, to confirm complete removal of contaminated soils.

58. **Shallow Groundwater Remedy.** The shallow groundwater remedy shall consist of hydraulic barriers with a pump-and-treat system designed to isolate shallow groundwater and to intercept and treat shallow groundwater flowing above the meadow mat in the AOC 1 Open Space Area. The shallow groundwater remedy shall consist of the following:

(a) The existing soil/cement/bentonite wall on the boundary of Study Area 6 North and Study Area 7 shall be incorporated into the other engineering controls;

(b) Subterranean slurry walls or other hydraulic barriers shall be installed along the northern, eastern and western sides of the AOC 1 Open Space Area and keyed into the meadow mat or Stratum O or to comparable depths below ground surface;

(c) A groundwater extraction system shall be established that will consist of (i) one or more shallow extraction wells, sumps, or french drains within the AOC 1 Open Space Area; (ii) pumps; and (iii) underground piping to convey any extracted water to Honeywell's Treatment Plant;

(d) The capture zone for the shallow groundwater remedy shall include at least the entire area of contaminated shallow groundwater (except for shallow groundwater that penetrates the meadow mat and is captured by the Deep Groundwater Remedy);

(e) A plan for control of water levels shall be developed;

(f) In the event that underground structures are demolished, the plans shall address the need for special attention for structures that extend below the meadow mat in order to control needed water levels; and

(g) Honeywell shall submit such information as is required to allow NJDEP to establish a classification exception area for groundwater at the Site, in accordance with NJDEP

regulations.

59. **Permits and Authorizations.** Honeywell shall obtain all necessary federal, state, and local permits and authorizations to carry out the Chromium Remedy as set forth in this Article. The Jersey City Entities agree to cooperate with Honeywell in the applications for any such permits, authorizations, or approvals. Such cooperation shall include providing information or data with respect to permit applications, co-signing permit applications, and allowing access to Study Area 6 North to obtain information necessary for the permits.

B. Long-Term Monitoring, Maintenance, and Protection of Engineering and Institutional Controls

60. **Protection of the AOC 1 Open Space Area.** Except as provided in paragraphs 60(j) and 60(k), development in the AOC 1 Open Space Area shall be prohibited. The AOC 1 Open Space Area shall be protected against activities that may jeopardize the integrity of the cap and/or the groundwater remedial measures that shall be installed in the AOC 1 Open Space Area pursuant to the Chromium Remedy or that may impede the long-term monitoring and maintenance of the cap and/or groundwater remedial measures. It is the intention of the Parties to implement different layers of protection, which alone or in concert, impose restrictions on development, run with the land, and survive all parties. Accordingly, the following actions shall be taken pursuant to the Schedule provided in paragraph 54(b):

(a) **Ownership of and Access to the AOC 1 Open Space Area.** Ownership of and access to the AOC 1 Open Space Area shall be in accordance with the following:

(i) Pursuant to the terms of this Consent Decree and paragraph 4.3 of the Jersey City/Honeywell Consent Order, Bayfront Redevelopment LLC shall become the owner in fee simple absolute of all of the property that comprises the AOC 1 Open Space Area and shall not convey any rights or interests in such property except as provided in this Decree. At the time

of the conveyance from JCRA to Bayfront Redevelopment LLC, Bayfront Redevelopment LLC shall give Jersey City an option to buy AOC 1 Open Space Area prior to the planned transfer pursuant to paragraph 60(a)(iii). Such option to buy shall be subject to the conservation restriction imposed pursuant to paragraph 60(b). Jersey City shall exercise the option to buy the AOC 1 Open Space Area in the event that the conditions allowing for withdrawal of funds from the financial assurance mechanisms under paragraphs 84(c) or 84(d) are met;

(ii) At the time the JCRA conveys the Study Area 6 North property to Bayfront Redevelopment LLC pursuant to paragraph 4.3 of the Jersey City/Honeywell Consent Order, Bayfront Redevelopment LLC shall grant a conservation restriction for the AOC 1 Open Space Area pursuant to the requirements of paragraph 60(b);

(iii) Upon the final construction of all roads and utility corridors within the AOC 1 Open Space Area, Bayfront Development LLC shall donate good and marketable title to all the land comprising the AOC 1 Open Space Area to Jersey City. In conjunction with such donation, Bayfront Redevelopment LLC shall petition to subdivide the properties within Study Area 6 North to create a new parcel(s) comprising the AOC 1 Open Space Area. At the time of the donation, Jersey City shall grant Honeywell an easement for the purpose of monitoring and maintaining the Chromium Remedy. Jersey City shall also grant Honeywell all necessary access to the AOC 1 Open Space Area by license or such other mechanisms as may be appropriate for purposes of monitoring and maintaining the Chromium Remedy. After it acquires title pursuant to this paragraph, Jersey City shall retain ownership of the AOC 1 Open Space Area unless and until it shall have complied with the requirements of paragraph 60(a)(iv);

(iv) After it acquires title pursuant to this paragraph, Jersey City shall not convey or enter into any lease of the AOC 1 Open Space Area to any other person or entity unless it has first satisfied either of the following conditions:

(1) Jersey City has obtained the Special Master's (or if the Special Master's appointment has expired, the Court's) approval to convey the AOC 1 Open Space Area to a government entity that has the capacity and willingness to fulfill Jersey City's obligations under the Consent Decree with respect to the AOC 1 Open Space Area and such entity agrees to submit to the Court's jurisdiction and to be bound by the requirements of the Consent Decree that Jersey City has committed to fulfill with respect to protection of the AOC 1 Open Space Area pursuant to this paragraph and routine maintenance of the permissible development in the AOC 1 Open Space Area pursuant to paragraph 64(d); or

(2) The AOC 1 Open Space Area has been remediated such that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive, and Jersey City has demonstrated to the Special Master and/or the Court, as appropriate, that such remediation has been completed in accordance with all applicable requirements.

(b) **Conservation Restriction.** At the time the JCRA conveys the Study Area 6 North property to Bayfront Redevelopment LLC pursuant to paragraph 4.3 of the Jersey City/Honeywell Consent Order, but prior to the grant of the option to buy pursuant to paragraph 60(a)(i), Bayfront Redevelopment LLC shall grant an open space conservation restriction, pursuant to N.J.S.A. 13:8-B-1, *et seq.*, over the AOC 1 Open Space Area substantially in the form set forth in Exhibit D. Exhibit D is a conservation restriction that is consistent with the terms of this paragraph and this Consent Decree. The conservation restriction shall allow for the implementation, maintenance, monitoring, repair and replacement of the Chromium Remedy and development consistent with paragraphs 60(j) and 60(k), including the construction and

placement of roads and utilities. The Hackensack River Watershed Land Trust shall be the primary holder of the conservation restriction, with all rights of monitoring and enforcement. Riverkeeper shall propose an entity to serve as the secondary holder of the conservation restriction subject to comment by the Parties and review by the Special Master. The secondary holder shall have secondary rights of monitoring and enforcement.

(i) The conservation restriction shall be incorporated into this Consent Decree and made part of this Consent Decree. The final, executed conservation restriction shall be lodged with the Court and entered as an order of the Court. The conservation restriction shall be enforceable in this Court, in the same manner as this Consent Decree.

(ii) The conservation restrictions provided under this Consent Decree shall be consistent with the prohibited and permitted development of the AOC 1 Open Space Area as set forth in paragraphs 60(j) and 60(k) below.

(iii) Jersey City shall not take any action, whether through exercise of any power of eminent domain, application to the State of New Jersey for approval of a diversion of public park or recreation land, legal challenge to the validity or enforceability of the conservation restriction, or otherwise, the effect of which would be to in any way terminate, abrogate, or diminish the terms, conditions, or purposes of the conservation restriction. If, notwithstanding the preceding sentence, Jersey City proceeds with a condemnation or other action, the result of which would be to terminate, abrogate, or otherwise diminish the terms, conditions, or purposes of the conservation restriction, Jersey City shall, before taking any such action satisfy all of the conditions set forth in paragraph60(a)(iv)(2).

(iv) Notwithstanding the foregoing, the conservation restriction may be terminated upon application of any Party when no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area, whether in soils or in groundwater, in excess of the

levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive.

(c) **Deed Notice.** Upon completion of the Chromium Remedy, the AOC 1 Open Space Area shall be subjected to the deed notice substantially in the form set forth in Exhibit E that restricts future activities on the AOC 1 Open Space Area. Nothing in the deed notice shall be construed as preventing the imposition of more stringent restrictions on the development allowed in the AOC 1 Open Space Area pursuant to this paragraph and, in particular, the conservation restriction provided for in paragraph 60(b).

(d) **Recording of the Consent Decree, Conservation Restriction, and Deed Notice.** This Consent Decree, the conservation restriction imposed pursuant to paragraph 60(b), and the deed notice imposed pursuant to paragraph 60(c) shall be recorded, pursuant to N.J.S.A. 46:15-1.1, 46:16-1.1, and 46:16-2, in the office of the Hudson County Register and a conspicuous reference to the Consent Decree, conservation restriction, and deed notice shall be included in all instruments concerning title to the AOC 1 Open Space Area. Any Party shall have the right, periodically, but no more than once every 25 years, to record memoranda or other instruments that reference, incorporate, or attach this Consent Decree, the conservation restriction, the deed notice, and/or any further orders of the Court related to the AOC 1 Open Space Area in the real estate records related to the AOC 1 Open Space Area.

(e) **Zoning.** Pursuant to the Redevelopment Plan, the AOC 1 Open Space Area is designated for open space and park. Jersey City shall not amend or change this designation unless it first satisfies the requirements of paragraph 60(a)(iv)(2).

(f) **Recreation and Open Space Inventory.** Upon acquiring fee simple absolute title to the AOC 1 Open Space, Jersey City shall add those portions of the AOC 1 Open Space Area not covered by roads, the pedestrian thoroughfare, and utility corridors adjacent to

roads onto its Green Acres Program Recreation and Open Space Inventory ("ROSI") pursuant to N.J.A.C. 7:36 and shall specify in such listing that it is subject to (i) Honeywell's prior easement to monitor, maintain, repair, and replace the Chromium Remedy; (ii) the actions necessary to implement, monitor, maintain, repair, and replace the Chromium Remedy; (iii) the actions necessary to install any development permissible under paragraphs 60(j) and 60(k); and (iv) the conservation restriction imposed pursuant to paragraph 60(b). Jersey City shall also take all steps necessary or appropriate to notify the New Jersey Green Acres Program that such portions of the AOC 1 Open Space Area have been added to its ROSI, such that those portions of the AOC 1 Open Space Area shall thereafter be subject to all procedural and regulatory requirements applicable under the Green Acres Program, including prohibitions against diversion.

(g) **Eminent Domain.** If all or part of the AOC 1 Open Space Area is taken in exercise of the power of eminent domain, or acquired by purchase in lieu of condemnation, by any public, corporate, or other authority so as to terminate, abrogate, or limit the restrictions created by this Consent Decree or the conservation restriction imposed pursuant to paragraph 60(b), in whole or in part, any Party may take appropriate actions to challenge such taking if there is a reasonable legal basis for doing so. In the event that the Parties are unable to prevent a taking notwithstanding their reasonable and appropriate efforts, any Party may take appropriate actions to recover the full value of the interests in the AOC 1 Open Space Area subject to the taking or in lieu purchase, and all direct and incidental damages, costs, and fees occasioned thereby.

(h) **Environmental Covenant.** In the event that New Jersey enacts the Uniform Environmental Covenants Act or its substantial equivalent, the Parties shall address the issue of whether an environmental covenant shall be established for the AOC 1 Open Space Area under the statute. If the Parties are unable to reach agreement on establishment of an environmental

covenant, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. The Special Master shall recommend adoption of an environmental covenant if it would provide substantial additional protection for the AOC 1 Open Space Area without unreasonably harming the interests of any Party. Any Party shall have the right to seek review by the Court of the Special Master's recommendation or consideration by the Court of the dispute in the event that the Special Master's appointment has expired.

(i) **Future Protections.** Any Party shall have the right to propose consideration of additional or substitute protections for the AOC 1 Open Space Area. If the Parties are unable to reach agreement with regard to the proposal, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. The Special Master shall recommend adoption of additional or substitute protections for the AOC 1 Open Space Area if they would provide substantial additional protection for the AOC 1 Open Space Area without unreasonably harming the interests of any Party. Any Party shall have the right to seek review by the Court of the Special Master's recommendation or consideration by the Court of the dispute in the event that the Special Master's appointment has expired.

(j) **Prohibited Development in AOC 1 Open Space Area.** Only development satisfying the requirements of this paragraph and paragraph 60(k) shall be permitted in the AOC 1 Open Space Area. All other development in the AOC 1 Open Space Area shall be prohibited.

(i) Honeywell shall establish Open Space Design Standards that shall govern all development in the AOC 1 Open Space Area regardless of when the construction or installation of permissible development occurs. The Open Space Design Standards shall satisfy each of the requirements set forth in paragraph 60(j)(v) and shall set forth the requirements for development that are necessary for the protection of the integrity of the Chromium Remedy.

(ii) The Initial Development in the AOC 1 Open Space Area shall be the

development undertaken following the completion of the Chromium Remedy in the AOC 1 Open Space Area. The Initial Development may occur in one or more phases. Honeywell and Bayfront Redevelopment LLC shall prepare a Development Plan before the initiation of each phase of the Initial Development. The Initial Development Period for each phase shall consist of the period covered by the Initial Development, plus a period of 10 years following the submission of the as-built documentation for the phase pursuant to paragraph 60(j)(viii).

(iii) The Special Master shall have jurisdiction to review the Open Space Design Standards and the Development Plan(s) solely for the purpose of ensuring that any development undertaken during the Initial Development Period is consistent with this Consent Decree and with protection of the integrity of the Chromium Remedy. The Special Master's jurisdiction with regard to development in the AOC 1 Open Space Area shall run through the Initial Development Period for each phase.

(iv) Honeywell shall ensure that the requirements of this paragraph and paragraph 60(k) are satisfied with regard to any development undertaken within the Initial Development Period. Honeywell shall also ensure that any development undertaken within the Initial Development Period is designed and installed in a manner consistent with this Consent Decree and with protection of the integrity of the Chromium Remedy.

(v) Any development undertaken in the AOC 1 Open Space Area, regardless of when undertaken, shall satisfy each of the following requirements:

(1) It shall not jeopardize the integrity of the Chromium Remedy;

(2) It shall be limited to the types of development permitted under paragraph 60(k);

(3) It shall be consistent with this Consent Decree, including the conservation restriction imposed pursuant to paragraph 60(b), and the Redevelopment Plan;

however, in the event of any conflict or inconsistency between this Decree and the Redevelopment Plan, this Decree shall govern;

(4) In total, at least 75% of the AOC 1 Open Space Area, exclusive of the acreage used for roads and the pedestrian thoroughfare, shall be comprised of landscaping, as defined by paragraph 60(k)(xi);

(5) The portion of the Open Space Design Standards necessary for protection of the Chromium Remedy as related to all roads, the pedestrian thoroughfare and associated utility corridors as well as the general location of such items shall be included in the 100% Design of the Chromium Remedy;

(6) If the lowest elevation for the bedding for any utility line, including irrigation or sprinkler lines, is two feet from the top of the warning layer of the cap, the utility line shall be placed in a utility corridor;

(7) In any event, there shall be two feet of soil or more between the warning layer of the cap and the lowest elevation of the bedding for any irrigation or sprinkler lines; and

(8) No permanent concession facilities shall be permitted.

(vi) Honeywell shall submit the Open Space Design Standards and the Development Plan(s) for any development undertaken during the Initial Development Period pursuant to the requirements of paragraph 72(c), except that such documents need not be submitted to NJDEP. Following Honeywell's submission of such documents, the procedures of paragraphs 72(d) and 72(e) shall apply, except that the Special Master need not provide notice to NJDEP.

(vii) During the Initial Development Period, any development in the AOC 1 Open Space Area shall require the preparation and submission of a Development Plan pursuant

to paragraph 60(j)(vi) and such Development Plan shall be subject to review by the Special Master pursuant to paragraph 60(j)(iii).

(viii) Upon completion of each phase of the Initial Development, Honeywell shall provide as-built documentation for the Initial Development to the Special Master, Riverkeeper, and the Jersey City Entities. Upon completion of any further development during the Initial Development Period for the phase, Honeywell shall also provide as-built documentation to the Special Master, Riverkeeper, and the Jersey City Entities for the additional development. Such additional as-built documentation for a phase shall not affect the running of the Initial Development Period for the phase.

(ix) During the Initial Development Period, replacement in-kind of development features or facilities included in the Initial Development or minor modifications to the development features or facilities included in the Initial Development shall not require the preparation of a Development Plan or be subject to review by the Special Master, provided that such replacement or modification satisfies the requirements of the Open Space Design Standards, the applicable Development Plan, and paragraphs 60(j)(v) and 60(j)(x)(3)(notice requirement).

(x) After the Initial Development Period, all development is prohibited unless one of the following conditions is met:

(1) Jersey City satisfies the conditions set forth in paragraph 60(a)(iv)(2);

(2) The development is a replacement in-kind and such replacement is made in conformance with the specifications of the Open Space Design Standards, the applicable Development Plan, and paragraph 60(j)(v); or

(3) The development meets the requirements of paragraphs 60(j)(v) and 60(j)(xi), and Jersey City provides notice of its intention to alter or add to the

development undertaken in the Initial Development Period. Such notice shall be provided in writing to Honeywell, Riverkeeper, and the holders of the conservation restriction established pursuant to paragraph 60(b) at least 30 days prior to Jersey City's alteration or addition to development undertaken in the Initial Development Period. Honeywell, Riverkeeper, or any holder of the conservation restriction shall have the right to move the Court to prohibit such alteration or addition.

(xi) If any of the development features or facilities that Jersey City seeks to add pursuant to paragraph 60(j)(x) require utilities that would require utility corridors other than the utility corridors installed during the Initial Development Period, Jersey City shall obtain approval from the Court before installing such new utility corridors.

(xii) Jersey City shall provide Honeywell, Riverkeeper, and the holders of the conservation restriction established pursuant to paragraph 60(b) with an annual report that describes any alterations or additions, including those activities under paragraph 60(j)(x)(2), to the development undertaken during the Initial Development Period.

(xiii) All development features or facilities, whether included in the Initial Development or added subsequent thereto, are subject to demolition and/or removal to the extent necessary to maintain, replace, or repair the Chromium Remedy.

(k) **Permissible Development in the AOC 1 Open Space Area.** The Initial Development or any subsequent addition or alteration thereto may include any or all of the following types of development features or facilities, provided that such development features or facilities satisfy the conditions set forth in paragraph 60(j)(v):

(i) Roads and the pedestrian thoroughfare -- both crossing and running along the AOC 1 Open Space Area, but no more extensive than provided for in the diagram on page 39 of the Redevelopment Plan;

(ii) Curbing and fences;

(iii) Sidewalks, paths, walkways, and nature trails;

(iv) Utilities and utility corridors, lighting, and restrooms;

(v) Irrigation or sprinkler components or systems;

(vi) Water features;

(vii) Above-ground storm water cisterns;

(viii) Signs, including the signs or display required by paragraph 60(l);

(ix) Benches, trash receptacles, and bicycle racks;

(x) Recreational facilities, such as playground equipment, bocce ball courts, tennis courts, basketball courts, and athletic fields; and

(xi) Landscaping, including natural grasses, small trees, shrubbery, flowers, and potted plants, provided that such landscaping and the anticipated root structure of each landscaping component do not and will not jeopardize the integrity of the Chromium Remedy. Any portion of an athletic field that is covered in natural grass shall be considered landscaping for purposes of the percentage set forth in paragraph 60(j)(v)(4).

(l) **Signs or Displays.** Honeywell shall develop a permanent plan for informing visitors to the AOC 1 Open Space Area of the history of the chromium production, contamination, and its remediation. Such plan shall provide for appropriate signs or displays that communicate this information. Such plan shall be subject to review and comment by the Parties and approval by the Special Master.

61. **Honeywell's Ongoing Responsibility.** Honeywell shall be responsible for implementing, monitoring, maintaining, repairing and replacing the Chromium Remedy in perpetuity. Honeywell shall satisfy this responsibility through establishment and implementation of a Long-Term Monitoring Plan. In the event that Honeywell ceases to exist without a

successor-in-interest or its obligations under this Consent Decree are stayed or limited due to a bankruptcy petition, the Court shall appoint an independent third-party fiduciary who shall be responsible for implementing, monitoring, maintaining, repairing and replacing the Chromium Remedy pursuant to the requirements of this Consent Decree and the Long-Term Monitoring Plan, unless Jersey City volunteers to assume these responsibilities for the Chromium Remedy.

62. **Long-Term Monitoring Plan.** In consultation with the Parties, and subject to approval by the Special Master and NJDEP, Honeywell shall develop a Long-Term Monitoring Plan to ensure the ongoing effectiveness of the Chromium Remedy to meet the objectives set forth in paragraphs 56, 58, and 63. The Long-Term Monitoring Plan shall be consistent with the applicable EPA policies and guidance, including, among others, EPA's Comprehensive Five Year Review Guidance (2001) (or any subsequent revision) and with NJDEP's Technical Requirements for Site Remediation (or any subsequent revision).

63. **Long-Term Monitoring Plan Objectives.** Honeywell shall design the Long-Term Monitoring Plan to satisfy each of the following objectives:

(a) Provide monitoring to ensure that the integrity and effectiveness of the Chromium Remedy are maintained; and

(b) Provide monitoring to ensure that the restrictions of the institutional controls are being satisfied, including the prohibition on development in the AOC 1 Open Space Area.

64. **Monitoring and Remediation Under the Long-Term Monitoring Plan.** The Long-Term Monitoring Plan shall include the monitoring and remediation activities set forth in this paragraph and other monitoring and remediation activities, if necessary, to meet the objectives of paragraph 63. Honeywell shall provide Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP with annual reports on activities conducted under the Long-Term Monitoring Plan.

(a) **Monitoring Activities in the Long-Term Monitoring Plan.** Honeywell shall undertake the following monitoring activities at intervals to be specified in the Long-Term Monitoring Plan, but no less frequently than set forth below, and, if the monitoring shows it is necessary, Honeywell shall also undertake the remediation activities as set forth below:

(i) Quarterly visual inspection monitoring of the AOC 1 Open Space Area to ensure that it is not being put to any use that is inconsistent with paragraphs 60(j) and 60(k) or any use that may compromise the integrity of the Chromium Remedy. The Long-Term Monitoring Plan shall include an inventory of the prohibited and permissible uses pursuant to paragraph 60 and a corresponding checklist to be used by the individuals conducting the monitoring. If Honeywell determines that the AOC 1 Open Space Area is being used in a manner inconsistent with the protections or the integrity and effectiveness of the Chromium Remedy, Honeywell shall act as soon as possible to cause such use to cease and, if there has been damage to the Chromium Remedy, to repair or replace it to original specifications or to a level of protection equivalent to the original Chromium Remedy;

(ii) Quarterly visual inspection monitoring of the AOC 1 Open Space Area grade and slope to identify whether erosion has occurred or is occurring. Honeywell shall remediate any significant erosion.

(iii) Quarterly visual inspection monitoring to determine whether noticeable differential settlement or subsidence has occurred or is occurring in the AOC 1 Open Space Area such that the integrity of the Chromium Remedy may be materially impaired. If evidence of differential settlement or subsidence is found, Honeywell shall propose further investigative measures. Honeywell shall remediate any differential settlement or subsidence that is beyond the degree of differential settlement/subsidence allowed for in the 100% Design

and repair the cap and/or the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(iv) A baseline topographic survey at the completion of the Chromium Remedy and three additional surveys conducted at five-year intervals beginning five years after the conduct of the baseline survey. The topographic survey shall be of sufficient precision and accuracy to present the results as one-foot contours;

(v) Quarterly visual inspection monitoring to determine whether the Chromium Remedy in the AOC 1 Open Space Area has been disturbed. Any evidence of the distinctive warning layer materials or any other cap materials as described in paragraph 56(a) at the surface is an indication that the cap has been disturbed. In such an event, Honeywell shall propose further investigative measures to evaluate whether the integrity of the cap has been compromised. In the event that the investigative measures show that the cap integrity has been compromised, Honeywell shall repair or replace the cap and the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(vi) Quarterly visual inspection monitoring to ensure that burrowing animals are not materially impairing the integrity of the Chromium Remedy. If evidence of burrowing animals is found, Honeywell shall follow humane removal procedures and repair or replace the cap and the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(vii) Quarterly visual inspection monitoring of the vegetative cover in the AOC 1 Open Space Area to ensure that vegetative cover is in conformance with the landscaping provisions of the 100% Design and the Redevelopment Plan and will not materially impair the integrity of the Chromium Remedy. Maintenance of the vegetative cover shall include, at a

minimum, mowing to ensure that tree species cannot become established and removal of any other vegetation with the potential to damage the Chromium Remedy;

(viii) Quarterly groundwater monitoring to ensure that groundwater levels are maintained in accordance with the requirement to maintain an outward gradient from Study Area 7 and in accordance with the water level control plan developed pursuant to paragraph 58(e);

(ix) Monitoring of vented gases and the gas venting system to ensure proper operation of the system, to evaluate any degradation of the system, to assess the need for treatment of vented gases, either initial, subsequent, or further depending on whether treatment has been previously provided, and to detect any condition that might endanger public health or safety. Such monitoring shall be conducted on a monthly basis for at least one year and, if the readings are stable, such monitoring may be conducted thereafter on a quarterly basis; and

(x) Any additional monitoring as required by specific details added in the design phase of the AOC 1 Open Space Area.

(b) **Procedures for Proposing Changes to the Long-Term Monitoring Plan.** Any Party may, from time to time, propose changes to the scope of the monitoring activities under the Long-Term Monitoring Plan. If the Parties agree, the Long-Monitoring Plan shall be so changed subject to approval by NJDEP and by the Special Master, if his appointment has not terminated, or otherwise, by the Court. If the Parties are unable to reach agreement over alterations to the monitoring and the Special Master's appointment has not terminated under this Consent Decree, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation. In the event that the dispute arises after the Special Master's appointment has terminated, any Party may file a motion seeking a resolution of the dispute by

the Court.

(c) **Contingency Plan.** As part of the Long-Term Monitoring Plan, Honeywell shall develop a contingency plan to ensure the integrity of the remediation in the event of any planned penetration of the cap or otherwise planned activity that compromises the cap or any unplanned event or accident that penetrates the cap or otherwise compromises the integrity of the Chromium Remedy. The contingency plan shall include, at a minimum, an annually updated plan to notify the relevant persons, including the Special Master, NJDEP, and the Parties, of (i) the event penetrating the cap, compromising the cap, or compromising the integrity of the Chromium Remedy; (ii) the general steps to be taken to identify the extent of the problem; and (iii) the standards for remedying the problem.

(d) **Routine Maintenance.** The title owner of the AOC 1 Open Space Area shall conduct maintenance of the AOC 1 Open Space Area features or facilities that are permissible under paragraphs 60(j) and 60(k). The maintenance workers shall be trained in maintenance procedures that do not jeopardize the integrity of the Chromium Remedy. The training shall include the identification and reporting of any uses or features that are not permissible in the AOC 1 Open Space Area or that may jeopardize the integrity of the Chromium Remedy. Honeywell shall provide all training materials. The title owner of AOC 1 Open Space Area shall annually provide to the other Parties and the Special Master a report describing the training which has been provided to its maintenance workers. The title owner of the AOC 1 Open Space Area shall also provide to the Parties and the Special Master notice of any violations of the restrictions relating to the AOC 1 Open Space Area identified by its workers during routine maintenance.

(e) **Recordkeeping.** Honeywell shall maintain written logs or other records of those monitoring and remediation activities undertaken pursuant to the Long-Term Monitoring

Plan. Such logs shall be provided to Riverkeeper and the Jersey City Entities on a quarterly basis.

65. **Monitoring and Reporting to Riverkeeper and Jersey City Entities.** Riverkeeper and Jersey City Entities shall be provided with all documents submitted to NJDEP and/or the Special Master with respect to the Chromium Remedy, including the documents identified in paragraph 72(c).

66. **Notice to Stakeholders.** All residents, regardless of whether they are owners or lessees, and all commercial tenants on Study Areas 6 and 7 are hereby deemed stakeholders. Honeywell shall ensure that all stakeholders shall be provided at the time of their purchase or lease with notice of the contamination, the remedial actions that have been undertaken or are planned, and the importance of reporting activities that may appear to jeopardize the integrity of the engineering controls. Notice shall be accomplished in the following manner:

(a) Bold or otherwise conspicuous language on the first page of the deed provided to all purchasers in the Residential Area;

(b) A summary notice of the Chromium Remedy which:

(i) Has been subject to review and comment by the Parties and approval by the Special Master; and

(ii) Provides a reference to public websites and libraries and/or the future equivalents thereof, where the following can be found:

(1) Zoning and other Jersey City maps showing the AOC 1 Open Space Area; and

(2) Documents describing the contamination and the remediation, including:

(a) This Consent Decree;

(b) The Remedial Investigation Report and the Final Remedial Action Report,

(c) The annual reports on long-term monitoring and maintenance and repair activities as required by paragraph 64 and annual reports on changes to the Initial Development as required by paragraph 60(j)(xii); and

(d) The Long-Term Monitoring Plan.

(c) The provision of the maps and documents referred to in paragraph 66(b)(ii) to the public via websites and libraries and/or the future equivalents thereof; and

(d) Notices to lessees and commercial tenants in all lease documents.

67. **Annual Letter to Riverkeeper and Jersey City Entities on Notice to Stakeholders.** Each year beginning one year after the issuance of the first notice in a deed or lease pursuant to paragraph 66, Honeywell shall provide a letter to the Riverkeeper and the Jersey City Entities documenting its compliance with paragraph 66.

68. **Future Notice to Stakeholders.** Honeywell shall ensure that all stakeholders are provided with notice, at least annually, of long-term monitoring activities and any additional remediation activities undertaken with respect to the Chromium Remedy. Such notice shall be accomplished by notices on websites or future equivalents thereof, including Jersey City websites, any websites created to provide information about the Chromium Remediation or redevelopment of the Redevelopment Area, and one or more of the following:

(a) Any community message board or other similar site used and/or maintained by stakeholders or the manager(s) of the Redevelopment Area;

(b) Mailings to all stakeholders; and

(c) Posters and flyers throughout the Redevelopment Area.

69. **Stakeholder Enforcement.** Any stakeholder shall have the right to enforce the

remedial obligations of this Consent Decree in the Court, including post-implementation monitoring and maintenance obligations, and the terms of any deed notice or use restriction.

C. Oversight and Enforcement by the Special Master and NJDEP

70. **Federal Court Jurisdiction.** The Court shall retain jurisdiction for the purpose of overseeing and enforcing this Consent Decree and to review any issue or dispute which is not resolved through the oversight process described in Article III.C.

71. **Appointment and Jurisdiction of the Special Master.** The Chromium Remedy provided for in this Consent Decree is hereby referred to a Special Master pursuant to Rule 53 of the Federal Rules of Civil Procedure. The Special Master is appointed in the Consolidated Litigation for the purpose of overseeing and enforcing the Chromium Remedy, the first five years of long-term monitoring of the Chromium Remedy, financial assurances for the Chromium Remedy, and the Initial Development Period for each phase of development in the AOC 1 Open Space Area. The Special Master is also appointed in the Consolidated Litigation for the limited purpose of ensuring that the scheduling and implementation of the Historic Fill Remedy, the site preparation activities, and the site redevelopment activities described in the Jersey City/Honeywell Consent Order, Articles II.B, III, and IV, do not undermine the integrity of, unreasonably interfere with, or unnecessarily delay the effectuation of the Chromium Remedy, the Study Area 7 remedies, and other remedies within his jurisdiction as of the date of entry of this Consent Decree. The Special Master shall have jurisdiction over all matters for which he is appointed.

72. **Oversight of the Chromium Remedy.**

(a) **NJDEP Authority.** NJDEP shall retain its full statutory and regulatory authority with respect to the Study Area 6 North site, including (i) permitting authority; (ii) authority to review and approve the Remedial Action Work Plan, 100% Design, and final

Remedial Action Report for the Chromium Remedy; and (iii) authority to issue a no further action letter.

(b) **Special Master Responsibilities.** The Special Master shall have the following responsibilities:

(i) Ensuring that Honeywell's implementation of the Chromium Remedy satisfies the requirements of this Consent Decree;

(ii) Ensuring that Honeywell's implementation of the Chromium Remedy conforms with federal, state, and local permit requirements;

(iii) Establishing a reasonable schedule for the implementation of the Chromium Remedy and monitoring conformance with it;

(iv) Reviewing monthly progress reports and conducting periodic meetings with the Parties to review the progress of the implementation of the Chromium Remedy. NJDEP shall be invited, but not required, to participate in these meetings and the decision as to whether to participate shall be left to NJDEP's sole discretion;

(v) Submitting quarterly progress reports to the Court;

(vi) Overseeing the financial assurances established pursuant to paragraphs 77 through 86, and, until the expiration of his term pursuant to paragraph 76, overseeing the financial assurances established pursuant to paragraphs 87 through 98;

(vii) Coordinating review of the documents as provided in paragraphs 72(c) through 72(f);

(viii) Overseeing all development undertaken in the AOC 1 Open Space Area during the Initial Development Period pursuant to paragraph 60(j)(iii); and

(ix) To the extent that, in matters within the jurisdiction of the Special Master as set forth herein, a dispute arises between the Parties with respect to implementation of the Chromium Remedy, issuing a recommendation to the Court with respect to the dispute.

(c) **Submission of Documents by Honeywell.** Honeywell shall submit the following documents to Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP:

(i) An overall schedule with milestones for the design and implementation of the remedy ("Schedule");

(ii) Design drawings and specifications at the 50% level;

(iii) Design drawings and specifications at the 100% level (after selection of the contractor) (hereafter "100% Design");

(iv) The data validation plan, including quality control and quality assurance protocols;

(v) The site-wide master health and safety plan;

(vi) The Long-Term Monitoring Plan;

(vii) The final Remedial Action Report or final construction report (including as-built drawings and such other reports as may be prepared of the remedy as implemented);

(viii) A report reviewing measured groundwater levels for the groundwater remedy;

(ix) Documents required during the Initial Development Period pursuant to paragraphs 60(j)(vi), 60(j)(vii), and 60(j)(viii) ; and

(x) Other post-implementation monitoring reports as required by the Long-Term Monitoring Plan.

(d) **Comment on Submitted Documents.** For each of the documents submitted by Honeywell pursuant to paragraph 72(c), the Special Master shall establish a schedule for the submission of comments and responses to comments. For each of the documents submitted, Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP shall have the right to submit comments to Honeywell. Honeywell shall address all received comments and submit a revised document. The revised document shall be submitted by Honeywell to Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP. The revised document shall be subject to review and approval pursuant to paragraph 72(e).

(e) **Review and Approval of the Submitted/Revised Document**

(i) **Scope of Review.** All documents submitted by Honeywell, pursuant to paragraph 72(c) and 72(d), shall be subject to review and approval by the Special Master in accordance with the following procedure. All such documents, except the Schedule and the 100% Design, shall be subject to the review and approval process and shall not require an order of the Court. The Schedule and 100% Design documents shall be subject to the review and approval process, but shall also require an order of the Court as provided in paragraph 72(f). A document shall be approved if the document (1) complies with this Consent Decree; (2) complies with the Remedial Action Work Plan for the Chromium Remedy; and (3) complies with the Schedule and 100% Design.

(ii) **Procedure.** Prior to making a decision on a document, the Special Master shall notify NJDEP of his intention to rule on the document or make a recommendation to the Court on the document. Such notice shall notify NJDEP that the Special Master will consider any comments NJDEP wishes to submit on the document if such comments are submitted within 30 days of NJDEP's receipt of the notice. NJDEP shall in its sole discretion determine whether to submit comments to the Special Master.

(iii) **Court Review.** If any Party objects to the Special Master's recommendation to the Court or approval of any document pursuant to this paragraph, that Party may seek further relief from the Court with respect to the document.

(f) **Schedule and 100% Design Documents.** As to the Schedule and the 100% Design documents, Honeywell shall have the responsibility, within 30 days of the Special Master's approval of each document, of (i) moving for entry of an order by the Court approving the document as approved by the Special Master; or (ii) filing objections with the Court to the Special Master's approval (and any recommendations contained therein) and moving for entry of the Schedule or 100% Design (including any such recommendations of the Special Master to which Honeywell agrees). Riverkeeper and the Jersey City Entities shall have the right in these proceedings to raise any objections they might have to the Schedule or 100% Design as approved by the Special Master or to the submission by Honeywell to the Court. NJDEP shall receive notice of any motion filed with respect to the Schedule or the 100% Design.

(g) **Flexibility in 50% and 100% Design Documents**. The Parties recognize that work conducted to implement the Chromium Remedy may be conducted by Honeywell contractors and that Honeywell may establish performance-based criteria or specifications for its contractors. As a result, the Parties recognize that the 50% Design and 100% Design documents for the Chromium Remedy may include performance-based standards, criteria, and specifications. These documents shall be sufficiently prescriptive to enable the Parties and the Special Master to evaluate their conformance with the Remedial Action Work Plan and this Consent Decree. The Parties also recognize that the 100% Design will be completed after Honeywell has selected a contractor. The Parties further recognize that completing the 100% Design after the selection of the contractor(s) shall not make the 100% Design subject to any less

stringent or more deferential review. Honeywell's commitment to the contractor(s) shall not be cause to limit review by the Parties and the Special Master.

(h) **Changes to the Schedule**. The Parties recognize that changes to individual line items in the Schedule will occur. To the extent that (i) the Parties and the Special Master agree that such changes do not have a material impact on satisfaction of the Schedule milestones established for items set forth in paragraph 54(b); and (ii) such changes do not require modifications to any necessary permits or authorizations for the Chromium Remedy, such changes may be made upon agreement of the Parties and the Special Master without further order of the Court.

73. **Retention of Professionals.** The Special Master may retain the services of professionals and/or other technical personnel, as reasonably needed, to fulfill his obligations under this Consent Decree, and for which he will be reimbursed pursuant to paragraph 75.

74. **Insurance for the Special Master.** The Special Master shall obtain insurance coverage relating to the performance of the Special Master's duties and responsibilities under this Consent Decree. Such coverage shall be similar to the Special Master's existing coverage in *ICO v. Honeywell*, procured pursuant to the Court's November 11, 2005 Stipulation and Order Regarding Special Master's Application to Procure Insurance Coverage, and as extended to the Consolidated Litigation by the Consent Order on Sediment Remediation and Financial Assurances ("Sediment Consent Order"). The insurance coverage shall be sufficiently extended in duration and scope to cover all additional duties and responsibilities as set forth hereunder. Honeywell shall pay the premiums and other administrative costs of the Special Master's insurance.

75. **Reimbursement of Special Master Fees and Expenses.** The Special Master shall submit fee applications to the Court for approval of reasonable fees and expenses incurred in the

oversight of matters referred to him pursuant to this Consent Decree. Any Party may raise with the Court objections to such fee applications. Upon approval of a fee application by the Court, the reimbursement of the Special Master's fees and expenses shall be made from the escrow fund previously established by Honeywell for the purpose of paying the Special Master's fees and expenses in *ICO v. Honeywell* pursuant to this Court's September 15, 2003 Order Setting Financial Assurances and extended to the Consolidated Litigation by the Sediment Consent Order.

76. **Expiration of Special Master's Appointment.** The Special Master's appointment under this Consent Decree shall expire after Honeywell has completed the first five years of long-term monitoring of the Chromium Remedy and the Initial Development Period for each phase of development has been concluded as provided in paragraph 60(j)(ii). However, solely to the extent that the Special Master is still supervising other portions of the Consolidated Litigation or *ICO v. Honeywell* after Honeywell has completed the first five years of long-term monitoring of the Chromium Remedy or the Initial Development Period for each phase of development as provided in paragraph 60(j)(ii), whichever is later, the Special Master shall continue to have jurisdiction under this Consent Decree until he has completed his specifically enumerated responsibilities under the Final Judgment in *ICO v. Honeywell*, the Sediment Consent Order, the Deep Groundwater Consent Order, and any other future orders, decrees, or judgments in *ICO v. Honeywell* and the Consolidated Litigation. Enumerated responsibilities under any order, decree, or judgment shall include only those tasks specifically assigned to the Special Master in the order, decree, or judgment. Enumerated responsibilities shall not include any continued jurisdiction exercised over long-term monitoring beyond the initial period specified in the order, decree, or judgment. For example, the Special Master has jurisdiction over the first five years of long-term monitoring under the Sediment Consent Order. Oversight during these five years shall

be an enumerated responsibility, but any continued oversight of long-term monitoring, pursuant to the extension of the Special Master's jurisdiction beyond the first five years, as provided in paragraph 60 of the Sediment Consent Order, shall not be an enumerated responsibility. Such extensions of jurisdiction shall be effective only so long as specific enumerated responsibilities in any order, decree, or judgment have not been fulfilled.

D. Initial Financial Assurances

77. **Chromium Remedy Letter of Credit.** Honeywell shall obtain a one-year, irrevocable letter of credit (the "Chromium Remedy Letter of Credit") to be automatically renewed annually in an amount equal to the "Remedial Costs Subject to Financial Assurance."

(a) Remedial Costs Subject to Financial Assurance shall mean:

(i) The costs of implementing the Chromium Remedy;

(ii) The costs of monitoring and maintenance activities, as required by the Long-Term Monitoring Plan, for five years; and

(iii) A contingency of 25% with respect to those costs listed in paragraphs 77(a)(i) and 77(a)(ii).

(b) The Chromium Remedy Letter of Credit shall be issued by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution, provided that in either case, the financial institution shall be acceptable to the Special Master.

78. **Procedures for Review of the Proposed Chromium Remedy Letter of Credit.** No later than 60 days after entry by the Court of this Consent Decree, Honeywell shall submit to Riverkeeper, Jersey City Entities, and the Special Master for their review the proposed (a) amount of the Chromium Remedy Letter of Credit; (b) form of the Chromium Remedy Letter of Credit; and (c) name of the institution that will issue the Chromium Remedy Letter of Credit. If

Riverkeeper or the Jersey City Entities do not agree to the terms of the Chromium Remedy Letter of Credit, the Parties shall meet and confer in an effort to resolve their differences. If the Parties are unable to reach agreement over the terms of the Chromium Remedy Letter of Credit, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation regarding the terms of the Chromium Remedy Letter of Credit.

79. **Automatic Renewal.** The Chromium Remedy Letter of Credit shall be automatically renewed annually unless (a) no later than 120 days prior to the anniversary of the Chromium Remedy Letter of Credit issue date, the issuer provides notice of nonrenewal or (b) Honeywell seeks a reduction in the Chromium Remedy Letter of Credit, pursuant to paragraph 80, to correspond to the reduced estimate of Remedial Costs Subject to Financial Assurances. If the issuer provides notice of nonrenewal, Honeywell shall obtain a replacement irrevocable Chromium Remedy Letter of Credit at least 95 days prior to the expiration date of the existing Chromium Remedy Letter of Credit. If Honeywell is not otherwise in default as provided in Article III.D, the Special Master shall direct the cancellation of the prior Chromium Remedy Letter of Credit within 91 days after delivery to the Special Master of any replacement of a Chromium Remedy Letter of Credit. In the event that the Special Master is entitled to draw upon a Chromium Remedy Letter of Credit because there are two Chromium Remedy Letters of Credit currently in place, the Special Master shall not draw an aggregate amount in excess of the highest valued Chromium Remedy Letter of Credit. Upon Honeywell's request, the Special Master may, at his option, decide not to require overlapping letters of credit in any year based on Honeywell's financial strength in that year, provided that Honeywell has submitted all necessary information so that the Special Master can make his determination at least 150 days prior to the expiration of the Chromium Remedy Letter of Credit.

80. **Annual Right to Seek Reduction in Amount of Chromium Remedy Letter of Credit.** Honeywell shall have the right annually to seek a reduction in the Chromium Remedy Letter of Credit. At the time of seeking such reduction, Honeywell shall submit to the Riverkeeper, the Jersey City Entities, and the Special Master an estimate of the remaining Remedial Costs Subject to Financial Assurance, including the contingency as described in paragraph 77(a)(iii), and shall seek adjustment of the Chromium Remedy Letter of Credit so that the total estimated amount of remaining Remedial Costs Subject to Financial Assurance are covered by the Chromium Remedy Letter of Credit. However, the adjustment shall not result in reducing the Chromium Remedy Letter of Credit to an amount below the remaining estimated costs under paragraphs 77(a)(i) and 77(a)(ii), plus a contingency of 25% of the remaining estimated costs under paragraphs 77(a)(i) and 77(a)(ii), and shall not result in reducing the Chromium Remedy Letter of Credit to an amount less than $20,000,000 as expressed in 2008 dollars unless long-term financial assurances are in place pursuant to Article III.E. Before making any request to reduce the amount or modify the terms of the Chromium Remedy Letter of Credit, Honeywell shall first confer with the Riverkeeper and the Jersey City Entities in an effort to reach agreement on the modified amount or terms of the Chromium Remedy Letter of Credit. If the Parties are unable to reach agreement over the modified amount or terms of the Chromium Remedy Letter of Credit, the Parties shall submit the dispute to the Special Master, who shall resolve the dispute. Any Party shall have the right to seek review by the Court of the Special Master's decision regarding the modified amount or terms of the Chromium Remedy Letter of Credit. Upon agreement on the amount of the reduction or modified terms of the Chromium Remedy Letter of Credit (or upon order of the Court directing that the Chromium Remedy Letter of Credit be reduced to an identified amount or otherwise modified), Honeywell shall obtain a replacement Chromium Remedy Letter of Credit in such amount and with such

terms. If Honeywell is not otherwise in default as provided in Article III.D and the issuer of the primary Chromium Remedy Letter of Credit has not provided notice of non-renewal, within 30 days after delivery to the Special Master of any replacement of a Chromium Remedy Letter of Credit, the Special Master shall direct the cancellation of the prior Chromium Remedy Letter of Credit.

81. **Bankruptcy Protection.** Neither the Chromium Remedy Letter of Credit nor the proceeds of the Chromium Remedy Letter of Credit shall be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy. The Chromium Remedy Letter of Credit shall contain the language necessary to assure that neither the Chromium Remedy Letter of Credit nor the proceeds of the Chromium Remedy Letter of Credit shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

82. **Exclusive Court Jurisdiction.** The Chromium Remedy Letter of Credit shall recite that the issuer submits to the exclusive jurisdiction of this Court for any and all disputes arising under the Letter of Credit.

83. **Application of New York Law.** The provisions of the Uniform Customs and Practice ("UCP") for Documentary Credits (1993 Revision) International Chamber of Commerce Publication #500 and New York law shall apply to the Chromium Remedy Letter of Credit.

84. **Procedures upon Honeywell's Material Default of Its Obligations.** During the period in which the Special Master has jurisdiction pursuant to paragraph 71, the Chromium Remedy Letter of Credit shall be payable to the Special Master and shall not, prior to its expiration date, be revoked or terminated except consistent with this Consent Decree and with the consent of the Special Master and approval by the Court. The Special Master's ability to draw upon the Chromium Remedy Letter of Credit shall not be limited by any agreement between Honeywell and the issuer. The Special Master may, without further order or notice to

this Court, draw upon the Chromium Remedy Letter of Credit upon the occurrence of default by Honeywell, which shall include:

(a) The failure of Honeywell, in the event that notice is given pursuant to paragraph 79 to deliver a replacement Chromium Remedy Letter of Credit at least 95 days prior to the expiration date of the existing Chromium Remedy Letter of Credit;

(b) The material failure of Honeywell to proceed with diligence and in good faith to carry out the terms of this Consent Decree and the continuance of such a material breach for a period of 15 days after written notice to Honeywell thereof and either (i) Honeywell, in the opinion of the Special Master without further input from the Parties, shall have failed to cure the breach; (ii) during the 15-day period, the Court has not entered an order to prevent the Special Master from drawing on the Chromium Remedy Letter of Credit; or (iii) the Court or the Special Master has not granted Honeywell additional time to cure the breach;

(c) The filing by Honeywell of a petition seeking relief, or the granting of relief, under the Federal Bankruptcy Code or any similar federal or state statute; any assignment for the benefit of creditors made by Honeywell; the involuntary filing of any of the foregoing against Honeywell if involuntary filing has not been dismissed within 60 days; the appointment of a custodian, receiver, liquidator, or trustee, or other similar official for Honeywell or for a substantial part of Honeywell's property; any action by Honeywell to effect any of the foregoing; or if Honeywell becomes insolvent as defined in Section 101(32) of the Federal Bankruptcy Code; or

(d) The dissolution, liquidation, merger, consolidation, or reorganization of Honeywell or the institution of any proceeding to effect any of the foregoing, other than under paragraph 84(c) above, and the failure of Honeywell to provide assurance to the Special Master, within 15 days after written notice, that such an event will not impair Honeywell's ability to

carry out the terms of this Consent Decree.

85. **Placement of Proceeds in Court Registry Investment System Account.** In the event that the Special Master draws upon the Chromium Remedy Letter of Credit due to an event of default, the Special Master shall place the proceeds of the Chromium Remedy Letter of Credit which represent the remaining estimated Chromium Remedy costs under paragraphs 77(a)(i), plus a contingency of 25% of the remaining estimated costs under paragraph 77(a)(i), in an account with the Court Registry Investment System in accordance with Local Civil Rule 67.1 and not expend the proceeds of the Letter of Credit without further order of this Court. The Special Master shall place all additional proceeds of the Chromium Remedy Letter of Credit in a trust fund pursuant to paragraph 90(b)(v).

86. **Termination of Chromium Remedy Letter of Credit.** The Chromium Remedy Letter of Credit may be withdrawn in its entirety upon the satisfaction of all of the following:

(a) The implementation of the Chromium Remedy; and

(b) Establishment of long-term financial assurance pursuant to Article III.E.

E. Long-Term Financial Assurances

87. **Long-Term Financial Assurances.** Honeywell shall fund long-term financial assurances to ensure that the activities set forth in paragraph 89(a) are carried out regardless of whether Honeywell is financially able to carry out such activities in perpetuity.

88. **Resolution of the Amount of Long-Term Financial Assurances.** The Parties have agreed to the following options with regard to how the long-term financial assurances shall be determined:

(a) If the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less,

and agree on the amount of funding needed, Honeywell shall provide long-term financial assurances as required by Article III.E.

(b) If the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less, but disagree on the amount of funding needed, Honeywell shall provide long-term financial assurances as required by Article III.E except that the dispute as to the amount of the long-term financial assurances shall be submitted to the Special Master pursuant to paragraph 91.

(c) If the Parties do not agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less, or the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is greater than $10,000,000, the Parties shall seek resolution by the Court of the long-term financial assurances issues, including (i) the type of financial assurances to be provided; (ii) the scope of the financial assurances; (iii) the amount of the financial assurances; and (iv) the duration of the financial assurances. In the event that the Parties seek resolution by the Court, the provisions of paragraphs 90 through 98 shall not apply.

(d) Within 60 days of the entry of this Consent Decree, the Parties shall determine which option under this paragraph shall apply. In the event that the Parties determine that paragraph 88(c) applies, Riverkeeper shall initiate the proceedings by moving the Court for the imposition of long-term financial assurances.

(e) If the Parties determine that they are proceeding under paragraph 88(c), Honeywell shall maintain the Chromium Remedy Letter of Credit required by paragraph 77 in an amount equal to at least $20,000,000 in 2008 dollars until such time as the long-term financial assurances ordered by the Court are in place. In the event of any default by Honeywell pursuant

to paragraph 84 while the Chromium Remedy Letter of Credit is in place, the provisions of paragraph 90(b)(v) for the placement of the proceeds that exceed the remaining estimated Chromium Remedy costs under paragraph 77(a)(i) plus a contingency of 25% of the remaining estimated costs under paragraph 77(a)(i), shall apply.

89. **Costs Subject to Long-Term Financial Assurances.**

(a) Long-term financial assurances shall provide enough funds to cover the costs of the following activities:

(i) Perpetual monitoring and maintenance of the Chromium Remedy, including installation, operation and monitoring of any above-cap-grade gas collection and/or treatment system as may be necessary, but such system is not part of the 100% Design;

(ii) Perpetual operation of the shallow groundwater pump-and-treat remedy;

(iii) Perpetual repair of the cap;

(iv) Perpetual replacement of the cap on a 75-year replacement interval; and

(v) In the event that Honeywell selects a trust fund pursuant to paragraph 90(a), the perpetual administration of the trust fund.

(b) The costs that shall be subject to financial assurances is an amount that will provide the full payment for each of the activities set forth in paragraphs 89(a)(i) through 89(a)(v) plus a 25% contingency when the activities in paragraphs 89(a)(i) through 89(a)(v) are expected to be performed. The costs subject to financial assurances are forward looking because they state an amount valued at the time the funds are needed. As such, they shall be stated in contemporary time as the present value (calculated on the basis of a discount rate of 4.75%) of

the estimated future costs of the activities specified in paragraphs 89(a)(i) through 89(a)(v), plus a 25% contingency on those costs.

90. **Long-Term Financial Assurance Mechanisms.** Honeywell shall provide long-term financial assurances in the amount of the costs subject to long-term financial assurances in the form of a trust fund, a letter of credit, or some combination of the two. The selected mechanism(s) shall satisfy the following requirements:

(a) **Trust Fund.** In the event that Honeywell selects a trust fund, Honeywell shall create a trust fund such that it can provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary.

(i) The trust fund shall be at arm's length from Honeywell and shall not be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy, dissolution, privatization, or sale. The trust fund agreement shall contain the language necessary to assure that neither the trust fund nor the earnings of the trust fund shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

(ii) The trust fund shall be managed by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution acceptable to Riverkeeper and the Jersey City Entities or approved by the Court. In the event that the financial institution managing the trust fund declares bankruptcy, the Court shall withdraw the funds and appoint another financial institution meeting the requirements of this paragraph to manage the trust.

(iii) No more frequently than once per year, Honeywell may apply to the Court for an order directing the trust manager to reimburse Honeywell for any costs that it has incurred to carry out the activities set forth in paragraphs 89(a)(i) through 89(a)(iv).

(b) **Long-Term Letter of Credit.** In the event that Honeywell selects a letter of credit, Honeywell shall obtain a one-year irrevocable letter of credit (the "Long-Term Letter of Credit") to be automatically renewed annually in an amount that provides sufficient funds such that a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a), could be created. The Long-Term Letter of Credit-funded trust, plus any trust fund established under paragraph 90(a), shall provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. The amount of any Long-Term Letter of Credit shall therefore be adjusted periodically as the cap replacement interval is approached because, for example, the money needed in the 10th year to fund a trust that can provide for replacement of the cap in the 75th year is much less than the money that would be needed in the 40th year. Such periodic adjustments shall be proposed and approved by the Court in conjunction with the adjustments under paragraph 92.

(i) Neither the Long-Term Letter of Credit nor the proceeds of the Long-Term Letter of Credit shall be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy, dissolution, privatization, or sale. The Long-Term Letter of Credit shall contain the language necessary to assure that neither the Long-Term Letter of Credit nor the proceeds of the Long-Term Letter of Credit shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

(ii) The Long-Term Letter of Credit shall be issued by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution acceptable to Riverkeeper and the Jersey City Entities or approved by the Court. In the event that the financial institution issuing the Long-Term Letter of Credit declares bankruptcy, the Court shall authorize the drawing of funds from the Long-Term Letter of Credit

and shall deposit those funds in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

(iii) The provisions of the Uniform Customs and Practice ("UCP") for Documentary Credits (1993 Revision) International Chamber of Commerce Publication #500 and New York law shall apply to the Long-Term Letter of Credit.

(iv) The Long-Term Letter of Credit shall be automatically renewed annually, unless, no later than 120 days prior to the anniversary of the Long-Term Letter of Credit issue date, the issuer provides notice of non-renewal. If the issuer provides notice of non-renewal, Honeywell shall obtain a replacement irrevocable Long-Term Letter of Credit at least 95 days prior to the expiration date of the existing Long-Term Letter of Credit. If Honeywell is not otherwise in default as provided in this Article, the Court shall direct the cancellation of the prior Long-Term Letter of Credit within 91 days after delivery to the Court of any replacement of a Long-Term Letter of Credit. In the event that the Court is entitled to draw upon a Long-Term Letter of Credit when there are two Letters of Credit currently in place, the Court shall not draw an aggregate amount in excess of the highest valued Long-Term Letter of Credit.

(v) Prior to the expiration of the Special Master's appointment pursuant to paragraph 76, the Long-Term Letter of Credit shall be payable to the Special Master. During the time the Long-Term Letter of Credit is payable to the Special Master, the Special Master may draw on the Long-Term Letter of Credit as provided in paragraph 84. In the event that the Special Master draws upon the Long-Term Letter of Credit due to an event of default, the Special Master shall place the proceeds of the Long-Term Letter of Credit in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a). After the Special Master's appointment expires pursuant to paragraph 76, the Long-Term Letter of Credit shall be payable to the Court and, in the event that the Court draws

on the Long-Term Letter of Credit, the Court shall place the proceeds of the Long-Term Letter of Credit in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

(vi) Whether the Long-Term Letter of Credit is payable to the Special Master or the Court, it shall not, prior to its expiration date, be revoked or terminated by Honeywell except consistent with this Consent Decree and with the approval of the Court. The ability of the Special Master or the Court to draw upon the Long-Term Letter of Credit shall not be limited by any agreement between Honeywell and the issuer.

(vii) In the event that the Long-Term Letter of Credit is drawn upon and invested pursuant to paragraph 90(b)(ii), 90(b)(v) or 95 and Honeywell has also selected a trust fund pursuant to paragraph 90(a), resulting in the existence of two trust funds, the two trust funds shall be managed so as to ensure that the combined amount of the trust funds is sufficient to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary.

(c) **Combination.** Honeywell may use some combination of a trust fund and a letter of credit to achieve the requirements of this paragraph. However, if a combination is used, Honeywell shall ensure that the combined amount of financial assurances is sufficient to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. The trust fund and the letter of credit shall otherwise satisfy all the requirements of paragraphs 90(a) and 90(b).

91. **Procedures for Review of the Proposed Long-Term Financial Assurances.** In the event that the Parties have determined that they are proceeding pursuant to paragraph 88(a) or 88(b), no later than 120 days after the determination under paragraph 88(d), Honeywell shall submit to Riverkeeper, the Jersey City Entities, and the Special Master, for their review (a) the

amount of the proposed long-term financial assurances; (b) the form(s) of the proposed long-term financial assurance mechanisms; and (c) the name(s) of the institution proposed to manage or issue the long-term financial assurances. If Riverkeeper and the Jersey City Entities agree to the terms of the proposed long-term financial assurances, within 60 days of such agreement, Honeywell shall create a trust fund and/or secure a Long-Term Letter of Credit on those terms. If the Parties are unable to reach agreement over the terms of the long-term financial assurances, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation regarding the terms of the financial assurances. In any event, until the long-term financial assurances have been put into place, Honeywell shall maintain the Chromium Remedy Letter of Credit and the requirements of paragraphs 88(e) and 90(b)(v) shall apply to the Chromium Remedy Letter of Credit.

92. **Adjustment of Amount Held in Long-Term Financial Assurances.** Every five years as marked from the establishment of the first long-term financial assurances pursuant to paragraph 90, the Parties shall report to the Court whether the long-term financial assurances are adequately funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. At such time as the Parties report to the Court, any Party may seek an adjustment in the amount of the long-term financial assurances. The Party seeking an adjustment must demonstrate that the long-term financial assurances are under-funded or over-funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. Such demonstration shall reflect the actual costs of implementing the remedy and/or any replacement of the remedy, once such actual costs are available. The demonstration shall also reflect the costs of work completed to date and the actual lifetime of the cap, once the

cap has been replaced or has passed a replacement interval without requiring replacement. The demonstration shall further reflect the actual performance of the fund and its ability to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. Any demonstration shall be forward looking and shall be based upon estimates of what the activities in paragraphs 89(a)(i) through 89(a)(v) are expected to cost at the time they must be performed and the amount of funding projected to be available to undertake such activities at the time they must be performed. If, after reviewing the submission(s) received from the Parties, the Court determines that the long-term financial assurances are under-funded or over-funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary, the Court shall order an adjustment in the amount held in the long-term financial assurances to overcome the shortage or overage. In the event that the Court determines that the long-term financial assurances are under-funded, it shall order Honeywell to increase the amount held in the long-term financial assurances. In the event that the Court determines that any trust fund established pursuant to paragraph 90(a) is over-funded, the Court shall issue an order directing the trust manager to pay the overage to Honeywell. In the event that the Court determines that the Long-Term Letter of Credit is over-funded, the Court shall issue an order permitting Honeywell to reduce the amount covered during the next annual renewal of the Long-Term Letter of Credit pursuant to paragraph 90(b)(iv). Any adjustment to the amount of the Long-Term Letter of Credit pursuant to this paragraph shall be in addition to any adjustment of the amount of the Long-Term Letter of Credit required pursuant to paragraph 90(b).

93. **Exclusive Court Jurisdiction.** The trust fund agreement and/or the Long-Term Letter of Credit shall recite that the trust fund manager and/or issuer of the Long-Term Letter of Credit submit to the exclusive jurisdiction of this Court for any and all disputes arising under the

trust fund or the Long-Term Letter of Credit. The requirements of this paragraph shall apply whether the trust fund is established pursuant to paragraph 90(a), 90(b)(ii), 90(b)(v), or 95.

94. **Procedures upon Honeywell's Material Default of Its Obligations after the Special Master's Appointment Has Expired.** Upon the occurrence of default by Honeywell, after the Special Master's appointment has expired, Riverkeeper or the Jersey City Entities may move the Court on an expedited basis for an order to withdraw funds from the trust fund or to draw on the Long-Term Letter of Credit. Default shall include:

(a) The failure of Honeywell, in the event that notice is given pursuant to paragraph 90(b)(iv) to deliver a replacement Long-Term Letter of Credit at least 95 days prior to the expiration date of the existing Long-Term Letter of Credit;

(b) The material failure of Honeywell to proceed with diligence and in good faith to carry out the terms of this Consent Decree and the continuance of such a material breach for a period of 30 days after written notice by Riverkeeper or the Jersey City Entities to Honeywell of the alleged material failure, unless Honeywell cures the alleged breach within the 30-day notice period or such longer period as the Parties may agree to or the Court may order;

(c) The filing by Honeywell of a petition seeking relief, or the granting of relief, under the Federal Bankruptcy Code or any similar federal or state statute; any assignment for the benefit of creditors made by Honeywell; the involuntary filing of any of the foregoing against Honeywell if the involuntary filing is not dismissed within 60 days; the appointment of a custodian, receiver, liquidator, trustee, or other similar official for Honeywell or for a substantial part of Honeywell's property; any action by Honeywell to effect any of the foregoing; or if Honeywell becomes insolvent as defined in Section 101(32) of the Federal Bankruptcy Code; or

(d) The dissolution, liquidation, merger, consolidation, or reorganization of Honeywell or the institution of any proceeding to effect any of the foregoing, other than under

paragraph 94(c), if Honeywell fails to provide assurance to Riverkeeper, the Jersey City Entities, and the Court, within 15 days after written notice, that such an event will not impair Honeywell's ability to carry out the terms of this Consent Decree.

95. **Drawing on the Long-Term Letter of Credit in the Event of Honeywell's Default.** If the Court grants any motion by Riverkeeper or the Jersey City Entities pursuant to paragraph 94 to draw on the Long-Term Letter of Credit, the sum approved by the Court's order granting the motion shall be paid from the Long-Term Letter of Credit into a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

96. **Use of the Trust Fund in the Event of Honeywell's Default**. In the event of Honeywell's default, the money in the trust fund established pursuant to paragraph 90(a) shall be available to meet the obligations of paragraph 89(a). Riverkeeper and/or the Jersey City Entities shall file motions with the Court seeking orders directing how the money in the trust fund shall be used. The Court shall consider motions on an expedited basis and shall enter appropriate orders. The Court may enter an order allowing for automatic withdrawal of regular expenses without separate motion to the Court by Riverkeeper or the Jersey City Entities.

97. **Use of a Trust Fund Established Pursuant to Paragraph 85, 90(b)(ii), 90(b)(v), or 95.** In the event that a trust fund is established pursuant to paragraph 85, 90(b)(ii), 90(b)(v), or 95, the money in the trust fund shall be available to meet the obligations of paragraph 89(a). Riverkeeper and/or the Jersey City Entities shall file motions with the Court seeking orders directing how the money in the trust fund shall be used. The Court shall consider motions on an expedited basis and shall enter appropriate orders. The Court may enter an order allowing for automatic withdrawal of regular expenses without separate motion to the Court by Riverkeeper or the Jersey City Entities.

98. **Termination of the Long-Term Financial Assurances.** Honeywell's obligations

under Article III.E shall be terminated and the long-term financial assurance mechanisms shall be terminated when the Court finds that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area or on the Site, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive. Upon determining that long-term financial assurances may be terminated, the Court shall order that any Long-Term Letter of Credit may be withdrawn in its entirety and any trust fund may be terminated. In conjunction with its order terminating any trust fund, the Court in its discretion shall designate a recipient(s) of any remaining trust funds.

ARTICLE IV: IMPLEMENTATION SCHEDULE AND TERMINATION

99. **Schedule for Remedy and Site Preparation Implementation Activities.** The Chromium Remedy under Article III and the Historic Fill Remedy under Article II.B of the Jersey City/Honeywell Consent Order and Site Preparation Activities under Article III of the Jersey City/Honeywell Consent Order shall be undertaken by the Parties in accordance with the following anticipated schedule, recognizing that this schedule may be further modified in writing by agreement of the Parties and with the approval of the Court:

(a) By October 1, 2008, the Jersey City Entities and Honeywell shall develop a Site Preparation Plan, pursuant to paragraph 3.2 of the Jersey City/Honeywell Consent Order, for all Site Preparation Activities necessary to undertake the Chromium Remedy;

(b) No later than June 18, 2009, Honeywell shall submit to NJDEP a remedial design document for the Chromium Remedy;

(c) No later than September 1, 2009, Honeywell shall submit all applications for permits and authorizations for the performance of the Chromium Remedy to all appropriate local, state, and federal government entities;

(d) Honeywell shall use its best efforts to complete the Chromium Remedy no later than four years after all appropriate applications and authorizations for the performance of the Chromium Remedy have been obtained;

(e) By May 1, 2008, Honeywell and the Jersey City Entities shall submit a work plan for further Remedial Investigation for AOC 2 to NJDEP; and

(f) By December 1, 2008, Honeywell and the Jersey City Entities shall submit a Remedial Action Selection Report and Remedial Action Workplan for the Historic Fill Remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order. The Workplan shall contain a schedule for implementation of the Historic Fill Remedy.

100. **Termination of this Consent Decree.** This Consent Decree shall terminate upon the withdrawal of any Party as provided for in this paragraph. Any Party may elect to withdraw from this Consent Decree due to the occurrence of one or more of the following events, provided that such Party provides written notice of withdrawal to the other Parties pursuant to paragraph 108:

(a) The Court fails to enter the Jersey City/Honeywell Consent Order or this Consent Decree or either the Jersey City/Honeywell Consent Order or this Consent Decree is determined to be invalid on appeal;

(b) JCRA fails to take those actions required under paragraphs 4.11(a), (b), and (c) of the Jersey City/Honeywell Consent Order within nine months of entry of this Consent Decree; or

(c) JCRA fails to approve a Redevelopment Agreement between Bayfront Redevelopment LLC and JCRA pursuant to paragraph 4.11(e) of the Jersey City/Honeywell Consent Order within 12 months of entry of this Consent Decree.

101. **Procedures for Withdrawal and Termination.** Any Party electing to withdraw pursuant to paragraph 100 and thereby terminate this Consent Decree shall provide written notice of such withdrawal and termination to all other Parties within 30 days of the occurrence giving rise to the decision to withdraw. If any Party objects to termination of the Consent Decree, or believes that the conditions set forth in paragraph 100 have not been met, such objecting Party may move the Court for an expedited hearing on the issue of whether the conditions for termination have been effectuated.

102. **Good-Faith Obligation to Avoid Termination.** The Parties agree that they will each endeavor to fulfill the terms of this Consent Decree, that they will work diligently and in good faith to meet their obligations hereunder, and that they will promptly and timely take all reasonable steps to give effect to this Consent Decree and to avoid termination under paragraph 100.

103. **Effect of Termination.** If this Consent Decree is terminated pursuant to paragraph 100, the Consent Decree shall no longer be binding on the Parties and shall be of no further effect. In the event that this Consent Decree is terminated by one or more Parties pursuant to paragraph 100, each Party to this Consent Decree reserves all of its rights, claims, and defenses (both legal and factual) against the other Parties with respect to the matters at issue in the Consolidated Litigation and each Party remains free to pursue such rights, claims, and defenses.

ARTICLE V: ADDITIONAL PROVISIONS RELATED TO HISTORIC FILL AND SITE PREPARATION AND REDEVELOPMENT

104. **Historic Fill Remedy**. This Consent Decree shall adopt and incorporate the terms of Article II.B of the Jersey City/Honeywell Consent Order with respect to the Historic Fill Remedy. The Historic Fill Remedy shall not be limited to the activities set forth in Article II.B of the Jersey City/Honeywell Consent Order in the event that NJDEP requires a more extensive remedy. The Historic Fill Remedy shall be compatible with the Chromium Remedy such that no

part of the Historic Fill Remedy shall interfere with the installation, maintenance, and monitoring of the Chromium Remedy. In addition, the Historic Fill Remedy for any discharge of non-chromium contaminants to the Hackensack River shall not interfere with the remedies under the Sediment Consent Order, including the source control remedies. In the event that Jersey City conducts the Historic Fill Remedy instead of Honeywell, the terms of this paragraph shall still apply.

105. **Oversight of Historic Fill Remedy**. Paragraph 2.11 of the Jersey City/Honeywell Consent Order shall apply only to the Historic Fill Remedy, not the Chromium Remedy. The Progress Reports provided for in paragraphs 2.12 and 3.7 of the Jersey City/Honeywell Consent Order shall be provided to Riverkeeper and the Special Master at the time they are submitted.

106. **Transfer of Title of Study Areas 6 North and 7 to and from Bayfront Redevelopment LLC**. The transfer of title of Study Area 6 North and Study Area 7 properties to Bayfront Redevelopment LLC pursuant to the Jersey City/Honeywell Consent Order and any subsequent transfers shall not impede Honeywell's obligations to (a) complete the remediation of Study Area 7 and implement the Final Judgment and subsequent orders in *ICO v. Honeywell* or (b) complete the Chromium Remedy and conduct long-term monitoring and fulfill its other obligations set forth in this Consent Decree. Such transfers of Study Areas 6 North and Study Area 7 shall not include a transfer of Honeywell's obligations to implement the Final Judgment and subsequent orders in *ICO v. Honeywell* or a transfer of Honeywell's obligations under this Consent Decree, but shall include a right of access or any other right required by Honeywell to complete the remediation. Any subsequent transfer of Study Area 6 North or Study Area 7 from Bayfront Redevelopment LLC to a redeveloper or other party shall provide all necessary agreements to allow Honeywell all necessary access to Study Area 6 North and Study Area 7 for purposes of completing Honeywell's obligations with respect to Study Area 6 North under this

Consent Decree and completing the Study Area 7 remediation and implementing the Final Judgment and subsequent orders in *ICO v. Honeywell*.

107. **Dispute Resolution Procedures.** The provisions of Article VIII of the Jersey City/Honeywell Consent Order do not apply to any disputes regarding or impacting the Chromium Remedy, which shall be resolved as provided in paragraph 72. The provisions of Article VIII of the Jersey City/Honeywell Consent Order shall apply to disputes between the Jersey City Entities and Honeywell regarding the Historic Fill Remedy and other obligations provided in the Jersey City/Honeywell Consent Order, except to the extent that such disputes may affect the Chromium Remedy. If any such dispute may affect the Chromium Remedy, it shall be resolved as provided in paragraph 72. Honeywell shall provide Riverkeeper with a copy of each notice of any breach provided under paragraph 8.1 of the Jersey City/Honeywell Consent Order within 10 days of Honeywell's receipt or issuance of such notice. Honeywell shall provide Riverkeeper with a copy of any written resolution of a dispute pursuant to paragraph 8.2 within 10 days of the resolution.

ARTICLE XI: NOTICE

108. **Notice.** Any and all notices given in connection with this Consent Decree shall be deemed adequately given only if in writing and addressed to the Party for whom such notices are intended at the addresses set forth in this paragraph. All notices shall be sent by Federal Express or other nationally recognized overnight messenger service or by first-class registered or certified mail, postage prepaid, return receipt requested. A written notice shall be deemed to have been given to the recipient party on the earlier of (a) the date it shall be delivered to the address set forth in this paragraph; (b) the date delivery shall have been refused at the address set forth in this paragraph; or (c) with respect to notices sent by mail, the date as of which the postal service shall have indicated such notice to be undeliverable at the address set forth in this paragraph.

Any and all notices referred to in this Consent Decree, or which any Party desires to give to the other, shall be addressed as follows:

If to Honeywell and/or
Bayfront Redevelopment LLC :

Tom Byrne, Esq.
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-2775

If to Riverkeeper:

Bruce J. Terris
Carolyn Smith Pravlik
Kathleen L. Millian
Terris, Pravlik & Millian, LLP
1121 12th St., N.W.
Washington, DC 20005-4632
(202) 682-2100

With copies to:

John Morris
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-4003

If to Jersey City:

William Matsikoudis
Corporation Counsel
City of Jersey City
280 Grove Street
Jersey City, NJ 07305
(201) 547-4667

If to JCIA:

David L. Isabel
Golub & Isabel, PC
160 Littleton Road
Parsippany, NJ 07054
(973) 968-3377

If to JCMUA:

Sam Della Fera Jr.
Trenk, DiPasquale, Webster,
Della Ferra & Sodono, P.C.
347 Mount Pleasant Ave.
West Orange, NJ 07052
(973) 243-8600

If to JCRA:

Robert Antonichello
Executive Director
30 Montgomery Street
Jersey City, NJ 07302
(201) 547-5810

Any party may change its designated recipients or addresses for notice in this paragraph by providing written notice of such change to all other Parties.

ARTICLE XII: RIVERKEEPER'S ATTORNEYS' FEES

109. **Payment of Past Fees and Expenses.** Within 30 days of the entry of this Consent Decree, Honeywell shall pay Terris, Pravlik & Millian, LLP the sum of $1,513,217.15 which represents the following:

(a) A compromise of the attorneys' fees incurred by Riverkeeper in the litigation of Study Area 6 North portion of *Riverkeeper v. Honeywell* through March 27, 2008; and

(b) $187,862.27 in out-of-pocket expenses representing 50% of the expenses incurred by Riverkeeper in *Riverkeeper v. Honeywell* from the inception of the litigation after deducting the expenses to be paid pursuant to the Sediment Consent Order.

Payment of the sum of $1,513,217.15 shall be in full satisfaction of all obligations, duties, and responsibilities of Honeywell with respect to the $1,556,747.46 in fees and expenses that Riverkeeper claimed with regard to the above described fees and expenses.

110. **Future Fees and Expenses.** Honeywell shall reimburse Riverkeeper's attorneys for reasonable fees and expenses incurred: (a) in negotiating this Consent Decree after March 27, 2008; (b) in the monitoring and enforcement of this Consent Decree; and (c) in participation in the Special Master process established pursuant to this Consent Decree. Honeywell shall also reimburse Riverkeeper for reasonable attorneys' fees and expenses for Riverkeeper's review of and participation in the Long-Term Monitoring Plan and monitoring and enforcement of this Consent Decree following the term of the Special Master. In the event that any dispute arises between the Parties under this Consent Decree that must be resolved by the Court, Riverkeeper shall be entitled to recover its attorneys' fees and expenses for litigation of the dispute to the extent allowed by federal law. Riverkeeper and Honeywell shall use the same informal procedure for attempting to settle fees issues as has been used for post-judgment monitoring fees in *ICO v. Honeywell*. In the event that Riverkeeper and Honeywell are unable to reach a

settlement on fees, Riverkeeper shall apply to the Court for an award of attorneys' fees and expenses. If Honeywell objects to only a portion of the Riverkeeper's statement of attorneys' fees and expenses, Honeywell shall pay the undisputed portion within 60 days of Riverkeeper's submittal of the statement to Honeywell. The Court shall resolve any objections to Riverkeeper's statement of attorneys' fees and expenses and shall enter an appropriate Order.

ARTICLE XIII: MISCELLANEOUS PROVISIONS

111. **Force Majeure.** Force Majeure, for the purposes of this Consent Decree, is defined as an event arising from causes beyond the control of any Party or Parties (or their agents, contractors, subcontractors, representatives, or assigns) which could not have been overcome by reasonable diligence and which delays or prevents the performance of any obligation under this Consent Decree. Examples of events which may constitute force majeure include the refusal of any federal or state governmental authority to grant a permit or authorization necessary for the completion of actions required by this Consent Decree, floods, hurricanes, tornadoes, and other extraordinary weather events, earthquakes and other natural disasters, terrorist attacks, war, and other national emergencies. Examples of events that are not force majeure events include normal inclement weather, increased costs or expense, the failure to timely and fully apply for a permit or authorization necessary for the completion of actions required by this Consent Decree, or financial difficulty of any Party. The Party claiming force majeure shall bear the burden of showing an event was a force majeure event.

112. **JCRA and Bayfront Redevelopment LLC as Parties.** As signatories to this Consent Decree, JCRA and Bayfront Redevelopment LLC subject themselves to the Court's jurisdiction for the purpose of enforcing this Consent Decree and agree to be bound by this Consent Decree. This Consent Decree shall be fully enforceable against JCRA and Bayfront Redevelopment LLC.

113. **Successors and Assigns.** This Consent Decree shall be binding upon and shall inure to the benefit of the successors, assigns, heirs, corporate parents, subsidiaries, and affiliates of each Party. No assignment or delegation of the obligations hereunder shall release the assigning Party from its obligations under this Consent Decree.

114. **Successors to Hackensack Riverkeeper, Inc.** In the event that Hackensack Riverkeeper, Inc. disbands or otherwise ceases operations, it shall assign its rights under this Consent Decree to another qualified nonprofit organization. A nonprofit organization shall be qualified for assignment under this Consent Decree if it is a charitable organization under Section 501(c)(3) of the Internal Revenue Code or its substantial equivalent and has an established record of working to enhance or preserve the ecology, natural habitat, or environment. Any such assignment shall be subject to approval by the Court and Honeywell shall have the right to object to any proposed assignment. Any successor organization shall have the duty to assign its rights under this Consent Decree to another qualified nonprofit organization in the event that the successor disbands or otherwise ceases operations. In the event that a successor is not appointed at any given time, the New Jersey Attorney General or equivalent officer shall appoint a successor subject to approval by the Court and objection by Honeywell.

115. **Reservation of Rights and Claims**. Except as set forth expressly herein, this Consent Decree does not affect in any way any of the Parties' claims or defenses against third parties who have not signed the Consent Decree.

116. **Governing Law and Continuing Jurisdiction.** The Court shall retain jurisdiction over the matters addressed in this Consent Decree for purposes of enabling the Parties to apply to the Court for any further order as may be necessary to construe, carry out, or enforce the terms of this Consent Decree. This Consent Decree shall be interpreted and enforced under the laws of

the United States and the State of New Jersey by the United States District Court for the District of New Jersey.

117. **Construction.** Questions regarding the interpretation of this Consent Decree shall not be resolved against any Party on the ground that this Consent Decree has been drafted by that Party. This Consent Decree is the result of review, negotiation, and compromise by each Party.

118. **Authority to Enter into Agreement.** The undersigned representative for each Party represents, certifies, and warrants that he or she is duly authorized by the Party whom he or she represents to enter into the terms of this Consent Decree and bind such Party legally to this Consent Decree.

119. **Measures to Effectuate This Consent Decree.** The Jersey City Entities and JCRA shall take all appropriate steps to ensure that this Consent Decree has been (and that actions required hereunder will be) duly considered, ratified, and approved. Such steps include consideration of this Consent Decree at a meeting of the City Council, open to the public, at which members of the public have the opportunity to comment on all aspects of the Settlement, including the commitments made by Jersey City; and consideration by and approval of the commissioners of the JCIA, JCMUA, and JCRA.

120. **Modifications.** This Consent Decree may be modified by mutual agreement of the Parties but such agreement must be in writing, duly and properly signed by all Parties, and shall be submitted to the Court for approval.

121. **Severability.** Each of the provisions in paragraph 60 of this Consent Decree shall be deemed severable and, in the event that one or more of such provisions is deemed invalid or unenforceable, it shall not affect the validity or enforceability of the other provisions of the Consent Decree.

122. **Signatures.** This Consent Decree may be signed simultaneously or in counterparts by the respective signatories, which shall be as fully valid and binding as if a single document was signed by all of the signatories. This Consent Decree may be signed electronically by any or all signatories, and such electronic signature shall be as fully valid and binding as a hand-written signature.

CONSERVATION RESTRICTION

This **CONSERVATION RESTRICTION** ("Conservation Restriction"), made on this 12th day of December, 2008, between BAYFRONT REDEVELOPMENT LLC, a limited liability company, having an address at c/o Honeywell International Inc., 101 Columbia Turnpike, Morristown, New Jersey 07962 (hereafter the "Grantor"), HONEYWELL INTERNATIONAL INC., a corporation of the State of Delaware, having an address at 101 Columbia Turnpike, Morristown, New Jersey 07962, and THE HACKENSACK WATERSHED LAND TRUST, a non-profit Corporation of the State of New Jersey with offices at 231 Main Street, Hackensack, New Jersey 07061 (hereafter "Grantee").

WHEREAS, the Grantee, is a non-profit corporation incorporated under the laws of the State of New Jersey as a tax exempt public charity under Section 501(c)(3) and 509(a)(1) of the Internal Revenue Code; is qualified under section 170(h) of the Internal Revenue Code to receive conservation contributions; is a charitable conservancy within the meaning of N.J.S.A. 13:8B-2(a); is qualified to do business in the State of New Jersey; and whose purpose is to preserve natural areas for scientific, charitable, educational, and aesthetic purposes; and

WHEREAS, Grantor is the owner in fee simple of certain AOC 1 Open Space Property consisting of approximately 11 acres and now known and designated as a portion of Block 1290.1, Lots 2D and 2E and Block 1290.1, Lot 16A.99 on the Tax Map of the City of Jersey City, as described in Schedule A and Exhibit A attached hereto (the "AOC 1 Open Space Property"); and

WHEREAS, the AOC 1 Open Space Property is subject to a certain Option to Purchase in favor of the City of Jersey City which may be exercised upon the occurrence of certain conditions, which is being recorded simultaneously with this Conservation Restriction, and which provides for purchase subject to this Conservation Restriction; and

WHEREAS, on or about December 23, 2005, the Jersey City Municipal Utilities Authority ("JCMUA") filed litigation styled *Jersey City Municipal Utilities Authority v. Honeywell International Inc.*, D.N.J., Civ. No. 05-5955 (DMC), bringing claims against Honeywell International Inc. ("Honeywell") under, *inter alia*, Section 6972 of the Resource Conservation and Recovery Act ("RCRA"), and seeking remediation of chromium contamination on property then-owned by JCMUA, which included the area known as the AOC 1 Open Space Property; and

WHEREAS, on or about December 28, 2005, the Jersey City Incinerator Authority ("JCIA") filed litigation styled *Jersey City Incinerator Authority v. Honeywell International Inc.*, D.N.J., Civ. No. 05-5993 (DMC), bringing claims against Honeywell under, *inter alia*, Section 6972 of RCRA, and seeking remediation of chromium contamination on property then-owned by JCIA, which included the area known as the AOC 1 Open Space Property; and

WHEREAS, on or about January 4, 2006, the Hackensack Riverkeeper, Inc., ("Riverkeeper") filed litigation styled *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-022 (DMC), bringing a claim against Honeywell under RCRA and seeking remediation of chromium contamination to soils, groundwater,

surface waters, and sediments associated with various properties collectively designated by NJDEP as Study Areas 5, 6 North, and 6 South;

WHEREAS, Study Area 6 North includes the properties previously owned by JCMUA, JCIA, and the City of Jersey City and includes the AOC 1 Open Space Property.

WHEREAS, *JCMUA v. Honeywell*, *JCIA v. Honeywell,* and *Riverkeeper v. Honeywell* were consolidated by the United States District Court for the District of New Jersey (hereinafter the "Consolidated Litigation"); and

WHEREAS, the Consolidated Litigation was resolved, in part, by the "Consent Decree Regarding Remediation and Redevelopment of Study Area 6 North" (hereinafter the "Consent Decree"), which decree is being recorded simultaneously with this Conservation Restriction; and

WHEREAS, the AOC 1 Open Space Property is being remediated for chromium contamination and following the remediation, development of the AOC 1 Open Space Property is prohibited except in the limited circumstances set forth in the Consent Decree and this Conservation Restriction; and

WHEREAS, subject to certain roadway and utility improvements affecting portions of the AOC 1 Open Space Property, and consistent with the terms of the Consent Decree and this Conservation Restriction, the AOC 1 Open Space Property will, following implementation of the Chromium Remedy as defined in the Consent Decree, be re-developed from commercial/industrial purposes to open space/public park purposes. Following the remediation, the AOC 1 Open Space Property will be established as a predominantly green open space with associated pedestrian walkways

and outdoor recreation facilities for the use and enjoyment of the public, while serving to protect the long-term integrity of the Chromium Remedy; and

WHEREAS, pursuant to the Bayfront I Redevelopment Plan, adopted by Jersey City on March 12, 2008, the AOC 1 Open Space Property has been zoned for open space and park use and certain roadways and utility improvements; and

WHEREAS, the AOC 1 Open Space Property is subject to certain provisions in the Consent Decree; and

WHEREAS, paragraph 60(b) of the Consent Decree provides that Bayfront Redevelopment LLC shall grant an open space conservation restriction over the AOC 1 Open Space Property; and

WHEREAS, the parties hereto wish to set forth certain terms and conditions that will restrict future uses of, and activities on, the AOC 1 Open Space Property and assure appropriate monitoring and enforcement of the conservation, open space, parks, and recreation purposes of this Conservation Restriction.

NOW THEREFORE, WITNESSETH: For and in consideration of the sum of One Dollar ($1.00) and other good and valuable consideration paid by Grantee to Grantor, the receipt and sufficiency of which is acknowledged by Grantor, and in consideration of the covenants hereinafter contained, the parties to this Conservation Restriction, intending to be legally bound, do

HEREBY AGREE AS FOLLOWS:

1. **Purpose**. It is the purpose of this Conservation Restriction to protect and preserve the AOC 1 Open Space Property; to permit Honeywell to implement, monitor, maintain, repair, and replace the Chromium Remedy; to prevent any use of the AOC 1

Open Space Property that will significantly impair or interfere with the purposes of the Consent Decree; and to preserve the AOC 1 Open Space Property as predominantly green open space with associated pedestrian walkways and outdoor recreation facilities for the use and enjoyment of the public. However, nothing in this Conservation Restriction shall grant a public right of access to enter upon, or use, the AOC 1 Open Space Property, or any portion thereof, during the time that the Chromium Remedy required by the Consent Decree is being implemented. Thereafter, Grantor and Grantee intend that this Conservation Restriction will confine the use of the AOC 1 Open Space Property to such activities as are consistent with the purpose of the Consent Decree. In the event of any conflict between the Consent Decree and this Conservation Restriction, the Consent Decree shall control.

2. **Title**. Grantor covenants and represents that Grantor is the sole owner and is seized of the AOC 1 Open Space Property in fee simple and has good right to grant and convey this Conservation Restriction and that Grantee(s) shall have the use of, and enjoyment of, the benefits derived from and existing out of this Conservation Restriction.

3. **Definitions**.

3.1 Capitalized terms in this Conservation Restriction which are not defined herein shall have the meaning ascribed to them in the Consent Decree.

3.2 AOC 1 Open Space Property shall mean the property consisting of approximately 11 acres and now known and designated as a portion of Block 1290.1, Lots 2D, 2E, and Block 1290.1, Lot 16A.99 on the Tax Map of the City of Jersey City, as described more fully in Schedule A and Exhibit A attached hereto. The AOC 1 Open

Space Property is the same property as the AOC 1 Open Space Area in the Consent Decree.

3.3 Bayfront Redevelopment LLC shall mean the limited liability company created by Honeywell for the purposes described in paragraph 4.1 of the Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc., filed simultaneously with the Consent Decree in the Consolidated Litigation.

3.4 Consent Decree shall mean the Consent Decree Regarding Remediation and Redevelopment of Study Area 6 North, entered in the Consolidated Litigation and being recorded simultaneously with this Conservation Restriction.

3.5 Consolidated Litigation shall mean *Jersey City Municipal Utilities Authority v. Honeywell International Inc.*, D.N.J., Civ. No. 05-5955 (DMC), *Jersey City Incinerator Authority v. Honeywell International Inc.*, D.N.J., Civ. No. 05-5993 (DMC), and *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-022 (DMC).

3.6 The Court shall mean the United States District Court for the District of New Jersey, which has jurisdiction over the Consolidated Litigation.

3.7 Hackensack River Watershed Land Trust shall mean the dedicated fund of the Hackensack Riverkeeper, Inc., established under Section 501(c) of the Internal Revenue Code for the purpose of acquiring and preserving open space within the Hackensack River watershed and administered by the Board of Trustees of the Hackensack Riverkeeper, Inc.

3.8 Holders of this Conservation Restriction shall mean Grantee and its successors and assigns and, in the event a Secondary Grantee is designated pursuant to paragraph 7.3, its successors and assigns.

3.9 Honeywell shall mean Honeywell International Inc.

3.10 Grantee shall mean Hackensack Watershed Land Trust and/or its designated successors and assigns. Grantee shall also mean the Secondary Grantee, in the event that the Secondary Grantee is designated pursuant to paragraph 7.3, and must fill the role of Grantee pursuant to paragraph 7.4.

3.11 Grantor shall mean Bayfront Redevelopment LLC as the current holder of the fee simple title to the AOC 1 Open Space Property and any subsequent holder of the fee simple title to the AOC 1 Open Space Property, including Jersey City.

3.12 Jersey City shall mean the City of Jersey City, New Jersey.

3.13 The Jersey City Entities shall mean the City of Jersey City, including the Department of Public Works ("DPW") and other agencies and branches thereof, the JCIA, and the JCMUA.

3.14 Party or Parties shall mean any one or all of the signatories to the Consent Decree.

3.15 Qualified Holder shall mean (a) an organization exempt from federal income taxation under Section 501(c)(3) of the Internal Revenue Code that satisfies the requirements to be a qualified organization within the meaning of Section 170(h)(3) of the Internal Revenue Code, or under any substantially similar provision of any successor tax code, and that is authorized to hold a conservation restriction with respect to property located within the State of New Jersey, (b) any trust or other entity

created by the legislature of the State of New Jersey or by Hudson County for substantially similar purposes, or (c) the State of New Jersey, Hudson County, or any other public body in New Jersey that is empowered to hold and administer a conservation restriction.

3.16 Riverkeeper shall mean the plaintiffs in *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-22 (DMC), and includes the Hackensack Riverkeeper, Inc., William Sheehan, Reverend Winston Clarke, and Lawrence Baker.

3.17 Secondary Grantee shall mean a qualified holder designated by Grantee pursuant to paragraph 7.3.

3.18 The Special Master shall mean Senator Robert G. Torricelli, appointed as the Special Master in *ICO v. Honeywell* and the Consolidated Litigation, and his successors or whomever the Court may appoint as Special Master.

4. **Conservation Restriction**.

4.1 Grant. Grantor hereby grants and conveys to Grantee, a non-public conservation restriction on, over and across the AOC 1 Open Space Property as is depicted on the recorded Plat, which area is described in Schedule A and Exhibit A attached hereto and made a part hereof.

4.2 Grantor's Retained Responsibilities. Grantor retains all responsibilities and shall bear all costs and liabilities of any kind related to the ownership of the AOC 1 Open Space Property, including the payment of taxes. Grantor shall keep Grantee's interest in the AOC 1 Open Space Property free of any liens arising out of any work performed for, materials furnished to, or obligations incurred by

Grantor. Honeywell shall be solely responsible for the implementation, monitoring, maintenance, repair, and replacement of the Chromium Remedy in the AOC 1 Open Space Property as provided for under the Consent Decree. Neither Grantee nor Secondary Grantee, if such a grantee is designated pursuant to paragraph 7.3, shall have any responsibility whatsoever with respect to the implementation, monitoring, maintenance, repair, and/or replacement of the Chromium Remedy in the AOC 1 Open Space Property.

4.3 Recordation, Notice in Future Instruments. This Conservation Restriction shall be recorded in the office of the Hudson County Register and a conspicuous reference to this Conservation Restriction shall be included in all instruments concerning title to the AOC 1 Open Space Property. Any Party to the Consent Decree and Grantee shall have the right, periodically, but no more than once every 25 years, to record memoranda or other instruments that reference, incorporate, or attach this Conservation Restriction in the real estate records related to the AOC 1 Open Space Property. This right of recordation shall be exercised in conjunction with the right of recordation provided in paragraph 60(d) of the Consent Decree.

4.4 Notice of Future Transfers. Grantor shall give written notice to Grantee(s) of any sale, lease, or other transfer of any interest in the Property not later than ten days following the date of such sale, lease, or transfer, which notice shall include the name and address of each party to whom an interest was sold, leased, or transferred. However, sales, leases, or transfers other than in accordance with the terms of paragraph 60 of the Consent Decree are prohibited.

5. **Permitted Activities.**

5.1 Remediation and Redevelopment as Open Space/Public Park. Grantor and/or Honeywell shall be permitted to undertake all activities reasonably required in connection with: (i) the implementation, maintenance, monitoring, repair, and replacement of the Chromium Remedy consistent with the Consent Decree, (ii) the construction of roads and associated utilities at the AOC 1 Open Space Property as permitted by the Consent Decree, and (iii) such further development of the AOC 1 Open Space Property into an open space/public park as is consistent with paragraphs 60(j) and 60(k) of the Consent Decree and paragraphs 5.2 and 5.3 of this Conservation Restriction. In addition, the Jersey City Entity Study Area 6 North Operations (as defined in the Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc. attached as Exhibit A to the Consent Decree) shall be allowed to continue on the AOC 1 Open Space Property until such time as those Operations are relocated prior to implementation of the Chromium Remedy pursuant to the Consent Decree.

5.2 Prohibited Development in the AOC 1 Open Space Property. Only development satisfying the requirements of this paragraph, paragraph 5.3 of this Conservation Restriction, and the requirements of paragraphs 60(j) and 60(k) of the Consent Decree shall be permitted in the AOC 1 Open Space Area. All other development in the AOC 1 Open Space Area shall be prohibited.

(a) Honeywell shall establish Open Space Design Standards that shall govern all development in the AOC 1 Open Space Property, regardless of when the construction or installation of permissible development occurs. The Open

Space Design Standards shall satisfy each of the requirements set forth in paragraph 60(j)(v) of the Consent Decree and paragraph 5.2(e) of this Conservation Restriction, and shall set forth the requirements for development that are necessary for the protection of the integrity of the Chromium Remedy, installed pursuant to the Consent Decree.

(b) The Initial Development in the AOC 1 Open Space Property shall be the development undertaken following the completion of the Chromium Remedy in the AOC 1 Open Space Property, pursuant to the Consent Decree. The Initial Development may occur in one or more phases. Honeywell and Bayfront Redevelopment LLC shall prepare a Development Plan before the initiation of each phase of the Initial Development. The Initial Development Period for each phase shall consist of the period covered by the Initial Development, plus a period of 10 years following the submission of the as-built documentation for the phase pursuant to paragraph 60(j)(viii) of the Consent Decree and paragraph 5.2(h) of this Conservation Restriction.

(c) The Special Master, appointed in the Consolidated Litigation pursuant to the Consent Decree, shall have jurisdiction to review the Open Space Design Standards and the Development Plan(s) solely for the purpose of ensuring that any development undertaken during the Initial Development Period is consistent with the Consent Decree and with protection of the integrity of the Chromium Remedy. The Special Master's jurisdiction with regard to development in the AOC 1 Open Space Area shall run through the Initial Development Period for each phase.

(d) Honeywell shall ensure that the requirements of this

paragraph, paragraph 5.3 of this Conservation Restriction, and of paragraphs 60(j) and 60(k) of the Consent Decree are satisfied with regard to any development undertaken within the Initial Development Period. Honeywell shall also ensure that any development undertaken within the Initial Development Period is designed and installed in a manner consistent with the requirements of the Consent Decree and with protection of the integrity of the Chromium Remedy installed pursuant to the Consent Decree.

(e) Any development undertaken in the AOC 1 Open Space Property, regardless of when undertaken, shall satisfy each of the following requirements:

(i) It shall not jeopardize the integrity of the Chromium Remedy installed pursuant to the Consent Decree;

(ii) It shall be limited to the types of development permitted under paragraph 60(k) of the Consent Decree and paragraph 5.3 of this Conservation Restriction;

(iii) It shall be consistent with this Conservation Restriction, the Consent Decree, and the Redevelopment Plan; however, in the event of any conflict or inconsistency between this Conservation Restriction, the Consent Decree, and the Redevelopment Plan, the Consent Decree shall govern;

(iv) In total, at least 75% of the AOC 1 Open Space Property, exclusive of the acreage used for roads and the pedestrian thoroughfare, shall be comprised of landscaping, as defined by paragraph 60(k)(xi) of the Consent Decree and paragraph 5.3(k) of this Conservation Restriction;

(v) The portion of the Open Space Design Standards

necessary for protection of the Chromium Remedy as related to all roads, the pedestrian thoroughfare and associated utility corridors as well as the general location of such items shall be included in the 100% Design of the Chromium Remedy, which is subject to review and approval pursuant to the terms of the Consent Decree;

(vi) If the lowest elevation for the bedding for any utility line, including irrigation or sprinkler lines, is two feet from the top of the warning layer of the cap, the utility line shall be placed in a utility corridor;

(vii) In any event, there shall be two feet of soil or more between the warning layer of the cap and the lowest elevation of the bedding for any irrigation or sprinkler lines; and

(viii) No permanent concession facilities shall be permitted.

(f) Honeywell shall submit the Open Space Design Standards and the Development Plan(s) for any development undertaken during the Initial Development Period pursuant to the requirements of paragraph 72(c) of the Consent Decree, except that such documents need not be submitted to NJDEP. Following Honeywell's submission of such documents, the procedures of paragraphs 72(d) and 72(e) of the Consent Decree shall apply, except that the Special Master need not provide notice to NJDEP.

(g) During the Initial Development Period, any development in the AOC 1 Open Space Area shall require the preparation and submission of a Development Plan pursuant to paragraph 60(j)(vi) of the Consent Decree and paragraph 5.2(f) of this Conservation Restriction, and such Development Plan shall be subject to review by the Special Master pursuant to paragraph 60(j)(iii) of the Consent

Decree and paragraph 5.2(c) of this Conservation Restriction.

(h) Upon completion of each phase of the Initial Development, Honeywell shall provide as-built documentation for the Initial Development to the Special Master, Riverkeeper, and the Jersey City Entities. Upon completion of any further development during the Initial Development Period for the phase, Honeywell shall also provide as-built documentation to the Special Master, Riverkeeper, and the Jersey City Entities for the additional development. Such additional as-built documentation for a phase shall not affect the running of the Initial Development Period for the phase.

(i) During the Initial Development Period, replacement in-kind of development features or facilities included in the Initial Development or minor modifications to the development features or facilities included in the Initial Development shall not require the preparation of a Development Plan or be subject to review by the Special Master, provided that such replacement or modification satisfies the requirements of the Open Space Design Standards, the applicable Development Plan, paragraphs 60(j)(v) and 60(j)(x)(3)(notice requirement) of the Consent Decree and paragraphs 5.2(e) and 5.2(j)(iii) of this Conservation Restriction.

(j) After the Initial Development Period, all development is prohibited unless one of the following conditions is met:

(i) The AOC 1 Open Space Property has been remediated such that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Property, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive

standards for Unrestricted Use in place at the time, whichever is more restrictive, and Jersey City has demonstrated to the Special Master and/or the Court, as appropriate, that such remediation has been completed in accordance with all applicable requirements.

(ii) The development is a replacement in-kind and such replacement is made in conformance with the specifications of the Open Space Design Standards, the applicable Development Plan, paragraph 60(j)(v) of the Consent Decree and paragraph 5.2(e) of this Conservation Restriction; or

(iii) The development meets the requirements of paragraphs 60(j)(v) and 60(j)(xi) of the Consent Decree and paragraphs 5.2(e) and 5.2(k) of this Conservation Restriction, and Jersey City provides notice of its intention to alter or add to the development undertaken in the Initial Development Period. Such notice shall be provided in writing to Honeywell, Riverkeeper, and the holders of this Conservation Restriction at least 30 days prior to Jersey City's alteration or addition to development undertaken in the Initial Development Period. Honeywell, Riverkeeper, or any holder of this Conservation Restriction shall have the right to move the Court to prohibit such alteration or addition.

(k) If any of the development features or facilities that Jersey City seeks to add, pursuant to paragraph 60(j)(x) of the Consent Decree and paragraph 5.2(j) of this Conservation Restriction, require utilities that would require utility corridors other than the utility corridors installed during the Initial Development Period, Jersey City shall obtain approval from the Court before installing such new utility corridors.

(l) Jersey City shall provide Honeywell, Riverkeeper, and the

holders of this Conservation Restriction with an annual report that describes any alterations or additions, including those activities under paragraph 60(j)(x)(2) of the Consent Decree and 5.2(j)(ii) of this Conservation Restriction, to the development undertaken during the Initial Development Period.

(m) All development features or facilities, whether included in the Initial Development or added subsequent thereto, are subject to demolition and/or removal to the extent necessary to maintain, replace, or repair the Chromium Remedy required by the Consent Decree.

5.3 The Initial Development or any subsequent addition or alteration thereto may include any or all of the following types of development features or facilities, provided that such development features or facilities satisfy the conditions set forth in paragraph 60(j)(v) of the Consent Decree and paragraph 5.2(e) of this Conservation Restriction:

(a) Roads and the pedestrian thoroughfare -- both crossing and running along the AOC 1 Open Space Property, but no more extensive than provided for in the diagram on page 39 of the Redevelopment Plan;

(b) Curbing and fences;

(c) Sidewalks, paths, walkways, and nature trails;

(d) Utilities and utility corridors, lighting, and restrooms;

(e) Irrigation or sprinkler components or systems;

(f) Water features;

(g) Above-ground storm water cisterns;

(h) Signs, including the signs or display required by paragraph

60(l) of the Consent Decree;

(i) Benches, trash receptacles, and bicycle racks;

(j) Recreational facilities, such as playground equipment, bocce ball courts, tennis courts, basketball courts, and athletic fields; and

(k) Landscaping, including natural grasses, small trees, shrubbery, flowers, and potted plants, provided that such landscaping and the anticipated root structure of each landscaping component do not and will not jeopardize the integrity of the Chromium Remedy. Any portion of an athletic field that is covered in natural grass shall be considered landscaping for purposes of the percentage set forth in paragraph 60(j)(v)(4) of the Consent Decree and paragraph 5.2(e)(iv) of this Conservation Restriction.

5.4 Easement for Monitoring, Maintenance, Repair, and Replacement: As between Grantor and Grantee, Honeywell shall remain solely responsible for monitoring, maintenance, repair, and replacement of the Chromium Remedy in accordance with the Consent Decree and shall reserve, or obtain a grant of, an easement for the purpose of such monitoring, maintenance, repair, and replacement. Neither Grantee nor Secondary Grantee, if such grantee is designated pursuant to paragraph 7.3, shall have any responsibility whatsoever with respect to the implementation, monitoring, maintenance, repair, and/or replacement of the Chromium Remedy in the AOC 1 Open Space Property. Honeywell shall be entitled to promptly record such reservation and/or easement and Grantee agrees that the terms, conditions, and restrictions and purposes of such reservation and/or easement, or reference thereto, will be inserted in any subsequent deed or other legal instrument by

which the City of Jersey City, Grantor, or Grantee divests either a real property or other recordable interest in the AOC 1 Open Space Property.

6. **Prohibited Activities.** Development at the AOC 1 Open Space Property is prohibited, except insofar as it meets the requirements of the Consent Decree and of paragraph 5 of this Conservation Restriction.

7. **Grantee's Rights.** To accomplish the purpose of this Conservation Restriction, the following rights are conveyed to Grantee:

7.1 Right of Entry. The right to enter the AOC 1 Open Space Property during the implementation of the Chromium Remedy pursuant to the Consent Decree at reasonable times and with prior notice for the purpose of: (a) inspecting the AOC 1 Open Space Property to determine if Grantor is complying with the covenants and purposes of this Conservation Restriction; (b) enforcing the terms of this Conservation Restriction; and (c) taking any and all actions with respect to the AOC 1 Open Space Property as may be legal, necessary and appropriate, to remedy or abate any material violations hereof. After the Chromium Remedy has been implemented, Grantee shall have the right to enter the AOC 1 Open Space Property at reasonable times for the purposes above without the need for prior notice.

7.2 Enforcement. The right to prevent any improvement, activity on, or use of, the AOC 1 Open Space Property that is inconsistent with the purpose of this Conservation Restriction and to require the restoration of such areas or features of the AOC 1 Open Space Property that may be damaged by any inconsistent improvement or use. For purposes of the enforcement of this Conservation Restriction, Grantee agrees

to pursue such enforcement solely before the Court in the Consolidated Litigation and to submit to the jurisdiction of that Court.

7.3 Designation of Secondary Grantee. Grantee has the right to designate a Qualified Holder as a Secondary Grantee with the written consent of Grantor, which consent will not be unreasonably withheld. Within 60 days of such designation, this Conservation Restriction shall be modified by the Parties and duly recorded.

7.4 Allocation of Responsibilities between Grantee and Secondary Grantee. In the event a Secondary Grantee is designated pursuant to paragraph 7.3, then the following shall apply: for so long as Grantee, or any successor in interest to Grantee, remains a holder of this Conservation Restriction, and unless and until Grantee and Secondary Grantee or their respective successors or assigns shall otherwise agree in a writing executed by them in recordable form and delivered to Grantor, Grantee shall be delegated the primary responsibility for monitoring and enforcing compliance with the terms of this Conservation Restriction. In connection therewith, Grantee, or its successors and assigns, shall have sole power and authority, as between Grantee and Secondary Grantee of this Conservation Restriction, to grant or withhold any and all other consents or approvals that may be required to be obtained by Grantor under the terms of this Conservation Restriction. Notwithstanding the foregoing, Secondary Grantee shall be entitled to receive a copy of all notices required to be given to Grantee, and shall be provided with a copy of all requests for approval submitted by Grantor and all written approvals, or denials thereof, given pursuant to this Conservation Restriction. Secondary Grantee's right to exercise rights and remedies

conferred by this Conservation Restriction upon Grantee, other than as provided in this paragraph, shall become effective upon Grantee's dissolution, in the event that Grantee has failed to name a successor.

8. **Grantee's Remedies**.

8.1 Proceedings upon Violation. In the event that Grantee becomes aware of a violation of the terms of this Conservation Restriction, Grantee shall promptly give notice to Grantor, Honeywell, the Jersey City Entities, and Riverkeeper of such violation via certified mail, return receipt requested, and request corrective action sufficient to abate such violation and restore the AOC 1 Open Space Property as closely as possible to the condition that would have existed had there been no violation. Failure by Grantor or Honeywell to cause discontinuance, abatement, or initiate such other corrective action as may be required by the Consent Decree within 90 days after receipt of such notice, or such longer period as may be necessary if the violation cannot reasonably be cured within 90 days, shall entitle Grantee to move the Court to enforce the terms of this Conservation Restriction; to require the restoration of the AOC 1 Open Space Property to its previous condition; and/or to enjoin compliance. If Grantee believes that circumstances are such that immediate action is required to prevent or mitigate significant additional harm or damage to the AOC 1 Open Space Property, Grantee may pursue its remedies without waiting for any period provided for cure to expire and without prior notice.

8.2 Proceedings upon Alteration or Addition to Development. Grantee shall have the right to participate in proceedings under paragraph 5.2(j)(iii) of this

Conservation Restriction and paragraph 60(j)(x)(3) of the Consent Decree to prohibit any alterations or additions to the development in the AOC 1 Open Space Property.

8.3 Forbearance. Any forbearance by Grantee to exercise its rights under this Conservation Restriction in the event of any breach of any term of this Conservation Restriction by Grantor shall not be deemed or construed to be a waiver by Grantee of such term or of any subsequent breach of the same or any other term of this Conservation Restriction or of any of Grantee's rights under this Conservation Restriction. No delay or omission by Grantee in the exercise of any right or remedy upon any breach by Grantor shall impair such right or remedy or be construed as a waiver. Grantor shall not be entitled to assert any defense based upon laches, estoppel, or prescription with respect to any violation of this Conservation Restriction as to which Grantee was not specifically notified by Grantor in writing.

9. **Parties Subject to Conservation Restriction**. The covenants agreed to and the terms, conditions, and restrictions imposed by this grant shall be binding upon Grantor, its lessees, agents, personal representatives, successors, assigns, and all other successors in interest to Grantor. The covenants agreed to and the terms, conditions, and restrictions imposed by this grant shall be binding upon Grantee(s), their lessees, agents, personal representatives, successors, assigns, and all other successors in interest to Grantee(s).

10. **Termination**.

10.1 This Conservation Restriction is intended to be of unlimited duration, subject only to termination as provided in paragraph 10.2 of this Conservation

Restriction, and therefore may not be terminated solely by mutual agreement of Grantor and Grantee.

10.2 This Conservation Restriction may be terminated upon application to the Court of any Party to the Consent Decree when no hexavalent or total chromium contamination remains in AOC 1 Open Space Property, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive. Upon Court approval of termination of this Conservation Restriction, Grantor shall conduct a public hearing in accordance with N.J.S.A 13:8B-5 and Grantee(s) shall release the Conservation Restriction and shall execute, at the request of Grantor, a release of this Conservation Restriction and any other instrument to that effect deemed necessary or desirable.

11. **Assignment.**

11.1 Right to Assign. Grantee, and any future assignee of this Conservation Restriction, may with the prior written consent of Grantor, which consent will not be unreasonably withheld, transfer and assign this Conservation Restriction and the rights and obligations created hereby, in whole or in part, to one or more Qualified Holders as defined in paragraph 3.15 The assignee shall simultaneously with such assignment assume the obligation to carry out the conservation purposes for which this Conservation Restriction is granted.

11.2 Executory Limitation. In the event that a Secondary Grantee has been designated pursuant to paragraph 7.3 and the Grantee dissolves without having assigned all of it rights and interest in the Property and delegated all of its

responsibilities under this Conservation Restriction to one or more Qualified Holders, such rights and responsibilities shall be vested in the Secondary Grantee pursuant to paragraph 7.4. In the event that a Secondary Grantee is not designated pursuant to paragraph 7.3 and the Grantee dissolves without having assigned all of its rights and interest in the Property and delegated all of its responsibilities under this Conservation Restriction to one or more Qualified Holders, such rights and responsibilities shall be vested in another Qualified Holder pursuant to a *cy pres* proceeding in the Court. Grantor and Honeywell shall have the right to appear in any such proceeding as interested parties. In the event that a Secondary Grantee is designated pursuant to paragraph 7.3, and such Secondary Grantee dissolves without having assigned all of its rights and interest in the Property and delegated all of its responsibilities under this Conservation Restriction to one or more Qualified Holders, Grantee may designate another Secondary Grantee pursuant to paragraph 7.3.

11.3 Release of Grantee's Further Obligations. The holder or holders of this Conservation Restriction immediately before any assignment or judicial re-vesting pursuant to paragraph 11.2 shall thereafter have no further obligation to monitor compliance with, or enforce the provisions of, this Conservation Restriction, provided that the assignee meets the requirements set forth above and has assumed the obligation to monitor and enforce this Conservation Restriction.

12. **Miscellaneous Provisions.**

12.1 Severability. If any provision of this Conservation Restriction or the application thereof to any person or circumstances is found to be invalid, the remaining provisions of this Conservation Restriction, and the application of such provisions to

persons or circumstances other than those as to which it is found to be invalid, shall not be affected.

12.2 Successors and Assigns. The term "Grantor" shall include Grantor and Grantor's heirs, executors, administrators, successors, and assigns. The term "Grantor" shall also mean the masculine, feminine, corporate, singular, or plural of the word as needed in the context of its use.

12.3 No Third-Party Beneficiaries. The parties hereto intend that there be no third-party beneficiaries to this Conservation Restriction, except the Parties to the Consent Decree.

12.4 Captions. The captions herein have been inserted solely for convenience of reference and are not a part of this Conservation Restriction and shall have no effect upon construction or interpretation.

12.5 Notices. Any notices required in this Conservation Restriction shall be sent by registered or certified mail to the persons at the following addresses. Any party listed below may change the recipient or location for receipt of such notice by sending written notice of such change to the other Parties listed below:

(a) If to Grantor:

Tom Byrne, Esq.
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-2775

(b) With copy to:

John Morris
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962

(973) 455-4003

(c) If to Grantee Hackensack River Watershed Land Trust:

William Sheehan
231 Main Street
Hackensack, NJ 07601

(d) If to Jersey City:

William Matsikoudis
Corporation Counsel
City of Jersey City
280 Grove Street
Jersey City, NJ 07305
(201) 547-4667

12.6 Amendment. This Conservation Restriction may be amended only with the written consent of Grantee and Grantor and of the Parties to the Consent Decree. Any such amendment shall be consistent with the purpose of the Consent Decree and this Conservation Restriction and shall comply with any applicable requirements of N.J.S.A. 13:8B-1 et seq.

12.7 No Extinguishment through Merger. If Grantee comes to own all or any portion of the fee interest in the AOC 1 Open Space Property, (a) Grantee, as successor in title to Grantor, shall observe and be bound by the obligations of Grantor and the restrictions imposed upon the AOC 1 Open Space Property by this Conservation Restriction, (b) in view of the public interest in its enforcement, this Conservation Restriction shall survive such simultaneous ownership of fee and Conservation Restriction interests in the AOC 1 Open Space Property, and shall not be extinguished notwithstanding any otherwise applicable legal doctrine under which such property interests would or might be merged, and (c) Grantee shall, as promptly as practicable, either assign its interests in this Conservation Restriction to another

Qualified Holder in conformity with the requirements of this paragraph or divest itself of its fee interest in the AOC 1 Open Space Property. Any instrument of assignment of this Conservation Restriction or the rights conveyed herein shall refer to the provisions of this paragraph, and shall contain language necessary to continue it in force.

IN WITNESS WHEREOF, the parties hereunto set their hands and seals the day and year first above written.

KELLY G. PALAZZI
NOTARY PUBLIC OF NEW JERSEY
MY COMMISSION EXPIRES ~~APRIL 24,~~ May 6, 2009

598375.1

Schedule A
MAXIMUM LEGAL DESCRIPTION
PRE-REMEDIATION AOC 1 OPEN SPACE PROPERTY
BLOCK 1290.1 Lots 2D, 2E, 14H, 14J, 15B, 15D and 16A.99
CITY OF JERSEY CITY
HUDSON COUNTY, NEW JERSEY

The AOC 1 Open Space Property that is the subject of this Conservation Restriction is intended to consist of a parcel of land which will be bounded by underground Hydraulic Barrier Walls that have not been fully constructed as of the date of this instrument. Accordingly, the parties agree that until such time as construction of the Hydraulic Barrier Walls is completed and an Amended Conservation Restriction is approved by the Court as provided below, the legal description of the AOC 1 Open Space Property shall be as set forth in the survey and diagram attached hereto as Exhibit A. The parties further agree that such legal description is subject to revision as provided herein.

Upon completion of construction of the Hydraulic Barrier Walls, Grantor will cause the AOC 1 Open Space Property to be re-surveyed (the "As-Built Survey") with the perimeter of the AOC 1 Open Space Property to be the outer facing wall of the Hydraulic Barrier Walls, as constructed. Grantor shall further cause a metes and bounds description (the "As-Built Description") to be prepared based on the As-Built Survey. Following preparation of the As-Built Description, Grantor shall request that the Court amend the order which, pursuant to paragraph 60(b)(i) of the Consent Decree, embodies this Conservation Restriction ("the Conservation Restriction Order"), by substituting the As-Built Description for the metes and bounds description set forth in Exhibit A and thereby creating an Amended Conservation Restriction. Once the Conservation Restriction Order is so amended by the Court, Grantor shall record the Amended Conservation Restriction in the office of the Hudson County Register, without the need for execution or consent, written or otherwise, by Grantee.

Upon recording the Amended Conservation Restriction, the As-Built Description shall supersede, replace and make null and void the legal description set forth in Exhibit A to this Conservation Restriction.

LEGAL DESCRIPTION
PROPOSED OPEN SPACE AREA
BLOCK 1290.1 LOTS 2D, 2E, 14H, 14J and 16A.99
CITY OF JERSEY CITY
HUDSON COUNTY, NEW JERSEY

A Parcel of land described herein located in Block 1290.1, Lots 2D, 2E, 14H, 14J and 16A.99, City of Jersey City, Hudson County, New Jersey, and being more particularly described as follows:

Beginning at the intersection of the westerly sideline of New Jersey State Highway Route 440 and the division line between Block 1290.1, Lots 14D and 16A.99, and running; thence,

1. Along said division line, North 49 degrees 06 minutes 05 seconds West, 257.00 feet to the division line between Lots 14D and 14H; thence,

2. Along said division line, South 24 degrees 46 minutes 55 seconds West 6 feet more or less to the southerly face of an existing Hydraulic Barrier Wall; thence,

Running through Lots 14H and 14J in Block 1290.1, along said southerly wall face, the following two (2) courses:

3. North 49 degrees 06 minutes 05 seconds West, 232.64 feet; thence,

4. North 59 degrees 39 minutes 05 seconds West, 1584.08 feet to the westerly line of said Lot 14J; thence,

5. Along said westerly line, and along the westerly line of Lot 2D in Block 1290.1, North 45 degrees 52 minutes 45 seconds East, 70.6 feet more or less to the intersection of the same with the southerly building line as extended, of an outfall structure building; thence,

6. Running through Lot 2D along said line, South 45 degrees 40 minutes 26 seconds East, 60.73 feet; thence,

7. Along the same, North 44 degrees 19 minutes 34 seconds East, 22.58 feet; thence,

8. Along the same, North 45 degrees 40 minutes 26 seconds West, 7.05 feet; thence,

9. Along the same, North 44 degrees 19 minutes 34 seconds East, 5.38 feet; thence,

10. Along the same, North 45 degrees 40 minutes 26 seconds West, 1.44 feet; thence,

11. Along the same, North 44 degrees 19 minutes 34 seconds East, 5.24 feet to the intersection of the same with the outer wall of an existing JCMUA 72" underground sanitary sewer force main pipe (being the side facing the herein described open space lands); thence,

12. Along said outer pipe wall, North 68 degrees 14 minutes 24 seconds East, 110.05 feet; thence,

13. Along the same, North 26 degrees 00 minutes 52 seconds East, 5.35 feet to the southerly building line of another outfall structure building; thence,

14. Along said building line, South 63 degrees 59 minutes 08 seconds East, 3.40 feet; thence,

15. Along the same, North 26 degrees 00 minutes 52 seconds East, 5.26 feet to the aforementioned outer wall of an existing JCMUA 72" underground sanitary sewer force main pipe; thence,

16. Along said outer pipe wall, South 64 degrees 15 minutes 52 seconds East, 298.76 feet; thence,

17. Along the same, South 63 degrees 39 minutes 08 seconds East, 195.65 feet; thence

18. Along the same, South 65 degrees 19 minutes 16 seconds East, 113.04 feet; thence,

19. Along the same, South 67 degrees 09 minutes 18 seconds East, 103.49 feet; thence,

20. Along the same, North 23 degrees 08 minutes 40 seconds East, 53.16 feet to a point of non-tangent curvature in the northerly curb line of a proposed road to be known as Stegman Boulevard, as shown on Exhibit 7 of the "Bayfront I Development Plan" prepared for the City of Jersey City by A. Nelessen Associates, Inc, dated February 13, 2008; thence,

Running through Lots 2D, 2E, and 16A.99, along said proposed northerly curb line the following five (5) courses:

20. Along a non-tangent curve to the right having a radius of 1036.00 feet, a central angle of 06 degrees 49 minutes 53 seconds and an arc length of 123.52 feet and a chord bearing of South 66 degrees 53 minutes 53 seconds East, a chord distance of 123.45 feet to a point of compound curvature; thence,

21. Along a curve to the right having a radius of 1458.00 feet, a central angle of 09 degrees 39 minutes 52 seconds and an arc length of 245.93 feet to a point of tangency; thence,

22. South 53 degrees 49 minutes 05 seconds East, 74.81 feet to a point of curvature; thence,

23. Along a curve to the right having a radius of 6213.00 feet, a central angle of 04 degrees 27 minutes 15.8 seconds and an arc length of 483.02 feet to a point of tangency; thence,

24. South 49 degrees 21 minutes 50 seconds East, 272.98 feet to the aforementioned Route 440 westerly sideline; thence,

25. Along said westerly sideline, South 24 degrees 46 minutes 55 seconds West, 274.45 feet to the point and place of beginning.

Containing 11.8 acres of land more or less as described herein.

Subject to a field survey of the proposed hydraulic barrier walls upon completion of their installation.

Subject to all existing easements, rights-of-way and reservations of record.

The above described premises being also depicted on the diagram included as part of this Exhibit A.

DEED NOTICE CONCERNING CONTROLS INSTALLED FOR CHROMIUM CONTAMINATION UNDERLYING THE PROPERTY

This Deed Notice is made as of the __ day of _____, 2017, by ***Paul Trenk, whose post office address is 114 Oakville Street, Staten Island, NY 10314***. Owner shall mean Paul Trenk together with its successors and assigns, including all successors in interest in the Property which is the subject of this Deed Notice as described fully below.

1. THE PROPERTY. Paul Trenk is the current owner in fee simple of certain real property designated the Deferred Area as portions of ***Block 21901, Lot 4 on the tax map of the City of Jersey City, Hudson County, New Jersey***[1]. The New Jersey Department of Environmental Protection (NJDEP) Program Interest Number for the contaminated site which includes this property is ***Hudson County Chromate Site No. 087 Program Interest (PI) # G000008710*** [NJDEP PI# for non-chromium-related contaminants at the Property is #745719]. The Property is also part of the Deferred Area of the site referred to as Site 087 pursuant to the Consent Decree Regarding Remediation and Redevelopment of Study Area 6 North ("Consent Decree") which is attached hereto and is entered as an order of the Court in the following consolidated actions *JCMUA v. Honeywell International, Inc.*, D.N.J., Civ. No. 05-05955; *JCIA v. Honeywell International, Inc.*, D.N.J., Civ. No. 05-5993; and *Hackensack Riverkeeper, Inc. v. Honeywell International, Inc.*,

[1] All references to Block 21901 Lot 4 in this Deed Notice shall mean those portions of Block 21901 Lot 4 regardless of whether the word "portion(s)" is specifically called out or not.

D.N.J., Civ. No. 06-22. The Consent Decree restricts transfer, use and development of the Property. To the extent that there is any conflict or inconsistency between the terms of this Deed Notice and the terms of the Consent Decree, the Consent Decree shall govern. To the extent that any action to be taken pursuant to this Deed Notice is in conflict with or inconsistent with the Consent Decree, the Consent Decree shall govern.

2. REMEDIATION.

i. The Department's Bureau of State Case Management (BCM) is the entity within the Department that is responsible for the oversight of the remediation of the SA-6 North. The matter was Case No. Hudson County Chromate Site No. 087 PI# G000008710. The Department has approved this Deed Notice as an institutional control for the Property, which is part of the remediation of the Property.

ii. N.J.A.C. 7:26-C-7 requires the Owner, among other persons, to obtain a soil remedial action permit for the soil remedial action at the Property. That permit will contain the monitoring, maintenance and biennial certification requirements that apply to the Property.

3. SOIL AND GROUNDWATER CONTAMINATION. Honeywell International Inc. ("Honeywell") a corporation of the State of Delaware, licensed to do business in the State of New Jersey whose post office address is 115 Tabor Road, Morris Plains, New Jersey 07950, has remediated the Property to address chromium-related soil and shallow groundwater contamination. The Remedial Action Work Plan (RAWP) was approved by the Department on February 19, 2009 for Hudson County Chromate Site Nos. 087 and 088, which included portions of the Property. Remedial actions were further approved pursuant to the Consent Decree. Under both the Consent Decree and the RAWP soil contamination remains in the Property which contains contaminants in concentrations that do not allow for the unrestricted use of the Property.

Deed Notice #9 consists of two small areas on SA-6 North within the Route 440 Right-Of-Way (ROW) where the Public Service Electric & Gas (PSE&G) gas main is located north of the SA-6 North Open Space Area. Deed Notice Area #9 is comprised of two tracts of land; Tract 1 is near Culver Circle at the Route 440 ROW and Tract 2 is further south along the Route 440 ROW at SA-6 North. Tract 1 is an approximately 1,400 square foot area. Tract 2 is an approximately 970 square foot area. These deed notice areas includes chromium only. Excavations in this part of SA-6 North were limited in these areas by the PSE&G gas main and will be completed after the Route 440 ROW widening project. In the meantime, this deed notice is for both Tracts 1 and 2 together. Once the remediation of these areas is complete and remedial objectives are achieved, Honeywell will terminate Deed Notice Area #9.

It is not anticipated that the Bayfront Redevelopment Project will impact Deed Notice #9. Because this area is so narrow, is proximate to the Route 440 ROW, and the gas main is located within the area, development of this area will also need to be deferred until the gas main is relocated.

The soil contamination is described, including the type, concentration and specific location of such contaminants, in Exhibit B, which is attached hereto and made a part hereof. As a result of the contamination, there is a statutory requirement for this Deed Notice and engineering controls in accordance with N.J.S.A. 58:10B-13. Under the terms of the Consent Decree and this Deed Notice,

Honeywell is responsible for monitoring and maintaining the soil remediation for the Property in perpetuity or until remediation is implemented that renders this Deed Notice unnecessary.

4. CONSIDERATION. In accordance with the Department's approval of the chromium RAWP for the remediation of Hudson County Chromate Site Nos. 087 and 088 which includes the Property, and in consideration of the terms and conditions of that approval, and in accordance with the Consent Decree, and other good and valuable considerations, Owner has agreed to subject the Property to certain statutory and regulatory requirements which impose restrictions upon the use of the Property, to restrict certain uses of the Property, and to provide notice to subsequent owners, lessees and operators of the restrictions and the monitoring, maintenance, and biennial certification requirements outlined in this Deed Notice and required by law, as set forth herein.

5A. RESTRICTED AREAS. Due to the presence of contamination remaining at concentrations that do not allow for unrestricted use, Owner has agreed, as part of the remedial action for the Property, to restrict the use of the Property (the "Restricted Areas"); a narrative description of these restrictions, along with the associated monitoring and maintenance activities and the biennial certification requirements are provided in Exhibit C, which is attached hereto and made a part hereof. Owner has also agreed to maintain a list of these restrictions on site for inspection by governmental enforcement officials.

5B. RESTRICTED LAND USES. The following statutory land use restrictions apply to the Restricted Areas:

i. The Brownfield and Contaminated Site Remediation Act, N.J.S.A. 58:10B-12.g(10), prohibits the conversion of a contaminated site, remediated to non-residential soil remediation standards that require the maintenance of engineering or institutional controls, to a child care facility, or public, private, or charter school without the Department's prior written approval, unless a presumptive remedy is implemented; and

ii. The Brownfield and Contaminated Site Remediation Act, N.J.S.A. 58:10B-12.g(12), prohibits the conversion of a landfill, with gas venting systems and or leachate collection systems, to a single family residence or a child care facility without the Department's prior written approval.

5C. ENGINEERING CONTROLS. Due to the presence and concentration of these contaminants, the Owner has also agreed, as part of the remedial action for the Property, to the placement of certain engineering controls on the Property. A narrative description of these engineering controls, along with the associated monitoring and maintenance activities and the biennial certification requirements are provided in Exhibit C. Honeywell shall be responsible for monitoring and maintenance of engineering controls and biennial certification requirements as specified in Paragraphs 8A and 8B.

6A. CHANGE IN OWNERSHIP AND REZONING.

i. The Owner and the subsequent owners and lessees, shall cause all leases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring all holders thereof to take the Property subject to the restrictions contained herein and to comply with

all, and not to violate any of the conditions of this Deed Notice. Nothing contained in this Paragraph shall be construed as limiting any obligation of any person to provide any notice required by any law, regulation, or order of any governmental authority.

ii. The Owner and the subsequent owners shall provide written notice to the Department of Environmental Protection on a form provided by the Department and available at www.nj.gov/srp/forms within thirty (30) calendar days after the effective date of any conveyance, grant, gift, or other transfer, in whole or in part, of the owner's interest in the Restricted Area.

iii. The Owner and the subsequent owners shall provide written notice to the Department, on a form available from the Department at www.nj.gov/srp/forms, within thirty (30) calendar days after the owner's petition for or filing of any document initiating a rezoning of the Property to residential.

6B. SUCCESSORS AND ASSIGNS. This Deed Notice shall be binding upon Owner and upon Owner's successors and assigns, and subsequent owners, lessees and operators while each is an owner, lessee, or operator of the Property.

7A. ALTERATIONS, IMPROVEMENTS, AND DISTURBANCES.

i. The Owner and all subsequent owners and lessees shall notify any person of whom it has knowledge, including, without limitation, tenants, employees of tenants, and contractors, intending to conduct invasive work or excavate within the Restricted Areas, of the nature and location of known contamination in the Restricted Areas, and, of the precautions necessary to protect the engineering controls and minimize potential human exposure to contaminants.

ii. Except as provided in the Consent Decree and Paragraph 7B, below, no person shall make, or allow to be made, any alteration, improvement, or disturbance in, to, or about the Property which disturbs any engineering control at the Property except as (a) permitted in the Consent Decree and (b) without first obtaining the express written consent of the Department. Nothing herein shall constitute a waiver of the obligation of any person to comply with all applicable laws and regulations including, without limitation, the applicable rules of the Occupational Safety and Health Administration. To request the consent of the Department of Environmental Protection, contact:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413

iii. Notwithstanding subparagraph 7A.ii., above, a Soil Remedial Action Permit modification is not required for any alteration, improvement, or disturbance provided that:

(A) Takes such action in conformance with the Consent Decree; and

(B) Notifies the Department of Environmental Protection of the activity by calling the DEP Hotline, at 1-877-WARN-DEP or 1-877-927-6337, within twenty-four (24) hours after the beginning of each alteration, improvement, or disturbance; and

(C) Notifies Honeywell of the activity by calling 855-727-2658; and

(D) Honeywell and/or the owner, lessee or operator restores any disturbance of an engineering control to pre-disturbance conditions within sixty (60) calendar days after the initiation of the alteration, improvement or disturbance; and

(E) Ensures that all applicable worker health and safety laws and regulations are followed during the alteration, improvement, or disturbance, and during the restoration; and

(F) Ensures that human exposure to contamination in excess of the applicable remediation standards does not occur; and

(G) The next biennial certification includes a description of the nature of the alteration, improvement, or disturbance, the dates and duration of the alteration, improvement, or disturbance, the name of key individuals and their affiliations conducting the alteration, improvement, or disturbance, a description of the notice the Owner gave to those persons prior to the disturbance, the amounts of soil generated for disposal, if any, the final disposition and any precautions taken to prevent exposure.

7B. EMERGENCIES. In the event of an emergency which presents, or may present, an unacceptable risk to the public health and safety, or to the environment, or immediate environmental concern, see N.J.S.A. 58:10C-2, any person may temporarily breach an engineering control provided that that person complies with each of the following:

i. Immediately notifies the Department of Environmental Protection of the emergency, by calling the DEP Hotline at 1-877-WARNDEP or 1-877-927-6337;

ii. Immediately notifies Honeywell of the emergency by calling 855-727-2658;

iii. Limits both the actual disturbance and the time needed for the disturbance to the minimum reasonably necessary to adequately respond to the emergency;

iv. Implements all measures necessary to limit actual or potential, present or future risk of exposure to humans or the environment to the contamination;

v. Notifies the Department of Environmental Protection when the emergency has ended by calling the DEP Hotline at 1-877-WARNDEP or 1-877-927-6337;

vi. Notifies Honeywell when the emergency has ended by calling 855-727-2658; and

vii. Honeywell restores the engineering control to the pre-emergency conditions as soon as possible, and provides a written report to the Department of Environmental Protection of such emergency and restoration efforts within sixty (60) calendar days after completion of the restoration of the engineering control. The report must include all information pertinent to the emergency, potential discharges of contaminants, and restoration measures that were implemented, which, at a minimum, should specify: (a) the nature and likely cause of the emergency, (b) the potential discharges of or exposures to contaminants, if any, that may have occurred, (c) the measures that have been taken to mitigate the effects of the emergency on human health and the environment, (d) the measures completed or implemented to restore the engineering control, and (e) the changes to the engineering control or site operation and maintenance plan to prevent recurrence of such conditions in the future. Honeywell shall submit the report to:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413

8A. MONITORING AND MAINTENANCE OF DEED NOTICE, AND PROTECTIVENESS CERTIFICATION. The persons in any way responsible, pursuant to the Spill Compensation and Control Act, N.J.S.A. 58:10-23.11a et seq., for the hazardous substances that remain at the Property, the persons responsible for conducting the remediation, Honeywell, the Owner, and the subsequent owners, lessees, and operators, shall monitor and maintain this Deed Notice. The subsequent owners, lessees and operators have this obligation only during their ownership, tenancy, or operation. Honeywell shall certify to the Department on a biennial basis that the remedial action that includes this Deed Notice remains protective of the public health and safety and of the environment. The specific obligations to monitor and maintain the deed notice shall include all of the following:

i. Monitoring and maintaining this Deed Notice according to the requirements in Exhibit C, to ensure that the remedial action that includes the Deed Notice continues to be protective of the public health and safety and of the environment;

ii. Conducting any additional remedial investigations and implementing any additional remedial actions, that are necessary to correct, mitigate, or abate each problem related to the protectiveness of the remedial action for the Property prior to the date that the certification is due to the Department pursuant to iii, below, in order to ensure that the remedial action that includes this Deed Notice remains protective of the public health and safety and of the environment.

iii. Certify to the Department of Environmental Protection as to the continued protectiveness of the remedial action that includes this Deed Notice, on a form provided by the Department and consistent with N.J.A.C. 7:26C-1.2 (a)1, every two years on the anniversary of the date stamped on the Deed Notice that indicates when the Deed Notice was recorded.

8B. MONITORING AND MAINTENANCE OF ENGINEERING CONTROLS, AND PROTECTIVENESS CERTIFICATION. Honeywell shall maintain all engineering controls at the Property and certify to the Department on a biennial basis that the remedial action of which each engineering control is a part remains protective of the public health and safety and of the environment. The specific obligations to monitor and maintain the engineering controls shall include the following:

i. Monitoring and maintaining each engineering control according to the requirements in Exhibit C, to ensure that the remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment;

ii. Conducting any additional remedial investigations and implementing any additional remedial actions, that are necessary to correct, mitigate, or abate each problem related to the protectiveness of the remedial action for the Property prior to the date that the certification is due to the Department pursuant to iii, below, in order to ensure that the remedial action that includes the engineering control remains protective of the public health and safety and of the environment.

iii. Certify to the Department of Environmental Protection as to the continued protectiveness of the remedial action that includes the engineering control, on a form provided by the Department and consistent with N.J.A.C. 7:26C-1.2 (a)1, every two years on the anniversary of the date stamped on the Deed Notice that indicates when the Deed Notice was recorded.

9. ACCESS. The Owner agrees to allow the Department, its agents and representatives access to the Property to inspect and evaluate the continued protectiveness of the remedial action that includes this Deed Notice and to conduct additional remediation to ensure the protection of the public health and safety and of the environment if the persons responsible for monitoring the protectiveness of the remedial action, as described in Paragraph 8, above, fail to conduct such remediation pursuant to this Deed Notice as required by law. The Owner, and the subsequent owners and lessees, shall also cause all leases, subleases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring that all holders thereof provide such access to the Department.

10. NOTICES.

i. Owner shall cause all leases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring all holders thereof to take the Property subject to the restrictions contained herein and to comply with all, and not to violate any of the conditions of this Deed Notice. Nothing contained in this Paragraph shall be construed as limiting any obligation of any person to provide any notice required by any law, regulation, or order of any governmental authority.

ii. Owner shall notify any person intending to conduct invasive work or excavate within the Property on its behalf of the nature and location of contamination and, of the precautions necessary to minimize potential human exposure to contaminants.

iii. Owner shall provide written notice to the Department of Environmental Protection at least thirty (30) calendar days before the effective date of any conveyance, grant, gift, or other transfer, in whole or in part, of the owner's interest in the Restricted Area. Any such conveyance, grant or gift must be consistent with the terms of the Consent Decree.

iv. Owner shall provide written notice to the Department within thirty (30) calendar days following the Owner's receiving notice of any petition for a rezoning of the Property. Any such rezoning must be consistent with the terms of the Consent Decree. The Owner shall submit the written notice to:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413.

11. ENFORCEMENT OF VIOLATIONS.

i. This Deed Notice itself is not intended to create any interest in real estate in favor of the Department of Environmental Protection, nor to create a lien against the Property, but merely is intended to provide notice of certain conditions and restrictions on the Property and to reflect the regulatory and statutory obligations imposed as a conditional remedial action for this Property.

ii. The restrictions provided herein may be enforceable by the Department against any person who violates this Deed Notice. To enforce violations of this Deed Notice, the Department may initiate one or more enforcement actions pursuant to N.J.S.A. 58:10-23.11, and N.J.S.A. 58:10C, and require additional remediation and assess damages pursuant to N.J.S.A. 58:10-23.11, and N.J.S.A. 58:10C.

12. SEVERABILITY. If any court of competent jurisdiction determines that any provision of this Deed Notice requires modification, such provision shall be deemed to have been modified automatically to conform to such requirements. If a court of competent jurisdiction determines that any provision of this Deed Notice is invalid or unenforceable and the provision is of such a nature that it cannot be modified, the provision shall be deemed deleted from this instrument as if the provision had never been included herein. In either case, the remaining provisions of this Deed Notice shall remain in full force and effect.

13. MODIFICATION AND TERMINATION.

i. Any person may request in writing, at any time, that the Department modify this Deed Notice where performance of subsequent remedial actions, a change of conditions at the Property, or the adoption of revised remediation standards suggest that modification of the Deed Notice would be appropriate.

ii. Any person may request in writing, at any time, that the Department terminate this Deed Notice because the conditions which triggered the need for this Deed Notice are no longer applicable.

iii. Any person seeking a modification or termination of this Deed Notice must also have such modification approved by the United States District Court for the District of New Jersey pursuant to the Consent Decree until such time as the Consent Decree terminates with regard to the Property pursuant to the Consent Decree.

iv. This Deed Notice may be revised or terminated only upon filing of an instrument, executed by the Department, in the office of the Hudson County Register, New Jersey, expressly modifying or terminating this Deed Notice.

Within thirty (30) calendar days after the filing of a Termination of Deed Notice, the owner of the property shall apply to the Department for termination of the soil remedial action permit pursuant to N.J.A.C. 7:26C-7.

14A. EXHIBIT A. Exhibit A includes the following maps of the Property and the vicinity:

i. Exhibit A-1: Vicinity Map - A map that identifies by name the roads, and other important geographical features in the vicinity of the Property;

ii. Exhibit A-2: Metes and Bounds Description - A metes and bounds description of the Property, including reference to tax lot and block numbers for the Property and a Tax Map;

iii. Exhibit A-3: Property Map - A scaled map of the Property, scaled at one inch to 200 feet or less, and if more than one map is submitted, the maps shall be presented as overlays, keyed to a base map; the map(s) shall include diagrams of major surface topographical features such as buildings, roads, and parking lots.

14B. EXHIBIT B. Exhibit B includes the following descriptions of the Restricted Areas:

i. Exhibit B-1: Restricted Area Map - Maps for the Property that include, as applicable:

(A) As-built diagrams of each engineering control, including caps, fences, slurry walls, ground water monitoring wells, and ground water pumping system;

(B) As-built diagrams of any buildings, roads, parking lots and other structures that function as engineering controls; and

(C) Designation of all soil and/or sediment sample locations within the restricted areas that exceed any soil or sediment standard that are keyed into one of the tables described below.

ii. Exhibit B-2 (Table B-2): Restricted Area Data Tables - Table for the Property that includes:

(A) Sample location designation from Restricted Area maps (Exhibit B-1);

(B) Sample elevation based upon mean sea level;

(C) Name and chemical abstract service registry number of each contaminant with a concentration that exceeds the unrestricted use standard;

(D) The restricted and unrestricted use standards for each contaminant in the table; and

(E) The remaining concentration of each contaminant at each sample location at each elevation (or if historic fill, include data from the Department's default concentrations at N.J.A.C. 7:26E-4.6, Table 4-2).

14C. EXHIBIT C. Exhibit C includes narrative descriptions of the institutional controls and engineering controls as follows:

i. Exhibit C-1A through C-1C. Exhibit C-1A: Deed Notice as Institutional Control; Exhibit C-1B: Consent Decree as Institutional Control; Exhibit C-1C: Zoning as Institutional Control: Exhibit C-1 includes a narrative description of the restrictions and obligations of this Deed Notice that are in addition to those described above, as follows:

(A) General Description of the Institutional Control:
(1) Description and estimated size of the Restricted Areas as described above;
(2) Description of the restrictions on the Property by operation of this Deed Notice and the other Institutional Controls; and
(3) The objective of the restrictions;

(B) Description of the monitoring necessary to determine whether:
(1) Any disturbances of the soil in the Restricted Areas did not result in the unacceptable exposure to the soil contamination;
(2) There have been any land use changes subsequent to the filing of this Deed Notice and the other Institutional Controls or the most recent biennial certification, whichever is more recent;
(3) The current land use on the Property is consistent with the restrictions in this Deed Notice and the other Institutional Controls;
(4) Any newly promulgated or modified requirements of applicable regulations or laws apply to the Property; and
(5) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice and the other Institutional Controls, and conduct the necessary sampling; and

(C) Description of the following items that will be included in the biennial certification:
(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice and the other Institutional Controls;

(2) Land use at the Property is consistent with the restrictions in this Deed Notice and the other Institutional Controls; and
(3) The remedial action that includes this Deed Notice and the other Institutional Controls continues to be protective of the public health and safety and of the environment.

ii. Exhibit C-2. Exhibit C-2: Engineering Controls: Asphalt Cover;

Exhibit C-2 includes a narrative description of the engineering controls as follows:

(A) General Description of the engineering control:
(1) Description of the engineering control;
(2) The objective of the engineering control; and
(3) How the engineering control is intended to function.

(B) Description of the operation and maintenance necessary to ensure that:
(1) Periodic inspections of each engineering control are performed in order to determine its integrity, operability, and effectiveness;
(2) Each engineering control continues as designed and intended to protect the public health and safety and the environment;
(3) Each alteration, excavation or disturbance of any engineering control is timely and appropriately addressed to maintain the integrity of the engineering control;
(4) The engineering control is being inspected and maintained and its integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment;
(5) A record of the self-inspection dates, name of the inspector, results of the inspection and condition(s) of the engineering control. Sampling, for example, may be necessary if it is not possible to visually evaluate the integrity/performance of the engineering control; and
(6) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

(C) Description of the following items that will be included in the biennial certification:
(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;
(2) The engineering control continues to operate as designed; and
(3) The remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment.

15. SIGNATURES. IN WITNESS WHEREOF, Owner has executed this Deed Notice as of the date first written above.

Deed Notice #9 SA-6 North Route 440 Deferred Area

Metes and Bounds Description of Property: See Attached

A-2 Metes and Bounds Description of Property Portions of Block 21901, Lot 4
City of Jersey City, New Jersey

If there is any discrepancy between the Metes and Bounds and the tax map; the Metes and Bounds prevails.

The Property is identified as portions of Block 21901, Lot 4 on the City of Jersey City tax maps, the Property being presently owned by Paul Trenk. A copy of the current tax map showing the Property is included as Exhibit A-2.

DESCRIPTION OF PROPERTY
CITY OF JERSEY CITY
HUDSON COUNTY, NEW JERSEY
PROJECT NO. 10000292R

DEED NOTICE AREA 9
BLOCK 21901, LOT 4
MAY 18, 2016
REVISED OCTOBER 13, 2016

All those certain lots, tracts or parcels of land situate lying and being in the City of Jersey, in the County of Hudson and State of New Jersey, and being a portion of Lot 4 in Block 21901, designated as Deed Notice Area 9 as shown on an exhibit entitled, "Deed Notice Area 9, SA6 North, Block 21901, Lot 4, City of Jersey City, Hudson County, New Jersey," prepared by Maser Consulting P.A., dated May 12, 2016, last revised October 7, 2016 and being more particularly bounded and described as follows, to wit:

TRACT I

COMMENCING at the intersection of the westerly line of New Jersey State Highway Route 440 (112 foot wide right of way), with the northeasterly corner of Lot 4 in Block 21901, lands now or formerly of Paul Trenk; thence –

A) **S 24° 46' 55" W, 22.21 feet** along said westerly line to the True Point of **BEGINNING**, as shown on the aforesaid exhibit and running; thence –

1. Along said westerly line of Route 440, **S 24° 46' 55" W, 137.98 feet**; thence –

Running through a portion of Lot 4 in Block 21601, the following four (4) courses:

2. **N 39° 23' 38" W, 11.11 feet**; thence –
3. **N 24° 46' 55" E, 138.43 feet**; thence –
4. **N 84° 58' 58" E, 5.43 feet;** thence –
5. **S 08° 44' 20" E, 9.57 feet,** to the Point and Place of **BEGINNING.**

CONTAINING: 1,408 S.F. of land more or less or 0.032 acre of land more or less.

TRACT II

BEGINNING at the intersection of the westerly line of New Jersey State Highway Route 440 (112 foot wide right of way), with the southeasterly corner of Lot 4 in Block 21901, lands now or formerly of Paul Trenk and running; thence –

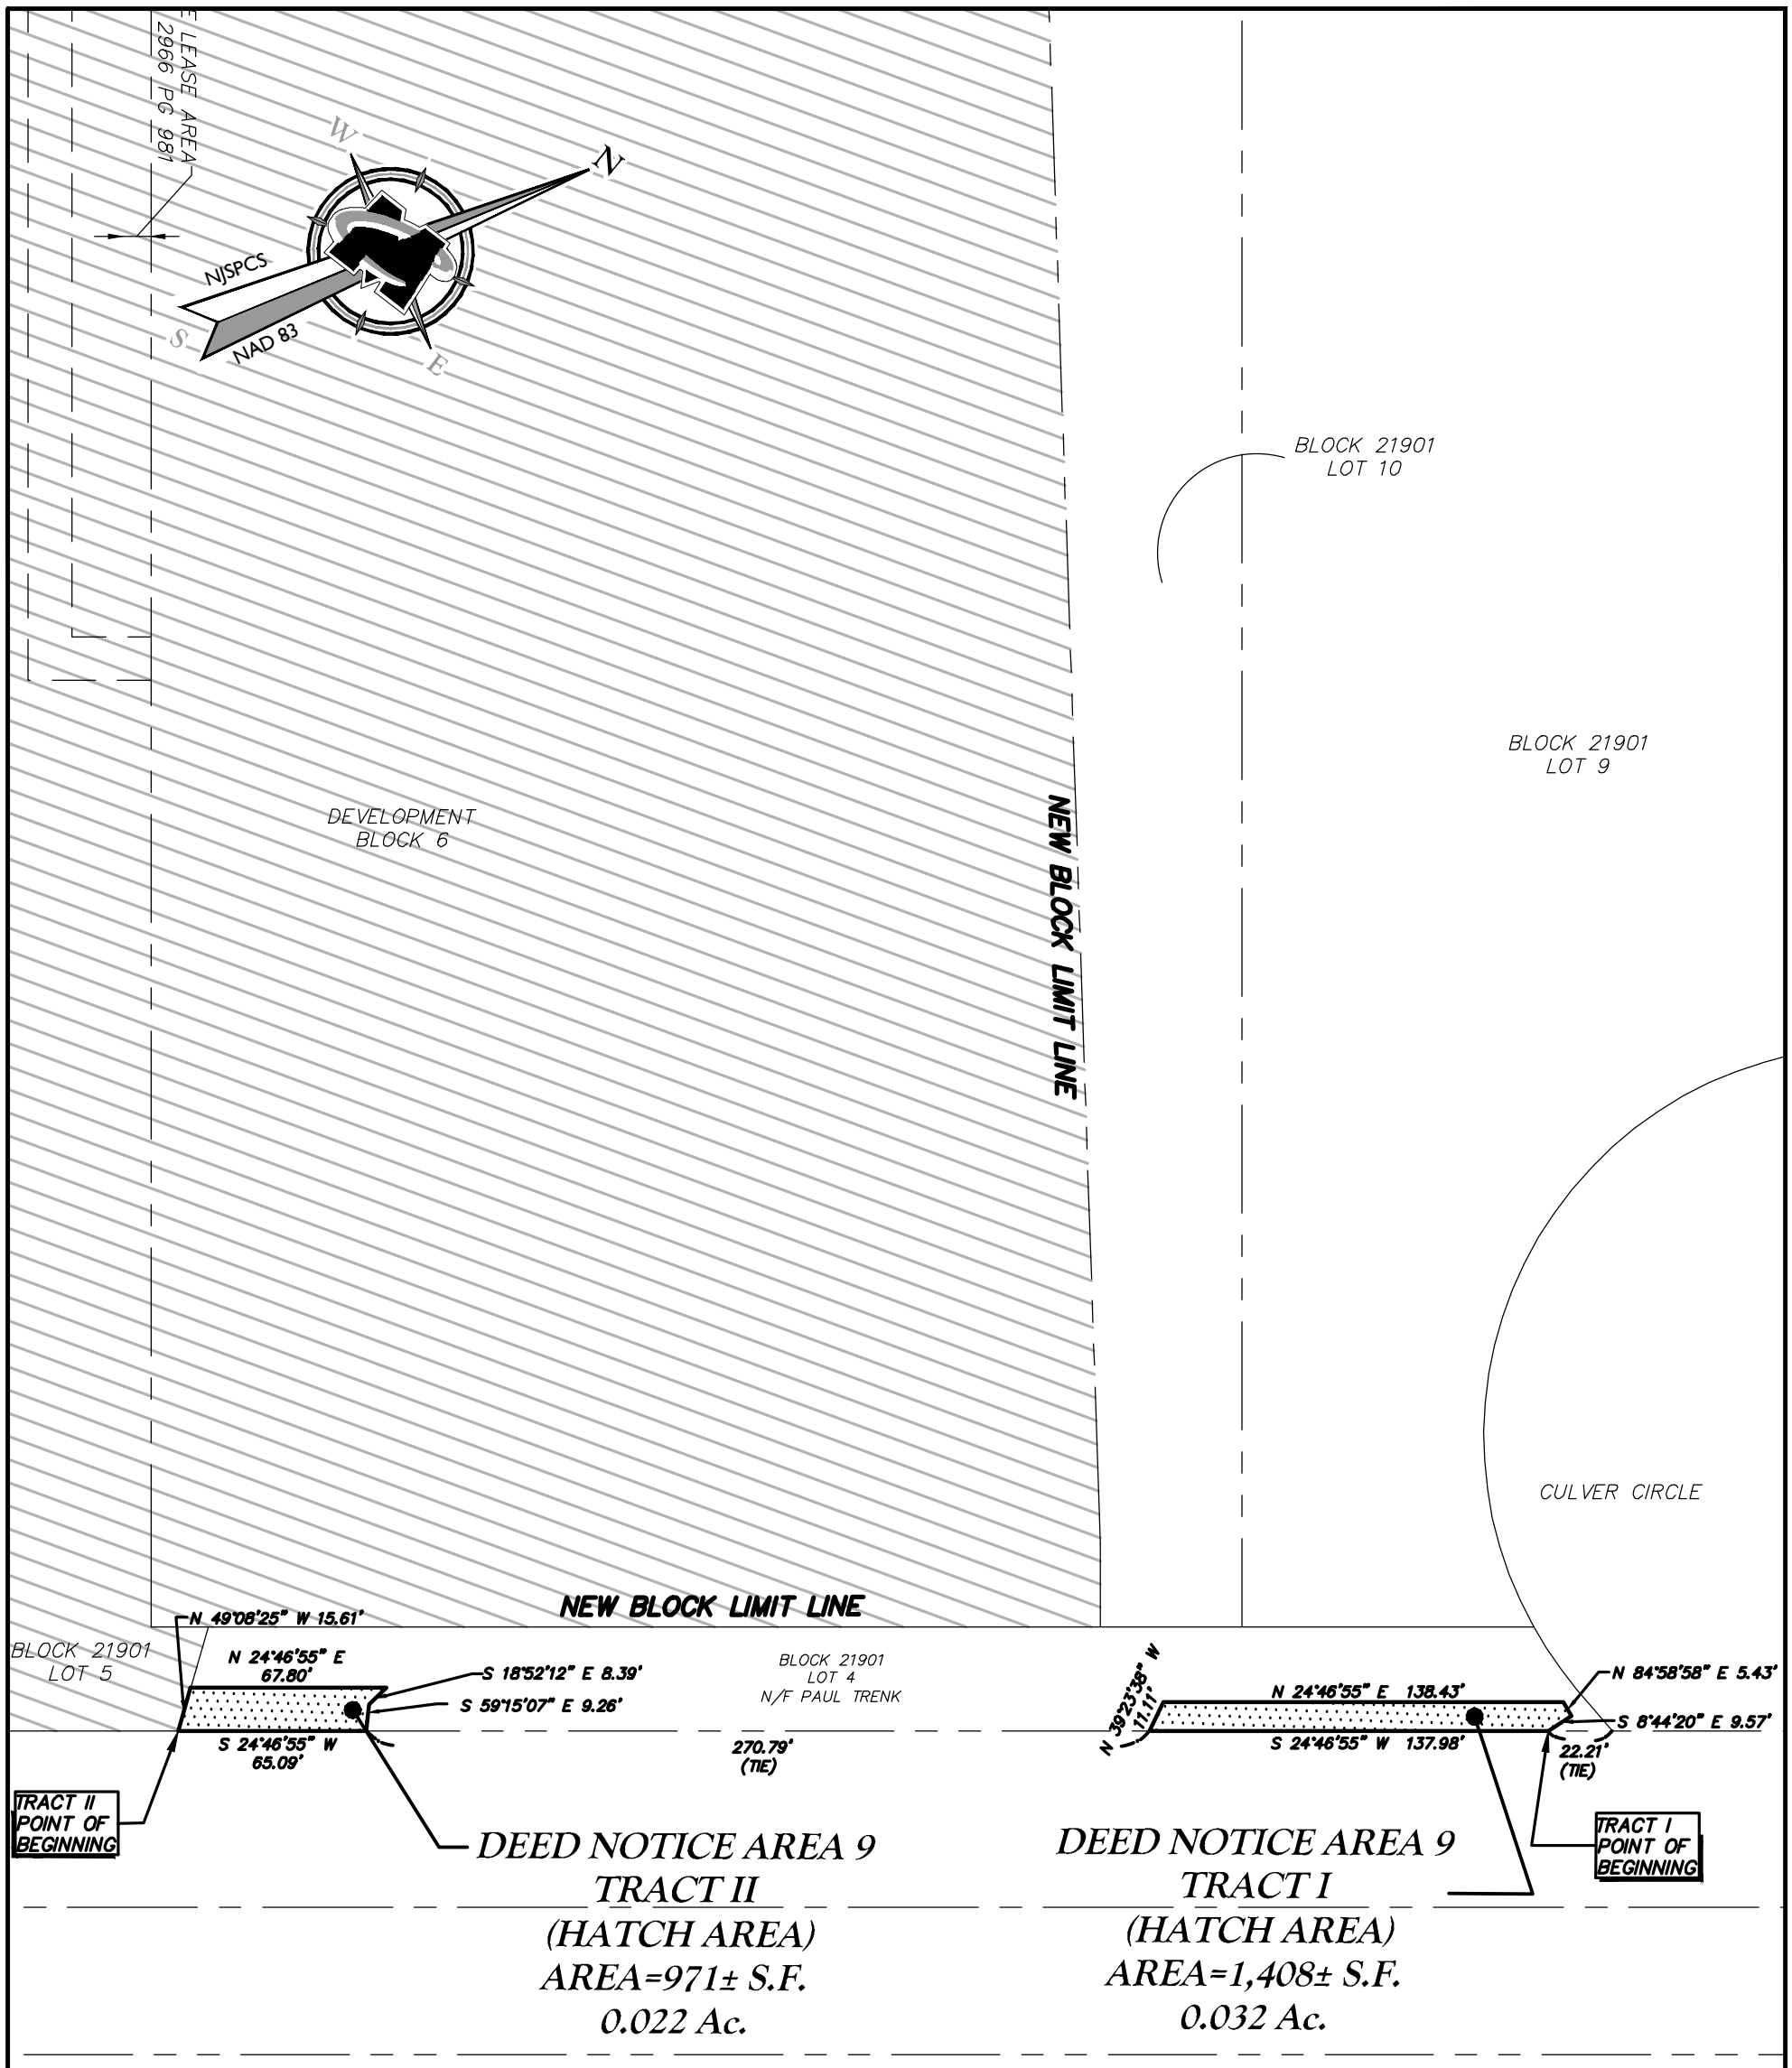
1. Along the southerly line of Lot 4 in Block 21901, **N 49° 08' 25" W, 15.61 feet**; thence –

Running through a portion of said Lot 4 in Block 21601, the following four (4) courses:

2. **N 24° 46' 55" E, 67.80 feet**; thence –

3. **S 18° 52' 12" E, 8.39 feet**; thence –

4. **S 59° 15' 07" E, 9.26 feet**, to the aforesaid westerly line of New Jersey State Highway Route 440; thence –



6. Along said westerly line of Route 440, **S 24° 46' 55" W, 65.09 feet,** to the Point and Place of **BEGINNING.**

CONTAINING: 971 S.F. of land more or less or 0.022 acre of land more or less.

Exhibit B-1 Restricted Area Map includes Exhibit B-1 (Restricted Area and Soil Sample Locations).

Exhibit B-2 is a Restricted Area Data Table indicating soil sample locations with concentrations remaining above the New Jersey Department of Environmental Protection's (NJDEP) Chromium Policy.

Restricted Area Map Notes:

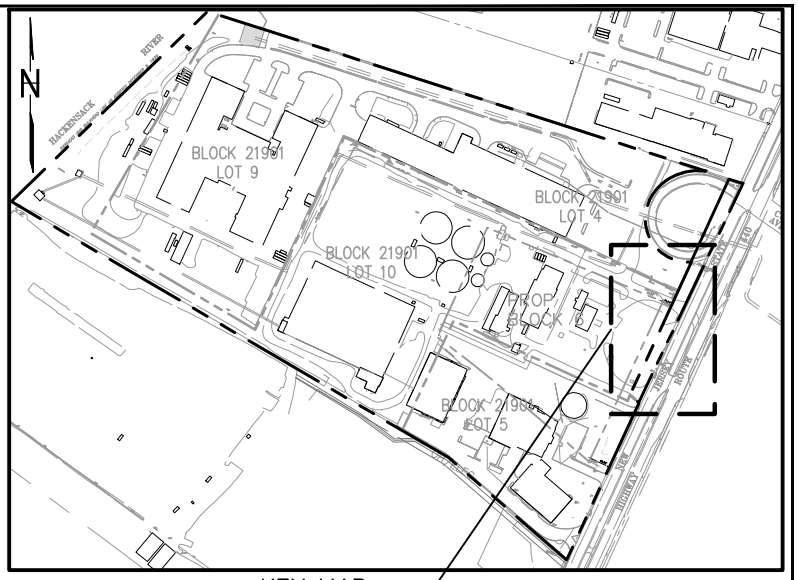

Exhibit B-1 indicates engineering controls. For soils with hexavalent chromium concentrations above 20 mg/kg, the engineering controls include a cap consisting of 1 foot of clean soil at the northern-most restricted area and a cap consisting of a geotextile demarcation fabric overlain by 6-inches of gravel at the southern-most restricted area.

C-1 Institutional Controls
C-2 Engineering Controls
Portions of Block 21901, Lot 4
City of Jersey City, New Jersey

C-1 Institutional Controls

C-1 Deed Notice, Consent Decree, Zoning as Institutional Controls: Exhibit C-1 (A through C) for portions of Block 21901, Lot 4, City of Jersey City, New Jersey known as the Deferred Area

i. Exhibits C-1A through C-1C. Exhibit C-1A: Deed Notice as Institutional Control; Exhibit C-1B: Consent Decree as Institutional Control; Exhibit C-1C Zoning as Institutional Control Exhibits C-1 include a narrative description of the restrictions and obligations of this Deed Notice and the other Institutional Controls that are in addition to those described above, as follows:

(A) General Description of the Institutional Control:

(1) Description and estimated size of the Restricted Areas as described above;

The Property constitutes portions of Block 21901, Lot 4. The estimated size of the Area containing chromium-impacted soils (hexavalent chromium above 20 mg/kg) as identified on Exhibit B-1 is estimated at approximately 2,370 square feet or approximately 0.05 acres.

(2) Description of the restrictions on the Property by operation of the Institutional Control;

The Property shall only be used for activities consistent with this Deed Notice, the Consent Decree, including, but not limited to, Paragraphs 60(j) and 60(k) of the Consent Decree, and the applicable zoning standards. Intrusive activities (i.e., excavation or digging) that breach the engineering controls (as described in Exhibit C-2) will not be permitted on the Property except in compliance with the terms of the Consent Decree, and this Deed Notice. See Deed Notice for additional information; subsections 7A Alterations, Improvements, Disturbances, and 7B, Emergencies.

(3) The objective of the restrictions;

The restrictions will prohibit contact with soils above the NJDEP Soil Cleanup Criteria for hexavalent chromium.

(B) Description of the monitoring necessary to determine whether:

(1) Any disturbances of the soil in the Restricted Areas did not result in the unacceptable exposure to the soil contamination;

Visual inspections of the Property and other monitoring as set forth in the Consent Decree.

(2) There have been any land use changes subsequent to the filing of this Deed Notice or the most recent biennial certification, whichever is more recent;

Same as (B)(1).

(3) The current land use on the Property is consistent with the restrictions in this Deed Notice;

Same as (B)(1).

(4) Any newly promulgated or modified requirements of applicable regulations or laws apply to the site; and

Review of newly promulgated or modified requirements of applicable regulations or laws that potentially may apply to the site.

(5) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

Same as (B)(4).

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) Land use at the Property is consistent with the restrictions in the Consent Decree, this Deed Notice, the applicable zoning standards; and

(3) The remedial action that includes this Deed Notice continues to be protective of the public health and safety and of the environment.

The monitoring report will be included in the biennial certification. Components of the monitoring report will include the following:

- ***A report of all conditions set forth in sections (A) and (B) above to assure that they have been adhered to, including evaluation of any available documents as a result of changes in land use or incidents.***
- ***A report that determines whether or not the land use at the Property has remained consistent with the restrictions in the Consent Decree, this Deed Notice,* and *the applicable zoning standards.***
- ***A report that determines whether or not the Deed Notice continues to be protective of the public health and safety and the environment.***

C-2 Engineering Controls
Deed Notice #9 SA-6 North Route 440 Deferred Area

Portions of Block 21901, Lot 4
City of Jersey City, New Jersey

ii. Exhibits C-2A through C: Narrative description of the Engineering Controls including Clean Fill as follows:

(A) General Description of the engineering controls:

(1) Description of the engineering controls;

The Engineering Controls consist of a cap consisting of 1 foot of clean soil at the northern-most restricted area and a cap consisting of a geotextile demarcation fabric overlain by 6-inches of gravel at the southern-most restricted area.

(2) The objective of the engineering controls; and

The objective of the controls is to prevent contact with soils above the NJDEP Chromium Policy for hexavalent chromium.

(3) How the engineering controls are intended to function.

The soil engineering controls are intended to function as a barrier to underlying and adjacent soils that exceed the NJDEP Chromium Policy Criteria within the Property.

(B) Description of the operation and maintenance necessary to ensure that:

(1) Periodic inspections of each engineering control are performed in order to determine its integrity, operability, and effectiveness;

Honeywell will perform monitoring by visual inspection of the Property pursuant to the Consent Decree.

(2) Each engineering control continues as designed and intended to protect the public health and safety and the environment;

Same as (B)(1) above.

(3) Each alteration, excavation or disturbance of any engineering control is timely and appropriately addressed to maintain the integrity of the engineering controls;

Same as (B)(1) above. Also, see the Consent Decree and the Deed Notice for additional information: subsections 7A Alterations, Improvements, Disturbances, and 7B Emergencies.

(4) The engineering controls are being inspected and maintained and their integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment;

Same as (B)(1) above.

(5) A record of the self-inspection dates, name of the inspector, results of the inspection and condition(s) of the engineering controls. Sampling, for example, may be necessary if it is not possible to visually evaluate the integrity/performance of the engineering controls; and

Records of the inspections are to be maintained as listed in (5).

(6) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

A review of any new standards, regulations, or laws will be conducted. Should the review indicate that other activities are necessary, those activities will be listed and executed.

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) The engineering controls continues to operate as designed; and

(3) The remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment.

The monitoring report will be included in the biennial certification. Components of the monitoring report will include the following:

- ***A report of all conditions set forth in sections (A) and (B) above to assure that they have been adhered to, including an evaluation to determine whether or not the engineering controls are continuing to meet the original objective and intended function.***
- ***A report to determine whether or not the engineering controls continue to operate as designed.***

- ***A report to determine whether or not the engineering controls continue to be protective of the public health and safety and of the environment.***

RECITALS

Whereas, on June 30, 2003, the district court for the District of New Jersey issued a Final Judgment in *Interfaith Community Organization v. Honeywell International Inc.*, Civ. No. 95-2097 (DMC) ("*ICO v. Honeywell*"), ordering the remediation of an area designated by the New Jersey Department of Environmental Protection ("NJDEP") as Study Area 7 by excavation of all chromium contamination on the property, under the oversight of a court-appointed Special Master;

Whereas, on or about December 23, 2005, the Jersey City Municipal Utilities Authority ("JCMUA") filed litigation styled *Jersey City Municipal Utilities Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5955 (DMC), bringing claims against Honeywell International Inc. ("Honeywell") under, *inter alia*, Section 6972 of the Resource Conservation and Recovery Act ("RCRA"), and seeking remediation of chromium contamination on property owned by JCMUA and other relief;

Whereas, on or about December 28, 2005, the Jersey City Incinerator Authority ("JCIA") filed litigation styled *Jersey City Incinerator Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5993 (DMC), bringing claims against Honeywell under, *inter alia*, Section 6972 of RCRA, and seeking remediation of chromium contamination on property owned by JCIA and other relief;

Whereas, on or about January 4, 2006, the Hackensack Riverkeeper, Inc., Captain William Sheehan, Reverend Winston Clarke, and Lawrence Baker ("Riverkeeper") filed litigation styled *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.,* D.N.J., Civ. No. 06-022 (DMC), bringing a claim against Honeywell under RCRA and seeking remediation of chromium contamination to soils, groundwater, surface waters, and sediments associated with various properties collectively designated by NJDEP as Study Areas 5, 6 North, and 6 South;

Whereas, Study Areas 6 North and South are directly adjacent to Study Area 7 on the north and south sides, respectively;

Whereas, Study Area 5 is comprised of properties to the east of Study Areas 6 North, 6 South, and 7 across Route 440;

Whereas, the property owned by JCIA and JCMUA and collectively the subject of *JCMUA v. Honeywell* and *JCIA v. Honeywell* comprises a part of Study Area 6 North;

Whereas, the City of Jersey City ("Jersey City") also owns property that comprises a part of Study Area 6 North;

Whereas, Riverkeeper also named as defendants in *Riverkeeper v. Honeywell* Jersey City, JCMUA, and JCIA (collectively the "Jersey City Entities");

Whereas, the Jersey City Entities and Honeywell also asserted cross-claims against each other in *Riverkeeper v. Honeywell*;

Whereas, *JCMUA v. Honeywell*, *JCIA v. Honeywell,* and *Riverkeeper v. Honeywell* were consolidated by the United States District Court for the District of New Jersey (hereinafter the "Consolidated Litigation");

Whereas, in the Consolidated Litigation, the Jersey City Entities and Riverkeeper have alleged that Honeywell bears responsibility for the presence and remediation of chromite ore processing residue ("COPR") and chromium in soils and groundwater on the Study Area 6 North property;

Whereas, in the Consolidated Litigation, Honeywell has alleged that the Jersey City Entities bear full responsibility for lead and other contamination on the Study Area 6 North property, and also bear an equitable share of liability for the presence and remediation of COPR and chromium in soils and groundwater on the Study Area 6 North property and for chromium and other contamination in Hackensack River sediments in the vicinity of Study Area 6 North;

Whereas, on October 9, 2007, Honeywell and Riverkeeper submitted the Consent Order on Sediment Remediation and Financial Assurances ("Sediment Consent Order"), resolving issues related to the remediation of chromium contaminated sediments in the Hackensack River in the vicinity of Study Areas 5, 6, and 7;

Whereas, the Parties to this Consent Decree each believe that it is in their mutual interest to move forward productively to resolve their differences so that they can implement environmental remediation at Study Area 6 North that ensures the continued protection of human health and the environment and so that Study Area 6 and Study Area 7 can be redeveloped in keeping with Jersey City's vision for a revitalized West Side;

Whereas, the Local Redevelopment and Housing Law, N.J.S.A. 40A:12A-1, *et seq*., as amended and supplemented (the "Redevelopment Law") provides for municipalities to participate in the redevelopment and improvement of areas in need of redevelopment;

Whereas, the portions of Study Area 6 and Study Area 7 (i) which are owned by the Jersey City Entities, (ii) which are owned by Honeywell, (iii) as to which Honeywell has a purchase and sale agreement with the current owner, or (iv) which hereafter will be acquired by a Jersey City Entity and/or Honeywell are parcels which by ordinance adopted by the City Council of Jersey City on February 27, 2008, have been determined to be "areas in need of redevelopment" under the criteria of the Redevelopment Law because of conditions prevalent on those parcels;

Whereas, the settlement which is the subject matter of this Consent Decree contemplates the environmental remediation of Study Area 6 North and redevelopment of the parcels that comprise Study Areas 6 and 7 to create a major mixed use project in an important section of Jersey City;

Whereas, each of the actions to implement this Consent Decree have been fully considered by the Parties as a means to accomplish the aforesaid purposes of this settlement;

Whereas, the consent of each of the Jersey City Entities to this Consent Decree was considered at a duly noticed and appropriate meeting of their respective governing bodies, open to the public, at which members of the public were provided an opportunity to comment on all aspects of the settlement, including, without limitation, the commitments made by the Jersey City Entities herein; and

Whereas, Honeywell and the Jersey City Entities are settling their claims, cross-claims, or counter-claims in the Consolidated Litigation against each other in the *Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc.* (hereafter "Jersey City/Honeywell Consent Order"), filed in the Consolidated Litigation simultaneously with this Consent Decree and attached as Exhibit A to this Consent Decree:

NOW, THEREFORE, IT IS HEREBY ORDERED AND DECREED AS FOLLOWS:

ARTICLE I: DEFINITIONS

For purposes of this Consent Decree, the following terms shall have the meanings set forth in this Article:

1. **AOC 1** shall mean that area of Study Area 6 North in which the hexavalent chromium concentration in the top 20 feet of soil below existing ground surfaces exceeds concentrations of 20 mg/kg and the Chromium Remedy will be implemented pursuant to Article III. AOC 1 is shown on Exhibit B.

2. **AOC 1 Additional Excavation Areas** shall mean those areas of Study Area 6 North which require excavation pursuant to paragraph 57. The AOC 1 Additional Excavation Areas are not contiguous to AOC 1. The AOC 1 Additional Excavation Areas are shown on Exhibit B.

3. **AOC 1 Open Space Area** shall mean the AOC 1 Open Space Area, as defined by paragraph 53, consisting of approximately 11 acres enclosed by the hydraulic barrier walls constructed under the Chromium Remedy, and which shall be subject to paragraph 60. The AOC 1 Open Space Area is shown on Exhibit B.

4. **AOC 2** shall mean that area of Study Area 6 North on which the Historic Fill Remedy will be implemented pursuant to Article II.B of the Jersey City/Honeywell Consent Order. AOC 2 is shown on Exhibit B.

5. **Bayfront Redevelopment LLC** shall have the meaning set forth in paragraph 4.1 of the Jersey City/Honeywell Consent Order.

6. **COPR** shall mean Chromite Ore Processing Residue.

7. **Chromium Remedy** or **Chromium Remediation** shall mean the remedy set forth in Article III.

8. **Consolidated Litigation** shall mean *Jersey City Municipal Utility Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5955 (DMC), *Jersey City Incinerator Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5993 (DMC), and *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.,* D.N.J., Civ. No. 06-022 (DMC).

9. The **Court** shall mean the United States District Court of the District of New Jersey, which has jurisdiction over the Consolidated Litigation.

10. **Deep Groundwater Remedy** shall mean the deep overburden and bedrock groundwater pump and treat remedy as required by the Order Approving the Deep Overburden Groundwater Remediation, entered on October 6, 2006, and the Stipulation on Consent Regarding the Schedule for Implementation of Deep Groundwater Remedial Actions, currently pending before the Special Master in *ICO v. Honeywell.* In the event that Riverkeeper and Honeywell reach a settlement on source control issues, the Deep Groundwater Remedy shall

include the remedy to which Riverkeeper and Honeywell have agreed. In the event that Riverkeeper and Honeywell do not reach a settlement on source control issues, the Deep Groundwater Remedy shall include the remedy ordered by the Special Master or the Court in *ICO v. Honeywell* for source control.

11. **Hackensack River Watershed Land Trust** shall mean the dedicated fund of the Hackensack Riverkeeper, Inc., established under Section 501(c) of the Internal Revenue Code for the purpose of acquiring and preserving open space within the Hackensack River watershed and administered by the Board of Trustees of the Hackensack Riverkeeper, Inc.

12. **Historic Fill** shall have the definition provided in the NJDEP Technical Requirements for Site Remediation.

13. **Historic Fill Remedy or Historic Fill Remediation** shall mean the remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order, except that the Historic Fill Remedy shall not be limited to the remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order if NJDEP requires a more stringent remedy.

14. **Honeywell** shall mean Honeywell International Inc. and its affiliates, including Kellogg Street 80 Property LLC, Kellogg Street 60 Property LLC, and Kellogg Street/440 Property LLC.

15. **Honeywell's Treatment Plant** shall mean the treatment plant currently located at 80 Kellogg Street that is used to treat, *inter alia*, chromium contaminated groundwater.

16. ***ICO v. Honeywell*** shall mean *Interfaith Community Organization v. Honeywell International Inc.,* D.N.J., Civ. No. 95-2097 (DMC).

17. **Including** shall mean including, but not limited to.

18. **JCIA** shall mean the Jersey City Incinerator Authority.

19. **JCMUA** shall mean the Jersey City Municipal Utilities Authority.

20. **JCRA** shall mean the Jersey City Redevelopment Agency.

21. **Jersey City Entities** shall mean the City of Jersey City, including the Department of Public Works ("DPW") and other agencies and branches thereof, the JCIA, and the JCMUA.

22. **Jersey City/Honeywell Consent Order** shall mean the *Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc.* entered in the Consolidated Litigation simultaneously with this Consent Decree.

23. **NJDEP** shall mean the New Jersey Department of Environmental Protection.

24. **NJDEP Chromium Directive** shall mean the Chromium Directive issued by NJDEP on February 8, 2007, and attached as Exhibit C.

25. **Party or Parties** shall mean any one or all of the signatories to this Consent Decree.

26. **RCRA** shall mean the Resource Conservation and Recovery Act, 42 U.S.C. 6901, *et seq.*, as amended.

27. **Redevelopment Agreement** shall have the meaning set forth in paragraph 4.11(e) of the Jersey City/Honeywell Consent Order.

28. **Redevelopment Area** shall mean Study Area 6 North, Study Area 6 South, and Study Area 7, collectively.

29. **Redevelopment Law** shall mean the New Jersey Local Redevelopment and Housing Law, N.J.S.A. 40A:12A1, *et seq.*, as amended and supplemented.

30. **Redevelopment Plan** shall mean the Bayfront I Redevelopment Plan as adopted by Jersey City on March 12, 2008.

31. **Riverkeeper** shall mean the plaintiffs in *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-22 (DMC), and includes the Hackensack Riverkeeper, Inc., William Sheehan, Reverend Winston Clarke, and Lawrence Baker.

32. **Sediment Consent Order** shall mean the Consent Order on Sediment Remediation and Financial Assurances, which the Parties expect will be entered by the Court in *ICO v. Honeywell* and this Consolidated Litigation.

33. **Shallow Groundwater** or **Shallow Level of Groundwater** shall mean groundwater above the meadow mat, groundwater at stratigraphically equivalent depths in locations where there is no meadow mat, and groundwater that is contaminated by recent contact with COPR or other chromium soil contamination above the meadow mat and subsequently flows downward through or past the meadow mat into the upper portion of the lacustrine sediments. This does not include groundwater found in the bedrock, the deep zone, or any plume of contamination that is in both the intermediate and deep zones, as those zones are defined in the Final Groundwater Investigation Report, prepared in *ICO v. Honeywell*, dated February 2007, p. 1-2.

34. **Site** shall mean Study Area 6 North.

35. **Site Preparation Activities** shall have the meaning set forth in paragraph 3.1 of the Jersey City/Honeywell Consent Order.

36. **Site Preparation Plan** shall have the meaning set forth in paragraph 3.2 of the Jersey City/Honeywell Consent Order.

37. **Soil** shall mean soils, historic fill, and/or COPR.

38. The **Special Master** shall mean Senator Robert G. Torricelli, appointed as the Special Master in *ICO v. Honeywell* and the Consolidated Litigation, and his successors or whomever the Court may appoint as Special Master.

39. **Stratum O** shall mean the layer composed of soft brown silty fine sand interlayered with soft gray silty clay and fine sandy to clayey silt generally located above the meadow mat below the Historic Fill and/or COPR.

40. **Study Area 6 North** shall mean that property comprising Sites 87 and 88 of the Chromate Chemical Production Waste Sites designated by NJDEP, comprising approximately 41.58 acres and including: (a) all such property owned by JCMUA located at 555 Route 440, Jersey City, New Jersey, (b) all such property owned by JCIA located at 501 Route 440, Jersey City, New Jersey; (c) all such property owned by Jersey City or its Department of Public Works and located at 575 Route 440, Jersey City, New Jersey; and (d) all such property owned by Paul Trenk consisting of Block 1290.1, Lot 2A, Jersey City, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

41. **Study Area 6 South** shall mean (a) that property currently owned by 425/445 Route 440 Property LLC consisting of Site 73, located at 200 Kellogg Street Jersey City, Hudson County, New Jersey; (b) that property currently owned by Kellogg Street 80 Property LLC consisting of Site 134, located at 100 Kellogg Street Jersey City, Hudson County, New Jersey; (c) that property currently owned by Kellogg Street 80 Property LLC consisting of Site 140 located at 80 Kellogg Street Jersey City, Hudson County, New Jersey; (d) that property currently owned by Kellogg Street 60 LLC consisting of Site 125, located at 60 Kellogg Street Jersey City, Hudson County, New Jersey; (e) that property currently owned by Kellogg Street/440 Property LLC consisting of Site 124, Jersey City, Hudson County, New Jersey; (f) that property currently owned by Kellogg St/Harsimus Cove Realty located at 150 Kellogg Street, Jersey City, Hudson County, New Jersey, (g) that property currently owned by Cordova Enterprises Ltd located at 38 Kellogg Street, Jersey City, Hudson County, New Jersey, and (g) that property currently owned by Cordova Enterprises Ltd located at 28 Kellogg Street, Jersey City, Hudson County, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

42. **Study Area 6** shall mean Study Area 6 North and Study Area 6 South, collectively.

43. **Study Area 7** shall mean (a) that property currently owned by 425/445 Route 440 Property LLC located at 425 and 445 Route 440, Jersey City, Hudson County, New Jersey, and (b) that property currently owned by Roned Realty/Edward Navlen located at 465 Route 440, Jersey City, Hudson County, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

44. **Technical Requirements for Site Remediation** shall mean the NJDEP Technical Requirements for Site Remediation, N.J.A.C. Chapter 26E, as duly and properly promulgated and amended.

45. **Unrestricted Use** shall mean that the contaminated medium is restored to a condition or quality suitable for all uses.

ARTICLE II: SCOPE OF THE CONSENT DECREE, JURISDICTION, AND CLAIMS RESOLVED

46. Except as provided in this paragraph, the terms of the Jersey City/Honeywell Consent Order shall remain in full force and effect. To the extent that any provision in the Jersey City/Honeywell Consent Order refers to the Chromium Remedy or Chromium Remediation, it shall be construed as referring to Article III of this Decree. In the event of any conflict or inconsistency between the terms of this Decree and the Jersey City/Honeywell Consent Order, the terms of this Decree govern. In the event that any action taken pursuant to the Jersey City/Honeywell Consent Order is in conflict with or inconsistent with the terms of this Decree, the terms of this Decree shall govern.

47. This Court has jurisdiction over the Parties and subject matter of the Consolidated Litigation pursuant to Section 6972 of RCRA.

48. For purposes of this Consent Decree, the Complaints in the Consolidated Litigation each state claims upon which relief may be granted against Honeywell.

49. In the event that this Decree is not terminated by one or more Parties pursuant to paragraph 100, this Consent Decree resolves, settles, and satisfies all claims by Riverkeeper against Honeywell with respect to soils and shallow groundwater at Study Area 6 North. This Consent Decree does not resolve any claims by Riverkeeper against Honeywell with respect to Study Area 6 South, Study Area 5, or groundwater at Study Area 6 North other than shallow groundwater.

50. Nothing in this Consent Decree shall be construed or interpreted to waive any claim or defense any Party has asserted or may assert against any third party in the Consolidated Litigation except as explicitly stated herein.

51. This Consent Decree does not constitute an admission of liability on the part of any Party with respect to any claims, cross-claims, or counter-claims in the Consolidated Litigation.

ARTICLE III: CHROMIUM REMEDIATION

A. Chromium Remedy

52. **Responsibility for Implementation of Chromium Remediation.** As between the Parties, Honeywell shall be responsible for and shall undertake remediation of COPR and chromium present in Study Area 6 North at Honeywell's sole cost and expense. Remediation of COPR and chromium present in Study Area 6 North shall be undertaken in accordance with the terms of this Consent Decree.

53. **AOC 1 and AOC 2.** For the purposes of remediation, Study Area 6 North shall consist of two Areas of Concern ("AOCs"), designated as AOC 1 and AOC 2 as shown on Exhibit B. AOC 1 is set forth on Exhibit B and consists of that portion of Study Area 6 North for which chromium remediation is required pursuant to paragraphs 55, 56, and 57. AOC 2 consists of the entirety of Study Area 6 North, including AOC 1, to the extent that historic fill is present in any area of Study Area 6 North. For AOC 1, the intended land use will determine the types

of remedial measures taken in the Chromium Remedy. There are two distinct land uses for AOC 1: open space and residential. As a result, AOC 1 will be further subdivided into:

(a) The AOC 1 Open Space Area, which shall comprise that portion of AOC 1 for which future use shall be restricted as provided in paragraph 60. The AOC 1 Open Space Area is shown on Exhibit B;

(b) The AOC 1 Residential Area, which shall comprise that portion of AOC 1 for which future use shall allow for residential and/or commercial and retail uses, but for which the remedial measures shall assume only a residential use . The AOC 1 Residential Area is shown on Exhibit B; and

(c) The AOC 1 Additional Excavation Areas, which consist of those portions of Study Area 6 North that require remediation pursuant to paragraph 57. The planned land use for the AOC 1 Additional Excavation Areas is residential and/or commercial and retail uses, but the remedial measures shall assume only a residential use.

54. **Scope and General Requirements of the Chromium Remedy.** The Chromium Remedy shall address shallow groundwater and soil containing hexavalent chromium in AOC 1, and shall be consistent with the requirements set forth in this Article. The Chromium Remedy set forth in this Consent Decree addresses only the shallow level of groundwater (see paragraph 58). The deep overburden and bedrock groundwater remediation, including source control, shall be addressed in a separate consent order, which shall place these issues within the jurisdiction of the Special Master in conjunction with the groundwater remedies for Study Area 7.

(a) The Chromium Remedy shall be consistent with the NJDEP Technical Requirements for Site Remediation, the Chromium Directive as issued by NJDEP on February 8, 2007 ("the NJDEP Chromium Directive"), and the Remedial Action Work Plan (with addenda) approved by NJDEP on or about February 19, 2008. This Consent Decree shall have precedence

over the Remedial Action Work Plan in the event of any inconsistency.

(b) The Chromium Remedy shall be carried out diligently, and the development and implementation of the Historic Fill Remedy shall not delay satisfaction of the milestones in the Schedule established pursuant to this paragraph. Honeywell shall propose a master Schedule for the implementation of the Chromium Remedy within 90 days of the entry of this Consent Decree, which shall include, at a minimum, the following milestones:

(i) Submission to the Special Master for all documents subject to review by the Special Master pursuant to paragraph 72(c);

(ii) Relocation of the Jersey City Entities' Study Area 6 North Operations as shall be required prior to the implementation of the Chromium Remedy;

(iii) Completion of those Site Preparation Activities necessary for the implementation of the Chromium Remedy, including remediation of the AOC 1 Additional Excavation Areas;

(iv) A final date for Honeywell's proposal of *in situ* treatment for any part of the AOC 1 Residential Area pursuant to paragraph 55(d) and a date for the final decision as to whether excavation or *in situ* treatment shall be used in the event of such a proposal;

(v) The initiation of work related to the Chromium Remedy;

(vi) The date for completion of the installation of the Chromium Remedy;

(vii) Implementation of the long-term protections of the AOC 1 Open Space Area established pursuant to paragraph 60; and

(viii) Transfer of the AOC 1 Open Space Area to Jersey City pursuant to paragraph 60(a)(iii).

(c) **Demolition and Grading Activities.** During demolition and grading activities, adequate protective measures shall be taken to protect site workers and the community

from airborne dusts and exposures to contaminated soils.

(d) **Vegetation of Clean Fill.** All clean soil fill in areas that will not involve paved roads, sidewalks, paths, walkways, or building structures shall be vegetated in such a manner to protect and maintain the required depth of clean soil fill.

55. **AOC 1 Residential Area Soil Remedy.** In the AOC 1 Residential Area, soils containing hexavalent chromium at concentrations greater than 20 mg/kg shall be excavated to a depth of 20 feet below the current ground surface in accordance with the NJDEP Chromium Directive.

(a) Those soils excavated from the AOC 1 Residential Area in which hexavalent chromium concentrations exceed 240 mg/kg shall be disposed of off-site at a waste disposal facility licensed to accept such waste.

(b) Those soils excavated from the AOC 1 Residential Area in which the hexavalent chromium concentration is less than 240 mg/kg, but greater than 20 mg/kg, shall be consolidated within the AOC 1 Open Space Area. However, any such soils which would require venting of gases shall be disposed of off-site.

(c) Soils excavated from the AOC 1 Residential Area shall be replaced with existing soils from AOC 2 or backfill soil. Any backfill soil brought to the Site shall either meet all applicable federal and NJDEP criteria, including NJDEP residential soil criteria, or comply with a beneficial soil reuse plan that is approved by NJDEP and subject to review and comment by the Parties and approval by the Special Master.

(d) In the AOC 1 Residential Area, excavation of soils containing hexavalent chromium greater than 20 mg/kg shall be the presumptive remedy. Around remaining active underground utilities or other structures, such as the bulkhead, *in situ* treatment may be considered in lieu of excavation only if Honeywell demonstrates, and all Parties, the Special

Master, and NJDEP agree that (1) excavation is technically impracticable and (2) treatment will result in hexavalent chromium concentrations of 20 mg/kg or less and no rebound will occur. If no treatment option is available, Honeywell shall propose an alternative remedial approach, subject to review and comment by the Parties and approval by the Special Master.

(e) Honeywell shall excavate all soils containing hexavalent chromium greater than 20 mg/kg in conjunction with the placement of the piping for the Deep Groundwater Remedy. Honeywell shall not propose treatment in lieu of excavation based on the location of the pipes for the Deep Groundwater Remedy or any apparent impracticability of excavating in conjunction with their installation.

56. **AOC 1 Open Space Area Soil Remedy.** In the AOC 1 Open Space Area, the soil remedy shall consist of an engineered RCRA cap to isolate contaminated soils, with gas venting, if necessary, to address the generation of methane and other naturally occurring gases in the Stratum O and/or Stratum D in the Open Space AOC. Soils consolidated under the cap, shall not require gas venting and shall not be the basis for the inclusion of gas venting as a component of the cap. The cap shall be designed and constructed so that:

(a) The cap shall consist of gas collection system, if gas venting is necessary, a base protective layer, an impervious geomembrane liner with a minimum thickness of 40 mil; a geocomposite drainage layer; a filter fabric; and a distinctive colored warning layer with markings in English and Spanish that would deter penetration of the cap in the event that digging occurred in the vicinity of the cap;

(b) All utilities, including those supporting the pump-and-treat system for groundwater remediation, with the exception of any extraction wells or collection trenches, shall be placed above the cap (but may be below the ground surface and/or contained within utility corridors). In the event that above-cap-grade gas collection and treatment is selected or is

needed to meet current or future regulatory requirements, such collection and treatment facilities are prohibited in the Open Space AOC, except for piping to connect the sub-liner collection system with the treatment facilities. Honeywell shall configure the cap so that all active piping for the wastewater treatment system operated by JCMUA, including all force mains and any connections to the emergency outfall, shall be outside the capped area. Honeywell may propose, subject to the review process in paragraph 72, to use treatment in lieu of excavation in the vicinity of the emergency outfall line if the criteria of paragraph 55(d) are satisfied; and

(c) Exclusive of roadways, the cap shall be overlain by layers of clean fill, backfill and/or overburden with an average depth of at least three feet and a minimum depth of at least two feet provided that any layer that incorporates overburden shall be below at least two feet of clean fill. Any clean fill or backfill soil brought to the Site will either meet all applicable federal and NJDEP criteria, including NJDEP residential soil criteria, or comply with a beneficial soil reuse plan that is approved by NJDEP and subject to review and comment by the Parties and approval by the Special Master. One foot of clean fill, covered with bituminous blacktop, shall be sufficient cover where roads, walkways, or other paved surfaces are located within the AOC 1 Open Space Area. All clean soil fill in areas that will not involve paved roads, walkways, or other paved surfaces shall be vegetated in such a manner as to protect and maintain the required depth of the clean soil fill and to ensure that such vegetation shall not cause any interference with or penetration of the cap.

(d) The existing overburden soils in the AOC 1 Open Space Area shall first be stripped off and set aside for use. If hexavalent chromium concentrations in the overburden exceed 20 mg/kg, the overburden shall be placed under the cap. If hexavalent chromium concentrations in the overburden do not exceed 20 mg/kg, the overburden may be placed above the cap but below the two feet of clean fill required by paragraph 56(c). Excavated hexavalent

chromium impacted soils (with concentrations between 20 mg/kg and 240 mg/kg) from the AOC 1 Residential Area shall be placed and spread in the AOC 1 Open Space Area under the cap. Excavated hexavalent chromium impacted soils (with concentrations between 20 mg/kg and 240 mg/kg) from the Study Area 6 South Development AOC (as defined in the First Amended Consent Decree Regarding Remediation and Redevelopment of Study Area 6 South and including only those portions of Study Area 6 South for which the future uses of the property may include commercial or residential development) may be placed and spread in the AOC 1 Open Space Area under the cap, provided that such soils do not require venting of gases and shall not serve as the basis for the inclusion of gas venting as part of the Study Area 6 North AOC 1 Open Space Area remedy. Both the chromium impacted soils and the previously stripped overburden shall be suitably compacted according to design specifications. Debris, to the extent it would interfere with the compaction specification requirements of the 100% Design, shall not be placed under the cap. The engineered cap shall be installed over the chromium-impacted soils exceeding 20 mg/kg hexavalent chromium.

57. **AOC 1 Additional Excavation Areas Remedy.** For those AOC 1 Additional Excavation Areas, soils containing hexavalent chromium at concentrations greater than 20 mg/kg shall be excavated to a depth of 20 feet below the current ground surface in accordance with the NJDEP Chromium Directive. Excavation of those areas comprising the AOC 1 Additional Excavation Areas shall initially be conducted in the 50-foot by 50-foot area planned in the RAWP but shall not be so limited in the event that confirmation sampling indicates that hexavalent chromium concentrations continue to exceed 20 mg/kg. Honeywell shall excavate laterally and vertically (to depths of up to 20 feet below current ground surface) until the hexavalent chromium is less than 20 mg/kg based on the results of confirmation sampling. Confirmation sampling for the AOC 1 Additional Excavation Areas shall be taken from the side

walls and bottom of the excavation, in accordance with the Technical Requirements for Site Remediation, to confirm complete removal of contaminated soils.

58. **Shallow Groundwater Remedy.** The shallow groundwater remedy shall consist of hydraulic barriers with a pump-and-treat system designed to isolate shallow groundwater and to intercept and treat shallow groundwater flowing above the meadow mat in the AOC 1 Open Space Area. The shallow groundwater remedy shall consist of the following:

(a) The existing soil/cement/bentonite wall on the boundary of Study Area 6 North and Study Area 7 shall be incorporated into the other engineering controls;

(b) Subterranean slurry walls or other hydraulic barriers shall be installed along the northern, eastern and western sides of the AOC 1 Open Space Area and keyed into the meadow mat or Stratum O or to comparable depths below ground surface;

(c) A groundwater extraction system shall be established that will consist of (i) one or more shallow extraction wells, sumps, or french drains within the AOC 1 Open Space Area; (ii) pumps; and (iii) underground piping to convey any extracted water to Honeywell's Treatment Plant;

(d) The capture zone for the shallow groundwater remedy shall include at least the entire area of contaminated shallow groundwater (except for shallow groundwater that penetrates the meadow mat and is captured by the Deep Groundwater Remedy);

(e) A plan for control of water levels shall be developed;

(f) In the event that underground structures are demolished, the plans shall address the need for special attention for structures that extend below the meadow mat in order to control needed water levels; and

(g) Honeywell shall submit such information as is required to allow NJDEP to establish a classification exception area for groundwater at the Site, in accordance with NJDEP

regulations.

59. **Permits and Authorizations.** Honeywell shall obtain all necessary federal, state, and local permits and authorizations to carry out the Chromium Remedy as set forth in this Article. The Jersey City Entities agree to cooperate with Honeywell in the applications for any such permits, authorizations, or approvals. Such cooperation shall include providing information or data with respect to permit applications, co-signing permit applications, and allowing access to Study Area 6 North to obtain information necessary for the permits.

B. Long-Term Monitoring, Maintenance, and Protection of Engineering and Institutional Controls

60. **Protection of the AOC 1 Open Space Area.** Except as provided in paragraphs 60(j) and 60(k), development in the AOC 1 Open Space Area shall be prohibited. The AOC 1 Open Space Area shall be protected against activities that may jeopardize the integrity of the cap and/or the groundwater remedial measures that shall be installed in the AOC 1 Open Space Area pursuant to the Chromium Remedy or that may impede the long-term monitoring and maintenance of the cap and/or groundwater remedial measures. It is the intention of the Parties to implement different layers of protection, which alone or in concert, impose restrictions on development, run with the land, and survive all parties. Accordingly, the following actions shall be taken pursuant to the Schedule provided in paragraph 54(b):

(a) **Ownership of and Access to the AOC 1 Open Space Area.** Ownership of and access to the AOC 1 Open Space Area shall be in accordance with the following:

(i) Pursuant to the terms of this Consent Decree and paragraph 4.3 of the Jersey City/Honeywell Consent Order, Bayfront Redevelopment LLC shall become the owner in fee simple absolute of all of the property that comprises the AOC 1 Open Space Area and shall not convey any rights or interests in such property except as provided in this Decree. At the time

of the conveyance from JCRA to Bayfront Redevelopment LLC, Bayfront Redevelopment LLC shall give Jersey City an option to buy AOC 1 Open Space Area prior to the planned transfer pursuant to paragraph 60(a)(iii). Such option to buy shall be subject to the conservation restriction imposed pursuant to paragraph 60(b). Jersey City shall exercise the option to buy the AOC 1 Open Space Area in the event that the conditions allowing for withdrawal of funds from the financial assurance mechanisms under paragraphs 84(c) or 84(d) are met;

(ii) At the time the JCRA conveys the Study Area 6 North property to Bayfront Redevelopment LLC pursuant to paragraph 4.3 of the Jersey City/Honeywell Consent Order, Bayfront Redevelopment LLC shall grant a conservation restriction for the AOC 1 Open Space Area pursuant to the requirements of paragraph 60(b);

(iii) Upon the final construction of all roads and utility corridors within the AOC 1 Open Space Area, Bayfront Development LLC shall donate good and marketable title to all the land comprising the AOC 1 Open Space Area to Jersey City. In conjunction with such donation, Bayfront Redevelopment LLC shall petition to subdivide the properties within Study Area 6 North to create a new parcel(s) comprising the AOC 1 Open Space Area. At the time of the donation, Jersey City shall grant Honeywell an easement for the purpose of monitoring and maintaining the Chromium Remedy. Jersey City shall also grant Honeywell all necessary access to the AOC 1 Open Space Area by license or such other mechanisms as may be appropriate for purposes of monitoring and maintaining the Chromium Remedy. After it acquires title pursuant to this paragraph, Jersey City shall retain ownership of the AOC 1 Open Space Area unless and until it shall have complied with the requirements of paragraph 60(a)(iv);

(iv) After it acquires title pursuant to this paragraph, Jersey City shall not convey or enter into any lease of the AOC 1 Open Space Area to any other person or entity unless it has first satisfied either of the following conditions:

(1) Jersey City has obtained the Special Master's (or if the Special Master's appointment has expired, the Court's) approval to convey the AOC 1 Open Space Area to a government entity that has the capacity and willingness to fulfill Jersey City's obligations under the Consent Decree with respect to the AOC 1 Open Space Area and such entity agrees to submit to the Court's jurisdiction and to be bound by the requirements of the Consent Decree that Jersey City has committed to fulfill with respect to protection of the AOC 1 Open Space Area pursuant to this paragraph and routine maintenance of the permissible development in the AOC 1 Open Space Area pursuant to paragraph 64(d); or

(2) The AOC 1 Open Space Area has been remediated such that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive, and Jersey City has demonstrated to the Special Master and/or the Court, as appropriate, that such remediation has been completed in accordance with all applicable requirements.

(b) **Conservation Restriction.** At the time the JCRA conveys the Study Area 6 North property to Bayfront Redevelopment LLC pursuant to paragraph 4.3 of the Jersey City/Honeywell Consent Order, but prior to the grant of the option to buy pursuant to paragraph 60(a)(i), Bayfront Redevelopment LLC shall grant an open space conservation restriction, pursuant to N.J.S.A. 13:8-B-1, *et seq.*, over the AOC 1 Open Space Area substantially in the form set forth in Exhibit D. Exhibit D is a conservation restriction that is consistent with the terms of this paragraph and this Consent Decree. The conservation restriction shall allow for the implementation, maintenance, monitoring, repair and replacement of the Chromium Remedy and development consistent with paragraphs 60(j) and 60(k), including the construction and

placement of roads and utilities. The Hackensack River Watershed Land Trust shall be the primary holder of the conservation restriction, with all rights of monitoring and enforcement. Riverkeeper shall propose an entity to serve as the secondary holder of the conservation restriction subject to comment by the Parties and review by the Special Master. The secondary holder shall have secondary rights of monitoring and enforcement.

(i) The conservation restriction shall be incorporated into this Consent Decree and made part of this Consent Decree. The final, executed conservation restriction shall be lodged with the Court and entered as an order of the Court. The conservation restriction shall be enforceable in this Court, in the same manner as this Consent Decree.

(ii) The conservation restrictions provided under this Consent Decree shall be consistent with the prohibited and permitted development of the AOC 1 Open Space Area as set forth in paragraphs 60(j) and 60(k) below.

(iii) Jersey City shall not take any action, whether through exercise of any power of eminent domain, application to the State of New Jersey for approval of a diversion of public park or recreation land, legal challenge to the validity or enforceability of the conservation restriction, or otherwise, the effect of which would be to in any way terminate, abrogate, or diminish the terms, conditions, or purposes of the conservation restriction. If, notwithstanding the preceding sentence, Jersey City proceeds with a condemnation or other action, the result of which would be to terminate, abrogate, or otherwise diminish the terms, conditions, or purposes of the conservation restriction, Jersey City shall, before taking any such action satisfy all of the conditions set forth in paragraph60(a)(iv)(2).

(iv) Notwithstanding the foregoing, the conservation restriction may be terminated upon application of any Party when no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area, whether in soils or in groundwater, in excess of the

levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive.

(c) **Deed Notice.** Upon completion of the Chromium Remedy, the AOC 1 Open Space Area shall be subjected to the deed notice substantially in the form set forth in Exhibit E that restricts future activities on the AOC 1 Open Space Area. Nothing in the deed notice shall be construed as preventing the imposition of more stringent restrictions on the development allowed in the AOC 1 Open Space Area pursuant to this paragraph and, in particular, the conservation restriction provided for in paragraph 60(b).

(d) **Recording of the Consent Decree, Conservation Restriction, and Deed Notice.** This Consent Decree, the conservation restriction imposed pursuant to paragraph 60(b), and the deed notice imposed pursuant to paragraph 60(c) shall be recorded, pursuant to N.J.S.A. 46:15-1.1, 46:16-1.1, and 46:16-2, in the office of the Hudson County Register and a conspicuous reference to the Consent Decree, conservation restriction, and deed notice shall be included in all instruments concerning title to the AOC 1 Open Space Area. Any Party shall have the right, periodically, but no more than once every 25 years, to record memoranda or other instruments that reference, incorporate, or attach this Consent Decree, the conservation restriction, the deed notice, and/or any further orders of the Court related to the AOC 1 Open Space Area in the real estate records related to the AOC 1 Open Space Area.

(e) **Zoning.** Pursuant to the Redevelopment Plan, the AOC 1 Open Space Area is designated for open space and park. Jersey City shall not amend or change this designation unless it first satisfies the requirements of paragraph 60(a)(iv)(2).

(f) **Recreation and Open Space Inventory.** Upon acquiring fee simple absolute title to the AOC 1 Open Space, Jersey City shall add those portions of the AOC 1 Open Space Area not covered by roads, the pedestrian thoroughfare, and utility corridors adjacent to

roads onto its Green Acres Program Recreation and Open Space Inventory ("ROSI") pursuant to N.J.A.C. 7:36 and shall specify in such listing that it is subject to (i) Honeywell's prior easement to monitor, maintain, repair, and replace the Chromium Remedy; (ii) the actions necessary to implement, monitor, maintain, repair, and replace the Chromium Remedy; (iii) the actions necessary to install any development permissible under paragraphs 60(j) and 60(k); and (iv) the conservation restriction imposed pursuant to paragraph 60(b). Jersey City shall also take all steps necessary or appropriate to notify the New Jersey Green Acres Program that such portions of the AOC 1 Open Space Area have been added to its ROSI, such that those portions of the AOC 1 Open Space Area shall thereafter be subject to all procedural and regulatory requirements applicable under the Green Acres Program, including prohibitions against diversion.

(g) **Eminent Domain.** If all or part of the AOC 1 Open Space Area is taken in exercise of the power of eminent domain, or acquired by purchase in lieu of condemnation, by any public, corporate, or other authority so as to terminate, abrogate, or limit the restrictions created by this Consent Decree or the conservation restriction imposed pursuant to paragraph 60(b), in whole or in part, any Party may take appropriate actions to challenge such taking if there is a reasonable legal basis for doing so. In the event that the Parties are unable to prevent a taking notwithstanding their reasonable and appropriate efforts, any Party may take appropriate actions to recover the full value of the interests in the AOC 1 Open Space Area subject to the taking or in lieu purchase, and all direct and incidental damages, costs, and fees occasioned thereby.

(h) **Environmental Covenant.** In the event that New Jersey enacts the Uniform Environmental Covenants Act or its substantial equivalent, the Parties shall address the issue of whether an environmental covenant shall be established for the AOC 1 Open Space Area under the statute. If the Parties are unable to reach agreement on establishment of an environmental

covenant, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. The Special Master shall recommend adoption of an environmental covenant if it would provide substantial additional protection for the AOC 1 Open Space Area without unreasonably harming the interests of any Party. Any Party shall have the right to seek review by the Court of the Special Master's recommendation or consideration by the Court of the dispute in the event that the Special Master's appointment has expired.

(i) **Future Protections.** Any Party shall have the right to propose consideration of additional or substitute protections for the AOC 1 Open Space Area. If the Parties are unable to reach agreement with regard to the proposal, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. The Special Master shall recommend adoption of additional or substitute protections for the AOC 1 Open Space Area if they would provide substantial additional protection for the AOC 1 Open Space Area without unreasonably harming the interests of any Party. Any Party shall have the right to seek review by the Court of the Special Master's recommendation or consideration by the Court of the dispute in the event that the Special Master's appointment has expired.

(j) **Prohibited Development in AOC 1 Open Space Area.** Only development satisfying the requirements of this paragraph and paragraph 60(k) shall be permitted in the AOC 1 Open Space Area. All other development in the AOC 1 Open Space Area shall be prohibited.

(i) Honeywell shall establish Open Space Design Standards that shall govern all development in the AOC 1 Open Space Area regardless of when the construction or installation of permissible development occurs. The Open Space Design Standards shall satisfy each of the requirements set forth in paragraph 60(j)(v) and shall set forth the requirements for development that are necessary for the protection of the integrity of the Chromium Remedy.

(ii) The Initial Development in the AOC 1 Open Space Area shall be the

development undertaken following the completion of the Chromium Remedy in the AOC 1 Open Space Area. The Initial Development may occur in one or more phases. Honeywell and Bayfront Redevelopment LLC shall prepare a Development Plan before the initiation of each phase of the Initial Development. The Initial Development Period for each phase shall consist of the period covered by the Initial Development, plus a period of 10 years following the submission of the as-built documentation for the phase pursuant to paragraph 60(j)(viii).

(iii) The Special Master shall have jurisdiction to review the Open Space Design Standards and the Development Plan(s) solely for the purpose of ensuring that any development undertaken during the Initial Development Period is consistent with this Consent Decree and with protection of the integrity of the Chromium Remedy. The Special Master's jurisdiction with regard to development in the AOC 1 Open Space Area shall run through the Initial Development Period for each phase.

(iv) Honeywell shall ensure that the requirements of this paragraph and paragraph 60(k) are satisfied with regard to any development undertaken within the Initial Development Period. Honeywell shall also ensure that any development undertaken within the Initial Development Period is designed and installed in a manner consistent with this Consent Decree and with protection of the integrity of the Chromium Remedy.

(v) Any development undertaken in the AOC 1 Open Space Area, regardless of when undertaken, shall satisfy each of the following requirements:

(1) It shall not jeopardize the integrity of the Chromium Remedy;

(2) It shall be limited to the types of development permitted under paragraph 60(k);

(3) It shall be consistent with this Consent Decree, including the conservation restriction imposed pursuant to paragraph 60(b), and the Redevelopment Plan;

however, in the event of any conflict or inconsistency between this Decree and the Redevelopment Plan, this Decree shall govern;

(4) In total, at least 75% of the AOC 1 Open Space Area, exclusive of the acreage used for roads and the pedestrian thoroughfare, shall be comprised of landscaping, as defined by paragraph 60(k)(xi);

(5) The portion of the Open Space Design Standards necessary for protection of the Chromium Remedy as related to all roads, the pedestrian thoroughfare and associated utility corridors as well as the general location of such items shall be included in the 100% Design of the Chromium Remedy;

(6) If the lowest elevation for the bedding for any utility line, including irrigation or sprinkler lines, is two feet from the top of the warning layer of the cap, the utility line shall be placed in a utility corridor;

(7) In any event, there shall be two feet of soil or more between the warning layer of the cap and the lowest elevation of the bedding for any irrigation or sprinkler lines; and

(8) No permanent concession facilities shall be permitted.

(vi) Honeywell shall submit the Open Space Design Standards and the Development Plan(s) for any development undertaken during the Initial Development Period pursuant to the requirements of paragraph 72(c), except that such documents need not be submitted to NJDEP. Following Honeywell's submission of such documents, the procedures of paragraphs 72(d) and 72(e) shall apply, except that the Special Master need not provide notice to NJDEP.

(vii) During the Initial Development Period, any development in the AOC 1 Open Space Area shall require the preparation and submission of a Development Plan pursuant

to paragraph 60(j)(vi) and such Development Plan shall be subject to review by the Special Master pursuant to paragraph 60(j)(iii).

(viii) Upon completion of each phase of the Initial Development, Honeywell shall provide as-built documentation for the Initial Development to the Special Master, Riverkeeper, and the Jersey City Entities. Upon completion of any further development during the Initial Development Period for the phase, Honeywell shall also provide as-built documentation to the Special Master, Riverkeeper, and the Jersey City Entities for the additional development. Such additional as-built documentation for a phase shall not affect the running of the Initial Development Period for the phase.

(ix) During the Initial Development Period, replacement in-kind of development features or facilities included in the Initial Development or minor modifications to the development features or facilities included in the Initial Development shall not require the preparation of a Development Plan or be subject to review by the Special Master, provided that such replacement or modification satisfies the requirements of the Open Space Design Standards, the applicable Development Plan, and paragraphs 60(j)(v) and 60(j)(x)(3)(notice requirement).

(x) After the Initial Development Period, all development is prohibited unless one of the following conditions is met:

(1) Jersey City satisfies the conditions set forth in paragraph 60(a)(iv)(2);

(2) The development is a replacement in-kind and such replacement is made in conformance with the specifications of the Open Space Design Standards, the applicable Development Plan, and paragraph 60(j)(v); or

(3) The development meets the requirements of paragraphs 60(j)(v) and 60(j)(xi), and Jersey City provides notice of its intention to alter or add to the

development undertaken in the Initial Development Period. Such notice shall be provided in writing to Honeywell, Riverkeeper, and the holders of the conservation restriction established pursuant to paragraph 60(b) at least 30 days prior to Jersey City's alteration or addition to development undertaken in the Initial Development Period. Honeywell, Riverkeeper, or any holder of the conservation restriction shall have the right to move the Court to prohibit such alteration or addition.

(xi) If any of the development features or facilities that Jersey City seeks to add pursuant to paragraph 60(j)(x) require utilities that would require utility corridors other than the utility corridors installed during the Initial Development Period, Jersey City shall obtain approval from the Court before installing such new utility corridors.

(xii) Jersey City shall provide Honeywell, Riverkeeper, and the holders of the conservation restriction established pursuant to paragraph 60(b) with an annual report that describes any alterations or additions, including those activities under paragraph 60(j)(x)(2), to the development undertaken during the Initial Development Period.

(xiii) All development features or facilities, whether included in the Initial Development or added subsequent thereto, are subject to demolition and/or removal to the extent necessary to maintain, replace, or repair the Chromium Remedy.

(k) **Permissible Development in the AOC 1 Open Space Area.** The Initial Development or any subsequent addition or alteration thereto may include any or all of the following types of development features or facilities, provided that such development features or facilities satisfy the conditions set forth in paragraph 60(j)(v):

(i) Roads and the pedestrian thoroughfare -- both crossing and running along the AOC 1 Open Space Area, but no more extensive than provided for in the diagram on page 39 of the Redevelopment Plan;

(ii) Curbing and fences;

(iii) Sidewalks, paths, walkways, and nature trails;

(iv) Utilities and utility corridors, lighting, and restrooms;

(v) Irrigation or sprinkler components or systems;

(vi) Water features;

(vii) Above-ground storm water cisterns;

(viii) Signs, including the signs or display required by paragraph 60(l);

(ix) Benches, trash receptacles, and bicycle racks;

(x) Recreational facilities, such as playground equipment, bocce ball courts, tennis courts, basketball courts, and athletic fields; and

(xi) Landscaping, including natural grasses, small trees, shrubbery, flowers, and potted plants, provided that such landscaping and the anticipated root structure of each landscaping component do not and will not jeopardize the integrity of the Chromium Remedy. Any portion of an athletic field that is covered in natural grass shall be considered landscaping for purposes of the percentage set forth in paragraph 60(j)(v)(4).

(l) **Signs or Displays.** Honeywell shall develop a permanent plan for informing visitors to the AOC 1 Open Space Area of the history of the chromium production, contamination, and its remediation. Such plan shall provide for appropriate signs or displays that communicate this information. Such plan shall be subject to review and comment by the Parties and approval by the Special Master.

61. **Honeywell's Ongoing Responsibility.** Honeywell shall be responsible for implementing, monitoring, maintaining, repairing and replacing the Chromium Remedy in perpetuity. Honeywell shall satisfy this responsibility through establishment and implementation of a Long-Term Monitoring Plan. In the event that Honeywell ceases to exist without a

successor-in-interest or its obligations under this Consent Decree are stayed or limited due to a bankruptcy petition, the Court shall appoint an independent third-party fiduciary who shall be responsible for implementing, monitoring, maintaining, repairing and replacing the Chromium Remedy pursuant to the requirements of this Consent Decree and the Long-Term Monitoring Plan, unless Jersey City volunteers to assume these responsibilities for the Chromium Remedy.

62. **Long-Term Monitoring Plan.** In consultation with the Parties, and subject to approval by the Special Master and NJDEP, Honeywell shall develop a Long-Term Monitoring Plan to ensure the ongoing effectiveness of the Chromium Remedy to meet the objectives set forth in paragraphs 56, 58, and 63. The Long-Term Monitoring Plan shall be consistent with the applicable EPA policies and guidance, including, among others, EPA's Comprehensive Five Year Review Guidance (2001) (or any subsequent revision) and with NJDEP's Technical Requirements for Site Remediation (or any subsequent revision).

63. **Long-Term Monitoring Plan Objectives.** Honeywell shall design the Long-Term Monitoring Plan to satisfy each of the following objectives:

(a) Provide monitoring to ensure that the integrity and effectiveness of the Chromium Remedy are maintained; and

(b) Provide monitoring to ensure that the restrictions of the institutional controls are being satisfied, including the prohibition on development in the AOC 1 Open Space Area.

64. **Monitoring and Remediation Under the Long-Term Monitoring Plan.** The Long-Term Monitoring Plan shall include the monitoring and remediation activities set forth in this paragraph and other monitoring and remediation activities, if necessary, to meet the objectives of paragraph 63. Honeywell shall provide Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP with annual reports on activities conducted under the Long-Term Monitoring Plan.

(a) **Monitoring Activities in the Long-Term Monitoring Plan.** Honeywell shall undertake the following monitoring activities at intervals to be specified in the Long-Term Monitoring Plan, but no less frequently than set forth below, and, if the monitoring shows it is necessary, Honeywell shall also undertake the remediation activities as set forth below:

(i) Quarterly visual inspection monitoring of the AOC 1 Open Space Area to ensure that it is not being put to any use that is inconsistent with paragraphs 60(j) and 60(k) or any use that may compromise the integrity of the Chromium Remedy. The Long-Term Monitoring Plan shall include an inventory of the prohibited and permissible uses pursuant to paragraph 60 and a corresponding checklist to be used by the individuals conducting the monitoring. If Honeywell determines that the AOC 1 Open Space Area is being used in a manner inconsistent with the protections or the integrity and effectiveness of the Chromium Remedy, Honeywell shall act as soon as possible to cause such use to cease and, if there has been damage to the Chromium Remedy, to repair or replace it to original specifications or to a level of protection equivalent to the original Chromium Remedy;

(ii) Quarterly visual inspection monitoring of the AOC 1 Open Space Area grade and slope to identify whether erosion has occurred or is occurring. Honeywell shall remediate any significant erosion.

(iii) Quarterly visual inspection monitoring to determine whether noticeable differential settlement or subsidence has occurred or is occurring in the AOC 1 Open Space Area such that the integrity of the Chromium Remedy may be materially impaired. If evidence of differential settlement or subsidence is found, Honeywell shall propose further investigative measures. Honeywell shall remediate any differential settlement or subsidence that is beyond the degree of differential settlement/subsidence allowed for in the 100% Design

and repair the cap and/or the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(iv) A baseline topographic survey at the completion of the Chromium Remedy and three additional surveys conducted at five-year intervals beginning five years after the conduct of the baseline survey. The topographic survey shall be of sufficient precision and accuracy to present the results as one-foot contours;

(v) Quarterly visual inspection monitoring to determine whether the Chromium Remedy in the AOC 1 Open Space Area has been disturbed. Any evidence of the distinctive warning layer materials or any other cap materials as described in paragraph 56(a) at the surface is an indication that the cap has been disturbed. In such an event, Honeywell shall propose further investigative measures to evaluate whether the integrity of the cap has been compromised. In the event that the investigative measures show that the cap integrity has been compromised, Honeywell shall repair or replace the cap and the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(vi) Quarterly visual inspection monitoring to ensure that burrowing animals are not materially impairing the integrity of the Chromium Remedy. If evidence of burrowing animals is found, Honeywell shall follow humane removal procedures and repair or replace the cap and the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(vii) Quarterly visual inspection monitoring of the vegetative cover in the AOC 1 Open Space Area to ensure that vegetative cover is in conformance with the landscaping provisions of the 100% Design and the Redevelopment Plan and will not materially impair the integrity of the Chromium Remedy. Maintenance of the vegetative cover shall include, at a

minimum, mowing to ensure that tree species cannot become established and removal of any other vegetation with the potential to damage the Chromium Remedy;

(viii) Quarterly groundwater monitoring to ensure that groundwater levels are maintained in accordance with the requirement to maintain an outward gradient from Study Area 7 and in accordance with the water level control plan developed pursuant to paragraph 58(e);

(ix) Monitoring of vented gases and the gas venting system to ensure proper operation of the system, to evaluate any degradation of the system, to assess the need for treatment of vented gases, either initial, subsequent, or further depending on whether treatment has been previously provided, and to detect any condition that might endanger public health or safety. Such monitoring shall be conducted on a monthly basis for at least one year and, if the readings are stable, such monitoring may be conducted thereafter on a quarterly basis; and

(x) Any additional monitoring as required by specific details added in the design phase of the AOC 1 Open Space Area.

(b) **Procedures for Proposing Changes to the Long-Term Monitoring Plan.** Any Party may, from time to time, propose changes to the scope of the monitoring activities under the Long-Term Monitoring Plan. If the Parties agree, the Long-Monitoring Plan shall be so changed subject to approval by NJDEP and by the Special Master, if his appointment has not terminated, or otherwise, by the Court. If the Parties are unable to reach agreement over alterations to the monitoring and the Special Master's appointment has not terminated under this Consent Decree, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation. In the event that the dispute arises after the Special Master's appointment has terminated, any Party may file a motion seeking a resolution of the dispute by

the Court.

(c) **Contingency Plan.** As part of the Long-Term Monitoring Plan, Honeywell shall develop a contingency plan to ensure the integrity of the remediation in the event of any planned penetration of the cap or otherwise planned activity that compromises the cap or any unplanned event or accident that penetrates the cap or otherwise compromises the integrity of the Chromium Remedy. The contingency plan shall include, at a minimum, an annually updated plan to notify the relevant persons, including the Special Master, NJDEP, and the Parties, of (i) the event penetrating the cap, compromising the cap, or compromising the integrity of the Chromium Remedy; (ii) the general steps to be taken to identify the extent of the problem; and (iii) the standards for remedying the problem.

(d) **Routine Maintenance.** The title owner of the AOC 1 Open Space Area shall conduct maintenance of the AOC 1 Open Space Area features or facilities that are permissible under paragraphs 60(j) and 60(k). The maintenance workers shall be trained in maintenance procedures that do not jeopardize the integrity of the Chromium Remedy. The training shall include the identification and reporting of any uses or features that are not permissible in the AOC 1 Open Space Area or that may jeopardize the integrity of the Chromium Remedy. Honeywell shall provide all training materials. The title owner of AOC 1 Open Space Area shall annually provide to the other Parties and the Special Master a report describing the training which has been provided to its maintenance workers. The title owner of the AOC 1 Open Space Area shall also provide to the Parties and the Special Master notice of any violations of the restrictions relating to the AOC 1 Open Space Area identified by its workers during routine maintenance.

(e) **Recordkeeping.** Honeywell shall maintain written logs or other records of those monitoring and remediation activities undertaken pursuant to the Long-Term Monitoring

Plan. Such logs shall be provided to Riverkeeper and the Jersey City Entities on a quarterly basis.

65. **Monitoring and Reporting to Riverkeeper and Jersey City Entities.** Riverkeeper and Jersey City Entities shall be provided with all documents submitted to NJDEP and/or the Special Master with respect to the Chromium Remedy, including the documents identified in paragraph 72(c).

66. **Notice to Stakeholders.** All residents, regardless of whether they are owners or lessees, and all commercial tenants on Study Areas 6 and 7 are hereby deemed stakeholders. Honeywell shall ensure that all stakeholders shall be provided at the time of their purchase or lease with notice of the contamination, the remedial actions that have been undertaken or are planned, and the importance of reporting activities that may appear to jeopardize the integrity of the engineering controls. Notice shall be accomplished in the following manner:

(a) Bold or otherwise conspicuous language on the first page of the deed provided to all purchasers in the Residential Area;

(b) A summary notice of the Chromium Remedy which:

(i) Has been subject to review and comment by the Parties and approval by the Special Master; and

(ii) Provides a reference to public websites and libraries and/or the future equivalents thereof, where the following can be found:

(1) Zoning and other Jersey City maps showing the AOC 1 Open Space Area; and

(2) Documents describing the contamination and the remediation, including:

(a) This Consent Decree;

(b) The Remedial Investigation Report and the Final Remedial Action Report,

(c) The annual reports on long-term monitoring and maintenance and repair activities as required by paragraph 64 and annual reports on changes to the Initial Development as required by paragraph 60(j)(xii); and

(d) The Long-Term Monitoring Plan.

(c) The provision of the maps and documents referred to in paragraph 66(b)(ii) to the public via websites and libraries and/or the future equivalents thereof; and

(d) Notices to lessees and commercial tenants in all lease documents.

67. **Annual Letter to Riverkeeper and Jersey City Entities on Notice to Stakeholders.** Each year beginning one year after the issuance of the first notice in a deed or lease pursuant to paragraph 66, Honeywell shall provide a letter to the Riverkeeper and the Jersey City Entities documenting its compliance with paragraph 66.

68. **Future Notice to Stakeholders.** Honeywell shall ensure that all stakeholders are provided with notice, at least annually, of long-term monitoring activities and any additional remediation activities undertaken with respect to the Chromium Remedy. Such notice shall be accomplished by notices on websites or future equivalents thereof, including Jersey City websites, any websites created to provide information about the Chromium Remediation or redevelopment of the Redevelopment Area, and one or more of the following:

(a) Any community message board or other similar site used and/or maintained by stakeholders or the manager(s) of the Redevelopment Area;

(b) Mailings to all stakeholders; and

(c) Posters and flyers throughout the Redevelopment Area.

69. **Stakeholder Enforcement.** Any stakeholder shall have the right to enforce the

remedial obligations of this Consent Decree in the Court, including post-implementation monitoring and maintenance obligations, and the terms of any deed notice or use restriction.

C. Oversight and Enforcement by the Special Master and NJDEP

70. **Federal Court Jurisdiction.** The Court shall retain jurisdiction for the purpose of overseeing and enforcing this Consent Decree and to review any issue or dispute which is not resolved through the oversight process described in Article III.C.

71. **Appointment and Jurisdiction of the Special Master.** The Chromium Remedy provided for in this Consent Decree is hereby referred to a Special Master pursuant to Rule 53 of the Federal Rules of Civil Procedure. The Special Master is appointed in the Consolidated Litigation for the purpose of overseeing and enforcing the Chromium Remedy, the first five years of long-term monitoring of the Chromium Remedy, financial assurances for the Chromium Remedy, and the Initial Development Period for each phase of development in the AOC 1 Open Space Area. The Special Master is also appointed in the Consolidated Litigation for the limited purpose of ensuring that the scheduling and implementation of the Historic Fill Remedy, the site preparation activities, and the site redevelopment activities described in the Jersey City/Honeywell Consent Order, Articles II.B, III, and IV, do not undermine the integrity of, unreasonably interfere with, or unnecessarily delay the effectuation of the Chromium Remedy, the Study Area 7 remedies, and other remedies within his jurisdiction as of the date of entry of this Consent Decree. The Special Master shall have jurisdiction over all matters for which he is appointed.

72. **Oversight of the Chromium Remedy.**

(a) **NJDEP Authority.** NJDEP shall retain its full statutory and regulatory authority with respect to the Study Area 6 North site, including (i) permitting authority; (ii) authority to review and approve the Remedial Action Work Plan, 100% Design, and final

Remedial Action Report for the Chromium Remedy; and (iii) authority to issue a no further action letter.

(b) **Special Master Responsibilities.** The Special Master shall have the following responsibilities:

(i) Ensuring that Honeywell's implementation of the Chromium Remedy satisfies the requirements of this Consent Decree;

(ii) Ensuring that Honeywell's implementation of the Chromium Remedy conforms with federal, state, and local permit requirements;

(iii) Establishing a reasonable schedule for the implementation of the Chromium Remedy and monitoring conformance with it;

(iv) Reviewing monthly progress reports and conducting periodic meetings with the Parties to review the progress of the implementation of the Chromium Remedy. NJDEP shall be invited, but not required, to participate in these meetings and the decision as to whether to participate shall be left to NJDEP's sole discretion;

(v) Submitting quarterly progress reports to the Court;

(vi) Overseeing the financial assurances established pursuant to paragraphs 77 through 86, and, until the expiration of his term pursuant to paragraph 76, overseeing the financial assurances established pursuant to paragraphs 87 through 98;

(vii) Coordinating review of the documents as provided in paragraphs 72(c) through 72(f);

(viii) Overseeing all development undertaken in the AOC 1 Open Space Area during the Initial Development Period pursuant to paragraph 60(j)(iii); and

(ix) To the extent that, in matters within the jurisdiction of the Special Master as set forth herein, a dispute arises between the Parties with respect to implementation of the Chromium Remedy, issuing a recommendation to the Court with respect to the dispute.

(c) **Submission of Documents by Honeywell.** Honeywell shall submit the following documents to Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP:

(i) An overall schedule with milestones for the design and implementation of the remedy ("Schedule");

(ii) Design drawings and specifications at the 50% level;

(iii) Design drawings and specifications at the 100% level (after selection of the contractor) (hereafter "100% Design");

(iv) The data validation plan, including quality control and quality assurance protocols;

(v) The site-wide master health and safety plan;

(vi) The Long-Term Monitoring Plan;

(vii) The final Remedial Action Report or final construction report (including as-built drawings and such other reports as may be prepared of the remedy as implemented);

(viii) A report reviewing measured groundwater levels for the groundwater remedy;

(ix) Documents required during the Initial Development Period pursuant to paragraphs 60(j)(vi), 60(j)(vii), and 60(j)(viii) ; and

(x) Other post-implementation monitoring reports as required by the Long-Term Monitoring Plan.

(d) **Comment on Submitted Documents.** For each of the documents submitted by Honeywell pursuant to paragraph 72(c), the Special Master shall establish a schedule for the submission of comments and responses to comments. For each of the documents submitted, Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP shall have the right to submit comments to Honeywell. Honeywell shall address all received comments and submit a revised document. The revised document shall be submitted by Honeywell to Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP. The revised document shall be subject to review and approval pursuant to paragraph 72(e).

(e) **Review and Approval of the Submitted/Revised Document**

(i) **Scope of Review.** All documents submitted by Honeywell, pursuant to paragraph 72(c) and 72(d), shall be subject to review and approval by the Special Master in accordance with the following procedure. All such documents, except the Schedule and the 100% Design, shall be subject to the review and approval process and shall not require an order of the Court. The Schedule and 100% Design documents shall be subject to the review and approval process, but shall also require an order of the Court as provided in paragraph 72(f). A document shall be approved if the document (1) complies with this Consent Decree; (2) complies with the Remedial Action Work Plan for the Chromium Remedy; and (3) complies with the Schedule and 100% Design.

(ii) **Procedure.** Prior to making a decision on a document, the Special Master shall notify NJDEP of his intention to rule on the document or make a recommendation to the Court on the document. Such notice shall notify NJDEP that the Special Master will consider any comments NJDEP wishes to submit on the document if such comments are submitted within 30 days of NJDEP's receipt of the notice. NJDEP shall in its sole discretion determine whether to submit comments to the Special Master.

(iii) **Court Review.** If any Party objects to the Special Master's recommendation to the Court or approval of any document pursuant to this paragraph, that Party may seek further relief from the Court with respect to the document.

(f) **Schedule and 100% Design Documents.** As to the Schedule and the 100% Design documents, Honeywell shall have the responsibility, within 30 days of the Special Master's approval of each document, of (i) moving for entry of an order by the Court approving the document as approved by the Special Master; or (ii) filing objections with the Court to the Special Master's approval (and any recommendations contained therein) and moving for entry of the Schedule or 100% Design (including any such recommendations of the Special Master to which Honeywell agrees). Riverkeeper and the Jersey City Entities shall have the right in these proceedings to raise any objections they might have to the Schedule or 100% Design as approved by the Special Master or to the submission by Honeywell to the Court. NJDEP shall receive notice of any motion filed with respect to the Schedule or the 100% Design.

(g) **Flexibility in 50% and 100% Design Documents**. The Parties recognize that work conducted to implement the Chromium Remedy may be conducted by Honeywell contractors and that Honeywell may establish performance-based criteria or specifications for its contractors. As a result, the Parties recognize that the 50% Design and 100% Design documents for the Chromium Remedy may include performance-based standards, criteria, and specifications. These documents shall be sufficiently prescriptive to enable the Parties and the Special Master to evaluate their conformance with the Remedial Action Work Plan and this Consent Decree. The Parties also recognize that the 100% Design will be completed after Honeywell has selected a contractor. The Parties further recognize that completing the 100% Design after the selection of the contractor(s) shall not make the 100% Design subject to any less

stringent or more deferential review. Honeywell's commitment to the contractor(s) shall not be cause to limit review by the Parties and the Special Master.

(h) **Changes to the Schedule**. The Parties recognize that changes to individual line items in the Schedule will occur. To the extent that (i) the Parties and the Special Master agree that such changes do not have a material impact on satisfaction of the Schedule milestones established for items set forth in paragraph 54(b); and (ii) such changes do not require modifications to any necessary permits or authorizations for the Chromium Remedy, such changes may be made upon agreement of the Parties and the Special Master without further order of the Court.

73. **Retention of Professionals.** The Special Master may retain the services of professionals and/or other technical personnel, as reasonably needed, to fulfill his obligations under this Consent Decree, and for which he will be reimbursed pursuant to paragraph 75.

74. **Insurance for the Special Master.** The Special Master shall obtain insurance coverage relating to the performance of the Special Master's duties and responsibilities under this Consent Decree. Such coverage shall be similar to the Special Master's existing coverage in *ICO v. Honeywell*, procured pursuant to the Court's November 11, 2005 Stipulation and Order Regarding Special Master's Application to Procure Insurance Coverage, and as extended to the Consolidated Litigation by the Consent Order on Sediment Remediation and Financial Assurances ("Sediment Consent Order"). The insurance coverage shall be sufficiently extended in duration and scope to cover all additional duties and responsibilities as set forth hereunder. Honeywell shall pay the premiums and other administrative costs of the Special Master's insurance.

75. **Reimbursement of Special Master Fees and Expenses.** The Special Master shall submit fee applications to the Court for approval of reasonable fees and expenses incurred in the

oversight of matters referred to him pursuant to this Consent Decree. Any Party may raise with the Court objections to such fee applications. Upon approval of a fee application by the Court, the reimbursement of the Special Master's fees and expenses shall be made from the escrow fund previously established by Honeywell for the purpose of paying the Special Master's fees and expenses in *ICO v. Honeywell* pursuant to this Court's September 15, 2003 Order Setting Financial Assurances and extended to the Consolidated Litigation by the Sediment Consent Order.

76. **Expiration of Special Master's Appointment.** The Special Master's appointment under this Consent Decree shall expire after Honeywell has completed the first five years of long-term monitoring of the Chromium Remedy and the Initial Development Period for each phase of development has been concluded as provided in paragraph 60(j)(ii). However, solely to the extent that the Special Master is still supervising other portions of the Consolidated Litigation or *ICO v. Honeywell* after Honeywell has completed the first five years of long-term monitoring of the Chromium Remedy or the Initial Development Period for each phase of development as provided in paragraph 60(j)(ii), whichever is later, the Special Master shall continue to have jurisdiction under this Consent Decree until he has completed his specifically enumerated responsibilities under the Final Judgment in *ICO v. Honeywell*, the Sediment Consent Order, the Deep Groundwater Consent Order, and any other future orders, decrees, or judgments in *ICO v. Honeywell* and the Consolidated Litigation. Enumerated responsibilities under any order, decree, or judgment shall include only those tasks specifically assigned to the Special Master in the order, decree, or judgment. Enumerated responsibilities shall not include any continued jurisdiction exercised over long-term monitoring beyond the initial period specified in the order, decree, or judgment. For example, the Special Master has jurisdiction over the first five years of long-term monitoring under the Sediment Consent Order. Oversight during these five years shall

be an enumerated responsibility, but any continued oversight of long-term monitoring, pursuant to the extension of the Special Master's jurisdiction beyond the first five years, as provided in paragraph 60 of the Sediment Consent Order, shall not be an enumerated responsibility. Such extensions of jurisdiction shall be effective only so long as specific enumerated responsibilities in any order, decree, or judgment have not been fulfilled.

D. Initial Financial Assurances

77. **Chromium Remedy Letter of Credit.** Honeywell shall obtain a one-year, irrevocable letter of credit (the "Chromium Remedy Letter of Credit") to be automatically renewed annually in an amount equal to the "Remedial Costs Subject to Financial Assurance."

(a) Remedial Costs Subject to Financial Assurance shall mean:

(i) The costs of implementing the Chromium Remedy;

(ii) The costs of monitoring and maintenance activities, as required by the Long-Term Monitoring Plan, for five years; and

(iii) A contingency of 25% with respect to those costs listed in paragraphs 77(a)(i) and 77(a)(ii).

(b) The Chromium Remedy Letter of Credit shall be issued by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution, provided that in either case, the financial institution shall be acceptable to the Special Master.

78. **Procedures for Review of the Proposed Chromium Remedy Letter of Credit.** No later than 60 days after entry by the Court of this Consent Decree, Honeywell shall submit to Riverkeeper, Jersey City Entities, and the Special Master for their review the proposed (a) amount of the Chromium Remedy Letter of Credit; (b) form of the Chromium Remedy Letter of Credit; and (c) name of the institution that will issue the Chromium Remedy Letter of Credit. If

Riverkeeper or the Jersey City Entities do not agree to the terms of the Chromium Remedy Letter of Credit, the Parties shall meet and confer in an effort to resolve their differences. If the Parties are unable to reach agreement over the terms of the Chromium Remedy Letter of Credit, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation regarding the terms of the Chromium Remedy Letter of Credit.

79. **Automatic Renewal.** The Chromium Remedy Letter of Credit shall be automatically renewed annually unless (a) no later than 120 days prior to the anniversary of the Chromium Remedy Letter of Credit issue date, the issuer provides notice of nonrenewal or (b) Honeywell seeks a reduction in the Chromium Remedy Letter of Credit, pursuant to paragraph 80, to correspond to the reduced estimate of Remedial Costs Subject to Financial Assurances. If the issuer provides notice of nonrenewal, Honeywell shall obtain a replacement irrevocable Chromium Remedy Letter of Credit at least 95 days prior to the expiration date of the existing Chromium Remedy Letter of Credit. If Honeywell is not otherwise in default as provided in Article III.D, the Special Master shall direct the cancellation of the prior Chromium Remedy Letter of Credit within 91 days after delivery to the Special Master of any replacement of a Chromium Remedy Letter of Credit. In the event that the Special Master is entitled to draw upon a Chromium Remedy Letter of Credit because there are two Chromium Remedy Letters of Credit currently in place, the Special Master shall not draw an aggregate amount in excess of the highest valued Chromium Remedy Letter of Credit. Upon Honeywell's request, the Special Master may, at his option, decide not to require overlapping letters of credit in any year based on Honeywell's financial strength in that year, provided that Honeywell has submitted all necessary information so that the Special Master can make his determination at least 150 days prior to the expiration of the Chromium Remedy Letter of Credit.

80. **Annual Right to Seek Reduction in Amount of Chromium Remedy Letter of Credit.** Honeywell shall have the right annually to seek a reduction in the Chromium Remedy Letter of Credit. At the time of seeking such reduction, Honeywell shall submit to the Riverkeeper, the Jersey City Entities, and the Special Master an estimate of the remaining Remedial Costs Subject to Financial Assurance, including the contingency as described in paragraph 77(a)(iii), and shall seek adjustment of the Chromium Remedy Letter of Credit so that the total estimated amount of remaining Remedial Costs Subject to Financial Assurance are covered by the Chromium Remedy Letter of Credit. However, the adjustment shall not result in reducing the Chromium Remedy Letter of Credit to an amount below the remaining estimated costs under paragraphs 77(a)(i) and 77(a)(ii), plus a contingency of 25% of the remaining estimated costs under paragraphs 77(a)(i) and 77(a)(ii), and shall not result in reducing the Chromium Remedy Letter of Credit to an amount less than $20,000,000 as expressed in 2008 dollars unless long-term financial assurances are in place pursuant to Article III.E. Before making any request to reduce the amount or modify the terms of the Chromium Remedy Letter of Credit, Honeywell shall first confer with the Riverkeeper and the Jersey City Entities in an effort to reach agreement on the modified amount or terms of the Chromium Remedy Letter of Credit. If the Parties are unable to reach agreement over the modified amount or terms of the Chromium Remedy Letter of Credit, the Parties shall submit the dispute to the Special Master, who shall resolve the dispute. Any Party shall have the right to seek review by the Court of the Special Master's decision regarding the modified amount or terms of the Chromium Remedy Letter of Credit. Upon agreement on the amount of the reduction or modified terms of the Chromium Remedy Letter of Credit (or upon order of the Court directing that the Chromium Remedy Letter of Credit be reduced to an identified amount or otherwise modified), Honeywell shall obtain a replacement Chromium Remedy Letter of Credit in such amount and with such

terms. If Honeywell is not otherwise in default as provided in Article III.D and the issuer of the primary Chromium Remedy Letter of Credit has not provided notice of non-renewal, within 30 days after delivery to the Special Master of any replacement of a Chromium Remedy Letter of Credit, the Special Master shall direct the cancellation of the prior Chromium Remedy Letter of Credit.

81. **Bankruptcy Protection.** Neither the Chromium Remedy Letter of Credit nor the proceeds of the Chromium Remedy Letter of Credit shall be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy. The Chromium Remedy Letter of Credit shall contain the language necessary to assure that neither the Chromium Remedy Letter of Credit nor the proceeds of the Chromium Remedy Letter of Credit shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

82. **Exclusive Court Jurisdiction.** The Chromium Remedy Letter of Credit shall recite that the issuer submits to the exclusive jurisdiction of this Court for any and all disputes arising under the Letter of Credit.

83. **Application of New York Law.** The provisions of the Uniform Customs and Practice ("UCP") for Documentary Credits (1993 Revision) International Chamber of Commerce Publication #500 and New York law shall apply to the Chromium Remedy Letter of Credit.

84. **Procedures upon Honeywell's Material Default of Its Obligations.** During the period in which the Special Master has jurisdiction pursuant to paragraph 71, the Chromium Remedy Letter of Credit shall be payable to the Special Master and shall not, prior to its expiration date, be revoked or terminated except consistent with this Consent Decree and with the consent of the Special Master and approval by the Court. The Special Master's ability to draw upon the Chromium Remedy Letter of Credit shall not be limited by any agreement between Honeywell and the issuer. The Special Master may, without further order or notice to

this Court, draw upon the Chromium Remedy Letter of Credit upon the occurrence of default by Honeywell, which shall include:

(a) The failure of Honeywell, in the event that notice is given pursuant to paragraph 79 to deliver a replacement Chromium Remedy Letter of Credit at least 95 days prior to the expiration date of the existing Chromium Remedy Letter of Credit;

(b) The material failure of Honeywell to proceed with diligence and in good faith to carry out the terms of this Consent Decree and the continuance of such a material breach for a period of 15 days after written notice to Honeywell thereof and either (i) Honeywell, in the opinion of the Special Master without further input from the Parties, shall have failed to cure the breach; (ii) during the 15-day period, the Court has not entered an order to prevent the Special Master from drawing on the Chromium Remedy Letter of Credit; or (iii) the Court or the Special Master has not granted Honeywell additional time to cure the breach;

(c) The filing by Honeywell of a petition seeking relief, or the granting of relief, under the Federal Bankruptcy Code or any similar federal or state statute; any assignment for the benefit of creditors made by Honeywell; the involuntary filing of any of the foregoing against Honeywell if involuntary filing has not been dismissed within 60 days; the appointment of a custodian, receiver, liquidator, or trustee, or other similar official for Honeywell or for a substantial part of Honeywell's property; any action by Honeywell to effect any of the foregoing; or if Honeywell becomes insolvent as defined in Section 101(32) of the Federal Bankruptcy Code; or

(d) The dissolution, liquidation, merger, consolidation, or reorganization of Honeywell or the institution of any proceeding to effect any of the foregoing, other than under paragraph 84(c) above, and the failure of Honeywell to provide assurance to the Special Master, within 15 days after written notice, that such an event will not impair Honeywell's ability to

carry out the terms of this Consent Decree.

85. **Placement of Proceeds in Court Registry Investment System Account.** In the event that the Special Master draws upon the Chromium Remedy Letter of Credit due to an event of default, the Special Master shall place the proceeds of the Chromium Remedy Letter of Credit which represent the remaining estimated Chromium Remedy costs under paragraphs 77(a)(i), plus a contingency of 25% of the remaining estimated costs under paragraph 77(a)(i), in an account with the Court Registry Investment System in accordance with Local Civil Rule 67.1 and not expend the proceeds of the Letter of Credit without further order of this Court. The Special Master shall place all additional proceeds of the Chromium Remedy Letter of Credit in a trust fund pursuant to paragraph 90(b)(v).

86. **Termination of Chromium Remedy Letter of Credit.** The Chromium Remedy Letter of Credit may be withdrawn in its entirety upon the satisfaction of all of the following:

(a) The implementation of the Chromium Remedy; and

(b) Establishment of long-term financial assurance pursuant to Article III.E.

E. Long-Term Financial Assurances

87. **Long-Term Financial Assurances.** Honeywell shall fund long-term financial assurances to ensure that the activities set forth in paragraph 89(a) are carried out regardless of whether Honeywell is financially able to carry out such activities in perpetuity.

88. **Resolution of the Amount of Long-Term Financial Assurances.** The Parties have agreed to the following options with regard to how the long-term financial assurances shall be determined:

(a) If the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less,

and agree on the amount of funding needed, Honeywell shall provide long-term financial assurances as required by Article III.E.

(b) If the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less, but disagree on the amount of funding needed, Honeywell shall provide long-term financial assurances as required by Article III.E except that the dispute as to the amount of the long-term financial assurances shall be submitted to the Special Master pursuant to paragraph 91.

(c) If the Parties do not agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less, or the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is greater than $10,000,000, the Parties shall seek resolution by the Court of the long-term financial assurances issues, including (i) the type of financial assurances to be provided; (ii) the scope of the financial assurances; (iii) the amount of the financial assurances; and (iv) the duration of the financial assurances. In the event that the Parties seek resolution by the Court, the provisions of paragraphs 90 through 98 shall not apply.

(d) Within 60 days of the entry of this Consent Decree, the Parties shall determine which option under this paragraph shall apply. In the event that the Parties determine that paragraph 88(c) applies, Riverkeeper shall initiate the proceedings by moving the Court for the imposition of long-term financial assurances.

(e) If the Parties determine that they are proceeding under paragraph 88(c), Honeywell shall maintain the Chromium Remedy Letter of Credit required by paragraph 77 in an amount equal to at least $20,000,000 in 2008 dollars until such time as the long-term financial assurances ordered by the Court are in place. In the event of any default by Honeywell pursuant

to paragraph 84 while the Chromium Remedy Letter of Credit is in place, the provisions of paragraph 90(b)(v) for the placement of the proceeds that exceed the remaining estimated Chromium Remedy costs under paragraph 77(a)(i) plus a contingency of 25% of the remaining estimated costs under paragraph 77(a)(i), shall apply.

89. **Costs Subject to Long-Term Financial Assurances.**

(a) Long-term financial assurances shall provide enough funds to cover the costs of the following activities:

(i) Perpetual monitoring and maintenance of the Chromium Remedy, including installation, operation and monitoring of any above-cap-grade gas collection and/or treatment system as may be necessary, but such system is not part of the 100% Design;

(ii) Perpetual operation of the shallow groundwater pump-and-treat remedy;

(iii) Perpetual repair of the cap;

(iv) Perpetual replacement of the cap on a 75-year replacement interval; and

(v) In the event that Honeywell selects a trust fund pursuant to paragraph 90(a), the perpetual administration of the trust fund.

(b) The costs that shall be subject to financial assurances is an amount that will provide the full payment for each of the activities set forth in paragraphs 89(a)(i) through 89(a)(v) plus a 25% contingency when the activities in paragraphs 89(a)(i) through 89(a)(v) are expected to be performed. The costs subject to financial assurances are forward looking because they state an amount valued at the time the funds are needed. As such, they shall be stated in contemporary time as the present value (calculated on the basis of a discount rate of 4.75%) of

the estimated future costs of the activities specified in paragraphs 89(a)(i) through 89(a)(v), plus a 25% contingency on those costs.

90. **Long-Term Financial Assurance Mechanisms.** Honeywell shall provide long-term financial assurances in the amount of the costs subject to long-term financial assurances in the form of a trust fund, a letter of credit, or some combination of the two. The selected mechanism(s) shall satisfy the following requirements:

(a) **Trust Fund.** In the event that Honeywell selects a trust fund, Honeywell shall create a trust fund such that it can provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary.

(i) The trust fund shall be at arm's length from Honeywell and shall not be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy, dissolution, privatization, or sale. The trust fund agreement shall contain the language necessary to assure that neither the trust fund nor the earnings of the trust fund shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

(ii) The trust fund shall be managed by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution acceptable to Riverkeeper and the Jersey City Entities or approved by the Court. In the event that the financial institution managing the trust fund declares bankruptcy, the Court shall withdraw the funds and appoint another financial institution meeting the requirements of this paragraph to manage the trust.

(iii) No more frequently than once per year, Honeywell may apply to the Court for an order directing the trust manager to reimburse Honeywell for any costs that it has incurred to carry out the activities set forth in paragraphs 89(a)(i) through 89(a)(iv).

(b) **Long-Term Letter of Credit.** In the event that Honeywell selects a letter of credit, Honeywell shall obtain a one-year irrevocable letter of credit (the "Long-Term Letter of Credit") to be automatically renewed annually in an amount that provides sufficient funds such that a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a), could be created. The Long-Term Letter of Credit-funded trust, plus any trust fund established under paragraph 90(a), shall provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. The amount of any Long-Term Letter of Credit shall therefore be adjusted periodically as the cap replacement interval is approached because, for example, the money needed in the 10th year to fund a trust that can provide for replacement of the cap in the 75th year is much less than the money that would be needed in the 40th year. Such periodic adjustments shall be proposed and approved by the Court in conjunction with the adjustments under paragraph 92.

(i) Neither the Long-Term Letter of Credit nor the proceeds of the Long-Term Letter of Credit shall be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy, dissolution, privatization, or sale. The Long-Term Letter of Credit shall contain the language necessary to assure that neither the Long-Term Letter of Credit nor the proceeds of the Long-Term Letter of Credit shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

(ii) The Long-Term Letter of Credit shall be issued by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution acceptable to Riverkeeper and the Jersey City Entities or approved by the Court. In the event that the financial institution issuing the Long-Term Letter of Credit declares bankruptcy, the Court shall authorize the drawing of funds from the Long-Term Letter of Credit

and shall deposit those funds in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

(iii) The provisions of the Uniform Customs and Practice ("UCP") for Documentary Credits (1993 Revision) International Chamber of Commerce Publication #500 and New York law shall apply to the Long-Term Letter of Credit.

(iv) The Long-Term Letter of Credit shall be automatically renewed annually, unless, no later than 120 days prior to the anniversary of the Long-Term Letter of Credit issue date, the issuer provides notice of non-renewal. If the issuer provides notice of non-renewal, Honeywell shall obtain a replacement irrevocable Long-Term Letter of Credit at least 95 days prior to the expiration date of the existing Long-Term Letter of Credit. If Honeywell is not otherwise in default as provided in this Article, the Court shall direct the cancellation of the prior Long-Term Letter of Credit within 91 days after delivery to the Court of any replacement of a Long-Term Letter of Credit. In the event that the Court is entitled to draw upon a Long-Term Letter of Credit when there are two Letters of Credit currently in place, the Court shall not draw an aggregate amount in excess of the highest valued Long-Term Letter of Credit.

(v) Prior to the expiration of the Special Master's appointment pursuant to paragraph 76, the Long-Term Letter of Credit shall be payable to the Special Master. During the time the Long-Term Letter of Credit is payable to the Special Master, the Special Master may draw on the Long-Term Letter of Credit as provided in paragraph 84. In the event that the Special Master draws upon the Long-Term Letter of Credit due to an event of default, the Special Master shall place the proceeds of the Long-Term Letter of Credit in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a). After the Special Master's appointment expires pursuant to paragraph 76, the Long-Term Letter of Credit shall be payable to the Court and, in the event that the Court draws

on the Long-Term Letter of Credit, the Court shall place the proceeds of the Long-Term Letter of Credit in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

(vi) Whether the Long-Term Letter of Credit is payable to the Special Master or the Court, it shall not, prior to its expiration date, be revoked or terminated by Honeywell except consistent with this Consent Decree and with the approval of the Court. The ability of the Special Master or the Court to draw upon the Long-Term Letter of Credit shall not be limited by any agreement between Honeywell and the issuer.

(vii) In the event that the Long-Term Letter of Credit is drawn upon and invested pursuant to paragraph 90(b)(ii), 90(b)(v) or 95 and Honeywell has also selected a trust fund pursuant to paragraph 90(a), resulting in the existence of two trust funds, the two trust funds shall be managed so as to ensure that the combined amount of the trust funds is sufficient to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary.

(c) **Combination.** Honeywell may use some combination of a trust fund and a letter of credit to achieve the requirements of this paragraph. However, if a combination is used, Honeywell shall ensure that the combined amount of financial assurances is sufficient to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. The trust fund and the letter of credit shall otherwise satisfy all the requirements of paragraphs 90(a) and 90(b).

91. **Procedures for Review of the Proposed Long-Term Financial Assurances.** In the event that the Parties have determined that they are proceeding pursuant to paragraph 88(a) or 88(b), no later than 120 days after the determination under paragraph 88(d), Honeywell shall submit to Riverkeeper, the Jersey City Entities, and the Special Master, for their review (a) the

amount of the proposed long-term financial assurances; (b) the form(s) of the proposed long-term financial assurance mechanisms; and (c) the name(s) of the institution proposed to manage or issue the long-term financial assurances. If Riverkeeper and the Jersey City Entities agree to the terms of the proposed long-term financial assurances, within 60 days of such agreement, Honeywell shall create a trust fund and/or secure a Long-Term Letter of Credit on those terms. If the Parties are unable to reach agreement over the terms of the long-term financial assurances, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation regarding the terms of the financial assurances. In any event, until the long-term financial assurances have been put into place, Honeywell shall maintain the Chromium Remedy Letter of Credit and the requirements of paragraphs 88(e) and 90(b)(v) shall apply to the Chromium Remedy Letter of Credit.

92. **Adjustment of Amount Held in Long-Term Financial Assurances.** Every five years as marked from the establishment of the first long-term financial assurances pursuant to paragraph 90, the Parties shall report to the Court whether the long-term financial assurances are adequately funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. At such time as the Parties report to the Court, any Party may seek an adjustment in the amount of the long-term financial assurances. The Party seeking an adjustment must demonstrate that the long-term financial assurances are under-funded or over-funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. Such demonstration shall reflect the actual costs of implementing the remedy and/or any replacement of the remedy, once such actual costs are available. The demonstration shall also reflect the costs of work completed to date and the actual lifetime of the cap, once the

cap has been replaced or has passed a replacement interval without requiring replacement. The demonstration shall further reflect the actual performance of the fund and its ability to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. Any demonstration shall be forward looking and shall be based upon estimates of what the activities in paragraphs 89(a)(i) through 89(a)(v) are expected to cost at the time they must be performed and the amount of funding projected to be available to undertake such activities at the time they must be performed. If, after reviewing the submission(s) received from the Parties, the Court determines that the long-term financial assurances are under-funded or over-funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary, the Court shall order an adjustment in the amount held in the long-term financial assurances to overcome the shortage or overage. In the event that the Court determines that the long-term financial assurances are under-funded, it shall order Honeywell to increase the amount held in the long-term financial assurances. In the event that the Court determines that any trust fund established pursuant to paragraph 90(a) is over-funded, the Court shall issue an order directing the trust manager to pay the overage to Honeywell. In the event that the Court determines that the Long-Term Letter of Credit is over-funded, the Court shall issue an order permitting Honeywell to reduce the amount covered during the next annual renewal of the Long-Term Letter of Credit pursuant to paragraph 90(b)(iv). Any adjustment to the amount of the Long-Term Letter of Credit pursuant to this paragraph shall be in addition to any adjustment of the amount of the Long-Term Letter of Credit required pursuant to paragraph 90(b).

93. **Exclusive Court Jurisdiction.** The trust fund agreement and/or the Long-Term Letter of Credit shall recite that the trust fund manager and/or issuer of the Long-Term Letter of Credit submit to the exclusive jurisdiction of this Court for any and all disputes arising under the

trust fund or the Long-Term Letter of Credit. The requirements of this paragraph shall apply whether the trust fund is established pursuant to paragraph 90(a), 90(b)(ii), 90(b)(v), or 95.

94. **Procedures upon Honeywell's Material Default of Its Obligations after the Special Master's Appointment Has Expired.** Upon the occurrence of default by Honeywell, after the Special Master's appointment has expired, Riverkeeper or the Jersey City Entities may move the Court on an expedited basis for an order to withdraw funds from the trust fund or to draw on the Long-Term Letter of Credit. Default shall include:

(a) The failure of Honeywell, in the event that notice is given pursuant to paragraph 90(b)(iv) to deliver a replacement Long-Term Letter of Credit at least 95 days prior to the expiration date of the existing Long-Term Letter of Credit;

(b) The material failure of Honeywell to proceed with diligence and in good faith to carry out the terms of this Consent Decree and the continuance of such a material breach for a period of 30 days after written notice by Riverkeeper or the Jersey City Entities to Honeywell of the alleged material failure, unless Honeywell cures the alleged breach within the 30-day notice period or such longer period as the Parties may agree to or the Court may order;

(c) The filing by Honeywell of a petition seeking relief, or the granting of relief, under the Federal Bankruptcy Code or any similar federal or state statute; any assignment for the benefit of creditors made by Honeywell; the involuntary filing of any of the foregoing against Honeywell if the involuntary filing is not dismissed within 60 days; the appointment of a custodian, receiver, liquidator, trustee, or other similar official for Honeywell or for a substantial part of Honeywell's property; any action by Honeywell to effect any of the foregoing; or if Honeywell becomes insolvent as defined in Section 101(32) of the Federal Bankruptcy Code; or

(d) The dissolution, liquidation, merger, consolidation, or reorganization of Honeywell or the institution of any proceeding to effect any of the foregoing, other than under

paragraph 94(c), if Honeywell fails to provide assurance to Riverkeeper, the Jersey City Entities, and the Court, within 15 days after written notice, that such an event will not impair Honeywell's ability to carry out the terms of this Consent Decree.

95. **Drawing on the Long-Term Letter of Credit in the Event of Honeywell's Default.** If the Court grants any motion by Riverkeeper or the Jersey City Entities pursuant to paragraph 94 to draw on the Long-Term Letter of Credit, the sum approved by the Court's order granting the motion shall be paid from the Long-Term Letter of Credit into a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

96. **Use of the Trust Fund in the Event of Honeywell's Default**. In the event of Honeywell's default, the money in the trust fund established pursuant to paragraph 90(a) shall be available to meet the obligations of paragraph 89(a). Riverkeeper and/or the Jersey City Entities shall file motions with the Court seeking orders directing how the money in the trust fund shall be used. The Court shall consider motions on an expedited basis and shall enter appropriate orders. The Court may enter an order allowing for automatic withdrawal of regular expenses without separate motion to the Court by Riverkeeper or the Jersey City Entities.

97. **Use of a Trust Fund Established Pursuant to Paragraph 85, 90(b)(ii), 90(b)(v), or 95.** In the event that a trust fund is established pursuant to paragraph 85, 90(b)(ii), 90(b)(v), or 95, the money in the trust fund shall be available to meet the obligations of paragraph 89(a). Riverkeeper and/or the Jersey City Entities shall file motions with the Court seeking orders directing how the money in the trust fund shall be used. The Court shall consider motions on an expedited basis and shall enter appropriate orders. The Court may enter an order allowing for automatic withdrawal of regular expenses without separate motion to the Court by Riverkeeper or the Jersey City Entities.

98. **Termination of the Long-Term Financial Assurances.** Honeywell's obligations

under Article III.E shall be terminated and the long-term financial assurance mechanisms shall be terminated when the Court finds that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area or on the Site, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive. Upon determining that long-term financial assurances may be terminated, the Court shall order that any Long-Term Letter of Credit may be withdrawn in its entirety and any trust fund may be terminated. In conjunction with its order terminating any trust fund, the Court in its discretion shall designate a recipient(s) of any remaining trust funds.

ARTICLE IV: IMPLEMENTATION SCHEDULE AND TERMINATION

99. **Schedule for Remedy and Site Preparation Implementation Activities.** The Chromium Remedy under Article III and the Historic Fill Remedy under Article II.B of the Jersey City/Honeywell Consent Order and Site Preparation Activities under Article III of the Jersey City/Honeywell Consent Order shall be undertaken by the Parties in accordance with the following anticipated schedule, recognizing that this schedule may be further modified in writing by agreement of the Parties and with the approval of the Court:

(a) By October 1, 2008, the Jersey City Entities and Honeywell shall develop a Site Preparation Plan, pursuant to paragraph 3.2 of the Jersey City/Honeywell Consent Order, for all Site Preparation Activities necessary to undertake the Chromium Remedy;

(b) No later than June 18, 2009, Honeywell shall submit to NJDEP a remedial design document for the Chromium Remedy;

(c) No later than September 1, 2009, Honeywell shall submit all applications for permits and authorizations for the performance of the Chromium Remedy to all appropriate local, state, and federal government entities;

(d) Honeywell shall use its best efforts to complete the Chromium Remedy no later than four years after all appropriate applications and authorizations for the performance of the Chromium Remedy have been obtained;

(e) By May 1, 2008, Honeywell and the Jersey City Entities shall submit a work plan for further Remedial Investigation for AOC 2 to NJDEP; and

(f) By December 1, 2008, Honeywell and the Jersey City Entities shall submit a Remedial Action Selection Report and Remedial Action Workplan for the Historic Fill Remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order. The Workplan shall contain a schedule for implementation of the Historic Fill Remedy.

100. **Termination of this Consent Decree.** This Consent Decree shall terminate upon the withdrawal of any Party as provided for in this paragraph. Any Party may elect to withdraw from this Consent Decree due to the occurrence of one or more of the following events, provided that such Party provides written notice of withdrawal to the other Parties pursuant to paragraph 108:

(a) The Court fails to enter the Jersey City/Honeywell Consent Order or this Consent Decree or either the Jersey City/Honeywell Consent Order or this Consent Decree is determined to be invalid on appeal;

(b) JCRA fails to take those actions required under paragraphs 4.11(a), (b), and (c) of the Jersey City/Honeywell Consent Order within nine months of entry of this Consent Decree; or

(c) JCRA fails to approve a Redevelopment Agreement between Bayfront Redevelopment LLC and JCRA pursuant to paragraph 4.11(e) of the Jersey City/Honeywell Consent Order within 12 months of entry of this Consent Decree.

101. **Procedures for Withdrawal and Termination.** Any Party electing to withdraw pursuant to paragraph 100 and thereby terminate this Consent Decree shall provide written notice of such withdrawal and termination to all other Parties within 30 days of the occurrence giving rise to the decision to withdraw. If any Party objects to termination of the Consent Decree, or believes that the conditions set forth in paragraph 100 have not been met, such objecting Party may move the Court for an expedited hearing on the issue of whether the conditions for termination have been effectuated.

102. **Good-Faith Obligation to Avoid Termination.** The Parties agree that they will each endeavor to fulfill the terms of this Consent Decree, that they will work diligently and in good faith to meet their obligations hereunder, and that they will promptly and timely take all reasonable steps to give effect to this Consent Decree and to avoid termination under paragraph 100.

103. **Effect of Termination.** If this Consent Decree is terminated pursuant to paragraph 100, the Consent Decree shall no longer be binding on the Parties and shall be of no further effect. In the event that this Consent Decree is terminated by one or more Parties pursuant to paragraph 100, each Party to this Consent Decree reserves all of its rights, claims, and defenses (both legal and factual) against the other Parties with respect to the matters at issue in the Consolidated Litigation and each Party remains free to pursue such rights, claims, and defenses.

ARTICLE V: ADDITIONAL PROVISIONS RELATED TO HISTORIC FILL AND SITE PREPARATION AND REDEVELOPMENT

104. **Historic Fill Remedy**. This Consent Decree shall adopt and incorporate the terms of Article II.B of the Jersey City/Honeywell Consent Order with respect to the Historic Fill Remedy. The Historic Fill Remedy shall not be limited to the activities set forth in Article II.B of the Jersey City/Honeywell Consent Order in the event that NJDEP requires a more extensive remedy. The Historic Fill Remedy shall be compatible with the Chromium Remedy such that no

part of the Historic Fill Remedy shall interfere with the installation, maintenance, and monitoring of the Chromium Remedy. In addition, the Historic Fill Remedy for any discharge of non-chromium contaminants to the Hackensack River shall not interfere with the remedies under the Sediment Consent Order, including the source control remedies. In the event that Jersey City conducts the Historic Fill Remedy instead of Honeywell, the terms of this paragraph shall still apply.

105. **Oversight of Historic Fill Remedy**. Paragraph 2.11 of the Jersey City/Honeywell Consent Order shall apply only to the Historic Fill Remedy, not the Chromium Remedy. The Progress Reports provided for in paragraphs 2.12 and 3.7 of the Jersey City/Honeywell Consent Order shall be provided to Riverkeeper and the Special Master at the time they are submitted.

106. **Transfer of Title of Study Areas 6 North and 7 to and from Bayfront Redevelopment LLC**. The transfer of title of Study Area 6 North and Study Area 7 properties to Bayfront Redevelopment LLC pursuant to the Jersey City/Honeywell Consent Order and any subsequent transfers shall not impede Honeywell's obligations to (a) complete the remediation of Study Area 7 and implement the Final Judgment and subsequent orders in *ICO v. Honeywell* or (b) complete the Chromium Remedy and conduct long-term monitoring and fulfill its other obligations set forth in this Consent Decree. Such transfers of Study Areas 6 North and Study Area 7 shall not include a transfer of Honeywell's obligations to implement the Final Judgment and subsequent orders in *ICO v. Honeywell* or a transfer of Honeywell's obligations under this Consent Decree, but shall include a right of access or any other right required by Honeywell to complete the remediation. Any subsequent transfer of Study Area 6 North or Study Area 7 from Bayfront Redevelopment LLC to a redeveloper or other party shall provide all necessary agreements to allow Honeywell all necessary access to Study Area 6 North and Study Area 7 for purposes of completing Honeywell's obligations with respect to Study Area 6 North under this

Consent Decree and completing the Study Area 7 remediation and implementing the Final Judgment and subsequent orders in *ICO v. Honeywell*.

107. **Dispute Resolution Procedures.** The provisions of Article VIII of the Jersey City/Honeywell Consent Order do not apply to any disputes regarding or impacting the Chromium Remedy, which shall be resolved as provided in paragraph 72. The provisions of Article VIII of the Jersey City/Honeywell Consent Order shall apply to disputes between the Jersey City Entities and Honeywell regarding the Historic Fill Remedy and other obligations provided in the Jersey City/Honeywell Consent Order, except to the extent that such disputes may affect the Chromium Remedy. If any such dispute may affect the Chromium Remedy, it shall be resolved as provided in paragraph 72. Honeywell shall provide Riverkeeper with a copy of each notice of any breach provided under paragraph 8.1 of the Jersey City/Honeywell Consent Order within 10 days of Honeywell's receipt or issuance of such notice. Honeywell shall provide Riverkeeper with a copy of any written resolution of a dispute pursuant to paragraph 8.2 within 10 days of the resolution.

ARTICLE XI: NOTICE

108. **Notice.** Any and all notices given in connection with this Consent Decree shall be deemed adequately given only if in writing and addressed to the Party for whom such notices are intended at the addresses set forth in this paragraph. All notices shall be sent by Federal Express or other nationally recognized overnight messenger service or by first-class registered or certified mail, postage prepaid, return receipt requested. A written notice shall be deemed to have been given to the recipient party on the earlier of (a) the date it shall be delivered to the address set forth in this paragraph; (b) the date delivery shall have been refused at the address set forth in this paragraph; or (c) with respect to notices sent by mail, the date as of which the postal service shall have indicated such notice to be undeliverable at the address set forth in this paragraph.

Any and all notices referred to in this Consent Decree, or which any Party desires to give to the other, shall be addressed as follows:

If to Honeywell and/or
Bayfront Redevelopment LLC :

Tom Byrne, Esq.
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-2775

If to Riverkeeper:

Bruce J. Terris
Carolyn Smith Pravlik
Kathleen L. Millian
Terris, Pravlik & Millian, LLP
1121 12th St., N.W.
Washington, DC 20005-4632
(202) 682-2100

With copies to:

John Morris
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-4003

If to Jersey City:

William Matsikoudis
Corporation Counsel
City of Jersey City
280 Grove Street
Jersey City, NJ 07305
(201) 547-4667

If to JCIA:

David L. Isabel
Golub & Isabel, PC
160 Littleton Road
Parsippany, NJ 07054
(973) 968-3377

If to JCMUA:

Sam Della Fera Jr.
Trenk, DiPasquale, Webster,
Della Ferra & Sodono, P.C.
347 Mount Pleasant Ave.
West Orange, NJ 07052
(973) 243-8600

If to JCRA:

Robert Antonichello
Executive Director
30 Montgomery Street
Jersey City, NJ 07302
(201) 547-5810

Any party may change its designated recipients or addresses for notice in this paragraph by providing written notice of such change to all other Parties.

ARTICLE XII: RIVERKEEPER'S ATTORNEYS' FEES

109. **Payment of Past Fees and Expenses.** Within 30 days of the entry of this Consent Decree, Honeywell shall pay Terris, Pravlik & Millian, LLP the sum of $1,513,217.15 which represents the following:

(a) A compromise of the attorneys' fees incurred by Riverkeeper in the litigation of Study Area 6 North portion of *Riverkeeper v. Honeywell* through March 27, 2008; and

(b) $187,862.27 in out-of-pocket expenses representing 50% of the expenses incurred by Riverkeeper in *Riverkeeper v. Honeywell* from the inception of the litigation after deducting the expenses to be paid pursuant to the Sediment Consent Order.

Payment of the sum of $1,513,217.15 shall be in full satisfaction of all obligations, duties, and responsibilities of Honeywell with respect to the $1,556,747.46 in fees and expenses that Riverkeeper claimed with regard to the above described fees and expenses.

110. **Future Fees and Expenses.** Honeywell shall reimburse Riverkeeper's attorneys for reasonable fees and expenses incurred: (a) in negotiating this Consent Decree after March 27, 2008; (b) in the monitoring and enforcement of this Consent Decree; and (c) in participation in the Special Master process established pursuant to this Consent Decree. Honeywell shall also reimburse Riverkeeper for reasonable attorneys' fees and expenses for Riverkeeper's review of and participation in the Long-Term Monitoring Plan and monitoring and enforcement of this Consent Decree following the term of the Special Master. In the event that any dispute arises between the Parties under this Consent Decree that must be resolved by the Court, Riverkeeper shall be entitled to recover its attorneys' fees and expenses for litigation of the dispute to the extent allowed by federal law. Riverkeeper and Honeywell shall use the same informal procedure for attempting to settle fees issues as has been used for post-judgment monitoring fees in *ICO v. Honeywell*. In the event that Riverkeeper and Honeywell are unable to reach a

settlement on fees, Riverkeeper shall apply to the Court for an award of attorneys' fees and expenses. If Honeywell objects to only a portion of the Riverkeeper's statement of attorneys' fees and expenses, Honeywell shall pay the undisputed portion within 60 days of Riverkeeper's submittal of the statement to Honeywell. The Court shall resolve any objections to Riverkeeper's statement of attorneys' fees and expenses and shall enter an appropriate Order.

ARTICLE XIII: MISCELLANEOUS PROVISIONS

111. **Force Majeure.** Force Majeure, for the purposes of this Consent Decree, is defined as an event arising from causes beyond the control of any Party or Parties (or their agents, contractors, subcontractors, representatives, or assigns) which could not have been overcome by reasonable diligence and which delays or prevents the performance of any obligation under this Consent Decree. Examples of events which may constitute force majeure include the refusal of any federal or state governmental authority to grant a permit or authorization necessary for the completion of actions required by this Consent Decree, floods, hurricanes, tornadoes, and other extraordinary weather events, earthquakes and other natural disasters, terrorist attacks, war, and other national emergencies. Examples of events that are not force majeure events include normal inclement weather, increased costs or expense, the failure to timely and fully apply for a permit or authorization necessary for the completion of actions required by this Consent Decree, or financial difficulty of any Party. The Party claiming force majeure shall bear the burden of showing an event was a force majeure event.

112. **JCRA and Bayfront Redevelopment LLC as Parties.** As signatories to this Consent Decree, JCRA and Bayfront Redevelopment LLC subject themselves to the Court's jurisdiction for the purpose of enforcing this Consent Decree and agree to be bound by this Consent Decree. This Consent Decree shall be fully enforceable against JCRA and Bayfront Redevelopment LLC.

113. **Successors and Assigns.** This Consent Decree shall be binding upon and shall inure to the benefit of the successors, assigns, heirs, corporate parents, subsidiaries, and affiliates of each Party. No assignment or delegation of the obligations hereunder shall release the assigning Party from its obligations under this Consent Decree.

114. **Successors to Hackensack Riverkeeper, Inc.** In the event that Hackensack Riverkeeper, Inc. disbands or otherwise ceases operations, it shall assign its rights under this Consent Decree to another qualified nonprofit organization. A nonprofit organization shall be qualified for assignment under this Consent Decree if it is a charitable organization under Section 501(c)(3) of the Internal Revenue Code or its substantial equivalent and has an established record of working to enhance or preserve the ecology, natural habitat, or environment. Any such assignment shall be subject to approval by the Court and Honeywell shall have the right to object to any proposed assignment. Any successor organization shall have the duty to assign its rights under this Consent Decree to another qualified nonprofit organization in the event that the successor disbands or otherwise ceases operations. In the event that a successor is not appointed at any given time, the New Jersey Attorney General or equivalent officer shall appoint a successor subject to approval by the Court and objection by Honeywell.

115. **Reservation of Rights and Claims**. Except as set forth expressly herein, this Consent Decree does not affect in any way any of the Parties' claims or defenses against third parties who have not signed the Consent Decree.

116. **Governing Law and Continuing Jurisdiction.** The Court shall retain jurisdiction over the matters addressed in this Consent Decree for purposes of enabling the Parties to apply to the Court for any further order as may be necessary to construe, carry out, or enforce the terms of this Consent Decree. This Consent Decree shall be interpreted and enforced under the laws of

the United States and the State of New Jersey by the United States District Court for the District of New Jersey.

117. **Construction.** Questions regarding the interpretation of this Consent Decree shall not be resolved against any Party on the ground that this Consent Decree has been drafted by that Party. This Consent Decree is the result of review, negotiation, and compromise by each Party.

118. **Authority to Enter into Agreement.** The undersigned representative for each Party represents, certifies, and warrants that he or she is duly authorized by the Party whom he or she represents to enter into the terms of this Consent Decree and bind such Party legally to this Consent Decree.

119. **Measures to Effectuate This Consent Decree.** The Jersey City Entities and JCRA shall take all appropriate steps to ensure that this Consent Decree has been (and that actions required hereunder will be) duly considered, ratified, and approved. Such steps include consideration of this Consent Decree at a meeting of the City Council, open to the public, at which members of the public have the opportunity to comment on all aspects of the Settlement, including the commitments made by Jersey City; and consideration by and approval of the commissioners of the JCIA, JCMUA, and JCRA.

120. **Modifications.** This Consent Decree may be modified by mutual agreement of the Parties but such agreement must be in writing, duly and properly signed by all Parties, and shall be submitted to the Court for approval.

121. **Severability.** Each of the provisions in paragraph 60 of this Consent Decree shall be deemed severable and, in the event that one or more of such provisions is deemed invalid or unenforceable, it shall not affect the validity or enforceability of the other provisions of the Consent Decree.

122. **Signatures.** This Consent Decree may be signed simultaneously or in counterparts by the respective signatories, which shall be as fully valid and binding as if a single document was signed by all of the signatories. This Consent Decree may be signed electronically by any or all signatories, and such electronic signature shall be as fully valid and binding as a hand-written signature.

DEED NOTICE CONCERNING CONTROLS INSTALLED FOR CHROMIUM CONTAMINATION UNDERLYING THE PROPERTY

This Deed Notice is made as of the __ day of _____, 2017, by ***Jersey City Municipal Utilities Authority (JCMUA) whose mailing address is 555 NJ Route 440, Jersey City, NJ 07304***. Owner shall mean JCMUA, together with its successors and assigns, including all successors in interest in the Property which is the subject of this Deed Notice as described fully below.

1. THE PROPERTY. JCMUA is the current owner in fee simple of certain real property designated as a portion of ***Block 21901, Lot 10 on the tax map of the City of Jersey City, Hudson County, New Jersey***[1]. The New Jersey Department of Environmental Protection (NJDEP) Program Interest Number for the contaminated site which includes this property is ***Hudson County Chromate Site No. 087 PI # G000008710*** [NJDEP PI# for non-chromium-related contaminants at the Property is #745719]. The Property is also part of the as Site 087 pursuant to the First Amended Consent Decree Regarding the Remediation and Redevelopment of Study Area 6 North ("Consent Decree") which is attached hereto and is entered as an order of the Court in the following consolidated actions *JCMUA v. Honeywell International, Inc.*, D.N.J., Civ. No. 05-05955; *JCIA v. Honeywell International, Inc.*, D.N.J., Civ. No. 05-5993; and *Hackensack Riverkeeper, Inc. v. Honeywell International, Inc.*, D.N.J., Civ. No. 06-22. The Consent Decree

[1] All references to Block 21901 Lot 10 in this Deed Notice shall mean those portions of Block 21901 Lot 10 regardless of whether the word "portion(s)" is specifically called out or not.

restricts transfer, use and development of the Property. To the extent that there is any conflict or inconsistency between the terms of this Deed Notice and the terms of the Consent Decree, the Consent Decree shall govern.

2. REMEDIATION.

i. The Department's Bureau of State Case Management (BCM) is the entity within the Department that is responsible for the oversight of the remediation of the SA-6 North. The matter is Case No. Hudson County Chromate Site No. 087 PI# G000008710. The Department has approved this Deed Notice as an institutional control for the Property, which is part of the remediation of the Property.

ii. N.J.A.C. 7:26-C-7 requires the Owner, among other persons, to obtain a soil remedial action permit for the soil remedial action at the Property. That permit will contain the monitoring, maintenance and biennial certification requirements that apply to the Property.

3. SOIL AND GROUNDWATER CONTAMINATION. Honeywell International Inc. ("Honeywell") a corporation of the State of Delaware, licensed to do business in the State of New Jersey whose post office address is 115 Tabor Road, Morris Plains, New Jersey 07950, has remediated the Property to address chromium-related soil and shallow groundwater contamination. The Remedial Action Work Plan (RAWP) was approved by the Department on February 19, 2009 for Hudson County Chromate Site Nos. 087 and 088, which included portions of the Property. Remedial actions were further approved pursuant to the Consent Decree. Under both the Consent Decree and the RAWP soil contamination remains in the Property which contains contaminants in concentrations that do not allow for the unrestricted use of the Property.

Deed Notice #10 encompasses the In-situ Treatment Area 7 (TA-7), an area where a limited amount of shallow soils exceed 20 milligrams per kilogram (mg/kg) for hexavalent chromium. This deed notice area includes chromium only. This area consists of aboveground storage tanks connected by underground piping to a pump island with fuel-dispensing cabinets/pumps which JCMUA uses to fuel vehicles. To prevent disruption to the JCMUA fueling system and due to the depth of chromium-impacted soil and the proximity of the nearby 72-inch forcemain, in-situ treatment was implemented in this area in lieu of excavation. The in-situ treatment implemented reduced the chromium-impacted soils to below 20 mg/kg for hexavalent chromium throughout the area except for at one recalcitrant area with a size of approximately 560 square foot area. As part of facility upgrades, JCMUA plans on relocating their fueling system. Once they do, the limited area where hexavalent chromium soil remains >20 mg/kg will be excavated and the deed notice terminated. This area will not be impacted by Open Space Development.

The soil contamination is described, including the type, concentration and specific location of such contaminants, in Exhibit B, which is attached hereto and made a part hereof. As a result of the contamination, there is a statutory requirement for this Deed Notice and engineering controls in accordance with N.J.S.A. 58:10B-13. Under the terms of the Consent Decree and this Deed Notice, Honeywell is responsible for monitoring and maintaining the soil remediation for the Property in perpetuity or until remediation is implemented that renders this Deed Notice unnecessary.

4. CONSIDERATION. In accordance with the Department's approval of the chromium RAWP for the remediation for the Hudson County Chromate Site Nos. 087 and 088 which includes the Property, and in consideration of the terms and conditions of that approval, and in accordance with the Consent Decree, and other good and valuable considerations, Owner has agreed to subject the Property to certain statutory and regulatory requirements which impose restrictions upon the use of the Property, to restrict certain uses of the Property, and to provide notice to subsequent owners, lessees and operators of the restrictions and the monitoring, maintenance, and biennial certification requirements outlined in this Deed Notice and required by law, as set forth herein.

5A. RESTRICTED AREAS. Due to the presence of these contaminants, Owner has agreed, as part of the remedial action for the Property, to restrict the use of the Property (the "Restricted Areas"); a narrative description of these restrictions, along with the associated monitoring and maintenance activities and the biennial certification requirements are provided in Exhibit C, which is attached hereto and made a part hereof. Owner has also agreed to maintain a list of these restrictions on site for inspection by governmental enforcement officials.

5B. RESTRICTED LAND USES. The following statutory land use restrictions apply to the Restricted Areas:

i. The Brownfield and Contaminated Site Remediation Act, N.J.S.A. 58:10B-12.g(10), prohibits the conversion of a contaminated site, remediated to non-residential soil remediation standards that require the maintenance of engineering or institutional controls, to a child care facility, or public, private, or charter school without the Department's prior written approval, unless a presumptive remedy is implemented; and

ii. The Brownfield and Contaminated Site Remediation Act, N.J.S.A. 58:10B-12.g(12), prohibits the conversion of a landfill, with gas venting systems and or leachate collection systems, to a single family residence or a child care facility without the Department's prior written approval.

5C. ENGINEERING CONTROLS. Due to the presence and concentration of these contaminants, the Owner has also agreed, as part of the remedial action for the Property, to the placement of certain engineering controls on the Property. A narrative description of these engineering controls, along with the associated monitoring and maintenance activities and the biennial certification requirements are provided in Exhibit C. Honeywell shall be responsible for monitoring and maintenance of engineering controls and biennial certification requirements as specified in Paragraphs 8A and 8B.

5D. LONG TERM MONITORING PLAN. Honeywell has prepared a Long Term Monitoring Plan (LTMP) which sets forth requirements for monitoring of the chromium remedial measures including engineering controls within the Property and shallow groundwater, and requirements for notification and reporting pursuant to the Consent Decree, Deed Notice and Soil Remedial Action Permit. A copy of the LTMP is maintained by Honeywell at 115 Mount Tabor Road, Morris Plains, NJ 07950. This Deed Notice is appended to the LTMP.

6A. CHANGE IN OWNERSHIP AND REZONING.

i. The Owner and the subsequent owners and lessees, shall cause all leases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring all holders thereof to take the Property subject to the restrictions contained herein and to comply with all, and not to violate any of the conditions of this Deed Notice. Nothing contained in this Paragraph shall be construed as limiting any obligation of any person to provide any notice required by any law, regulation, or order of any governmental authority.

ii. The Owner and the subsequent owners shall provide written notice to the Department of Environmental Protection on a form provided by the Department and available at www.nj.gov/srp/forms within thirty (30) calendar days after the effective date of any conveyance, grant, gift, or other transfer, in whole or in part, of the owner's interest in the Restricted Area.

iii. The Owner and the subsequent owners shall provide written notice to the Department, on a form available from the Department at www.nj.gov/srp/forms, within thirty (30) calendar days after the owner's petition for or filing of any document initiating a rezoning of the Property to residential.

6B. SUCCESSORS AND ASSIGNS. This Deed Notice shall be binding upon Owner and upon Owner's successors and assigns, and subsequent owners, lessees and operators while each is an owner, lessee, or operator of the Property.

7A. ALTERATIONS, IMPROVEMENTS, AND DISTURBANCES.

i. The Owner and all subsequent owners and lessees shall notify any person of whom it has knowledge, including, without limitation, tenants, employees of tenants, and contractors, intending to conduct invasive work or excavate within the Restricted Areas, of the nature and location of known contamination in the Restricted Areas, and, of the precautions necessary to protect the engineering controls and minimize potential human exposure to contaminants.

ii. Except as provided in the Consent Decree and Paragraph 7B, below, no person shall make, or allow to be made, any alteration, improvement, or disturbance in, to, or about the Property which disturbs any engineering control at the Property except as (a) permitted in the Consent Decree and (b) without first obtaining the express written consent of the Department. Nothing herein shall constitute a waiver of the obligation of any person to comply with all applicable laws and regulations including, without limitation, the applicable rules of the Occupational Safety and Health Administration. To request the consent of the Department of Environmental Protection, contact:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413

iii. Notwithstanding subparagraph 7A.ii., above, a Soil Remedial Action Permit modification is not required for any alteration, improvement, or disturbance provided that:

(A) Takes such action in conformance with the Consent Decree; and

(B) Notifies the Department of Environmental Protection of the activity by calling the DEP Hotline, at 1-877-WARN-DEP or 1-877-927-6337, within twenty-four (24) hours after the beginning of each alteration, improvement, or disturbance; and

(C) Notifies Honeywell of the activity by calling 855-727-2658; and

(D) Honeywell and/or the owner, lessee or operator restores any disturbance of an engineering control to pre-disturbance conditions within sixty (60) calendar days after the initiation of the alteration, improvement or disturbance; and

(E) Ensures that all applicable worker health and safety laws and regulations are followed during the alteration, improvement, or disturbance, and during the restoration; and

(F) Ensures that human exposure to contamination in excess of the applicable remediation standards does not occur; and

(G) The next biennial certification includes a description of the nature of the alteration, improvement, or disturbance, the dates and duration of the alteration, improvement, or disturbance, the name of key individuals and their affiliations conducting the alteration, improvement, or disturbance, a description of the notice the Owner gave to those persons prior to the disturbance, the amounts of soil generated for disposal, if any, the final disposition and any precautions taken to prevent exposure.

7B. EMERGENCIES. In the event of an emergency which presents, or may present, an unacceptable risk to the public health and safety, or to the environment, or immediate environmental concern, see N.J.S.A. 58:10C-2, any person may temporarily breach an engineering control provided that that person complies with each of the following:

i. Immediately notifies the Department of Environmental Protection of the emergency, by calling the DEP Hotline at 1-877-WARNDEP or 1-877-927-6337;

ii. Immediately notifies Honeywell of the emergency by calling 855-727-2658;

iii. Limits both the actual disturbance and the time needed for the disturbance to the minimum reasonably necessary to adequately respond to the emergency;

iv. Implements all measures necessary to limit actual or potential, present or future risk of exposure to humans or the environment to the contamination;

v. Notifies the Department of Environmental Protection when the emergency has ended by calling the DEP Hotline at 1-877-WARNDEP or 1-877-927-6337;

vi. Notifies Honeywell when the emergency has ended by calling 855-727-2658; and

vii. Honeywell restores the engineering control to the pre-emergency conditions as soon as possible, and provides a written report to the Department of Environmental Protection of such emergency and restoration efforts within sixty (60) calendar days after completion of the restoration of the engineering control. The report must include all information pertinent to the emergency, potential discharges of contaminants, and restoration measures that were implemented, which, at a minimum, should specify: (a) the nature and likely cause of the emergency, (b) the potential discharges of or exposures to contaminants, if any, that may have occurred, (c) the measures that have been taken to mitigate the effects of the emergency on human health and the environment, (d) the measures completed or implemented to restore the engineering control, and (e) the changes to the engineering control or site operation and maintenance plan to prevent recurrence of such conditions in the future. Honeywell shall submit the report to:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413

8A. MONITORING AND MAINTENANCE OF DEED NOTICE, AND PROTECTIVENESS CERTIFICATION. The persons in any way responsible, pursuant to the Spill Compensation and Control Act, N.J.S.A. 58:10-23.11a et seq., for the hazardous substances that remain at the Property, the persons responsible for conducting the remediation, Honeywell, the Owner, and the subsequent owners, lessees, and operators, shall monitor and maintain this Deed Notice. The subsequent owners, lessees and operators have this obligation only during their ownership, tenancy, or operation. Honeywell shall certify to the Department on a biennial basis that the remedial action that includes this Deed Notice remains protective of the public health and safety and of the environment. The specific obligations to monitor and maintain the deed notice shall include all of the following:

i. Monitoring and maintaining this Deed Notice according to the requirements in Exhibit C, to ensure that the remedial action that includes the Deed Notice continues to be protective of the public health and safety and of the environment;

ii. Conducting any additional remedial investigations and implementing any additional remedial actions, that are necessary to correct, mitigate, or abate each problem related to the protectiveness of the remedial action for the Property prior to the date that the certification is due to the Department pursuant to iii, below, in order to ensure that the remedial action that includes this Deed Notice remains protective of the public health and safety and of the environment.

iii. Certify to the Department of Environmental Protection as to the continued protectiveness of the remedial action that includes this Deed Notice, on a form provided by the Department and

consistent with N.J.A.C. 7:26C-1.2 (a)1, every two years on the anniversary of the date stamped on the Deed Notice that indicates when the Deed Notice was recorded.

8B. MONITORING AND MAINTENANCE OF ENGINEERING CONTROLS, AND PROTECTIVENESS CERTIFICATION. Honeywell shall maintain all engineering controls at the Property and certify to the Department on a biennial basis that the remedial action of which each engineering control is a part remains protective of the public health and safety and of the environment. The specific obligations to monitor and maintain the engineering controls shall include the following:

i. Monitoring and maintaining each engineering control according to the requirements in Exhibit C, to ensure that the remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment;

ii. Conducting any additional remedial investigations and implementing any additional remedial actions, that are necessary to correct, mitigate, or abate each problem related to the protectiveness of the remedial action for the Property prior to the date that the certification is due to the Department pursuant to iii, below, in order to ensure that the remedial action that includes the engineering control remains protective of the public health and safety and of the environment.

iii. Certify to the Department of Environmental Protection as to the continued protectiveness of the remedial action that includes the engineering control, on a form provided by the Department and consistent with N.J.A.C. 7:26C-1.2 (a)1, every two years on the anniversary of the date stamped on the Deed Notice that indicates when the Deed Notice was recorded.

9. ACCESS. The Owner agrees to allow the Department, its agents and representatives access to the Property to inspect and evaluate the continued protectiveness of the remedial action that includes this Deed Notice and to conduct additional remediation to ensure the protection of the public health and safety and of the environment if the persons responsible for monitoring the protectiveness of the remedial action, as described in Paragraph 8, above, fail to conduct such remediation pursuant to this Deed Notice as required by law. The Owner, and the subsequent owners and lessees, shall also cause all leases, subleases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring that all holders thereof provide such access to the Department.

10. NOTICES.

i. Owner shall cause all leases, grants, and other written transfers of an interest in the Restricted Areas to contain a provision expressly requiring all holders thereof to take the Property subject to the restrictions contained herein and to comply with all, and not to violate any of the conditions of this Deed Notice. Nothing contained in this Paragraph shall be construed as limiting any obligation of any person to provide any notice required by any law, regulation, or order of any governmental authority.

ii. Owner shall notify any person intending to conduct invasive work or excavate within the Property on its behalf of the nature and location of contamination and, of the precautions necessary to minimize potential human exposure to contaminants.

iii. Owner shall provide written notice to the Department of Environmental Protection at least thirty (30) calendar days before the effective date of any conveyance, grant, gift, or other transfer, in whole or in part, of the owner's interest in the Restricted Area. Any such conveyance, grant or gift must be consistent with the terms of the Consent Decree.

iv. Owner shall provide written notice to the Department within thirty (30) calendar days following the Owner's receiving notice of any petition for a rezoning of the Property. Any such rezoning must be consistent with the terms of the Consent Decree. The Owner shall submit the written notice to:

Department of Environmental Protection
Division of Remediation Management and Response
Bureau of Operation, Maintenance and Monitoring
Deed Notice Inspection Program
P.O. Box 413
401 E. State Street
Trenton, NJ 08625-0413.

11. ENFORCEMENT OF VIOLATIONS.

i. This Deed Notice itself is not intended to create any interest in real estate in favor of the Department of Environmental Protection, nor to create a lien against the Property, but merely is intended to provide notice of certain conditions and restrictions on the Property and to reflect the regulatory and statutory obligations imposed as a conditional remedial action for this Property.

ii. The restrictions provided herein may be enforceable by the Department against any person who violates this Deed Notice. To enforce violations of this Deed Notice, the Department may initiate one or more enforcement actions pursuant to N.J.S.A. 58:10-23.11, and N.J.S.A. 58:10C, and require additional remediation and assess damages pursuant to N.J.S.A. 58:10-23.11, and N.J.S.A. 58:10C.

12. SEVERABILITY. If any court of competent jurisdiction determines that any provision of this Deed Notice requires modification, such provision shall be deemed to have been modified automatically to conform to such requirements. If a court of competent jurisdiction determines that any provision of this Deed Notice is invalid or unenforceable and the provision is of such a nature that it cannot be modified, the provision shall be deemed deleted from this instrument as if the provision had never been included herein. In either case, the remaining provisions of this Deed Notice shall remain in full force and effect.

13. MODIFICATION AND TERMINATION.

i. Any person may request in writing, at any time, that the Department modify this Deed Notice where performance of subsequent remedial actions, a change of conditions at the Property, or the adoption of revised remediation standards suggest that modification of the Deed Notice would be appropriate.

ii. Any person may request in writing, at any time, that the Department terminate this Deed Notice because the conditions which triggered the need for this Deed Notice are no longer applicable.

iii. Any person seeking a modification or termination of this Deed Notice must also have such modification approved by the United States District Court for the District of New Jersey pursuant to the Consent Decree until such time as the Consent Decree terminates with regard to the Property pursuant to the Consent Decree.

iv. This Deed Notice may be revised or terminated only upon filing of an instrument, executed by the Department, in the office of the Hudson County Register, New Jersey, expressly modifying or terminating this Deed Notice.

v. Within thirty (30) calendar days after the filing of a Termination of Deed Notice, the owner of the property shall apply to the Department for termination of the soil remedial action permit pursuant to N.J.A.C. 7:26C-7.

14A. EXHIBIT A. Exhibit A includes the following maps of the Property and the vicinity:

i. Exhibit A-1: Vicinity Map - A map that identifies by name the roads, and other important geographical features in the vicinity of the Property;

ii. Exhibit A-2: Metes and Bounds Description - A metes and bounds description of the Property, including reference to tax lot and block numbers for the Property and a Tax Map;

iii. Exhibit A-3: Property Map - A scaled map of the Property, scaled at one inch to 200 feet or less, and if more than one map is submitted, the maps shall be presented as overlays, keyed to a base map; the map(s) shall include diagrams of major surface topographical features such as buildings, roads, and parking lots.

14B. EXHIBIT B. Exhibit B includes the following descriptions of the Restricted Areas:

i. Exhibit B-1: Restricted Area Map - Maps for the Property that include, as applicable:

(A) As-built diagrams of each engineering control, including caps, fences, slurry walls, ground water monitoring wells, and ground water pumping system;

(B) As-built diagrams of any buildings, roads, parking lots and other structures that function as engineering controls; and

(C) Designation of all soil and/or sediment sample locations within the restricted areas that exceed any soil or sediment standard that are keyed into one of the tables described below.

ii. Exhibit B-2 (Table B-2): Restricted Area Data Tables - Table for the Property that includes:

(A) Sample location designation from Restricted Area maps (Exhibit B-1);

(B) Sample elevation based upon mean sea level;

(C) Name and chemical abstract service registry number of each contaminant with a concentration that exceeds the unrestricted use standard;

(D) The restricted and unrestricted use standards for each contaminant in the table; and

(E) The remaining concentration of each contaminant at each sample location at each elevation (or if historic fill, include data from the Department's default concentrations at N.J.A.C. 7:26E-4.6, Table 4-2).

14C. EXHIBIT C. Exhibit C includes narrative descriptions of the institutional controls and engineering controls as follows:

i. Exhibit C-1A through C-1C. Exhibit C-1-A: Deed Notice as Institutional Control; Exhibit C-1-B: Consent Decree as Institutional Control; and Exhibit C-1C Zoning as Institutional Control: Exhibit C-1 includes a narrative description of the restrictions and obligations of this Deed Notice that are in addition to those described above, as follows:

(A) General Description of the Institutional Control:
(1) Description and estimated size of the Restricted Areas as described above;
(2) Description of the restrictions on the Property by operation of this Deed Notice and the other Institutional Controls; and
(3) The objective of the restrictions;

(B) Description of the monitoring necessary to determine whether:
(1) Any disturbances of the soil in the Restricted Areas did not result in the unacceptable exposure to the soil contamination;
(2) There have been any land use changes subsequent to the filing of this Deed Notice and the other Institutional Controls or the most recent biennial certification, whichever is more recent;
(3) The current land use on the Property is consistent with the restrictions in this Deed Notice and the other Institutional Controls;
(4) Any newly promulgated or modified requirements of applicable regulations or laws apply to the Property; and
(5) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice and the other Institutional Controls, and conduct the necessary sampling; and

(C) Description of the following items that will be included in the biennial certification:
(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of

the remedial action that includes this Deed Notice and the other Institutional Controls;
(2) Land use at the Property is consistent with the restrictions in this Deed Notice and the other Institutional Controls; and
(3) The remedial action that includes this Deed Notice and the other Institutional Controls continues to be protective of the public health and safety and of the environment.

ii. Exhibit C-2. Exhibit C-2: Engineering Controls: Asphalt Cover;

Exhibit C-2 includes a narrative description of the engineering controls as follows:

(A) General Description of the engineering control:
(1) Description of the engineering control;
(2) The objective of the engineering control; and
(3) How the engineering control is intended to function.

(B) Description of the operation and maintenance necessary to ensure that:
(1) Periodic inspections of each engineering control are performed in order to determine its integrity, operability, and effectiveness;
(2) Each engineering control continues as designed and intended to protect the public health and safety and the environment;
(3) Each alteration, excavation or disturbance of any engineering control is timely and appropriately addressed to maintain the integrity of the engineering control;
(4) The engineering control is being inspected and maintained and its integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment;
(5) A record of the self-inspection dates, name of the inspector, results of the inspection and condition(s) of the engineering control. Sampling, for example, may be necessary if it is not possible to visually evaluate the integrity/performance of the engineering control; and
(6) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

(C) Description of the following items that will be included in the biennial certification:
(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;
(2) The engineering control continues to operate as designed; and
(3) The remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment.

DESCRIPTION OF PROPERTY
CITY OF JERSEY CITY
HUDSON COUNTY, NEW JERSEY
PROJECT NO. 10000292R

DEED NOTICE AREA 10
LOT 10 BLOCK 21901
OCTOBER 13, 2016

All that certain lot, tract or parcel of land situate lying and being in the City of Jersey, in the County of Hudson and State of New Jersey, and being a portion of Lot 10 in Block 21901, designated as Deed Notice Area 10 as shown on an exhibit entitled, "Deed Notice Area 10, SA6 North, Block 21901 Lot 10, City of Jersey City, Hudson County, New Jersey," prepared by Maser Consulting P.A., dated October 12, 2016 and being more particularly bounded and described as follows, to wit:

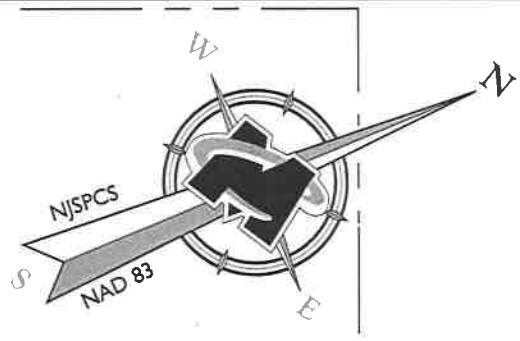
COMMENCING at the intersection of the division line between Lots 9 and 10 in Block 21901 with the northwesterly line of Lot 4 in Block 21901, as shown on the aforesaid exhibit; thence-

A. **S 24° 46'55" W, 49.08 feet**, along said northwesterly line to the intersection of the same with the northerly line of proposed Block 6; thence-

B. **N 67° 01'59" E, 567.84 feet**, along said northerly line; thence-

C. **S 22° 52' 09" W, 1.33 feet**, running through said proposed Block 6 to the True Point of **BEGINNING**, and running; thence-

Continuing through said proposed Block 6 the following four (4) courses:



1. **S 40° 08' 40" E, 25.46 feet**; thence-
2. **S 48° 14' 31" W, 22.69 feet,** thence -
3. **N 44° 42' 54" W, 21.93 feet,** thence –
4. **N 39° 59' 38" E, 24.79 feet,** to the Point and Place of **BEGINNING.**

CONTAINING: 559 S.F. of land more or less or 0.013 acre of land more or less.

Exhibit B-1 Restricted Area Map includes Exhibit B-1 (Restricted Area and Soil Sample Locations).

Exhibit B-2 is a Restricted Area Data Table indicating soil sample locations with concentrations remaining above the NJDEP Chromium Policy.

Restricted Area Map Notes:

Exhibit B-1 indicates engineering controls chromium remedy components. For soils with hexavalent chromium concentrations above 20 mg/kg, the engineering control consists of 2 feet of clean soil and an asphalt/concrete cap.

C-1 Institutional Controls
C-2 Engineering Controls
Portion of Block 21901, Lot 10
City of Jersey City, New Jersey

C-1 Institutional Controls

C-1 Deed Notice, Consent Decree, Zoning as Institutional Controls: Exhibit C-1 (A through C) for that portion of Block 21901, Lot 10, City of Jersey City, New Jersey known as the Deferred Area

Exhibits C-1A through C-1C. Exhibit C-1-A: Deed Notice as Institutional Control; Exhibit C-1-B: Consent Decree as Institutional Control; Exhibit C-1C Zoning as Institutional Control: Exhibits C-1A through C-1C include a narrative description of the restrictions and obligations of this Deed Notice and the other Institutional Controls that are in addition to those described above, as follows:

(A) General Description of the Institutional Control:

(1) Description and estimated size of the Restricted Areas as described above;

The Property constitutes a portion of Block 21901, Lot 10. The estimated size of the Area containing chromium-impacted soils (hexavalent chromium above 20 mg/kg) is identified on Exhibit B-1 is estimated at approximately 560 square feet or approximately 0.013 acres.

(2) Description of the restrictions on the Property by operation of the Institutional Control;

The Property shall only be used for activities consistent with this Deed Notice, the Consent Decree, including, but not limited to, Paragraphs 60(j) and 60(k) of the Consent Decree, and the applicable zoning standards. Intrusive activities (i.e., excavation or digging) that breach the engineering controls (as described in Exhibit C-2) will not be permitted on the Property except in compliance with the terms of the Consent Decree, and this Deed Notice. See Deed Notice for additional information; subsections 7A Alterations, Improvements, Disturbances, and 7B, Emergencies.

(3) The objective of the restrictions;

The restrictions will prohibit contact with soils above the NJDEP Soil Cleanup Criteria for hexavalent chromium.

(B) Description of the monitoring necessary to determine whether:

(1) Any disturbances of the soil in the Restricted Areas did not result in the unacceptable exposure to the soil contamination;

Visual inspections of the Property and other monitoring as set forth in the Consent Decree.

(2) There have been any land use changes subsequent to the filing of this Deed Notice or the most recent biennial certification, whichever is more recent;

Same as (B)(1).

(3) The current land use on the Property is consistent with the restrictions in this Deed Notice;

Same as (B)(1).

(4) Any newly promulgated or modified requirements of applicable regulations or laws apply to the site; and

Review of newly promulgated or modified requirements of applicable regulations or laws that potentially may apply to the site.

(5) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

Same as (B)(4).

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) Land use at the Property is consistent with the restrictions in the Consent Decree, this Deed Notice, the applicable zoning standards; and

(3) The remedial action that includes this Deed Notice continues to be protective of the public health and safety and of the environment.

The monitoring report will be included in the biennial certification. Components of the monitoring report will include the following:

- ***A report of all conditions set forth in sections (A) and (B) above to assure that they have been adhered to, including evaluation of any available documents as a result of changes in land use or incidents.***
- ***A report that determines whether or not the land use at the Property has remained consistent with the restrictions in the Consent Decree, this Deed Notice,* and *the applicable zoning standards.***
- ***A report that determines whether or not the Deed Notice continues to be protective of the public health and safety and the environment.***

C-2 Engineering Controls
Deed Notice #10 SA-6 North TA-7

Portion of Block 21901, Lot 10
City of Jersey City, New Jersey

ii. Exhibits C-2A through C: Narrative description of the Engineering Controls including Clean Fill as follows:

(A) General Description of the engineering controls:

(1) Description of the engineering controls;

The Engineering Control consists of 2 feet of clean soil and an asphalt/concrete cap.

(2) The objective of the engineering controls; and

The objective of the controls is to prevent contact with soils above the NJDEP Chromium Policy for hexavalent chromium.

(3) How the engineering controls are intended to function.

The soil engineering controls are intended to function as a barrier to underlying and adjacent soils that exceed the NJDEP Chromium Policy Criteria within the Property.

(B) Description of the operation and maintenance necessary to ensure that:

(1) Periodic inspections of each engineering control are performed in order to determine its integrity, operability, and effectiveness;

Honeywell will perform monitoring by visual inspection of the Property pursuant to the Consent Decree.

(2) Each engineering control continues as designed and intended to protect the public health and safety and the environment;

Same as (B)(1) above.

(3) Each alteration, excavation or disturbance of any engineering control is timely and appropriately addressed to maintain the integrity of the engineering controls;

Same as (B)(1) above. Also, see the Consent Decree and the Deed Notice for additional information: subsections 7A Alterations, Improvements, Disturbances, and 7B Emergencies.

(4) The engineering controls are being inspected and maintained and their integrity remains so that the remedial action continues to be protective of the public health and safety and of the environment;

Same as (B)(1) above.

(5) A record of the self-inspection dates, name of the inspector, results of the inspection and condition(s) of the engineering controls. Sampling, for example, may be necessary if it is not possible to visually evaluate the integrity/performance of the engineering controls; and

Records of the inspections are to be maintained as listed in (5).

(6) Any new standards, regulations, or laws apply to the Property that might necessitate additional sampling in order to evaluate the protectiveness of the remedial action which includes this Deed Notice, and conduct the necessary sampling; and

A review of any new standards, regulations, or laws will be conducted. Should the review indicate that other activities are necessary, those activities will be listed and executed.

(C) Description of the following items that will be included in the biennial certification:

(1) A monitoring report that describes the specific activities, pursuant to (A) and (B), above, conducted in support of the biennial certification of the protectiveness of the remedial action that includes this Deed Notice;

(2) The engineering controls continues to operate as designed; and

(3) The remedial action that includes the engineering control continues to be protective of the public health and safety and of the environment.

The monitoring report will be included in the biennial certification. Components of the monitoring report will include the following:

- ***A report of all conditions set forth in sections (A) and (B) above to assure that they have been adhered to, including an evaluation to determine whether or not the engineering controls are continuing to meet the original objective and intended function.***
- ***A report to determine whether or not the engineering controls continue to operate as designed.***
- ***A report to determine whether or not the engineering controls continue to be protective of the public health and safety and of the environment***

RECITALS

Whereas, on June 30, 2003, the district court for the District of New Jersey issued a Final Judgment in *Interfaith Community Organization v. Honeywell International Inc.*, Civ. No. 95-2097 (DMC) ("*ICO v. Honeywell*"), ordering the remediation of an area designated by the New Jersey Department of Environmental Protection ("NJDEP") as Study Area 7 by excavation of all chromium contamination on the property, under the oversight of a court-appointed Special Master;

Whereas, on or about December 23, 2005, the Jersey City Municipal Utilities Authority ("JCMUA") filed litigation styled *Jersey City Municipal Utilities Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5955 (DMC), bringing claims against Honeywell International Inc. ("Honeywell") under, *inter alia*, Section 6972 of the Resource Conservation and Recovery Act ("RCRA"), and seeking remediation of chromium contamination on property owned by JCMUA and other relief;

Whereas, on or about December 28, 2005, the Jersey City Incinerator Authority ("JCIA") filed litigation styled *Jersey City Incinerator Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5993 (DMC), bringing claims against Honeywell under, *inter alia*, Section 6972 of RCRA, and seeking remediation of chromium contamination on property owned by JCIA and other relief;

Whereas, on or about January 4, 2006, the Hackensack Riverkeeper, Inc., Captain William Sheehan, Reverend Winston Clarke, and Lawrence Baker ("Riverkeeper") filed litigation styled *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.,* D.N.J., Civ. No. 06-022 (DMC), bringing a claim against Honeywell under RCRA and seeking remediation of chromium contamination to soils, groundwater, surface waters, and sediments associated with various properties collectively designated by NJDEP as Study Areas 5, 6 North, and 6 South;

Whereas, Study Areas 6 North and South are directly adjacent to Study Area 7 on the north and south sides, respectively;

Whereas, Study Area 5 is comprised of properties to the east of Study Areas 6 North, 6 South, and 7 across Route 440;

Whereas, the property owned by JCIA and JCMUA and collectively the subject of *JCMUA v. Honeywell* and *JCIA v. Honeywell* comprises a part of Study Area 6 North;

Whereas, the City of Jersey City ("Jersey City") also owns property that comprises a part of Study Area 6 North;

Whereas, Riverkeeper also named as defendants in *Riverkeeper v. Honeywell* Jersey City, JCMUA, and JCIA (collectively the "Jersey City Entities");

Whereas, the Jersey City Entities and Honeywell also asserted cross-claims against each other in *Riverkeeper v. Honeywell*;

Whereas, *JCMUA v. Honeywell*, *JCIA v. Honeywell,* and *Riverkeeper v. Honeywell* were consolidated by the United States District Court for the District of New Jersey (hereinafter the "Consolidated Litigation");

Whereas, in the Consolidated Litigation, the Jersey City Entities and Riverkeeper have alleged that Honeywell bears responsibility for the presence and remediation of chromite ore processing residue ("COPR") and chromium in soils and groundwater on the Study Area 6 North property;

Whereas, in the Consolidated Litigation, Honeywell has alleged that the Jersey City Entities bear full responsibility for lead and other contamination on the Study Area 6 North property, and also bear an equitable share of liability for the presence and remediation of COPR and chromium in soils and groundwater on the Study Area 6 North property and for chromium and other contamination in Hackensack River sediments in the vicinity of Study Area 6 North;

Whereas, on October 9, 2007, Honeywell and Riverkeeper submitted the Consent Order on Sediment Remediation and Financial Assurances ("Sediment Consent Order"), resolving issues related to the remediation of chromium contaminated sediments in the Hackensack River in the vicinity of Study Areas 5, 6, and 7;

Whereas, the Parties to this Consent Decree each believe that it is in their mutual interest to move forward productively to resolve their differences so that they can implement environmental remediation at Study Area 6 North that ensures the continued protection of human health and the environment and so that Study Area 6 and Study Area 7 can be redeveloped in keeping with Jersey City's vision for a revitalized West Side;

Whereas, the Local Redevelopment and Housing Law, N.J.S.A. 40A:12A-1, *et seq*., as amended and supplemented (the "Redevelopment Law") provides for municipalities to participate in the redevelopment and improvement of areas in need of redevelopment;

Whereas, the portions of Study Area 6 and Study Area 7 (i) which are owned by the Jersey City Entities, (ii) which are owned by Honeywell, (iii) as to which Honeywell has a purchase and sale agreement with the current owner, or (iv) which hereafter will be acquired by a Jersey City Entity and/or Honeywell are parcels which by ordinance adopted by the City Council of Jersey City on February 27, 2008, have been determined to be "areas in need of redevelopment" under the criteria of the Redevelopment Law because of conditions prevalent on those parcels;

Whereas, the settlement which is the subject matter of this Consent Decree contemplates the environmental remediation of Study Area 6 North and redevelopment of the parcels that comprise Study Areas 6 and 7 to create a major mixed use project in an important section of Jersey City;

Whereas, each of the actions to implement this Consent Decree have been fully considered by the Parties as a means to accomplish the aforesaid purposes of this settlement;

Whereas, the consent of each of the Jersey City Entities to this Consent Decree was considered at a duly noticed and appropriate meeting of their respective governing bodies, open to the public, at which members of the public were provided an opportunity to comment on all aspects of the settlement, including, without limitation, the commitments made by the Jersey City Entities herein; and

Whereas, Honeywell and the Jersey City Entities are settling their claims, cross-claims, or counter-claims in the Consolidated Litigation against each other in the *Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc.* (hereafter "Jersey City/Honeywell Consent Order"), filed in the Consolidated Litigation simultaneously with this Consent Decree and attached as Exhibit A to this Consent Decree:

NOW, THEREFORE, IT IS HEREBY ORDERED AND DECREED AS FOLLOWS:

ARTICLE I: DEFINITIONS

For purposes of this Consent Decree, the following terms shall have the meanings set forth in this Article:

1. **AOC 1** shall mean that area of Study Area 6 North in which the hexavalent chromium concentration in the top 20 feet of soil below existing ground surfaces exceeds concentrations of 20 mg/kg and the Chromium Remedy will be implemented pursuant to Article III. AOC 1 is shown on Exhibit B.

2. **AOC 1 Additional Excavation Areas** shall mean those areas of Study Area 6 North which require excavation pursuant to paragraph 57. The AOC 1 Additional Excavation Areas are not contiguous to AOC 1. The AOC 1 Additional Excavation Areas are shown on Exhibit B.

3. **AOC 1 Open Space Area** shall mean the AOC 1 Open Space Area, as defined by paragraph 53, consisting of approximately 11 acres enclosed by the hydraulic barrier walls constructed under the Chromium Remedy, and which shall be subject to paragraph 60. The AOC 1 Open Space Area is shown on Exhibit B.

4. **AOC 2** shall mean that area of Study Area 6 North on which the Historic Fill Remedy will be implemented pursuant to Article II.B of the Jersey City/Honeywell Consent Order. AOC 2 is shown on Exhibit B.

5. **Bayfront Redevelopment LLC** shall have the meaning set forth in paragraph 4.1 of the Jersey City/Honeywell Consent Order.

6. **COPR** shall mean Chromite Ore Processing Residue.

7. **Chromium Remedy** or **Chromium Remediation** shall mean the remedy set forth in Article III.

8. **Consolidated Litigation** shall mean *Jersey City Municipal Utility Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5955 (DMC), *Jersey City Incinerator Authority v. Honeywell International Inc.,* D.N.J., Civ. No. 05-5993 (DMC), and *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.,* D.N.J., Civ. No. 06-022 (DMC).

9. The **Court** shall mean the United States District Court of the District of New Jersey, which has jurisdiction over the Consolidated Litigation.

10. **Deep Groundwater Remedy** shall mean the deep overburden and bedrock groundwater pump and treat remedy as required by the Order Approving the Deep Overburden Groundwater Remediation, entered on October 6, 2006, and the Stipulation on Consent Regarding the Schedule for Implementation of Deep Groundwater Remedial Actions, currently pending before the Special Master in *ICO v. Honeywell.* In the event that Riverkeeper and Honeywell reach a settlement on source control issues, the Deep Groundwater Remedy shall

include the remedy to which Riverkeeper and Honeywell have agreed. In the event that Riverkeeper and Honeywell do not reach a settlement on source control issues, the Deep Groundwater Remedy shall include the remedy ordered by the Special Master or the Court in *ICO v. Honeywell* for source control.

11. **Hackensack River Watershed Land Trust** shall mean the dedicated fund of the Hackensack Riverkeeper, Inc., established under Section 501(c) of the Internal Revenue Code for the purpose of acquiring and preserving open space within the Hackensack River watershed and administered by the Board of Trustees of the Hackensack Riverkeeper, Inc.

12. **Historic Fill** shall have the definition provided in the NJDEP Technical Requirements for Site Remediation.

13. **Historic Fill Remedy or Historic Fill Remediation** shall mean the remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order, except that the Historic Fill Remedy shall not be limited to the remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order if NJDEP requires a more stringent remedy.

14. **Honeywell** shall mean Honeywell International Inc. and its affiliates, including Kellogg Street 80 Property LLC, Kellogg Street 60 Property LLC, and Kellogg Street/440 Property LLC.

15. **Honeywell's Treatment Plant** shall mean the treatment plant currently located at 80 Kellogg Street that is used to treat, *inter alia*, chromium contaminated groundwater.

16. ***ICO v. Honeywell*** shall mean *Interfaith Community Organization v. Honeywell International Inc.,* D.N.J., Civ. No. 95-2097 (DMC).

17. **Including** shall mean including, but not limited to.

18. **JCIA** shall mean the Jersey City Incinerator Authority.

19. **JCMUA** shall mean the Jersey City Municipal Utilities Authority.

20. **JCRA** shall mean the Jersey City Redevelopment Agency.

21. **Jersey City Entities** shall mean the City of Jersey City, including the Department of Public Works ("DPW") and other agencies and branches thereof, the JCIA, and the JCMUA.

22. **Jersey City/Honeywell Consent Order** shall mean the *Settlement Consent Order by and between the Jersey City Entities and Honeywell International Inc.* entered in the Consolidated Litigation simultaneously with this Consent Decree.

23. **NJDEP** shall mean the New Jersey Department of Environmental Protection.

24. **NJDEP Chromium Directive** shall mean the Chromium Directive issued by NJDEP on February 8, 2007, and attached as Exhibit C.

25. **Party or Parties** shall mean any one or all of the signatories to this Consent Decree.

26. **RCRA** shall mean the Resource Conservation and Recovery Act, 42 U.S.C. 6901, *et seq.*, as amended.

27. **Redevelopment Agreement** shall have the meaning set forth in paragraph 4.11(e) of the Jersey City/Honeywell Consent Order.

28. **Redevelopment Area** shall mean Study Area 6 North, Study Area 6 South, and Study Area 7, collectively.

29. **Redevelopment Law** shall mean the New Jersey Local Redevelopment and Housing Law, N.J.S.A. 40A:12A1, *et seq.*, as amended and supplemented.

30. **Redevelopment Plan** shall mean the Bayfront I Redevelopment Plan as adopted by Jersey City on March 12, 2008.

31. **Riverkeeper** shall mean the plaintiffs in *Hackensack Riverkeeper, Inc. v. Honeywell International Inc.*, D.N.J., Civ. No. 06-22 (DMC), and includes the Hackensack Riverkeeper, Inc., William Sheehan, Reverend Winston Clarke, and Lawrence Baker.

32. **Sediment Consent Order** shall mean the Consent Order on Sediment Remediation and Financial Assurances, which the Parties expect will be entered by the Court in *ICO v. Honeywell* and this Consolidated Litigation.

33. **Shallow Groundwater** or **Shallow Level of Groundwater** shall mean groundwater above the meadow mat, groundwater at stratigraphically equivalent depths in locations where there is no meadow mat, and groundwater that is contaminated by recent contact with COPR or other chromium soil contamination above the meadow mat and subsequently flows downward through or past the meadow mat into the upper portion of the lacustrine sediments. This does not include groundwater found in the bedrock, the deep zone, or any plume of contamination that is in both the intermediate and deep zones, as those zones are defined in the Final Groundwater Investigation Report, prepared in *ICO v. Honeywell*, dated February 2007, p. 1-2.

34. **Site** shall mean Study Area 6 North.

35. **Site Preparation Activities** shall have the meaning set forth in paragraph 3.1 of the Jersey City/Honeywell Consent Order.

36. **Site Preparation Plan** shall have the meaning set forth in paragraph 3.2 of the Jersey City/Honeywell Consent Order.

37. **Soil** shall mean soils, historic fill, and/or COPR.

38. The **Special Master** shall mean Senator Robert G. Torricelli, appointed as the Special Master in *ICO v. Honeywell* and the Consolidated Litigation, and his successors or whomever the Court may appoint as Special Master.

39. **Stratum O** shall mean the layer composed of soft brown silty fine sand interlayered with soft gray silty clay and fine sandy to clayey silt generally located above the meadow mat below the Historic Fill and/or COPR.

40. **Study Area 6 North** shall mean that property comprising Sites 87 and 88 of the Chromate Chemical Production Waste Sites designated by NJDEP, comprising approximately 41.58 acres and including: (a) all such property owned by JCMUA located at 555 Route 440, Jersey City, New Jersey, (b) all such property owned by JCIA located at 501 Route 440, Jersey City, New Jersey; (c) all such property owned by Jersey City or its Department of Public Works and located at 575 Route 440, Jersey City, New Jersey; and (d) all such property owned by Paul Trenk consisting of Block 1290.1, Lot 2A, Jersey City, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

41. **Study Area 6 South** shall mean (a) that property currently owned by 425/445 Route 440 Property LLC consisting of Site 73, located at 200 Kellogg Street Jersey City, Hudson County, New Jersey; (b) that property currently owned by Kellogg Street 80 Property LLC consisting of Site 134, located at 100 Kellogg Street Jersey City, Hudson County, New Jersey; (c) that property currently owned by Kellogg Street 80 Property LLC consisting of Site 140 located at 80 Kellogg Street Jersey City, Hudson County, New Jersey; (d) that property currently owned by Kellogg Street 60 LLC consisting of Site 125, located at 60 Kellogg Street Jersey City, Hudson County, New Jersey; (e) that property currently owned by Kellogg Street/440 Property LLC consisting of Site 124, Jersey City, Hudson County, New Jersey; (f) that property currently owned by Kellogg St/Harsimus Cove Realty located at 150 Kellogg Street, Jersey City, Hudson County, New Jersey, (g) that property currently owned by Cordova Enterprises Ltd located at 38 Kellogg Street, Jersey City, Hudson County, New Jersey, and (g) that property currently owned by Cordova Enterprises Ltd located at 28 Kellogg Street, Jersey City, Hudson County, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

42. **Study Area 6** shall mean Study Area 6 North and Study Area 6 South, collectively.

43. **Study Area 7** shall mean (a) that property currently owned by 425/445 Route 440 Property LLC located at 425 and 445 Route 440, Jersey City, Hudson County, New Jersey, and (b) that property currently owned by Roned Realty/Edward Navlen located at 465 Route 440, Jersey City, Hudson County, New Jersey. Such properties are more fully described in Exhibit H to the Jersey City/Honeywell Consent Order.

44. **Technical Requirements for Site Remediation** shall mean the NJDEP Technical Requirements for Site Remediation, N.J.A.C. Chapter 26E, as duly and properly promulgated and amended.

45. **Unrestricted Use** shall mean that the contaminated medium is restored to a condition or quality suitable for all uses.

ARTICLE II: SCOPE OF THE CONSENT DECREE, JURISDICTION, AND CLAIMS RESOLVED

46. Except as provided in this paragraph, the terms of the Jersey City/Honeywell Consent Order shall remain in full force and effect. To the extent that any provision in the Jersey City/Honeywell Consent Order refers to the Chromium Remedy or Chromium Remediation, it shall be construed as referring to Article III of this Decree. In the event of any conflict or inconsistency between the terms of this Decree and the Jersey City/Honeywell Consent Order, the terms of this Decree govern. In the event that any action taken pursuant to the Jersey City/Honeywell Consent Order is in conflict with or inconsistent with the terms of this Decree, the terms of this Decree shall govern.

47. This Court has jurisdiction over the Parties and subject matter of the Consolidated Litigation pursuant to Section 6972 of RCRA.

48. For purposes of this Consent Decree, the Complaints in the Consolidated Litigation each state claims upon which relief may be granted against Honeywell.

49. In the event that this Decree is not terminated by one or more Parties pursuant to paragraph 100, this Consent Decree resolves, settles, and satisfies all claims by Riverkeeper against Honeywell with respect to soils and shallow groundwater at Study Area 6 North. This Consent Decree does not resolve any claims by Riverkeeper against Honeywell with respect to Study Area 6 South, Study Area 5, or groundwater at Study Area 6 North other than shallow groundwater.

50. Nothing in this Consent Decree shall be construed or interpreted to waive any claim or defense any Party has asserted or may assert against any third party in the Consolidated Litigation except as explicitly stated herein.

51. This Consent Decree does not constitute an admission of liability on the part of any Party with respect to any claims, cross-claims, or counter-claims in the Consolidated Litigation.

ARTICLE III: CHROMIUM REMEDIATION

A. Chromium Remedy

52. **Responsibility for Implementation of Chromium Remediation.** As between the Parties, Honeywell shall be responsible for and shall undertake remediation of COPR and chromium present in Study Area 6 North at Honeywell's sole cost and expense. Remediation of COPR and chromium present in Study Area 6 North shall be undertaken in accordance with the terms of this Consent Decree.

53. **AOC 1 and AOC 2.** For the purposes of remediation, Study Area 6 North shall consist of two Areas of Concern ("AOCs"), designated as AOC 1 and AOC 2 as shown on Exhibit B. AOC 1 is set forth on Exhibit B and consists of that portion of Study Area 6 North for which chromium remediation is required pursuant to paragraphs 55, 56, and 57. AOC 2 consists of the entirety of Study Area 6 North, including AOC 1, to the extent that historic fill is present in any area of Study Area 6 North. For AOC 1, the intended land use will determine the types

of remedial measures taken in the Chromium Remedy. There are two distinct land uses for AOC 1: open space and residential. As a result, AOC 1 will be further subdivided into:

(a) The AOC 1 Open Space Area, which shall comprise that portion of AOC 1 for which future use shall be restricted as provided in paragraph 60. The AOC 1 Open Space Area is shown on Exhibit B;

(b) The AOC 1 Residential Area, which shall comprise that portion of AOC 1 for which future use shall allow for residential and/or commercial and retail uses, but for which the remedial measures shall assume only a residential use . The AOC 1 Residential Area is shown on Exhibit B; and

(c) The AOC 1 Additional Excavation Areas, which consist of those portions of Study Area 6 North that require remediation pursuant to paragraph 57. The planned land use for the AOC 1 Additional Excavation Areas is residential and/or commercial and retail uses, but the remedial measures shall assume only a residential use.

54. **Scope and General Requirements of the Chromium Remedy.** The Chromium Remedy shall address shallow groundwater and soil containing hexavalent chromium in AOC 1, and shall be consistent with the requirements set forth in this Article. The Chromium Remedy set forth in this Consent Decree addresses only the shallow level of groundwater (see paragraph 58). The deep overburden and bedrock groundwater remediation, including source control, shall be addressed in a separate consent order, which shall place these issues within the jurisdiction of the Special Master in conjunction with the groundwater remedies for Study Area 7.

(a) The Chromium Remedy shall be consistent with the NJDEP Technical Requirements for Site Remediation, the Chromium Directive as issued by NJDEP on February 8, 2007 ("the NJDEP Chromium Directive"), and the Remedial Action Work Plan (with addenda) approved by NJDEP on or about February 19, 2008. This Consent Decree shall have precedence

over the Remedial Action Work Plan in the event of any inconsistency.

(b) The Chromium Remedy shall be carried out diligently, and the development and implementation of the Historic Fill Remedy shall not delay satisfaction of the milestones in the Schedule established pursuant to this paragraph. Honeywell shall propose a master Schedule for the implementation of the Chromium Remedy within 90 days of the entry of this Consent Decree, which shall include, at a minimum, the following milestones:

(i) Submission to the Special Master for all documents subject to review by the Special Master pursuant to paragraph 72(c);

(ii) Relocation of the Jersey City Entities' Study Area 6 North Operations as shall be required prior to the implementation of the Chromium Remedy;

(iii) Completion of those Site Preparation Activities necessary for the implementation of the Chromium Remedy, including remediation of the AOC 1 Additional Excavation Areas;

(iv) A final date for Honeywell's proposal of *in situ* treatment for any part of the AOC 1 Residential Area pursuant to paragraph 55(d) and a date for the final decision as to whether excavation or *in situ* treatment shall be used in the event of such a proposal;

(v) The initiation of work related to the Chromium Remedy;

(vi) The date for completion of the installation of the Chromium Remedy;

(vii) Implementation of the long-term protections of the AOC 1 Open Space Area established pursuant to paragraph 60; and

(viii) Transfer of the AOC 1 Open Space Area to Jersey City pursuant to paragraph 60(a)(iii).

(c) **Demolition and Grading Activities.** During demolition and grading activities, adequate protective measures shall be taken to protect site workers and the community

from airborne dusts and exposures to contaminated soils.

(d) **Vegetation of Clean Fill.** All clean soil fill in areas that will not involve paved roads, sidewalks, paths, walkways, or building structures shall be vegetated in such a manner to protect and maintain the required depth of clean soil fill.

55. **AOC 1 Residential Area Soil Remedy.** In the AOC 1 Residential Area, soils containing hexavalent chromium at concentrations greater than 20 mg/kg shall be excavated to a depth of 20 feet below the current ground surface in accordance with the NJDEP Chromium Directive.

(a) Those soils excavated from the AOC 1 Residential Area in which hexavalent chromium concentrations exceed 240 mg/kg shall be disposed of off-site at a waste disposal facility licensed to accept such waste.

(b) Those soils excavated from the AOC 1 Residential Area in which the hexavalent chromium concentration is less than 240 mg/kg, but greater than 20 mg/kg, shall be consolidated within the AOC 1 Open Space Area. However, any such soils which would require venting of gases shall be disposed of off-site.

(c) Soils excavated from the AOC 1 Residential Area shall be replaced with existing soils from AOC 2 or backfill soil. Any backfill soil brought to the Site shall either meet all applicable federal and NJDEP criteria, including NJDEP residential soil criteria, or comply with a beneficial soil reuse plan that is approved by NJDEP and subject to review and comment by the Parties and approval by the Special Master.

(d) In the AOC 1 Residential Area, excavation of soils containing hexavalent chromium greater than 20 mg/kg shall be the presumptive remedy. Around remaining active underground utilities or other structures, such as the bulkhead, *in situ* treatment may be considered in lieu of excavation only if Honeywell demonstrates, and all Parties, the Special

Master, and NJDEP agree that (1) excavation is technically impracticable and (2) treatment will result in hexavalent chromium concentrations of 20 mg/kg or less and no rebound will occur. If no treatment option is available, Honeywell shall propose an alternative remedial approach, subject to review and comment by the Parties and approval by the Special Master.

(e) Honeywell shall excavate all soils containing hexavalent chromium greater than 20 mg/kg in conjunction with the placement of the piping for the Deep Groundwater Remedy. Honeywell shall not propose treatment in lieu of excavation based on the location of the pipes for the Deep Groundwater Remedy or any apparent impracticability of excavating in conjunction with their installation.

56. **AOC 1 Open Space Area Soil Remedy.** In the AOC 1 Open Space Area, the soil remedy shall consist of an engineered RCRA cap to isolate contaminated soils, with gas venting, if necessary, to address the generation of methane and other naturally occurring gases in the Stratum O and/or Stratum D in the Open Space AOC. Soils consolidated under the cap, shall not require gas venting and shall not be the basis for the inclusion of gas venting as a component of the cap. The cap shall be designed and constructed so that:

(a) The cap shall consist of gas collection system, if gas venting is necessary, a base protective layer, an impervious geomembrane liner with a minimum thickness of 40 mil; a geocomposite drainage layer; a filter fabric; and a distinctive colored warning layer with markings in English and Spanish that would deter penetration of the cap in the event that digging occurred in the vicinity of the cap;

(b) All utilities, including those supporting the pump-and-treat system for groundwater remediation, with the exception of any extraction wells or collection trenches, shall be placed above the cap (but may be below the ground surface and/or contained within utility corridors). In the event that above-cap-grade gas collection and treatment is selected or is

needed to meet current or future regulatory requirements, such collection and treatment facilities are prohibited in the Open Space AOC, except for piping to connect the sub-liner collection system with the treatment facilities. Honeywell shall configure the cap so that all active piping for the wastewater treatment system operated by JCMUA, including all force mains and any connections to the emergency outfall, shall be outside the capped area. Honeywell may propose, subject to the review process in paragraph 72, to use treatment in lieu of excavation in the vicinity of the emergency outfall line if the criteria of paragraph 55(d) are satisfied; and

(c) Exclusive of roadways, the cap shall be overlain by layers of clean fill, backfill and/or overburden with an average depth of at least three feet and a minimum depth of at least two feet provided that any layer that incorporates overburden shall be below at least two feet of clean fill. Any clean fill or backfill soil brought to the Site will either meet all applicable federal and NJDEP criteria, including NJDEP residential soil criteria, or comply with a beneficial soil reuse plan that is approved by NJDEP and subject to review and comment by the Parties and approval by the Special Master. One foot of clean fill, covered with bituminous blacktop, shall be sufficient cover where roads, walkways, or other paved surfaces are located within the AOC 1 Open Space Area. All clean soil fill in areas that will not involve paved roads, walkways, or other paved surfaces shall be vegetated in such a manner as to protect and maintain the required depth of the clean soil fill and to ensure that such vegetation shall not cause any interference with or penetration of the cap.

(d) The existing overburden soils in the AOC 1 Open Space Area shall first be stripped off and set aside for use. If hexavalent chromium concentrations in the overburden exceed 20 mg/kg, the overburden shall be placed under the cap. If hexavalent chromium concentrations in the overburden do not exceed 20 mg/kg, the overburden may be placed above the cap but below the two feet of clean fill required by paragraph 56(c). Excavated hexavalent

chromium impacted soils (with concentrations between 20 mg/kg and 240 mg/kg) from the AOC 1 Residential Area shall be placed and spread in the AOC 1 Open Space Area under the cap. Excavated hexavalent chromium impacted soils (with concentrations between 20 mg/kg and 240 mg/kg) from the Study Area 6 South Development AOC (as defined in the First Amended Consent Decree Regarding Remediation and Redevelopment of Study Area 6 South and including only those portions of Study Area 6 South for which the future uses of the property may include commercial or residential development) may be placed and spread in the AOC 1 Open Space Area under the cap, provided that such soils do not require venting of gases and shall not serve as the basis for the inclusion of gas venting as part of the Study Area 6 North AOC 1 Open Space Area remedy. Both the chromium impacted soils and the previously stripped overburden shall be suitably compacted according to design specifications. Debris, to the extent it would interfere with the compaction specification requirements of the 100% Design, shall not be placed under the cap. The engineered cap shall be installed over the chromium-impacted soils exceeding 20 mg/kg hexavalent chromium.

57. **AOC 1 Additional Excavation Areas Remedy.** For those AOC 1 Additional Excavation Areas, soils containing hexavalent chromium at concentrations greater than 20 mg/kg shall be excavated to a depth of 20 feet below the current ground surface in accordance with the NJDEP Chromium Directive. Excavation of those areas comprising the AOC 1 Additional Excavation Areas shall initially be conducted in the 50-foot by 50-foot area planned in the RAWP but shall not be so limited in the event that confirmation sampling indicates that hexavalent chromium concentrations continue to exceed 20 mg/kg. Honeywell shall excavate laterally and vertically (to depths of up to 20 feet below current ground surface) until the hexavalent chromium is less than 20 mg/kg based on the results of confirmation sampling. Confirmation sampling for the AOC 1 Additional Excavation Areas shall be taken from the side

walls and bottom of the excavation, in accordance with the Technical Requirements for Site Remediation, to confirm complete removal of contaminated soils.

58. **Shallow Groundwater Remedy.** The shallow groundwater remedy shall consist of hydraulic barriers with a pump-and-treat system designed to isolate shallow groundwater and to intercept and treat shallow groundwater flowing above the meadow mat in the AOC 1 Open Space Area. The shallow groundwater remedy shall consist of the following:

(a) The existing soil/cement/bentonite wall on the boundary of Study Area 6 North and Study Area 7 shall be incorporated into the other engineering controls;

(b) Subterranean slurry walls or other hydraulic barriers shall be installed along the northern, eastern and western sides of the AOC 1 Open Space Area and keyed into the meadow mat or Stratum O or to comparable depths below ground surface;

(c) A groundwater extraction system shall be established that will consist of (i) one or more shallow extraction wells, sumps, or french drains within the AOC 1 Open Space Area; (ii) pumps; and (iii) underground piping to convey any extracted water to Honeywell's Treatment Plant;

(d) The capture zone for the shallow groundwater remedy shall include at least the entire area of contaminated shallow groundwater (except for shallow groundwater that penetrates the meadow mat and is captured by the Deep Groundwater Remedy);

(e) A plan for control of water levels shall be developed;

(f) In the event that underground structures are demolished, the plans shall address the need for special attention for structures that extend below the meadow mat in order to control needed water levels; and

(g) Honeywell shall submit such information as is required to allow NJDEP to establish a classification exception area for groundwater at the Site, in accordance with NJDEP

regulations.

59. **Permits and Authorizations.** Honeywell shall obtain all necessary federal, state, and local permits and authorizations to carry out the Chromium Remedy as set forth in this Article. The Jersey City Entities agree to cooperate with Honeywell in the applications for any such permits, authorizations, or approvals. Such cooperation shall include providing information or data with respect to permit applications, co-signing permit applications, and allowing access to Study Area 6 North to obtain information necessary for the permits.

B. Long-Term Monitoring, Maintenance, and Protection of Engineering and Institutional Controls

60. **Protection of the AOC 1 Open Space Area.** Except as provided in paragraphs 60(j) and 60(k), development in the AOC 1 Open Space Area shall be prohibited. The AOC 1 Open Space Area shall be protected against activities that may jeopardize the integrity of the cap and/or the groundwater remedial measures that shall be installed in the AOC 1 Open Space Area pursuant to the Chromium Remedy or that may impede the long-term monitoring and maintenance of the cap and/or groundwater remedial measures. It is the intention of the Parties to implement different layers of protection, which alone or in concert, impose restrictions on development, run with the land, and survive all parties. Accordingly, the following actions shall be taken pursuant to the Schedule provided in paragraph 54(b):

(a) **Ownership of and Access to the AOC 1 Open Space Area.** Ownership of and access to the AOC 1 Open Space Area shall be in accordance with the following:

(i) Pursuant to the terms of this Consent Decree and paragraph 4.3 of the Jersey City/Honeywell Consent Order, Bayfront Redevelopment LLC shall become the owner in fee simple absolute of all of the property that comprises the AOC 1 Open Space Area and shall not convey any rights or interests in such property except as provided in this Decree. At the time

of the conveyance from JCRA to Bayfront Redevelopment LLC, Bayfront Redevelopment LLC shall give Jersey City an option to buy AOC 1 Open Space Area prior to the planned transfer pursuant to paragraph 60(a)(iii). Such option to buy shall be subject to the conservation restriction imposed pursuant to paragraph 60(b). Jersey City shall exercise the option to buy the AOC 1 Open Space Area in the event that the conditions allowing for withdrawal of funds from the financial assurance mechanisms under paragraphs 84(c) or 84(d) are met;

(ii) At the time the JCRA conveys the Study Area 6 North property to Bayfront Redevelopment LLC pursuant to paragraph 4.3 of the Jersey City/Honeywell Consent Order, Bayfront Redevelopment LLC shall grant a conservation restriction for the AOC 1 Open Space Area pursuant to the requirements of paragraph 60(b);

(iii) Upon the final construction of all roads and utility corridors within the AOC 1 Open Space Area, Bayfront Development LLC shall donate good and marketable title to all the land comprising the AOC 1 Open Space Area to Jersey City. In conjunction with such donation, Bayfront Redevelopment LLC shall petition to subdivide the properties within Study Area 6 North to create a new parcel(s) comprising the AOC 1 Open Space Area. At the time of the donation, Jersey City shall grant Honeywell an easement for the purpose of monitoring and maintaining the Chromium Remedy. Jersey City shall also grant Honeywell all necessary access to the AOC 1 Open Space Area by license or such other mechanisms as may be appropriate for purposes of monitoring and maintaining the Chromium Remedy. After it acquires title pursuant to this paragraph, Jersey City shall retain ownership of the AOC 1 Open Space Area unless and until it shall have complied with the requirements of paragraph 60(a)(iv);

(iv) After it acquires title pursuant to this paragraph, Jersey City shall not convey or enter into any lease of the AOC 1 Open Space Area to any other person or entity unless it has first satisfied either of the following conditions:

(1) Jersey City has obtained the Special Master's (or if the Special Master's appointment has expired, the Court's) approval to convey the AOC 1 Open Space Area to a government entity that has the capacity and willingness to fulfill Jersey City's obligations under the Consent Decree with respect to the AOC 1 Open Space Area and such entity agrees to submit to the Court's jurisdiction and to be bound by the requirements of the Consent Decree that Jersey City has committed to fulfill with respect to protection of the AOC 1 Open Space Area pursuant to this paragraph and routine maintenance of the permissible development in the AOC 1 Open Space Area pursuant to paragraph 64(d); or

(2) The AOC 1 Open Space Area has been remediated such that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive, and Jersey City has demonstrated to the Special Master and/or the Court, as appropriate, that such remediation has been completed in accordance with all applicable requirements.

(b) **Conservation Restriction.** At the time the JCRA conveys the Study Area 6 North property to Bayfront Redevelopment LLC pursuant to paragraph 4.3 of the Jersey City/Honeywell Consent Order, but prior to the grant of the option to buy pursuant to paragraph 60(a)(i), Bayfront Redevelopment LLC shall grant an open space conservation restriction, pursuant to N.J.S.A. 13:8-B-1, *et seq.*, over the AOC 1 Open Space Area substantially in the form set forth in Exhibit D. Exhibit D is a conservation restriction that is consistent with the terms of this paragraph and this Consent Decree. The conservation restriction shall allow for the implementation, maintenance, monitoring, repair and replacement of the Chromium Remedy and development consistent with paragraphs 60(j) and 60(k), including the construction and

placement of roads and utilities. The Hackensack River Watershed Land Trust shall be the primary holder of the conservation restriction, with all rights of monitoring and enforcement. Riverkeeper shall propose an entity to serve as the secondary holder of the conservation restriction subject to comment by the Parties and review by the Special Master. The secondary holder shall have secondary rights of monitoring and enforcement.

(i) The conservation restriction shall be incorporated into this Consent Decree and made part of this Consent Decree. The final, executed conservation restriction shall be lodged with the Court and entered as an order of the Court. The conservation restriction shall be enforceable in this Court, in the same manner as this Consent Decree.

(ii) The conservation restrictions provided under this Consent Decree shall be consistent with the prohibited and permitted development of the AOC 1 Open Space Area as set forth in paragraphs 60(j) and 60(k) below.

(iii) Jersey City shall not take any action, whether through exercise of any power of eminent domain, application to the State of New Jersey for approval of a diversion of public park or recreation land, legal challenge to the validity or enforceability of the conservation restriction, or otherwise, the effect of which would be to in any way terminate, abrogate, or diminish the terms, conditions, or purposes of the conservation restriction. If, notwithstanding the preceding sentence, Jersey City proceeds with a condemnation or other action, the result of which would be to terminate, abrogate, or otherwise diminish the terms, conditions, or purposes of the conservation restriction, Jersey City shall, before taking any such action satisfy all of the conditions set forth in paragraph60(a)(iv)(2).

(iv) Notwithstanding the foregoing, the conservation restriction may be terminated upon application of any Party when no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area, whether in soils or in groundwater, in excess of the

levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive.

(c) **Deed Notice.** Upon completion of the Chromium Remedy, the AOC 1 Open Space Area shall be subjected to the deed notice substantially in the form set forth in Exhibit E that restricts future activities on the AOC 1 Open Space Area. Nothing in the deed notice shall be construed as preventing the imposition of more stringent restrictions on the development allowed in the AOC 1 Open Space Area pursuant to this paragraph and, in particular, the conservation restriction provided for in paragraph 60(b).

(d) **Recording of the Consent Decree, Conservation Restriction, and Deed Notice.** This Consent Decree, the conservation restriction imposed pursuant to paragraph 60(b), and the deed notice imposed pursuant to paragraph 60(c) shall be recorded, pursuant to N.J.S.A. 46:15-1.1, 46:16-1.1, and 46:16-2, in the office of the Hudson County Register and a conspicuous reference to the Consent Decree, conservation restriction, and deed notice shall be included in all instruments concerning title to the AOC 1 Open Space Area. Any Party shall have the right, periodically, but no more than once every 25 years, to record memoranda or other instruments that reference, incorporate, or attach this Consent Decree, the conservation restriction, the deed notice, and/or any further orders of the Court related to the AOC 1 Open Space Area in the real estate records related to the AOC 1 Open Space Area.

(e) **Zoning.** Pursuant to the Redevelopment Plan, the AOC 1 Open Space Area is designated for open space and park. Jersey City shall not amend or change this designation unless it first satisfies the requirements of paragraph 60(a)(iv)(2).

(f) **Recreation and Open Space Inventory.** Upon acquiring fee simple absolute title to the AOC 1 Open Space, Jersey City shall add those portions of the AOC 1 Open Space Area not covered by roads, the pedestrian thoroughfare, and utility corridors adjacent to

roads onto its Green Acres Program Recreation and Open Space Inventory ("ROSI") pursuant to N.J.A.C. 7:36 and shall specify in such listing that it is subject to (i) Honeywell's prior easement to monitor, maintain, repair, and replace the Chromium Remedy; (ii) the actions necessary to implement, monitor, maintain, repair, and replace the Chromium Remedy; (iii) the actions necessary to install any development permissible under paragraphs 60(j) and 60(k); and (iv) the conservation restriction imposed pursuant to paragraph 60(b). Jersey City shall also take all steps necessary or appropriate to notify the New Jersey Green Acres Program that such portions of the AOC 1 Open Space Area have been added to its ROSI, such that those portions of the AOC 1 Open Space Area shall thereafter be subject to all procedural and regulatory requirements applicable under the Green Acres Program, including prohibitions against diversion.

(g) **Eminent Domain.** If all or part of the AOC 1 Open Space Area is taken in exercise of the power of eminent domain, or acquired by purchase in lieu of condemnation, by any public, corporate, or other authority so as to terminate, abrogate, or limit the restrictions created by this Consent Decree or the conservation restriction imposed pursuant to paragraph 60(b), in whole or in part, any Party may take appropriate actions to challenge such taking if there is a reasonable legal basis for doing so. In the event that the Parties are unable to prevent a taking notwithstanding their reasonable and appropriate efforts, any Party may take appropriate actions to recover the full value of the interests in the AOC 1 Open Space Area subject to the taking or in lieu purchase, and all direct and incidental damages, costs, and fees occasioned thereby.

(h) **Environmental Covenant.** In the event that New Jersey enacts the Uniform Environmental Covenants Act or its substantial equivalent, the Parties shall address the issue of whether an environmental covenant shall be established for the AOC 1 Open Space Area under the statute. If the Parties are unable to reach agreement on establishment of an environmental

covenant, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. The Special Master shall recommend adoption of an environmental covenant if it would provide substantial additional protection for the AOC 1 Open Space Area without unreasonably harming the interests of any Party. Any Party shall have the right to seek review by the Court of the Special Master's recommendation or consideration by the Court of the dispute in the event that the Special Master's appointment has expired.

(i) **Future Protections.** Any Party shall have the right to propose consideration of additional or substitute protections for the AOC 1 Open Space Area. If the Parties are unable to reach agreement with regard to the proposal, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. The Special Master shall recommend adoption of additional or substitute protections for the AOC 1 Open Space Area if they would provide substantial additional protection for the AOC 1 Open Space Area without unreasonably harming the interests of any Party. Any Party shall have the right to seek review by the Court of the Special Master's recommendation or consideration by the Court of the dispute in the event that the Special Master's appointment has expired.

(j) **Prohibited Development in AOC 1 Open Space Area.** Only development satisfying the requirements of this paragraph and paragraph 60(k) shall be permitted in the AOC 1 Open Space Area. All other development in the AOC 1 Open Space Area shall be prohibited.

(i) Honeywell shall establish Open Space Design Standards that shall govern all development in the AOC 1 Open Space Area regardless of when the construction or installation of permissible development occurs. The Open Space Design Standards shall satisfy each of the requirements set forth in paragraph 60(j)(v) and shall set forth the requirements for development that are necessary for the protection of the integrity of the Chromium Remedy.

(ii) The Initial Development in the AOC 1 Open Space Area shall be the

development undertaken following the completion of the Chromium Remedy in the AOC 1 Open Space Area. The Initial Development may occur in one or more phases. Honeywell and Bayfront Redevelopment LLC shall prepare a Development Plan before the initiation of each phase of the Initial Development. The Initial Development Period for each phase shall consist of the period covered by the Initial Development, plus a period of 10 years following the submission of the as-built documentation for the phase pursuant to paragraph 60(j)(viii).

(iii) The Special Master shall have jurisdiction to review the Open Space Design Standards and the Development Plan(s) solely for the purpose of ensuring that any development undertaken during the Initial Development Period is consistent with this Consent Decree and with protection of the integrity of the Chromium Remedy. The Special Master's jurisdiction with regard to development in the AOC 1 Open Space Area shall run through the Initial Development Period for each phase.

(iv) Honeywell shall ensure that the requirements of this paragraph and paragraph 60(k) are satisfied with regard to any development undertaken within the Initial Development Period. Honeywell shall also ensure that any development undertaken within the Initial Development Period is designed and installed in a manner consistent with this Consent Decree and with protection of the integrity of the Chromium Remedy.

(v) Any development undertaken in the AOC 1 Open Space Area, regardless of when undertaken, shall satisfy each of the following requirements:

(1) It shall not jeopardize the integrity of the Chromium Remedy;

(2) It shall be limited to the types of development permitted under paragraph 60(k);

(3) It shall be consistent with this Consent Decree, including the conservation restriction imposed pursuant to paragraph 60(b), and the Redevelopment Plan;

however, in the event of any conflict or inconsistency between this Decree and the Redevelopment Plan, this Decree shall govern;

(4) In total, at least 75% of the AOC 1 Open Space Area, exclusive of the acreage used for roads and the pedestrian thoroughfare, shall be comprised of landscaping, as defined by paragraph 60(k)(xi);

(5) The portion of the Open Space Design Standards necessary for protection of the Chromium Remedy as related to all roads, the pedestrian thoroughfare and associated utility corridors as well as the general location of such items shall be included in the 100% Design of the Chromium Remedy;

(6) If the lowest elevation for the bedding for any utility line, including irrigation or sprinkler lines, is two feet from the top of the warning layer of the cap, the utility line shall be placed in a utility corridor;

(7) In any event, there shall be two feet of soil or more between the warning layer of the cap and the lowest elevation of the bedding for any irrigation or sprinkler lines; and

(8) No permanent concession facilities shall be permitted.

(vi) Honeywell shall submit the Open Space Design Standards and the Development Plan(s) for any development undertaken during the Initial Development Period pursuant to the requirements of paragraph 72(c), except that such documents need not be submitted to NJDEP. Following Honeywell's submission of such documents, the procedures of paragraphs 72(d) and 72(e) shall apply, except that the Special Master need not provide notice to NJDEP.

(vii) During the Initial Development Period, any development in the AOC 1 Open Space Area shall require the preparation and submission of a Development Plan pursuant

to paragraph 60(j)(vi) and such Development Plan shall be subject to review by the Special Master pursuant to paragraph 60(j)(iii).

(viii) Upon completion of each phase of the Initial Development, Honeywell shall provide as-built documentation for the Initial Development to the Special Master, Riverkeeper, and the Jersey City Entities. Upon completion of any further development during the Initial Development Period for the phase, Honeywell shall also provide as-built documentation to the Special Master, Riverkeeper, and the Jersey City Entities for the additional development. Such additional as-built documentation for a phase shall not affect the running of the Initial Development Period for the phase.

(ix) During the Initial Development Period, replacement in-kind of development features or facilities included in the Initial Development or minor modifications to the development features or facilities included in the Initial Development shall not require the preparation of a Development Plan or be subject to review by the Special Master, provided that such replacement or modification satisfies the requirements of the Open Space Design Standards, the applicable Development Plan, and paragraphs 60(j)(v) and 60(j)(x)(3)(notice requirement).

(x) After the Initial Development Period, all development is prohibited unless one of the following conditions is met:

(1) Jersey City satisfies the conditions set forth in paragraph 60(a)(iv)(2);

(2) The development is a replacement in-kind and such replacement is made in conformance with the specifications of the Open Space Design Standards, the applicable Development Plan, and paragraph 60(j)(v); or

(3) The development meets the requirements of paragraphs 60(j)(v) and 60(j)(xi), and Jersey City provides notice of its intention to alter or add to the

development undertaken in the Initial Development Period. Such notice shall be provided in writing to Honeywell, Riverkeeper, and the holders of the conservation restriction established pursuant to paragraph 60(b) at least 30 days prior to Jersey City's alteration or addition to development undertaken in the Initial Development Period. Honeywell, Riverkeeper, or any holder of the conservation restriction shall have the right to move the Court to prohibit such alteration or addition.

(xi) If any of the development features or facilities that Jersey City seeks to add pursuant to paragraph 60(j)(x) require utilities that would require utility corridors other than the utility corridors installed during the Initial Development Period, Jersey City shall obtain approval from the Court before installing such new utility corridors.

(xii) Jersey City shall provide Honeywell, Riverkeeper, and the holders of the conservation restriction established pursuant to paragraph 60(b) with an annual report that describes any alterations or additions, including those activities under paragraph 60(j)(x)(2), to the development undertaken during the Initial Development Period.

(xiii) All development features or facilities, whether included in the Initial Development or added subsequent thereto, are subject to demolition and/or removal to the extent necessary to maintain, replace, or repair the Chromium Remedy.

(k) **Permissible Development in the AOC 1 Open Space Area.** The Initial Development or any subsequent addition or alteration thereto may include any or all of the following types of development features or facilities, provided that such development features or facilities satisfy the conditions set forth in paragraph 60(j)(v):

(i) Roads and the pedestrian thoroughfare -- both crossing and running along the AOC 1 Open Space Area, but no more extensive than provided for in the diagram on page 39 of the Redevelopment Plan;

(ii) Curbing and fences;

(iii) Sidewalks, paths, walkways, and nature trails;

(iv) Utilities and utility corridors, lighting, and restrooms;

(v) Irrigation or sprinkler components or systems;

(vi) Water features;

(vii) Above-ground storm water cisterns;

(viii) Signs, including the signs or display required by paragraph 60(l);

(ix) Benches, trash receptacles, and bicycle racks;

(x) Recreational facilities, such as playground equipment, bocce ball courts, tennis courts, basketball courts, and athletic fields; and

(xi) Landscaping, including natural grasses, small trees, shrubbery, flowers, and potted plants, provided that such landscaping and the anticipated root structure of each landscaping component do not and will not jeopardize the integrity of the Chromium Remedy. Any portion of an athletic field that is covered in natural grass shall be considered landscaping for purposes of the percentage set forth in paragraph 60(j)(v)(4).

(l) **Signs or Displays.** Honeywell shall develop a permanent plan for informing visitors to the AOC 1 Open Space Area of the history of the chromium production, contamination, and its remediation. Such plan shall provide for appropriate signs or displays that communicate this information. Such plan shall be subject to review and comment by the Parties and approval by the Special Master.

61. **Honeywell's Ongoing Responsibility.** Honeywell shall be responsible for implementing, monitoring, maintaining, repairing and replacing the Chromium Remedy in perpetuity. Honeywell shall satisfy this responsibility through establishment and implementation of a Long-Term Monitoring Plan. In the event that Honeywell ceases to exist without a

successor-in-interest or its obligations under this Consent Decree are stayed or limited due to a bankruptcy petition, the Court shall appoint an independent third-party fiduciary who shall be responsible for implementing, monitoring, maintaining, repairing and replacing the Chromium Remedy pursuant to the requirements of this Consent Decree and the Long-Term Monitoring Plan, unless Jersey City volunteers to assume these responsibilities for the Chromium Remedy.

62. **Long-Term Monitoring Plan.** In consultation with the Parties, and subject to approval by the Special Master and NJDEP, Honeywell shall develop a Long-Term Monitoring Plan to ensure the ongoing effectiveness of the Chromium Remedy to meet the objectives set forth in paragraphs 56, 58, and 63. The Long-Term Monitoring Plan shall be consistent with the applicable EPA policies and guidance, including, among others, EPA's Comprehensive Five Year Review Guidance (2001) (or any subsequent revision) and with NJDEP's Technical Requirements for Site Remediation (or any subsequent revision).

63. **Long-Term Monitoring Plan Objectives.** Honeywell shall design the Long-Term Monitoring Plan to satisfy each of the following objectives:

(a) Provide monitoring to ensure that the integrity and effectiveness of the Chromium Remedy are maintained; and

(b) Provide monitoring to ensure that the restrictions of the institutional controls are being satisfied, including the prohibition on development in the AOC 1 Open Space Area.

64. **Monitoring and Remediation Under the Long-Term Monitoring Plan.** The Long-Term Monitoring Plan shall include the monitoring and remediation activities set forth in this paragraph and other monitoring and remediation activities, if necessary, to meet the objectives of paragraph 63. Honeywell shall provide Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP with annual reports on activities conducted under the Long-Term Monitoring Plan.

(a) **Monitoring Activities in the Long-Term Monitoring Plan.** Honeywell shall undertake the following monitoring activities at intervals to be specified in the Long-Term Monitoring Plan, but no less frequently than set forth below, and, if the monitoring shows it is necessary, Honeywell shall also undertake the remediation activities as set forth below:

(i) Quarterly visual inspection monitoring of the AOC 1 Open Space Area to ensure that it is not being put to any use that is inconsistent with paragraphs 60(j) and 60(k) or any use that may compromise the integrity of the Chromium Remedy. The Long-Term Monitoring Plan shall include an inventory of the prohibited and permissible uses pursuant to paragraph 60 and a corresponding checklist to be used by the individuals conducting the monitoring. If Honeywell determines that the AOC 1 Open Space Area is being used in a manner inconsistent with the protections or the integrity and effectiveness of the Chromium Remedy, Honeywell shall act as soon as possible to cause such use to cease and, if there has been damage to the Chromium Remedy, to repair or replace it to original specifications or to a level of protection equivalent to the original Chromium Remedy;

(ii) Quarterly visual inspection monitoring of the AOC 1 Open Space Area grade and slope to identify whether erosion has occurred or is occurring. Honeywell shall remediate any significant erosion.

(iii) Quarterly visual inspection monitoring to determine whether noticeable differential settlement or subsidence has occurred or is occurring in the AOC 1 Open Space Area such that the integrity of the Chromium Remedy may be materially impaired. If evidence of differential settlement or subsidence is found, Honeywell shall propose further investigative measures. Honeywell shall remediate any differential settlement or subsidence that is beyond the degree of differential settlement/subsidence allowed for in the 100% Design

and repair the cap and/or the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(iv) A baseline topographic survey at the completion of the Chromium Remedy and three additional surveys conducted at five-year intervals beginning five years after the conduct of the baseline survey. The topographic survey shall be of sufficient precision and accuracy to present the results as one-foot contours;

(v) Quarterly visual inspection monitoring to determine whether the Chromium Remedy in the AOC 1 Open Space Area has been disturbed. Any evidence of the distinctive warning layer materials or any other cap materials as described in paragraph 56(a) at the surface is an indication that the cap has been disturbed. In such an event, Honeywell shall propose further investigative measures to evaluate whether the integrity of the cap has been compromised. In the event that the investigative measures show that the cap integrity has been compromised, Honeywell shall repair or replace the cap and the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(vi) Quarterly visual inspection monitoring to ensure that burrowing animals are not materially impairing the integrity of the Chromium Remedy. If evidence of burrowing animals is found, Honeywell shall follow humane removal procedures and repair or replace the cap and the overlying layers to original 100% Design specifications or to a level of protection at least equivalent to the original Chromium Remedy;

(vii) Quarterly visual inspection monitoring of the vegetative cover in the AOC 1 Open Space Area to ensure that vegetative cover is in conformance with the landscaping provisions of the 100% Design and the Redevelopment Plan and will not materially impair the integrity of the Chromium Remedy. Maintenance of the vegetative cover shall include, at a

minimum, mowing to ensure that tree species cannot become established and removal of any other vegetation with the potential to damage the Chromium Remedy;

(viii) Quarterly groundwater monitoring to ensure that groundwater levels are maintained in accordance with the requirement to maintain an outward gradient from Study Area 7 and in accordance with the water level control plan developed pursuant to paragraph 58(e);

(ix) Monitoring of vented gases and the gas venting system to ensure proper operation of the system, to evaluate any degradation of the system, to assess the need for treatment of vented gases, either initial, subsequent, or further depending on whether treatment has been previously provided, and to detect any condition that might endanger public health or safety. Such monitoring shall be conducted on a monthly basis for at least one year and, if the readings are stable, such monitoring may be conducted thereafter on a quarterly basis; and

(x) Any additional monitoring as required by specific details added in the design phase of the AOC 1 Open Space Area.

(b) **Procedures for Proposing Changes to the Long-Term Monitoring Plan.** Any Party may, from time to time, propose changes to the scope of the monitoring activities under the Long-Term Monitoring Plan. If the Parties agree, the Long-Monitoring Plan shall be so changed subject to approval by NJDEP and by the Special Master, if his appointment has not terminated, or otherwise, by the Court. If the Parties are unable to reach agreement over alterations to the monitoring and the Special Master's appointment has not terminated under this Consent Decree, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation. In the event that the dispute arises after the Special Master's appointment has terminated, any Party may file a motion seeking a resolution of the dispute by

the Court.

(c) **Contingency Plan.** As part of the Long-Term Monitoring Plan, Honeywell shall develop a contingency plan to ensure the integrity of the remediation in the event of any planned penetration of the cap or otherwise planned activity that compromises the cap or any unplanned event or accident that penetrates the cap or otherwise compromises the integrity of the Chromium Remedy. The contingency plan shall include, at a minimum, an annually updated plan to notify the relevant persons, including the Special Master, NJDEP, and the Parties, of (i) the event penetrating the cap, compromising the cap, or compromising the integrity of the Chromium Remedy; (ii) the general steps to be taken to identify the extent of the problem; and (iii) the standards for remedying the problem.

(d) **Routine Maintenance.** The title owner of the AOC 1 Open Space Area shall conduct maintenance of the AOC 1 Open Space Area features or facilities that are permissible under paragraphs 60(j) and 60(k). The maintenance workers shall be trained in maintenance procedures that do not jeopardize the integrity of the Chromium Remedy. The training shall include the identification and reporting of any uses or features that are not permissible in the AOC 1 Open Space Area or that may jeopardize the integrity of the Chromium Remedy. Honeywell shall provide all training materials. The title owner of AOC 1 Open Space Area shall annually provide to the other Parties and the Special Master a report describing the training which has been provided to its maintenance workers. The title owner of the AOC 1 Open Space Area shall also provide to the Parties and the Special Master notice of any violations of the restrictions relating to the AOC 1 Open Space Area identified by its workers during routine maintenance.

(e) **Recordkeeping.** Honeywell shall maintain written logs or other records of those monitoring and remediation activities undertaken pursuant to the Long-Term Monitoring

Plan. Such logs shall be provided to Riverkeeper and the Jersey City Entities on a quarterly basis.

65. **Monitoring and Reporting to Riverkeeper and Jersey City Entities.** Riverkeeper and Jersey City Entities shall be provided with all documents submitted to NJDEP and/or the Special Master with respect to the Chromium Remedy, including the documents identified in paragraph 72(c).

66. **Notice to Stakeholders.** All residents, regardless of whether they are owners or lessees, and all commercial tenants on Study Areas 6 and 7 are hereby deemed stakeholders. Honeywell shall ensure that all stakeholders shall be provided at the time of their purchase or lease with notice of the contamination, the remedial actions that have been undertaken or are planned, and the importance of reporting activities that may appear to jeopardize the integrity of the engineering controls. Notice shall be accomplished in the following manner:

(a) Bold or otherwise conspicuous language on the first page of the deed provided to all purchasers in the Residential Area;

(b) A summary notice of the Chromium Remedy which:

(i) Has been subject to review and comment by the Parties and approval by the Special Master; and

(ii) Provides a reference to public websites and libraries and/or the future equivalents thereof, where the following can be found:

(1) Zoning and other Jersey City maps showing the AOC 1 Open Space Area; and

(2) Documents describing the contamination and the remediation, including:

(a) This Consent Decree;

(b) The Remedial Investigation Report and the Final Remedial Action Report,

(c) The annual reports on long-term monitoring and maintenance and repair activities as required by paragraph 64 and annual reports on changes to the Initial Development as required by paragraph 60(j)(xii); and

(d) The Long-Term Monitoring Plan.

(c) The provision of the maps and documents referred to in paragraph 66(b)(ii) to the public via websites and libraries and/or the future equivalents thereof; and

(d) Notices to lessees and commercial tenants in all lease documents.

67. **Annual Letter to Riverkeeper and Jersey City Entities on Notice to Stakeholders.** Each year beginning one year after the issuance of the first notice in a deed or lease pursuant to paragraph 66, Honeywell shall provide a letter to the Riverkeeper and the Jersey City Entities documenting its compliance with paragraph 66.

68. **Future Notice to Stakeholders.** Honeywell shall ensure that all stakeholders are provided with notice, at least annually, of long-term monitoring activities and any additional remediation activities undertaken with respect to the Chromium Remedy. Such notice shall be accomplished by notices on websites or future equivalents thereof, including Jersey City websites, any websites created to provide information about the Chromium Remediation or redevelopment of the Redevelopment Area, and one or more of the following:

(a) Any community message board or other similar site used and/or maintained by stakeholders or the manager(s) of the Redevelopment Area;

(b) Mailings to all stakeholders; and

(c) Posters and flyers throughout the Redevelopment Area.

69. **Stakeholder Enforcement.** Any stakeholder shall have the right to enforce the

remedial obligations of this Consent Decree in the Court, including post-implementation monitoring and maintenance obligations, and the terms of any deed notice or use restriction.

C. Oversight and Enforcement by the Special Master and NJDEP

70. **Federal Court Jurisdiction.** The Court shall retain jurisdiction for the purpose of overseeing and enforcing this Consent Decree and to review any issue or dispute which is not resolved through the oversight process described in Article III.C.

71. **Appointment and Jurisdiction of the Special Master.** The Chromium Remedy provided for in this Consent Decree is hereby referred to a Special Master pursuant to Rule 53 of the Federal Rules of Civil Procedure. The Special Master is appointed in the Consolidated Litigation for the purpose of overseeing and enforcing the Chromium Remedy, the first five years of long-term monitoring of the Chromium Remedy, financial assurances for the Chromium Remedy, and the Initial Development Period for each phase of development in the AOC 1 Open Space Area. The Special Master is also appointed in the Consolidated Litigation for the limited purpose of ensuring that the scheduling and implementation of the Historic Fill Remedy, the site preparation activities, and the site redevelopment activities described in the Jersey City/Honeywell Consent Order, Articles II.B, III, and IV, do not undermine the integrity of, unreasonably interfere with, or unnecessarily delay the effectuation of the Chromium Remedy, the Study Area 7 remedies, and other remedies within his jurisdiction as of the date of entry of this Consent Decree. The Special Master shall have jurisdiction over all matters for which he is appointed.

72. **Oversight of the Chromium Remedy.**

(a) **NJDEP Authority.** NJDEP shall retain its full statutory and regulatory authority with respect to the Study Area 6 North site, including (i) permitting authority; (ii) authority to review and approve the Remedial Action Work Plan, 100% Design, and final

Remedial Action Report for the Chromium Remedy; and (iii) authority to issue a no further action letter.

(b) **Special Master Responsibilities.** The Special Master shall have the following responsibilities:

(i) Ensuring that Honeywell's implementation of the Chromium Remedy satisfies the requirements of this Consent Decree;

(ii) Ensuring that Honeywell's implementation of the Chromium Remedy conforms with federal, state, and local permit requirements;

(iii) Establishing a reasonable schedule for the implementation of the Chromium Remedy and monitoring conformance with it;

(iv) Reviewing monthly progress reports and conducting periodic meetings with the Parties to review the progress of the implementation of the Chromium Remedy. NJDEP shall be invited, but not required, to participate in these meetings and the decision as to whether to participate shall be left to NJDEP's sole discretion;

(v) Submitting quarterly progress reports to the Court;

(vi) Overseeing the financial assurances established pursuant to paragraphs 77 through 86, and, until the expiration of his term pursuant to paragraph 76, overseeing the financial assurances established pursuant to paragraphs 87 through 98;

(vii) Coordinating review of the documents as provided in paragraphs 72(c) through 72(f);

(viii) Overseeing all development undertaken in the AOC 1 Open Space Area during the Initial Development Period pursuant to paragraph 60(j)(iii); and

(ix) To the extent that, in matters within the jurisdiction of the Special Master as set forth herein, a dispute arises between the Parties with respect to implementation of the Chromium Remedy, issuing a recommendation to the Court with respect to the dispute.

(c) **Submission of Documents by Honeywell.** Honeywell shall submit the following documents to Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP:

(i) An overall schedule with milestones for the design and implementation of the remedy ("Schedule");

(ii) Design drawings and specifications at the 50% level;

(iii) Design drawings and specifications at the 100% level (after selection of the contractor) (hereafter "100% Design");

(iv) The data validation plan, including quality control and quality assurance protocols;

(v) The site-wide master health and safety plan;

(vi) The Long-Term Monitoring Plan;

(vii) The final Remedial Action Report or final construction report (including as-built drawings and such other reports as may be prepared of the remedy as implemented);

(viii) A report reviewing measured groundwater levels for the groundwater remedy;

(ix) Documents required during the Initial Development Period pursuant to paragraphs 60(j)(vi), 60(j)(vii), and 60(j)(viii) ; and

(x) Other post-implementation monitoring reports as required by the Long-Term Monitoring Plan.

(d) **Comment on Submitted Documents.** For each of the documents submitted by Honeywell pursuant to paragraph 72(c), the Special Master shall establish a schedule for the submission of comments and responses to comments. For each of the documents submitted, Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP shall have the right to submit comments to Honeywell. Honeywell shall address all received comments and submit a revised document. The revised document shall be submitted by Honeywell to Riverkeeper, the Jersey City Entities, the Special Master, and NJDEP. The revised document shall be subject to review and approval pursuant to paragraph 72(e).

(e) **Review and Approval of the Submitted/Revised Document**

(i) **Scope of Review.** All documents submitted by Honeywell, pursuant to paragraph 72(c) and 72(d), shall be subject to review and approval by the Special Master in accordance with the following procedure. All such documents, except the Schedule and the 100% Design, shall be subject to the review and approval process and shall not require an order of the Court. The Schedule and 100% Design documents shall be subject to the review and approval process, but shall also require an order of the Court as provided in paragraph 72(f). A document shall be approved if the document (1) complies with this Consent Decree; (2) complies with the Remedial Action Work Plan for the Chromium Remedy; and (3) complies with the Schedule and 100% Design.

(ii) **Procedure.** Prior to making a decision on a document, the Special Master shall notify NJDEP of his intention to rule on the document or make a recommendation to the Court on the document. Such notice shall notify NJDEP that the Special Master will consider any comments NJDEP wishes to submit on the document if such comments are submitted within 30 days of NJDEP's receipt of the notice. NJDEP shall in its sole discretion determine whether to submit comments to the Special Master.

(iii) **Court Review.** If any Party objects to the Special Master's recommendation to the Court or approval of any document pursuant to this paragraph, that Party may seek further relief from the Court with respect to the document.

(f) **Schedule and 100% Design Documents.** As to the Schedule and the 100% Design documents, Honeywell shall have the responsibility, within 30 days of the Special Master's approval of each document, of (i) moving for entry of an order by the Court approving the document as approved by the Special Master; or (ii) filing objections with the Court to the Special Master's approval (and any recommendations contained therein) and moving for entry of the Schedule or 100% Design (including any such recommendations of the Special Master to which Honeywell agrees). Riverkeeper and the Jersey City Entities shall have the right in these proceedings to raise any objections they might have to the Schedule or 100% Design as approved by the Special Master or to the submission by Honeywell to the Court. NJDEP shall receive notice of any motion filed with respect to the Schedule or the 100% Design.

(g) **Flexibility in 50% and 100% Design Documents**. The Parties recognize that work conducted to implement the Chromium Remedy may be conducted by Honeywell contractors and that Honeywell may establish performance-based criteria or specifications for its contractors. As a result, the Parties recognize that the 50% Design and 100% Design documents for the Chromium Remedy may include performance-based standards, criteria, and specifications. These documents shall be sufficiently prescriptive to enable the Parties and the Special Master to evaluate their conformance with the Remedial Action Work Plan and this Consent Decree. The Parties also recognize that the 100% Design will be completed after Honeywell has selected a contractor. The Parties further recognize that completing the 100% Design after the selection of the contractor(s) shall not make the 100% Design subject to any less

stringent or more deferential review. Honeywell's commitment to the contractor(s) shall not be cause to limit review by the Parties and the Special Master.

(h) **Changes to the Schedule**. The Parties recognize that changes to individual line items in the Schedule will occur. To the extent that (i) the Parties and the Special Master agree that such changes do not have a material impact on satisfaction of the Schedule milestones established for items set forth in paragraph 54(b); and (ii) such changes do not require modifications to any necessary permits or authorizations for the Chromium Remedy, such changes may be made upon agreement of the Parties and the Special Master without further order of the Court.

73. **Retention of Professionals.** The Special Master may retain the services of professionals and/or other technical personnel, as reasonably needed, to fulfill his obligations under this Consent Decree, and for which he will be reimbursed pursuant to paragraph 75.

74. **Insurance for the Special Master.** The Special Master shall obtain insurance coverage relating to the performance of the Special Master's duties and responsibilities under this Consent Decree. Such coverage shall be similar to the Special Master's existing coverage in *ICO v. Honeywell*, procured pursuant to the Court's November 11, 2005 Stipulation and Order Regarding Special Master's Application to Procure Insurance Coverage, and as extended to the Consolidated Litigation by the Consent Order on Sediment Remediation and Financial Assurances ("Sediment Consent Order"). The insurance coverage shall be sufficiently extended in duration and scope to cover all additional duties and responsibilities as set forth hereunder. Honeywell shall pay the premiums and other administrative costs of the Special Master's insurance.

75. **Reimbursement of Special Master Fees and Expenses.** The Special Master shall submit fee applications to the Court for approval of reasonable fees and expenses incurred in the

oversight of matters referred to him pursuant to this Consent Decree. Any Party may raise with the Court objections to such fee applications. Upon approval of a fee application by the Court, the reimbursement of the Special Master's fees and expenses shall be made from the escrow fund previously established by Honeywell for the purpose of paying the Special Master's fees and expenses in *ICO v. Honeywell* pursuant to this Court's September 15, 2003 Order Setting Financial Assurances and extended to the Consolidated Litigation by the Sediment Consent Order.

76. **Expiration of Special Master's Appointment.** The Special Master's appointment under this Consent Decree shall expire after Honeywell has completed the first five years of long-term monitoring of the Chromium Remedy and the Initial Development Period for each phase of development has been concluded as provided in paragraph 60(j)(ii). However, solely to the extent that the Special Master is still supervising other portions of the Consolidated Litigation or *ICO v. Honeywell* after Honeywell has completed the first five years of long-term monitoring of the Chromium Remedy or the Initial Development Period for each phase of development as provided in paragraph 60(j)(ii), whichever is later, the Special Master shall continue to have jurisdiction under this Consent Decree until he has completed his specifically enumerated responsibilities under the Final Judgment in *ICO v. Honeywell*, the Sediment Consent Order, the Deep Groundwater Consent Order, and any other future orders, decrees, or judgments in *ICO v. Honeywell* and the Consolidated Litigation. Enumerated responsibilities under any order, decree, or judgment shall include only those tasks specifically assigned to the Special Master in the order, decree, or judgment. Enumerated responsibilities shall not include any continued jurisdiction exercised over long-term monitoring beyond the initial period specified in the order, decree, or judgment. For example, the Special Master has jurisdiction over the first five years of long-term monitoring under the Sediment Consent Order. Oversight during these five years shall

be an enumerated responsibility, but any continued oversight of long-term monitoring, pursuant to the extension of the Special Master's jurisdiction beyond the first five years, as provided in paragraph 60 of the Sediment Consent Order, shall not be an enumerated responsibility. Such extensions of jurisdiction shall be effective only so long as specific enumerated responsibilities in any order, decree, or judgment have not been fulfilled.

D. Initial Financial Assurances

77. **Chromium Remedy Letter of Credit.** Honeywell shall obtain a one-year, irrevocable letter of credit (the "Chromium Remedy Letter of Credit") to be automatically renewed annually in an amount equal to the "Remedial Costs Subject to Financial Assurance."

(a) Remedial Costs Subject to Financial Assurance shall mean:

(i) The costs of implementing the Chromium Remedy;

(ii) The costs of monitoring and maintenance activities, as required by the Long-Term Monitoring Plan, for five years; and

(iii) A contingency of 25% with respect to those costs listed in paragraphs 77(a)(i) and 77(a)(ii).

(b) The Chromium Remedy Letter of Credit shall be issued by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution, provided that in either case, the financial institution shall be acceptable to the Special Master.

78. **Procedures for Review of the Proposed Chromium Remedy Letter of Credit.** No later than 60 days after entry by the Court of this Consent Decree, Honeywell shall submit to Riverkeeper, Jersey City Entities, and the Special Master for their review the proposed (a) amount of the Chromium Remedy Letter of Credit; (b) form of the Chromium Remedy Letter of Credit; and (c) name of the institution that will issue the Chromium Remedy Letter of Credit. If

Riverkeeper or the Jersey City Entities do not agree to the terms of the Chromium Remedy Letter of Credit, the Parties shall meet and confer in an effort to resolve their differences. If the Parties are unable to reach agreement over the terms of the Chromium Remedy Letter of Credit, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation regarding the terms of the Chromium Remedy Letter of Credit.

79. **Automatic Renewal.** The Chromium Remedy Letter of Credit shall be automatically renewed annually unless (a) no later than 120 days prior to the anniversary of the Chromium Remedy Letter of Credit issue date, the issuer provides notice of nonrenewal or (b) Honeywell seeks a reduction in the Chromium Remedy Letter of Credit, pursuant to paragraph 80, to correspond to the reduced estimate of Remedial Costs Subject to Financial Assurances. If the issuer provides notice of nonrenewal, Honeywell shall obtain a replacement irrevocable Chromium Remedy Letter of Credit at least 95 days prior to the expiration date of the existing Chromium Remedy Letter of Credit. If Honeywell is not otherwise in default as provided in Article III.D, the Special Master shall direct the cancellation of the prior Chromium Remedy Letter of Credit within 91 days after delivery to the Special Master of any replacement of a Chromium Remedy Letter of Credit. In the event that the Special Master is entitled to draw upon a Chromium Remedy Letter of Credit because there are two Chromium Remedy Letters of Credit currently in place, the Special Master shall not draw an aggregate amount in excess of the highest valued Chromium Remedy Letter of Credit. Upon Honeywell's request, the Special Master may, at his option, decide not to require overlapping letters of credit in any year based on Honeywell's financial strength in that year, provided that Honeywell has submitted all necessary information so that the Special Master can make his determination at least 150 days prior to the expiration of the Chromium Remedy Letter of Credit.

80. **Annual Right to Seek Reduction in Amount of Chromium Remedy Letter of Credit.** Honeywell shall have the right annually to seek a reduction in the Chromium Remedy Letter of Credit. At the time of seeking such reduction, Honeywell shall submit to the Riverkeeper, the Jersey City Entities, and the Special Master an estimate of the remaining Remedial Costs Subject to Financial Assurance, including the contingency as described in paragraph 77(a)(iii), and shall seek adjustment of the Chromium Remedy Letter of Credit so that the total estimated amount of remaining Remedial Costs Subject to Financial Assurance are covered by the Chromium Remedy Letter of Credit. However, the adjustment shall not result in reducing the Chromium Remedy Letter of Credit to an amount below the remaining estimated costs under paragraphs 77(a)(i) and 77(a)(ii), plus a contingency of 25% of the remaining estimated costs under paragraphs 77(a)(i) and 77(a)(ii), and shall not result in reducing the Chromium Remedy Letter of Credit to an amount less than $20,000,000 as expressed in 2008 dollars unless long-term financial assurances are in place pursuant to Article III.E. Before making any request to reduce the amount or modify the terms of the Chromium Remedy Letter of Credit, Honeywell shall first confer with the Riverkeeper and the Jersey City Entities in an effort to reach agreement on the modified amount or terms of the Chromium Remedy Letter of Credit. If the Parties are unable to reach agreement over the modified amount or terms of the Chromium Remedy Letter of Credit, the Parties shall submit the dispute to the Special Master, who shall resolve the dispute. Any Party shall have the right to seek review by the Court of the Special Master's decision regarding the modified amount or terms of the Chromium Remedy Letter of Credit. Upon agreement on the amount of the reduction or modified terms of the Chromium Remedy Letter of Credit (or upon order of the Court directing that the Chromium Remedy Letter of Credit be reduced to an identified amount or otherwise modified), Honeywell shall obtain a replacement Chromium Remedy Letter of Credit in such amount and with such

terms. If Honeywell is not otherwise in default as provided in Article III.D and the issuer of the primary Chromium Remedy Letter of Credit has not provided notice of non-renewal, within 30 days after delivery to the Special Master of any replacement of a Chromium Remedy Letter of Credit, the Special Master shall direct the cancellation of the prior Chromium Remedy Letter of Credit.

81. **Bankruptcy Protection.** Neither the Chromium Remedy Letter of Credit nor the proceeds of the Chromium Remedy Letter of Credit shall be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy. The Chromium Remedy Letter of Credit shall contain the language necessary to assure that neither the Chromium Remedy Letter of Credit nor the proceeds of the Chromium Remedy Letter of Credit shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

82. **Exclusive Court Jurisdiction.** The Chromium Remedy Letter of Credit shall recite that the issuer submits to the exclusive jurisdiction of this Court for any and all disputes arising under the Letter of Credit.

83. **Application of New York Law.** The provisions of the Uniform Customs and Practice ("UCP") for Documentary Credits (1993 Revision) International Chamber of Commerce Publication #500 and New York law shall apply to the Chromium Remedy Letter of Credit.

84. **Procedures upon Honeywell's Material Default of Its Obligations.** During the period in which the Special Master has jurisdiction pursuant to paragraph 71, the Chromium Remedy Letter of Credit shall be payable to the Special Master and shall not, prior to its expiration date, be revoked or terminated except consistent with this Consent Decree and with the consent of the Special Master and approval by the Court. The Special Master's ability to draw upon the Chromium Remedy Letter of Credit shall not be limited by any agreement between Honeywell and the issuer. The Special Master may, without further order or notice to

this Court, draw upon the Chromium Remedy Letter of Credit upon the occurrence of default by Honeywell, which shall include:

(a) The failure of Honeywell, in the event that notice is given pursuant to paragraph 79 to deliver a replacement Chromium Remedy Letter of Credit at least 95 days prior to the expiration date of the existing Chromium Remedy Letter of Credit;

(b) The material failure of Honeywell to proceed with diligence and in good faith to carry out the terms of this Consent Decree and the continuance of such a material breach for a period of 15 days after written notice to Honeywell thereof and either (i) Honeywell, in the opinion of the Special Master without further input from the Parties, shall have failed to cure the breach; (ii) during the 15-day period, the Court has not entered an order to prevent the Special Master from drawing on the Chromium Remedy Letter of Credit; or (iii) the Court or the Special Master has not granted Honeywell additional time to cure the breach;

(c) The filing by Honeywell of a petition seeking relief, or the granting of relief, under the Federal Bankruptcy Code or any similar federal or state statute; any assignment for the benefit of creditors made by Honeywell; the involuntary filing of any of the foregoing against Honeywell if involuntary filing has not been dismissed within 60 days; the appointment of a custodian, receiver, liquidator, or trustee, or other similar official for Honeywell or for a substantial part of Honeywell's property; any action by Honeywell to effect any of the foregoing; or if Honeywell becomes insolvent as defined in Section 101(32) of the Federal Bankruptcy Code; or

(d) The dissolution, liquidation, merger, consolidation, or reorganization of Honeywell or the institution of any proceeding to effect any of the foregoing, other than under paragraph 84(c) above, and the failure of Honeywell to provide assurance to the Special Master, within 15 days after written notice, that such an event will not impair Honeywell's ability to

carry out the terms of this Consent Decree.

85. **Placement of Proceeds in Court Registry Investment System Account.** In the event that the Special Master draws upon the Chromium Remedy Letter of Credit due to an event of default, the Special Master shall place the proceeds of the Chromium Remedy Letter of Credit which represent the remaining estimated Chromium Remedy costs under paragraphs 77(a)(i), plus a contingency of 25% of the remaining estimated costs under paragraph 77(a)(i), in an account with the Court Registry Investment System in accordance with Local Civil Rule 67.1 and not expend the proceeds of the Letter of Credit without further order of this Court. The Special Master shall place all additional proceeds of the Chromium Remedy Letter of Credit in a trust fund pursuant to paragraph 90(b)(v).

86. **Termination of Chromium Remedy Letter of Credit.** The Chromium Remedy Letter of Credit may be withdrawn in its entirety upon the satisfaction of all of the following:

(a) The implementation of the Chromium Remedy; and

(b) Establishment of long-term financial assurance pursuant to Article III.E.

E. Long-Term Financial Assurances

87. **Long-Term Financial Assurances.** Honeywell shall fund long-term financial assurances to ensure that the activities set forth in paragraph 89(a) are carried out regardless of whether Honeywell is financially able to carry out such activities in perpetuity.

88. **Resolution of the Amount of Long-Term Financial Assurances.** The Parties have agreed to the following options with regard to how the long-term financial assurances shall be determined:

(a) If the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less,

and agree on the amount of funding needed, Honeywell shall provide long-term financial assurances as required by Article III.E.

(b) If the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less, but disagree on the amount of funding needed, Honeywell shall provide long-term financial assurances as required by Article III.E except that the dispute as to the amount of the long-term financial assurances shall be submitted to the Special Master pursuant to paragraph 91.

(c) If the Parties do not agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is $10,000,000 or less, or the Parties agree that the current amount necessary to cover the costs to be subject to long-term financial assurances, as set forth in paragraph 89(b), is greater than $10,000,000, the Parties shall seek resolution by the Court of the long-term financial assurances issues, including (i) the type of financial assurances to be provided; (ii) the scope of the financial assurances; (iii) the amount of the financial assurances; and (iv) the duration of the financial assurances. In the event that the Parties seek resolution by the Court, the provisions of paragraphs 90 through 98 shall not apply.

(d) Within 60 days of the entry of this Consent Decree, the Parties shall determine which option under this paragraph shall apply. In the event that the Parties determine that paragraph 88(c) applies, Riverkeeper shall initiate the proceedings by moving the Court for the imposition of long-term financial assurances.

(e) If the Parties determine that they are proceeding under paragraph 88(c), Honeywell shall maintain the Chromium Remedy Letter of Credit required by paragraph 77 in an amount equal to at least $20,000,000 in 2008 dollars until such time as the long-term financial assurances ordered by the Court are in place. In the event of any default by Honeywell pursuant

to paragraph 84 while the Chromium Remedy Letter of Credit is in place, the provisions of paragraph 90(b)(v) for the placement of the proceeds that exceed the remaining estimated Chromium Remedy costs under paragraph 77(a)(i) plus a contingency of 25% of the remaining estimated costs under paragraph 77(a)(i), shall apply.

89. **Costs Subject to Long-Term Financial Assurances.**

(a) Long-term financial assurances shall provide enough funds to cover the costs of the following activities:

(i) Perpetual monitoring and maintenance of the Chromium Remedy, including installation, operation and monitoring of any above-cap-grade gas collection and/or treatment system as may be necessary, but such system is not part of the 100% Design;

(ii) Perpetual operation of the shallow groundwater pump-and-treat remedy;

(iii) Perpetual repair of the cap;

(iv) Perpetual replacement of the cap on a 75-year replacement interval; and

(v) In the event that Honeywell selects a trust fund pursuant to paragraph 90(a), the perpetual administration of the trust fund.

(b) The costs that shall be subject to financial assurances is an amount that will provide the full payment for each of the activities set forth in paragraphs 89(a)(i) through 89(a)(v) plus a 25% contingency when the activities in paragraphs 89(a)(i) through 89(a)(v) are expected to be performed. The costs subject to financial assurances are forward looking because they state an amount valued at the time the funds are needed. As such, they shall be stated in contemporary time as the present value (calculated on the basis of a discount rate of 4.75%) of

the estimated future costs of the activities specified in paragraphs 89(a)(i) through 89(a)(v), plus a 25% contingency on those costs.

90. **Long-Term Financial Assurance Mechanisms.** Honeywell shall provide long-term financial assurances in the amount of the costs subject to long-term financial assurances in the form of a trust fund, a letter of credit, or some combination of the two. The selected mechanism(s) shall satisfy the following requirements:

(a) **Trust Fund.** In the event that Honeywell selects a trust fund, Honeywell shall create a trust fund such that it can provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary.

(i) The trust fund shall be at arm's length from Honeywell and shall not be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy, dissolution, privatization, or sale. The trust fund agreement shall contain the language necessary to assure that neither the trust fund nor the earnings of the trust fund shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

(ii) The trust fund shall be managed by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution acceptable to Riverkeeper and the Jersey City Entities or approved by the Court. In the event that the financial institution managing the trust fund declares bankruptcy, the Court shall withdraw the funds and appoint another financial institution meeting the requirements of this paragraph to manage the trust.

(iii) No more frequently than once per year, Honeywell may apply to the Court for an order directing the trust manager to reimburse Honeywell for any costs that it has incurred to carry out the activities set forth in paragraphs 89(a)(i) through 89(a)(iv).

(b) **Long-Term Letter of Credit.** In the event that Honeywell selects a letter of credit, Honeywell shall obtain a one-year irrevocable letter of credit (the "Long-Term Letter of Credit") to be automatically renewed annually in an amount that provides sufficient funds such that a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a), could be created. The Long-Term Letter of Credit-funded trust, plus any trust fund established under paragraph 90(a), shall provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. The amount of any Long-Term Letter of Credit shall therefore be adjusted periodically as the cap replacement interval is approached because, for example, the money needed in the 10th year to fund a trust that can provide for replacement of the cap in the 75th year is much less than the money that would be needed in the 40th year. Such periodic adjustments shall be proposed and approved by the Court in conjunction with the adjustments under paragraph 92.

(i) Neither the Long-Term Letter of Credit nor the proceeds of the Long-Term Letter of Credit shall be considered the property of Honeywell or property of the estate in the event of Honeywell's bankruptcy, dissolution, privatization, or sale. The Long-Term Letter of Credit shall contain the language necessary to assure that neither the Long-Term Letter of Credit nor the proceeds of the Long-Term Letter of Credit shall be affected or restricted in any way by operation of the automatic stay in 11 U.S.C. 362.

(ii) The Long-Term Letter of Credit shall be issued by a financial institution domiciled in the United States or by a United States subsidiary of a non-U.S. financial institution acceptable to Riverkeeper and the Jersey City Entities or approved by the Court. In the event that the financial institution issuing the Long-Term Letter of Credit declares bankruptcy, the Court shall authorize the drawing of funds from the Long-Term Letter of Credit

and shall deposit those funds in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

(iii) The provisions of the Uniform Customs and Practice ("UCP") for Documentary Credits (1993 Revision) International Chamber of Commerce Publication #500 and New York law shall apply to the Long-Term Letter of Credit.

(iv) The Long-Term Letter of Credit shall be automatically renewed annually, unless, no later than 120 days prior to the anniversary of the Long-Term Letter of Credit issue date, the issuer provides notice of non-renewal. If the issuer provides notice of non-renewal, Honeywell shall obtain a replacement irrevocable Long-Term Letter of Credit at least 95 days prior to the expiration date of the existing Long-Term Letter of Credit. If Honeywell is not otherwise in default as provided in this Article, the Court shall direct the cancellation of the prior Long-Term Letter of Credit within 91 days after delivery to the Court of any replacement of a Long-Term Letter of Credit. In the event that the Court is entitled to draw upon a Long-Term Letter of Credit when there are two Letters of Credit currently in place, the Court shall not draw an aggregate amount in excess of the highest valued Long-Term Letter of Credit.

(v) Prior to the expiration of the Special Master's appointment pursuant to paragraph 76, the Long-Term Letter of Credit shall be payable to the Special Master. During the time the Long-Term Letter of Credit is payable to the Special Master, the Special Master may draw on the Long-Term Letter of Credit as provided in paragraph 84. In the event that the Special Master draws upon the Long-Term Letter of Credit due to an event of default, the Special Master shall place the proceeds of the Long-Term Letter of Credit in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a). After the Special Master's appointment expires pursuant to paragraph 76, the Long-Term Letter of Credit shall be payable to the Court and, in the event that the Court draws

on the Long-Term Letter of Credit, the Court shall place the proceeds of the Long-Term Letter of Credit in a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

(vi) Whether the Long-Term Letter of Credit is payable to the Special Master or the Court, it shall not, prior to its expiration date, be revoked or terminated by Honeywell except consistent with this Consent Decree and with the approval of the Court. The ability of the Special Master or the Court to draw upon the Long-Term Letter of Credit shall not be limited by any agreement between Honeywell and the issuer.

(vii) In the event that the Long-Term Letter of Credit is drawn upon and invested pursuant to paragraph 90(b)(ii), 90(b)(v) or 95 and Honeywell has also selected a trust fund pursuant to paragraph 90(a), resulting in the existence of two trust funds, the two trust funds shall be managed so as to ensure that the combined amount of the trust funds is sufficient to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary.

(c) **Combination.** Honeywell may use some combination of a trust fund and a letter of credit to achieve the requirements of this paragraph. However, if a combination is used, Honeywell shall ensure that the combined amount of financial assurances is sufficient to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. The trust fund and the letter of credit shall otherwise satisfy all the requirements of paragraphs 90(a) and 90(b).

91. **Procedures for Review of the Proposed Long-Term Financial Assurances.** In the event that the Parties have determined that they are proceeding pursuant to paragraph 88(a) or 88(b), no later than 120 days after the determination under paragraph 88(d), Honeywell shall submit to Riverkeeper, the Jersey City Entities, and the Special Master, for their review (a) the

amount of the proposed long-term financial assurances; (b) the form(s) of the proposed long-term financial assurance mechanisms; and (c) the name(s) of the institution proposed to manage or issue the long-term financial assurances. If Riverkeeper and the Jersey City Entities agree to the terms of the proposed long-term financial assurances, within 60 days of such agreement, Honeywell shall create a trust fund and/or secure a Long-Term Letter of Credit on those terms. If the Parties are unable to reach agreement over the terms of the long-term financial assurances, the Parties shall submit the dispute to the Special Master, who shall recommend a resolution of the dispute. Any Party shall have the right to seek review by the Court of the Special Master's recommendation regarding the terms of the financial assurances. In any event, until the long-term financial assurances have been put into place, Honeywell shall maintain the Chromium Remedy Letter of Credit and the requirements of paragraphs 88(e) and 90(b)(v) shall apply to the Chromium Remedy Letter of Credit.

92. **Adjustment of Amount Held in Long-Term Financial Assurances.** Every five years as marked from the establishment of the first long-term financial assurances pursuant to paragraph 90, the Parties shall report to the Court whether the long-term financial assurances are adequately funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. At such time as the Parties report to the Court, any Party may seek an adjustment in the amount of the long-term financial assurances. The Party seeking an adjustment must demonstrate that the long-term financial assurances are under-funded or over-funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. Such demonstration shall reflect the actual costs of implementing the remedy and/or any replacement of the remedy, once such actual costs are available. The demonstration shall also reflect the costs of work completed to date and the actual lifetime of the cap, once the

cap has been replaced or has passed a replacement interval without requiring replacement. The demonstration shall further reflect the actual performance of the fund and its ability to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary. Any demonstration shall be forward looking and shall be based upon estimates of what the activities in paragraphs 89(a)(i) through 89(a)(v) are expected to cost at the time they must be performed and the amount of funding projected to be available to undertake such activities at the time they must be performed. If, after reviewing the submission(s) received from the Parties, the Court determines that the long-term financial assurances are under-funded or over-funded to provide the full amount of the costs subject to long-term financial assurances, as set forth in paragraph 89(b), at the time those funds are necessary, the Court shall order an adjustment in the amount held in the long-term financial assurances to overcome the shortage or overage. In the event that the Court determines that the long-term financial assurances are under-funded, it shall order Honeywell to increase the amount held in the long-term financial assurances. In the event that the Court determines that any trust fund established pursuant to paragraph 90(a) is over-funded, the Court shall issue an order directing the trust manager to pay the overage to Honeywell. In the event that the Court determines that the Long-Term Letter of Credit is over-funded, the Court shall issue an order permitting Honeywell to reduce the amount covered during the next annual renewal of the Long-Term Letter of Credit pursuant to paragraph 90(b)(iv). Any adjustment to the amount of the Long-Term Letter of Credit pursuant to this paragraph shall be in addition to any adjustment of the amount of the Long-Term Letter of Credit required pursuant to paragraph 90(b).

93. **Exclusive Court Jurisdiction.** The trust fund agreement and/or the Long-Term Letter of Credit shall recite that the trust fund manager and/or issuer of the Long-Term Letter of Credit submit to the exclusive jurisdiction of this Court for any and all disputes arising under the

trust fund or the Long-Term Letter of Credit. The requirements of this paragraph shall apply whether the trust fund is established pursuant to paragraph 90(a), 90(b)(ii), 90(b)(v), or 95.

94. **Procedures upon Honeywell's Material Default of Its Obligations after the Special Master's Appointment Has Expired.** Upon the occurrence of default by Honeywell, after the Special Master's appointment has expired, Riverkeeper or the Jersey City Entities may move the Court on an expedited basis for an order to withdraw funds from the trust fund or to draw on the Long-Term Letter of Credit. Default shall include:

(a) The failure of Honeywell, in the event that notice is given pursuant to paragraph 90(b)(iv) to deliver a replacement Long-Term Letter of Credit at least 95 days prior to the expiration date of the existing Long-Term Letter of Credit;

(b) The material failure of Honeywell to proceed with diligence and in good faith to carry out the terms of this Consent Decree and the continuance of such a material breach for a period of 30 days after written notice by Riverkeeper or the Jersey City Entities to Honeywell of the alleged material failure, unless Honeywell cures the alleged breach within the 30-day notice period or such longer period as the Parties may agree to or the Court may order;

(c) The filing by Honeywell of a petition seeking relief, or the granting of relief, under the Federal Bankruptcy Code or any similar federal or state statute; any assignment for the benefit of creditors made by Honeywell; the involuntary filing of any of the foregoing against Honeywell if the involuntary filing is not dismissed within 60 days; the appointment of a custodian, receiver, liquidator, trustee, or other similar official for Honeywell or for a substantial part of Honeywell's property; any action by Honeywell to effect any of the foregoing; or if Honeywell becomes insolvent as defined in Section 101(32) of the Federal Bankruptcy Code; or

(d) The dissolution, liquidation, merger, consolidation, or reorganization of Honeywell or the institution of any proceeding to effect any of the foregoing, other than under

paragraph 94(c), if Honeywell fails to provide assurance to Riverkeeper, the Jersey City Entities, and the Court, within 15 days after written notice, that such an event will not impair Honeywell's ability to carry out the terms of this Consent Decree.

95. **Drawing on the Long-Term Letter of Credit in the Event of Honeywell's Default.** If the Court grants any motion by Riverkeeper or the Jersey City Entities pursuant to paragraph 94 to draw on the Long-Term Letter of Credit, the sum approved by the Court's order granting the motion shall be paid from the Long-Term Letter of Credit into a trust fund, separate from any trust fund created under paragraph 90(a) but satisfying the requirements of paragraph 90(a).

96. **Use of the Trust Fund in the Event of Honeywell's Default**. In the event of Honeywell's default, the money in the trust fund established pursuant to paragraph 90(a) shall be available to meet the obligations of paragraph 89(a). Riverkeeper and/or the Jersey City Entities shall file motions with the Court seeking orders directing how the money in the trust fund shall be used. The Court shall consider motions on an expedited basis and shall enter appropriate orders. The Court may enter an order allowing for automatic withdrawal of regular expenses without separate motion to the Court by Riverkeeper or the Jersey City Entities.

97. **Use of a Trust Fund Established Pursuant to Paragraph 85, 90(b)(ii), 90(b)(v), or 95.** In the event that a trust fund is established pursuant to paragraph 85, 90(b)(ii), 90(b)(v), or 95, the money in the trust fund shall be available to meet the obligations of paragraph 89(a). Riverkeeper and/or the Jersey City Entities shall file motions with the Court seeking orders directing how the money in the trust fund shall be used. The Court shall consider motions on an expedited basis and shall enter appropriate orders. The Court may enter an order allowing for automatic withdrawal of regular expenses without separate motion to the Court by Riverkeeper or the Jersey City Entities.

98. **Termination of the Long-Term Financial Assurances.** Honeywell's obligations

under Article III.E shall be terminated and the long-term financial assurance mechanisms shall be terminated when the Court finds that no hexavalent or total chromium contamination remains in the AOC 1 Open Space Area or on the Site, whether in soils or in groundwater, in excess of the levels specified for Unrestricted Use in the NJDEP Chromium Directive or any more restrictive standards for Unrestricted Use in place at the time, whichever is more restrictive. Upon determining that long-term financial assurances may be terminated, the Court shall order that any Long-Term Letter of Credit may be withdrawn in its entirety and any trust fund may be terminated. In conjunction with its order terminating any trust fund, the Court in its discretion shall designate a recipient(s) of any remaining trust funds.

ARTICLE IV: IMPLEMENTATION SCHEDULE AND TERMINATION

99. **Schedule for Remedy and Site Preparation Implementation Activities.** The Chromium Remedy under Article III and the Historic Fill Remedy under Article II.B of the Jersey City/Honeywell Consent Order and Site Preparation Activities under Article III of the Jersey City/Honeywell Consent Order shall be undertaken by the Parties in accordance with the following anticipated schedule, recognizing that this schedule may be further modified in writing by agreement of the Parties and with the approval of the Court:

(a) By October 1, 2008, the Jersey City Entities and Honeywell shall develop a Site Preparation Plan, pursuant to paragraph 3.2 of the Jersey City/Honeywell Consent Order, for all Site Preparation Activities necessary to undertake the Chromium Remedy;

(b) No later than June 18, 2009, Honeywell shall submit to NJDEP a remedial design document for the Chromium Remedy;

(c) No later than September 1, 2009, Honeywell shall submit all applications for permits and authorizations for the performance of the Chromium Remedy to all appropriate local, state, and federal government entities;

(d) Honeywell shall use its best efforts to complete the Chromium Remedy no later than four years after all appropriate applications and authorizations for the performance of the Chromium Remedy have been obtained;

(e) By May 1, 2008, Honeywell and the Jersey City Entities shall submit a work plan for further Remedial Investigation for AOC 2 to NJDEP; and

(f) By December 1, 2008, Honeywell and the Jersey City Entities shall submit a Remedial Action Selection Report and Remedial Action Workplan for the Historic Fill Remedy set forth in Article II.B of the Jersey City/Honeywell Consent Order. The Workplan shall contain a schedule for implementation of the Historic Fill Remedy.

100. **Termination of this Consent Decree.** This Consent Decree shall terminate upon the withdrawal of any Party as provided for in this paragraph. Any Party may elect to withdraw from this Consent Decree due to the occurrence of one or more of the following events, provided that such Party provides written notice of withdrawal to the other Parties pursuant to paragraph 108:

(a) The Court fails to enter the Jersey City/Honeywell Consent Order or this Consent Decree or either the Jersey City/Honeywell Consent Order or this Consent Decree is determined to be invalid on appeal;

(b) JCRA fails to take those actions required under paragraphs 4.11(a), (b), and (c) of the Jersey City/Honeywell Consent Order within nine months of entry of this Consent Decree; or

(c) JCRA fails to approve a Redevelopment Agreement between Bayfront Redevelopment LLC and JCRA pursuant to paragraph 4.11(e) of the Jersey City/Honeywell Consent Order within 12 months of entry of this Consent Decree.

101. **Procedures for Withdrawal and Termination.** Any Party electing to withdraw pursuant to paragraph 100 and thereby terminate this Consent Decree shall provide written notice of such withdrawal and termination to all other Parties within 30 days of the occurrence giving rise to the decision to withdraw. If any Party objects to termination of the Consent Decree, or believes that the conditions set forth in paragraph 100 have not been met, such objecting Party may move the Court for an expedited hearing on the issue of whether the conditions for termination have been effectuated.

102. **Good-Faith Obligation to Avoid Termination.** The Parties agree that they will each endeavor to fulfill the terms of this Consent Decree, that they will work diligently and in good faith to meet their obligations hereunder, and that they will promptly and timely take all reasonable steps to give effect to this Consent Decree and to avoid termination under paragraph 100.

103. **Effect of Termination.** If this Consent Decree is terminated pursuant to paragraph 100, the Consent Decree shall no longer be binding on the Parties and shall be of no further effect. In the event that this Consent Decree is terminated by one or more Parties pursuant to paragraph 100, each Party to this Consent Decree reserves all of its rights, claims, and defenses (both legal and factual) against the other Parties with respect to the matters at issue in the Consolidated Litigation and each Party remains free to pursue such rights, claims, and defenses.

ARTICLE V: ADDITIONAL PROVISIONS RELATED TO HISTORIC FILL AND SITE PREPARATION AND REDEVELOPMENT

104. **Historic Fill Remedy**. This Consent Decree shall adopt and incorporate the terms of Article II.B of the Jersey City/Honeywell Consent Order with respect to the Historic Fill Remedy. The Historic Fill Remedy shall not be limited to the activities set forth in Article II.B of the Jersey City/Honeywell Consent Order in the event that NJDEP requires a more extensive remedy. The Historic Fill Remedy shall be compatible with the Chromium Remedy such that no

part of the Historic Fill Remedy shall interfere with the installation, maintenance, and monitoring of the Chromium Remedy. In addition, the Historic Fill Remedy for any discharge of non-chromium contaminants to the Hackensack River shall not interfere with the remedies under the Sediment Consent Order, including the source control remedies. In the event that Jersey City conducts the Historic Fill Remedy instead of Honeywell, the terms of this paragraph shall still apply.

105. **Oversight of Historic Fill Remedy**. Paragraph 2.11 of the Jersey City/Honeywell Consent Order shall apply only to the Historic Fill Remedy, not the Chromium Remedy. The Progress Reports provided for in paragraphs 2.12 and 3.7 of the Jersey City/Honeywell Consent Order shall be provided to Riverkeeper and the Special Master at the time they are submitted.

106. **Transfer of Title of Study Areas 6 North and 7 to and from Bayfront Redevelopment LLC**. The transfer of title of Study Area 6 North and Study Area 7 properties to Bayfront Redevelopment LLC pursuant to the Jersey City/Honeywell Consent Order and any subsequent transfers shall not impede Honeywell's obligations to (a) complete the remediation of Study Area 7 and implement the Final Judgment and subsequent orders in *ICO v. Honeywell* or (b) complete the Chromium Remedy and conduct long-term monitoring and fulfill its other obligations set forth in this Consent Decree. Such transfers of Study Areas 6 North and Study Area 7 shall not include a transfer of Honeywell's obligations to implement the Final Judgment and subsequent orders in *ICO v. Honeywell* or a transfer of Honeywell's obligations under this Consent Decree, but shall include a right of access or any other right required by Honeywell to complete the remediation. Any subsequent transfer of Study Area 6 North or Study Area 7 from Bayfront Redevelopment LLC to a redeveloper or other party shall provide all necessary agreements to allow Honeywell all necessary access to Study Area 6 North and Study Area 7 for purposes of completing Honeywell's obligations with respect to Study Area 6 North under this

Consent Decree and completing the Study Area 7 remediation and implementing the Final Judgment and subsequent orders in *ICO v. Honeywell*.

107. **Dispute Resolution Procedures.** The provisions of Article VIII of the Jersey City/Honeywell Consent Order do not apply to any disputes regarding or impacting the Chromium Remedy, which shall be resolved as provided in paragraph 72. The provisions of Article VIII of the Jersey City/Honeywell Consent Order shall apply to disputes between the Jersey City Entities and Honeywell regarding the Historic Fill Remedy and other obligations provided in the Jersey City/Honeywell Consent Order, except to the extent that such disputes may affect the Chromium Remedy. If any such dispute may affect the Chromium Remedy, it shall be resolved as provided in paragraph 72. Honeywell shall provide Riverkeeper with a copy of each notice of any breach provided under paragraph 8.1 of the Jersey City/Honeywell Consent Order within 10 days of Honeywell's receipt or issuance of such notice. Honeywell shall provide Riverkeeper with a copy of any written resolution of a dispute pursuant to paragraph 8.2 within 10 days of the resolution.

ARTICLE XI: NOTICE

108. **Notice.** Any and all notices given in connection with this Consent Decree shall be deemed adequately given only if in writing and addressed to the Party for whom such notices are intended at the addresses set forth in this paragraph. All notices shall be sent by Federal Express or other nationally recognized overnight messenger service or by first-class registered or certified mail, postage prepaid, return receipt requested. A written notice shall be deemed to have been given to the recipient party on the earlier of (a) the date it shall be delivered to the address set forth in this paragraph; (b) the date delivery shall have been refused at the address set forth in this paragraph; or (c) with respect to notices sent by mail, the date as of which the postal service shall have indicated such notice to be undeliverable at the address set forth in this paragraph.

Any and all notices referred to in this Consent Decree, or which any Party desires to give to the other, shall be addressed as follows:

If to Honeywell and/or
Bayfront Redevelopment LLC :

Tom Byrne, Esq.
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-2775

If to Riverkeeper:

Bruce J. Terris
Carolyn Smith Pravlik
Kathleen L. Millian
Terris, Pravlik & Millian, LLP
1121 12th St., N.W.
Washington, DC 20005-4632
(202) 682-2100

With copies to:

John Morris
Honeywell International Inc.
101 Columbia Road
Morristown, NJ 07962
(973) 455-4003

If to Jersey City:

William Matsikoudis
Corporation Counsel
City of Jersey City
280 Grove Street
Jersey City, NJ 07305
(201) 547-4667

If to JCIA:

David L. Isabel
Golub & Isabel, PC
160 Littleton Road
Parsippany, NJ 07054
(973) 968-3377

If to JCMUA:

Sam Della Fera Jr.
Trenk, DiPasquale, Webster,
Della Ferra & Sodono, P.C.
347 Mount Pleasant Ave.
West Orange, NJ 07052
(973) 243-8600

If to JCRA:

Robert Antonichello
Executive Director
30 Montgomery Street
Jersey City, NJ 07302
(201) 547-5810

Any party may change its designated recipients or addresses for notice in this paragraph by providing written notice of such change to all other Parties.

ARTICLE XII: RIVERKEEPER'S ATTORNEYS' FEES

109. **Payment of Past Fees and Expenses.** Within 30 days of the entry of this Consent Decree, Honeywell shall pay Terris, Pravlik & Millian, LLP the sum of $1,513,217.15 which represents the following:

(a) A compromise of the attorneys' fees incurred by Riverkeeper in the litigation of Study Area 6 North portion of *Riverkeeper v. Honeywell* through March 27, 2008; and

(b) $187,862.27 in out-of-pocket expenses representing 50% of the expenses incurred by Riverkeeper in *Riverkeeper v. Honeywell* from the inception of the litigation after deducting the expenses to be paid pursuant to the Sediment Consent Order.

Payment of the sum of $1,513,217.15 shall be in full satisfaction of all obligations, duties, and responsibilities of Honeywell with respect to the $1,556,747.46 in fees and expenses that Riverkeeper claimed with regard to the above described fees and expenses.

110. **Future Fees and Expenses.** Honeywell shall reimburse Riverkeeper's attorneys for reasonable fees and expenses incurred: (a) in negotiating this Consent Decree after March 27, 2008; (b) in the monitoring and enforcement of this Consent Decree; and (c) in participation in the Special Master process established pursuant to this Consent Decree. Honeywell shall also reimburse Riverkeeper for reasonable attorneys' fees and expenses for Riverkeeper's review of and participation in the Long-Term Monitoring Plan and monitoring and enforcement of this Consent Decree following the term of the Special Master. In the event that any dispute arises between the Parties under this Consent Decree that must be resolved by the Court, Riverkeeper shall be entitled to recover its attorneys' fees and expenses for litigation of the dispute to the extent allowed by federal law. Riverkeeper and Honeywell shall use the same informal procedure for attempting to settle fees issues as has been used for post-judgment monitoring fees in *ICO v. Honeywell*. In the event that Riverkeeper and Honeywell are unable to reach a

settlement on fees, Riverkeeper shall apply to the Court for an award of attorneys' fees and expenses. If Honeywell objects to only a portion of the Riverkeeper's statement of attorneys' fees and expenses, Honeywell shall pay the undisputed portion within 60 days of Riverkeeper's submittal of the statement to Honeywell. The Court shall resolve any objections to Riverkeeper's statement of attorneys' fees and expenses and shall enter an appropriate Order.

ARTICLE XIII: MISCELLANEOUS PROVISIONS

111. **Force Majeure.** Force Majeure, for the purposes of this Consent Decree, is defined as an event arising from causes beyond the control of any Party or Parties (or their agents, contractors, subcontractors, representatives, or assigns) which could not have been overcome by reasonable diligence and which delays or prevents the performance of any obligation under this Consent Decree. Examples of events which may constitute force majeure include the refusal of any federal or state governmental authority to grant a permit or authorization necessary for the completion of actions required by this Consent Decree, floods, hurricanes, tornadoes, and other extraordinary weather events, earthquakes and other natural disasters, terrorist attacks, war, and other national emergencies. Examples of events that are not force majeure events include normal inclement weather, increased costs or expense, the failure to timely and fully apply for a permit or authorization necessary for the completion of actions required by this Consent Decree, or financial difficulty of any Party. The Party claiming force majeure shall bear the burden of showing an event was a force majeure event.

112. **JCRA and Bayfront Redevelopment LLC as Parties.** As signatories to this Consent Decree, JCRA and Bayfront Redevelopment LLC subject themselves to the Court's jurisdiction for the purpose of enforcing this Consent Decree and agree to be bound by this Consent Decree. This Consent Decree shall be fully enforceable against JCRA and Bayfront Redevelopment LLC.

113. **Successors and Assigns.** This Consent Decree shall be binding upon and shall inure to the benefit of the successors, assigns, heirs, corporate parents, subsidiaries, and affiliates of each Party. No assignment or delegation of the obligations hereunder shall release the assigning Party from its obligations under this Consent Decree.

114. **Successors to Hackensack Riverkeeper, Inc.** In the event that Hackensack Riverkeeper, Inc. disbands or otherwise ceases operations, it shall assign its rights under this Consent Decree to another qualified nonprofit organization. A nonprofit organization shall be qualified for assignment under this Consent Decree if it is a charitable organization under Section 501(c)(3) of the Internal Revenue Code or its substantial equivalent and has an established record of working to enhance or preserve the ecology, natural habitat, or environment. Any such assignment shall be subject to approval by the Court and Honeywell shall have the right to object to any proposed assignment. Any successor organization shall have the duty to assign its rights under this Consent Decree to another qualified nonprofit organization in the event that the successor disbands or otherwise ceases operations. In the event that a successor is not appointed at any given time, the New Jersey Attorney General or equivalent officer shall appoint a successor subject to approval by the Court and objection by Honeywell.

115. **Reservation of Rights and Claims**. Except as set forth expressly herein, this Consent Decree does not affect in any way any of the Parties' claims or defenses against third parties who have not signed the Consent Decree.

116. **Governing Law and Continuing Jurisdiction.** The Court shall retain jurisdiction over the matters addressed in this Consent Decree for purposes of enabling the Parties to apply to the Court for any further order as may be necessary to construe, carry out, or enforce the terms of this Consent Decree. This Consent Decree shall be interpreted and enforced under the laws of

the United States and the State of New Jersey by the United States District Court for the District of New Jersey.

117. **Construction.** Questions regarding the interpretation of this Consent Decree shall not be resolved against any Party on the ground that this Consent Decree has been drafted by that Party. This Consent Decree is the result of review, negotiation, and compromise by each Party.

118. **Authority to Enter into Agreement.** The undersigned representative for each Party represents, certifies, and warrants that he or she is duly authorized by the Party whom he or she represents to enter into the terms of this Consent Decree and bind such Party legally to this Consent Decree.

119. **Measures to Effectuate This Consent Decree.** The Jersey City Entities and JCRA shall take all appropriate steps to ensure that this Consent Decree has been (and that actions required hereunder will be) duly considered, ratified, and approved. Such steps include consideration of this Consent Decree at a meeting of the City Council, open to the public, at which members of the public have the opportunity to comment on all aspects of the Settlement, including the commitments made by Jersey City; and consideration by and approval of the commissioners of the JCIA, JCMUA, and JCRA.

120. **Modifications.** This Consent Decree may be modified by mutual agreement of the Parties but such agreement must be in writing, duly and properly signed by all Parties, and shall be submitted to the Court for approval.

121. **Severability.** Each of the provisions in paragraph 60 of this Consent Decree shall be deemed severable and, in the event that one or more of such provisions is deemed invalid or unenforceable, it shall not affect the validity or enforceability of the other provisions of the Consent Decree.

122. **Signatures.** This Consent Decree may be signed simultaneously or in counterparts by the respective signatories, which shall be as fully valid and binding as if a single document was signed by all of the signatories. This Consent Decree may be signed electronically by any or all signatories, and such electronic signature shall be as fully valid and binding as a hand-written signature.
