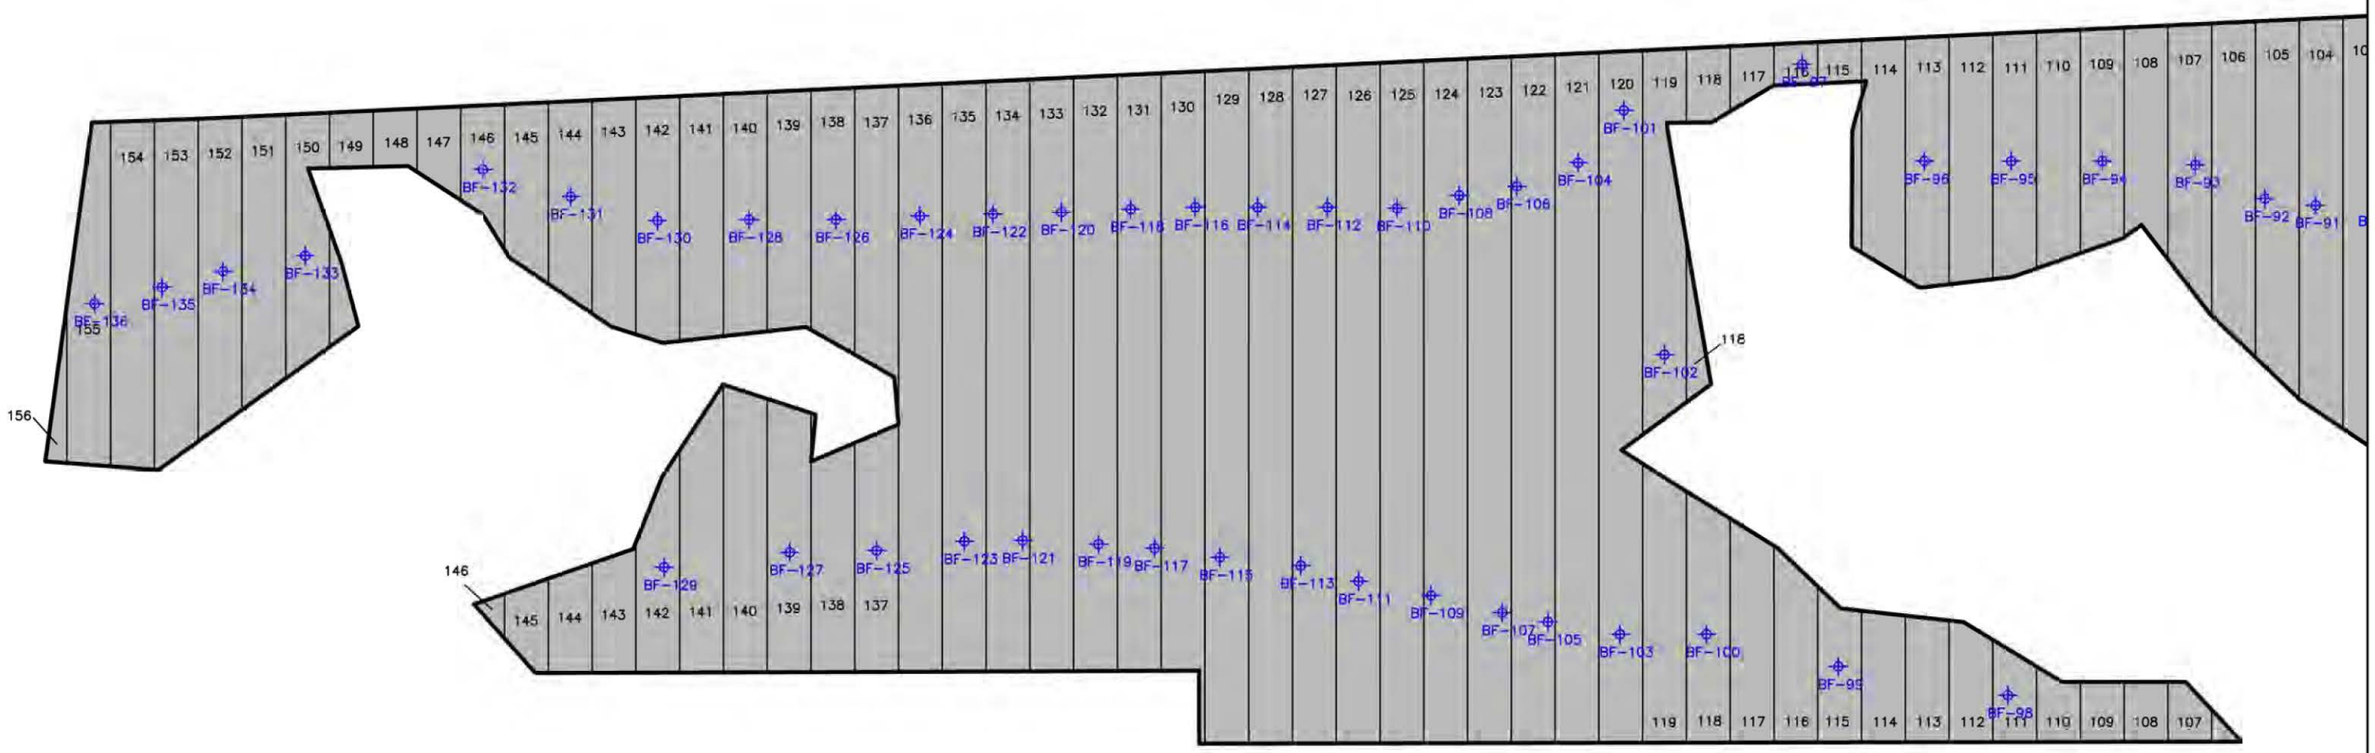
Maximum Dry Density (gravel corrected) for Weldon WC QP based on Sor Testing Laboratories Report No. 13-2027 dated 12/9/13. Sample collected from on site soils.

Maximum Dry Density for Weldon WC Screenings based on Sor Testing Laboratories Report No. 13-1877 dated 11/6/13.

Maximum Dry Density (gravel corrected) for Tilcon MH DGA based on Sor Testing Laboratories Report No. 13-1334 dated 8/7/13.

Maximum Dry Density for Weldon LH Screenings based on Vertical V Laboratory Report No. 12643 dated 9/29/14.



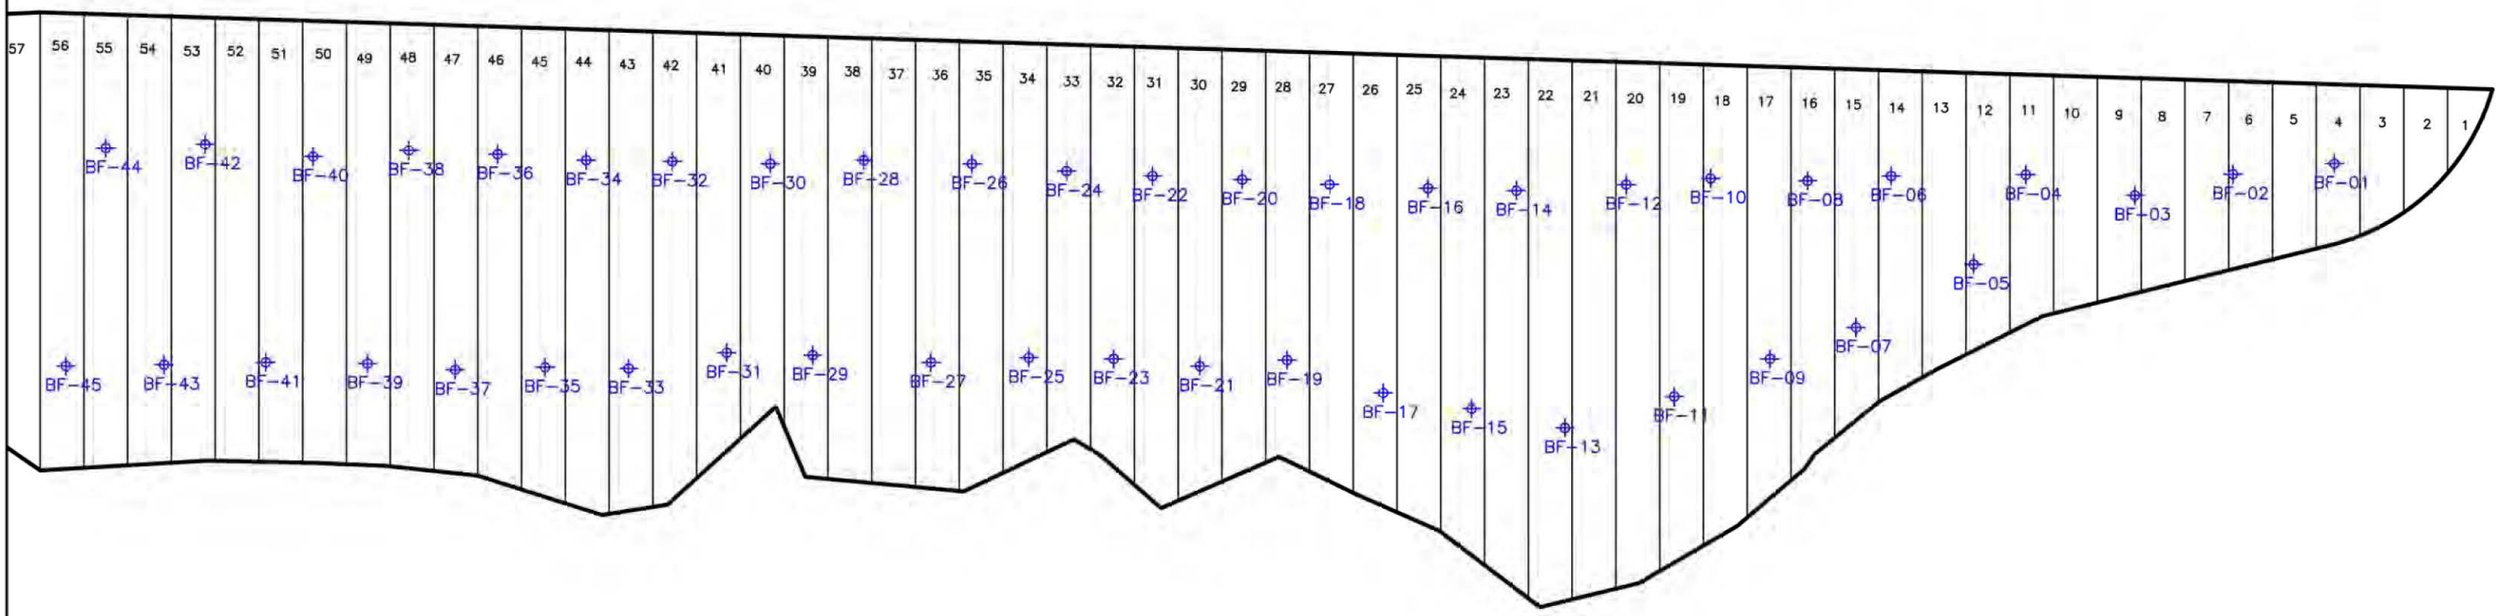
Re-used on site historical fill material (Type A) will not be tested for compaction per Specification Section 02315-3.13 A.2.b

Moisture content not to exceed 3% above optimum per Specification Section 02315-2.04C

Bottom of excavation elevation based on Maser survey data (Center Point elevations)

Sample ID BF-01-01 where:

BF = Backfill (At frequency of 1 test/2500 SF)
01 = Test Location (as noted on Backfill Compaction Location Figure)
01 = Number of test performed at that location (sequential)
R = Will be placed after sample ID if the test location is reworked and the compaction test is run again



NOTE:

Testing locations are based on reduced testing frequency specified in 012315 3.13 A. 2. a.

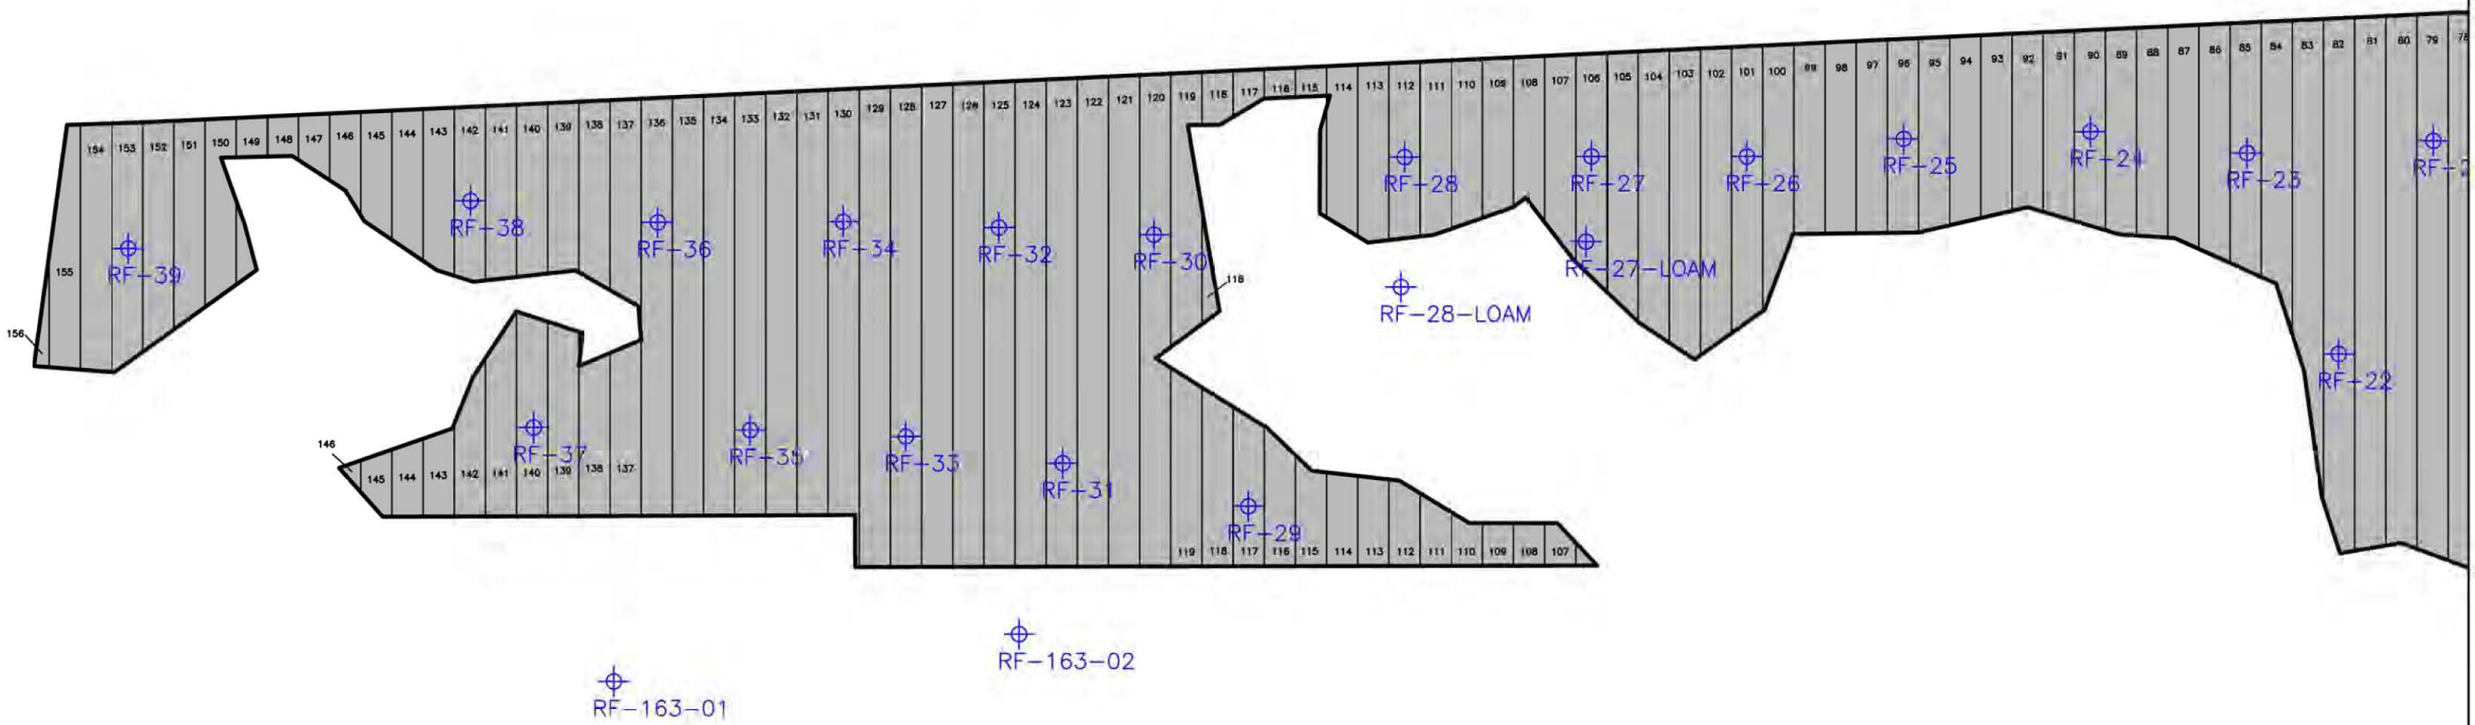
***Notes:***

Maximum Dry Density for Weldon WC Screenings based on Sor Testing Laboratories Report No. 13-1877 dated 11/6/13.

Maximum Dry Density (gravel corrected) for Tilcon MH DGA based on Sor Testing Laboratories Report No. 13-1334 dated 8/7/13.



Re-used on site historical fill material (Type A) will not be tested for compaction per Specification Section 02315-3.13 A.2.b

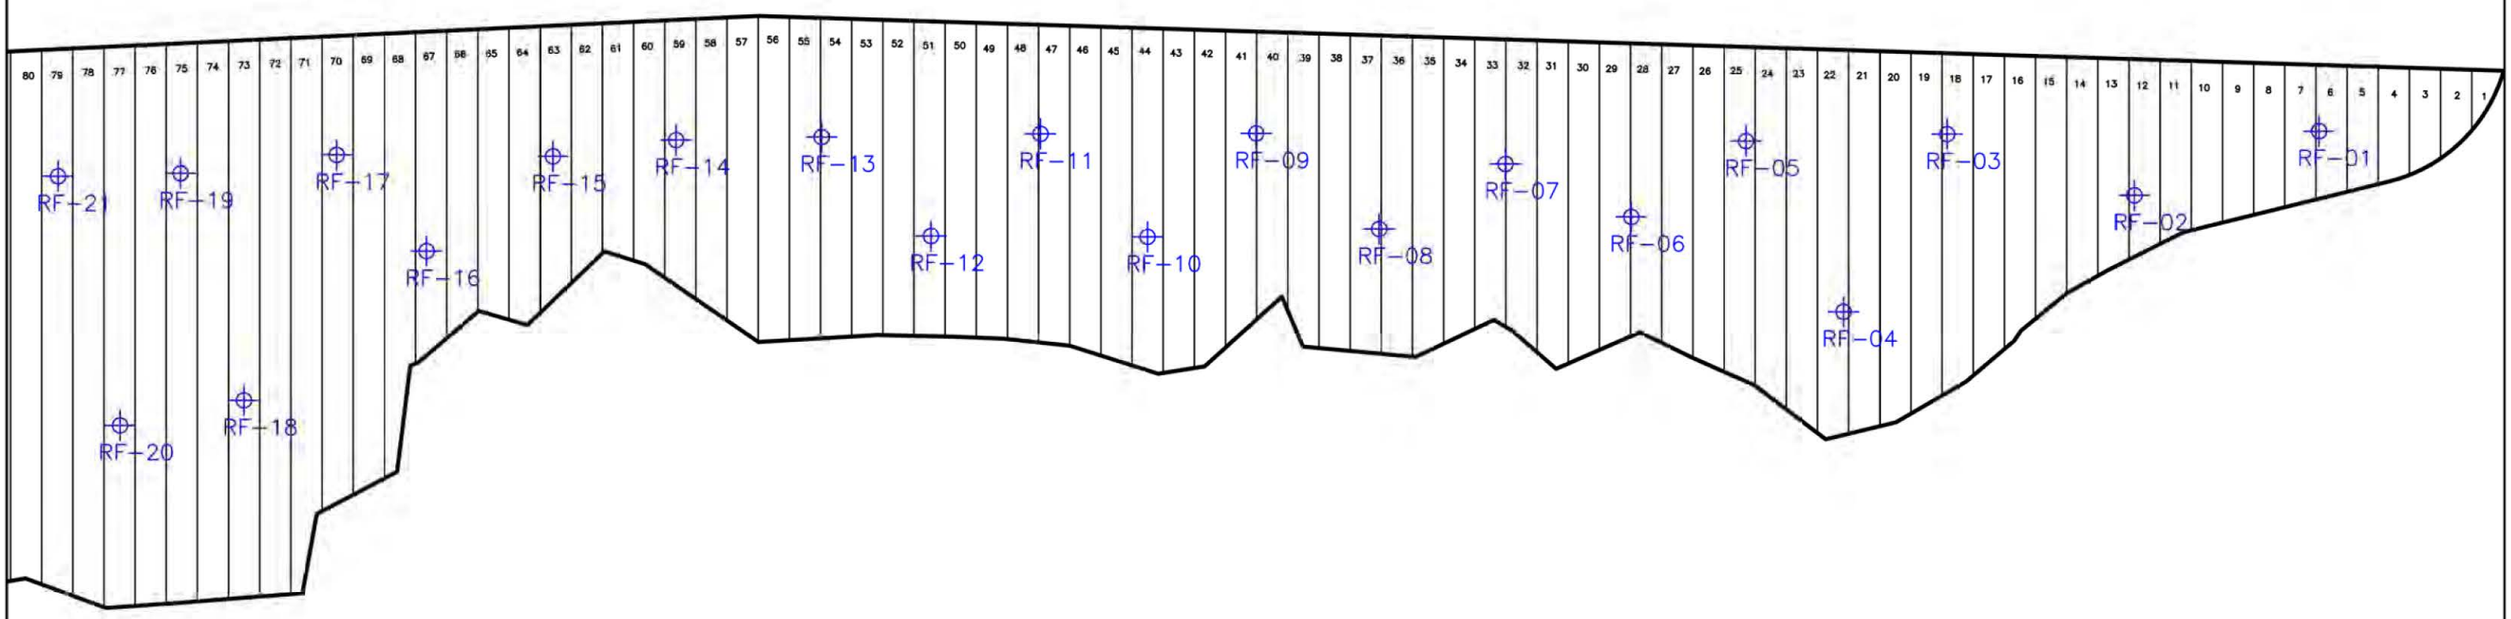
Moisture content not to exceed 3% above optimum per Specification Section 02315-2.04C

Bottom of excavation elevation based on Maser survey data (Center Point elevations)

Sample ID RF-01-01 where:

RF = Reduced Frequency
01 = Test Location (as noted on Backfill Compaction Location Figure)
01 = Number of test performed at that location (sequential)
R = Will be placed after sample ID if the test location is reworked and the compaction test is run again

NOTE:



Testing locations are based on reduced testing frequency specified in 012315 3.13 A. 3.

Weldon Watchung screenings testing frequency reduced as of 2/11/14.

ENTACT 302 Unity Plaza Latrobe, PA 15650

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used: All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3. SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler. All samples are iced in a cooler during transport to the lab.

# Attachment 13: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending December 2014**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014** | Direction on the handling of petroleum soils under the cap. | Pending submittal to Parties' per request. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |
| **DC 2015-01-22** | In accordance with the 100% Design the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-02**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from February 1 – February 28, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

WJH:jtc/sgf

# B. SITE OPERATIONS

## 1. AVERAGE WEEKLY SITE RESOURCES

| Team | Week Ending | | | |
|---|---|---|---|---|
| | 02/8/15 | 02/15/15 | 02/22/15 | 03/1/15 |
| **Construction Management (AMEC)** | 11 | 11 | 11 | 11 |
| **Engineering (AMEC)** | 1 | 1 | 1 | 1 |
| **Air Monitoring (Emilcott)** | 1 | 1 | 1 | 1 |
| **Security (Securitas)** | 3 | 3 | 3 | 3 |
| **Entact/Subcontractors** | 24 | 26 | 25 | 25 |
| **Arecon/US Ecology Subcontractors** | 1 | 1 | 0 | 1 |
| **Evoqua** | 1 | 1 | 1 | 1 |
| **HBS (SA-6N GWTP Security System)** | 0 | 0 | 0 | 0 |
| **Gramercy** | 10 | 10 | 9 | 8 |
| **TOTAL STAFF** | **52** | **54** | **51** | **51** |

## 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected February PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Completed above-grade demolition of the former Waste Management Garage and the JCIA Garage. Continued above-grade demolition and load out of the JCIA Incinerator Building.
- On February 2 and 3, 2015, Cornerstone personnel re-developed GWET extraction well 087-PW-2. The acid flushing of PW-2 force main to the GWTP was also completed at this time.
- On February 4, 2015, Cornerstone personnel re-developed injection well 088-IW-01. Cornerstone performed a follow-up yield test of the well on March 2, 2015.
- On February 10, 2015, the Year 1 Implementation Report for SA-7 Sediment Remedy Long-term Monitoring Program was submitted.
- On February 19, 2015, contractor removed the Site 163 UST from SA-6 South, Facility ID number 010374. The closure report was finalized by the LSRP and submitted to all parties on March 3, 2015.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed /refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and the tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on February 18, 2015.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 02/8/15 | 02/15/15 | 02/22/15 | 03/1/15 |
| Avg. Gallons Treated & Discharged (per day) | 65,621 | 78,547 | 77,756 | 78,169 |
| Average Flow (gpm) for Operating Period | 55 | 55 | 54 | 54 |
| Avg. Hours of Plant Operation | 20 | 24 | 24 | 24 |
| GWTP Influent Tanks (gal.) | 9,897 | 6,876 | 5,018 | 5,573 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Completed installation of the contingent groundwater system (collection trench piping and sumps) within the SA-6 South Open Space Area.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Gramercy- (JCIA Demo)** | 20 cyd roll off | Jersey City, NJ | Sims Metal | Aluminum | 1 | 2.59 | 2.59 |
| **Gramercy- (JCIA Demo)** | 40 cyd roll off | Jersey City, NJ | Sims Metal | Metal | 17 | 15.5 | 263.9 |
| **Gramercy- (JCIA Demo)** | 40 cyd roll off | North Bergen, NJ | Cardella Waste | C&D | 1 | 11.03 | 11.03 |
| **Gramercy- (JCIA Demo)** | 30 cyd roll off | Bayonne, NJ | Durable Recycling | Concrete | 21 | 16.4 | 344.52 |
| **Gramercy- (JCIA Demo)** | 40 cyd roll off | Bayonne, NJ | Durable Recycling | Brick/Masonry | 6 | 18.42 | 110.54 |
| **Entact/ Arecon** | Tri-axle Dump | South Brunswick, NJ | MCUA | Petroleum Impacted Soil | 75 | 24.7 | 1,859.72 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Cells |
|---|---|
| **Excavation Completed** | No update for the reporting period |
| **Backfill in Progress** | Cell number(s): 77-70 |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 02/8/15 | 02/15/15 | 02/22/15 | 03/01/15 |
| Tilcon, Import Tons – 1.5" Stone | 73.62 | 204.6 | 0 | 0 |
| NJCU Borrow Material, CY | 0 | 0 | 0 | 4,942 |

- Clean borrow material (from NJCU Surcharge Program) was delivered to the site during the week of February 23, 2015 through February 27, 2015. A total of 353 loads were delivered totaling approximately 4,942 cubic yards. Borrow material is stockpiled within the excavation and will be placed weather permitting.

## E. SURCHARGE OPERATIONS

- Area 1S: Completed offloading Celgene material from 1S and relocating to 2S and temporary stockpile area.
- Area 2S: Surcharging complete on Area 2S. Began offloading Celgene material on February 23, 2015 from west to east, and offload is approximately 30% complete.
- Area 3S: Surcharge placement continued on Area 3S and isnow fully constructed.
- Area 1N: Surcharge removal activities were discontinued in February in Area 1N. Surcharge removal activities in this area remain at approximately 85% complete.
- Area 2N: Surcharging is 100% complete. Offloading not yet scheduled by contractor.
- Area 3N: No activity in this area pending demobilization of the JCIA Demolition contractor.
- Area 4N: No activity in this area pending demobilization of the JCIA Demolition contractor.
- Active Monitoring for Surcharge is currently limited to Area 3S. The combination of snow and temperatures are preventing personnel from taking readings at the frequency stated in the Surcharge Monitoring Plan Monitoring will resume at all points when it is feasible and safe to do so.

## F. SHEET PILE OPERATIONS

- Resumed delivery of sheet pile for the remaining barrier wall at SA-6 North.

## G. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |

| Tidelands Licenses for Sediment Remedy | SA-7 | Re-Issuance of Final Tidelands License is pending and will be effective 7/21/2013 | N/A | 7/21/2014 | 7/19/2012 |
| Pre-Construction Notice – Nationwide Permit #38 for Sediment Remedy | SA-7 | Issued: 3/21/2013 | N/A | 3/18/2015 | 3/25/2013 |
| NJDOT – Application for Drainage Connection, Post Remediation Grading and Drainage | SA-6 Chromium Remedy | Application Submitted 8/19/14 Permit Application Rescinded 12/1/14 & Approved by DOT on 12/18/14 | N/A | N/A | N/A |
| NJDOT – Highway Occupancy Permit – Installation of Sheet Piling and Excavation Adjacent to Rte 440 ROW | SA-6 Chromium Remedy | Application Submitted 9/8/14 Final Executed Permit Issued 12/2/14 | 11/2/15 | 12/2/15 | Pending |

## H. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete JCIA Structures Demolition and demobilize.
- Continue loadout and transportation and disposal activities of non-hazardous petroleum impacted soils at SA-6 South.
- Complete delivery of steel sheetpile for remaining SA-6 North Barrier Wall installation.
- Complete removal of temporary sheetpile on the south side of the SA-6 south excavation area.
- Resume Vertical Hydraulic Barrier wall installation activities on SA6 North.

- Continue monitoring well abandonment activities on SA6 South.
- Complete installation of utility pole sleeves associated with PSEG overhead line relocation activities.
- Collect round of quarterly groundwater levels.
- Conduct S-3 Mass Removal Injection Event No.19.
- Conduct quarterly GWET well sampling.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Continue the SA-6 North Bench-Scale Treatability Study for Treatment Area 10 proximate to force main.
- Continue to coordinate with the JCDPW on their off-site relocation of remaining equipment from SA-6 North.

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

# Attachment 13: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending February 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**Subject:** **Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-03**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from March 1 – March 31, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

## B. SITE OPERATIONS

### 1. AVERAGE WEEKLY SITE RESOURCES

| Team | Week Ending | | | |
|---|---|---|---|---|
| | 03/8/15 | 03/15/15 | 03/22/15 | 03/22/15 |
| **Construction Management (AMEC)** | 10 | 10 | 11 | 10 |
| **Engineering (AMEC)** | 1 | 1 | 1 | 1 |
| **Air Monitoring (Emilcott)** | 1 | 1 | 1 | 1 |
| **Security (Securitas)** | 3 | 3 | 3 | 3 |
| **Entact/Subcontractors** | 27 | 29 | 27 | 27 |
| **Arecon/US Ecology Subcontractors** | 1 | 1 | 2 | 2 |
| **Evoqua** | 1 | 1 | 1 | 1 |
| **HBS (SA-6N GWTP Security System)** | 0 | 0 | 0 | 0 |
| **Gramercy** | 9 | 9 | 8 | 0 |
| **TOTAL STAFF** | **53** | **55** | **54** | **45** |

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected March PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- On March 18, 2015, Gramercy completed the above-grade demolition of the former JCIA Building Structures. Site cleanup and demobilization activities were completed on March 23, 2015.
- After demobilization of Gramercy, the former JCIA parcel was incorporated into the perimeter fencing to allow for hydraulic barrier installation and subsequent chromium remediation in this portion of SA-6 North.

- On March 22, 23, and 24th, 2015, Cornerstone personnel conducted S-3 Mass Removal Injection Event #19 in Injection Well 088-IW-01.
- Installed three (3) utility pole sleeves along Route 440 for future PSE&G overhead power line relocation.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed /refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and the tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on March 11, 2015.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 03/8/15 | 03/15/15 | 03/22/15 | 03/29/15 |
| Avg. Gallons Treated & Discharged (per day) | 76,688 | 77,070 | 77,533 | 76,391 |
| Average Flow (gpm) for Operating Period | 54 | 54 | 54 | 53 |
| Avg. Hours of Plant Operation | 24 | 24 | 24 | 24 |
| GWTP Influent Tanks (gal.) | 5,532 | 5,408 | 4,954 | 5,078 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completed abandonment of Deep wells DW1, DW2 DW3, DW4 and DW5. The Deep Wells were associated with the temporary construction dewatering activities installed by Entact in the SA-6 South Backfill area.
- Began well abandonment activities on SA-6 North.
- Continued loadout of non-hazardous petroleum impacted soils from SA-6 South.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Gramercy- (JCIA Demo)** | 40 cyd roll off | Jersey City, NJ | Sims Metal | Metal | 9 | 11.0 | 99.2 |
| **Gramercy- (JCIA Demo)** | 40 cyd roll off | North Bergen, NJ | Cardella Waste | C&D | 13 | 17.2 | 224.73 |

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Gramercy- (JCIA Demo)** | 30 cyd roll off | Bayonne, NJ | Durable Recycling | Concrete | 11 | 15.0 | 165 |
| **Gramercy- (JCIA Demo)** | 40 cyd roll off | Bayonne, NJ | Durable Recycling | Brick/Masonry | 62 | 17.9 | 1,112.8 |
| **Entact/ Arecon** | Tri-axle Dump | South Brunswick, NJ | MCUA | Petroleum Impacted Soil | 534 | 26.6 | 14,239 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Cells |
|---|---|
| **Excavation Completed** | No update for the reporting period |
| **Backfill in Progress** | No update for the reporting period |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 03/8/15 | 03/15/15 | 03/22/15 | 03/29/15 |
| NJCU Borrow Material, CY | 3,735 | 6,765 | 0 | 0 |

- Clean borrow material (from NJCU Surcharge Program) was delivered to the site during the weeks of March 2, 2015 through March 13, 2015. A total of 700 loads were delivered totaling approximately 10,500 cubic yards. Borrow material is stockpiled in the eastern area of SA-6 South and will be placed as backfill weather permitting.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging complete on Area 2S. Continue offloading Celgene and Novartis surcharge material (approximately 65% complete).
- Area 3S: Surcharge placement completed on Area 3S and monitoring ongoing.
- Area 1N: Surcharge removal activities were discontinued in February in Area 1N. Surcharge removal activities in this area remain at approximately 85% complete.
- Area 2N: Surcharging is 100% complete. Offloading not yet scheduled by contractor.
- Area 3N: No activity in this area pending installation of surcharge monitoring instrumentation.
- Area 4N: No activity in this area pending installation of surcharge monitoring instrumentation.

## F. SHEET PILE OPERATIONS

- Completed delivery of sheet pile for the remaining barrier wall at SA-6 North with exception of several specialty pieces.
- Completed removal of temporary sheet pile on SA-6 South.
- Continued vertical barrier wall installation activities on SA-6 North. Installed vertical barrier wall sheet pile from west of the sedimentation basin eastward through the sedimentation basin and through a portion of the former JCIA property ending east of the trash pit, STA 14+00 to STA 5+25. Vertical barrier wall was also installed on the western perimeter of the SA-6 North cap area from STA 21+75 to STA 23+42.

## G. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|

## H. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete loadout and transportation and disposal activities of non-hazardous petroleum impacted soils at SA-6 South.
- Continue Vertical Hydraulic Barrier wall installation activities on SA6 North.
- Remove standing water within the JCIA trash pit and begin removal and loadout of putrescible trash.
- Resume backfilling placement activities at SA-6 South.
- Complete installation of sleeves for anchors associated with Verizon overhead line relocation activities.
- Conduct S-3 Mass Removal Injection Event No. 20.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Continue the SA-6 North Bench-Scale Treatability Study for Treatment Area 10 proximate to force main.
- Continue to coordinate with the JCDPW on their off-site relocation of remaining equipment from SA-6 North.

# PRETREATMENT MONITORING REPORT

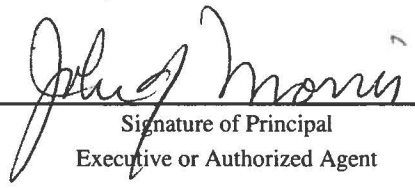
Certification of Non-Use if applicable (use additional sheets):

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analyte results are compliant (see attached report).



Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

# Attachment 13: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending March 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**Subject:** **Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-04**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from April 1 – April 30, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

| **TOTAL STAFF** | **44** | **43** | **42** | **46** |

## 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected April PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- On April 26, 27, and 28, 2015, Cornerstone personnel conducted S-3 Mass Removal Injection Event No.20 in Injection Well 088-IW-03.
- Removed standing water from within the JCIA trash pit and discharged to PVSC through CWTP.
- Changed out pump from within the northern sump on SA-7 to increase flow to the perimeter pool system.
- The Fire Department of Jersey City (FDJC) and the Jersey City Police Department (JCPD) K-9 unit completed training activities in the former Jersey City Department of Public Works “H” Building.
- Removed trees and wood debris from south end of the Jersey City Department of Public Works “H” building into Jersey City Incinerator Authority (JCIA) roll-off boxes which were transported off site by JCIA.

- B&B Drilling completed 57 direct push soil borings and Amec Foster Wheeler collected a total of 114 soil samples at Site 163 as part of the 6-month performance assessment to monitor in-situ treatability status. The sampling included 34 borings conducted as originally proposed in the approved Work Plan and an additional 23 borings as requested by Plaintiffs.
- NJDEP visited SA-6 to inspect the location of the former SA-6 South GWTP and the former outfall discharge on April 23, 2015.
- Installed two (2) utility pole sleeves for anchors along Route 440 for future Verizon overhead line relocation activities.
- PSEG began switching power to the North Bound side of Route 440.
- Entact Installed utility pole at the northeast corner of SA-7 to power the northeast 400 amp service panel.
- Celgene soils to be used as protective cover above the geosynthetics is staged at SA-7 awaiting mobilization of screening unit.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed /refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and the tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on April 9, 2015.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 4/5/15 | 4/12/15 | 4/19/15 | 4/26/15 |
| Avg. Gallons Treated & Discharged (per day) | 76,197 | 77,987 | 78,259 | 78,438 |
| Average Flow (gpm) for Operating Period | 54 | 54 | 54 | 54 |
| Avg. Hours of Plant Operation | 24 | 24 | 24 | 24 |
| GWTP Influent Tanks (gal.) | 6,848 | 6,898 | 5,004 | 4,872 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Installed Manhole No. 2 associated with the SA-6 North Contingent Ground Water Extraction System.
- Completed loadout of non-hazardous petroleum impacted soils from SA-6 South.
- Completed compaction testing associated with bridge lift material on SA6-South.
- Began to haul screened historic fill from N1 and place it as backfill in the west side of SA-6 South backfill area.

- Began placement of soils with hexavalent chromium concentrations between 20 and 240 ppm within the sedimentation basin south of the Vertical Hydraulic Barrier Wall on SA-6 North.
- Began placement of historic fill within the sedimentation basin north of the Vertical Hydraulic Barrier Wall on SA-6 North.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-Off | TSDF | Stablex-Canada | WWTP Filter Cake | 1 | 16.79 | 16.79 |
| **Entact/ Arecon** | Tri-axle Dump | South Brunswick, NJ | MCUA | Petroleum Impacted Soil | 86 | 26.7 | 2,302.97 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Cells |
|---|---|
| **Excavation Completed** | No update for the reporting period |
| **Backfill in Progress** | NJCU Borrow material - Cells (10-125), Historic Fill - Cells (10-20), (110-125) |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 4/5/15 | 4/12/15 | 4/19/15 | 4/26/15 |
| Tilcon Mt Hope DGA | 377.87 | 0 | 0 | 0 |
| Tilcon Mt. Hope 1-1.5" Stone | 300.13 | 307.14 | 0 | 263.65 |

- Historic Fill was transferred from 1N surcharge area beginning on April 7, 2015. A total of 279 loads, totaling approximately 5,580 cubic yards was placed as backfill in SA6 South during the reporting period.
- Clean borrow material (from NJCU Surcharge Program) that was stockpiled in the eastern area of SA-6 South was placed as backfill in Cells (10-125).

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging complete on Area 2S. Continue offloading Celgene and Novartis surcharge material (approximately 95% complete).
- Area 3S: Surcharge placement completed on Area 3S. MRCE peer review completed verifying that the surcharge goal had been met.

- Area 1N: Began removal of screened historic fill on April 7, 2015. Surcharge removal activities in this area are approximately 95% complete.
- Area 2N: Surcharging is 100% complete. Offloading not yet scheduled by contractor.
- Area 3N: Began installation of surcharge monitoring instrumentation.
- Area 4N: No activity in this area pending installation of surcharge monitoring instrumentation.
- As noted in the transmittal of Surcharge Monitoring Report No. 12, we will not be submitting monthly surcharge monitoring reports until remaining instrumentation is installed in Areas 3N and 4N.

## F. SHEET PILE OPERATIONS

- Continued vertical barrier wall installation activities on SA-6 North. Installed vertical barrier wall sheet pile from, STA 5+25 to STA 3+10.

## G. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDEP Waterfront Development | SA-6 North Only | Obtained 6/23/2010 | Not Specified, Est. 3/31/2015 | 6/23/2015 | - |
| NJDEP CAFRA/FHA | SA-6 South Only | Obtained 9/26/2012 | Renewal Not Needed | 9/25/2017 | 10/09/2012 |
| HEPSCD SESCP | Novartis Soil Pile/SA-7 | Obtained 8/21/2012 | Renewal Not Needed | 2/21/2016 | - |
| NJDEP RFA | Novartis Soil Pile/SA-7 | Obtained 9/7/2012 | Renewal Not Needed | Not Specified | - |

|---|---|---|---|---|---|
| NJDOT – Highway Occupancy Permit – Installation of Sheet Piling and Excavation Adjacent to Rte 440 ROW | SA-6 Chromium Remedy | Application Submitted 9/8/14 Final Executed Permit Issued 12/2/14 | 11/2/15 | 12/2/15 | Pending |

## H. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Install Vertical Hydraulic Barrier wall closure pieces associated with the connection to the exterior of the JCIA trash pit concrete walls.
- Complete water supply disconnects to the Department of Public Works "H" Building and the JCIA garage.
- Begin removal and loadout of putrescible trash within the JCIA trash pit.
- Assist JCDPW personnel in the removal of materials and equipment from the Department of Public Works "H" Building.
- Continue backfill placement activities at SA-6 South.
- Begin to install SA-6 North Contingent Ground Water Extraction System piping.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Complete the SA-6 North Bench-Scale Treatability Study for Treatment Area 10 proximate to force main.
- Continue to coordinate with the JCDPW on their off-site relocation of remaining equipment from SA-6 North.

**ATTACHMENTS:**

1. Schedule – 6 Month Look Ahead
2. Site Photographs
3. Excavation and Backfill
   - Progression Chart
4. *Dewatering Operations Update (not included in this reporting period)*
5. SA-6 Construction Water Discharge Data (To PVSC)
6. *Backfill Analytical Data (not included in this reporting period)*
7. Perimeter Pools Update
8. *Groundwater Quality Data (not included in this reporting period)*
9. *Surcharge Monitoring Update (not included in this reporting period)*
10. Sheet Pile Update
11. Weekly SWPPP Reports

12. GWTP Update
    - 525/575 Route 440 GWTP PVSC Discharge Monitoring Repot (March 2015)
13. SA-6 North & South Design Change Tracking Log

# Attachment 1: Schedule – 6 Month Look Ahead

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start |
|---|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1891 days** | **Fri 1/4/08** |
| **18** | **JCIA/JCDPW Relocation** | **1735 days** | **Mon 8/11/08** |
| 19 | Develop Site Relocation Master Plan | 38 days | Mon 8/11/08 |
| 20 | Submit Site Relocation Master Plan | 0 days | Wed 10/1/08 |
| 21 | JC Construction of New Facilities | 1309 days | Tue 6/2/09 |
| 22 | Relocation Contractor Procurement | 392 days | Thu 4/15/10 |
| 23 | JCIA and JCDPW Relocation | 753 days | Mon 10/17/11 |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days | Mon 12/12/11 |
| 24a | Demolition of JCIA Structures | 151 days | Mon 9/1/14 |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** | **Fri 7/11/08** |
| **57** | **SA-6 South Relocation** | **616 days** | **Mon 12/26/11** |
| 58 | New GWTP Construction Completion | 502 days | Mon 3/5/12 |
| 59 | Demolition of 80 Kellogg | 857 days | Mon 12/26/11 |
| **60** | **SA-6 North/South Field Implementation** | **838 days** | **Fri 3/1/13** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 403 days | Mon 6/17/13 |
| 60b | SA-6S (Site 163) In-Situ Treatment | 294 days | Fri 11/15/13 |
| **61** | **Mobilization (Inclues new GWTP, In-situ Treatment & Main Remedy)** | **87 days** | **Fri 3/1/13** |
| 61a | Mobilization | 87 days | Fri 3/1/13 |
| **62** | **Surcharge Install/Instrumentation** | **620 days** | **Mon 6/17/13** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instrumentation | 142 days | Mon 6/17/13 |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 195 days | Mon 6/2/14 |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days | Mon 3/2/15 |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 182 days | Mon 10/20/14 |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 195 days | Mon 3/3/14 |
| **63** | **Barrier Wall Install** | **489 days** | **Mon 6/17/13** |
| **63a** | **SA 6N Installation of Barrier Wall** | **369 days** | **Mon 12/2/13** |
| 63b | SA-6N Barrier Wall Delivery and Installation Preparation | 55 days | Mon 12/2/13 |
| 63c | SA-6N Stations 23+38 to 14+25 | 90 days | Mon 2/17/14 |
| 63d | SA-6N Stations 14+25 to 0+00 | 224 days | Mon 6/23/14 |
| **63f** | **SA 6S Installation of Barrier Wall** | **250 days** | **Mon 6/17/13** |
| 63g | SA-6S Barrier Wall Delivery and Installation Preparation | 44 days | Mon 6/17/13 |
| 63h | SA-6S Stations 1+54 to 8+37 | 7 days | Fri 8/16/13 |
| 63i | SA-6S Stations 0+00 to 1+54; 8+37 to 8+60; 24+40 to 14+87; 24+40 to 25+89 | 27 days | Thu 10/3/13 |
| 63j | SA-6S Stations 8+60 to 14+87 | 145 days | Mon 11/11/13 |
| **64** | **Excavation** | **507 days** | **Tue 10/22/13** |
| 64a | SA 6N Excavation | 218 days | Mon 12/1/14 |
| **64b** | **SA 6S Excavation** | **226 days** | **Tue 10/22/13** |
| 64c | SA-6S Excavation of Cells 1 - 25 | 53 days | Tue 10/22/13 |
| 64d | SA-6S Excavation of Cells 26 - 60 | 90 days | Fri 1/3/14 |
| 64e | SA-6S Excavation of Cells 156 - 61 | 83 days | Fri 5/9/14 |
| **65** | **Backfill** | **493 days** | **Mon 11/11/13** |
| 65a | SA 6N Backfill | 218 days | Mon 12/1/14 |
| 65b | SA 6S Backfill | 232 days | Mon 11/11/13 |
| **66** | **Capping and Cover Soil Placement** | **315 days** | **Mon 12/1/14** |
| 66a | SA 6N Capping and Cover Soil Placement | 119 days | Tue 9/1/15 |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days | Mon 12/1/14 |
| **67** | **Restoration** | **164 days** | **Tue 9/1/15** |
| 67a | Restoration | 164 days | Tue 9/1/15 |

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 31630016 (current number) #20630025 (future permit ID number)**

Dear Mr. Caltagirone:

Honeywell is submitting the March 2015 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

You have informed us that our Permit ID number will be changing any day now. Therefore, we have placed the future ID on the MR1 and MR2 forms along with the current ID number.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy /SCF

## PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3. SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler. All samples are iced in a cooler during transport to the lab.

# Attachment 13: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending April 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| DC 2013-7-29 | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| DC 2013-8-14 | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| DC 2013-8-14 | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| DC 2013-9-12 | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| DC 2013-9-24 | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| DC 2013-12-12 | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| DC 2014-3-25 | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| DC 2013-8-14 | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| DC 2014-5-6 | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| DC 2014-5-19 | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| DC 2014-7-28 | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| DC 2014-10-28 | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| DC 2014-8-13 | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| DC 2014-9-2 | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| DC 2014-10-31 | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| DC 2014-12-01 | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |
| DC 2015-01-22 | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 02 feet of historic fill soils from selected locations throughout the SA6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA6 South. | Submitted to Contractor only. |
| DC 2015-01-22 | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| DC 2015-03-03 | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. |
| DC 2015-03-30 | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to Contractor only. |
| DC 2015-03-04 | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**Subject:** **Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-05**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from May 1 – May 31, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected May PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- On May 31, June 1, and 2, 2015, Cornerstone personnel conducted S-3 Mass Removal Injection Event No.21 in Injection Well 088-IW-02.
- Cornerstone conducted semi-annual groundwater sampling for the S-3 Mass Removal program and quarterly sampling of the GWET well discharge.
- Completed Removal of standing water and residual municipal waste from within the JCIA trash pit. The water was discharged to PVSC through CWTP and the residual municipal waste was loaded out and transported off site for disposal by JCIA.
- Assisted JCDPW personnel in the removal of materials from within the former Jersey City Department of Public Works “H” building.
- Completed water supply disconnects to the Department of Public Works “H” Building and the maintenance garage. A total of 7 lines were disconnected and capped.

- B&B drilled and grouted columns of the east and west trash pit walls for low permeability connection of the special Hydraulic Barrier Sheets.
- PSEG completed switching overhead electrical power and Cable Vision completed moving overhead telecommunication wires to the North Bound side of Route 440.
- PSEG completed installation of power to the utility pole at the northeast corner of SA-7. Century Electric completed electrical connections from the utility pole to the electrical panel at the Northeast corner of SA-7 which feeds power to the perimeter pool pump and transducer.
- **L**oaded, transported and delivered World Trade Center Beams from SA-6 north to the new Jersey City Municipal Services Complex on Linden Avenue.
- Continued to evaluate Site 163 interim in-situ treatment performance sampling data.
- Continued to stockpile Celgene material for future screening operations.
- Ordered three new Honeywell office trailers to be located at SA-6 North.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed /refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and the tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on May 18, 2015.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | | |
|---|---|---|---|---|---|
| | 05/3/15 | 05/10/15 | 05/17/15 | 05/24/15 | 05/31/15 |
| Avg. Gallons Treated & Discharged (per day) | 77,624 | 77,562 | 77,850 | 78,263 | 76,616 |
| Average Flow (gpm) for Operating Period | 56 | 54 | 54 | 54 | 55 |
| Avg. Hours of Plant Operation | 24 | 24 | 24 | 24 | 24 |
| GWTP Influent Tanks (gal.) | 7,133 | 6,600 | 7,601 | 9,122 | 9,738 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Continued installation of SA-6 North Contingent Ground Water Extraction System piping. A total of 700 linear feet of piping and one access manhole was installed
- Installed Catch Basin 5 in the SA-6 South backfill area along Kellogg Street, to include a total of 200 linear feet of piping.
- Continued to haul screened historic fill from N1 and place it as backfill in the west side of SA-6 South backfill area.

- Continued placement of soils with hexavalent chromium concentrations between 20 and 240 ppm within the sedimentation basin south of the Vertical Hydraulic Barrier Wall on SA-6 North.
- Continued placement of historic fill within the sedimentation basin north of the Vertical Hydraulic Barrier Wall on SA-6 North.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| No update for the reporting period | | | | | | | |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Cells |
|---|---|
| **Excavation Completed** | No update for the reporting period |
| **Backfill in Progress** | Historic Fill - SA6 South western backfill area. |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | | |
|---|---|---|---|---|---|
| | 05/3/15 | 05/10/15 | 05/17/15 | 05/24/15 | 05/31/15 |
| Tilcon Mt Hope DGA | 620 | 0 | 0 | 0 | 0 |
| Tilcon Mt. Hope 3/8" Stone | 0 | 0 | 182 | 0 | 0 |
| Tilcon Mt. Hope 1-1.5" Stone | 0 | 308 | 0 | 333 | 0 |

- Historic Fill was transferred from 1N surcharge area beginning on April 7, 2015. A total of 118 loads, totaling approximately 2,360 cubic yards was placed as backfill in SA-6 South during the reporting period.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Begin surcharge removal. Offloading Novartis and relocating 20 to 240 ppm material to SA-6 North cap area (approximately 60% complete).
- Area 1N: Continued off-loading of remaining screened historic fill.
- Area 2N: Surcharging is 100% complete. Offloading not yet scheduled by contractor.
- Area 3N: Continued installation of surcharge monitoring instrumentation.
- Area 4N: Began installation of surcharge monitoring instrumentation.

- As noted in the transmittal of Surcharge Monitoring Report No. 12, we will not be submitting monthly surcharge monitoring reports until remaining instrumentation is installed in Areas 3N and 4N.

## F. SHEET PILE OPERATIONS

- Installed Vertical Hydraulic Barrier wall closure pieces associated with the connection to the exterior of the JCIA trash pit concrete walls.

## G. CAPPING OPERATIONS

- Continued general Cap Subgrade preparation in Area 1S.
- Continued Utility Corridor and roadway subgrade preparation.

## H. PERMIT STATUS

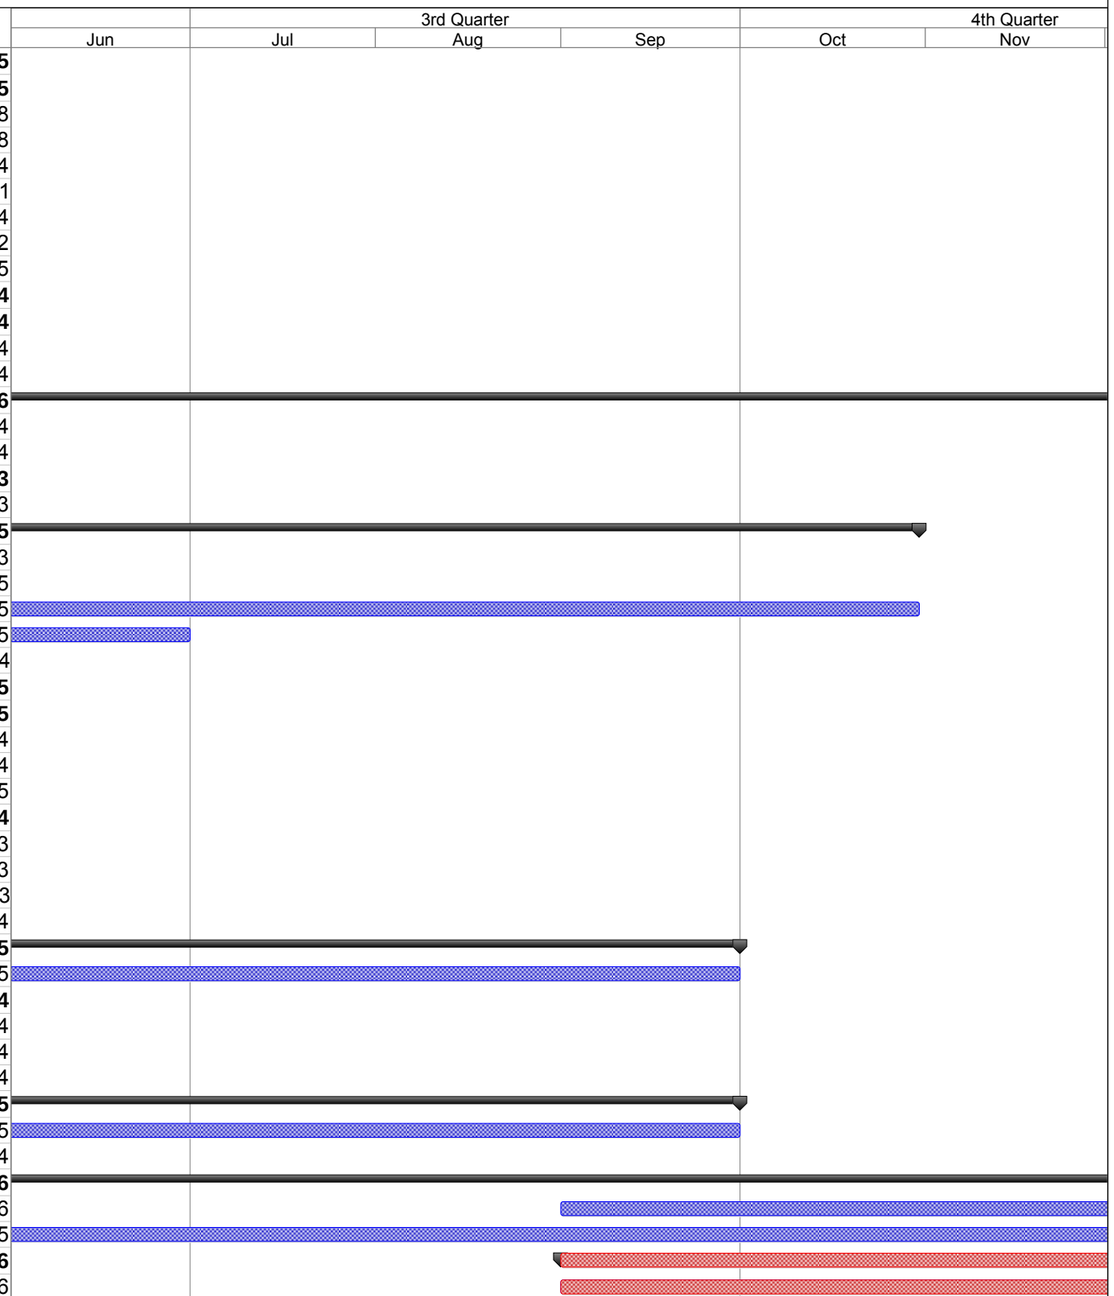
## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete set up Traffic Controls and Southbound shoulder closure associated with excavations along Route 440 frontage with SA-6 North in accordance with the NJDOT permit.
- Begin excavation of Areas EA-7 and EA-8.
- Begin pre-trenching for installation of temporary shoring related to the excavations along Route 440.
- Begin Soldier Pile installation associated with the temporary shoring along Route 440.
- Continue Cap Subgrade and utility corridor preparation activities.
- Verizon will complete switching communication lines to the North Bound side of Route 440.
- Begin Stratum D repair of the JCIA Trash Pit Area.
- Continue backfill placement activities at SA-6 South.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Develop the revised plan for the SA-6 North Treatment Area 10 proximate to force main.
- Complete the L-Well sampling of locations where geoprobe is required.
- Continue to work with owner on access for the planned PW-3 extraction well installation.

**ATTACHMENTS:**



1. Schedule – 6 Month Look Ahead
2. Site Photographs
3. Excavation and Backfill
   - Progression Chart
4. *Dewatering Operations Update (not included in this reporting period)*
5. SA-6 Construction Water Discharge Data (To PVSC)
6. *Backfill Analytical Data (not included in this reporting period)*
7. Perimeter Pools Update
8. *Groundwater Quality Data (not included in this reporting period)*
9. Surcharge Monitoring Update
10. Sheet Pile Update

11. Weekly SWPPP Reports
12. GWTP Update
    - 525/575 Route 440 GWTP PVSC Discharge Monitoring Report (April 2015)
13. SA-6 North & South Design Change Tracking Log

# Attachment 1: Schedule – 6 Month Look Ahead

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start | Finish |
|---|---|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1891 days** | **1/4/08** | **3/30/15** |
| **18** | **JCIA/JCDPW Relocation** | **1735 days** | **8/11/08** | **3/30/15** |
| 19 | Develop Site Relocation Master Plan | 38 days | 8/11/08 | 10/1/08 |

| HS13 | 685253.14 | 603316.22 |
| SP21 | 685302.66 | 603197.35 |

NOTES:

1. PRIOR TO SURCHARGING REMOVE SA-7 FENCE AND SA-7 FLOODLIGHTS.
2. RELOCATE POWER SUPPLY TO PW1 AND PW2 PRIOR TO SURCHARGE.
3. GEOTECHNICAL MONITORING INSTRUMENTATION TO BE INSTALLED PRIOR TO SURCHARGE.
4. PILE GEOMETRY IS BASED ON THE ASSUMPTION THAT THE SEDIMENTATION BASIN WALLS ARE IN PLACE AT THE TIME OF SURCHARGING.
5. SURCHARGE PILE TO BE SLOPED TO THE SHED FACE WATER TO THE NORTH.
6. LOCATION OF SA-7 PERIMETER POOL RISER PIPES ARE APPROXIMATE. RISER PIPES TO BE FIELD VERIFIED AND EXTENDED WITH SURCHARGE AND MONITORED.

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the April 2015 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used: All analytes are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3. SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler. All samples are iced in a cooler during transport to the lab.

# Attachment 13: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending May 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending May 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

Hopewell, NJ 08525

**Subject:** **Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-06**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from June 1 – June 30, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

## B. SITE OPERATIONS

### 1. AVERAGE WEEKLY SITE RESOURCES

| Team | Week Ending | | | |
|---|---|---|---|---|
| | 7/7/15 | 7/14/15 | 7/21/15 | 7/28/15 |
| **Construction Management (AMEC)** | 9 | 8 | 8 | 9 |
| **Engineering (AMEC)** | 1 | 1 | 1 | 1 |
| **Air Monitoring (Emilcott)** | 1 | 1 | 1 | 1 |
| **Security (Securitas)** | 3 | 3 | 3 | 3 |
| **Entact/Subcontractors** | 31 | 33 | 33 | 37 |
| **Arecon/US Ecology Subcontractors** | 0 | 0 | 0 | 0 |
| **Evoqua** | 1 | 1 | 1 | 1 |
| **B&B Drilling** | 2 | 1 | 0 | 0 |
| **TOTAL STAFF** | 48 | 48 | 47 | 52 |

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.

- Collected June PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Verizon continued relocating communication lines to the North Bound side of Route 440.
- On, June 1 and 2, 2015, Cornerstone personnel completed S-3 Mass Removal Injection Event No. 21 in Injection Well 088-IW-02.
- Cornerstone conducted a round of quarterly ground water level measurements.
- Continued to stockpile Celgene material for future screening operations.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed /refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and the tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on June 11, 2015.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 7/7/2015 | 714/2015 | 7/21/2015 | 7/28/2015 |
| Avg. Gallons Treated & Discharged (per day) | 77,715 | 77,015 | 77,664 | 75,857 |
| Average Flow (gpm) for Operating Period | 54 | 54 | 54 | 53 |
| Avg. Hours of Plant Operation | 24 | 24 | 24 | 24 |
| GWTP Influent Tanks (gal.) | 7,092 | 7,003 | 8,498 | 7,336 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completed excavation activities associated with Area EA-7.
- Performed excavation of EA-8 to design extents. Completion of the EA-8 excavation is pending post excavation sampling results.
- Completed pre-trenching for installation of temporary shoring related to the excavations along Route 440.
- Completed field verification of the JCMUA 48-inch storm sewer and BMUA 36-inch sewer force main.
- Installed traffic controls for shoulder closing associated with excavation along Route 440 south frontage with SA-6 North in accordance with the NJDOT permit.
- Lindie Griffith mobilized drill rig and equipment for installation of drilled soldier piles associated with temporary shoring for EA-2 and EA-3 along Rt. 440 frontage.

- Continued to haul screened historic fill from N1 and place it as backfill in the west side of SA-6 South backfill area.
- Completed placement of soils with hexavalent chromium concentrations between 20 and 240 ppm within the sedimentation basin south of the Vertical Hydraulic Barrier Wall on SA-6 North.
- Continued placement of historic fill within the sedimentation basin north of the Vertical Hydraulic Barrier Wall on SA-6 North.
- Completed groundwater sampling of four of the L-wells at SA-6 South, Site 124 using geoprobe/temporary well points.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| No update for the reporting period | | | | | | | |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Cells |
|---|---|
| **Excavation Completed** | Excavation Areas EA-7 and EA-8<br>Volume Excavated - Total for Reporting Period: 2,843.58 CY / Total to Date: 2,843.58 CY |
| **Backfill in Progress** | Historic Fill - SA6 South western backfill area. |

- Screened historic Fill was transferred from 1N surcharge area and placed as backfill in SA-6 South. A total of 110 loads, totaling approximately 2,200 cubic yards was placed as backfill in SA-6 South during the reporting period.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Continued off-loading of remaining screened historic fill.
- Area 2N: Surcharging is 100% complete. Offloading not yet scheduled by contractor.
- Area 3N: Completed installation of surcharge monitoring instrumentation.
- Area 4N: Completed installation of surcharge monitoring instrumentation.

## F. SHEET PILE OPERATIONS

- No sheet pile operations occurred during the reporting period.

## G. CAPPING OPERATIONS

- Continued general Cap Subgrade preparation in Area 1S and 2S.
- Continued Utility Corridor and roadway subgrade preparation.
- Continued cutting hydraulic barrier sheet of the SA-6 South cap area.
- Began breaking and removing asphalt on top of the SCB wall on the north side of the cap area.
- Began delivery and receiving inspections of geo-synthetic cap materials.
- Held kick-off meeting with Langan Environmental (independent liner QA) and initiated development of the QA Plan.

## H. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDEP Waterfront Development | SA-6 North Only | Obtained 6/23/2010 | Not Specified, Est. 3/31/2015 | 6/23/2015 | - |

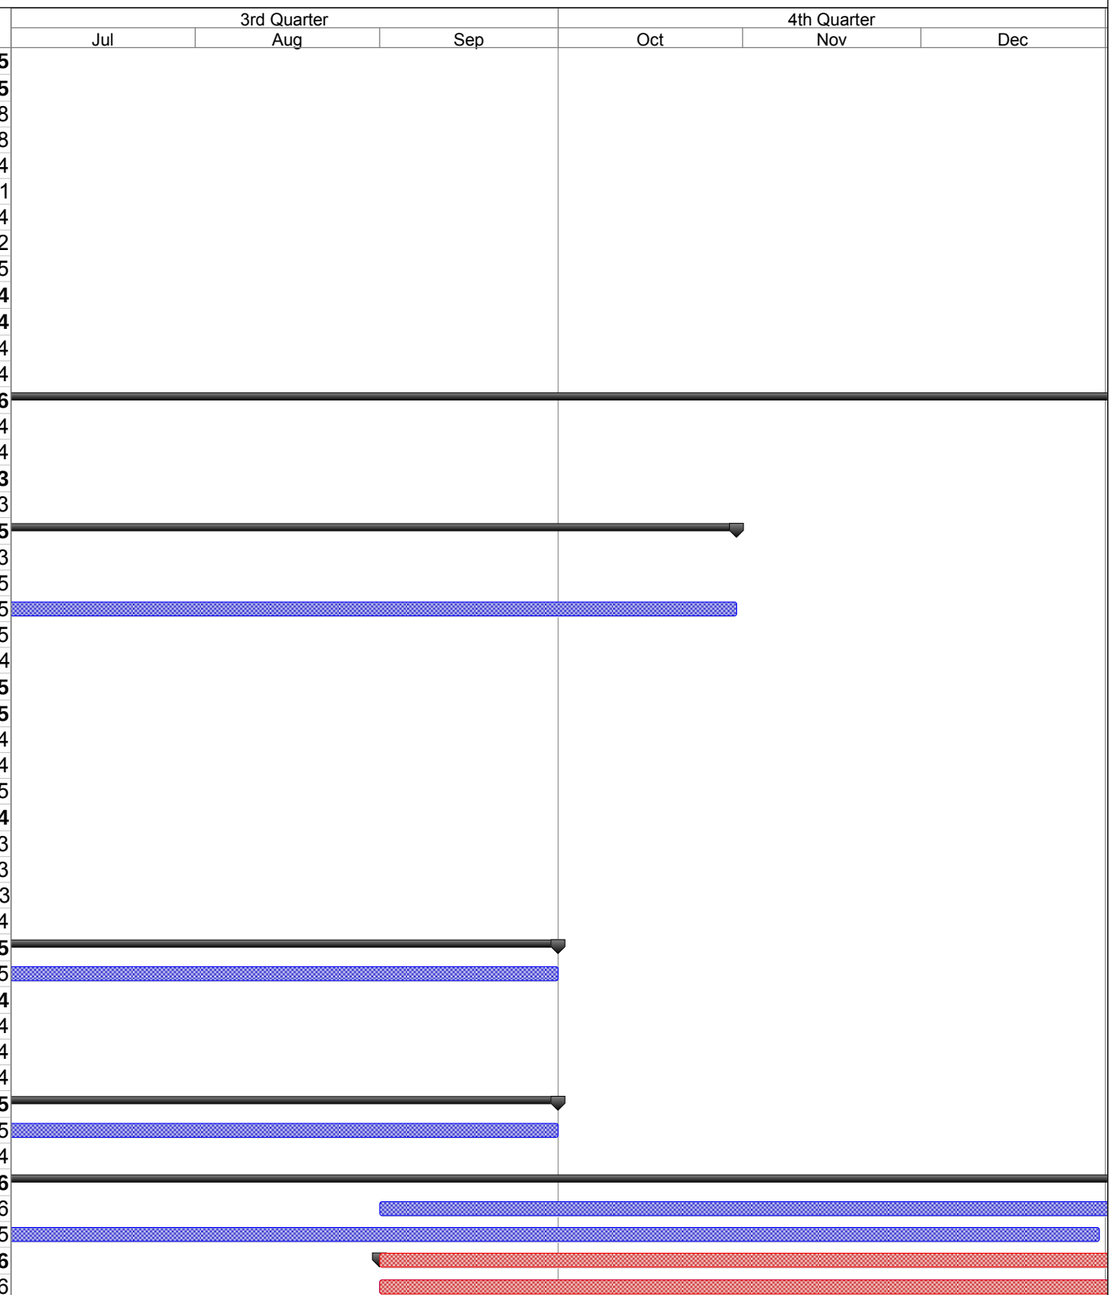
| NJDOT – Highway Occupancy Permit – Installation of Sheet Piling and Excavation Adjacent to Rte 440 ROW | SA-6 Chromium Remedy | Application Submitted 9/8/14 Final Executed Permit Issued 12/2/14 | 11/2/15 | 12/2/15 | Pending |

## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete excavation of Area EA-8 pending post excavation sampling results.
- Complete excavated waste load out for soils with hexavalent chromium concentrations greater than 240 ppm.
- Begin excavation of Area EA-4.
- Complete installation of drilled piles associated with the temporary shoring along Route 440.
- Complete installation of SA-6 South piezometers.
- Continue installation of the vertical hydraulic barrier wall east of the Trash Pit and along Route 440.
- Begin installation of dewatering wells associated with the SA-6 North Excavation Areas EA-2 and EA-3.
- Continue Cap Subgrade and utility corridor preparation activities on SA-6 South.
- Mobilize the geosynthetics crew and independent QA contractor and begin geo-synthetic cap placement activities on SA-6 South Area 1S.
- Mobilize screening equipment and begin screening Celgene material for use as cap cover soils.
- Verizon will complete relocation of communication lines to the North Bound side of Route 440.
- Begin Stratum D repair of the JCIA Trash Pit Area.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Conduct S-3 Mass Removal injection Event No. 22 in well 088-IW-01.
- Complete PVSC Monthly compliance sampling.
- Submit the revised plan for the SA-6 North Treatment Area 10 proximate to force main.
- Continue to work with owner on access for the planned PW-3 extraction well installation.
- Finalize and submit Surcharge Monitoring Report No. 13 which will include the baseline installation data for Areas 3N and 4N.



**ATTACHMENTS:**

1. Schedule – 6 Month Look Ahead
2. Site Photographs
3. Excavation and Backfill
   - Progression Chart
4. *Dewatering Operations Update (not included in this reporting period)*
5. SA-6 Construction Water Discharge Data (To PVSC)
6. Backfill Analytical Data
7. Perimeter Pools Update
8. Groundwater Quality Data
9. Surcharge Monitoring Update
10. *Sheet Pile Update (not included in this reporting period)*

# Attachment 1: Schedule – 6 Month Look Ahead

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start | Finish |
|---|---|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1891 days** | **1/4/08** | **3/30/15** |
| **18** | **JCIA/JCDPW Relocation** | **1735 days** | **8/11/08** | **3/30/15** |
| 19 | Develop Site Relocation Master Plan | 38 days | 8/11/08 | 10/1/08 |
| 20 | Submit Site Relocation Master Plan | 0 days | 10/1/08 | 10/1/08 |
| 21 | JC Construction of New Facilities | 1309 days | 6/2/09 | 6/2/14 |
| 22 | Relocation Contractor Procurement | 392 days | 4/15/10 | 10/13/11 |
| 23 | JCIA and JCDPW Relocation | 753 days | 10/17/11 | 8/29/14 |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days | 12/12/11 | 4/30/12 |
| 24a | Demolition of JCIA Structures | 151 days | 9/1/14 | 3/30/15 |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** | **7/11/08** | **4/30/14** |
| **57** | **SA-6 South Relocation** | **616 days** | **12/26/11** | **4/30/14** |
| 58 | New GWTP Construction Completion | 502 days | 3/5/12 | 1/30/14 |
| 59 | Demolition of 80 Kellogg | 857 days | 12/26/11 | 4/30/14 |
| **60** | **SA-6 North/South Field Implementation** | **838 days** | **3/1/13** | **5/16/16** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 403 days | 6/17/13 | 12/31/14 |
| 60b | SA-6S (Site 163) In-Situ Treatment | 294 days | 11/15/13 | 12/31/14 |
| **61** | **Mobilization (Inclues new GWTP, In-situ Treatment & Main Remedy)** | **87 days** | **3/1/13** | **6/28/13** |
| 61a | Mobilization | 87 days | 3/1/13 | 6/28/13 |
| **62** | **Surcharge Install/Instrumentation** | **620 days** | **6/17/13** | **10/30/15** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instrumentation | 142 days | 6/17/13 | 12/31/13 |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 195 days | 6/2/14 | 2/27/15 |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days | 3/2/15 | 10/30/15 |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 182 days | 10/20/14 | 6/30/15 |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 195 days | 3/3/14 | 11/28/14 |
| **63** | **Barrier Wall Install** | **489 days** | **6/17/13** | **4/30/15** |
| **63a** | **SA 6N Installation of Barrier Wall** | **369 days** | **12/2/13** | **4/30/15** |
| 63b | SA-6N Barrier Wall Delivery and Installation Preparation | 55 days | 12/2/13 | 2/14/14 |
| 63c | SA-6N Stations 23+38 to 14+25 | 90 days | 2/17/14 | 6/20/14 |
| 63d | SA-6N Stations 14+25 to 0+00 | 224 days | 6/23/14 | 4/30/15 |
| **63f** | **SA 6S Installation of Barrier Wall** | **250 days** | **6/17/13** | **5/30/14** |
| 63g | SA-6S Barrier Wall Delivery and Installation Preparation | 44 days | 6/17/13 | 8/15/13 |
| 63h | SA-6S Stations 1+54 to 8+37 | 7 days | 8/16/13 | 8/26/13 |
| 63i | SA-6S Stations 0+00 to 1+54; 8+37 to 8+60; 24+40 to 14+87; 24+40 to 25+89 | 27 days | 10/3/13 | 11/8/13 |
| 63j | SA-6S Stations 8+60 to 14+87 | 145 days | 11/11/13 | 5/30/14 |
| **64** | **Excavation** | **507 days** | **10/22/13** | **9/30/15** |
| 64a | SA 6N Excavation | 218 days | 12/1/14 | 9/30/15 |
| **64b** | **SA 6S Excavation** | **226 days** | **10/22/13** | **9/2/14** |
| 64c | SA-6S Excavation of Cells 1 - 25 | 53 days | 10/22/13 | 1/2/14 |
| 64d | SA-6S Excavation of Cells 26 - 60 | 90 days | 1/3/14 | 5/8/14 |
| 64e | SA-6S Excavation of Cells 156 - 61 | 83 days | 5/9/14 | 9/2/14 |
| **65** | **Backfill** | **493 days** | **11/11/13** | **9/30/15** |
| 65a | SA 6N Backfill | 218 days | 12/1/14 | 9/30/15 |
| 65b | SA 6S Backfill | 232 days | 11/11/13 | 9/30/14 |
| **66** | **Capping and Cover Soil Placement** | **315 days** | **12/1/14** | **2/12/16** |
| 66a | SA 6N Capping and Cover Soil Placement | 119 days | 9/1/15 | 2/12/16 |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days | 12/1/14 | 12/30/15 |
| **67** | **Restoration** | **164 days** | **9/1/15** | **4/15/16** |
| 67a | Restoration | 164 days | 9/1/15 | 4/15/16 |

Project: SA-6 Remediation Schedule
Revision 3
Date: 7/7/15

Task  Milestone  Summary  Critical

Note: The schedule will be revised following completion of the JCDPW relocation.

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start | Finish |
|---|---|---|---|---|
| **68** | **Demobilization** | **21 days** | **4/18/16** | **5/16/16** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | | | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | | | |
| **69** | **SA-6 North Project Closeout** | **310 days** | **10/1/15** | **12/7/16** |
| 75 | **SA-6 South Project Closeout** | **310 days** | **10/1/15** | **12/7/16** |

Project: SA-6 Remediation Schedule
Revision 3
Date: 7/7/15

Task | Milestone | Summary | Critical

Note: The schedule will be revised following completion of the JCDPW relocation.

# Attachment 2: Site Photographs

**Site Photograph 1:** Excavation to confirm 36-inch sewer main location on former JC properties.

**Site Photograph 2:** Excavation to confirm utilities locations along Rt. 440.

**Site Photograph 3:** Installation of Traffic Controls along Rt. 440.

**Site Photograph 4:** Loading end dump on plastic at former JC properties.

**Site Photograph 5:** Offloading remaining surcharge material at Kellogg St properties.

**Site Photograph 6:** Staging screened historic fill on former JC properties.

# Attachment 9: Surcharge Monitoring Update

Installed Instrumentation Locations

Instrumentation Locations Not Installed

| SETTLEMENT MONITORING POINT | | |
|---|---|---|
| DESCRIPTION | NORTHING | EASTING |
| FS8 | 685406.37 | 603094.37 |
| FS9 | 685500.70 | 603127.22 |
| FS10 | 685858.02 | 603165.50 |
| FS11 | 685387.04 | 603338.90 |
| HS10 | 685499.90 | 603327.97 |
| HS11 | 685328.97 | 603205.81 |
| HS12 | 685428.53 | 603407.96 |
| HS13 | 685253.14 | 603316.22 |
| SP21 | 685302.66 | 603197.35 |

NOTES:

1. PRIOR TO SURCHARGING REMOVE SA-7 FENCE AND SA-7 FLOODLIGHTS.
2. RELOCATE POWER SUPPLY TO PW1 AND PW2 PRIOR TO SURCHARGE.
3. GEOTECHNICAL MONITORING INSTRUMENTATION TO BE INSTALLED PRIOR TO SURCHARGE.
4. PILE GEOMETRY IS BASED ON THE ASSUMPTION THAT THE SEDIMENTATION BASIN WALLS ARE IN PLACE AT THE TIME OF SURCHARGING.
5. SURCHARGE PILE TO BE SLOPED TO THE SHED FACE WATER TO THE NORTH.
6. LOCATION OF SA-7 PERIMETER POOL RISER PIPES ARE APPROXIMATE. RISER PIPES TO BE FIELD VERIFIED AND EXTENDED WITH SURCHARGE AND MONITORED.

| Comment Number | Permit Number | SWAP Observer's Comments |
|---|---|---|
| 1 | IA2Q4A1AL8 | Silt fence on the southern perimeter of the 3-S surcharge area requires maintenance. |
| 2 | IA2Q4A1AL8 | Spill pallets and secondary containment for storage tanks have accumulated storm water. |
| 3 | IA2Q4A1AL8 | Novartis/Celgene surcharge material overtops the sheetpile hydraulic barrier at several locations in surcharge areas 1-S and 2-S. |
| 4 | IA2Q4A1AL8 | Storm water is ponded on SA-6 South to the north of the 60 Kellogg building. |
| 5 | IA2Q4A1AL8 | Garbage/debris has accumulated on the grass areas outside of the perimeter fenceline at the Kellogg Street jughandle. |
| 6 | IA2Q4A1AL8 | Several gaps are present between fence panels in the perimeter fence between SA-6 North and the MUA complex. |
| 7 | IA2Q4A1AL8 | Sediment has overtopped erosion control measures surrounding the Novartis stockpile area on SA-7 Erosion control measures are compromised on the eastern, southern and western sides. |
| 8 | IA2Q4A1AL8 | Sediment has accumulated on both the northern and the southern SA-7 access roadways |
| | | |
| | | |

**Facility Location:** Jersey City, New Jersey
**SWAP Observer:** Signature **Date:** 06/05/15

| Comment Number | Construction Manager's Comments to Contractor | Date Completed |
|---|---|---|
| 1 | Repair/replace silt fence as required. | 6/8/15 RAD |
| 2 | Drain storm water from secondary containment areas as required. | 6/9/15 RAD |
| 3 | Remove the surplus surcharge material to bring the grade in the SA-6 South cap area below the top of the HB sheets. Grade to prevent storm water runoff over the sheets. | 6/8/15 RAD |
| 4 | Pump ponded storm water to the Construction Water Treatment Plant as required. | 6/9/15 RAD |
| 5 | Pick up and dispose of garbage/debris. | 6/8/15 RAD |
| 6 | Close gaps in the perimeter fence. | 6/8/15 RAD |
| 7 | Repair/replace/install erosion control measures as required to provide acceptable containment around the expanding stockpile area. | 6/9/15 RAD |
| 8 | Remove sediment from the paved roadways and install tracking pads if required to prevent the buildup of sediment during normal work activities. | 6/10/15 RAD |
| | | |
| | | |

| Comment Number | Permit Number | SWAP Observer's Comments |
|---|---|---|
| 1 | IA2Q4A1AL8 | Exclusion Zone fencing is inadequate at various locations along the southern perimeter of the SA-6 South cap area. |
| 2 | IA2Q4A1AL8 | Backfill material meets the top of the sheet pile hydraulic barrier wall at several locations along the southern perimeter of the SA-6 South cap area. |
| 3 | IA2Q4A1AL8 | Windscreen has pulled loose from the perimeter fence at two locations adjacent to the Kellogg Street jughandle. |
| 4 | IA2Q4A1AL8 | Sections of removed storm drain pipe and other debris are present on the backfill in the western end of SA-6 South. |
| 5 | IA2Q4A1AL8 | Exclusion Zone fencing around the SA-6 North contingent groundwater system requires maintenance and additional signage. |
| 6 | IA2Q4A1AL8 | The historic fill stockpile to the south of the MUA building requires additional erosion control measures. |
| 7 | IA2Q4A1AL8 | Plastic sheeting at the Exclusion Zone truck exit east of the sedimentation basin is inadequate. |
| 8 | IA2Q4A1AL8 | Empty drums are staged on SA-6 North to the south of the JCIA trash pit. |
| 9 | IA2Q4A1AL8 | Erosion control measures around the Novartis stockpile area on SA-7 are inadequate or missing. |
| 10 | IA2Q4A1AL8 | Sediment has accumulated on the SA-7 paved and unpaved haul roads. |
| 11 | IA2Q4A1AL8 | Pallets and other debris are present on the stoned areas of SA-7 |

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets):

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

# Attachment 13: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending June 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending June 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor. Submitted to all Parties on July 2, 2015. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor. Submitted to all Parties on June 18, 2015. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Contractor only. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Contractor only. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on June 22, 2015. |

**SA-6 North/South Field Change Log - Month Ending June 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on June 22, 2015. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**8/14/2015**
**MONTHLY REPORT**

Honeywell

**Honeywell**
**101 Columbia Rd**
**Morristown, NJ 07962**

August 14, 2015

Honorable Robert G. Torricelli
Office of the Special Master
c/o Sean Jackson
7 So. Lanning Ave.
Hopewell, NJ 08525

**Subject:** **Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-07**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from July 1 – July 31, 2015.

Per prior discussion, Honeywell has included a new section pertaining to liner quality assurance.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

WJH:jtc/sgf

## B. SITE OPERATIONS

### 1. AVERAGE WEEKLY SITE RESOURCES

| Team | Week Ending | | | | |
|---|---|---|---|---|---|
| | 7/5/15 | 7/12/15 | 7/19/15 | 7/26/15 | 8/2/15 |
| **Construction Management (AMEC)** | 9 | 10 | 10 | 10 | 11 |
| **Engineering (AMEC)** | 1 | 1 | 1 | 1 | 1 |
| **Air Monitoring (Emilcott)** | 1 | 1 | 1 | 1 | 1 |
| **Security (Securitas)** | 3 | 3 | 3 | 3 | 3 |
| **Entact/Subcontractors** | 44 | 39 | 38 | 46 | 49 |
| **Arecon/US Ecology Subcontractors** | 1 | 0 | 0 | 0 | 0 |
| **Evoqua** | 1 | 1 | 1 | 1 | 1 |
| **B&B Drilling** | 2 | 2 | 2 | 2 | 0 |
| **TOTAL STAFF** | 62 | 57 | 56 | 64 | 66 |

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected July PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Verizon completed relocating overhead communication lines to the North Bound side of Route 440.

- On July 6 through 8, Cornerstone personnel completed S-3 Mass Removal Injection Event No. 22 in Injection Well 088-IW-01.
- On July17, Summit Drilling conducted soil sampling to a depth of 40 feet at the proposed PW-3 location on the Difeo car dealership property. The drill rig malfunctioned during drilling operations resulting in a demobilization and rescheduling of the work activities.
- Continued screening of Celgene material for use as protective cover soils above geosynthetics.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed /refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and the tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on July 16, 2015.
- PVSC collected annual compliance sample from the GWTP and the CWTP.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | | |
|---|---|---|---|---|---|
| | 7/5/15 | 7/12/15 | 7/19/15 | 7/26/15 | 8/2/15 |
| Avg. Gallons Treated & Discharged (per day) | 76,308 | 78,678 | 78,254 | 77,495 | 77,502 |
| Average Flow (gpm) for Operating Period | 54 | 54 | 54 | 53 | 54 |
| Avg. Hours of Plant Operation | 24 | 24 | 24 | 24 | 24 |
| GWTP Influent Tanks (gal.) | 11,616 | 7,838 | 9,276 | 8,606 | 7,882 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completion of the EA-8 excavation is pending post excavation sampling results.
- Lindie Griffith completed installation of drilled and driven soldier piles associated with temporary shoring for EA-2 and EA-3 along Route 440 frontage.
- Completed installation of well points for dewatering EA-5 on SA-6 North.
- Continued to haul screened historic fill from N1 and place it as backfill in the west side of SA-6 South backfill area.
- Continued relocating soils from Area 3S to the SA-6 North Cap Area.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Canada | Stablex | WWTP Filter Cake | 1 | 23 | 15.4 |
| **Entact/Horwith** | Tri-axle Dump | PA Transload | US Ecology | >1,000 mg/kg soils | 25 | 21.63 | 540.78 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Cells |
|---|---|
| **Excavation Completed** | Excavation Areas EA-7 and EA-8<br>Volume Excavated - Total for Reporting Period: 0 CY / Total to Date: 2,843.58 CY |
| **Backfill in Progress** | Historic Fill – SA-6 South western backfill area. |

- Screened historic Fill was transferred from 1N surcharge area and placed as backfill in SA-6 South. A total of 75 loads, totaling approximately 1,500 cubic yards was placed as backfill in SA-6 South during the reporting period.
- Screened Celgene material was placed as protective cover soil in the SA-6 South cap area. A total of 17 loads, totaling approximately 383 cubic yards was placed as backfill in SA-6 South during the reporting period.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Continued off-loading of remaining screened historic fill.
- Area 2N: Surcharging is 100% complete. Offloading not yet scheduled by contractor.
- Area 3N: Completed installation of surcharge monitoring instrumentation.
- Area 4N: Completed installation of surcharge monitoring instrumentation.

## F. SHEET PILE OPERATIONS

- Completed pre-trenching for vertical hydraulic barrier wall alignment along Route 440.
- Began installation of temporary sheet pile along Route 440.
- Continued installation of the vertical hydraulic barrier wall east of the Trash Pit and along Route 440 from STA 0+00 to STA 3+10 (Completed on August 5th 2015). Vibration monitoring was performed during driving activities.

## G. CAPPING OPERATIONS

- A total of 121,511 sq. ft. of liner totaling 35% of the total cap area, was deployed during the reporting period.
- Began installation of geosynthetic cap components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, and geocomposite Drainage layer.
- Continued general liner subgrade preparation in Area 2S and 3S.
- Continued cutting hydraulic barrier sheets to final elevation in SA-6 South Open Space Area.
- Completed installation of piezometers associated with the SA-6 South Open Space Area.
- Continued removing asphalt on top of the SCB wall and smooth coating as necessary for geosynthetics installation detail.
- Began installation of gas vent pipe installation.
- Continued delivery and receiving inspections of geosynthetic cap materials.

## H. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDEP Waterfront Development | SA-6 North Only | Obtained 6/23/2010 | Not Specified, Est. 3/31/2015 | 6/23/2015 | - |
| NJDEP CAFRA/FHA | SA-6 South Only | Obtained 9/26/2012 | Renewal Not Needed | 9/25/2017 | 10/09/2012 |
| HEPSCD SESCP | Novartis Soil Pile/SA-7 | Obtained 8/21/2012 | Renewal Not Needed | 2/21/2016 | - |

## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete excavation of Area EA-8 pending post excavation sampling results.
- Begin excavation of Area EA-4 and EA-5.
- Complete installation of the vertical hydraulic barrier wall within the Trash Pit
- Begin installation of dewatering wells associated with the SA-6 North Excavation Areas EA-2 and EA-3.
- Continue liner subgrade and utility corridor preparation activities on SA-6 South.
- Continue screening Celgene material for use as liner protective cover soils.
- Continue Celgene material screening activities.
- Continue dewatering and storm-water management activities.
- Complete installation of Sonic Boring associated with planned PW-3.
- Continue SWPPP inspections.
- Conduct S-3 Mass Removal injection Event No. 23 in well 088-IW-03.
- Complete soil sieve analyses from the PW-3 location on Difeo property.
- Complete PVSC Monthly compliance sampling.
- Implement the in-situ plan for the SA-6 North Treatment Area 10 proximate to force main.
- Continue to work with owner on access for the planned PW-3 extraction well/trench installation.

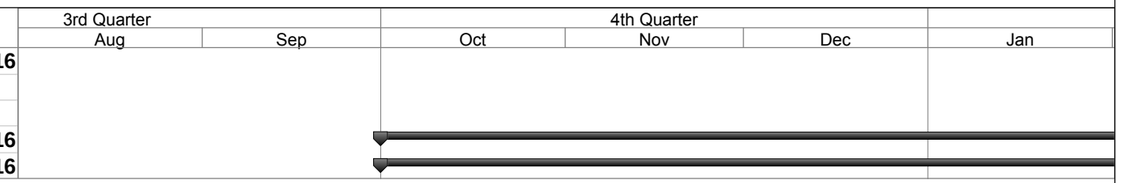
Honeywell

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start | Finish |
|---|---|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1891 days** | **1/4/08** | **3/30/15** |
| **18** | **JCIA/JCDPW Relocation** | **1735 days** | **8/11/08** | **3/30/15** |
| 19 | Develop Site Relocation Master Plan | 38 days | 8/11/08 | 10/1/08 |
| 20 | Submit Site Relocation Master Plan | 0 days | 10/1/08 | 10/1/08 |
| 21 | JC Construction of New Facilities | 1309 days | 6/2/09 | 6/2/14 |
| 22 | Relocation Contractor Procurement | 392 days | 4/15/10 | 10/13/11 |
| 23 | JCIA and JCDPW Relocation | 753 days | 10/17/11 | 8/29/14 |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days | 12/12/11 | 4/30/12 |
| 24a | Demolition of JCIA Structures | 151 days | 9/1/14 | 3/30/15 |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** | **7/11/08** | **4/30/14** |
| **57** | **SA-6 South Relocation** | **616 days** | **12/26/11** | **4/30/14** |
| 58 | New GWTP Construction Completion | 502 days | 3/5/12 | 1/30/14 |
| 59 | Demolition of 80 Kellogg | 857 days | 12/26/11 | 4/30/14 |
| **60** | **SA-6 North/South Field Implementation** | **838 days** | **3/1/13** | **5/16/16** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 403 days | 6/17/13 | 12/31/14 |
| 60b | SA-6S (Site 163) In-Situ Treatment | 294 days | 11/15/13 | 12/31/14 |
| **61** | **Mobilization (Inclues new GWTP, In-situ Treatment & Main Remedy)** | **87 days** | **3/1/13** | **6/28/13** |
| 61a | Mobilization | 87 days | 3/1/13 | 6/28/13 |
| **62** | **Surcharge Install/Instrumentation** | **620 days** | **6/17/13** | **10/30/15** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instrumentation | 142 days | 6/17/13 | 12/31/13 |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 195 days | 6/2/14 | 2/27/15 |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days | 3/2/15 | 10/30/15 |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 182 days | 10/20/14 | 6/30/15 |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 195 days | 3/3/14 | 11/28/14 |
| **63** | **Barrier Wall Install** | **489 days** | **6/17/13** | **4/30/15** |
| **63a** | **SA 6N Installation of Barrier Wall** | **369 days** | **12/2/13** | **4/30/15** |
| 63b | SA-6N Barrier Wall Delivery and Installation Preparation | 55 days | 12/2/13 | 2/14/14 |
| 63c | SA-6N Stations 23+38 to 14+25 | 90 days | 2/17/14 | 6/20/14 |
| 63d | SA-6N Stations 14+25 to 0+00 | 224 days | 6/23/14 | 4/30/15 |
| **63f** | **SA 6S Installation of Barrier Wall** | **250 days** | **6/17/13** | **5/30/14** |
| 63g | SA-6S Barrier Wall Delivery and Installation Preparation | 44 days | 6/17/13 | 8/15/13 |
| 63h | SA-6S Stations 1+54 to 8+37 | 7 days | 8/16/13 | 8/26/13 |
| 63i | SA-6S Stations 0+00 to 1+54; 8+37 to 8+60; 24+40 to 14+87; 24+40 to 25+89 | 27 days | 10/3/13 | 11/8/13 |
| 63j | SA-6S Stations 8+60 to 14+87 | 145 days | 11/11/13 | 5/30/14 |
| **64** | **Excavation** | **507 days** | **10/22/13** | **9/30/15** |
| 64a | SA 6N Excavation | 218 days | 12/1/14 | 9/30/15 |
| **64b** | **SA 6S Excavation** | **226 days** | **10/22/13** | **9/2/14** |
| 64c | SA-6S Excavation of Cells 1 - 25 | 53 days | 10/22/13 | 1/2/14 |
| 64d | SA-6S Excavation of Cells 26 - 60 | 90 days | 1/3/14 | 5/8/14 |
| 64e | SA-6S Excavation of Cells 156 - 61 | 83 days | 5/9/14 | 9/2/14 |
| **65** | **Backfill** | **493 days** | **11/11/13** | **9/30/15** |
| 65a | SA 6N Backfill | 218 days | 12/1/14 | 9/30/15 |
| 65b | SA 6S Backfill | 232 days | 11/11/13 | 9/30/14 |
| **66** | **Capping and Cover Soil Placement** | **315 days** | **12/1/14** | **2/12/16** |
| 66a | SA 6N Capping and Cover Soil Placement | 119 days | 9/1/15 | 2/12/16 |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days | 12/1/14 | 12/30/15 |
| **67** | **Restoration** | **164 days** | **9/1/15** | **4/15/16** |
| 67a | Restoration | 164 days | 9/1/15 | 4/15/16 |

Project: SA-6 Remediation Schedule
Revision 3
Date: 7/31/15



Task  Milestone  Summary  Critical

Note: The schedule will be revised following completion of the JCDPW relocation.

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start | Finish |
|---|---|---|---|---|
| **68** | **Demobilization** | **21 days** | **4/18/16** | **5/16/16** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | | | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | | | |
| **69** | **SA-6 North Project Closeout** | **310 days** | **10/1/15** | **12/7/16** |
| 75 | **SA-6 South Project Closeout** | **310 days** | **10/1/15** | **12/7/16** |

Project: SA-6 Remediation Schedule
Revision 3
Date: 7/31/15

Task | Milestone ◆ | Summary | Critical

Note: The schedule will be revised following completion of the JCDPW relocation.

# Attachment 2: Site Photographs

**Site Photograph 1:** Fine grading of soils along slope of open space area Kellogg Street properties.

**Site Photograph 2:** Fine grading of soils in flatter open space area Kellogg Street Properties.

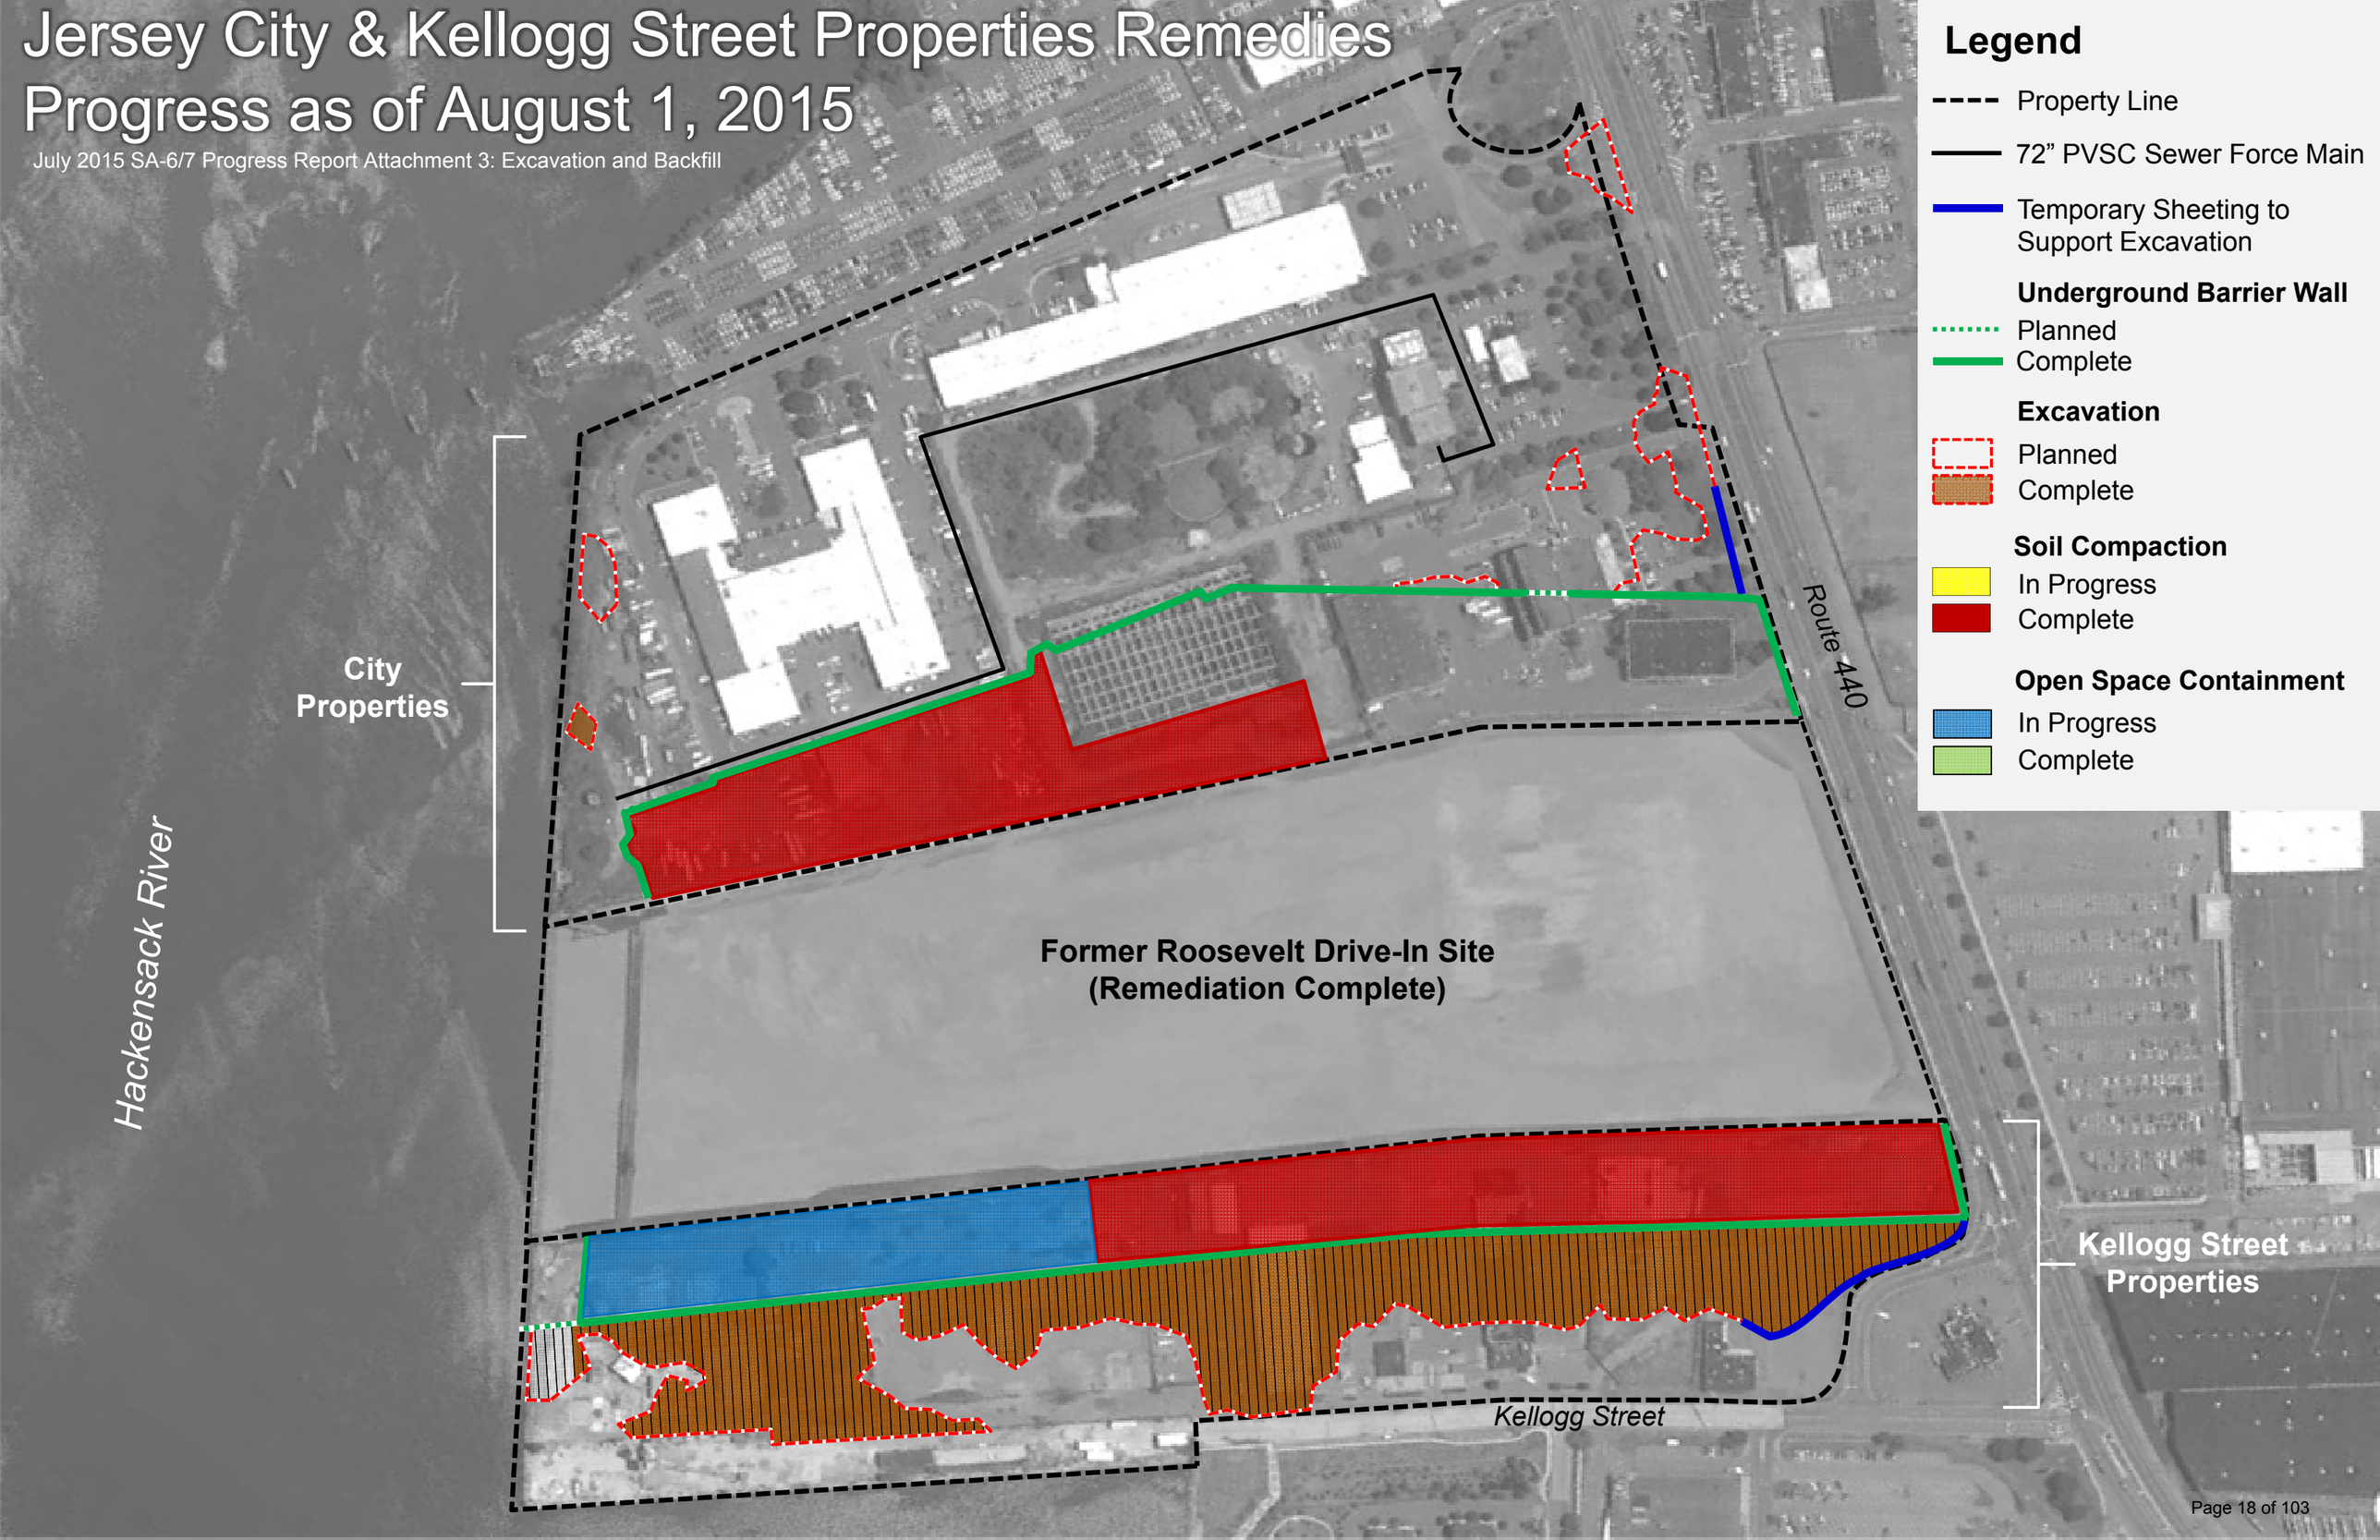
**Site Photograph 3:** Finishing the concrete barrier wall with smooth coat.

**Site Photograph 4:** Fusion Welding liner panels in Area 1S.

**Site Photograph 5:** Loading materials at Jersey City properties for offsite disposal.

**Site Photograph 6:** Onsite screening of soils to remove gravel.

**Site Photograph 7:** Sewing the seam between venting layer panels.



**Site Photograph 8:** Specialty equipment installs shoring for utility protection.

## Summary of Non-Compliance & Corrective Action Forms

***SA-6 South Cap Installation***

| Notice of Non-Compliance & Corrective Action Sheet Number | Date | Item | Associated Repair Number | Approx. Location | Follow Up Action Taken |
|---|---|---|---|---|---|
| 1 | 7/21/2015 | Subgrade Irregularity | RP-3 | Panel #2 (P-2) | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2.5 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs) |
| 2 | 7/21/2015 | Subgrade Irregularity | RP-8 | Panel #2 (P-2) | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2.5 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs) |
| 3 | 7/22/2015 | Failed Non-Destruct Test | RP-13 | Panel #7 (P-7) & Panel #8 (P-8) seam | Based on length of failed seam (approximately 6 ft.) the entire seam was patched and repaired (approximate 2 ft. by 6 ft. patch). The patch was overlapped a minimum of 4-inches, with rounded edges, and sealed with an extrusion weld. Vacuum box testing was then conducted in accordance with Section 02372-8 to confirm the weld. |
| 4 | 7/24/2015 | Subgrade Irregularity | RP-30 | Panel #17 (P-17) | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs) |
| 5 | 8/7/2015 | Failed Vacuum Box Test | RP-215 | Panel #50 (P-50) | Failed extrusion weld (identified during vacuum box testing) was patched with an approximate 2 ft. by 2 ft. geomembrane patch over the extrusion weld (noted as RP-222 on Repair Log). The patch was overlapped a minimum of 4-inches beyond the edges of the failed weld, conformed so that the edges were rounded, and sealed with an extrusion weld. Vacuum box testing was conducted along the seams to confirm the seams were properly patched and repaired. |

# Certificate of Soil Surface

Sheet # 7

| | | | | | |
|---|---|---|---|---|---|
| Project Name | HONEYWELL SA-6 SOUTH | Material Desc. | GEOMEMBRANE | | |
| Project No. | 100530001 | General Desc. | (Subgrade) | Operations | LCRS |
| Owner/ Contr. | HONEYWELL / AMEC FW | Cell No. | ~STA. 179+80 TO STA. 177+00 | | |
| QA Monitor | LANGAN | Date | 7/29/15 | | |

Description of Soil Surface to be lined: ~280 FT. SECTION OF SOIL APPROVED EAST OF GEOMEMBRANE PANELS INSTALLED ON 7/28/15 (P-30). SUBGRADE APPROVED FROM APPROX. STA. 179+80 TO STA. 177+00, SOIL APPEARS TO BE GRADED, COMPACTED, AND FREE OF DEBRIS (>½"), AND IN CONFORMANCE WITH PROJECT SPECS

I hereby certify that the above surface area is suitable for the installation of geosynthetics, and I shall be responsible for its integrity and suitability in accordance with the specifications from this date to the completion of the installation.

| Visual Inspection of Subgrade Surface | |
|---|---|
| **QUALITY** | **Y/N/NA** |
| **Geomembrane** | |
| Smooth | Y |
| Uniform | Y |
| Relatively free from abrupt changes in grade, rocks larger than ½, sharp objects, and debris | Y |
| Free of standing water | Y |
| Surface area to be lined has been properly prepared | Y |
| **Geocomposite Clay Liner** | |
| Free from wheel ruts, debris, rocks, sticks, and rocks larger than 1 inch | |
| Suitable for placement of GCL | |
| Smooth | |
| Any changes required? If so the contractor and owner's representative must be notified. | |

| Comment Number | Permit Number | SWAP Observer's Comments |
|---|---|---|
| 1 | IA2Q4A1AL8 | Exclusion Zone fencing is missing along the southwestern edge of the cap area. |
| 2 | IA2Q4A1AL8 | Spill pallets and other secondary containment vessels have accumulated stormwater. |
| 3 | IA2Q4A1AL8 | The cap area to the north of the 60 Kellogg building is graded to shed stormwater over the sheetpile hydraulic barrier. |
| 4 | IA2Q4A1AL8 | Gaps are present in the perimeter fence panels at the western end of Kellogg Street. |
| 5 | IA2Q4A1AL8 | Stormwater is ponded to the south of the hydraulic barrier on SA-6 South. |
| 6 | IA2Q4A1AL8 | The remaining Type C material stockpile requires a containment berm or tarping. |
| 7 | IA2Q4A1AL8 | Gaps are present in the perimeter fence to the west of the CWTP |
| 8 | IA2Q4A1AL8 | Additional erosion control measures are required around the soil screening operation on SA-7. |
| 9 | IA2Q4A1AL8 | Sediment is present on the southern SA-7 haul road. |
| 10 | | |

| Comment | Construction Manager's Comments to Contractor | Date Completed |
|---|---|---|
| 1 | Reinstall Exclusion Zone fencing | 7-6-15 RAD |
| 2 | Drain stormwater from secondary containment vessels. | 7-7-15 RAD |
| 3 | Regrade the cap area (shape a swale and/or berm) to divert stormwater run-off to a low area within the EZ. | 7-7-15 RAD |
| 4 | Install clamps between temporary fence panels to keep them in alignment. | 7-7-15 RAD |
| 5 | Pump ponded stormwater to the CWTP | 7-7-15 RAD |
| 6 | Construct a containment berm around or tarp over the remaining Type C stockpile. | 7-7-15 RAD |
| 7 | Reposition the Jersey barriers/fence panels to close the gaps in the perimeter fence. | 7-6-15 RAD |
| 8 | Install silt fence or other comperable erosion control measures around the soil screening area and the new stockpiles. | 7-8-15 RAD |
| 9 | Clean up the remaining sediment on the SA-7 roadway. | 7-6-15 RAD |
| 10 | | |

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets):

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analytes are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending June 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. Submited to all Parties on July 2, 2015. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor. Subimtted to all Parties on June 18, 2015. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Contractor only. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Contractor only. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on June 22, 2015. |

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on June 22, 2015. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Contractor only. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Contractor only. |
| **DC 2015-07-22** | Detail BN has been modified to extend the lIDPE up and over the SCB Wall. The prior detail showed both the GDl and geomembrane terminating at the wall. | Submitted to Contractor only. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

September 11, 2015

Honorable Robert G. Torricelli
Office of the Special Master
c/o Sean Jackson
7 So. Lanning Ave.
Hopewell, NJ 08525

**Subject:** **Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-08**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from August 1 – August 31, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

WJH:jtc/sgf

# B. SITE OPERATIONS

## 1. AVERAGE WEEKLY SITE RESOURCES

| Team | Week Ending | | | |
|---|---|---|---|---|
| | 08/09/15 | 08/16/15 | 08/23/15 | 08/30/15 |
| Construction Management (AMEC) | 9 | 9 | 9 | 9 |
| Engineering (AMEC) | 1 | 1 | 1 | 1 |
| Air Monitoring (Emilcott) | 1 | 1 | 1 | 1 |
| Security (Securitas) | 3 | 3 | 3 | 3 |
| Entact/Subcontractors | 49 | 48 | 40 | 39 |
| Arecon/US Ecology Subcontractors | 0 | 3 | 3 | 0 |
| Evoqua | 1 | 1 | 1 | 1 |
| B&B Drilling | 0 | 0 | 0 | 1 |
| **TOTAL STAFF** | **64** | **66** | **58** | **55** |

## 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected August PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- On August 16 through 18, Cornerstone personnel completed S-3 Mass Removal Injection Event No. 23 in Injection Well 088-IW-03.
- On August 5, Summit Drilling completed soil sampling to a depth of 70 feet at the at the proposed PW-3 location on the Difeo car dealership property. Laboratory grain size determinations were completed of selected soil samples from this boring.
- Continued screening of Celgene material for use as protective cover soils above geosynthetics.
- Continued abandonment of monitoring wells on SA-6 North. The wells that where abandoned include the following: 088-MW-002, 088-MW-102, 088-MW-103, 088-MW-115, 088-PZ-001, 088-PZ-002, and 115-E4-DO.

# C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed /refilled the polymer.

- Cleaned upstream process (tank 201 and tank 202) pH probes, and the tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on August 11, 2015.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 08/09/15 | 08/16/15 | 08/23/15 | 08/30/15 |
| Avg. Gallons Treated & Discharged (per day) | 77,459 | 77,432 | 78,222 | 78,560 |
| Average Flow (gpm) for Operating Period | 55 | 54 | 54 | 55 |
| Avg. Hours of Plant Operation | 24 | 24 | 24 | 24 |
| GWTP Influent Tanks (gal.) | 9,582 | 7,147 | 7,000 | 6,852 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completion of the Excavation Area EA-8 excavation is pending post excavation sampling results.
- Completed excavation of Excavation Area EA-4.
- Completed excavation of relief trench on the cap side of the vertical hydraulic barrier wall adjacent to Excavation Area EA-5 in preparation for excavation.
- Began excavation of Excavation Area EA-5.
- Completed backfill placement in Excavation Area EA-7.
- Continued relocating soils from Area 3S to the SA-6 North Cap Area.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Entact/Horwith** | Tri-axle Dump | South Brunswick, NJ | MCUA | AB-10 Material | 9 | 25.91 | 2,410.37 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Cells |
|---|---|
| **Excavation Completed** | Excavation Areas EA-4 and EA-5<br>Volume Excavated - Total for Reporting Period: 899.11CY / Total to Date: 3,742.69 CY |
| **Backfill in Progress** | Historic Fill – SA-6 South western backfill area EA-7 |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 08/09/15 | 8/16/15 | 8/23/15 | 8/30/15 |
| Mt. Hope 3/8" Stone | 101.93 | 0 | 0 | 0 |

- Screened Historic Fill was transferred and placed as backfill in EA-7. A total of 2 loads, totaling approximately 40 cubic yards was placed as backfill in EA-7. In addition, a total of 57 loads of less than 20ppm material, totaling approximately 608 cubic yards was placed as backfill in EA-7.
- Screened Celgene material was placed as protective cover soil in the SA-6 South cap area. A total approximately 6,000 cubic yards was placed as protective cover soil during the reporting period.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Continued off-loading of remaining screened historic fill.
- Area 2N: Surcharging is 100% complete. Offloading not yet scheduled by contractor.
- Area 3N: Completed installation of surcharge monitoring instrumentation.
- Area 4N: Completed installation of surcharge monitoring instrumentation.

## F. SHEET PILE OPERATIONS

- Continued installation of temporary sheet pile along Route 440. On August 4, 2015 the contractor broke an unmarked 6" water service to JCMUA. Repair of the 6" line was completed on August 5, 2015. Installation of the temporary sheet pile has been postponed until utilities are further delineated.
- Continued installation of the vertical hydraulic barrier wall east of the Trash Pit and along Route 440 from STA 0+00 to STA 3+10 (completed on August 5, 2015).

## G. CAPPING OPERATIONS

- A total of 111,127 sq. ft. of liner totaling 31% of the total cap area was deployed during the reporting period. The total liner area deployed to date is now 66%.
- Continued installation of geosynthetic cap components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, and geocomposite drainage layer.
- Continued general liner subgrade preparation in Area 2S and 3S.
- Continued cutting hydraulic barrier sheets to final elevation in SA-6 South Open Space Area.

- Continued removing asphalt on top of the SCB wall and smooth coating as necessary for geosynthetics installation detail.
- Continued installation of gas vent pipe installation.
- Began placement of protective cover soils and demarcation tape over the geocomposite drainage layer.

## H. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDEP Waterfront Development | SA-6 North Only | Obtained 6/23/2010 | Not Specified, Est. 3/31/2015 | 6/23/2015 | - |
| NJDEP CAFRA/FHA | SA-6 South Only | Obtained 9/26/2012 | Renewal Not Needed | 9/25/2017 | 10/09/2012 |
| HEPSCD SESCP | Novartis Soil Pile/SA-7 | Obtained 8/21/2012 | Renewal Not Needed | 2/21/2016 | - |
| NJDEP RFA | Novartis Soil Pile/SA-7 | Obtained 9/7/2012 | Renewal Not Needed | Not Specified | - |
| PVSC SUP No. 31630019 | SA-6 Chromium Remedy | Obtained 3/26/2014 Final Revision 5/23/14 | Renewal Not Needed | 8/31/2018 | 04/19/2014 |
| SESCP | SA-6 Chromium Remedy | Obtained 5/16/2013 | Renewal Not Needed | 11/16/2016 | - |
| RFA | SA-6 Chromium Remedy | Obtained 5/29/2013 | Not Specified | Not Specified | - |
| NJDEP - Water Allocation | SA-6 Chromium Remedy | Obtained 6/19/2013 | Renewal Not Needed | 5/31/2018 | - |
| NJDEP – Treatment Works Approval | SA-6 Chromium Remedy | Obtained 7/8/2013 | Not Specified, Est. 3/31/2015 | 6/30/2016 | - |
| NJDOT - Highway Occupancy Permit | SA-6 Chromium Remedy | Obtained 9/11/2013 | Not Specified, Est. 6/11/2014 | 9/11/2014, 1 yr. extension granted 10/6/14 | - |
| NJDEP CAFRA/WFD/FHA GWTP Force Mains | GWTP | Obtained 4/22/2008 | Renewal Not Needed | 4/22/2013 | - |
| HEPSCD SESCP | GWTP | Obtained 8/27/2012 | Renewal Not Needed | 2/27/2016 | - |
| NJDEP CAFRA/WFD/FHA | GWTP | Obtained 11/16/2012 | Renewal Not Needed | 6/23/2015 | - |
| NJDEP Treatment Works Approval | GWTP | Obtained 4/11/2013 | Renewal Not Needed | 4/10/2015 | 4/23/2013 |
| NJDEP Air Pollution Control Preconstruction Permit | Existing GWTP | Obtained 9/24/2013 | Not Specified, Est. 3/31/2014 | 6/23/2014 | 11/20/2013 |

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| PVSC SUP No. 31630016 | New GWTP | Obtained 10/1/2013 | 6/30/2018 | 9/30/2018 | 10/29/2013 |
| PVSC SUP No. 31630005 | Existing GWTP/SA-7 | Obtained 1/1/2014 | Renewal Not Needed | 12/31/2018 | - |
| NJDEP Discharge to Groundwater (DGW) for In-Situ Treatment of Chromium Impacted Soils | SA-6 North Only | Obtained 4/30/2012 | Not Specified | Not Specified | 5/10/2012 |
| NJDEP DGW for In-Situ Treatment of Chromium Impacted Soils | SA-6 South Only | Obtained 1/3/2013 | Not Specified | Not Specified | - |
| NJPDES Permit | SA-7 | Renewed: Effective 12/01/2012 | Renewal Not Needed | 6/30/2015 | 1/11/2013 |
| Subchapter 8 Air Permit Application for the Waste Water Treatment Plant | SA-7 | Issued: 06/24/2009 | Renewal Not Needed | 6/23/2014 | 7/15/2009 |
| Individual Waterfront Development Permit and Water Quality Certificate for Sediment Remedy | SA-7 | Issued: 05/27/2011 Modified: 07/02/2012 | N/A | 5/26/2016 | 5/27/2011, 7/5/2012 |
| Tidelands Licenses for Sediment Remedy | SA-7 | Re-Issuance of Final Tidelands License is pending and will be effective 7/21/2013 | N/A | 7/21/2014 | 7/19/2012 |
| Pre-Construction Notice – Nationwide Permit #38 for Sediment Remedy | SA-7 | Issued: 3/21/2013 | N/A | 3/18/2015 | 3/25/2013 |
| NJDOT – Application for Drainage Connection, Post Remediation Grading and Drainage | SA-6 Chromium Remedy | Application Submitted 8/19/14 Permit Application Rescinded 12/1/14 & Approved by DOT on 12/18/14 | N/A | N/A | N/A |
| NJDOT – Highway Occupancy Permit – Installation of Sheet Piling and Excavation Adjacent to Rte 440 ROW | SA-6 Chromium Remedy | Application Submitted 9/8/14 Final Executed Permit Issued 12/2/14 | 11/2/15 | 12/2/15 | Pending |

## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete excavation of Area EA-8.
- Complete excavation of Area EA-5.
- Complete backfilling of excavation area EA-4 and EA-5.
- Initiate installation of the vertical hydraulic barrier wall within the Trash Pit.
- Continue installation of dewatering wells associated with the SA-6 North Excavation Areas EA-2 and EA-3.
- Begin Trash Pit Meadow Mat Repair.
- Continue liner subgrade and utility corridor preparation activities on SA-6 South.
- Continue installation of geosynthetic cap components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, and geocomposite Drainage layer.
- Continue screening Celgene material for use as liner protective cover soils.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Conduct S-3 Mass Removal injection Event No. 24 in well 088-IW-02.
- Complete PVSC Monthly compliance sampling.
- Implement the in-situ plan for the SA-6 North Treatment Area 10.
- Continue to coordinate the planned PW-3 extraction well/trench installation.

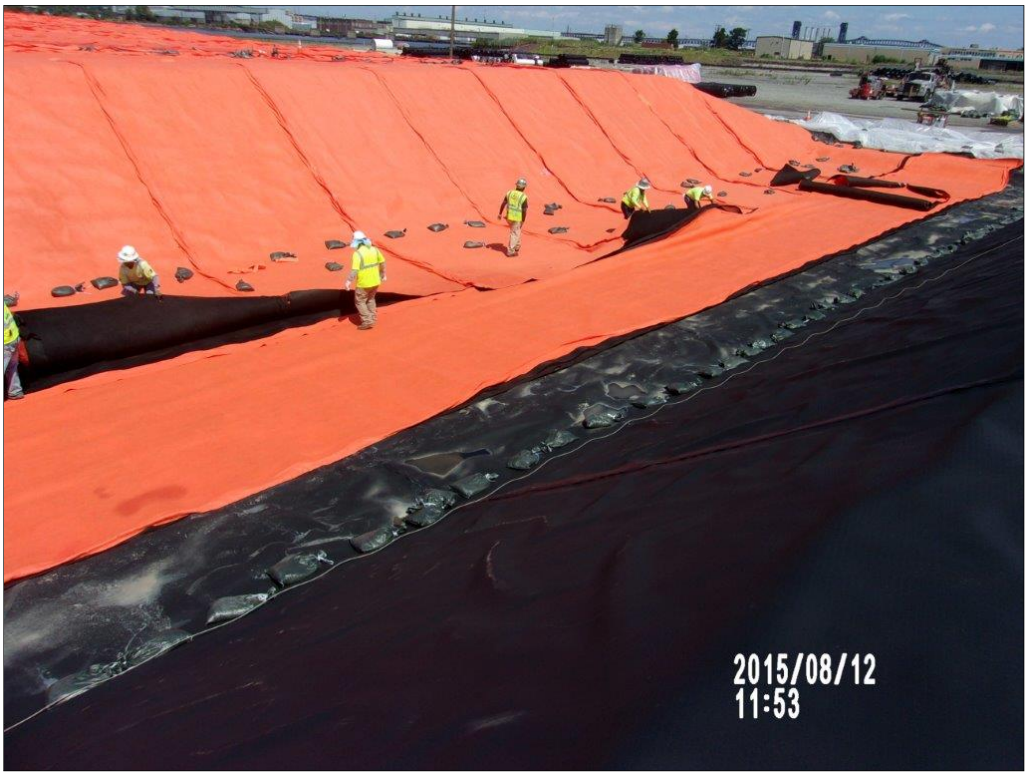
| 65a | SA 6N Backfill | 283 days | 12/1/14 | 12/30/15 |
| 65b | SA 6S Backfill | 384 days | 11/11/13 | 4/30/15 |
| **66** | **Capping and Cover Soil Placement** | **426 days** | **12/1/14** | **7/15/16** |
| 66a | SA 6N Capping and Cover Soil Placement | 83 days | 3/24/16 | 7/15/16 |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days | 12/1/14 | 12/30/15 |
| **67** | **Restoration** | **234 days** | **9/1/15** | **7/21/16** |
| 67a | Restoration | 234 days | 9/1/15 | 7/21/16 |
| **68** | **Demobilization** | **22 days** | **7/1/16** | **8/1/16** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | | | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | | | |
| **69** | **SA-6 North Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **75** | **SA-6 South Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **81** | **SA-6 North Long Term Protections** | **1830 days** | **10/1/08** | **10/1/15** |
| **92** | **SA-6 South Long Term Protections** | **2569 days** | **6/5/08** | **3/31/18** |

Project: SA-6 Remediation Schedule
Revision 4
Date: 8/28/15

Task Milestone Summary Critical

# Attachment 2: Site Photographs

**Site Photograph 1:** Contractor fine grading along edge of Open Space Area.



**Site Photograph 2:** Covering geotextile with screened clean fill Kellogg St. properties.

**Site Photograph 3:** Fusion-welding two liner panels in Open Space Area.

**Site Photograph 4:** Installing sheet pile along Route 440 former City properties.

**Site Photograph 5:** Placement of geotextile along Kellogg St. properties.

**Site Photograph 6:** Screening of clean fill onsite to remove larger gravel.

**Site Photograph 7:** Spreading clean fill Kellogg St. properties.

**Site Photograph 8:** Trimming top elevation of barrier wall Kellogg St. properties.

| Summary of Non-Compliance & Corrective Action Forms | | | | | |
|---|---|---|---|---|---|
| *SA-6 South Cap Installation* | | | | | |
| **Notice of Non-Compliance & Corrective Action Sheet Number** | **Date** | **Item** | **Associated Repair Number** | **Approx. Location** | **Follow Up Action Taken** |
| 5 | 8/7/2015 | Failed Vacuum Box Test | RP-215 | Panel #50 (P-50) | Failed extrusion weld (identified during vacuum box testing) was patched with an approximate 2 ft. by 2 ft. geomembrane patch over the extrusion weld (noted as RP-222 on Repair Log). The patch was overlapped a minimum of 4-inches beyond the edges of the failed weld, conformed so that the edges were rounded, and sealed with an extrusion weld. Vacuum box testing was conducted along the seams to confirm the seams were properly patched and repaired. |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** | Honeywell International, Inc. | **DATE:** | 8/3/2015 |
| **PROJECT:** | SA-6 South Capping | | | **WEATHER:** | 73/88° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** | Geocomposite & Cap Placement | **TIME:** | 0600 – 1945 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #13** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Ari Eslaminejad, Brian Shea<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL), 60-mil geomembrane liner (Cap), and geocomposite drainage layer (GDL) continuing from western end of SA-6 South. Material to be placed from Panel #34 (P-34) installed on 7/29/15 (located at approximate Sta. 17+00) running through first utility corridor approximately 120 ft. east to Sta. 15+80 (to eastern end of 1st utility corridor).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI placing an additional two panels of GDL (moving east from Panel #33) to cover up to geomembrane Panel #34 (P-34). While GDL was being placed, Langan and Entact conducted soil subgrade approval from approximate Sta. 17+00 to Sta. 15+80 (through 1st utility corridor). Refer to *Soil Subgrade Approval* forms from 8/3/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #1,2, and 3 of the daily photo log for 8/3/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 17+00 to Sta. 15+80 (to eastern side of 1st utility corridor).
- Geocomposite clay liner (GCL), GVL and Cap placement began with ESI placing the GCL along the bottom and slopes of the utility corridor (shown in the *8/3/15 Photo Log*) as shown on the project drawings and outlined in the specifications. The GCL was overlapped a minimum of 1 ft. and was sealed along the seams with a granular bentonite. Note: Prior to GCL placement, a soil transition slope (approx. 2 ft. by 2 ft. was constructed along the northern slope of the utility corridor to allow the GCL to transition over the slope without having to conform to the 90 deg. turns of the SCB wall). This soil slope modification was approved prior to construction.
- In addition to the GCL (placed within the utility corridor), 16 oz. geotextile was placed along the boundaries of the SA-6 South Cap (located at the areas above the groundwater table and outside of the GCL) over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *8/3/15 Photo Log* for supporting photographs.

- After installation of GCL and GVL through the utility corridor, geomembrane cap was installed continuing east of previously installed Panel #34 (located at approximate Sta. 17+00) on 7/29/15. Panels were oriented from east to west through the utility corridor (as proposed in the approved Panel Layout) and were installed through the utility corridor (located at approx. Sta. 16+50) running from the top of the western slope to the top of the eastern slope. Additional panels were installed outside of the utility corridor and were T (butt seamed) into the east-west panels from inside the utility corridor (the panels outside of the utility corridor reverted back to the north-south orientation as indicated on the approved panel layout). A total of twelve panel lengths (different dimensions and sizes) were installed (P-35, P-36, P-37, P-38, P-39, P-40, P-41, P-42, P-43, P-44, P-45, and P-46) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (8/3), *Trial Weld Log.*
- Installation and welding of the geomembrane panels was conducted until approximately 8 pm to ensure that the utility corridor was properly covered and sealed due to expected overnight storms. As such, no non-destructive testing on the installed panels was conducted. Additionally, no patch / repair work was completed, and no destructive samples were collected. These activities will be completed tomorrow (8/4/15).

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues recorded as no patch / repair work was conducted on geomembrane cap.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/3/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Log (once boot and associated sealing activities are completed for manhole located at Sta. 21+00).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 2 piezometers, and 3 gas vents).

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15 as well as reviewed and approved ESI *Daily Panel Placement*, *Preweld Test Report*, and *Certificate of Subgrade Acceptance, etc.* forms.
- Reviewed laboratory destruct sample results for samples DS-1 through DS-10, and DSX-1 through DSX-4. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for the next approximate 100 ft. run east (approximately from Sta. 15+80 to Sta. 14+80) east of utility corridor.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

***Daily QA Documents Completed***

| ***Appendix / QA Forms*** | ***Sheet / Page Numbers*** | ***Comments*** |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 8/4/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 70/85° F, AM Rain, Clear |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0600 – 1630 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #14** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Ari Eslaminejad, Brian Shea<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL), 60-mil geomembrane liner (Cap), and geocomposite drainage layer (GDL) continuing from western end of SA-6 South. Material to be placed from east of Panel #42 installed on 8/3/15 (located at approx. Sta. 15+80) moving east approximately 100 ft. to approximate Sta. 14+80.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Based on the AM storms / rain, ESI could not conduct patch / repair work (i.e. extrusion welding) on the geomembrane panels installed on 8/3/15 due to the inclement weather. Observation of the next section of soil subgrade (approx. Sta. 15+80 to 14+80) was conducted and soft / wet areas were identified with ponding water (due to the storms). As such, soil subgrade was not approved for additional panel placement. Refer to *8/4/15 Photo Log* for subgrade photos. ESI offsite until 12 PM for weather to clear.
- Entact removed the protective plastic layer covering the soil subgrade and conducted drying activities, re-grading, and re-compaction of the soil (as required).
- ESI back onsite at approximately 12 PM to conduct patch / repair work for the panels installed on 8/3/15 (Panels 35-46). Prior to any repair work, trial welding was conducted to confirm that the extrusion welds conformed to the project specifications (refer to *Preweld Test Report* for 8/4/15 for results (extrusion testing identified as EXT. on form).
- A total of forty-one repairs (RP-145 through RP-185) were observed and fixed (according to the project specifications) from Panel #35 through Panel #46 (repair / detailing work conducted on panels installed on 8/3/15). The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs), as well as seam joint repairs where non-destructive testing was conducted along the panel seams. These areas were subsequently patched and sealed with extrusion welds, and confirmed with vacuum box testing being conducted as outlined in the project specifications.
- No non-conformance issues were noted as repairs consisted of custom fit design or routine patch / repair work to allow geomembrane to conform to SA-6 contours.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- A total of two destruct samples, DS-11 and DS-12 (fusion weld samples) were collected for laboratory analysis. DS-11 was collected from panel seam 36/37 and DS-12 was collected from panel seam 42/43

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance items observed. Repairs associated with 8/4/15 consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/4/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Log (once boot and associated sealing activities are completed for manhole located at Sta. 21+00).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 2 piezometers, and 3 gas vents).
- Review laboratory results for DS-11 and DS-12

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15 as well as reviewed and approved ESI *Daily Panel Placement*, *Preweld Test Report*, and *Certificate of Subgrade Acceptance, etc.* forms.
- Reviewed laboratory destruct sample results for samples DS-1 through DS-10, and DSX-1 through DSX-4. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Additional subgrade preparation work to remove soft / wet areas for the next 80 ft. run east (approximately from Sta. 15+80 to Sta. 15+00) of 1st utility corridor.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** | Honeywell International, Inc. | **DATE:** | 8/5/2015 |
| **PROJECT:** | SA-6 South Capping | | | **WEATHER:** | 70/84° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** | Geocomposite & Cap Placement | **TIME:** | 0600 – 1700 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #15** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Ari Eslaminejad, Brian Shea<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL), 60-mil geomembrane liner (Cap), and geocomposite drainage layer (GDL) continuing from western end of SA-6 South. Material to be placed from Panel #42 (P-42) installed on 8/3/15 (located at approximate Sta. 15+80) running approximately 70 ft. east to Sta. 15+10.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting patch / repair work for three wrinkles (refer to *Repair Log* 8/5/15) that were identified along Panels 35-46 which were placed on 8/3/15. Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (8/5/15).
- A total of nine repairs (RP-186 through RP-194) were observed and fixed (according to the project specifications) from Panel #35 and Panel #36. As outlined above, these repairs were associated with removing geomembrane wrinkles to allow the cap to conform to the contours of SA-6 South grade. These areas were subsequently patched and sealed with extrusion welds, and confirmed with vacuum box testing being conducted as outlined in the project specifications. Note: no repairs of the geomembrane from 8/5/15 were identified as non-compliance issues.
- Additionally, while the geomembrane was being patched / repaired, ESI also installed the penetration boots for the wells, piezometers, and gas vents protruding through the cap (Note: Penetration logs will be completed once final sealant is placed around top of boot). Orange composite (GDL) was also placed over butt seams of the geocomposite and leistered in place. These patching activities were completed (as needed) to allow Entact to continue placing protective cover soil over the installed GDL along the western end of SA6. The final GDL layer was inspected by Entact and Langan to ensure that all repairs / patches were completed prior to soil placement.
- While patch / repair work was being conducted, Langan and Entact conducted soil subgrade approval from approximate Sta. 15+80 to Sta. 15+10. Refer to *Soil Subgrade Approval* forms from 8/5/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

the surface was free of any loose material. Refer to Photos #5,6 of the daily photo log for 8/5/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 15+80 to Sta. 15+10.

- Cap placement began with ESI placing the GCL along the southern slope (lower bench along southern end of SA-6 located below the groundwater table) of the southern edge of SA-6 (refer to *8/5/15 Photo Log*) as shown on the project drawings and outlined in the specifications. The GCL was overlapped a minimum of 1 ft. and was sealed along the seams with a granular bentonite.
- In addition to the GCL (placed along the southern slope), 16 oz. geotextile was placed along the northern boundary of the SA-6 South Cap, and also along the southern boundary east of the GCL (located at the areas above the groundwater table and outside of the GCL) over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications.
- GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *8/5/15 Photo Log* for supporting photographs.
- After installation of GCL and GVL along the SA-6 boundaries, geomembrane cap was installed continuing east of previously installed Panel #42 (located at approximate Sta. 15+80) on 8/3/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GCL and GCL layers. A total of three panel lengths were installed (P-47, P-48, P-49) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (8/5), *Trial Weld Log.*
- Installation and fusion welding of the geomembrane panels was conducted until the end of the work day. As such, no non-destructive testing on the installed panels was conducted. Additionally, no patch / repair work was completed, and no destructive samples were collected. These activities will be completed tomorrow (8/6/15). Note: An extrusion weld sample (DSX-5) was collected from the patch / repair work previously completed on 8/4/15.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues recorded as repair work was conducted to remove wrinkles from the cap to allow the geomembrane to properly conform to the contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/5/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Log (once boot and associated sealing activities are completed for manhole located at Sta. 21+00).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 2 piezometers, and 3 gas vents).
- Review laboratory data for extrusion destruct sample DSX-5

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, and 8/4/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-12, and DSX-1 through DSX-4. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for the next approximate 100 ft. run east (approximately from Sta. 15+10 to Sta. 14+10) continuing east along SA-6.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 69/88° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0600 – 1600 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #16** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Ari Eslaminejad, Brian Shea<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL), 60-mil geomembrane liner (Cap), and geocomposite drainage layer (GDL) continuing from western end of SA-6 South. Material to be placed from Panel #49 (P-49) installed on 8/5/15 (located at approximate Sta. 15+10) running approximately 110 ft. east to Sta. 14+00.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI placing GDL over the previously installed geomembrane panels from 8/3/15. A total of 10 panel lengths of GDL were placed along the west side of the utility corridor and along the western slope of the utility corridor with end points of the GDL terminating along the approximate center of the utility corridor (east to west orientation). The GDL was placed north to south outside of the corridor and east to west within the corridor and secured with white plastic fasteners spaced at a maximum of 5 ft. and the top layer of geotextile was sewn (according to the project specs).
- While GDL was being placed over the previously installed geomembrane, Langan and Entact conducted soil subgrade approval from approximate Sta. 15+10 to Sta. 14+00. Refer to *Soil Subgrade Approval* forms from 8/6/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #7,8, and 9 of the daily photo log for 8/6/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 15+10 to Sta. 14+00.
- Cap placement began with ESI placing the GCL along the southern slope (lower bench along southern end of SA-6 located below the groundwater table) of the southern edge of SA-6 (refer to *8/6/15 Photo Log*) as shown on the project drawings and outlined in the specifications. The GCL was overlapped a minimum of 1 ft. and was sealed along the seams with granular bentonite.
- Prior to deploying any geomembrane panels over the GCL, it was confirmed that the GCL maintained intimate contact between the material and the HB wall (southern boundary wall). Soil was removed from the top of the sheet piles (as required) by Entact. Refer to Photo #14 of the *Photo Log 8/6/15*.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- In addition to the GCL (placed along the southern slope), 16 oz. geotextile was placed along the northern boundary of the SA-6 South Cap, and also along the southern boundary east of the GCL (located at the areas above the groundwater table and outside of the GCL) over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications.
- GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *8/6/15 Photo Log* for supporting photographs.
- After installation of GCL, 16 oz. geotextile (along SA-6 boundaries) and GVL, geomembrane cap was installed continuing east of previously installed Panel #49 (located at approximate Sta. 15+10) on 8/5/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GCL and GVL layers. A total of four panel lengths (lengths defined as running the approximate 165 ft. north to south distance of the cap) were installed (P-50, P-51, P-52, P-53, P-54) by ESI. Note: P-51 terminated approximately 6 ft. short of the southern boundary of the SA-6 cap. As such, the remaining section was taken from an additional roll (G15C277060) and labeled as Panel #52 (P-52).
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (8/6), *Trial Weld Log.*
- Upon panel installation and fusion welding, ESI conducted non-destructive seam testing in accordance with the project specs. No patch / repair work was completed, and no destructive samples were collected as work activities were completed after non-destruct testing was completed. These additional activities will be completed tomorrow (8/7/15).

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues recorded as non-destruct testing was in conformance with the project specs and no patch / repair work, or vacuum box testing was conducted on 8/6/15.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/6/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Log (once boot and associated sealing activities are completed for manhole located at Sta. 21+00).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 2 piezometers, and 3 gas vents).

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, and 8/5/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-12, and DSX-1 through DSX-5. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 8/7/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 68/82° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0600 – 1530 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #17** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Ari Eslaminejad, Brian Shea<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL) and 60-mil geomembrane liner (Cap) continuing from western end of SA-6 South. Material to be placed from Panel #54 (P-54) installed on 8/6/15 (located at approximate Sta. 14+00) running approximately 100 ft. east to Sta. 13+00.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting patch / repair work along the panels previously installed Panels 50-54 which were placed on 8/6/15. Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (8/7/15).
- A total of twenty-three repairs (RP-195 through RP-217) were observed and fixed (according to the project specifications) from Panels #50 through Panel #54 (repair / detailing work conducted on panels installed on 8/6/15). The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- No non-conformance issues were observed as patch / repair work consisted of custom fit repairs to allow the geomembrane cap to conform to SA-6 contours.
- A total of three destruct samples were collected (DS-13, DS-14, and DSX-6). DS-13 and DS-14 (fusion) were collected from Panels 47/48 and 50/51, respectively. DSX-6 (extrusion) was collected from Panel #48 on RP-198.
- While the geomembrane was being patched / repaired, ESI also installed a penetration boot for Collection Manhole #2. Note: The penetration log for Collection Manhole #2 will be completed once the boot has been sealed and covered according to the project specifications (to be completed on 8/10/15), and the final sealant is placed around top of boot.
- Langan and Entact conducted soil subgrade approval from approximate Sta. 14+00 to Sta. 13+00 while

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

patch work was being completed by ESI. Refer to *Soil Subgrade Approval* forms from 8/7/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material.Refer to Photo #6 of the daily photo log for 8/7/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 14+00 to Sta. 13+00.

- GVL and Cap placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 14+00 (east of P-54) moving east (for approximately 100 ft.). GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *8/7/15 Photo Log* for supporting photographs.
- After installation of the GVL, geomembrane cap was installed continuing east of previously installed Panel #54 (located at approximate Sta. 14+00) on 8/6/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GVL layers. A total of five panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were installed (P-55, P-56, P-57, P-58, P-59, P-60) by ESI. Note:, during placement of Panel #55 and #59, the roll of geomembrane was completed, thus, Panel #56 was placed for the last 11 ft. (from roll G15C283029) to complete the southern end and Panel #60 (P-60) was placed for the last 15 ft. (from roll G15C276053) to complete the northern end of SA-6.
- During installation of the Cap, geomembrane seams were overlapped a minimum of 4-inches for fusion welding (according to project specs). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specs. A total of six 1-inch specimens were collected for peel and shear testing (3 samples/each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (8/7), *Trial Weld Log.*
- Installation and fusion welding of the geomembrane panels was conducted until the end of the work day. Once completed, non-destructive testing on the installed panels was conducted. Non-destruct testing was conducted in accordance with the project specs and is further summarized on the *Seam Control Form (8/7/15).* After non-destructive testing the work day was terminated and no patch / repair work was completed. These activities will be completed on Monday (8/10/15).

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance items observed. Repairs associated with 8/7/15 consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/7/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 14+35).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 3 gas vents).
- Review laboratory results for DS-13, DS-14 and DSX-6

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL) and 60-mil geomembrane liner (Cap) continuing from western end of SA-6 South. Material to be placed from Panel #60 (P-60) installed on 8/7/15 (located at approximate Sta. 13+00) running approximately 100 ft. east to Sta. 12+00.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting patch / repair work along the panels previously installed Panels 55-60 which were placed on 8/7/15. Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (8/10/15).
- A total of thirty-one repairs (RP-218 through RP-248) were observed and fixed (according to the project specifications) from Panels #55 through Panel #60 (repair / detailing work conducted on panels installed on 8/7/15). Refer to 8/10/15 *Repair Report.* The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While the geomembrane was being patched / repaired, ESI also installed a penetration boot for well 115-W5-SO, and completed placing the geomembrane patch around Access Manhole #2. Note: The penetration log for well 115-W5-SO will be completed once the boot has been sealed and covered according to the project specifications and the final sealant is placed around top of boot.
- Langan and Entact conducted soil subgrade approval from approximate Sta. 13+00 to Sta. 12+00 while patch work was being completed by ESI. Refer to *Soil Subgrade Approval* forms from 8/10/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #5 and #6 of the daily photo log for 8/10/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 13+00 to Sta. 12+00.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- GVL and Cap placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 13+00 (east of P-60) moving east (for approximately 100 ft.). GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *8/10/15 Photo Log* for supporting photographs.
- After installation of the GVL, geomembrane cap was installed continuing east of previously installed Panel #60 (located at approximate Sta. 13+00) on 8/7/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GVL layers. A total of five panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were installed (P-61, P-62, P-63, P-64, and P-65) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (8/10), *Trial Weld Log.*
- Installation and fusion welding of the geomembrane panels was conducted until the end of the work day. Once completed, non-destructive testing on the installed panels was conducted. Non-destruct testing was conducted in accordance with the project specs and is further summarized on the *Seam Control Form (8/10/15).* After non-destructive testing the work day was terminated and no patch / repair work was completed.
- A total of three destructive samples were collected (two fusion and one extrusion weld). Fusion weld destruct samples (DS-15, DS-16) were collected from Panel Seams 54/55 and 59/61 respectively. DSX-7 was collected along Panel 53/54 seam. Destruct samples were collected at 500 LF intervals and in accordance with the project specs.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project specs and patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/10/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 3 gas vents).
- Review laboratory results for DS-15, DS-16, DS-17, and DSX-7

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, and 8/7/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-14, and DSX-1 through DSX-6. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for the next approximate 100 ft. run east (approximately from Sta. 12+00 to Sta. 11+00) continuing east along SA-6.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** | Honeywell International, Inc. | **DATE:** | 8/12/2015 |
| **PROJECT:** | SA-6 South Capping | | | **WEATHER:** | 71/83° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** | Geocomposite & Cap Placement | **TIME:** | 0600 – 1630 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #19**
**AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Ari Eslaminejad, Brian Shea, Philemon Onyango
**Langan:** Dan Bosworth
**ENTACT** / **ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL), 60-mil geomembrane liner (Cap), and geocomposite drainage layer (GDL) continuing from western end of SA-6 South. Material to be placed from Panel #65 (P-65) installed on 8/10/15 (located at approximate Sta. 12+00) running approximately 100 ft. east to Sta. 11+00.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting patch / repair work along the panels previously installed Panels 61-66 which were placed on 8/10/15. Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (8/12/15).
- A total of four repairs (RP-249 through RP-252) were observed and fixed (according to the project specifications) from Panels #64 through Panel #66 (repair / detailing work conducted on panels installed on 8/10/15). Refer to 8/12/15 *Repair Report* for supporting information. The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While the geomembrane was being patched / repaired, ESI also installed / construction penetration boots for well 115-W5-SO and gas vent #5 (GV-5). Note: These penetration logs will be completed once the final clamps and seal (butyl seal) have been completed according to the project specifications and the final sealant is placed around top of boot.
- While ESI was conducting repair / patch work, Langan and Entact conducted soil subgrade observation from approximate Sta. 12+00 to Sta. 11+00. Based on visual inspection, the soil subgrade appeared to contain areas of soft / wet subgrade due to rainstorms from 8/11/15. Based on these soft areas, soil subgrade was not approved for geomembrane placement. Entact conducted additional preparation work (i.e. drying the soil and re-grading and re-compacting) as required, to conform the subgrade to the project specifications (refer to Photo #7 of the daily photo log for 8/12/15)

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- After completing patch / repair work from the panels installed on 8/10/15, ESI began to place GDL continuing east along the utility corridor. GDL was placed along the eastern slope of the utility corridor (located at approximate Sta. 16+50). Panels were oriented east to west within the utility corridor, and reverted back to the north and south orientation outside of the corridor (refer to the *8/12/15 Photo Log* for supporting photos)
- GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *8/12/15 Photo Log* for supporting photographs.
- No new geomembrane panels were placed as the soil subgrade for the next 100 ft. section was not approved. No destruct samples were collected, as DS-17 was collected on 8/10/15 during panel placement.
- Additionally, Entact placed protective cover soil over the previously installed geomembrane and GDL panels at the western end of SA-6. Protective cover soil was placed in 1 ft. lifts with caution tape placed at a maximum of 5 ft. spacing, placed over the GDL prior to soil placement.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues recorded as no new geomembrane panels were placed and the patch / repair work conducted on geomembrane cap was in compliance with the project specifications.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/12/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 3 gas vents).
- Review laboratory results for DS-17 (once received)

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, and 8/10/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-16, and DSX-1 through DSX-7. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL), 60-mil geomembrane liner (Cap), and geocomposite drainage layer (GDL) continuing from western end of SA-6 South. Material to be placed from Panel #65 (P-65) installed on 8/10/15 (located at approximate Sta. 12+00) running approximately 100 ft. east to Sta. 11+00.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 12+00 to Sta. 11+00. Refer to *Soil Subgrade Approval* forms from 8/13/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #1 and #2 of the daily photo log for 8/13/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 12+00 to Sta. 11+00. Note: The soft / wet areas identified on 8/12/15 were allowed to dry and were repaired for geomembrane placement.
- GVL and Cap placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 12+00 (east of P-65) moving east (for approximately 100 ft.). GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *8/13/15 Photo Log* for supporting photographs.
- After installation of the GVL, geomembrane cap was installed continuing east of previously installed Panel #65 (located at approximate Sta. 12+00) on 8/10/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GVL layers. A total of five panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

installed (P-67, P-68, P-69, P-70, and P-71) by ESI.

- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (8/13), *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 11+00, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (8/13/15) for non-destructive testing details. Based on the panel placement, minimal repairs were required along the installed panels. As such, no patch / repair work was conducted, and any associated repairs will be completed on 8/14/15.
- After completing non-destructive testing along the panels installed today (8/13/15), ESI began to place GDL continuing east from the 1st utility corridor (located at approx. Sta. 16+50). Panels were oriented from north to south (as outlined in the proposed GDL layout). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *8/13/15 Photo Log* for supporting photographs.
- A total of two destructive samples were collected (two fusion welds). Fusion weld destruct samples (DS-18, DS-19) were collected from Panel Seams 64/65 and 68/69, respectively. Destruct samples were collected at 500 LF intervals and in accordance with the project specs.
- Additionally, Entact placed protective cover soil over the previously installed geomembrane and GDL panels at the western end of SA-6. Protective cover soil was placed in 1 ft. lifts with caution tape placed at a maximum of 55-inch spacing, placed over the GDL prior to soil placement.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project specs and patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/13/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 3 gas vents).
- Review laboratory results for DS-17, DS-18, and DS-19 (once received)

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, and 8/12/15 as well as reviewed and approved daily ESI form submittals.

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- Reviewed laboratory destruct sample results for samples DS-1 through DS-16, and DSX-1 through DSX-7. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for the next approximate 80 ft. run east (approximately from Sta. 11+00 to Sta. 10+20) to Access Manhole #3 (ESI demobilization point).
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** | Honeywell International, Inc. | **DATE:** | 8/14/2015 |
| **PROJECT:** | SA-6 South Capping | | | **WEATHER:** | 78/95° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** | Geocomposite & Cap Placement | **TIME:** | 0600 – 1430 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #21** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Ari Eslaminejad, Brian Shea, Philemon Onyango<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL), 60-mil geomembrane liner (Cap), and geocomposite drainage layer (GDL) continuing from western end of SA-6 South. Material to be placed from Panel #65 (P-71) installed on 8/13/15 (located at approximate Sta. 11+00) running approximately 80 ft. east to Sta. 10+20 (western slope of 2nd utility corridor).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 11+00 to Sta. 10+20. Refer to *Soil Subgrade Approval* forms from 8/14/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 11+00 to Sta. 10+20.
- Geocomposite clay liner (GCL), GVL and Cap placement began with ESI placing the GCL along the southern slope of SA-6 (lower bench) located below (to 1 ft. above) the water table as shown on the project drawings and outlined in the specifications. The GCL was overlapped a minimum of 1 ft. and was sealed along the seams with a granular bentonite.
- In addition to the GCL (placed along the southern slope below the groundwater table), 16 oz. geotextile was placed along the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 11+00 (east of P-71) moving east (for approximately 80 ft.) to Sta. 10+20. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *8/14/15 Photo Log* for supporting photographs.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- After installation of the GVL, geomembrane cap was installed continuing east of previously installed Panel #71 (located at approximate Sta. 11+00) on 8/13/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GVL layers. A total of four panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were installed (P-72, P-73, P-74, and P-75) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (8/14), *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 10+20, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (8/14/15) for non-destructive testing details. Based on the panel placement, minimal repairs were required along the installed panels. ESI conducted patch / repair work for the panels installed on 8/13/15 (Panels 66-71) and 8/14/15 (Panels 72-75). Prior to any repair work, trial welding was conducted to confirm that the extrusion welds conformed to the project specifications (refer to *Preweld Test Report* for 8/14/15 for results (extrusion testing identified as EXT. on form).
- A total of ten repairs (RP-253 through RP-262) were observed and fixed (according to the project specifications) from Panel #71 through Panel #75 (repair / detailing work conducted on panels installed on 8/13/15 & 8/14/15). The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs), as well as seam joint repairs where non-destructive testing was conducted along the panel seams. These areas were subsequently patched and sealed with extrusion welds, and confirmed with vacuum box testing being conducted as outlined in the project specifications.
- Upon completion of patch / repair activities, ESI began to pack and load equipment for their 2-week demob from the Site.
- A total of two destructive samples were collected (two fusion welds). Fusion weld destruct samples (DS-20, DS-21) were collected from Panel Seams 70/71 and 74/75, respectively. Destruct samples were collected at 500 LF intervals and in accordance with the project specs.
- Additionally, Entact placed protective cover soil over the previously installed geomembrane and GDL panels at the western end of SA-6. Protective cover soil was placed in 1 ft. lifts with caution tape placed at a maximum of 55-inch spacing, placed over the GDL prior to soil placement.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project specs and patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/13/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70).

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 3 gas vents).
- Review laboratory results for DS-17, DS-18, DS-19, DS-20, and DS-21 (once received)

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, and 8/13/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-16, and DSX-1 through DSX-7. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 east of 2nd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South after 2-week demobilization is complete.

***Daily QA Documents Completed***

| ***Appendix / QA Forms*** | ***Sheet / Page Numbers*** | ***Comments*** |
|---|---|---|
| A1 – Certificate of Completion | | To be completed at termination of project |
| A2 – Receiving and Inspection | | N / A – no material delivered on 8/13/15 |
| A3 – Photo Log | Pages 1 – 4 | Total of 8 photos outlining pertinent daily observations and descriptions for 8/14/15 |
| A4 – Geosynthetic Inventory Log | | Completed to date; no updates from 8/13/15 |
| A5 – Subgrade Approval | Sheet 14 & ESI (8/14/15) | Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer |
| A6 – Trial Weld Log | Page 3 | One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 8/14/15. |
| A7 – Panel Placement Log | Page 15 | One panel placement log provided by ESI and confirmed by Langan for geomembrane placed on 8/14/15 |

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

## PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used: All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3. SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler. All samples are iced in a cooler during transport to the lab.

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending August 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending August 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |

**SA-6 North/South Field Change Log - Month Ending August 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-22** | Detail BN has been modified to extend the lIDPE up and over the SCB Wall. The prior detail showed both the GDI and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA 6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**10/15/2015**
**MONTHLY REPORT**

Honeywell
115 Tabor Road
Morris Plains, NJ 07950

October 15, 2015

Honorable Robert G. Torricelli
Office of the Special Master
c/o Sean Jackson
7 So. Lanning Ave.
Hopewell, NJ 08525

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-09**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from August 1 – August 31, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

WJH:jtc/sgf

# B. SITE OPERATIONS

## 1. AVERAGE WEEKLY SITE RESOURCES

| Team | Week Ending | | | |
|---|---|---|---|---|
| | 9/6/2015 | 9/13/2015 | 9/20/2015 | 9/27/2015 |
| Construction Management (AMEC) | 8 | 8 | 9 | 10 |
| Engineering (AMEC) | 1 | 1 | 1 | 1 |
| Air Monitoring (Emilcott) | 1 | 1 | 1 | 1 |
| Security (Securitas) | 3 | 3 | 3 | 3 |
| Entact/Subcontractors | 35 | 40 | 42 | 43 |
| Arecon/US Ecology Subcontractors | 0 | 3 | 3 | 0 |
| Langan | 0 | 0 | 1 | 1 |
| Evoqua | 1 | 1 | 1 | 1 |
| B&B Drilling | 2 | 0 | 0 | 2 |
| **TOTAL STAFF** | **51** | **57** | **61** | **62** |

## 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected September PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- On September 27 through 29, Cornerstone personnel completed S-3 Mass Removal Injection Event No. 24 in Injection Well 088-IW-02.
- On September 17 and 18, Cornerstone conducted a round of regional quarterly groundwater level measurements.
- ERFS/Summit re-mobilized to SA-6 North, Treatment Area 10-1 on September 9 and 10 and completed the proposed injection program in accordance with the Updated Work Plan submitted to all Parties on August 21, 2015.
- Continued screening of Celgene material for use as protective cover soils above geosynthetics.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on September 10, 2015.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 9/6/2015 | 9/13/2015 | 9/20/2015 | 9/27/2015 |
| Avg. Gallons Treated & Discharged (per day) | 78,081 | 78,108 | 77,991 | 76,827 |
| Average Flow (gpm) for Operating Period | 55 | 54 | 56 | 56 |
| Avg. Hours of Plant Operation | 24 | 24 | 24 | 23 |
| GWTP Influent Tanks (gal.) | 8,208 | 4,566 | 5,253 | 4,358 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completion of the Excavation Area EA-8 excavation is pending post excavation sampling results.
- Completed installation of dewatering well points and two deep dewatering wells associated with EA-2 and EA-3.
- Completed excavation of Excavation Area EA-5. An unknown UST was encountered during excavation activities. The UST was removed from the excavation on October 1, 2015 due to slope stability concerns. The UST was staged on site for future disposal and closure reporting under the non-chromium project and LSRP.
- Continued relocating soils from Area 3S to the SA-6 North Cap Area.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Canada | Stablex | WWTP Filter Cake | 1 | 16.5 | 16.5 |
| **Entact/Horwith** | Tri-axle Dump | Middlesex County Landfill, NJ | MCUA | Non-haz Cr | 44 | 26 | 1,153.71 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Cells |
|---|---|
| **Excavation Completed** | Excavation Area EA-5<br>Volume Excavated - Total for Reporting Period: 2,690.CY / Total to Date: 6,432. CY |
| **Backfill in Progress** | Celgene Screened fraction above 3/8 inch – EA-5 |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 9/6/2015 | 9/13/2015 | 9/20/2015 | 9/27/2015 |
| Mt. Hope 3/8" Stone | 100.23 | 0 | 0 | 50.89 |
| Mt. Hope DGA | 0 | 0 | 397.21 | 0 |

- Screened Celgene materials greater than 3/8 inch were transferred and placed as backfill in EA-5. A total of 36 loads, totaling approximately 810 cubic yards was placed as backfill in EA-5.
- Screened Celgene material was placed as protective cover soil in the SA-6 South cap area. A total approximately 4,973 cubic yards was placed as protective cover soil during the reporting period.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Continued off-loading of remaining screened historic fill.
- Area 2N: Surcharging is 100% complete. Offloading not yet scheduled by contractor.
- Area 3N: Completed installation of surcharge monitoring instrumentation.
- Area 4N: Completed installation of surcharge monitoring instrumentation.

## F. SHEET PILE OPERATIONS

- No activity to report.

## G. CAPPING OPERATIONS

- A total of 117,022 sq. ft. of liner totaling 32% of the total cap area was deployed during the reporting period. The total liner area deployed through September 27, 2015 is 96% for the cap system at SA-6 South.

- Continued installation of geosynthetic cap components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, and geocomposite drainage layer.
- Continued general liner subgrade preparation in Area 3S.
- Continued cutting hydraulic barrier sheets and the SCB wall to final elevation in SA-6 South Open Space Area.
- Continued removing asphalt on top of the SCB wall and smooth coating as necessary for geosynthetics installation detail.
- Continued installation of gas vent pipe.
- Modified destructive seam testing interval from 1 test per 500 feet of seam to 1 test per 1,500 feet of seam length according to Specification 02372-3.07.A. (Samples DS-1 to DS-26 had been collected with 0 failures).
- Continued placement of protective cover soils and demarcation tape over the geocomposite drainage layer.

## H. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |

| Pre-Construction Notice – Nationwide Permit #38 for Sediment Remedy | SA-7 | Issued: 3/21/2013 | N/A | 3/18/2015 | 3/25/2013 |
| NJDOT – Application for Drainage Connection, Post Remediation Grading and Drainage | SA-6 Chromium Remedy | Application Submitted 8/19/14 Permit Application Rescinded 12/1/14 & Approved by DOT on 12/18/14 | N/A | N/A | N/A |

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDOT – Highway Occupancy Permit – Installation of Sheet Piling and Excavation Adjacent to Rte 440 ROW | SA-6 Chromium Remedy | Application Submitted 9/8/14 Final Executed Permit Issued 12/2/14 | 11/2/15 | 12/2/15 | Pending |

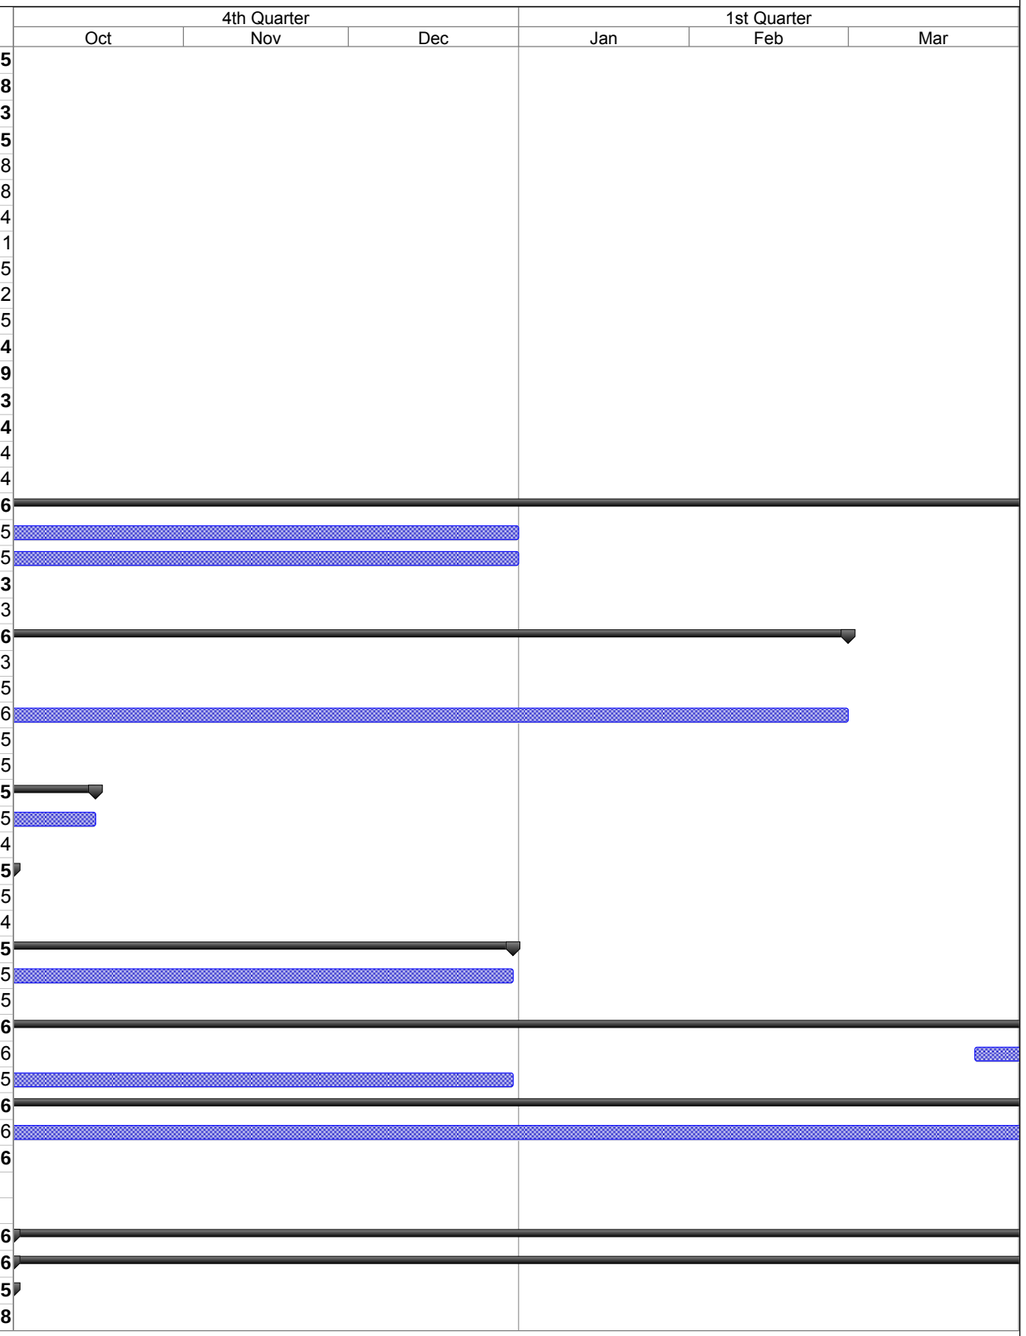
## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete excavation of Area EA-8.
- Complete backfilling of excavation areas EA-4 and EA-5.
- Begin Trash Pit area Meadow Mat Repair.
- Complete liner subgrade and utility corridor preparation activities on SA-6 South.
- Complete installation of geosynthetic cap components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, and geocomposite drainage layer.
- Continue screening Celgene material for use as protective cover soils above geosyntethics.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Continue to coordinate the planned PW-3 extraction well/trench installation.
- Initiate import and placement of Horizon B/C Soils.

**ATTACHMENTS:**

1. Schedule – 6 Month Look Ahead
2. Site Photographs
3. Excavation and Backfill
   - Progression Chart
4. *Dewatering Operations Update (not included in this reporting period)*
5. SA-6 Construction Water Discharge Data (To PVSC)
6. Backfill Analytical Data
7. Perimeter Pools Update
8. Groundwater Quality Data
9. *Surcharge Monitoring Update (not included in this reporting period)*
10. Sheet Pile Update
    - Repair Log
11. Capping Update
    - SA-6 South Cap Subgrade Progress Map
    - Repair Log
    - Non-conformance Log

- Subgrade Approval Forms
- QA Photo Log
- Daily QA Reports (Langan)



12. Weekly SWPPP Reports
13. GWTP Update
    - 525/575 Route 440 GWTP PVSC Discharge Monitoring Report (submitted September2015)
14. SA-6 North & South Design Change Tracking Log

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start | Finish |
|---|---|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1936 days** | **1/4/08** | **6/1/15** |
| **2** | **Remedial Action Work Plan** | **33 days** | **1/4/08** | **2/19/08** |
| **5** | **Remedial Action Design** | **1522 days** | **2/20/08** | **12/13/13** |
| **18** | **JCIA/JCDPW Relocation** | **1780 days** | **8/11/08** | **6/1/15** |
| 19 | Develop Site Relocation Master Plan | 38 days | 8/11/08 | 10/1/08 |
| 20 | Submit Site Relocation Master Plan | 0 days | 10/1/08 | 10/1/08 |
| 21 | JC Construction of New Facilities | 1309 days | 6/2/09 | 6/2/14 |
| 22 | Relocation Contractor Procurement | 392 days | 4/15/10 | 10/13/11 |
| 23 | JCIA and JCDPW Relocation | 949 days | 10/17/11 | 6/1/15 |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days | 12/12/11 | 4/30/12 |
| 24a | Demolition of JCIA Structures | 146 days | 9/1/14 | 3/23/15 |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** | **7/11/08** | **4/30/14** |
| **26** | **Remedial Action Work Plan** | **187 days** | **7/11/08** | **3/30/09** |
| **32** | **Remedial Action Design** | **1161 days** | **2/2/09** | **7/9/13** |
| **57** | **SA-6 South Relocation** | **616 days** | **12/26/11** | **4/30/14** |
| 58 | New GWTP Construction Completion | 502 days | 3/5/12 | 1/30/14 |
| 59 | Demolition of 80 Kellogg | 857 days | 12/26/11 | 4/30/14 |
| **60** | **SA-6 North/South Field Implementation** | **894 days** | **3/1/13** | **8/1/16** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 664 days | 6/17/13 | 12/31/15 |
| 60b | SA-6S (Site 163) In-Situ Treatment | 555 days | 11/15/13 | 12/31/15 |
| **61** | **Mobilization (Includees new GWTP, In-situ Treatment & Main Remedy)** | **87 days** | **3/1/13** | **6/28/13** |
| 61a | Mobilization | 87 days | 3/1/13 | 6/28/13 |
| **62** | **Surcharge Install/Instrumentation** | **706 days** | **6/17/13** | **2/29/16** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instumentation | 142 days | 6/17/13 | 12/31/13 |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 185 days | 4/8/14 | 2/13/15 |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days | 6/30/15 | 2/29/16 |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 91 days | 6/16/14 | 2/23/15 |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 155 days | 10/6/14 | 5/8/15 |
| **63** | **Barrier Wall Install** | **569 days** | **8/12/13** | **10/15/15** |
| 63a | SA 6N Installation of Barrier Wall | 159 days | 3/9/15 | 10/15/15 |
| 63b | SA 6S Installation of Barrier Wall | 210 days | 8/12/13 | 5/30/14 |
| **64** | **Excavation** | **507 days** | **10/22/13** | **9/30/15** |
| 64a | SA 6N Excavation | 218 days | 12/1/14 | 9/30/15 |
| 64b | SA 6S Excavation | 295 days | 10/22/13 | 12/8/14 |
| **65** | **Backfill** | **558 days** | **11/11/13** | **12/30/15** |
| 65a | SA 6N Backfill | 283 days | 12/1/14 | 12/30/15 |
| 65b | SA 6S Backfill | 384 days | 11/11/13 | 4/30/15 |
| **66** | **Capping and Cover Soil Placement** | **426 days** | **12/1/14** | **7/15/16** |
| 66a | SA 6N Capping and Cover Soil Placement | 83 days | 3/24/16 | 7/15/16 |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days | 12/1/14 | 12/30/15 |
| **67** | **Restoration** | **234 days** | **9/1/15** | **7/21/16** |
| 67a | Restoration | 234 days | 9/1/15 | 7/21/16 |
| **68** | **Demobilization** | **22 days** | **7/1/16** | **8/1/16** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | | | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | | | |
| **69** | **SA-6 North Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **75** | **SA-6 South Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **81** | **SA-6 North Long Term Protections** | **1830 days** | **10/1/08** | **10/1/15** |
| **92** | **SA-6 South Long Term Protections** | **2569 days** | **6/5/08** | **3/31/18** |

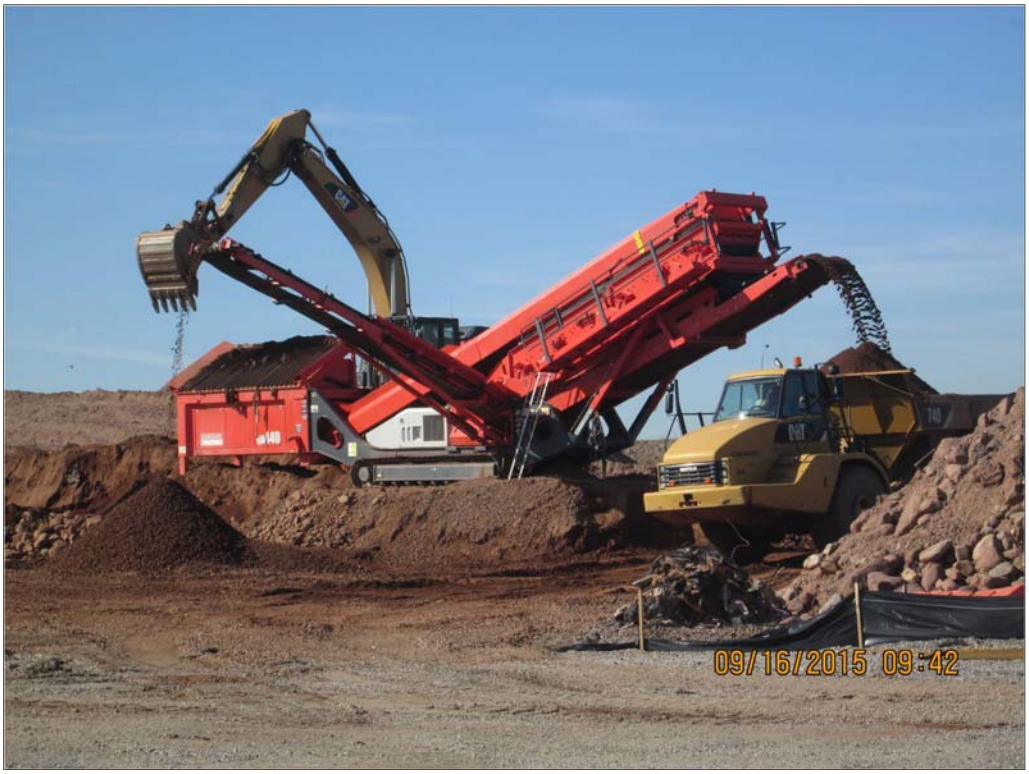
Project: SA-6 Remediation Schedule
Revision 4
Date: 9/30/15

Task  Milestone  Summary  Critical

# Attachment 2: Site Photographs

**Site Photograph 1:** Cleaning Barrier Wall prior to backfill former JC Properties.

**Site Photograph 2:** Completed Concrete Surface on SCB Wall.

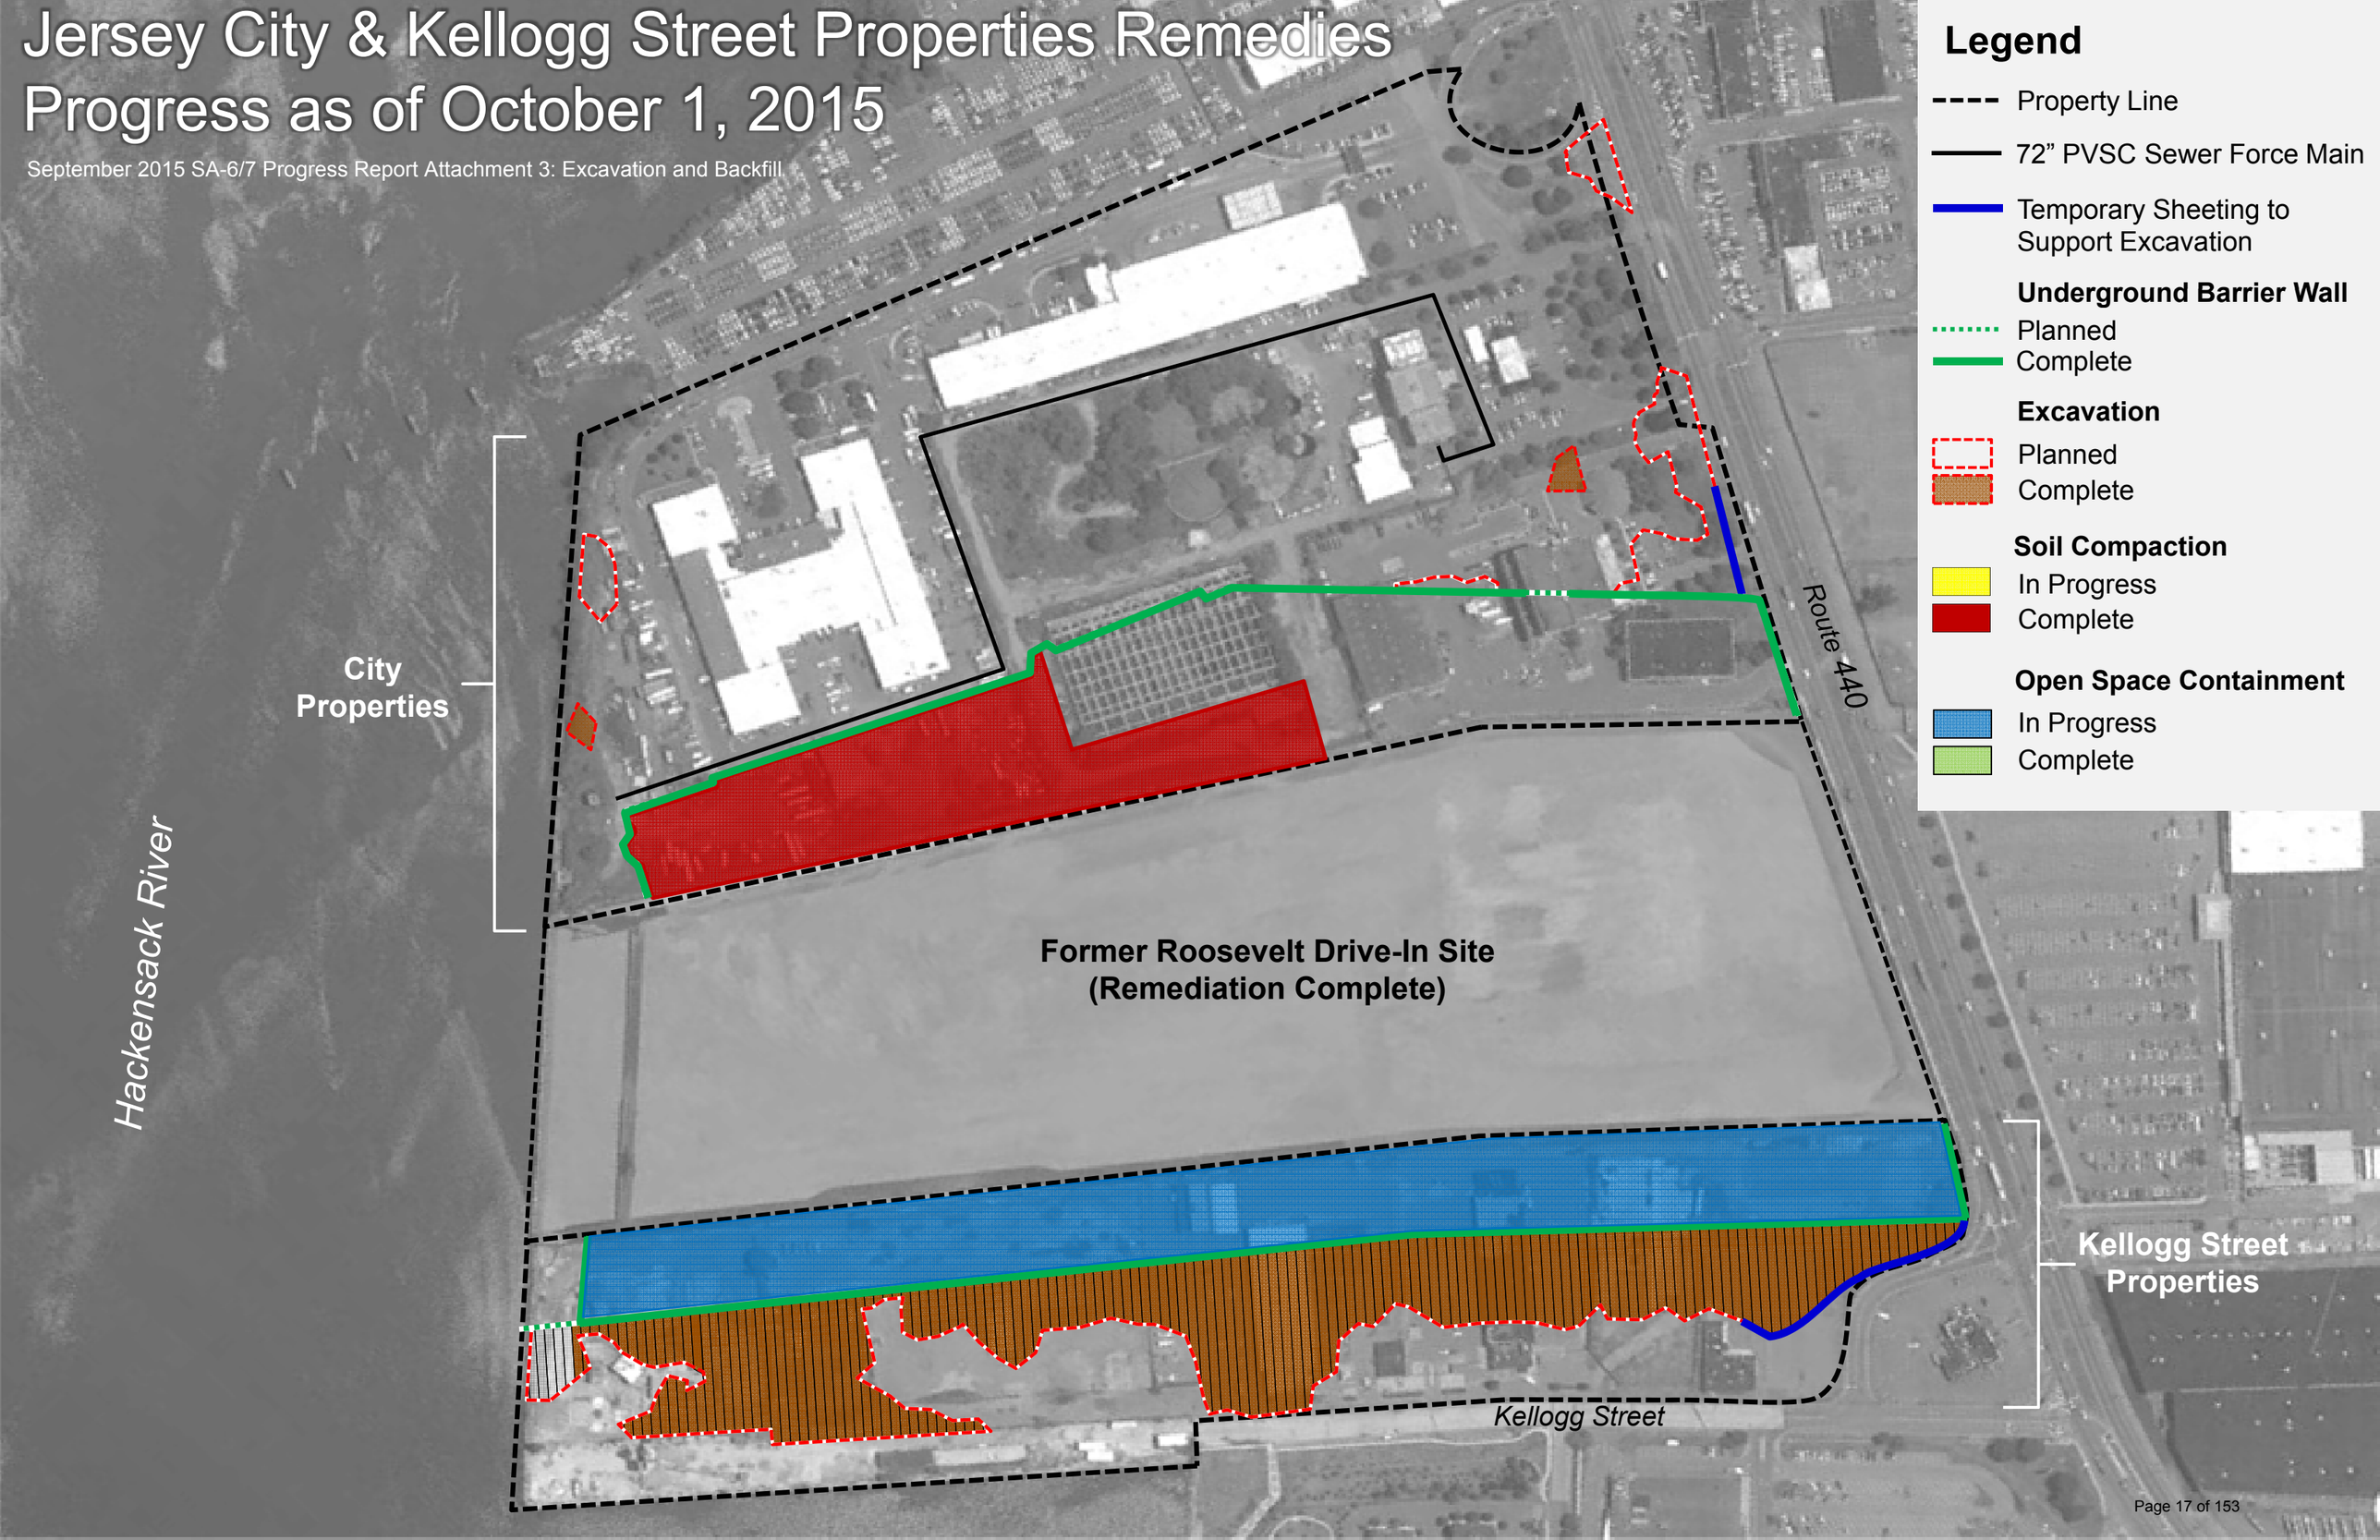


**Site Photograph 3:** EA-4 Excavation on former JC Properties.

**Site Photograph 4:** EA-5 Backfilling on former JC Properties.

**Site Photograph 5:** Placing Orange Geotextile in Open Space.

**Site Photograph 6:** Screening Imported Soils.



**Site Photograph 7:** Unloading Clean Cover Soils.

The following wells have been abandoned in accordance with the SA-6 100% Design:
134-W4-DO, 087-MW-001, 087-MW-019, 087-MW-Y20, 115-E1-DO, 115-E1-SO, 125-MW-01, 073-MW-BB-11, 073-MW-Y10, 134-MW-Q08.

The following wells have been abandoned:
North FS-1, FS-2, FS-3, FS-4
South FS-1, FS-3, FS-4, FS-5, FS-6, FS-7

The following wells are temporarily inaccessible:
134-MW-V09, W1-SO,

(not included in this reporting period)

# Attachment 10: Sheet Pile Update

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-43
Date Exposed: 8/26/15
Describe Damage: Epoxy removed on the edges and face of the sheet while excavator trying to remove soil from belly of the sheets.

Equipment 349E Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet

Date Repaired: 9/2/15 Partial 9/4/15 remaining
Inspected by: Ari Eslaminejad
Describe Repair: Clean & coat sheets wire brush
Repair Log Closure: AMEC Signature: [signature]
Date: 9/4/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-42
Date Exposed: 8/26/15
Describe Damage: Epoxy removed on the edges and face of the sheet while excavator trying to remove soil from belly of the sheets

Equipment 349E Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet pile

Date Repaired: 9/2/15 Partial 9/4/15 remaining
Inspected by: Ari Eslaminejad
Describe Repair: clean & coat sheets wire brush
Repair Log Closure: AMEC Signature: [signature]
Date: 9/4/15

## Summary of Non-Compliance & Corrective Action Forms

**SA-6 South Cap Installation**

| Notice of Non-Compliance & Corrective Action Sheet Number | Date | Item | Associated Repair Number | Approx. Location | Follow Up Action Taken |
|---|---|---|---|---|---|
| 1 | 7/21/2015 | Subgrade Irregularity | RP-3 | Panel #2 (P-2) | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2.5 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 2 | 7/21/2015 | Subgrade Irregularity | RP-8 | Panel #2 (P-2) | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2.5 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 3 | 7/22/2015 | Failed Non-Destruct Test | RP-13 | Panel #7 (P-7) & Panel #8 (P-8) seam | Based on length of failed seam (approximately 6 ft.) the entire seam was patched and repaired (approximate 2 ft. by 6 ft. patch). The patch was overlapped a minimum of 4-inches, with rounded edges, and sealed with an extrusion weld. Vacuum box testing was then conducted in accordance with Section 02372-8 to confirm the weld. |
| 4 | 7/24/2015 | Subgrade Irregularity | RP-30 | Panel #17 (P-17) | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 5 | 8/7/2015 | Failed Vacuum Box Test | RP-215 | Panel #50 (P-50) | Failed extrusion weld (identified during vacuum box testing) was patched with an approximate 2 ft. by 2 ft. geomembrane patch over the extrusion weld (noted as RP-222 on Repair Log). The patch was overlapped a minimum of 4-inches beyond the edges of the failed weld, conformed so that the edges were rounded, and sealed with an extrusion weld. Vacuum box testing was conducted along the seams to confirm the seams were properly patched and repaired. |
| 6 | 9/11/2015 | Subgrade Irregularity | RP-293 | Panel #57 (P-57) | Rock was removed from underneath geomembrane and hole was then patched with approximate 1.5 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 7 | 9/16/2015 | Subgrade Irregularity - Hydrated GCL | RP-331 | Panel #83 (P-83) | Geomembrane cap was cut and GCL was exposed. Hydrated GCL was removed from underneath geomembrane, and new pieces of GCL were cut and overlapped (minimum of 1 ft.) and sealed with granular bentonite along the seams. The cut in the geomembrane was then repaired with approximate 2 ft. by 2 ft. geomembrane patch. The patch was overlapped a minimum of 4-inches beyond the edges of the cut, conformed so that the edges were rounded, and sealed with an extrusion weld (as outlined in Section 02372). Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the hole was properly patched (as outlined in Section 02372). |
| 8 | 9/24/2015 | Subgrade Irregularity | RP-423 | Panel #111 (P-111) | Rock was removed from underneath geomembrane and hole was then patched with approximate 1.5 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |

# Certificate of Soil Surface

Sheet # 18

| | | | |
|---|---|---|---|
| Project Name | Honeywell SA-6 South | Material Desc. | Geomembrane |
| Project No. | 100530001 | General Desc. | (Subgrade) Operations LCRS |
| Owner/ Contr. | Honeywell / Arec FW | Cell No. | ~Sta. 7+70 to ~Sta. 7+00 |
| QA Monitor | Langan | Date | 9/17/15 |

Description of Soil Surface to be lined: ~70 ft. Section of Soil Subgrade Approved East of Geomembrane Panels Installed on 9/16/15 (P-94). Subgrade Approved From Approximate Sta. 7+70 (P-94) to Approximate Sta. 7+00 (western slope of 3rd utility corridor). Soil Appears to be Graded, Compacted, and Free of Debris (>1½") and in conformance with Project Specs.

I hereby certify that the above surface area is suitable for the installation of geosynthetics, and I shall be responsible for its integrity and suitability in accordance with the specifications from this date to the completion of the installation.

## ***Site Activities***

- Langan onsite for observation of placement of geosynthetic clay liner (GCL), and 60-mil geomembrane liner (Cap) continuing from western end of SA-6 South. Material to be placed from Panel #75 (P-75) installed on 8/14/15 (located at approximate Sta. 10+20 – western slope of utility corridor) running approximately 70 ft. east through 2nd utility corridor to approximate Sta. 9+50 (eastern slope of 2nd utility corridor).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 10+20 to Sta. 9+50. Refer to *Soil Subgrade Approval* forms from 9/9/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 10+20 to Sta. 9+50.
- While subgrade approval was being conducted, ESI completed patch / repair work for cap wrinkles that were observed from panel placement on 8/14/15. A total of thirty repairs (RP-263 through RP-292) were observed and fixed (according to the project specifications) from Panel #71 and Panel #73 (repair / detailing work conducted on panels installed on 8/14/15). The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs), where wrinkles were observed. These areas were subsequently patched and sealed with extrusion welds. No vacuum box testing was conducted on these repairs, and will be completed tomorrow (9/10).
- No non-conformance issues were recorded as patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- GCL and Cap placement began with ESI placing the GCL along the eastern and western slopes of the utility corridor and southern slope of SA-6 (lower bench) located below (to 1 ft. above) the water table as shown on the project drawings and outlined in the specifications. The GCL was overlapped a minimum of 1 ft. and was sealed along the seams with a granular bentonite.
- After installation of the GCL, geomembrane cap was installed continuing east of previously installed Panel #75 (located at approximate Sta. 10+20) on 8/14/15 and through the 2nd utility corridor. Panels were oriented from east to west (as proposed in the approved Panel Layout) and were placed on top of the GCL layer. A total of eleven panel lengths (panel lengths identified as the approximate 80 ft. run from east to west across the corridor, as well as geomembrane pieces which were used to complete the southern end of the corridor) were installed (P-76, P-77, P-78, P-79, P-80, P-81, P-82, P-83, P-84, P-85, and P-86) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (9/9), *Trial Weld Log.*
- No non-destructive testing or patch / repair work was conducted upon completion of geomembrane panel placement to approximate Sta. 9+50, as panel placement and fusion welded activities concluded the work day.
- One destructive sample was collected – DSX-8 (extrusion weld). Destruct samples were collected at 500 LF intervals and in accordance with the project specs.
- Additionally, Entact completed Site preparation activities for expectation of rainstorms tomorrow (9/10).

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project specs and patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/9/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), and Main Access Manhole #3 (located at western slope of 2nd utility corridor).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 3 gas vents).
- Review laboratory results for DSX-8 (once received).

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, and 8/15/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-21, and DSX-1 through DSX-7. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 east of 2nd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 9/11/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 66/77° F, Clear AM, Clouds & Rain PM |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1530 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #23** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Dave Ambrose<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite drainage layer (GDL), continuing from western end of SA-6 South. Material to be placed from geomembrane Panel #56 (located at approximate Sta. 14+20 – location where GDL had previously been placed to along with protective cover soil) running approximately 220 ft. east to Panel #68 (approximate Sta. 12+00)..
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting vacuum box testing for the repairs completed on 9/11/15 (as outlined in projecte specs). One vacuum box testing was complete, ESI began placing GDL from approximate Sta. 14+20 (Panel #56) to approximate Sta. 12+00 (Panel #68). GDL was placed according to project specifications with white plastic fasteners spaced at a maximum of 5 ft. intervals. Additionally, the top layer of geotextile was sewn (as outlined in the project specs).
- As per the QA inspection conducted on the GDL on September 3, 2015, by AmecFW, the following rolls of GDL were cut with the first wrap of geocomposite removed prior to use
    - Roll 64021010124 – 10 ft. removed
    - Roll 64021010133 – 8 ft. removed
    - Roll 64021010126 – 10 ft. removed
    - Roll 64021010116- 5 ft. removed
    - Roll 64021010112 – 10 ft. removed
        - Note: this roll was not identified during the GDL inspection, however based on damage to the protective plastic liner observed in the field, the outside layer of GDL was removed.
    - Roll 64021010119 – 10 ft. removed
- Due to the inclement weather from 9/10/15 and potential storms over the weekend, the protective plastic covering the soil subgrade to the east was not removed. As such, no soil subgrade approval was conducted and no additional geomembrane panels were placed.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- One non-conformance issues was observed during placement of GDL. A rock was encountered underneath geomembrane panel #57. This non-conformance issue was recorded as RP-293 and will be patched and repaired on Monday (9/14).
- Upon completion of GDL placement to the approved panel location, a visual observation of the top of the western slope of the 2nd utility corridor was conducted by Langan and Entact. The geomembrane panels were pulled back to expose the GCL. Visual observation confirmed that the GCL was dry and no water had drained underneath the panels. The top of the slope was then sealed with a fusion weld "T-seams" along Panel #75 (oriented north to south) and Panel #76 through Panel #81 (oriented east to west).
- Geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (9/11), *Trial Weld Log.* Note: non-destructive testing was completed on the welded seams (to be completed Monday – 9/14/15).

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 6 (Sheet #6) – Subgrade irregularity identified as RP-293 on *Repair Log*
    - Stone identified underneath geomembrane cap (Panel #57). Stone was subsequently removed, and hole was patched/repaired following project specs and further defined in *Sheet 6 Notice of Non-Compliance*

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/11/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), and Main Access Manhole #3 (located at western slope of 2nd utility corridor).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 4 gas vents).
- Review laboratory results for DSX-8 (once received).

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, and 8/15/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-21, and DSX-1 through DSX-7. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 9/14/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 58/74° F, Clear |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1630 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #24** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite drainage layer (GDL), continuing from western end of SA-6 South. Material to be placed from geomembrane Panel #68 (located at approximate Sta. 12+00 – location where GDL had previously been placed to - based on approved as-built drawings) running approximately 170 ft. east to Panel #74 located at top of western slope of 2nd utility corridor (approximate Sta. 10+30).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI placing GDL from approximate Sta. 12+00 (Panel #68) to approximate Sta. 10+30 (Panel #75). GDL was placed according to project specifications with white plastic fasteners spaced at a maximum of 5 ft. intervals. Additionally, the top layer of geotextile was sewn (as outlined in the project specs).
- As per the QA inspection conducted on the GDL on September 3, 2015, by AmecFW, no rolls of GDL were required to be cut to remove the first wrap of geocomposite prior to use.
- While GDL was being placed, ESI conducted non-destructive testing (air pressure testing) of the geomembrane panel seams installed on 9/9/15 in accordance with the project specifications. Refer to *Seam Control Form* (9/14/15) for non-destructive testing details.
- Once non-destructive testing was completed, ESI completed patch / repair along the panels previously installed, Panels 76-86 which were placed on 9/9/15. Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (9/14/15).
- A total of twenty-three repairs (RP-293 through RP-315) were observed and fixed (according to the project specifications) from Panels #76 through Panel #86 (repair / detailing work conducted on panels installed on 9/11/15). Refer to 9/14/15 *Repair Report.* The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- While the geomembrane was being patched / repaired, ESI also installed a penetration boot for gas vent GV-3, and completed placing the geomembrane patch around Access Manhole #3. Note: The penetration logs for all boots to date will be completed once the boot has been sealed with butyl sealant.
- One destructive sample (DS-22) was collected (fusion) from Panel Seams 79/80. Destruct samples were collected at 500 LF intervals and in accordance with the project specs.
- During cap placement activities, Entact spread protective cover soil moving east from approximate Sta. 14+20. Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project specs and patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/14/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), and Main Access Manhole #3 (located at western slope of 2nd utility corridor).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 5 gas vents).
- Review laboratory results for DS-22 (once received).

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, and 9/11/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-21, and DSX-1 through DSX-8. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 east of 2nd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 9/15/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 62/84° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1530 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #25** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Geoff Shallard, Dave Ambrose, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL) and 60-mil geomembrane liner (Cap), and continuing from eastern end of 2nd utility corridor. Material to be placed from Panels #76, 77, 78, 79, 80, 81, and 86 (panels running east to west through utility corridor) installed on 9/9/15 (located at approximate Sta. 9+50) running approximately 100 ft. east to Sta. 8+50. Panels installed today (9/15) will "T" into the panels outlined above as panels will revert back to north-south orientation outside of utility corridor (as per the approved panel layout).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 9+50 (eastern end of 2nd utility corridor) to Sta. 8+50. Refer to *Soil Subgrade Approval* forms from 9/15/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #1 and #2 of the daily photo log for 9/15/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 9+50 to Sta. 8+50.
- GVL and Cap placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 9+50 (east of 2nd utility corridor) moving east (for approximately 100 ft.) to approximate Sta. 8+50. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *9/15/15 Photo Log* for supporting photographs.
- After installation of the GVL, geomembrane cap was installed continuing east of previously installed Panels #76-81, and #86 (running east-west through 2nd utility corridor) on 9/9/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GVL

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

layers. A total of four panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were installed (P-87, P-88, P-89, and P-90) by ESI.

- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (9/15), *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 8+50, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (9/15/15) for non-destructive testing details. Based on the panel placement, minimal repairs were required along the installed panels. As such, patches were leistered over the repairs with the final extrusion welds to be completed on 9/16/15.
- One destructive sample (DS-23) was collected (fusion) from Panel Seams 88/89. Destruct samples were collected at 500 LF intervals and in accordance with the project specs.
- ESI pulled back the installed geomembrane panels along the northern and southern ends of the 2nd utility corridor to expose the underlying GCL. The GCL appeared to be hydrated (approximate 10 ft. wide section along southern end of corridor and approximate 4 ft. wide section along northern end of corridor) from rainwater infiltration that washed back underneath the cap due to the soil subgrade outside of the cap which was not yet completed to grade. These sections of GCL were cut and removed and the area was left open to dry overnight. New GCL pieces will be placed (according to the project specs) on 9/16/15.
- With cap activities complete, ESI filled sandbags for the remainder of the work day.
- During cap placement activities, Entact spread protective cover soil moving east from approximate Sta. 14+20. Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project specs and patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/15/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), and Main Access Manhole #3 (located at western slope of 2nd utility corridor).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 5 gas vents).
- Review laboratory results for DS-23 (once received).

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, and 9/14/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-22, and DSX-1 through DSX-8. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 east of 2nd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

## ***Daily QA Documents Completed***

| ***Appendix / QA Forms*** | ***Sheet / Page Numbers*** | ***Comments*** |
|---|---|---|
| A1 – Certificate of Completion | | To be completed at termination of project |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 9/16/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 63/85° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1530 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #26** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Geoff Shallard, Dave Ambrose, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL) and 60-mil geomembrane liner (Cap), and continuing from eastern end of 2nd utility corridor. Material to be placed from Panel #90 (P-90) installed on 9/15/15 and located at approximate Sta. 8+50 running approximately 80 ft. east to Sta. 7+70.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting vacuum box testing on the repairs completed from 9/14/15 (through 2nd utility corridor). ESI also conducted patch / repair work for the panels installed on 9/15/15 (Panels 87-90). Prior to any repair work, trial welding was conducted to confirm that the extrusion welds conformed to the project specifications (refer to *Preweld Test Report* for 9/16/15 for results (extrusion testing identified as EXT. on form).
- A total of forty-four repairs (RP-316 through RP-349) were observed and fixed (according to the project specifications) from Panel #87 through Panel #90 (repair / detailing work conducted on panels installed on 9/15/15). The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs), as well as seam joint repairs where non-destructive testing was conducted along the panel seams. These areas were subsequently patched and sealed with extrusion welds, and confirmed with vacuum box testing being conducted as outlined in the project specifications.
- Along with the repair work, ESI also placed the new pieces of GCL (refer to Photo Log) for the northern and southern areas along the 2nd utility corridor where the GCL was hydrated. One area along the southern section required the liner to be cut to pull back and expose the GCL. As such, this repair (RP-331) was identified as a non-conformance issue (subgrade irregularity) and is further defined below.
- While patch / repair work was being completed, Langan and Entact conducting soil subgrade approval from approximate Sta. 8+50 (moving east from P-90) to Sta. 7+70. Refer to *Soil Subgrade Approval* forms from 9/16/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photo #6 of the daily photo log for 9/16/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 8+50 to Sta. 7+70.

- GVL and Cap placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 8+50 (moving east of P-90) moving east (for approximately 80 ft.) to approximate Sta. 7+70. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *9/16/15 Photo Log* for supporting photographs.
- As per the QA inspection conducted on the GVL on September 3, 2015, by AmecFW, the following rolls of GVL were cut with the first wrap of geocomposite removed prior to use
    - Roll 65211010130 – 8 ft. removed
- After installation of the GVL, geomembrane cap was installed continuing east of previously installed Panel #90 on 9/15/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GVL layers. A total of four panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were installed (P-91, P-92, P-93, and P-94) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (9/16), *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 7+70, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (9/16/15) for non-destructive testing details. Based on the panel placement, minimal repairs were required along the installed panels. As such, patches were leistered over the repairs with the final extrusion welds to be completed on 9/17/15.
- One destructive sample (DSX-9) was collected (extrusion weld) from Panel Seams 88/89. Destruct samples were collected at 500 LF intervals and in accordance with the project specs.
- During cap placement activities, Entact spread protective cover soil moving east from approximate Sta. 14+20. Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 7 (Sheet #7) – Subgrade irregularity identified as RP-293 on *Repair Log*
    - GCL underneath geomembrane liner along southern end of utility corridor hydrated from rainwater accumulating outside of cap due to subgrade (subgrade outside of the cap not final). Geomembrane liner pulled back and cut to remove and replace sections of GCL. This patch was noted as a subgrade irregularity and was patched/repaired following project specs and is further defined on *Sheet 7 Notice of Non-Compliance*

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/16/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), and Main Access Manhole #3 (located at western slope of 2nd utility corridor).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 5 gas vents).
- Review laboratory results for DSX-9 (once received).

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, and 9/15/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-23, and DSX-1 through DSX-8. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 east of 2nd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 9/17/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 65/85° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1600 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #27** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu, Bills, Geoff Shallard, Dave Ambrose, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite drainage layer (GDL) geocomposite venting layer (GVL) and 60-mil geomembrane liner (Cap), continuing from eastern end of 2nd utility corridor. Material to be placed from Panel #94 (P-94) installed on 9/16/15 and located at approximate Sta. 7+70 running approximately 70 ft. east to Sta. 7+00 (top western slope of 3rd utility corridor).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting patch / repair work for the panels installed on 9/16/15 (Panels 91-94). Prior to any repair work, trial welding was conducted to confirm that the extrusion welds conformed to the project specifications (refer to *Preweld Test Report* for 9/17/15 for results (extrusion testing identified as EXT. on form).
- A total of seventeen repairs (RP-350 through RP-366) were observed and fixed (according to the project specifications) from Panel #91 through Panel #94 (repair / detailing work conducted on panels installed on 9/16/15). The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs), as well as seam joint repairs where non-destructive testing was conducted along the panel seams. These areas were subsequently patched and sealed with extrusion welds, and confirmed with vacuum box testing being conducted as outlined in the project specifications. Additionally, custom fit repairs were conducted along the top eastern slope of the 2nd utility corridor (Panel #80) to remove observed wrinkles in the geomembrane panels. Vacuum box testing was then completed on the repairs (as per the project specifications) to confirm the integrity of the extrusion welds.
- Once the patch / repair work was completed ESI began placing GDL from approximate Sta. 10+30 (Panel #75) to approximate Sta. 9+60 (Panel #87). GDL was placed through the 2nd utility corridor with the panels oriented east to west, and was placed according to project specifications with white plastic fasteners spaced at a maximum of 5 ft. intervals. Additionally, the top layer of geotextile was sewn (as outlined in the project specs).
- As per the QA inspection conducted on the GDL on September 3, 2015, by AmecFW, no rolls of GDL were required to be cut to remove the first wrap of geocomposite prior to use.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- While GDL placement was being conducted, Langan and Entact completed soil subgrade approval from approximate Sta. 7+70 (moving east from P-94) to Sta. 7+00 (top western slope of 3rd utility corridor). Refer to *Soil Subgrade Approval* forms from 9/17/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 7+70 to Sta. 7+00.
- GVL and Cap placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 7+70 (moving east of P-94) moving east (for approximately 70 ft.) to approximate Sta. 7+00. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *9/17/15 Photo Log* for supporting photographs.
- As per the QA inspection conducted on the GVL on September 3, 2015, by AmecFW, no rolls of GVL were required to be cut to remove first wrap of geocomposite prior to use
- After installation of the GVL, geomembrane cap was installed continuing east of previously installed Panel #94 on 9/16/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GVL layers. A total of three panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were installed (P-95, P-96, and P-97) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (9/17), *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 7+00, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (9/17/15) for non-destructive testing details. Based on the panel placement, minimal repairs were required along the installed panels. As such, patches were leistered over the repairs with the final extrusion welds to be completed on 9/18/15.
- One destructive sample (DS-24) was collected (fusion weld) from Panel Seams 91/92. Destruct samples were collected at 500 LF intervals and in accordance with the project specs.
- During cap placement activities, Entact spread protective cover soil moving east from approximate Sta. 14+20. Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project specs and patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/17/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), and Main Access Manhole #3 (located at western slope of 2nd utility corridor).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 5 gas vents).
- Review laboratory results for DS-24 (once received).

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, and 9/16/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-23, and DSX-1 through DSX-9. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 through, and east of 3rd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 9/18/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 66/83° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1530 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #28** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu, Bills, Geoff Shallard, Dave Ambrose, Brian Shea, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geosynthetic clay liner (GCL) geocomposite venting layer (GVL) and 60-mil geomembrane liner (Cap), through 3rd utility corridor (located at approximate Sta. 6+80). Material to be placed from Panel #97 (P-97) installed on 9/17/15 and located at approximate Sta. 7+00 running approximately 60 ft. east through 3rd utility corridor to Sta. 6+40 (top eastern side of 3rd utility corridor).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 7+00 (P-97 installed on 9/17/15) through the 3rd utility corridor to Sta. 6+40. Refer to *Soil Subgrade Approval* forms from 9/18/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 7+00 to Sta. 6+40.
- GCL and Cap placement began with ESI placing GVL along the eastern and western slopes of the 3rd utility corridor. GVL was placed at the areas above the groundwater table down the slopes of the corridor (GCL areas comprised the bottom of the utility corridor to approximately 2 ft. to 3 ft. up the side slopes). GVL was secured with white plastic fasteners spaced at a maximum of 5 ft. and was sewn along the top layer of geotextile (as outlined in the project specs).
- GCL was then placed along the bottom of the 3rd utility corridor, and along the eastern and western slopes of the utility corridor and southern slope of SA-6 (lower bench) located below (to 1 ft. above) the water table as shown on the project drawings and outlined in the specifications. The GCL was overlapped a minimum of 1 ft. and was sealed along the seams with a granular bentonite. The GVL overlapped the GCL a minimum of 1 ft. along the bottom slopes of the corridor, and the GCL was secured into the side slopes via soil stakes / staples.
- After installation of the GCL, geomembrane cap was installed continuing east of previously installed Panel #97 (located at approximate Sta. 7+-00) on 9/17/15 and through the 3rd utility corridor. Panels

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

were oriented from east to west (as proposed in the approved Panel Layout) and were placed on top of the GVL and GCL layers.

- A total of nine panel lengths (panel lengths identified as the approximate 68 ft. run from east to west across the corridor, as well as geomembrane pieces which were used to complete the southern end of the corridor) were installed (P-98, P-99, P-100, P-101, P-102, P-103, P-104, P-105, and P-106) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (9/18), *Trial Weld Log.*
- As per the QA inspection conducted on the GVL on September 3, 2015, by AmecFW, no rolls of GVL were required to be cut to remove the first wrap of geocomposite prior to use.
- Upon completion of geomembrane panel placement to approximate Sta. 6+40, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (9/18/15) for non-destructive testing details. Based on the panel placement, minimal repairs were required along the installed panels. As such, patches were leistered over the repairs with the final extrusion welds to be completed on 9/21/15.
- Two destructive samples (DS-25 and DS-26) were collected (fusion welds) from Panel Seams 94/95 and 97/97, respectively. Destruct samples were collected at 500 LF intervals and in accordance with the project specs.
- During cap placement activities, Entact spread protective cover soil moving east from approximate Sta. 14+20. Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project specs and patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/18/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), and Main Access Manhole #3 (located at western slope of 2nd utility corridor).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 6 gas vents).
- Review laboratory results for DS-25 and DS-26 (once received).

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, 9/16/15, and 9/17/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-24, and DSX-1 through DSX-9. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 through, and east of 3rd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

## ***Daily QA Documents Completed***

| ***Appendix / QA Forms*** | ***Sheet / Page Numbers*** | ***Comments*** |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 9/21/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 66/83° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1500 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #29** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Dave Ambrose, Brian Shea, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite drainage layer (GDL), continuing through 2nd utility corridor (located at approximate Sta. 10+00). Material to be placed from eastern slope of 2nd utility corridor (Panels 76-81; running east to west) located at approximate Sta. 10+30) running approximately 250 ft. east to Panel #93 (located at approximate Sta. 7+80).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI placing GDL from approximate Sta. 10+30 (eastern slope of 2nd utility corridor) to approximate Sta. 7+80 (Panel #93). GDL was placed according to project specifications with white plastic fasteners spaced at a maximum of 5 ft. intervals. Additionally, the top layer of geotextile was sewn (as outlined in the project specs).
- As per the QA inspection conducted on the GDL on September 3, 2015, by AmecFW, no rolls of GDL were required to be cut to remove the first wrap of geocomposite prior to use.
- Once GDL was completed to the (based on the approved as-builts) , ESI completed patch / repair along the panels previously installed, Panels 95-106 which were placed on 9/17/15 and 9/18/15. Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (9/21/15).
- A total of thirty-two repairs (RP-367 through RP-398) were observed and fixed (according to the project specifications) from Panels #95 through Panel #106 (repair / detailing work conducted on panels installed on 9/17/15 and 9/18/15). Refer to 9/21/15 *Repair Report.* The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While the geomembrane was being patched / repaired, ESI also installed a penetration boot for gas vent GV-2. Note: The penetration logs for all boots to date will be completed once the boot has been sealed with butyl sealant.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- One destructive sample (DSX-10) was collected (extrusion) from RP-376. Destruct samples were collected at 500 LF intervals and in accordance with the project specs.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project specs and patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/21/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), and Main Access Manhole #3 (located at western slope of 2nd utility corridor).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 3 piezometers, and 6 gas vents).
- Review laboratory data for destruct sample DSX-10 (extrusion) once received

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, 9/16/15, 9/17/15, and 9/18/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-26, and DSX-1 through DSX-9. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas east of 3rd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 9/22/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 62/84° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1530 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #30**
**AmecFW**: Stu Bills, Dave Ambrose, Brian Shea, Ari Eslaminejad
**Langan:** Dan Bosworth
**ENTACT** / **ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL) and 60-mil geomembrane liner (Cap), continuing past eastern side of 3rd utility corridor. Material to be placed from Panels #98, 99, 100, 101, 102, 103, and 106 (panels running east to west through 3rd utility corridor) installed on 9/18/15 (located at approximate Sta. 6+40) running approximately 110 ft. east to Sta. 5+30. Panels installed today (9/22) will "T" into the panels outlined above as panels will revert back to north-south orientation outside of utility corridor (as per the approved panel layout).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 6+40 (eastern end of 3rd utility corridor) to Sta. 5+30. Refer to *Soil Subgrade Approval* forms from 9/22/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #2 and #3 of the daily photo log for 9/22/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 6+40 to Sta. 5+30.
- While subgrade inspection was being conducted, ESI conducted vacuum box testing for the repairs completed on 9/21/15, and also installed the remaining panels of GDL from geomembrane Panel #93 to Panel #96.
- As per the QA inspection conducted on the GDL on September 3, 2015, by AmecFW, one roll of GDL was required to be cut to remove the first wrap of geocomposite prior to use – Roll #64021010086 (8 ft. cut).
- GVL and Cap placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 6+40 (east of 3rd utility corridor) moving east (for approximately 110 ft.) to approximate Sta. 5+30. GVL was placed according to

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *9/22/15 Photo Log* for supporting photographs.

- As per the QA inspection conducted on the GVL on September 3, 2015, by AmecFW, one roll of GVL was required to be cut to remove the first wrap of geocomposite prior to use – Roll #65211010113 (8 ft. cut)
- After installation of the GVL, geomembrane cap was installed continuing east of previously installed Panels #98-103, and #106 (running east-west through 3rd utility corridor) on 9/18/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GVL layers. A total of four panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were installed (P-107, P-108, P-109, and P-110) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (9/22), *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 5+30, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (9/22/15) for non-destructive testing details.
- Once non-destructive testing was completed, ESI conducted patch / repair along the panels installed, Panels 107-110. Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (9/22/15).
- A total of nineteen repairs (RP-399 through RP-417) were observed and fixed (according to the project specifications) from Panels #107 through Panel #110 (repair / detailing work conducted on panels installed on 9/22/15). Refer to 9/22/15 *Repair Report.* The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While the geomembrane was being patched / repaired, ESI also installed a penetration boot for piezometer PZ-14. Note: The penetration logs for all boots to date will be completed once the boot has been sealed with butyl sealant.
- No destructive samples were collected, as an RFI was submitted to AmecFW, and based on the results of the first 26 destruct samples – the sampling frequency was decreased from 500 LF to 1500 LF as samples yielded zero failures with all 26 exhibited shear and peel results greater than the minimum requirements (as per the project specs).
- During cap placement activities, Entact spread protective cover soil for the area immediately west of the 2nd utility corridor (approximate Sta. 10+20). Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project specs and patch / repair work consisted of custom fit design to allow geomembrane to conform to SA-6 contours.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/15/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 4 piezometers, and 5 gas vents).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), and Main Access Manhole #3 (located at western slope of 2nd utility corridor).

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, 9/16/15, 9/17/15, 9/18/15, and 9/21/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-26, and DSX-1 through DSX-10. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 east of 3rd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

***Daily QA Documents Completed***

| **CONTRACTOR & EQUIPMENT:**<br>**ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **PERSONNEL ON SITE:** **Day #31**<br>**AmecFW**: Stu Bills, Dave Ambrose, Brian Shea, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL), geosynthetic clay liner (GCL), 60-mil geomembrane liner (Cap), and geocomposite drainage layer (GDL) continuing past eastern side of 3rd utility corridor. Material to be placed from Panels #110 installed on 9/22/15 (located at approximate Sta. 5+30) running approximately 80 ft. east to Sta. 4+50.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying rolls of GDL from Panel #96/97 (approximate Sta. 7+00) through 3rd utility corridor to approximate Sta. 5+30 (Panel #110 placed on 9/22/15). GDL was placed according to project specifications with white plastic fasteners spaced at a maximum of 5 ft., and top layer of geotextile sewn along the panel seams.
- As per the QA inspection conducted on the GDL on September 3, 2015, by AmecFW, the following rolls of GDL was required to be cut to remove the first wrap of geocomposite prior to use:
    - Roll #64021010103 - 5 ft. cut and removed
    - Roll #64021010105 – 8 ft. cut and removed
- Langan and Entact conducting soil subgrade approval from east of Panel #110 (located at approximate Sta. 5+30) to approximate Sta. 4+50. Refer to *Soil Subgrade Approval* forms from 9/23/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #1 and #2 of the daily photo log for 9/23/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 5+30 to Sta. 4+50.
- GVL and Cap placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 5+30 (east of 3rd utility

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

corridor) moving east (for approximately 80 ft.) to approximate Sta. 4+50. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *9/23/15 Photo Log* for supporting photographs.

- As per the QA inspection conducted on the GVL on September 3, 2015, by AmecFW, no rolls of GVL were required to be cut to remove the first wrap of geocomposite prior to use.
- In addition to the GVL, GCL was placed along the northern and southern edges of SA-6 at areas below (to 1 ft. above) the groundwater table (as shown on the drawings and outlined in the project specs). GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges (as outlined in the project specs).
- After installation of the GVL and GCL, geomembrane cap was installed continuing east of previously installed Panel #110 on 9/22/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GVL and GCL layers. A total of four panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were installed (P-111, P-112, P-113, and P-114) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, a trial weld (smooth to smooth) was conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (9/23), *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 4+50, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (9/23/15) for non-destructive testing details.
- No patch / repair work was conducted as part of the activities on 9/23/15. Additionally, no destruct samples were collected.
- During cap placement activities, Entact continued to spread protective cover soil for the area through the 2nd utility corridor (approximate Sta. 10+00). Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project and no patch / repair work was conducted.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/23/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 2 wells, 4 piezometers, and 6 gas vents).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), and Main Access Manhole #3 (located at western slope of 2nd utility corridor).

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, 9/16/15, 9/17/15, 9/18/15, 9/21/15, and 9/22/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-26, and DSX-1 through DSX-10. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 east of 3rd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 9/24/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 59/80° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1600 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #32** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Brian Shea, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite venting layer (GVL), geosynthetic clay liner (GCL), and 60-mil geomembrane liner (Cap), continuing along eastern side of 3rd utility corridor. Material to be placed from Panel #114 installed on 9/23/15 (located at approximate Sta. 4+50) running approximately 70 ft. east to Sta. 3+80.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting patch / repair along the panels previously installed, Panels 111-114 which were placed on 9/23/15. Prior to repair work, a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (9/24/15).
- A total of seven repairs (RP-419 through RP-424) were observed and fixed (according to the project specifications) from Panels #111 through Panel #114 (repair / detailing work conducted on panels installed on 9/23/15). Refer to 9/24/15 *Repair Report.* The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- One non-compliance issue was observed and was noted on *Sheet #8 Notice of Non-Compliance and Corrective Action Form.* This non-compliance was also noted on the Repair Log as a subgrade irregularity and was identified as RP-423. This non-compliance issue was identified based on a rock that was observed underneath the geomembrane cap. The rock was removed from underneath the liner and the hole was patched / repaired according to the project specifications and further outlined in the *Non-Compliance and Corrective Action* forms – *Sheet #8* for 9/24/15.
- While the geomembrane was being patched / repaired, ESI also installed a penetration boot for well 115-E1A-SO and Access Manhole #4. Note: The penetration logs for all boots to date will be completed once the boots have been sealed with butyl sealant (not yet completed).

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- While ESI was completing patch / repair work, Langan and Entact conducted soil subgrade approval from east of Panel #114 (located at approximate Sta. 4+50) to approximate Sta. 3+80. Refer to *Soil Subgrade Approval* forms from 9/24/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #3 and #4 of the daily photo log for 9/24/2015, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 4+50 to Sta. 3+80.
- GVL and Cap placement began with ESI placing the GCL along the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The GCL was overlapped approximately 2 ft. outside of the cap and was placed along the areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included the areas within the SA-6 cap along the bottom and side slopes of the drainage/utility ditches located from approximate Sta. 4+50 to Sta. 3+80. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges (as outlined in the project specs).
- After the GCL was placed, GVL was installed from approximate Sta. 4+50 (Panel #114) moving east (for approximately 70 ft.) to approximate Sta. 3+80. GVL was placed along the areas outside of the water GCL (outside of the water table influence) and according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally, the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to *9/24/15 Photo Log* for supporting photographs. Note: The GVL was cut along the drainage / utility to expose the GCL as a minimum of 1 ft. of overlap was required along the ditches where the GVL and GCL intersected.
- As per the QA inspection conducted on the GVL on September 3, 2015, by AmecFW, no rolls of GVL were required to be cut to remove the first wrap of geocomposite prior to use.
- After installation of the GVL and GCL, geomembrane cap was installed continuing east of previously installed Panel #114 on 9/23/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GVL and GCL layers. A total of four panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were installed (P-115, P-116, P-117, and P-118) by ESI.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, two trial welds (smooth to smooth and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (9/24), *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 4+50, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (9/24/15) for non-destructive testing details.
- No patch / repair work was conducted on Panels #115 through #118 as part of the activities on 9/24/15.
- Two destructive samples were collected for laboratory testing. DS-27 (fusion) was collected from Panel Seam 110/111 and is noted as RP-422 on the *Repair Log*. Fusion weld destruct samples collected at 1500 LF intervals (as per the approved RFI to reduce the sampling frequency from 500 LF to 1500 LF). One extrusion weld sample (DSX-11) was also collected from RP-421 and is noted as RP-424 on the *Repair Log*. Extrusion weld samples collected at 500 LF intervals as per the project specs.
- During cap placement activities, Entact continued to spread protective cover soil for the area through the 2nd utility corridor (approximate Sta. 10+00). Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 8 (Sheet #8) – Subgrade irregularity identified as RP-423 on *Repair Log*
    - Stone identified underneath geomembrane cap (Panel #111). Stone was subsequently removed, and hole was patched/repaired following project specs and further defined in *Sheet 8 Notice of Non-Compliance*

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/24/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 3 wells, 4 piezometers, and 6 gas vents).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), Main Access Manhole #3 (located at western slope of 2nd utility corridor), and Manhole #4.
- Review laboratory destruct data for destruct samples DS-27 and DSX-11.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, 9/16/15, 9/17/15, 9/18/15, 9/21/15, 9/22/15, and 9/23/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-26, and DSX-1 through DSX-10. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 east of 3rd Utility Corridor. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the August 2015 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets):

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3. SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler. All samples are iced in a cooler during transport to the lab.

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending September 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending September 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |

**SA-6 North/South Field Change Log - Month Ending September 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-22** | Detail BN has been modified to extend the lIDPE up and over the SCB Wall. The prior detail showed both the GDI and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA 6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under th | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending September 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-10**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from October 1 – October 31, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

| **TOTAL STAFF** | **47** | **53** | **40** | **44** | **43** |

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected September PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Continued screening of Celgene material for use as protective cover soils above geosynthetics.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on October 13, 2015.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | | |
|---|---|---|---|---|---|
| | 10/4/15 | 10/11/15 | 10/18/15 | 10/25/15 | 11/1/15 |
| Avg. Gallons Treated & Discharged (per day) | 74,923 | 76,936 | 76,739 | 77,013 | 76,591 |
| Average Flow (gpm) for Operating Period | 57 | 56 | 54 | 57 | 57 |
| Avg. Hours of Plant Operation | 22 | 23 | 24 | 23 | 22 |
| GWTP Influent Tanks (gal.) | 7,488 | 4,836 | 5,381 | 4,258 | 5,498 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completion of the Excavation Area EA-8 excavation is pending post excavation sampling results.
- Began pumping/dewatering well points associated with Excavation Areas EA-2 and EA-3.
- Completed backfilling of EA-4 Excavation and began backfilling EA-5 Excavation.
- Began trash pit meadow mat repair activities as identified in the 100% Design, which consisted of the removal of concrete slabs and the excavation of historic fill. In addition, the contractor installed vinyl sheeting around the Stratum D repair area that included placement of the sand-bentonite plug.
- Began excavating surficial historic fill in N1 area. A total of 6,375 cubic yards was removed and stockpiled east of the Department of Public Works "H" building.
- Completed relocating soils from Area 3S to the SA-6 North Cap Area.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| No update for the reporting period | | | | | | | |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Cells |
|---|---|
| Excavation Completed | Excavation Area N1<br>Volume Excavated - Total for Reporting Period: 6,375CY / Total to Date: 12,807CY |
| Backfill in Progress | Celgene Screened fraction above 3/8 inch – EA-5 , EA-8 |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | | |
|---|---|---|---|---|---|
| | 10/4/15 | 10/11/15 | 10/18/15 | 10/25/15 | 11/1/15 |
| Liberty I-5 | 0 | 0 | 0 | 801.7 | 2,164.97 |

- Screened Celgene materials greater than 3/8 inch were transferred and placed as backfill in EA-8. A total of 25 loads, totaling approximately 563 cubic yards was placed as backfill in EA-8. In addition, 17 loads of crushed concrete totaling 383 yards were placed as backfill in EA-8.
- Screened Celgene material was placed as protective cover soil in the SA-6 South cap area. A total of approximately 5,333 cubic yards was placed as protective cover soil during the reporting period.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Continued off-loading of remaining screened historic fill.
- Area 2N: Surcharging is 100% complete. Offloading not yet scheduled by contractor.
- Area 3N: Completed installation of surcharge monitoring instrumentation.
- Area 4N: Completed installation of surcharge monitoring instrumentation.

## F. SHEET PILE OPERATIONS

- Completed installation of temporary sheet pile along 440 to support the EA2/EA3 excavation.

## G. CAPPING OPERATIONS

- A total of 22,040 sq. ft. of liner totaling 4% of the total cap area was deployed during the reporting period.
- Completed installation of geosynthetic cap components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, and geocomposite drainage layer for SA-6 South.
- On October 12, 2015 the results of the laboratory testing for destruct sample DSX-13 indicated 1 of 5 specimens exhibited a peel value less than the 66 lb/in minimum value. Based on this one failure anomaly, the repair associated with DSX-13 (RP-477) was covered with a new patch, welded, and vacuum box tested in accordance with the specifications. A new destruct sample DSX-15 was collected to confirm the integrity of the new welds and subsequent analysis indicated a passing result.
- Completed general liner subgrade preparation in Area 3S.
- Completed cutting hydraulic barrier sheets and the SCB wall to final elevation in SA-6 South Open Space Area.
- Completed removing asphalt on top of the SCB wall and smooth coating as necessary for geosynthetics installation detail.
- Completed installation of gas vent pipe on SA-6 South.
- Continued placement of protective cover soils and demarcation tape over the geocomposite drainage layer.
- Began fine grading of GDL cover soils to include associated compaction testing on the west side of the SA-6 South Cap area.
- Began placement of root barrier on the west side of the SA-6 South Cap.

## H. PERMIT STATUS

## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete excavation and backfilling of Excavation Area EA-8.
- Complete backfilling of Excavation Area EA-5.
- Complete Trash Pit area Meadow Mat Repair.
- Complete installation of sheet pile barrier wall on the interior of the trash pit.
- Complete removal of surficial historic fill in N1 area.
- Begin EA-2/EA-3 excavation activities.
- Complete screening Celgene material for use as protective cover soils above geosyntethics.
- Continue final grading of GDL cover soils to include associated compaction testing and installation of root barrier on SA-6 South.
- Begin import and placement of Horizon C soils on the SA-6 South open space area.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Conduct S-3 Mass Removal Injection Event No. 25 in well 088-IW-03 (completed November 4, 2015).

- Begin PW-3 extraction well/trench installation activities.
- Initiate preparation activities for planned Site 163 excavation within the residential footprint.

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-3

Date Exposed: 9/9/15

Describe Damage: Multiple Scrapes due to CAT 349E bucket along the face of the sheet

Damage Location (ft below top of sheet, inboard side outboard side): Along the Lngth of the Sheet from existing ground to BOE

Date Repaired: 9/11/15, 10/22/15, 10/27/15

Inspected by: A. Eslamiezad

Describe Repair: clean, wirebrush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-7

Date Exposed: 9/8/15

Describe Damage: Multiple Scrapes along the face of the sheet, from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE.

Date Repaired: 9/11/15, 10/22/15, 10/27/15

Inspected by: A. Eskaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-6

Date Exposed: 9/9/15

Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE

Date Repaired: 9/11/15, 10/22/15, 10/27/15

Inspected by: A. Eskaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

Date Exposed: 9/9/15

Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE

Date Repaired: 9/11/15, 10/22/15, 10/27/15

Inspected by: A. Eskaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-11
Date Exposed: 9/4/15
Describe Damage: Multiple Scrapes along the face of the sheet, from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE.
Date Repaired: 9/9/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-10
Date Exposed: 9/4/15
Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE
Date Repaired: 9/9/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-9
Date Exposed: 9/8/15
Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE
Date Repaired: 9/9/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-8
Date Exposed: 9/8/15
Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE
Date Repaired: 9/9/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-15

Date Exposed: 9/3/15

Describe Damage: Multiple Scrapes along the face of the sheet, from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE

Date Repaired: 9/9/15, 10/22/15, 10/27/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-14

Date Exposed: 9/4/15

Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE

Date Repaired: 9/9/15, 10/22/15, 10/27/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-13

Date Exposed: 9/4/15

Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE

Date Repaired: 9/9/15, 10/22/15, 10/27/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-12

Date Exposed: 9/4/15

Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE

Date Repaired: 9/9/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-19

Date Exposed: 9/2/15

Describe Damage: Multiple Scrapes along the face of the sheet, from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE.

Date Repaired: 9/9/15, 10/22/15, 10/27/15

Inspected by: A. Eskaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-18

Date Exposed: 9/3/15

Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE

Date Repaired: 9/9/15, 10/22/15, 10/27/15

Inspected by: A. Eskaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-17

Date Exposed: 9/3/15

Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE

Date Repaired: 9/9/15, 10/22/15, 10/27/15

Inspected by: A. Eskaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-16

Date Exposed: 9/3/15

Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE

Date Repaired: 9/4/15, 10/22/15, 10/27/15

Inspected by: A. Eskaminejad

Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-23
Date Exposed: 9/2/15
Describe Damage: Multiple Scrapes along the face of the sheet, from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE.
Date Repaired: 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-22
Date Exposed: 9/2/15
Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE
Date Repaired: 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-21
Date Exposed: 9/2/15
Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE
Date Repaired: 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-20
Date Exposed: 9/2/15
Describe Damage: Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to BOE
Date Repaired: 9/4/15, 10/27/15, 10/22/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-27
Date Exposed: 9/1/15
Describe Damage:

Multiple Scrapes along the face of the sheet, from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side):
Along the length of the sheet from existing ground to BOE.
Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-26
Date Exposed: 9/1/15
Describe Damage:

Multiple Scrapes along the face of the sheet from the CAT 349E bucket.

Damage Location (ft below top of sheet, inboard side outboard side):
Along the length of the sheet from existing ground to BOE
Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-25
Date Exposed: 9/1/15
Describe Damage:

Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side):
Along the length of the sheet from existing ground to BOE
Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-24
Date Exposed: 9/1/15
Describe Damage:

Multiple Scrapes along the face of the sheet from the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side):
Along the length of the sheet from existing ground to BOE
Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslaminejad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID:
Entact ID: 54P-31
Date Exposed: 8/31/15
Describe Damage:

Multiple scrapes along the face of the sheetpile, from the CAT 349 E bucket

Damage Location (ft below top of sheet, inboard side outboard side):
Along the length of the sheet from existing ground to the ~~surface~~ BOE

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslamineyad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID:
Entact ID: 54P-30
Date Exposed: 8/31/15
Describe Damage:

Multiple scrapes from the CAT 349 E bucket, along the face of the sheetpile.

Damage Location (ft below top of sheet, inboard side outboard side):
Along the length of the sheet from existing ground to the BOE.

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslamineyad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID:
Entact ID: 54P-29
Date Exposed: 8/31/15
Describe Damage:

Multiple Scrapes along the face of the sheet from the CAT 349 E bucket.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from existing ground to the BOE.

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslamineyad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID:
Entact ID: 54P-28
Date Exposed: 9/1/15
Describe Damage:

Multiple scrapes from the bucket of the 349 E along the face of the sheetpile

Damage Location (ft below top of sheet, inboard side outboard side):
Along the length of the sheet from existing ground to BOE

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslamineyad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-35
Date Exposed: 8/28/15
Describe Damage:

Multiple scrapes from the CAT 349 E bucket along the face of the sheet

Damage Location (ft below top of sheet, inboard side outboard side):

Along the length of the sheet from ground surface to BOE

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslamingad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-34
Date Exposed: 8/28/15
Describe Damage:

Multiple scrapes along the face of the sheet with the CAT 349E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from ground surface to BOE

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslamingad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-33
Date Exposed: 8/28/15
Describe Damage:

Multiple scrapes along the face of the sheet by the CAT 349 E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from ground surface to the BOE

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslamingad
Describe Repair:

Repair Log Closure: AMEC Signature:
Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-32
Date Exposed: 8/31/15
Describe Damage:

Multiple scrapes along the face of the sheet from the CAT 349 E bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of sheet from ground surface to the BOE

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15
Inspected by: A. Eslamingad
Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature:
Date: 10/27/15

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-9b39

Date Exposed: 8/27/15

Describe Damage: Multiple scrapes from the bucket of the CAT 349E. Defects are along the face of the sheet

Damage Location (ft below top of sheet, inboard side outboard side): Along the length from ground surface to BoE

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15

Inspected by: A. Eslamiejad

Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-38

Date Exposed: 8/27/15

Describe Damage: Multiple scrapes from the CAT 349E bucket, along the face of the sheet.

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from ground surface to BoE

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15

Inspected by: A. Eslamiejad

Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-~~38~~ 37

Date Exposed: 8/27/15

Describe Damage: Multiple scrapes from the CAT 349E bucket, along the face of the sheet

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from ground surface to BoE

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15

Inspected by: A. Eslamiejad

Describe Repair: clean, wirebrush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 54P-36

Date Exposed: 8/28/15

Describe Damage: Multiple scrapes from the CAT 349E bucket, along the face of the sheet

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet from ground surface to BoE

Date Repaired: 9/2/15, 9/4/15, 10/22/15, 10/27/15

Inspected by: A. Eslamiejad

Describe Repair: clean, wire brush, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/27/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 54P-43
Date Exposed: 8/26/15
Describe Damage: Epoxy removed on the edges and face of the sheet while excavator trying to remove soil from belly of the sheets.

Equipment 349E Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the length of the sheet

Date Repaired: 9/2/15 Partial 9/4/15 remaining
Inspected by: Ari Eslaminejad
Describe Repair: Clean & coat sheets wire brush
Repair Log Closure: AMEC Signature: _____
Date: 9/4/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Describe Damage: Multiple scrapes along the face of the sheet during meadow mat repair

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to ele +4

Date Repaired: 10/30/15
Inspected by: A. Eslaminejad
Describe Repair: ~~Cl~~ clean, grind, coat as

Repair Log Closure: AMEC Signature: [signature]
Date: 10/30/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 52P1-22
Date Exposed: _____
Describe Damage: Multiple scrapes caused by the excavator bucket during the meadowmat repair

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to ele +4

Date Repaired: 10/30/15
Inspected by: A. Eslaminejad
Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 10/30/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: S2P1-21

Date Exposed: _____

Describe Damage: Multiple scrapes caused by excavator bucket in meadowmat repair.

Damage Location (ft below top of sheet, inboard side outboard side): _____

Date Repaired: 10/30/15

Inspected by: A. Eslaminejad

Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/30/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: S2P-20

Date Exposed: _____

Describe Damage: Multiple scrapes caused by excavator bucket in meadow mat repair.

Damage Location (ft below top of sheet, inboard side outboard side): _____

Date Repaired: 10/30/15

Inspected by: A. Eslaminejad

Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/30/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: S2P-19

Date Exposed: _____

Describe Damage: Multiple scrapes caused by excavator bucket in meadow mat repair

Damage Location (ft below top of sheet, inboard side outboard side): _____

Date Repaired: 10/30/15

Inspected by: A. Eslaminejad

Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/30/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: S2P-18

Date Exposed: _____

Describe Damage: Multiple scrape caused by excavator bucket in meadowmat repair

Damage Location (ft below top of sheet, inboard side outboard side): _____

Date Repaired: 10/30/15

Inspected by: A. Eslaminejad

Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/30/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: SPI-1

Date Exposed: _____

Describe Damage: Multiple scrapes caused by excavator bucket during meadowmat repair

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to ele +4

Date Repaired: 10/30/15

Inspected by: A. Eslaminejad

Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/30/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: SPI-2

Date Exposed: _____

Describe Damage: Multiple scrapes along the face caused by the excavator bucket during meadowmat repair

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to ele +4

Date Repaired: 10/30/15

Inspected by: A. Eslaminejad

Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 10/30/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: SPI-3

Date Exposed: _____

Describe Damage: Multiple scrapes caused by excavator bucket during meadowmat repair

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to ele +4

Date Repaired: 10/30/15

Inspected by: A. Eslaminejad

Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____

**Summary of Non-Compliance & Corrective Action Forms**
**SA-6 South Cap Installation**

| Notice of Non-Compliance & Corrective Action Sheet Number | Date | Item | Associated Repair Number | Approx. Location | Follow Up Action Taken |
|---|---|---|---|---|---|
| 1 | 7/21/2015 | Subgrade Irregularity | RP-3 | Panel #2 (P-2) | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2.5 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 2 | 7/21/2015 | Subgrade Irregularity | RP-8 | Panel #2 (P-2) | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2.5 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 3 | 7/22/2015 | Failed Non-Destruct Test | RP-13 | Panel #7 (P-7) & Panel #8 (P-8) seam | Based on length of failed seam (approximately 6 ft.) the entire seam was patched and repaired (approximate 2 ft. by 6 ft. patch). The patch was overlapped a minimum of 4-inches, with rounded edges, and sealed with an extrusion weld. Vacuum box testing was then conducted in accordance with Section 02372-8 to confirm the weld. |
| 4 | 7/24/2015 | Subgrade Irregularity | RP-30 | Panel #17 (P-17) | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs) |
| 5 | 8/7/2015 | Failed Vacuum Box Test | RP-215 | Panel #50 (P-50) | Failed extrusion weld (identified during vacuum box testing) was patched with an approximate 2 ft. by 2 ft. geomembrane patch over the extrusion weld (noted as RP-222 on Repair Log). The patch was overlapped a minimum of 4-inches beyond the edges of the failed weld, conformed so that the edges were rounded, and sealed with an extrusion weld. Vacuum box testing was conducted along the seams to confirm the seams were properly patched and repaired. |
| 6 | 9/11/2015 | Subgrade Irregularity | RP-293 | Panel #57 (P-57) | Rock was removed from underneath geomembrane and hole was then patched with approximate 1.5 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 7 | 9/16/2015 | Subgrade Irregularity - Hydrated GCL | RP-331 | Panel #83 (P-83) | Geomembrane cap was cut and GCL was exposed. Hydrated GCL was removed from underneath geomembrane, and new pieces of GCL were cut and overlapped (minimum of 1 ft.) and sealed with granular bentonite along the seams. The cut in the geomembrane was then repaired with approximate 2 ft. by 2 ft. geomembrane patch. The patch was overlapped a minimum of 4-inches beyond the edges of the cut, conformed so that the edges were rounded, and sealed with an extrusion weld (as outlined in Section 02372). Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the hole was properly patched (as outlined in Section 02372). |
| 8 | 9/24/2015 | Subgrade Irregularity | RP-423 | Panel #111 (P-111) | Rock was removed from underneath geomembrane and hole was then patched with approximate 1.5 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 9 | 10/7/2015 | Subgrade Irregularity - Hydrated GCL | RP-458 through RP-473 | Panels #121-125 (P-121 to P-125) | Geomembrane cap was cut and GCL was exposed (southern swale of SA-6). Hydrated GCL was removed from underneath geomembrane, and new pieces of GCL were cut and overlapped (minimum of 1 ft.) and sealed with granular bentonite along the seams. Various cuts in the geomembrane were then repaired with geomembrane patches. The patches were overlapped a minimum of 4-inches beyond the edges of the cut, conformed so that the edges were rounded, and sealed with an extrusion weld (as outlined in Section 02372). Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the cuts were properly patched (as outlined in Section 02372). |
| 10 | 10/7/2015 | Subgrade Irregulairty - Hydrated GCL | RP-474 & RP-475 | Panels #117 and Panel #119/120 | Geomembrane cap was cut and GCL was exposed (northern end of SA-6 at SCB wall). Hydrated GCL was removed from underneath geomembrane, and new pieces of GCL were cut and overlapped (minimum of 1 ft.) and sealed with granular bentonite along the seams. Various cuts in the geomembrane were then repaired (RP-474 & RP-475) with geomembrane patches. The patches were overlapped a minimum of 4-inches beyond the edges of the cut, conformed so that the edges were rounded, and sealed with an extrusion weld (as outlined in Section 02372). Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the cuts were properly patched (as outlined in Section 02372). |

**Summary of Non-Compliance & Corrective Action Forms**
**SA-6 South Cap Installation**

| Notice of Non-Compliance & Corrective Action Sheet Number | Date | Item | Associated Repair Number | Approx. Location | Follow Up Action Taken |
|---|---|---|---|---|---|
| 11 | 10/12/2015 | Failed Destruct Sample | RP-477 | Panel #125 (P-125) | Geomembrane patch was placed over RP-477 (failed one of five specimens during destruct testing), and was overlapped a minimum of 4-inches beyond the edges of the repair, conformed so the edges were rounded, and sealed with an extrusion weld (as outlined in Section 02372). Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the patch was properly sealed (as outlined in Section 02372). Additionally, once the new patch (RP-486) was completed, an additional destruct sample (DSX-15) was collected to confirm the integrity of the new weld. Subsequent testing of DSX-15 yielded laboratory results that were in complinace with the project specs. |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 9/29/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 69/79° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1600 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #34**
**AmecFW**: Stu Bills, Brian Shea, Ari Eslaminejad
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of geosynthetic clay liner (GCL), 60-mil geomembrane liner (Cap), and geocomposite drainage layer (GDL) continuing along eastern side of 3rd utility corridor. Material to be placed from Panel #120 installed on 9/25/15 (located at approximate Sta. 3+30) running approximately 80 ft. east to Sta. 2+50.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying rolls of GDL from Panel #114 (approximate Sta. 4+50) to approximate Sta. 3+80 (Panel #118 placed on 9/24/15). GDL was placed according to project specifications with white plastic fasteners spaced at a maximum of 5 ft., and top layer of geotextile sewn along the panel seams.
- As per the QA inspection conducted on the GDL on September 3, 2015, by AmecFW, the following rolls of GDL were required to be cut to remove the first wrap of geocomposite prior to use:
    - Roll #64021010072 – Approximately 8 ft. removed
    - Roll #64021010064 – Roll not on inspection list. Approximately 30 ft. removed due to damage observed from forklift
- While ESI was placing GDL, Langan and Entact conducted soil subgrade approval from east of Panel #120 (located at approximate Sta. 3+30) to approximate Sta. 2+50. Refer to *Soil Subgrade Approval* forms from 9/29/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #2 and #3 of the daily photo log for 9/29/2015, for supporting subgrade photos (along with GCL placement). This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 3+30 to Sta. 2+50.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- GVL and Cap placement began with ESI placing the GCL along the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The GCL was overlapped approximately 2 ft. outside of the cap and was placed along the areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included the remaining area within the SA-6, as the lower bench east of Sta. 3+30 was comprised of areas below the water table elevation. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges (as outlined in the project specs).
- Upon placement of the GCL, GVL was placed along the upper elevations within the areas outside of the water table influence (as shown on the project drawings). GVL was placed according to project specifications with white plastic fasteners spaced at a maximum of 5 ft. intervals and the top layer of geotextile sewn.
- After installation of the GCL and GVL, geomembrane cap was installed continuing east of previously installed Panel #120 on 9/25/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GCL and GVL layers. A total of five panel lengths (panel lengths identified as the approximate 165 ft. run from north to south across SA-6) were installed (P-120, P-121, P-122, P-123, P-124, and P-125) by ESI. Note: During placement of geomembrane panel P-123, the roll of geomembrane terminated within the SA-6 approximately 20 ft. from the southern end of the cap. Thus an additional panel (P-124) was required to complete the geomembrane run from north to south.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, three trial welds (smooth to smooth, smooth to texture, and texture to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (9/29), *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 2+50, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (9/29/15) for non-destructive testing details. Once, non-destructive testing was completed, ESI then conducted patch/ repair work for the panels installed.
- A total of eleven repairs (RP-445 through RP-455) were observed and fixed (according to the project specifications) from Panels #121 through Panel #125 (repair / detailing work conducted on panels installed on 9/24/15). Refer to 9/29/15 *Repair Report.* The majority of these repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 South grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. No non-compliance issues were identified as patch / repair work completed was custom fit repairs to allow geomembrane to conform to SA-6 contours.
- No destructive samples were collected from 9/29/15
- During cap placement activities, Entact continued to spread protective cover soil for the area through the 3rd utility corridor (approximate Sta. 6+80, moving east). Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project and patch / repair work completed consisted of custom fit repairs to allow the geomembrane to conform to the SA-6 contours.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 9/29/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 3 wells, 4 piezometers, and 6 gas vents).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), Main Access Manhole #3 (located at western slope of 2nd utility corridor), and Manhole #4.

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, 9/16/15, 9/17/15, 9/18/15, 9/21/15, 9/22/15, 9/23/15, 9/24/15, and 9/25/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-27, and DSX-1 through DSX-11. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas along far eastern end of SA-6. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 10/07/2015 |
| **PROJECT:** | SA-6 South Capping | | | **WEATHER:** | 60/72° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | | **TIME:** | 0630 – 1600 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #35** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Brian Shea, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT / ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite drainage layer (GDL) continuing along eastern side of 3rd utility corridor, and patch / repair work associated with panels placed from 9/29/15.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI completing patch / repair work for minor wrinkles from panels previously placed on 9/29/15 (Panels 121 – 125). During the patch / repair work it was observed that the GCL underlying the geomembrane panels was hydrated with standing water present at two areas:
    - Area 1 was comprised of the drainage / utility swale located along the southern end of SA-6 (approximate Sta. 3+50 to Sta. 2+60 ). At this area, a sump pump pit was located immediately outside of SA-6 cap to the south. During the storm events over the weekend, this pump at one point shut down thus causing a build-up (ponding) of water that extended laterally into the swale and hydrating the GCL.
    - Area 2 was located along the northern end of the cap (approximate Sta. 4+00 to Sta. 3+40) along the SCB wall. During the storm events water from the adjacent roadway (higher elevation than the SA-6 cap as final grading has not yet been completed) ran along the edges of SA-6 causing some soil washout, which allowed the water to infiltrate laterally over the SCB wall and onto the lower portion of SA-6.
- For both of these areas, the geomembrane cap was pulled back to expose the hydrated GCL. The GCL was then cut and removed to expose the underlying soil subgrade. Visual observation of the subgrade showed that the soil was in good condition (firm and unyielding) with no wet or wash out areas observed. New GCL was then placed in these areas with minimum of 1 ft. of overlap and granular bentonite placed along the seams as per project specifications. Refer to *10/7/15 Photograph Log* for supporting Site photos.
- Once the new GCL was placed, the geomembrane panels were patch / repaired (as required) over these areas.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- A total of twenty repairs (RP-456 through RP-475) were observed and fixed (according to the project specifications) from Panels #119 through Panel #122 (repair / detailing work for replaced GCL on panels installed from 9/29/15). Refer to 10/7/15 *Repair Report.* The majority of these repairs were patch / repairs associated with the removal and replacing of the hydrated GCL. These repairs were identified as subgrade irregularities on the *Repair Report,* and were identified as non-compliance issues on *Sheet #9* and *Sheet #10 Notice of Non-Compliance* forms, respectively. Note: RP-457 which consisted of a pipe boot for GV-0 was marked in the field and noted on the Repair Report (as RP-457), however the boot and repair itself has not yet been completed.
- Two destructive samples were collected from 10/7/15. Destruct sample DS-28 (fusion) was collected from Panel #123/125, and sample DSX-12 was collected from RP-459 (Panel #123).
- During cap placement activities, Entact continued to spread protective cover soil for the area through the 3rd utility corridor (approximate Sta. 6+80, moving east). Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 9 (Sheet #9) – Subgrade irregularity (hydrated GCL) identified as repairs RP-458 through RP-473 on *Repair Log*
    - GCL underneath geomembrane liner along southern end SA-6 (swale) hydrated from rainwater accumulating outside of cap due to subgrade (subgrade outside of the cap not final) and failure of sump pump in area during storm. Geomembrane liner pulled back and cut to remove and replace sections of GCL. These patches were noted as a subgrade irregularities and were completed following project specs and are further defined on *Sheet 9 Notice of Non-Compliance*
- Non-Conformance No. 10 (Sheet #10) – Subgrade irregularity (hydrated GCL) identified as RP-474 and RP-475 on *Repair Log*
    - GCL underneath geomembrane liner along northern end of SA-6 cap (along SCB wall) hydrated from rainwater accumulating outside of cap due to subgrade (subgrade outside of the cap not final). Geomembrane liner pulled back and cut to remove and replace sections of GCL. These patches were noted as a subgrade irregularities and were patched/repaired following project specs as further defined on *Sheet 10 Notice of Non-Compliance*

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 10/7/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 3 wells, 4 piezometers, and 7 gas vents).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), Main Access Manhole #3 (located at western slope of 2nd utility corridor), and Manhole #4.
- Review laboratory data for destruct samples DS-28 and DSX-12.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, 9/16/15, 9/17/15, 9/18/15, 9/21/15, 9/22/15, 9/23/15, 9/24/15, 9/25/15, and 9/29/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-27, and DSX-1 through DSX-11. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas along far eastern end of SA-6. Ensure subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and Geomembrane Cap placement moving east along SA-6 South.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 10/08/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 62/77° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0630 – 1830 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #36**
**AmecFW**: Stu Bills, Brian Shea, Ari Eslaminejad
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of geosynthetic clay liner (GCL), geocomposite venting layer (GVL), 60-mil geomembrane liner (Cap), and geocomposite drainage layer (GDL) continuing along eastern side of 3rd utility corridor. Material to be placed from Panel #125 installed on 9/29/15 (located at approximate Sta. 2+50) running approximately 100 ft. east to Sta. 1+50.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying rolls of GDL from Panel #118 (approximate Sta. 3+80) to approximate Sta. 2+50 (Panel #125). GDL was placed according to project specifications with white plastic fasteners spaced at a maximum of 5 ft., and top layer of geotextile sewn along the panel seams.
- While ESI was placing GDL, Langan and Entact conducted soil subgrade approval from east of Panel #125 (located at approximate Sta. 2+50) to approximate Sta. 1+50. Refer to *Soil Subgrade Approval* forms from 10/08/15 for additional details. Based on visual inspection, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #3 and #4 of the daily photo log for 10/08/2015, for supporting subgrade photos (along with GCL placement). This area was also surveyed to meet the grading requirements as outlined in the project specifications. The soil subgrade inspection sheet was submitted for the approximate area of Sta. 2+50 to Sta. 1+50.
- GVL and Cap placement began with ESI placing the GCL along the boundaries of the SA-6 South Cap over the sheet pile and surrounding barrier walls. The GCL was overlapped approximately 2 ft. outside of the cap and was placed along the areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included the remaining area within the SA-6, as the lower bench east of Sta. 2+50 was comprised of areas below the water table elevation. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges (as outlined in the project specs).
- Upon placement of the GCL, GVL was placed along the upper elevations within the areas outside of the water table influence (as shown on the project drawings). GVL was placed according to project

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

specifications with white plastic fasteners spaced at a maximum of 5 ft. intervals and the top layer of geotextile sewn.

- After installation of the GCL and GVL, geomembrane cap was installed continuing east of previously installed Panel #125 on 9/29/15. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were placed on top of the GCL and GVL layers. A total of ten varying panel lengths were placed by ESI (Panels #126-134). Note: the dimensions of these panel lengths varied as the geomembrane panels were conformed to fit along the eastern end of the SA-6 cap.
- During installation of the Cap, geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, three trial welds (smooth to smooth, smooth to texture, and texture to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the associated QA form submitted for today (10/8), *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 1+50, ESI conducted non-destructive testing in accordance with the project specifications. Refer to *Seam Control Form* (10/08/15) for non-destructive testing details. Once, non-destructive testing was completed, ESI then conducted minor patch/ repair work for the panels installed (pipe boots PZ-12).
- A total of one repair (RP-476) was completed (according to the project specifications) for Panel #132 (pipe boot PZ-12). Refer to 10/8/15 *Repair Report* for additional details on the pipe boot. Note: no non-compliance issues were observed during the geomembrane placement and testing conducted on 10/8/15.
- One destructive sample was collected from 10/8/15. Destruct sample DS-29 (fusion) was collected from Panel #128/132 seam.
- During cap placement activities, Entact continued to spread protective cover soil for the area through the 3rd utility corridor (approximate Sta. 6+80, moving east). Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.

## ***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as non-destructive testing was in conformance with the project and patch / repair work completed consisted of pipe boot installations around PZ-12.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 10/8/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Well / Piezometer Penetration Logs (once clamps and gaskets have been installed for 3 wells, 5 piezometers, and 8 gas vents).
- Complete Collection Manhole Penetration Logs for Manhole #1 (once boot and associated sealing activities are completed for manhole located at Sta. 21+00), and Manhole #2 (once concrete extension is added and the manhole is clamped and sealed – located at approximate Sta. 15+70), Main Access Manhole #3 (located at western slope of 2nd utility corridor), and Manhole #4.
- Review laboratory data for destruct samples DS-29.

| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Brian Shea, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT / ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite drainage layer (GDL) continuing along eastern side of 3rd utility corridor, and to eastern end of SA-6, and patch / repair work associated with panels placed from 10/8/15 (Panels #126-134).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI completing patch / repair work for panels previously placed on 10/8/15 (Panels #126-134). A total of nine repairs (RP-477 through RP-485) were observed and fixed (according to the project specifications) from Panels #126 through Panel #134. Refer to 10/9/15 *Repair Report* for additional details. The majority of these repairs were custom fit details (allow the geomembrane to conform to the SA-6 contours) or seam joint repairs (joints where non-destructive testing was completed). Repairs were patched, sealed with an extrusion weld, and vacuum box tested (according to project specs).
- Two destructive samples were collected from 10/9/15. Destruct sample DSX-13 (extrusion) was collected from RP-477 (Panel #125) and DSX-14 (extrusion) was collected from RP-480 (Panel #132).
- Upon completion of the patch / repair work, ESI completed the final monitoring well, piezometer, and gas vent boots by placing the final butyl sealant around the top of the boot. Additionally, 1-inch pipe bands were placed around the conical Access Manholes (as per project specs).
- With the pipe boots completed, ESI deployed GDL from Panel #125 to Panel #134 (panels placed on 10/9/15). GDL was placed according to project specs with white plastic fasteners spaced at a maximum of 5 ft. and the top layer of geotextile sewn.
- Note: As per the AmecFW GDL Cover Soil Siltation Evaluation and Mitigation Measures Memo (Memo) submitted October 2015, three areas in the field were identified where GDL was exposed and silts were deposited directly onto the GDL. In response to the protective cover soil siltation, three new pieces of GDL were placed directly over the potentially impacted areas to assist in drainage. Additional details of these areas and mitigation measures are further described in the AmecFW Memo, with supporting photographs provided.

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- During cap placement activities, Entact continued to spread protective cover soil for the area through the 3rd utility corridor (approximate Sta. 6+80, moving east). Protective cover soil was placed following the project specs with warning caution tape spaced at maximum of 55-inch intervals.
- Upon completion of the daily activities, ESI demobilized from the Site, as SA-6 capping activities were completed.

***Non-Conformance Items / Corrective Actions***

- No non-conformance issues were recorded as patch / repair work completed consisted of custom fit repairs and seam joint patches to allow the geomembrane to conform to the SA-6 contours.

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 10/9/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete Well / Piezometer Penetration Logs (for 3 wells, 5 piezometers, and 8 gas vents).
- Complete Collection Manhole Penetration Logs for Manhole #1, and Manhole #2, Main Access Manhole #3 (located at western slope of 2nd utility corridor), and Manhole #4.
- Review laboratory data for destruct samples DSX-13 and DSX-14.

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, 9/16/15, 9/17/15, 9/18/15, 9/21/15, 9/22/15, 9/23/15, 9/24/15, 9/25/15, 9/29/15, 10/07/15, and 10/08/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-29, and DSX-1 through DSX-12. Laboratory results in compliance with shear and peel requirements as outlined in project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue with protective cover soil placement along eastern end of SA-6.
- Ensure destruct samples are in compliance with project specs and complete associated paperwork and construction certification report.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 10/12/2015 |
| **PROJECT:** | SA-6 South Capping | | | **WEATHER:** | 72° F, Clear |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | | **TIME:** | 1520 – 1720 |

| | |
|---|---|
| **CONTRACTOR & EQUIPMENT:**<br>**ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **PERSONNEL ON SITE:** **Day #38**<br>**AmecFW**: Stu Bills, Dave Ambrose, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT / ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of patch / repair work associated with a failed destruct test (DSX-13) for RP-477 located on Panel #125.
- Based on results of the laboratory destruct testing, 1 of 5 specimens exhibited a peel value less than the 66 lb/in value allotted (as per the project specs) for destruct sample DSX-13. Based on this one failure anomaly, the repair associated with DSX-13 (RP-477) was covered with a new patch, welded, and vacuum box tested (as per project specs). In addition, a new destruct sample DSX-15 was collected to confirm the integrity of the new welds associated with the new patch. Note: the average of the 5 peel specimens complied with the project specs (total of 92 lb/in).
- Site activities commenced with ESI completing patch / repair work for RP-477. A new 5 ft. by 15 ft. patch was placed over the repair, sealed with an extrusion weld, and vacuum box tested as per project specs. Once the new repair (RP-487) was complete, a new destruct sample, DSX-15, was collected to confirm the integrity of the weld.
- One destructive sample was collected from 10/12/15. Destruct sample DSX-15 (extrusion) was collected from RP-487 (placed over RP-477). Subsequent laboratory testing yielded peel and shear values that were in compliance with the project specs.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 11 (Sheet #11) – Failed destruct sample (DSX-13) collected from RP-477 from Panel #125 (failed one of the five specimens for peel testing)
    - Geomembrane patch was placed over RP-477, welded, and vacuum box tested (as per project specs). Additionally, a new destruct sample (DSX-15) was collected from the new patch (RP-487) to confirm the integrity of the new weld. This repair was noted as a failed destruct sample and was completed following project specs and as further defined on *Sheet 11 Notice of Non-Compliance.*

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 10/12/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory data for destruct samples DSX-15.

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, 9/16/15, 9/17/15, 9/18/15, 9/21/15, 9/22/15, 9/23/15, 9/24/15, 9/25/15, 9/29/15, 10/07/15, 10/08/15, and 10/09/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-29, and DSX-1 through DSX-14. Laboratory results in compliance with shear and peel requirements as outlined in project specifications with the exception of DSX-13. Subsequent patch / repair work defined within this report for the failed destruct sample.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Ensure new destruct sample (DSX-15) adheres to project specifications. Subsequent review of the data yielded peel and shear values that were in compliance with the project specs.
- Complete associated paperwork and begin construction certification report.

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the September 2015 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets):

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analytes are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending October 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending October 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |

**SA-6 North/South Field Change Log - Month Ending October 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-22** | Detail BN has been modified to extend the lIDPE up and over the SCB Wall. The prior detail showed both the GDI and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA 6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending October 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**12/11/2015**
**MONTHLY REPORT**

Honeywell
115 Tabor Road
Morris Plains, NJ 07950

December 11, 2015

Honorable Robert G. Torricelli
Office of the Special Master
c/o Sean Jackson
7 So. Lanning Ave.
Hopewell, NJ 08525

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-11**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from November 1 – November 30, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

WJH:jtc/sgf

## B. SITE OPERATIONS

### 1. AVERAGE WEEKLY SITE RESOURCES

| Team | Week Ending | | | |
|---|---|---|---|---|
| | 11/8/15 | 11/15/15 | 11/22/15 | 11/29/15 |
| **Construction Management (AMEC)** | 8 | 9 | 9 | 6 |
| **Engineering (AMEC)** | 1 | 1 | 1 | 1 |
| **Air Monitoring (Emilcott)** | 1 | 1 | 1 | 1 |
| **Security (Securitas)** | 3 | 3 | 3 | 3 |
| **Entact/Subcontractors** | 27 | 28 | 28 | 29 |

| | | | | |
|---|---|---|---|---|
| **Arecon/US Ecology Subcontractors** | 2 | 2 | 0 | 0 |
| **Langan** | 1 | 0 | 0 | 0 |
| **Evoqua** | 1 | 1 | 1 | 1 |
| **B&B Drilling** | 0 | 0 | 4 | 0 |
| **Century Electric** | 0 | 0 | 2 | 0 |
| **TOTAL STAFF** | **44** | **45** | **49** | **41** |

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected September PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Completed screening of Celgene material for use as protective cover soils above geosynthetics.
- Conducted S-3 Mass Removal Injection Event No. 25 in well 088-IW-03.
- Completed installation of PW-3 extraction well and observation well OBS-7.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on November 12, 2015.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 11/8/15 | 11/15/15 | 11/22/15 | 11/29/15 |
| Avg. Gallons Treated & Discharged (per day) | 76,371 | 76,957 | 77,338 | 77,033 |
| Average Flow (gpm) for Operating Period | 55 | 56 | 56 | 53 |
| Avg. Hours of Plant Operation | 23 | 23 | 23 | 24 |
| GWTP Influent Tanks (gal.) | 4,430 | 5,186 | 4,953 | 4,856 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.

- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completed cleaning and decommissioning of frac tanks, piping, and valves that were used at SA-6 South for collection and transfer of construction water to the treatment system located at SA-6 North.
- Continue pumping/dewatering of well points associated with Excavation Areas EA-2 and EA-3.
- Began excavation and backfilling of Excavation Areas EA-2 and EA-3. Contractor temporarily relocated the JCMUA water meter concrete vault within the EA-2/EA-3 excavation area. The vault was staged outside the limits of the EA-2/EA-3 excavation area.
- Completed backfilling EA-5 Excavation.
- Completed trash pit meadow mat repair activities to include installation of the sand-bentonite plug in the SA-6 North Stratum D repair area on the interior side to the vinyl sheets and placement of GCL.
- Completed excavating surficial historic fill in N1 area. A total of ~5,000 cubic yards was removed and stockpiled east of the Department of Public Works "H" building for subsequent sampling.

## 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| Horwith | Tri-axle | PA Transload | US Ecology | >240 mg/kg CrVI | 150 | 21.72 | 3,258.35 |

## 2. EXCAVATION & BACKFILL PROGRESS

| Description | Cells |
|---|---|
| **Excavation Completed** | Excavation Area N1, EA-2/EA-3<br>Volume Excavated - Total for Reporting Period: N1(4,964 CY) EA-2/EA-3(6,840 CY) /<br>Total to Date: 24,611CY |
| **Backfill in Progress** | EA-5 |

## 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 11/8/15 | 11/15/15 | 11/22/15 | 11/29/15 |
| Liberty I-5 | 1,787 | 1,399 | 71 | 504 |
| Horizon C soils | 1,600 | 1,209 | 3,501 | 0 |
| Tilcon 1.5" | 0 | 0 | 251.11 | 0 |

- Screened Celgene materials greater than 3/8 inch were transferred and placed as bridge lift in EA-2/EA-3. A total of 18 loads, totaling approximately 406 cubic yards was placed as temporary fill for bridge lift in EA-2/EA-3.

- Screened Celgene material was removed from the east side of the SA-6 South open space area during final grading of the protective cover soils. Approximately 1,530 cubic yards was removed from the cap area and transferred to the Celgene stockpile area.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Continued off-loading of remaining screened historic fill.
- Area 2N: Surcharging is 100% complete. Offloading is anticipated to be begin in December 2015.
- Area 3N: Completed installation of surcharge monitoring instrumentation.
- Area 4N: Completed installation of surcharge monitoring instrumentation.

## F. SHEET PILE OPERATIONS

- Begin installation of wales to the temporary sheet pile along Route 440.

## G. CAPPING OPERATIONS

- On November 4, 2014, liner crew was on site to address the remaining repair area identified near the SCB wall on the east side of the SA-6 Southopen space area.
- Completed placement of protective cover soils and demarcation tape over the geocomposite drainage layer.
- Continued fine grading of protective cover soils to include associated compaction testing on the SA-6 South open space area.
- Continued placement of root barrier and demarcation tape on the SA-6 Southopen space area.
- Began placement and grading of Horizon C soils (within future vegetated areas) and structural fill (within future roadway areas) of the SA-6 South open space area.

## H. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDEP Waterfront Development | SA-6 North Only | Obtained 6/23/2010 | Not Specified, Est. 3/31/2015 | 6/23/2015 | - |
| NJDEP CAFRA/FHA | SA-6 South Only | Obtained 9/26/2012 | Renewal Not Needed | 9/25/2017 | 10/09/2012 |
| HEPSCD SESCP | Novartis Soil Pile/SA-7 | Obtained 8/21/2012 | Renewal Not Needed | 2/21/2016 | - |
| NJDEP RFA | Novartis Soil Pile/SA-7 | Obtained 9/7/2012 | Renewal Not Needed | Not Specified | - |
| PVSC SUP No. 31630019 | SA-6 Chromium Remedy | Obtained 3/26/2014 Final Revision 5/23/14 | Renewal Not Needed | 8/31/2018 | 04/19/2014 |
| SESCP | SA-6 Chromium Remedy | Obtained 5/16/2013 | Renewal Not Needed | 11/16/2016 | - |

| Pre-Construction Notice – Nationwide Permit #38 for Sediment Remedy | SA-7 | Issued: 3/21/2013 | N/A | 3/18/2015 | 3/25/2013 |
| NJDOT – Application for Drainage Connection, Post Remediation Grading and Drainage | SA-6 Chromium Remedy | Application Submitted 8/19/14 Permit Application Rescinded 12/1/14 & Approved by DOT on 12/18/14 | N/A | N/A | N/A |
| NJDOT – Highway Occupancy Permit – Installation of Sheet Piling and Excavation Adjacent to Rte 440 ROW | SA-6 Chromium Remedy | Application Submitted 9/8/14 Final Executed Permit Issued 12/2/14 | 11/2/15, 1-yr Extension Pending | 12/2/15 | Pending |

## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete excavation and backfilling of Excavation Area EA-8.
- Complete Trash Pit Interior work activities.
- Continue EA-2/EA-3 excavation and backfilling activities.
- Begin Area 3N Surcharge material placement.
- Begin installation of the Contingent Groundwater Extraction System piping in Area 1N.

- Continue final grading of GDL cover soils to include associated compaction testing and installation of root barrier on SA-6 South open space area.
- Continue placement of Horizon C soils on the SA-6 South open space area.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Conduct S-3 Mass Removal Injection Event No. 26 in well 088-IW-01 (completed December 7-9, 2015).
- Complete PW-3 force main/trench installation and associated piping connections back to GWTP
- Begin dewatering and excavation activities associated with Site 163 excavation within the residential footprint.

Project: SA-6 Remediation Schedule
Revision 4
Date: 11/30/15

Task  Milestone  Summary  Critical

# Attachment 2: Site Photographs

**Site Photograph 1:** Grading slopes in open space area.

**Site Photograph 2:** Grading utility corridor soils in open space area.

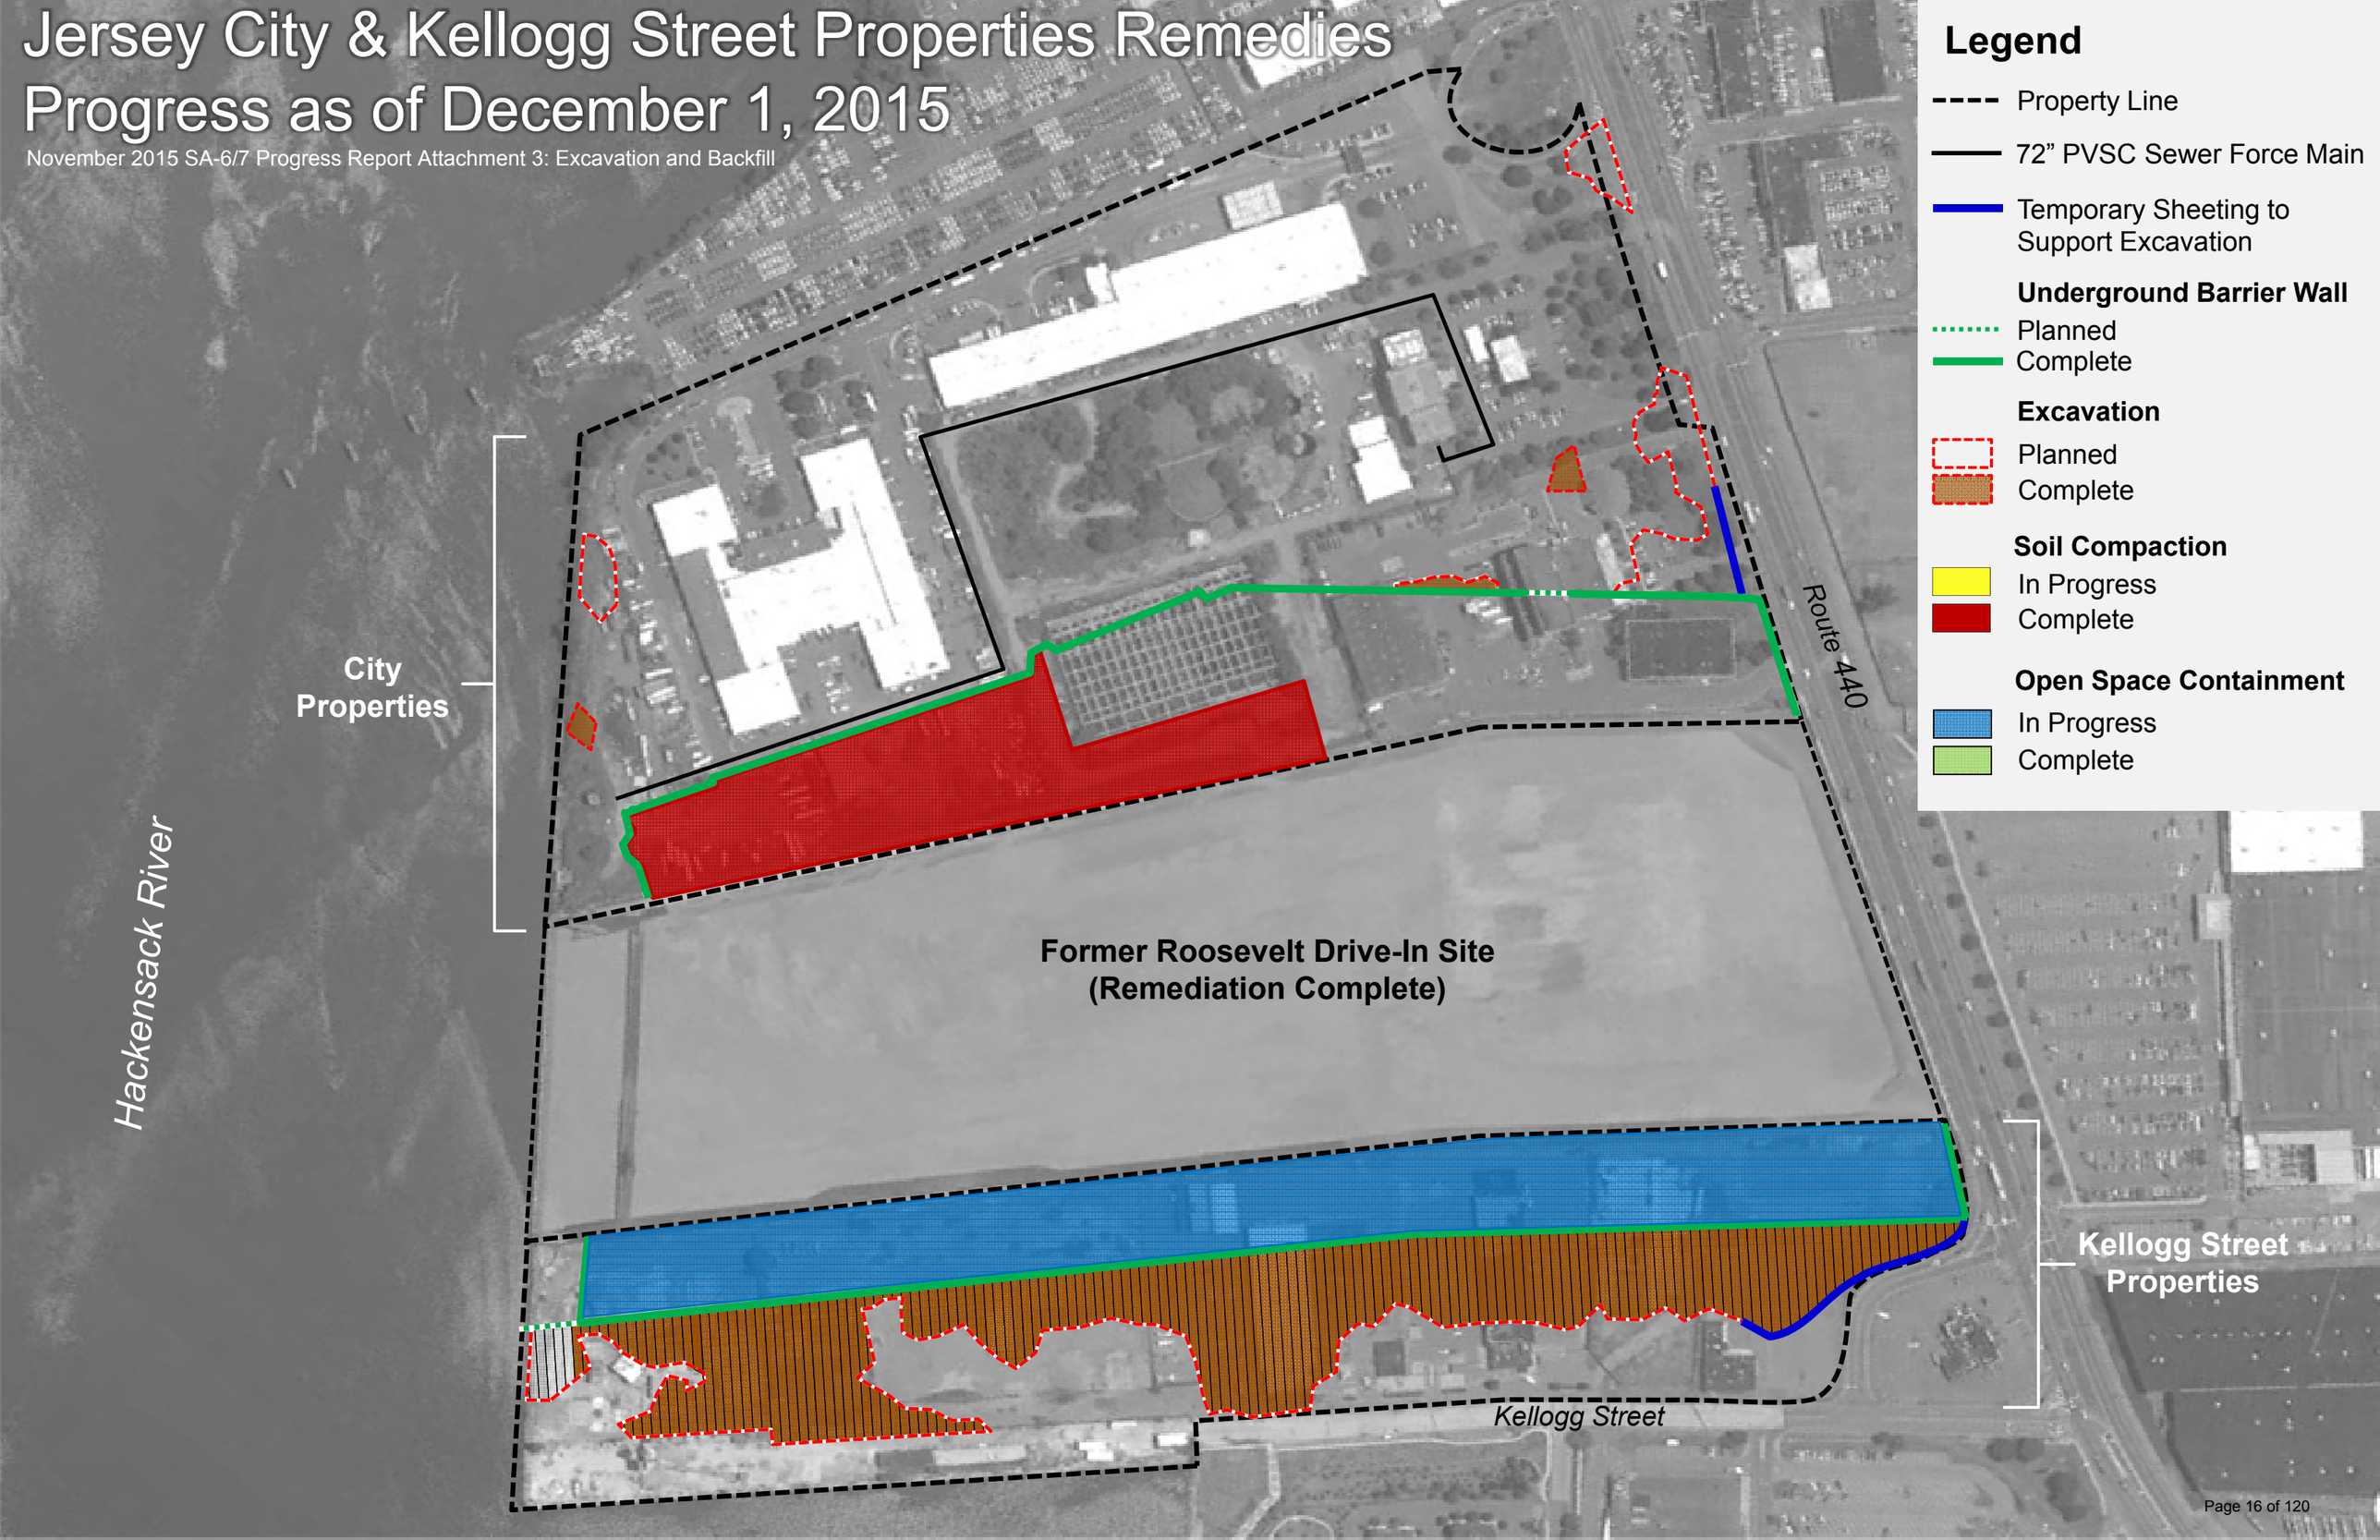
**Site Photograph 3:** Loading of material for offsite disposal.

**Site Photograph 4:** Loading of materials for onsite reuse.

**Site Photograph 5:** Placing clean fill over white root barrier.

**Site Photograph 6:** Screener removes larger stone material.

**Site Photograph 7:** Unloading clean imported soils.



**Site Photograph 8:** White geotextile placed as root barrier.

# Attachment 3: Excavation and Backfill

- Progression Chart

# Jersey City & Kellogg Street Properties Remedies
# Progress as of December 1, 2015

November 2015 SA-6/7 Progress Report Attachment 3: Excavation and Backfill

# Attachment 4: Dewatering Operations Update

**STUDY AREA 6 SOUTH DEEP WELL DATA (DW-7)**

| DATE | HOURS OF OPERATION | FLOW METER START (Gal) | FLOW METER FINISH (Gal) | VOLUME (Gal) DAILY | VOLUME (Gal) TOTAL | FLOW RATE (GPM) | COMMENTS |
|---|---|---|---|---|---|---|---|
| 11/18/15 | 24 | N/A | N/A | 11,500 | 11,500 | 8.0 | Flow meter not installed, tank measured |
| 11/19/15 | 24 | N/A | N/A | 11,000 | 22,500 | 7.6 | |
| 11/20/15 | 24 | N/A | N/A | 11,000 | 33,500 | 7.6 | |

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: SAP-9
Date Exposed: 11/16/15
Describe Damage:

Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to bottom of excavation

Date Repaired: 11/19/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: SAP-10
Date Exposed: 11/16/15
Describe Damage:

Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: SAP-11
Date Exposed: 11/16/15
Describe Damage:

Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: SAP-12
Date Exposed: 11/16/15
Describe Damage:

Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: SAP-13

Date Exposed: 11/16/15

Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to bottom of excavation

Date Repaired: 11/19/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]

Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 60P-1

Date Exposed: 11/16/15

Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]

Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 60P-2

Date Exposed: 11/16/15

Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]

Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 60P-3

Date Exposed: 11/16/15

Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]

Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-4
Date Exposed: 11/16/15
Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to bottom of excavation

Date Repaired: 11/19/15
Inspected by: A. Eslamineyad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-5
Date Exposed: 11/16/15
Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslamineyad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-6
Date Exposed: 11/17/15
Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslamineyad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-7
Date Exposed: 11/17/15
Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslamineyad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-8
Date Exposed: 11/17/15
Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to bottom of excavation

Date Repaired: 11/19/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-9
Date Exposed: 11/17/15
Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-10
Date Exposed: 11/17/15
Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-11
Date Exposed: 11/17/15
Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-12
Date Exposed: 11/17/15
Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to bottom of excavation

Date Repaired: 11/19/15
Inspected by: A. Eslamingad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-13
Date Exposed: 11/17/15
Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the Sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslamingad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-14
Date Exposed: 11/17/15
Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/19/15
Inspected by: A. Eslamingad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: [signature]
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-16
Date Exposed: 11/17/15
Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to bottom of excavation

Date Repaired: 11/19/15
Inspected by: A. Eslamineyad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 11/19/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-17
Date Exposed: 11/19/15
Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/24/15
Inspected by: A. Eslamineyad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 11/24/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-18
Date Exposed: 11/19/15
Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/24/15
Inspected by: A. Eslamineyad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 11/24/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-19
Date Exposed: 11/19/15
Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/24/15
Inspected by: A. Eslamineyad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 11/24/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 60P-20

Date Exposed: 11/19/15

Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to bottom of excavation

Date Repaired: 11/24/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 11/24/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 60P-21

Date Exposed: 11/19/15

Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 11/24/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 11/24/15

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 11/04/2015 |
| **PROJECT:** | SA-6 South Capping | | **WEATHER:** | 55 / 70° F, Clear |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & Cap Placement | **TIME:** | 0845 – 1215 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #39** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Dave Ambrose, Ari Eslaminejad<br>**Langan:** Dan Bosworth<br>**ENTACT / ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of patch / repair work associated with an equipment puncture that was observed along the northern end of SA-6 (at SCB wall) at approximate Sta. 2+95.
- Based on conversations with the project team, it is understood that during final grading of the area, the tooth of an excavator bucket punctured the GDL and underlying geomembrane cap. This error was attributed to malfunctioning GPS equipment, as the SCB wall (outside of the Cap) was not programmed into the GPS.
- Site activities commenced with ESI completing patch / repair work at the puncture location (along edge of SCB wall at approximate Sta. 2+95. A new piece of GCL was initially placed over the puncture area and a 2 ft. by 1.5 ft. geomembrane patch was then placed over the puncture, and sealed with an extrusion weld (as per project specs). Vacuum box testing could not be completed by ESI, as the patch / repair was located right on the edge of the SCB wall (refer to supporting photo log from 11/4/15). As such, the welds were visually observed by Langan and Entact / ESI to confirm uniformity.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 12 (Sheet #12) – Equipment puncture through geomembrane cap.
    - Geomembrane patch was placed over equipment puncture along SCB wall (at approximate Sta. 2+95) and extrusion welded (as per project specs). Prior to patch / repair work, a new piece of GCL was placed over the puncture. This repair was noted as an equipment puncture and was completed following the project specs and as further defined on *Sheet 12 Notice of Non-Compliance.*

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 11/04/15). Review and confirm supporting QA paperwork (Soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 7/20/15, 7/21/15, 7/22/15, 7/23/15 and 7/24/15, 7/27/15, 7/28/15, 7/29/15, 7/30/15, 7/31/15, 8/3/15, 8/4/15, 8/5/15, 8/6/15, 8/7/15, 8/10/15, 8/12/15, 8/13/15, 8/15/15, 9/9/15, 9/11/15, 9/14/15, 9/15/15, 9/16/15, 9/17/15, 9/18/15, 9/21/15, 9/22/15, 9/23/15, 9/24/15, 9/25/15, 9/29/15, 10/07/15, 10/08/15, 10/09/15, and 10/12/15 as well as reviewed and approved daily ESI form submittals (i.e. Subgrade, Panel Placement, etc.)
- Reviewed laboratory destruct sample results for samples DS-1 through DS-29, and DSX-1 through DSX-15. Laboratory results in compliance with shear and peel requirements as outlined in project specifications with the exception of DSX-13 (details previously defined in *10/12/15 Daily Report*).

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Complete associated paperwork and begin construction certification report.

***Daily QA Documents Completed***

| | | |

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the October 2015 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

**RE: REVISIONS TO SEWER USE PERMIT # 20630025**

Dear Ms. Kaouris,

Enclosed is a revised Sewer Use Permit for your facility. This revised permit will replace your presently active permit. The revisions are stated on page 3 of 8, special conditions or remarks.

In addition, Section B, conditions applicable to all permits (pages1-13) was sent with your permit. This section should be attached to the final permit.

If you have any questions, please contact Laura Marchitto at (973) 817-5905.

Very truly yours,
**PASSAIC VALLEY SEWERAGE COMMISSION**

Anthony Gammaro
Assistant Manager, User Charge & Permit Management

## SEWER USE PERMIT

**Permit #** 20630025

(Please use the Permit Number on any correspondence with PVSC)
In compliance with the provisions of the Federal Water Pollution Control Act, its amendments, the Clean Water Act and Rules and Regulations of the Passaic Valley Sewerage Commission

HONEYWELL INTERNATIONAL INC.

BAYFRONT REDEVELOPMENT

(herein, after referred to as the Permittee)
is authorized to discharge from a facility located at

525 & 575 ROUTE 440

JERSEY CITY, NEW JERSEY 07305

to the Passaic Valley Sewerage Commission Treatment Works in accordance with discharge limitations, monitoring requirements and other conditions set forth herein.

**EFFECTIVE DATE** 10/01/2013

**EXPIRATION DATE** 09/30/2018

**PASSAIC VALLEY SEWERAGE COMMISSION**

## SECTION A

## CONDITION SPECIFIC TO THIS PERMIT

1. **Sampling**

1.1 Samples and measurements taken as required under this permit shall be representative of the monitored activity. All samples shall be taken at the monitoring points approved by the PVSC and specified in this permit. Unless other wise specified, all samples shall be drawn by a 24-hour composite sampler acceptable to the PVSC which shall be equipped with attachments appropriate for affixing seals. During and after collection, the sample shall be maintained between $1^0C - 4^0C$.

1.2 In addition to the other sample requirements set forth in SECTION A, PART 2 of this permit, the Permittee shall comply with the following:

(a) Samples that are taken for heavy metal analysis must be drawn by an automatic 24-hour composite sampler. A grab sample is not acceptable for metals compliance determination.

## SIU FACT SHEET

Sewer Use Permit to discharge into Passaic Valley Sewerage Commission Treatment Plant

Honeywell International Incorporated has submitted a completed Contractual Indirect Discharger Application for a Sewer Use Permit Revision to discharge into the treatment works.

| NAME & ADDRESS OF APPLICANT | NAME AND ADDRESS OF FACILITY WHERE DISCHARGE OCCURS |
|---|---|
| Honeywell International Inc.<br>101 Columbia Road, Solvay 4<br>Morristown, New Jersey 07962 | Honeywell International Inc.<br>Bayfront Redevelopment<br>525 & 575 Route 440<br>Jersey City, New Jersey 07305 |

**Description of Facility Operations:** Groundwater discharger

**Million Gallons per Day (MGD) Industrial Wastewater:** Approx. - .094 MGD

**Number of Outlets: – 1:** This outlet is used for compliance

**Sample Point Location:** The Sample points for 24hr. composite & grab sampling are located within the Groundwater Treatment Plant (GWTP) Building. The sample point for 24hr. composite sampling (Metals & BOD) is located at the effluent surge tank and the sample point for the grab samples (SGT-HEM, TVOC) is located upstream of the effluent flow meter.

**Basis for Permit Conditions:** Groundwater

**Type of Pretreatment Equipment Installed:** Equalization Tank, Chemical Precipitation System and a Solids Handling System

**Duration of Sewer Use Permit:** 5 Years

**Special Conditions or Remarks:** Revision. Amended to 70gpm. This company is covered under PVSC Local Limits

REV: 04/2015
REV: 12/2015

2. **MONITORING REQUIREMENTS AND DISCHARGE LIMITATIONS**

(a) Beginning (10/01/2013) and lasting through (09/30/2018) the Permittee is authorized to discharge from outlet # (20630025-1). Such discharge shall be monitored as specified below. The table lists the limitations or procedures applicable to this outlet. The volume shall be determined from flowmeter readings. The Permittee shall submit volume in accordance with PVSC User Charge Self-Monitoring Report Form MR-2.

| EFFLUENT CHARACTERISTIC | DISCHARGE LIMITATIONS | | | MONITORING REQUIREMENTS | |
|---|---|---|---|---|---|
| PARAMETER | MONTHLY AVERAGE | DAILY MAX | MEASUREMENT FREQUENCY | SAMPLE TYPE | REPORTING PERIOD |
| Volume | XXXXX | XXXXX | XXXXX | XXXXX | Monthly |

## 2. MONITORING REQUIREMENTS AND DISCHARGE LIMITATIONS

(b) Beginning (10/01/2013) and lasting through (09/30/2018) the Permittee is authorized to discharge from outlet # (20630025-1). Such discharge shall be monitored as specified below. The table lists the limitations or procedures applicable to this outlet. The volume shall be determined from flowmeter readings. The Sample points for 24hr. composite & grab sampling are located within the Groundwater Treatment Plant (GWTP) Building. The sample point for 24hr. composite sampling (Metals & BOD) is located at the effluent surge tank and the sample point for the grab samples (SGT-HEM, TVOC) is located upstream of the effluent flow meter. The Permittee shall submit volume and analysis results in accordance with PVSC Pretreatment Discharge Monitoring Form MR-1.

| | DISCHARGE LIMITATIONS | | MONITORING REQUIREMENTS | | |
|---|---|---|---|---|---|
| PARAMETER | MONTHLY AVERAGE | DAILY MAX | MEASUREMENT FREQUENCY | SAMPLE TYPE | REPORTING PERIOD |
| SGT-HEM (Non-Polar Material) | 100 mg/l | 150 mg/l | Monthly | Grab* | Monthly |
| Chromium | XXXXX | 23 lbs/day | Monthly | 24 hr. Comp. | Monthly |
| TVOC | XXXXX | XXXXX | Monthly | Grab** | Monthly |
| BOD | XXXXX | XXXXX | Monthly | 24 hr. Comp | Monthly |
| Volume | XXXXX | XXXXX | XXXXX | XXXXX | Monthly |

* Sampling procedure must be in accordance with those specified by N.J.D.E.P.. Analysis procedure as defined by E.P.A. Method 1664A.

** Sampling procedure must be in accordance with those specified by N.J.D.E.P.. Analysis procedure as defined by E.P.A. Method 624.

REV: 04/2015

## 2. MONITORING REQUIREMENTS AND DISCHARGE LIMITATIONS

(b) Beginning (10/01/2013) and lasting through (09/30/2018) the Permittee is authorized to discharge from outlet # (20630025-1). Such discharge shall be monitored as specified below. The table lists the limitations or procedures applicable to this outlet. The volume shall be determined from flowmeter readings. The Sample points for 24hr. composite & grab sampling are located within the Groundwater Treatment Plant (GWTP) Building. The sample point for 24hr. composite sampling (Metals & BOD) is located at the effluent surge tank and the sample point for the grab samples (SGT-HEM, TVOC) is located upstream of the effluent flow meter The Permittee shall submit volume and analysis results in accordance with PVSC Pretreatment Discharge Monitoring Report Form MR-1.

| PVSC LOCAL LIMITS | DISCHARGE LIMITATIONS | | MONITORING REQUIREMENTS | | |
|---|---|---|---|---|---|
| PARAMETER | mg/l MONTHLY AVERAGE | mg/l THRESHOLD VALUE | MEASUREMENT FREQUENCY | SAMPLE TYPE | REPORTING PERIOD |
| Cu | 3.6 | 0.18 | Monthly | 24 hr. comp. | Monthly |
| Pb | 1.0 | 0.05 | Monthly | 24 hr. comp. | Monthly |
| Hg | 0.080 | 0.004 | Monthly | 24 hr. comp. | Monthly |
| Ni | 3.9 | 0.2 | Monthly | 24 hr. comp. | Monthly |
| Zn | 4.2 | 0.21 | Monthly | 24 hr. comp. | Monthly |
| Volume | XXXXX | XXXXX | XXXXX | XXXXX | Monthly |

# HONEYWELL INTERNATIONAL INC. – BAYFRONT REDEVELOPMENT - ID# 20630025

## 3. SCHEDULE OF COMPLIANCE

The Permittee is required to meet the following schedule of compliance:

A. Analysis of wastewater parameters shall be performed by a laboratory that has been certified by the State of New Jersey. Perittee is required to submit all certified analyses as an attachment to the monthly MR-1 report.

B. The Permittee is required to submit as an attachment to the MR-1 and/or MR-2 report monthly, a water balance showing meter readings used to calculate the reported volume discharged.

C. Permittee to submit a periodic compliance monitoring report MR-2 form for monthly reporting requirements within twenty-one (21) days after the end date of each preceding month.

D. Permittee to be in compliance with PVSC Local Limits.

Permittee to submit a periodic compliance monitoring report MR-1 form for monthly reporting requirements within thirty-five (35) days after the end date of each preceding month in accordance with General Pretreatment Regulations 40 CFR 403.12 section (e).

E. If the Permittee has been authorized by the PVSC to certify for non-use for one or more heavy metals, the Permittee must sample the discharge in March and September of each year in order to prove continued compliance. If any analytical results exceed the Threshold Value, but not the Local Limit, the Permittee shall analyze a sample each succeeding month until three successive monthly results are at or below the Threshold Value stated in the PVSC Rules and Regulations Section B-103.3 Table B-2.

F. Be certain that you do not surcharge any sewer lines. The rate of discharge must not exceed a maximum average daily flow rate of 70 gpm over the course of a sample date. Please note all discharges will automatically cease in the event the liquid level in the Emergency Outflow Structure Standpipe rises to a level 12 inches from the top of this pipe as detected by a float switch.

G. Permittee must operate in accordance with its 6/4/14 approved Slug Control Plan.

H. All discharge must pass through a non-resettable flow meter.

I. All discharge shall cease 5 years from the start of discharge. If additional time is needed, you must request an extension from PVSC 90 days prior to the expiration date of the Agreement and this Sewer Use Permit.

REV: 04/2015
REV: 12/2015

# HONEYWELL INTERNATIONAL INC. - BAYFRONT REDEVELOPEMENT – ID# 20630025

## SECTION A-3 SCHEDULE OF COMPLIANCE CONTINUED

J. All PVSC Rules & Regulations must be adhered to. (www.nj.gov/pvsc)

K. This Sewer Use Permit will run concurrent with a said contract executed by both Honeywell International Inc. and PVSC.

L. Honeywell International Incorporated must abide with the Memorandum of Understanding (MOU) executed both by Honeywell International Inc. and PVSC on 1/29/13.

M. PVSC reserves the right to require toxicity evaluation and/or to change the condition of this Permit, including discontinuing the discharge if it deems necessary.

N. The Permittee shall notify in writing, all agencies as directed by 40 CFR 403.12 (p) of any discharges classified hazardous waste under 40 CFR 261.

REV: 04/2015

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending November 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending November 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |

**SA-6 North/South Field Change Log - Month Ending November 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-22** | Detail BN has been modified to extend the lIDPE up and over the SCB Wall. The prior detail showed both the GDI and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA 6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending November 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D.<br>In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF.<br>This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only. |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | Submitted to Contractor only. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**MONTHLY REPORT**

Honeywell
115 Tabor Road
Morris Plains, NJ 07950

January 14, 2016

Honorable Robert G. Torricelli
Office of the Special Master
c/o Sean Jackson
7 So. Lanning Ave.
Hopewell, NJ 08525

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2015-12**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from December 1 – December 31, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Engineering and Construction

WJH:jtc/sgf

## B. SITE OPERATIONS

### 1. AVERAGE WEEKLY SITE RESOURCES

| Team | Week Ending | | | |
|---|---|---|---|---|
| | 12/6/15 | 12/13/15 | 12/20/15 | 12/27/15 |
| **Construction Management (AMEC)** | 8 | 10 | 9 | 8 |
| **Engineering (AMEC)** | 1 | 1 | 1 | 1 |
| **Air Monitoring (Emilcott)** | 1 | 1 | 1 | 1 |
| **Security (Securitas)** | 3 | 3 | 3 | 3 |
| **Entact/Subcontractors** | 30 | 31 | 32 | 36 |
| **Arecon/US Ecology Subcontractors** | 2 | 0 | 2 | 2 |
| **Langan** | 0 | 0 | 0 | 0 |
| **Evoqua** | 1 | 1 | 1 | 1 |
| **B&B Drilling** | 0 | 1 | 2 | 2 |
| **Cornerstone** | 0 | 2 | 2 | 1 |
| **TOTAL STAFF** | **46** | **50** | **53** | **55** |

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected December PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Conducted S-3 Mass Removal Injection Event No. 26 in well 088-IW-01.
- Completed installation of dual walled piping and electrical conduit to PW-3 extraction well.
- Completed startup and pumping of PW-3 extraction well.
- Conducted round of quarterly groundwater level measurements.
- Conducted biennial LTMP groundwater quality sampling event.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on December 8, 2015.
- From December 23, 2015 to December 28, 2015, the GWTP was offline due to a faulty control card. Trouble shooting was attempted on December 26, 2015 which included replacement of a communication cable and the input and output boards. These actions did not restore the system. On December 28, 2015 the problem was diagnosed as being a faulty scanner and module card and cards were replaced. The system was fully restarted on December 28, 2015 at 1:25 pm.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 12/6/15 | 12/13/15 | 12/20/15 | 12/27/15 |
| Avg. Gallons Treated & Discharged (per day) | 76,813 | 67,192 | 62,438 | 61,634 |
| Average Flow (gpm) for Operating Period | 55 | 53 | 54 | 49 |
| Avg. Hours of Plant Operation | 23 | 21 | 23 | 20 |
| GWTP Influent Tanks (gal.) | 4,080 | 4,157 | 4,560 | 5,424 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Continue pumping/dewatering of well points associated with Excavation Areas EA-2 and EA-3.

- Completed excavation of EA-8.
- Completed installation of shallow well points and dewatering well at Site 163.
- Began dewatering and excavation activities of Site 163. Completed installation of temporary 40 mil geomembrane liner in bermed containment areas.
- Initiated excavation of Excavation Areas EA-2 and EA-3 and placed ramp and bridge lift to protect work in the southern portion.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Horwith** | Tri-axle | PA Transload | US Ecology | >240 mg/kg CrVI | 154 | 21.56 | 3,321 |
| **Entact/Horwith** | Tri-axle Dump | Middlesex County Landfill, NJ | MCUA | Non-haz Cr | 65 | 26.1 | 1,701 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Excavation Completed** | Excavation, EA-2/EA-3<br>Volume Excavated - Total for Reporting Period: EA-2/EA-3(9,945 CY) /<br>Total to Date: 34,556 CY |
| **Backfill in Progress** | EA-8, EA2/3 |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 12/6/15 | 12/13/15 | 12/20/15 | 12/27/15 |
| Liberty I-5 | 940 | 2,337 | 1,427 | 0 |
| Horizon C soils | 1,133 | 0 | 0 | 0 |
| Tilcon 2.5” | 182 | 0 | 0 | 0 |

- Screened Celgene materials greater than 3/8 inch were transferred and placed as bridge lift in EA-2/EA-3.
- Screened Celgene material was removed from the east side of the SA-6 South open space area during final grading of the protective cover soils. Approximately 203 cubic yards was removed from the cap area and transferred to the Celgene stockpile area.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.

- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Surcharging and offloading of surcharge material is complete.
- Area 2N: Began offloading of area 2N.
- Area 3N: Began placing surcharge material, approximately 80% of the design volume to be placed is complete.
- Area 4N: Completed installation of surcharge monitoring instrumentation.

## F. SHEET PILE OPERATIONS

- Completed the installation of lagging to the EA-2/EA-3 temporary excavation support system.
- Completed installation of sheeting within the Trash Pit interior (grout sealing to concrete walls still to be completed).

## G. CAPPING OPERATIONS

- Continued fine grading of protective cover soils and associated compaction testing on the SA-6 South open space area.
- Continued placement of root barrier and demarcation tape on the SA-6 South open space area.
- Continued placement and grading of Horizon C soils (within future vegetated areas) and structural fill (within future roadway areas) of the SA-6 South open space area.

## H. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDEP Waterfront Development | SA-6 North Only | Obtained 6/23/2010 | Not Specified, Est. 3/31/2015 | 6/23/2015 | - |
| NJDEP CAFRA/FHA | SA-6 South Only | Obtained 9/26/2012 | Renewal Not Needed | 9/25/2017 | 10/09/2012 |
| HEPSCD SESCP | Novartis Soil Pile/SA-7 | Obtained 8/21/2012 | Renewal Not Needed | 2/21/2016 | - |
| NJDEP RFA | Novartis Soil Pile/SA-7 | Obtained 9/7/2012 | Renewal Not Needed | Not Specified | - |
| PVSC SUP No. 31630019 | SA-6 Chromium Remedy | Obtained 3/26/2014 Final Revision 5/23/14 | Renewal Not Needed | 8/31/2018 | 04/19/2014 |
| SESCP | SA-6 Chromium Remedy | Obtained 5/16/2013 | Renewal Not Needed | 11/16/2016 | - |

## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Continue Trash Pit Interior sheeting, grouting and backfilling activities.
- Complete EA-2/EA-3 excavation and backfilling activities.
- Complete EA-1 excavation and backfilling activities.
- Continue Site 163 dewatering and excavation activities.
- Complete Area 3N Surcharge material placement and begin to place material in Area 4N. Prepare next monthly Surcharge Monitoring Report for data collected in December 2015.
- Begin installation of the Contingent Groundwater Extraction System piping in Area 1N.
- Continue final grading of GDL cover soils to include associated compaction testing and installation of root barrier on SA-6 South open space area.
- Pending identification of new source(s), resume import and placement of Horizon C Soils on the Study Area 6 South open space area.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Complete placement of asphalt associated with the PW-3 force main trench.

- Continue dewatering and excavation activities associated with Site 163 excavation within the residential footprint including installation of temporary sheeting as needed.

**ATTACHMENTS:**

Project: SA-6 Remediation Schedule
Revision 4
Date: 12/29/15

Task  Milestone  Summary  Critical

# Attachment 2: Site Photographs

**Site Photograph 1:** Continuing Excavation Areas 2 and 3.

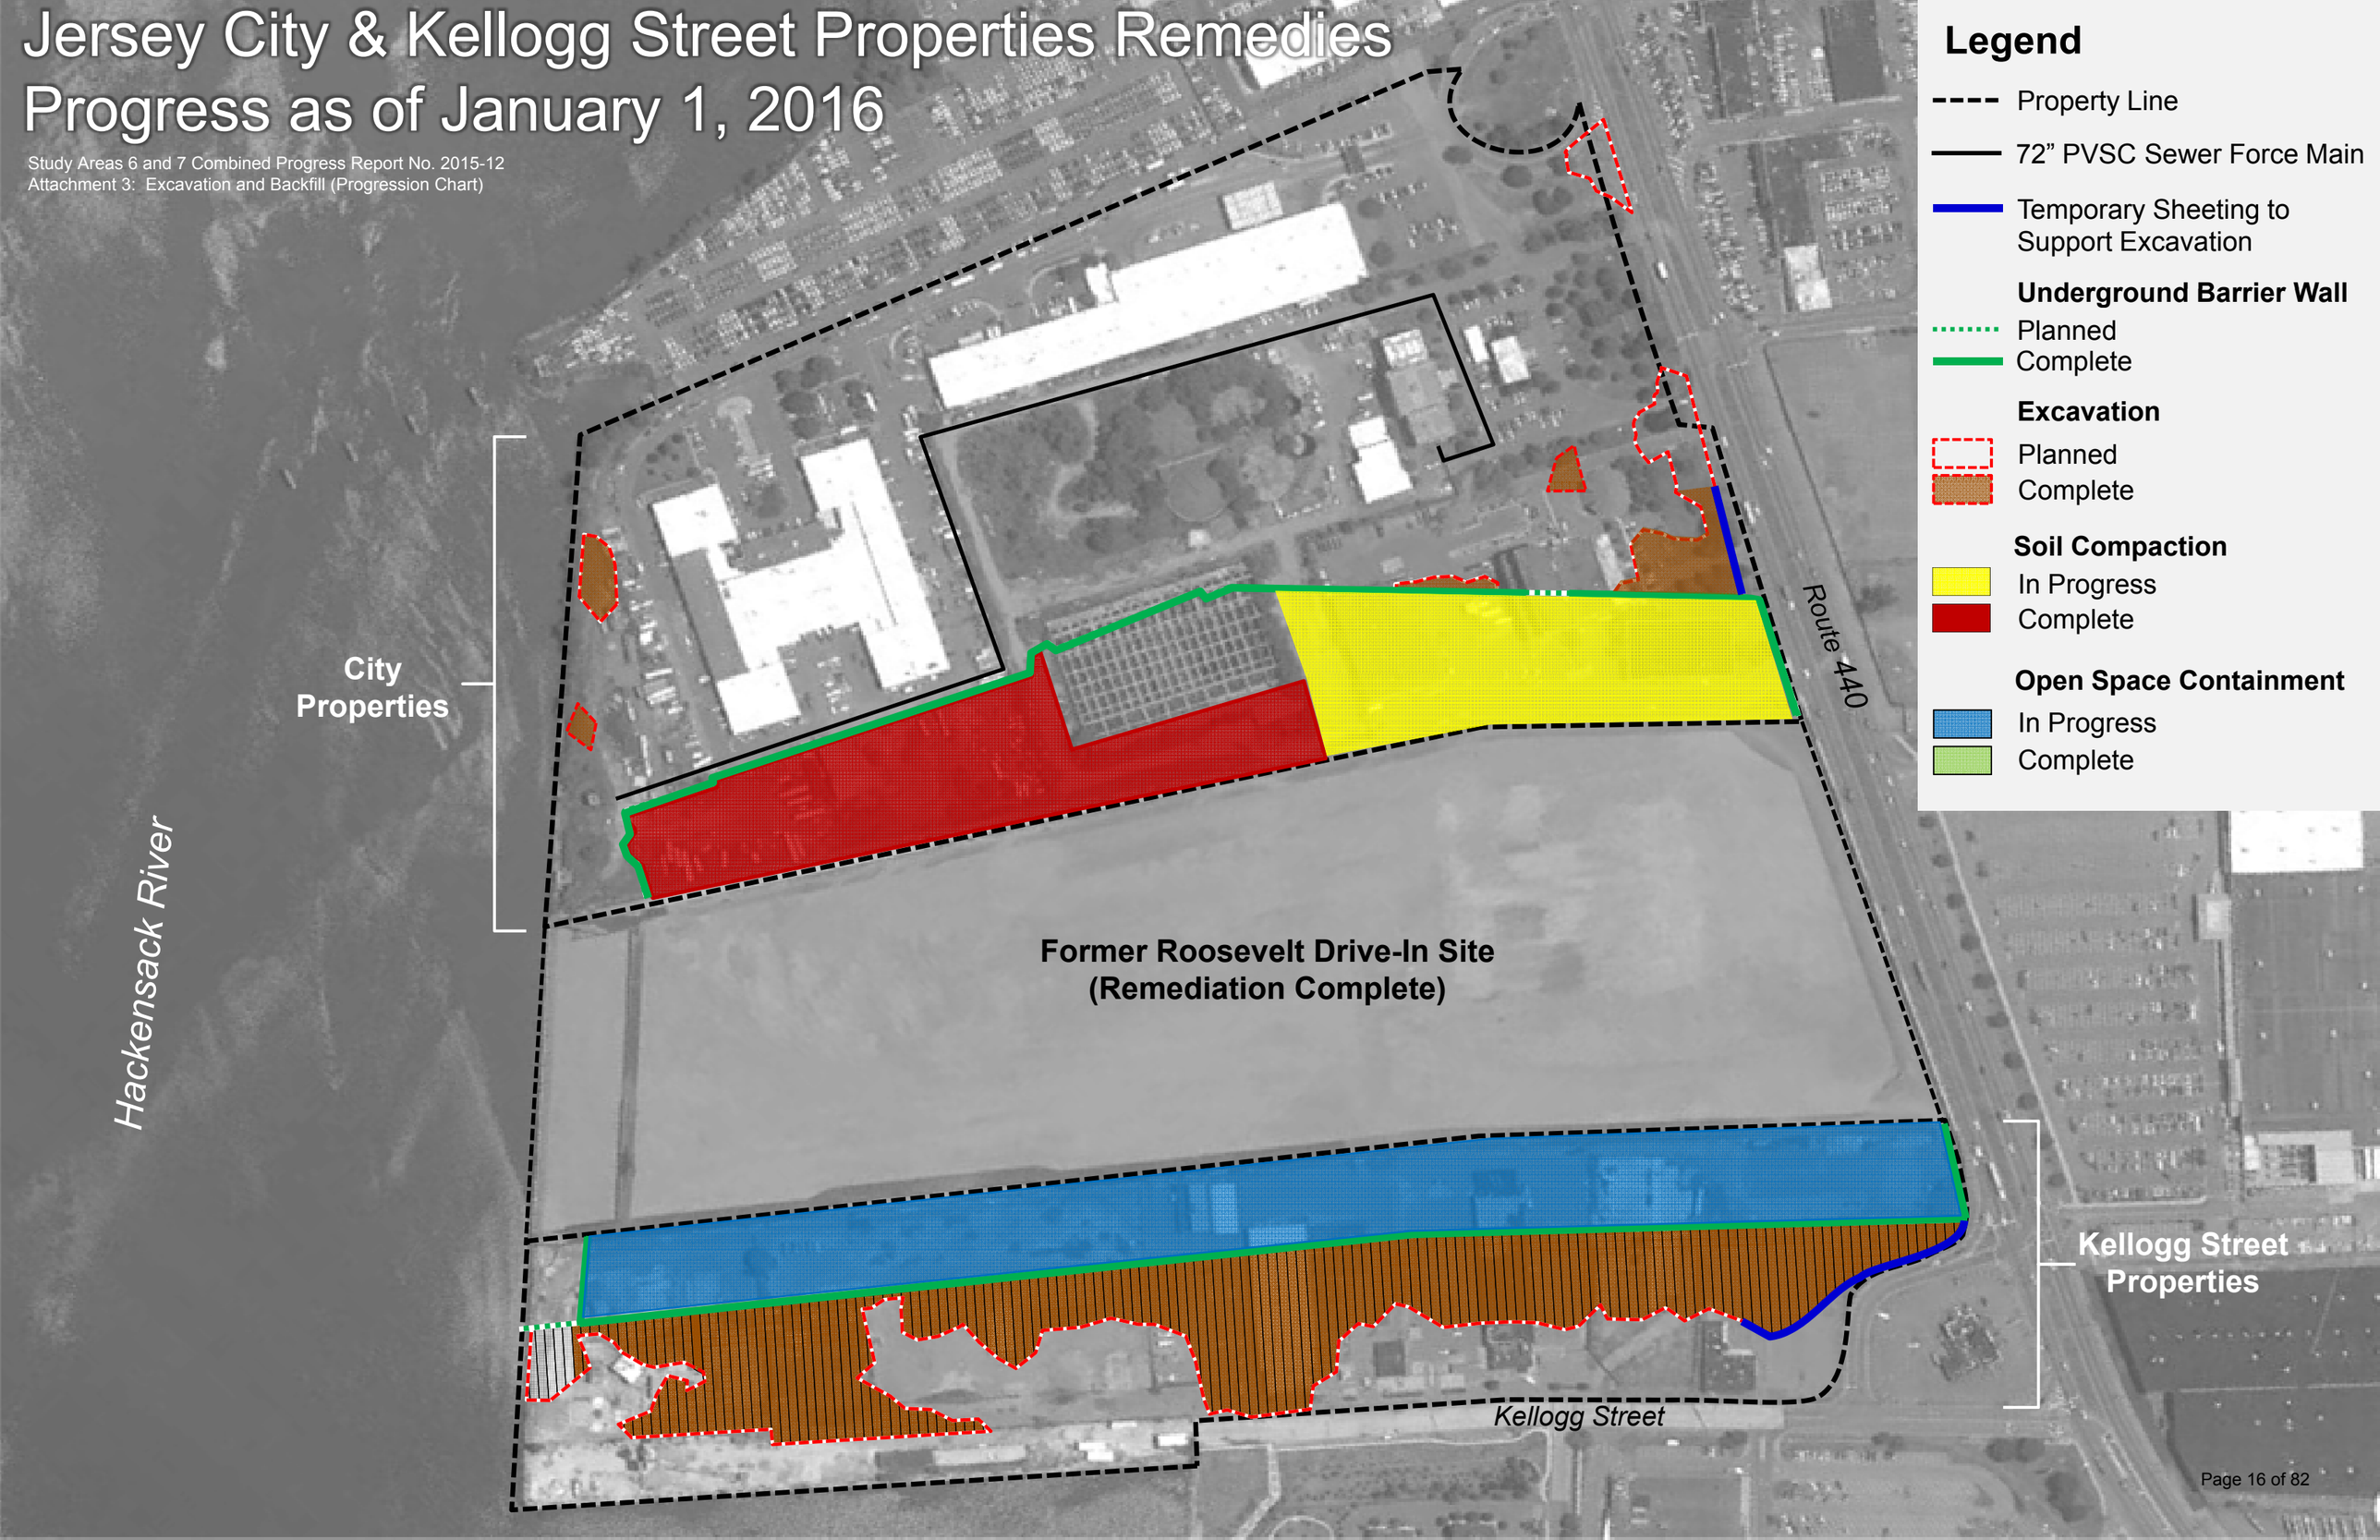
**Site Photograph 2:** Placement of clean fill in Excavation Areas 2 and 3.

**Site Photograph 3:** Placement of surcharge soils at former city properties Area 3N.

**Site Photograph 4:** Installing root barrier in open space area utility corridor.

**Site Photograph 5:** Loading clean fill for use in utility corridor.

**Site Photograph 6:** Spreading clean fill in utility corridor.



**Site Photograph 7:** Placement of clean fill in open space area utility corridor.

# Attachment 3: Excavation and Backfill

- Progression Chart

# Jersey City & Kellogg Street Properties Remedies Progress as of January 1, 2016

Study Areas 6 and 7 Combined Progress Report No. 2015-12
Attachment 3: Excavation and Backfill (Progression Chart)

## Legend

- Property Line
- 72” PVSC Sewer Force Main
- Temporary Sheeting to Support Excavation

**Underground Barrier Wall**

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-28
Date Exposed: 12/1/15
Describe Damage:

Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to bottom of excavation

Date Repaired: 12/3/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/3/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-29
Date Exposed: 12/1/15
Describe Damage:

Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 12/3/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/3/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-30
Date Exposed: 12/4/15
Describe Damage:

Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 12/11/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/11/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-31
Date Exposed: 12/4/15
Describe Damage:

Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 12/11/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/11/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 6OP-32

Date Exposed: 12/4/15

Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to bottom of excavation

Date Repaired: 12/11/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 12/11/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 6OP-33

Date Exposed: 12/4/15

Describe Damage: Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the Sheet to the bottom of the excavation

Date Repaired: 12/11/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 12/11/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 6OP-34

Date Exposed: 12/4/15

Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 12/11/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 12/11/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____

Entact ID: 6OP-35

Date Exposed: 12/4/15

Describe Damage: Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 12/11/15

Inspected by: A. Eslaminejad

Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____

Date: 12/11/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-36
Date Exposed: 12/14/15
Describe Damage:

Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to bottom of excavation

Date Repaired: 12/11/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/11/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-37
Date Exposed: 12/14/15
Describe Damage:

Epoxy scrapes on the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 12/17/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/17/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-38
Date Exposed: 12/14/15
Describe Damage:

Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 12/17/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/17/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-39
Date Exposed: 12/14/15
Describe Damage:

Epoxy scrapes along the face of the sheet, caused by the bucket of the 349 Excavator

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 12/17/15
Inspected by: A. Eslaminejad
Describe Repair: Clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/17/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-40
Date Exposed: 12/14/15
Describe Damage: Epoxy scrapes on the face of the sheet, caused by the CAT 349 Excavator bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of the excavation

Date Repaired: 12/17/15
Inspected by: A. Eslamnejad
Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/17/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-41
Date Exposed: 12/17/15
Describe Damage: Epoxy scrapes along the face of the sheet, caused by the CAT 349 Excavator bucket

Damage Location (ft below top of sheet, inboard side outboard side): Along the face of the sheet to the bottom of excavation

Date Repaired: 12/17/15
Inspected by: A. Eslamnejad
Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/17/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-42
Date Exposed: 12/14/15
Describe Damage: Epoxy scrapes on the face of the sheet. Caused by the CAT 349 excavator bucket

Damage Location (ft below top of sheet, inboard side outboard side): _____

Date Repaired: 12/17/15
Inspected by: A. Eslamnejad
Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/17/15

[1] A repair log is to be completed for each sheet pile section that is exposed and in need of repair.

amec

SHEET PILE REPAIR LOG[1]

Sheet Number/DB ID: _____
Entact ID: 60P-43
Date Exposed: 12/14/15
Describe Damage: Epoxy scrapes on the face of the sheet, caused by the CAT 349 Excavator bucket

Damage Location (ft below top of sheet, inboard side outboard side): _____

Date Repaired: 12/17/15
Inspected by: A. Eslamnejad
Describe Repair: clean, grind, coat

Repair Log Closure: AMEC Signature: _____
Date: 12/17/15

| Comment Number | Permit Number | SWAP Observer's Comments |
|---|---|---|
| 1 | IA2Q4A1AL8 | Storm water has accumulated in the secondary containment structures in the mechanic's work area on SA-6 South. |
| 2 | IA2Q4A1AL8 | Exclusion Zone fencing is inadequate at several locations around the EA-2/EA-3 excavations |
| 3 | IA2Q4A1AL8 | The Type A stockpile to the north of the EA-5 excavation area has overtopped the installed silt fencing to the north and to the west. |
| 4 | IA2Q4A1AL8 | The haul road to the north of the trash pit on SA-6 North is heavily coated with sediment and other material. |

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the November 2015 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analytes are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

# Honeywell — Chain Of Custody / Analysis Request

| Accutest Labs | | |

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending December 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending December 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |

**SA-6 North/South Field Change Log - Month Ending December 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | Submitted to Contractor only. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only. |
| **DC 2015-07-22** | Detail BN has been modified to extend the lIDPE up and over the SCB Wall. The prior detail showed both the GDI and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending December 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA 6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Contractor only. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | Submitted to Contractor only. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |

**SA-6 North/South Field Change Log - Month Ending December 2015**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D.<br>In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF.<br>This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only. |
| **DC 2015-12-01** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals.<br>EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results.<br>Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits.<br>A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | Submitted to Contractor only. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**2/9/2016**
**MONTHLY REPORT**

Honeywell
115 Tabor Road
Morris Plains, NJ 07950

February 11, 2016

Honorable Robert G. Torricelli
Office of the Special Master
c/o Sean Jackson
7 So. Lanning Ave.
Hopewell, NJ 08525

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2016-01**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from January 1 – January 31, 2015.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Design and Construction

WJH:jtc/sgf

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected January PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Completed placement of asphalt associated with the PW-3 force main trench restoration.
- Completed acid cleaning of PW-3 line.
- Sampled discharge from PW-3 extraction well for analysis of selected indicator parameters (results will be reported when validated).

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on January 20, 2016. From January 24, 2016 to January 27, 2016 to, the GWTP was offline due to a faulty main service breaker. The system was fully restarted on January 27, 2016 at 3:40PM.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | | |
|---|---|---|---|---|---|
| | 01/03/16 | 01/10/16 | 01/17/16 | 01/24/16 | 01/31/16 |
| Avg. Gallons Treated & Discharged (per day) | 77,236 | 78,455 | 68,614 | 79,663 | 80,596 |
| Average Flow (gpm) for Operating Period | 53 | 56 | 56 | 57 | 60 |
| Avg. Hours of Plant Operation | 24 | 23 | 20 | 23 | 23 |
| GWTP Influent Tanks (gal.) | 4,555 | 7,620 | 6,483 | 5,346 | 5,682 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.

- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Continued pumping/dewatering of well points associated with Excavation Areas EA-2 and EA-3.
- Continued dewatering and excavation activities of Site 163.
- Completed excavation of Excavation Areas EA-2 and EA-3.
- Continued backfilling of EA-2/EA-3 and the trash pit area.
- Began excavation of trench for installation of the Contingent Groundwater Extraction System piping in Area 1N.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Horwith** | Tri-axle | PA Transload | US Ecology | >240 mg/kg CrVI | 28 | 22.3 | 625 |
| **Entact/Horwith** | Tri-axle Dump | Middlesex County Landfill, NJ | MCUA | Non-haz Cr | 59 | 25 | 1462 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Excavation Completed** | Excavation: EA-2/EA-3, Site 163<br>Volume Excavated - Total for Reporting Period (EA-2/EA-3): 3,847.5 CY/ Total to Date (SA-6 North): 38,403CY;<br>Total for Reporting period (Site 163): 4,342.5 CY/ Total to Date : 4,342.5 CY |
| **Backfill in Progress** | EA-2/EA-3 |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | | |
|---|---|---|---|---|---|
| | 01/03/16 | 01/10/16 | 01/17/16 | 01/24/16 | 01/31/16 |
| Clayton Sand | 0 | 0 | 0 | 0 | 202 |
| Tilcon 2.5” | 0 | 0 | 0 | 255 | 0 |

- Screened Celgene materials greater than 3/8 inch were transferred and placed as bridge lift in EA-2/EA-3 and Site 163. In addition historic fill soils were transferred and placed as backfill in EA-2/EA-3.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.

- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Surcharging and offloading of surcharge material is complete.
- Area 2N: Completed offloading of area 2N.
- Area 3N: Completed placement of surcharge material.
- Area 4N: Completed placement of surcharge material.

## F. SHEET PILE OPERATIONS

- Completed installation of remaining hydraulic barrier sheeting on SA-6 North along Route 440. The subcontractor technician was on site for vibration monitoring over the sewer/water line during driving operations and no action levels were exceeded.
- Completed installation of sheeting within the former Trash Pit interior to include placement of Aqua Block bags to seal along bottom of sheeting and pit floor.
- Completed installation of grout tubes and bentonite at the connection of the former Trash Pit interior walls and the sheeting.
- Completed breaching of the pit concrete sidewalls in accordance with 100% Design.
- Completed removing temporary sheeting used along 440 and began installing these temporary sheets as needed for the Site 163 excavation.

## G. CAPPING OPERATIONS

- Continued evaluations of potential alternative fill source(s), of Horizon C Soils for the SA-6 South open space area.

## H. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|

## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete EA-2/EA-3 backfilling activities.
- Complete EA-1 excavation and backfilling activities.
- Continue dewatering and excavation activities associated with Site 163 excavation within the residential footprint including installation of temporary sheeting as needed.
- Continue installation of the Contingent Groundwater Extraction System piping in Area 1N.
- Continue final grading of GDL cover soils to include associated compaction testing and installation of root barrier on SA-6 South open space area.

- Pending identification of acceptable alternative fill source(s), resume import and placement of Horizon C Soils on the SA-6 South open space area.
- Continue routine surcharge monitoring in Areas 3N and 4N.
- Complete installation and grouting of the last special sheet pile barrier wall piece at the connection point of the SA-6 North barrier wall and the SCB wall at the southwestern portion of Area 1N.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.

**ATTACHMENTS:**

1. Schedule – 6 Month Look Ahead
2. Site Photographs
3. Excavation and Backfill (Progression Chart)
4. Dewatering Operations Update

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start | Finish |
|---|---|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1936 days** | **1/4/08** | **6/1/15** |
| **2** | **Remedial Action Work Plan** | **33 days** | **1/4/08** | **2/19/08** |
| **5** | **Remedial Action Design** | **1522 days** | **2/20/08** | **12/13/13** |
| **18** | **JCIA/JCDPW Relocation** | **1780 days** | **8/11/08** | **6/1/15** |
| 19 | Develop Site Relocation Master Plan | 38 days | 8/11/08 | 10/1/08 |
| 20 | Submit Site Relocation Master Plan | 0 days | 10/1/08 | 10/1/08 |
| 21 | JC Construction of New Facilities | 1309 days | 6/2/09 | 6/2/14 |
| 22 | Relocation Contractor Procurement | 392 days | 4/15/10 | 10/13/11 |
| 23 | JCIA and JCDPW Relocation | 949 days | 10/17/11 | 6/1/15 |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days | 12/12/11 | 4/30/12 |
| 24a | Demolition of JCIA Structures | 146 days | 9/1/14 | 3/23/15 |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** | **7/11/08** | **4/30/14** |
| **26** | **Remedial Action Work Plan** | **187 days** | **7/11/08** | **3/30/09** |
| **32** | **Remedial Action Design** | **1161 days** | **2/2/09** | **7/9/13** |
| **57** | **SA-6 South Relocation** | **616 days** | **12/26/11** | **4/30/14** |
| 58 | New GWTP Construction Completion | 502 days | 3/5/12 | 1/30/14 |
| 59 | Demolition of 80 Kellogg | 857 days | 12/26/11 | 4/30/14 |
| **60** | **SA-6 North/South Field Implementation** | **894 days** | **3/1/13** | **8/1/16** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 664 days | 6/17/13 | 12/31/15 |
| 60b | SA-6S (Site 163) In-Situ Treatment | 555 days | 11/15/13 | 12/31/15 |
| **61** | **Mobilization (Includees new GWTP, In-situ Treatment & Main Remedy)** | **87 days** | **3/1/13** | **6/28/13** |
| 61a | Mobilization | 87 days | 3/1/13 | 6/28/13 |
| **62** | **Surcharge Install/Instrumentation** | **706 days** | **6/17/13** | **2/29/16** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instumentation | 142 days | 6/17/13 | 12/31/13 |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 185 days | 4/8/14 | 2/13/15 |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days | 6/30/15 | 2/29/16 |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 91 days | 6/16/14 | 2/23/15 |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 155 days | 10/6/14 | 5/8/15 |
| **63** | **Barrier Wall Install** | **569 days** | **8/12/13** | **10/15/15** |
| 63a | SA 6N Installation of Barrier Wall | 159 days | 3/9/15 | 10/15/15 |
| 63b | SA 6S Installation of Barrier Wall | 210 days | 8/12/13 | 5/30/14 |
| **64** | **Excavation** | **507 days** | **10/22/13** | **9/30/15** |
| 64a | SA 6N Excavation | 218 days | 12/1/14 | 9/30/15 |
| 64b | SA 6S Excavation | 295 days | 10/22/13 | 12/8/14 |
| **65** | **Backfill** | **558 days** | **11/11/13** | **12/30/15** |
| 65a | SA 6N Backfill | 283 days | 12/1/14 | 12/30/15 |
| 65b | SA 6S Backfill | 384 days | 11/11/13 | 4/30/15 |
| **66** | **Capping and Cover Soil Placement** | **426 days** | **12/1/14** | **7/15/16** |
| 66a | SA 6N Capping and Cover Soil Placement | 83 days | 3/24/16 | 7/15/16 |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days | 12/1/14 | 12/30/15 |
| **67** | **Restoration** | **234 days** | **9/1/15** | **7/21/16** |
| 67a | Restoration | 234 days | 9/1/15 | 7/21/16 |
| **68** | **Demobilization** | **22 days** | **7/1/16** | **8/1/16** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | | | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | | | |
| **69** | **SA-6 North Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **75** | **SA-6 South Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **81** | **SA-6 North Long Term Protections** | **1830 days** | **10/1/08** | **10/1/15** |
| **92** | **SA-6 South Long Term Protections** | **2569 days** | **6/5/08** | **3/31/18** |

Project: SA-6 Remediation Schedule
Revision 4
Date: 1/31/16

Task  Milestone  Summary  Critical

# Attachment 2: Site Photographs

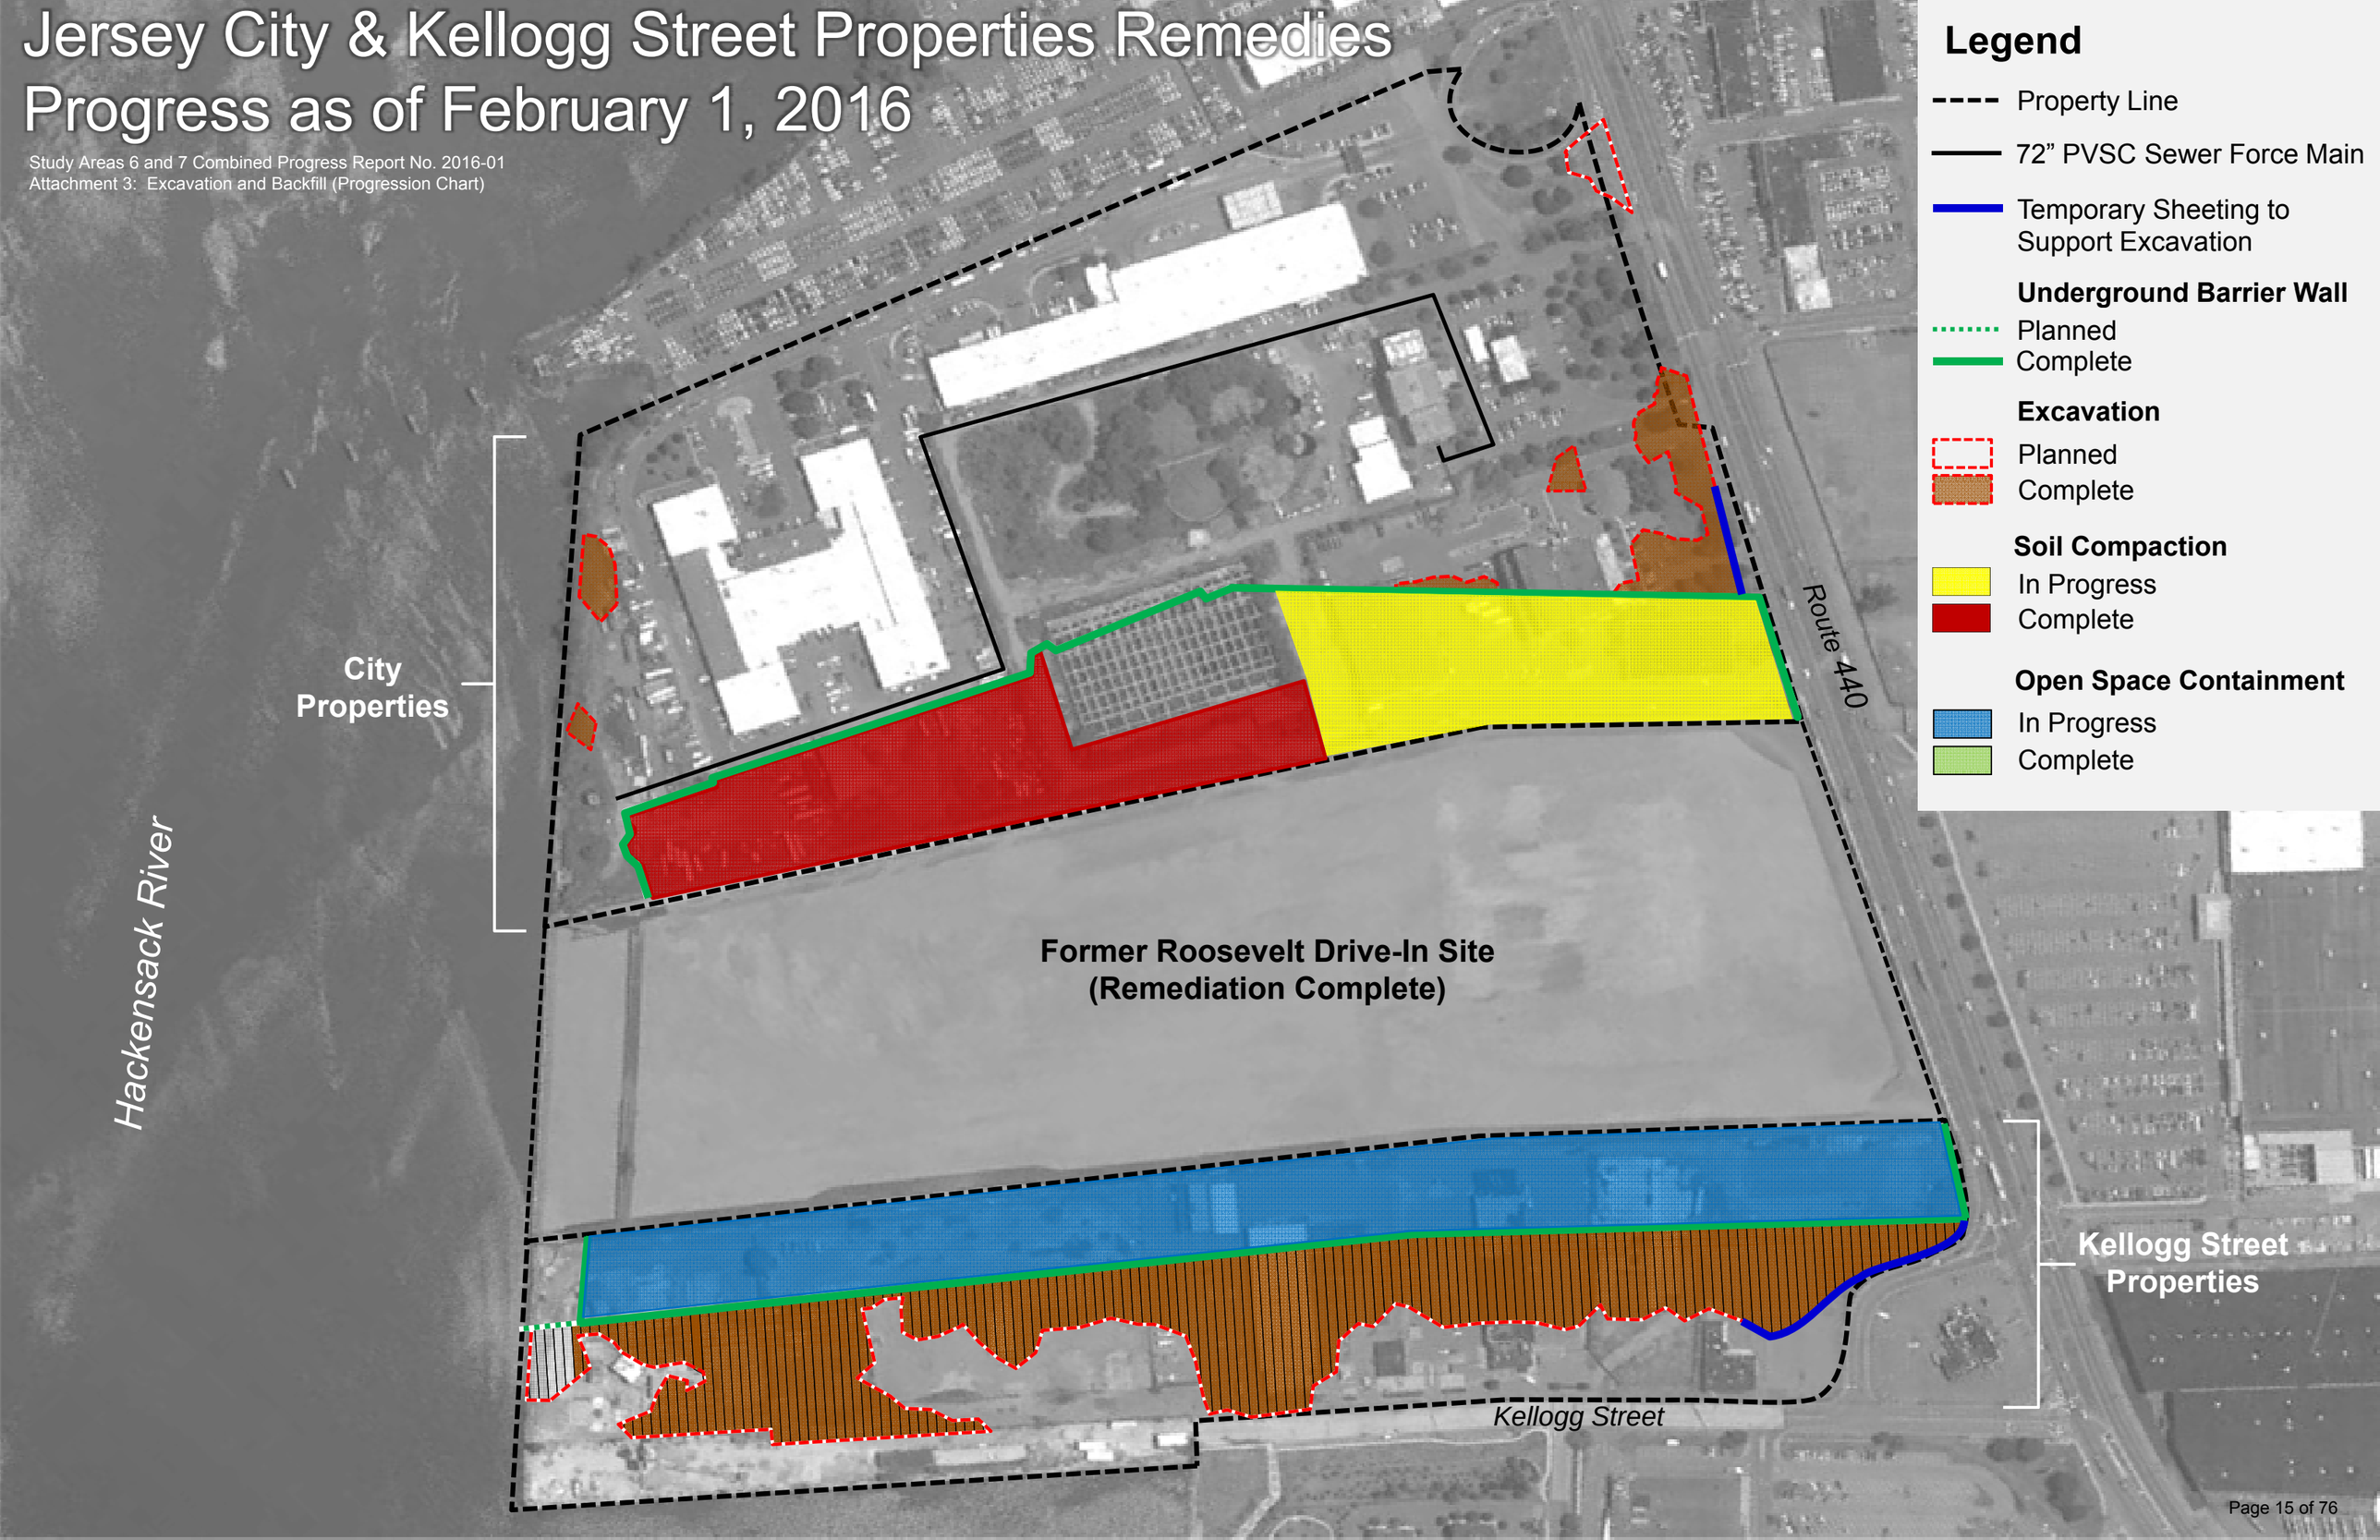
**Site Photograph 1:** Breaking up former JCIA building pad.

**Site Photograph 2:** Excavating along Kellogg St. Site 163.

**Site Photograph 3:** Placement of bridge lift in excavation area.

**Site Photograph 4:** Removing portion of former trash pit walls.

**Site Photograph 5:** Sheet piling across former trash pit.



**Site Photograph 6:** Sheeting and Excavation along Kellogg St. Site 163.

# Attachment 3: Excavation and Backfill

- Progression Chart

# Jersey City & Kellogg Street Properties Remedies
# Progress as of February 1, 2016

Study Areas 6 and 7 Combined Progress Report No. 2016-01

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the December 2015 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used: All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3. SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler. All samples are iced in a cooler during transport to the lab.

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending January 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | May 6, 2014 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending January 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending January 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | Submitted to Contractor only. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on June 22, 2015. |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on June 22, 2015. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only. |
| **DC 2015-07-22** | Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending January 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA 6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Contractor only. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending January 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | Submitted to Contractor only. |
| **DC 2015-09-28** | Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling. | Submitted to Parties on October 1, 2015. |
| **DC 2015-12-21** | Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation –8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area. | Submitted to Contractor only. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only. |
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance withASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |
| **DC 2015-12-01** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | Submitted to Contractor only. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**MONTHLY REPORT**

Honeywell
115 Tabor Road
Morris Plains, NJ 07950

March 10, 2016

Honorable Robert G. Torricelli
Office of the Special Master
c/o Sean Jackson
7 So. Lanning Ave.
Hopewell, NJ 08525

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2016-02**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from February 1 – February 29, 2016.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Design and Construction

WJH:jtc/sgf

Attachment: February 2016 SA-6/7 Combined Monthly Progress Report No. 2016-02

| **Security (Securitas)** | 3 | 3 | 3 | 3 |
| **Entact/Subcontractors** | 30 | 27 | 29 | 30 |

| Team | Week Ending | | | |
|---|---|---|---|---|
| | 02/07/16 | 02/14/16 | 02/21/16 | 02/28/16 |
| **Arecon/US Ecology Subcontractors** | 2 | 1 | 1 | 0 |
| **Eglentowicz (Demolition)** | 0 | 0 | 1 | 1 |
| **Langan** | 0 | 0 | 0 | 0 |
| **Evoqua** | 1 | 1 | 1 | 1 |
| **B&B Drilling** | 0 | 2 | 1 | 1 |
| **Cornerstone** | 0 | 1 | 0 | 0 |
| **TOTAL STAFF** | **48** | **47** | **47** | **45** |

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected February PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Installed 11 new shallow monitoring wells in the SA-6 South Development AOC in accordance with the 100% Design and Long Term Monitoring Plan and 1 new/replacement shallow monitoring well in a non-chromium AOC at SA-6 South in accordance with the NJDEP-approved Remedial Action Work Plan for Non-Chromium Contaminants of Concern.
- Began pre-demolition activities associated with 60/72 Kellogg to include disconnecting the water and sewer lines to 60 Kellogg, removal of the gas meters from 60 and 72 Kellogg, removal of the electric meter from 60 Kellogg, and installation of temporary construction fence.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on February 10, 2016.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 02/07/16 | 02/14/16 | 02/21/16 | 02/28/16 |
| Avg. Gallons Treated & Discharged (per day) | 79,597 | 79,365 | 78,708 | 79,077 |
| Average Flow (gpm) for Operating Period | 58 | 57 | 57 | 57 |
| Avg. Hours of Plant Operation | 23 | 23 | 23 | 23 |
| GWTP Influent Tanks (gal.) | 3,701 | 3,636 | 3,774 | 4,332 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completed installation of temporary well points at Site 163.
- Continued dewatering and excavation activities of Site 163 and began placing backfill in surveyed portions of Site 163.
- Completed excavation of Excavation Areas EA-2 and EA-3.
- Continued backfilling of EA-2/EA-3 excavation area.
- Completed abandonment of the two deep wells in EA-2/EA-3 (designated DW-6 and DW-7) and 88-MW-113 near EA-5.
- Continued EA-1 excavation and backfilling activities. After completion of the original excavation to the limits identified in the approved 100% Design, a lens of anomalous material less than 10 foot in width was observed on the northern face of the excavation at ~2 to 3 feet below grade near Culver Circle. Honeywell requested that the property line limits be laid out in the field and that removal of this observed anomalous material be completed up to this property line and the excavation limits resurveyed for the asbuilt documentation.
- Continued excavation of trench for installation of the Contingent Groundwater Extraction System piping in Area 1N. A total of 578 linear feet of pipe were installed.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Horwith** | Tri-axle | PA Transload | US Ecology | >240 mg/kg CrVI | 55 | 22.3 | 1,229 |
| **Entact/Horwith** | Tri-axle Dump | Middlesex County Landfill, NJ | MCUA | Non-haz Cr | 30 | 22.4 | 675 |

- See Attachment 15 for the Final February 1, 2016 truck incident report.

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Excavation Completed** | Excavation: EA-1, Site 163<br>Volume Excavated - Total for Reporting Period (EA-1): 1,040 CY/<br>Total to Date (SA-6 North): 39,443 CY;<br>Total for Reporting period (Site 163): 2,565 CY/ Total to Date: 6,907.5 CY |
| **Backfill in Progress** | EA-2/EA-3, EA-1, Site 163 |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 02/07/16 | 02/14/16 | 02/21/16 | 02/28/16 |
| Tilcon 1.5" Stone | 0 | 758.6 | 0 | 200.6 |

- Screened Celgene materials greater than 3/8 inch were transferred and placed as bridge lift in the Site 163 residential footprint excavation areas.
- Overburden historic fill soils with hexavalent chromium concentrations confirmed to be < 20 mg/kg soils were transferred and placed as backfill in Site 163.
- In addition historic fill soils previously identified to be < 20 mg/kg hexavalent chromium were transferred and placed as backfill in EA-2/EA-3.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Surcharging and offloading of surcharge material is complete.
- Area 2N: Surcharging and offloading of surcharge material is complete.
- Area 3N: Completed placement of surcharge material. Surcharging appears to be complete in the majority of this area and peer review of the calculations is underway by MRCE.
- Area 4N: Completed placement of surcharge material.

## F. SHEET PILE OPERATIONS

- Completed installation and grouting of the last special sheet pile barrier wall piece at the connection point of the SA-6 North barrier wall and the SA-7 SCB wall at the southwestern portion of Area 1N.
- Installed sheet pile for temporary excavation support at Site 163.

## G. CAPPING OPERATIONS

- Continued evaluations of potential alternative fill source(s), of Horizon C Soils for the SA-6 South open space area. Short list of potential Horizon B and C soil source vendors which may need relief on physical parameters (gradations, pH or organic matter content ranges in current specifications) were submitted to Dr. Jason Grabosky of Rutgers University for review.
- Continued to install additional panels of temporary plastic sheeting on the SA-6 South Cap.

## H. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDEP Waterfront Development | SA-6 North Only | Obtained 6/23/2010 | Not Specified, Est. 3/31/2015 | 6/23/2015 | - |

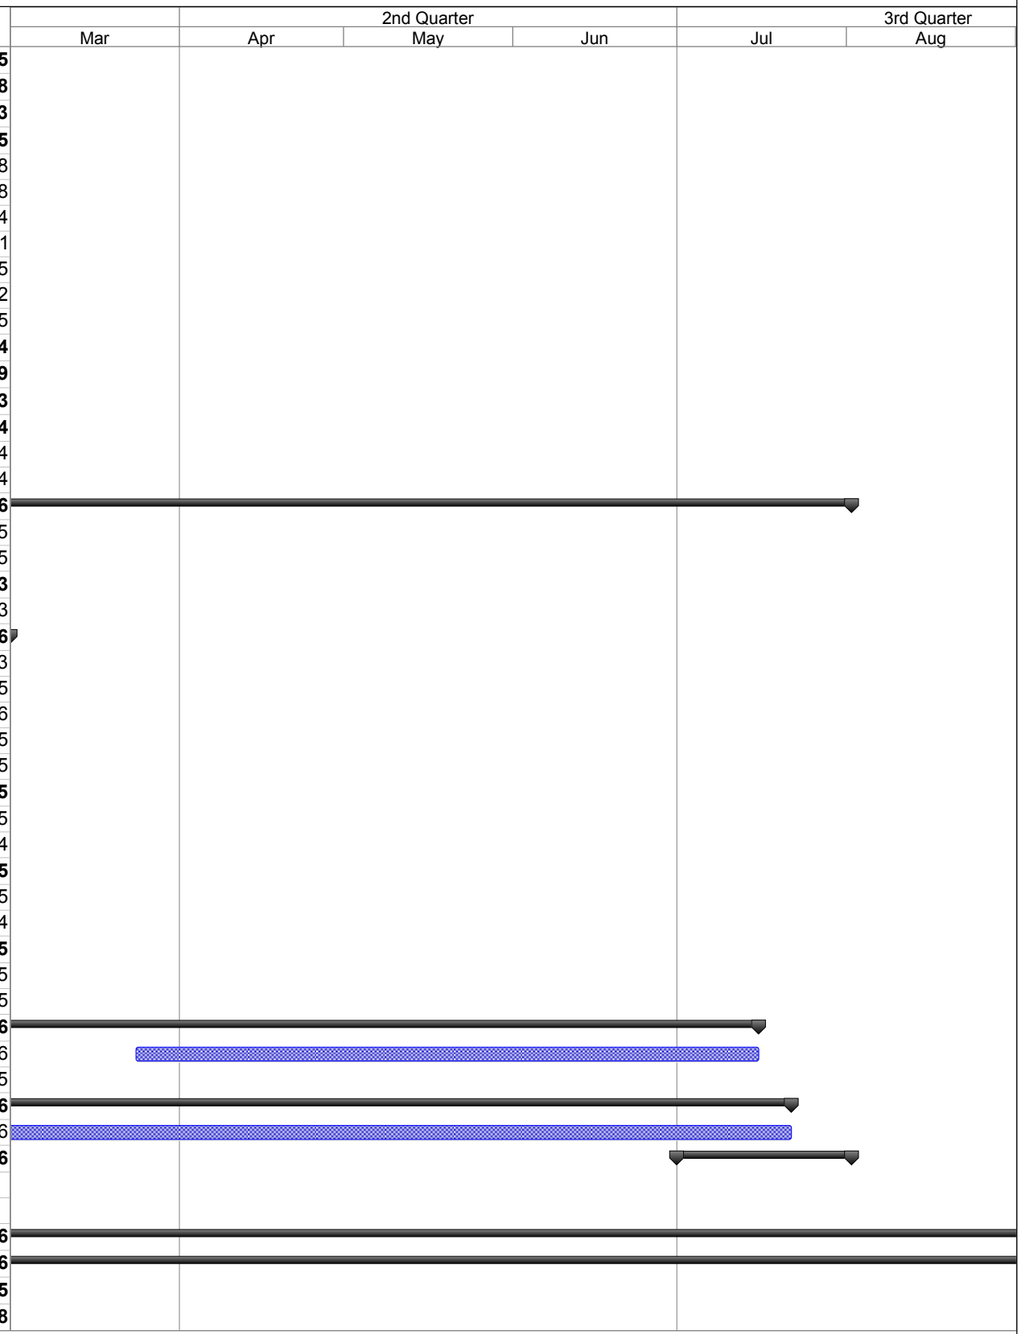
## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete EA-2/EA-3 backfilling activities.
- Complete EA-1 excavation and backfilling activities.
- Complete excavation and backfill activities associated with Site 163 excavation including removal of temporary sheeting.
- Continue installation of the Contingent Groundwater Extraction System piping in Area 1N.
- Continue final grading of GDL cover soils to include associated compaction testing and installation of root barrier on SA-6 South open space area.
- Pending identification of acceptable alternative fill source(s), resume import and placement of Horizon C Soils on the SA-6 South open space area.
- Continue routine surcharge monitoring in Areas 3N and 4N.
- Continue demolition of 60 and 72 Kellogg above-grade buildings to include asbestos abatement, universal waste removal, rodent abatement, and termination of the gas and electric service.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Conduct S-3 Mass Removal injection event no. 27 in well 088-IW-02.
- Cornerstone will conduct round of quarterly LTMP groundwater level measurements.
- Conduct 6-month performance assessment soil sampling in the in-situ treatment area TA-10-1 in accordance with the updated Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated August 2015.

**ATTACHMENTS:**

1. Schedule – 6 Month Look Ahead
2. Site Photographs
3. Excavation and Backfill (Progression Chart)
4. Dewatering Operations Update
5. SA-6 Construction Water Discharge Data (To PVSC)
6. Backfill Analytical Data
7. Perimeter Pools Update
8. Groundwater Quality Data *(not included in this reporting period)*
9. Surcharge Monitoring Update *(not included in this reporting period)*
10. Sheet Pile Update
11. Capping Update *(not included in this reporting period)*
12. Weekly SWPPP Reports
13. GWTP Update
14. SA-6 North & South Design Change Tracking Log
15. Horwith Accident RollOver



# Attachment 1: Schedule – 6 Month Look Ahead

Honeywell

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start | Finish |
|---|---|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1936 days** | **1/4/08** | **6/1/15** |
| **2** | **Remedial Action Work Plan** | **33 days** | **1/4/08** | **2/19/08** |
| **5** | **Remedial Action Design** | **1522 days** | **2/20/08** | **12/13/13** |
| **18** | **JCIA/JCDPW Relocation** | **1780 days** | **8/11/08** | **6/1/15** |
| 19 | Develop Site Relocation Master Plan | 38 days | 8/11/08 | 10/1/08 |
| 20 | Submit Site Relocation Master Plan | 0 days | 10/1/08 | 10/1/08 |
| 21 | JC Construction of New Facilities | 1309 days | 6/2/09 | 6/2/14 |
| 22 | Relocation Contractor Procurement | 392 days | 4/15/10 | 10/13/11 |
| 23 | JCIA and JCDPW Relocation | 949 days | 10/17/11 | 6/1/15 |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days | 12/12/11 | 4/30/12 |
| 24a | Demolition of JCIA Structures | 146 days | 9/1/14 | 3/23/15 |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** | **7/11/08** | **4/30/14** |
| **26** | **Remedial Action Work Plan** | **187 days** | **7/11/08** | **3/30/09** |
| **32** | **Remedial Action Design** | **1161 days** | **2/2/09** | **7/9/13** |
| **57** | **SA-6 South Relocation** | **616 days** | **12/26/11** | **4/30/14** |
| 58 | New GWTP Construction Completion | 502 days | 3/5/12 | 1/30/14 |
| 59 | Demolition of 80 Kellogg | 857 days | 12/26/11 | 4/30/14 |
| **60** | **SA-6 North/South Field Implementation** | **894 days** | **3/1/13** | **8/1/16** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 664 days | 6/17/13 | 12/31/15 |
| 60b | SA-6S (Site 163) In-Situ Treatment | 555 days | 11/15/13 | 12/31/15 |
| **61** | **Mobilization (Includees new GWTP, In-situ Treatment & Main Remedy)** | **87 days** | **3/1/13** | **6/28/13** |
| 61a | Mobilization | 87 days | 3/1/13 | 6/28/13 |
| **62** | **Surcharge Install/Instrumentation** | **706 days** | **6/17/13** | **2/29/16** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instumentation | 142 days | 6/17/13 | 12/31/13 |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 185 days | 4/8/14 | 2/13/15 |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days | 6/30/15 | 2/29/16 |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 91 days | 6/16/14 | 2/23/15 |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 155 days | 10/6/14 | 5/8/15 |
| **63** | **Barrier Wall Install** | **569 days** | **8/12/13** | **10/15/15** |
| 63a | SA 6N Installation of Barrier Wall | 159 days | 3/9/15 | 10/15/15 |
| 63b | SA 6S Installation of Barrier Wall | 210 days | 8/12/13 | 5/30/14 |
| **64** | **Excavation** | **507 days** | **10/22/13** | **9/30/15** |
| 64a | SA 6N Excavation | 218 days | 12/1/14 | 9/30/15 |
| 64b | SA 6S Excavation | 295 days | 10/22/13 | 12/8/14 |
| **65** | **Backfill** | **558 days** | **11/11/13** | **12/30/15** |
| 65a | SA 6N Backfill | 283 days | 12/1/14 | 12/30/15 |
| 65b | SA 6S Backfill | 384 days | 11/11/13 | 4/30/15 |
| **66** | **Capping and Cover Soil Placement** | **426 days** | **12/1/14** | **7/15/16** |
| 66a | SA 6N Capping and Cover Soil Placement | 83 days | 3/24/16 | 7/15/16 |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days | 12/1/14 | 12/30/15 |
| **67** | **Restoration** | **234 days** | **9/1/15** | **7/21/16** |
| 67a | Restoration | 234 days | 9/1/15 | 7/21/16 |
| **68** | **Demobilization** | **22 days** | **7/1/16** | **8/1/16** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | | | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | | | |
| **69** | **SA-6 North Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **75** | **SA-6 South Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **81** | **SA-6 North Long Term Protections** | **1830 days** | **10/1/08** | **10/1/15** |
| **92** | **SA-6 South Long Term Protections** | **2569 days** | **6/5/08** | **3/31/18** |

Project: SA-6 Remediation Schedule
Revision 4
Date: 3/01/16

Task  Milestone  Summary  Critical

# Attachment 2: Site Photographs

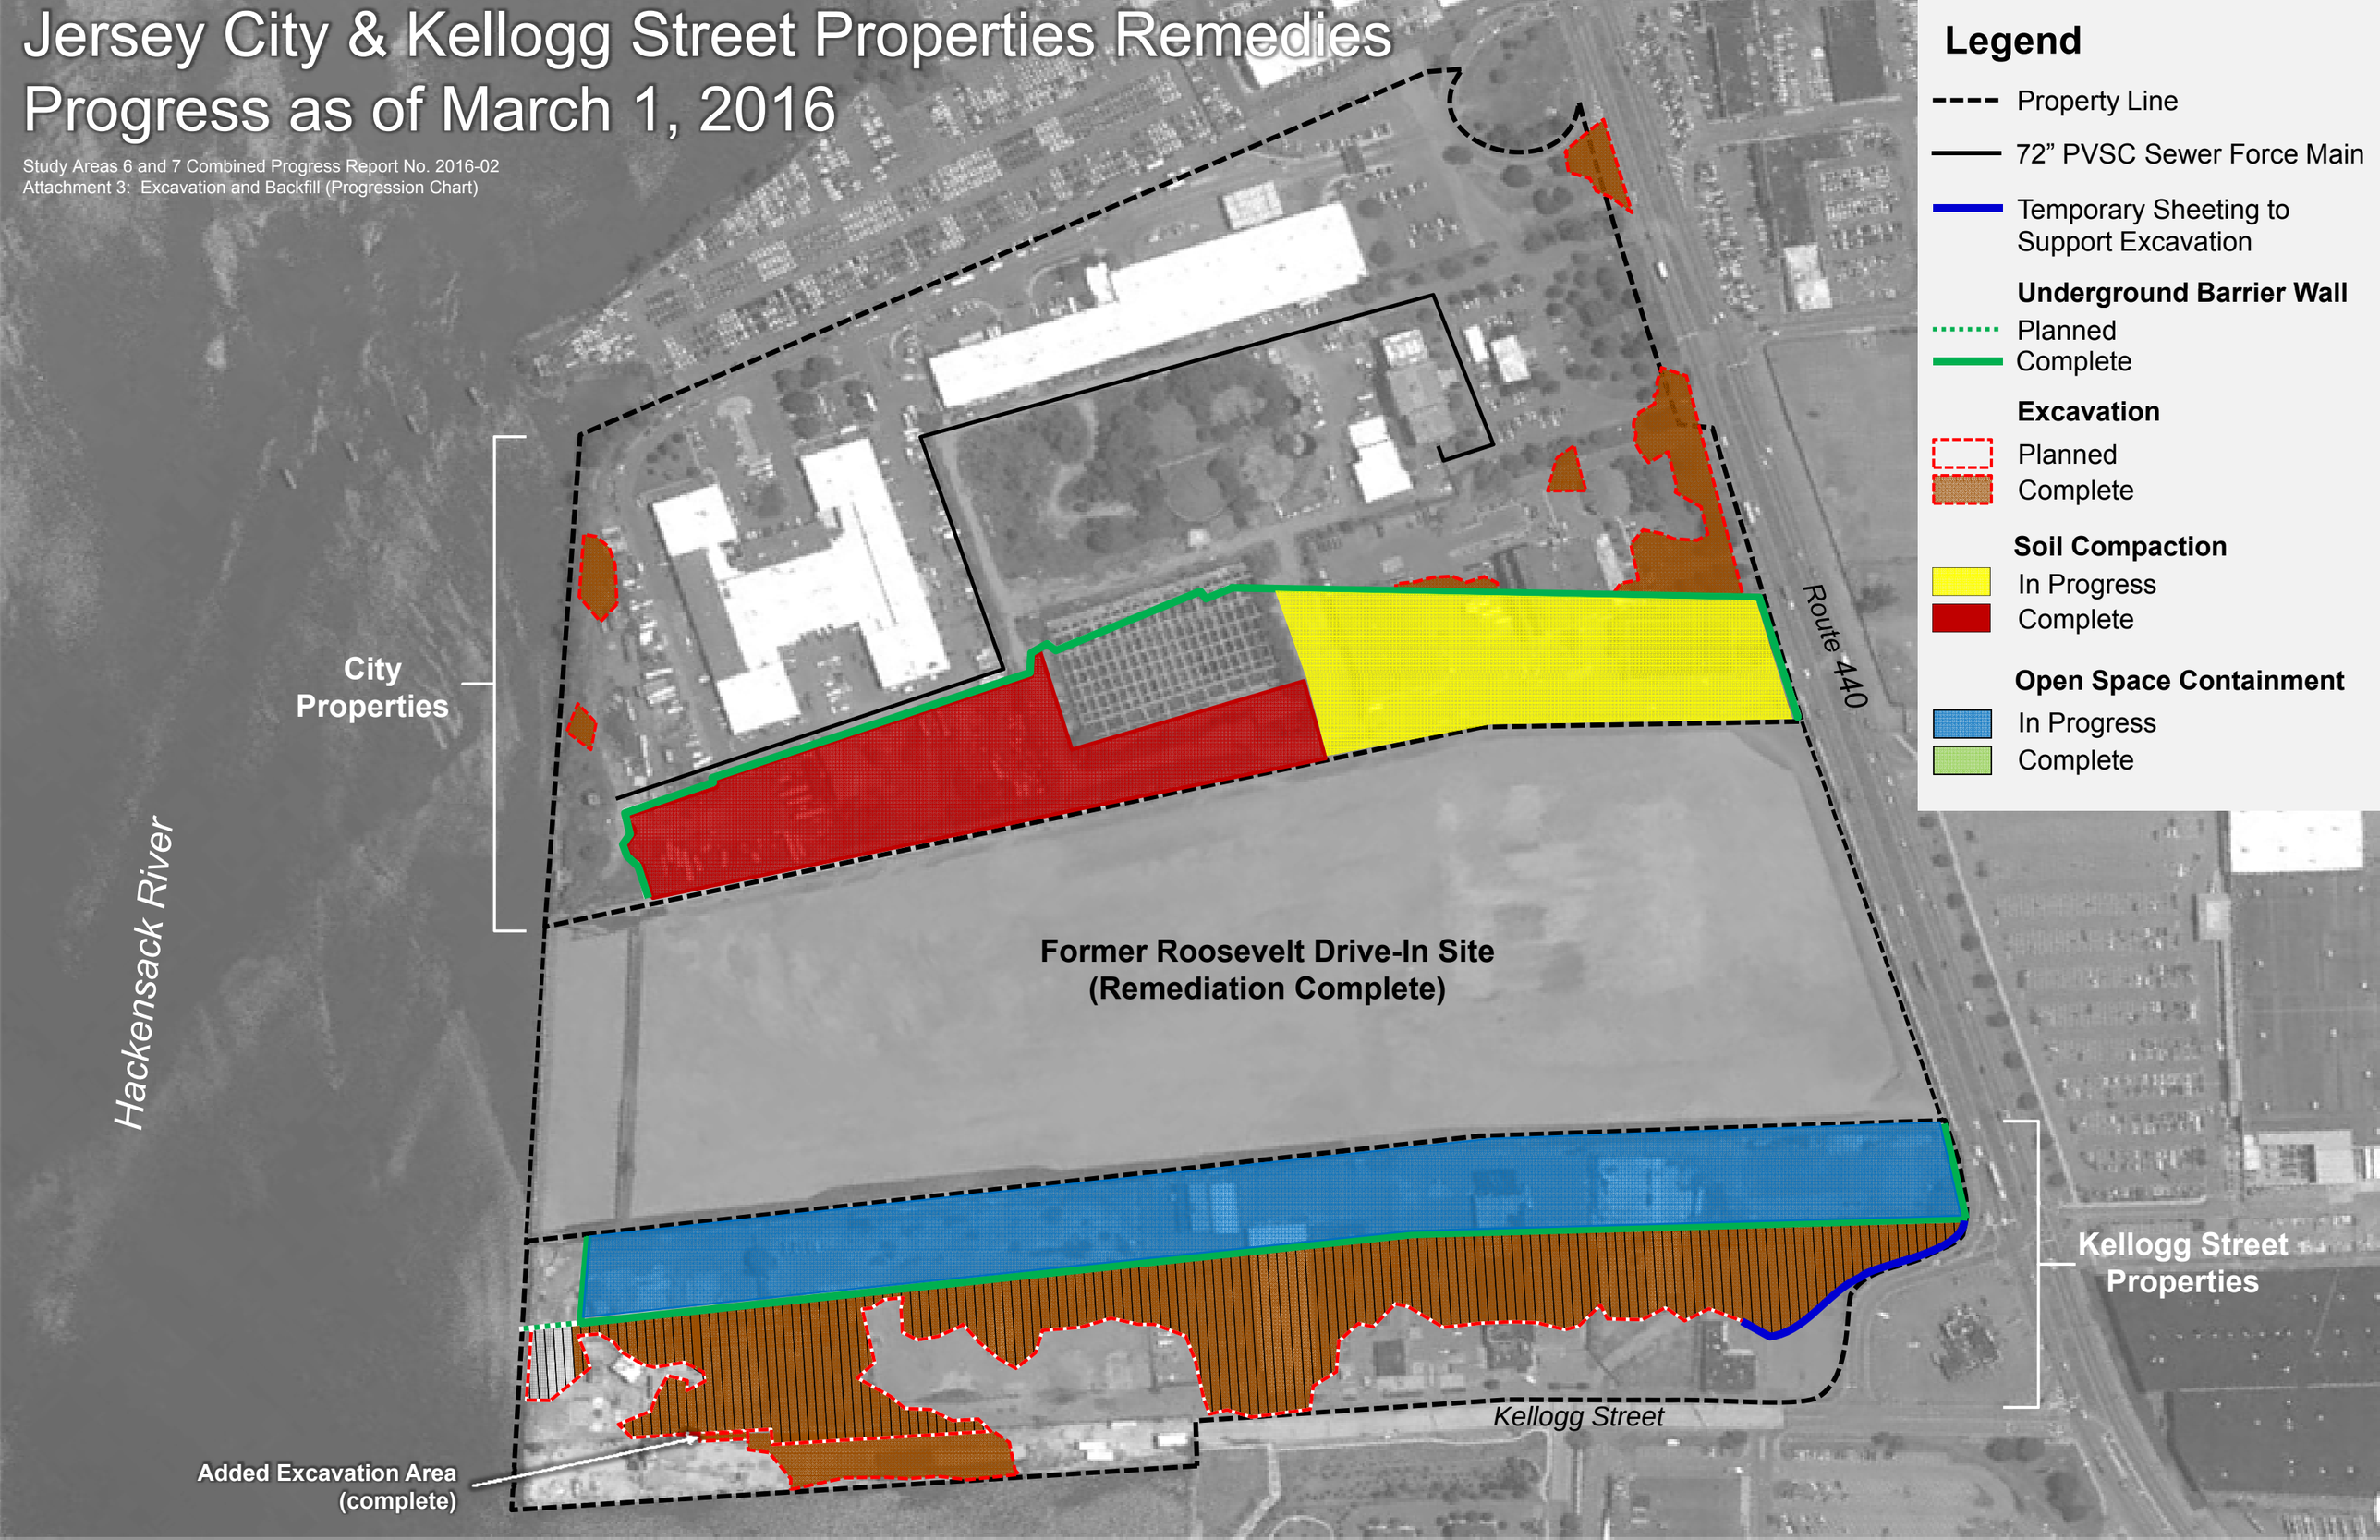
**Site Photograph 1:** Continuing Contingent GWES Trenching in Area 1N.

**Site Photograph 2:** EA-1 Survey activities.

**Site Photograph 3:** Excavation activities at Site 163 Kellogg Street properties.

**Site Photograph 4:** Hand digging to locate utility lines at EA-1.

**Site Photograph 5:** Loading of excavated soils from EA-1.



**Site Photograph 6:** Loading of excavated soils from Site 163.

# Attachment 3: Excavation and Backfill

- Progression Chart

# Jersey City & Kellogg Street Properties Remedies
# Progress as of March 1, 2016

Study Areas 6 and 7 Combined Progress Report No. 2016-02
Attachment 3: Excavation and Backfill (Progression Chart)

## Legend

- Property Line
- 72” PVSC Sewer Force Main
- Temporary Sheeting to Support Excavation

**Underground Barrier Wall**
- Planned
- Complete

**Excavation**
- Planned
- Complete

**Soil Compaction**
- In Progress
- Complete

**Open Space Containment**
- In Progress
- Complete

# Attachment 4: Dewatering Operations Update

| Comment Number | Permit Number | SWAP Observer's Comments |
|---|---|---|
| 1 | IA2Q4A1AL8 | The tracking pad at the SA-6 South truck exit has become blinded with sediment. |
| 2 | IA2Q4A1AL8 | Windscreen on the SA-6 South perimeter fenceline has become detached in several locations. |
| 3 | IA2Q4A1AL8 | Ponded storm water (snow melt) is present on puddles/ponds throughout SA-6 South. |
| 4 | IA2Q4A1AL8 | Trash and other debris is present along Rt. 440 and the Kellogg Street jughandle. |
| 5 | IA2Q4A1AL8 | **REPEAT:** The silt fence along the southern perimeter of the Novartis Stockpile Area on SA-7 requires maintenance or replacement. |
