**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the January 2016 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending February 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending February 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |

|---|---|---|
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | Submitted to Contractor only. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on June 22, 2015. |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on June 22, 2015. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only. |
| **DC 2015-07-22** | Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending February 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA 6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Contractor only. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending February 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | Submitted to Contractor only. |
| **DC 2015-09-28** | Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling. | Submitted to Parties on October 1, 2015. |
| **DC 2015-12-21** | Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation –8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area. | Submitted to Contractor only. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only. |
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance withASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |
| **DC 2015-12-01** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | Submitted to Contractor only. |
| **DC 2015-02-03** | The final grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending February 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-02-22** | AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entact's request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location.<br>In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5. | Submitted to Contractor only. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

# Attachment 15: Horwith Accident RollOver

# TRANSPORTATION HAZARDOUS WASTE ACCIDENT W / POTENTIAL OF RELEASE

Date: February 1st, 2016

Time: 3:00 PM

Driver: Salvatore Gagliano

Truck Number: 242

Shipment Information: Manifest #000728562WAS

Pickup: 60 Kellogg Street, Jersey City NJ.
Deliver: Horwith Transload Facility, Northampton PA

## Event Details

Initial Report

Kellie Heffley received a telephone call from Fastlane Towing stating they are on the scene of a single vehicle rollover and the truck is owned by Horwith Trucks. A represented from Fastlane, "Pinky" reported unit #242 had rolled over with load on Route 33 near the 3.3 mile marker. Pinky indicated he was called to the scene by the PA State Police.

The Horwith team immediately implemented our Transporter Contingency plan. Kellie contacted the PA State Police – Belfast Barracks and informed them the shipment was being shipped on a Hazardous Waste Manifest and caution should be used when up righting the unit to ensure the commodity was not released. Initial reports indicated cargo within the enclosed IP-1 Zippered liner was not breached during the rollover.

Pete Zarayko called Dave Desiderio of HandsOn Environmental and notified him of the accident.

Initial Reports indicated there was no release of product, therefore PA DEP was not immediately notified.

## HONEYWELL SA-7 - 2/1/17 Rollover Accident Details

At approximately 3:00pm on Monday, February 1st 2016, a tri-axle dump truck driven by Salvatore Gagliano was traveling northbound on Route 33 near mile marker 3.3 in Pennsylvania. The driver was traveling in the left lane of a two lane highway at approximately 65mph. For an unknown reason the driver side tires left the roadway. The driver attempted to regain traction on the highway with all tires at which time he lost control of the vehicle. The vehicle crossed both lanes of traffic and rolled onto the driver's side and came to rest on the right side of the highway.

Various "good Samaritans" stopped to aid assistance to the driver. Mr. Gagliano was initially unconscious when the first "Samaritan" arrived. The driver regained consciousness a few minutes later and was able to exit the unit from the passenger side window. He was quickly transported to St Luke's Fountain Hill where he was treated and released.

Initially the IP-1 zippered liner stayed in the dump body. However, a portion of the liner containing the contaminated soil slide out as a result of gravity and the unit being on its side. A portion of the liner came to rest on the roadway pavement. The liner did not breach at any point during the rollover incident.

Immediately following the incident, appropriate notifications were made to the PA State Police, emergency response personnel and our customer to inform them of the accident. 911 was called by another motorist. The following agencies were present on the scene: Northampton County EMA, Lehigh County Hazmat, Penn Dot, PA State Police, Bethlehem Twp. Fire Co., Nancy Run Fire Co., Rapid Response, Fastlane Towing, and PA DEP.

Under the direction of Fastlane Towing, Horwith was asked to send two additional vehicles to the accident scene to transfer the cargo. Fastlane Towing and Rapid Response received approval from DEP to open the IP-1 Zippered liner and remediate the soil prior to up righting the unit. (See Attached DEP Report) Various safety and security measures were used to ensure the contaminated soil was not released onto the roadway or into the environment. The soil was dug out of the IP-1 zippered liner from unit #242 and immediately loaded into two lined roll off containers. The dirt was transported by Horwith personnel under the same manifest number and transport instructions as the original load. (Manifest Number 000728562WAS) The two loads were dumped at the Northampton Transloading facility on Tuesday, February 2nd 2016 and shipped via rail to the designated disposal facility.

Unit # 242 was towed from the scene by Fastlane Towing and brought to the Horwith terminal in Northampton PA.
Rapid Response concluded cleanup operations by 12:00 AM February 2nd 2016.

**Incident Follow-up as of 2/17/16**

Eight soil samples were taken following the cleanup and the written results were provided to Horwith by Rapid Response. All samples reflected that no traces of the hazardous material were present. (See Attached) These result were sent to the PADEP by Rapid Response.

The driver was interviewed by Kellie Heffley and Michael Horwith regarding the accident details. The driver indicated he has no memory of the accident. He was initially treated at the hospital and released. Horwith sent him to our approved medical provider who conducted various post accident tests including drug testing. All test results were negative and did not provide any further insight as to a possible cause of the accident.

The vehicle was not impounded by the Department of Transportation and was released back to Horwith immediately. A DOT Inspection at the scene did not reveal any mechanical deficiencies with unit #242. The ECM was downloaded post accident. The average driver speed for February 1st 2016 was 52.1mph. The exact speed at impact cannot be validated by the ECM as the tires continued to rotate once the vehicle overturned. The vehicle is currently in the process of being repaired.

A copy of the police investigation report was requested but not received as of February 17, 2016. However, our driver did inform Horwith he received three citations in the mail. The charges include: Securing Loads in Vehicle, Driving on Roadways Laned for Traffic, Unlawful Activities. (See Attached) The citations were issued directly to Mr. Gagliano and are his responsibility. He has indicated he will be taking a hearing for each. Horwith did not receive any citations regarding this accident.

**Conclusion & Action Items**

In reviewing the details available to date, the cause of the accident is deemed driver error. There is no indication of a third party event that would have lead the truck #242 leaving the roadway for any reason.

Weather – Clear & Dry – Weather did not play a factor regarding visibility.
Vehicle – No mechanical deficiencies were revealed during the post-accident investigation. Manifest verified truck was transporting within legal weight limits for highway transportation.
Medical – All medical and drug test result have been concluded and did not reveal any medical reason the driver was unconscious prior to the accident.
Driver – Driver was not able to provide any memory or reasoning why he was unable to maintain control of unit #242.

Action Items:

- Mr. Gagliano employment with Horwith Trucks has been terminated.
- Immediately following the accident, Horwith reevaluated our company speed policy. All triaxles have been reset with a maximum speed limiter of 62mph. We researched and implemented additional mechanical settings to automatically apply the Jake Break for attempted override of the speed limiter setting.
- ECM Monitoring Policy implemented. Each time a vehicle is brought into our facility for service, the truck ECM will be downloaded and reviewed to monitor aggressive driving habits. These reports are reviewed directly by top management.
- All Horwith drivers have recently attended a Smith System driver training course. This course focuses on defensive driving techniques. We have currently held two courses and will be including this training in our new driver orientation program.
- Electronic logging and driver management technology. Horwith has been meeting with various global technology providers to team up with to capture our employee logs electronically along with speed gauge and aggressive driving monitoring services.
- A final analysis of the accident will be reviewed once the police report is received.

Report Prepared by Kellie Heffley, Director of Safety & Compliance for Horwith Trucks.

## RIGHTS AND OBLIGATIONS

**This citation will be filed with the magisterial district judge whose address appears above.**

1. Within ten (10) days of the receipt of this citation you must;
a. PLEAD NOT GUILTY by notifying the proper Magisterial District Judge in writing, signing the appropriate plea below, and by forwarding for collateral an amount equal to the Total Due plus $8.00 if the offense charged is under the Vehicle Code; or if the Total Due is not specified, by forwarding the sum of $50.00 as collateral for your appearance at trial

**OR**

b. PLEAD NOT GUILTY by appearing before the proper Magisterial District Judge and posting such collateral for your appearance as the Magisterial District Judge shall require

**OR**

c. Appear before the proper Magisterial District Judge to enter a plea if you cannot afford to pay the Total Due or the $50.00 collateral

**OR**

d. PLEAD GUILTY by notifying the proper Magisterial District Judge in writing, signing the appropriate plea below, and by forwarding an amount equal to the Total Due as specified, or by making payments online through Pennsylvania's Unified Judicial System web portal. Visit the portal at <http://ujsportal.pacourts.us> to make a payment.

**OR**

e. PLEAD GUILTY by appearing before the proper Magisterial District Judge if the Total Due is not specified or if you are required to appear because of the offense with which you are charged carries a mandatory sentence of imprisonment, for example, a violation of 75 Pa.C.S.§ 1543(b) (Driving while operating privilege is suspended or revoked.)

2. If you fail to appear for trial, the trial may be held in your absence.
3. If you have been charged with a summary offense under the Vehicle Code, failure to respond within the time specified above will result in the suspension of your driver's license, the issuance of a summons or a warrant for your arrest.
4. If you have been charged with a violation of a local ordinance or any parking offense, failure to respond within the time specified above will result in the issuance of a summons.
5. If you plead guilty or are found guilty, points may be assessed against your driver's record. An accumulation of points may result in the suspension of your driving privilege.
6. Your driving privilege WILL BE SUSPENDED if you plead guilty or are found guilty of certain offenses under the Vehicle Code, including but not limited to,75 Pa.C.S.§§ 1371, 3341, 3345, 3367, 3718, 3733, 3734, 3736, subsequent convictions of Pa.C.S.§ 3361 when occurring in an active work zone and an accident report is submitted by the police, subsequent convictions of 75 Pa. C.S.§ 1501, a violation of 75 Pa.C.S.§ 3361 when occurring in an active work zone and an accident report is submitted by the police, and a violation of 75 Pa.C.S.§ 3362 when occurring in an active work zone.
7. If you are found guilty by the Magisterial District Judge, or you plead guilty, and you wish to appeal, you have THIRTY(30) days to file an appeal for a trial in the Court of Common Pleas.
8. If you are disabled and require assistance, please contact the Magisterial District office shown above.

## RIGHTS AND OBLIGATIONS

**This citation will be filed with the magisterial district judge whose address appears above.**

1. Within ten (10) days of the receipt of this citation you must:

a. PLEAD NOT GUILTY by notifying the proper Magisterial District Judge in writing, signing the appropriate plea below, and by forwarding for collateral an amount equal to the Total Due plus $8.00 if the offense charged is under the Vehicle Code; or if the Total Due is not specified, by forwarding the sum of $50.00 as collateral for your appearance at trial.

**OR**

b. PLEAD NOT GUILTY by appearing before the proper Magisterial District Judge and posting such collateral for your appearance as the Magisterial District Judge shall require.

**OR**

c. Appear before the proper Magisterial District Judge to enter a plea if you cannot afford to pay the Total Due or the $50.00 collateral.

**OR**

d. PLEAD GUILTY by notifying the proper Magisterial District Judge in writing, signing the appropriate plea below, and by forwarding an amount equal to the Total Due as specified, or by making payments online through Pennsylvania's Unified Judicial System web portal. Visit the portal at <http://ujsportal.pacourts.us> to make a payment.

**OR**

e. PLEAD GUILTY by appearing before the proper Magisterial District Judge if the Total Due is not specified or if you are required to appear because of the offense with which you are charged carries a mandatory sentence of imprisonment, for example, a violation of 75 Pa.C.S.§ 1543(b) (Driving while operating privilege is suspended or revoked.)

2. If you fail to appear for trial, the trial may be held in your absence.

3. If you have been charged with a summary offense under the Vehicle Code, failure to respond within the time specified above will result in the suspension of your driver's license, the issuance of a summons or a warrant for your arrest.

4. If you have been charged with a violation of a local ordinance or any parking offense, failure to respond within the time specified above will result in the issuance of a summons.

5. If you plead guilty or are found guilty, points may be assessed against your driver's record. An accumulation of points may result in the suspension of your driving privilege.

6. Your driving privilege WILL BE SUSPENDED if you plead guilty or are found guilty of certain offenses under the Vehicle Code, including but not limited to,75 Pa.C.S.§§ 1371, 3341, 3345, 3367, 3718, 3733, 3734, 3736, subsequent convictions of Pa.C.S.§ 3361when occurring in an active work zone and an accident report is submitted by the police, subsequent convictions of 75 Pa. C.S.§ 1501, a violation of 75 Pa.C.S.§ 3361when occurring in an active work zone and an accident report is submitted by the police, and a violation of 75 Pa.C.S.§ 3362 when occurring in an active work zone.

7. If you are found guilty by the Magisterial District Judge, or you plead guilty, and you wish to appeal, you have THIRTY(30) days to file an appeal for a trial in the Court of Common Pleas.

8. If you are disabled and require assistance, please contact the Magisterial District office shown above.

# EMERGENCY RESPONSE FIELD INSPECTION REPORT

| | |
|---|---|
| **Type of incident:** Truck overturned on Route 33 North hauling hazardous waste, hexavalent chromium contaminated soil | **Date:** Mon. 2/1/2016 |
| **Facility or Location: Rte 33 North at Milemarker 3.6** | |
| **Municipality:** Bethlehem Twp. | **County:** Northampton |
| **Latitude:** 40° 40' 33.9" | **Longitude:** 75° 17' 27.2" |
| **Call Out Time:** 1600hrs | **Return Time:** 2358hrs |
| **Site Arrival Time:** 1630hrs | **Site Departure Time:** 2310hrs |
| **Beginning Mileage:** | **Ending Mileage:** |
| **Complainant Name and Address: N/A** | |
| **Telephone Number (  )** | |
| **Responsible Party Name and Address:** Truck owner/Hazardous waste transporter – Horwith Trucking, Inc., Route 329, P.O. Box 7, Northampton, PA 18067; Hazardous waste generator – Honeywell, Inc., 115 Tabor Rd., Morris Plains, NJ 07950-4262 | |
| **Telephone Number** (610) 261-2220 Horwith Trucks; 973-455-4252 – Honeywell, John Mojka (Contact on Manifest) | |
| **Weather Conditions:** Clear, Temp 40s | |

**Remarks:** 1600hrs – Call from Kevin Augustine, ER Mgr., to respond to the truck accident on Rte. 33 North involving hexavalent chromium-contaminated soil. Accident occurred about 1500hrs.

Called Jeff Stire, Northampton County EMA, to confirm location and directions into the scene. 1630hrs – Arrived at the accident scene – Northampton County EMA, Lehigh County Hazmat, PennDOT, PSP, and Bethlehem Twp and Nancy Run Fire Co., Rapid Response, Fast Lane Towing and Transport, on-scene; Horwith Tri-axle truck was overturned on the northbound shoulder of Rte. 33 N. at milemarker 3.6. Truck was hauling the soil from a Honeywell Site located at 60 Kellogg St., Jersey City, NJ to the Horwith Trucking yard in Northampton to be loaded into Norfolk So. Rail cars for transport to Heritage Environmental Services facility in Indianapolis, IN via a CSX rail siding and Heritage trucks into the TSD. The manifest listed an estimated quantity of the hazardous waste (D007-TCLP hazardous for Cr) at 47,520 lbs. and listed a concentration range of 240- <1000ppm Hexavalent Cr. The truck was overturned, but the white sack/containment bladder appeared to be intact and for the most part still lying within the side of the bed on the truck. Work crews from Fast Lane Towing and Transport and Rapid Response performed the waste removal in Level C PPE and off-loaded the soils into two rolloff containers for transportation to the Horwith facility. Plastic was laid in front of the waste bladder and underneath the portion hanging out of the truck before the bladder was cut open and the waste soils were off-loaded. The soils appeared to be moist and no dust was observed during the transfer of the soils into the rolloffs. The backhoe and truck were deconned after the soils were removed. After the soil was removed, the truck was righted to be towed away and the truck and the area where the truck laid were examined. There did not appear to be a diesel fuel spill, but a small puddle of motor oil was observed, which the Rapid Response crew soaked up with pads and then scraped out the area with a backhoe. I left the Site after the truck was righted, the shoulder inspected, and the crews were finishing up the cleanup.

**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2016-03**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from March 1 – March 31, 2016.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Design and Construction

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected March PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Conducted 6-month performance assessment soil sampling from the in-situ treatment area TA-10-1 in accordance with the updated Work Plan, dated August 2015 for the in-situ treatment of hexavalent chromium (Cr(VI)) impacted soils (results pending).
- Continued pre-demolition activities associated with 60/72 Kellogg to include terminating the gas and electric service, and completing the asbestos, rodent and universal waste abatement activities.
- Conducted quarterly regional LTMP groundwater level monitoring event.
- Completed S-3 Mass Removal Injection Event No. 27 in well 088-IW-02.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on March 15, 2016.
- Initiated piping layout plans for routing the Contingent Groundwater Extraction System force mains from SA-6 North and South to the existing GWTP Neutralization Tank.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 03/06/16 | 03/13/16 | 03/20/16 | 03/27/16 |
| Avg. Gallons Treated & Discharged (per day) | 78,884 | 79,334 | 78,927 | 79,097 |
| Average Flow (gpm) for Operating Period | 55 | 57 | 57 | 57 |
| Avg. Hours of Plant Operation | 24 | 23 | 23 | 23 |
| GWTP Influent Tanks (gal.) | 4,370 | 5,300 | 5,771 | 4,318 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completed dewatering and excavation activities of Site 163.
- Completed abandonment of the temporary Deep Extraction Well, DW8.
- Completed placement of backfill in Site 163 excavations in residential footprint.
- Continued backfilling of EA-2/EA-3 excavation area.
- Completed backfilling and restoration of EA-8.
- Completed excavation and backfilling of the anomalous material area observed within the northern portion of EA-1 up to the property line at Culver Circle.
- Completed trenching for installation of the Contingent Groundwater Extraction System piping on SA-6 North. A total of 260 linear feet of collection pipe was installed.
- Began backfilling the SA-6 North CGWES pipeline and installed the risers on manholes.
- On March 22, Amec sampled the proposed Nature's Choice Horizon C stockpiled soils for the additional hexavalent chromium analysis agreed upon with the parties. Results will be submitted when final.

## 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Sarnia, Ontario Canada | Stablex | WWTP Filer Cake | 1 | 14 | 14 |
| **Horwith** | Tri-axle | PA Transload | US Ecology | >240 mg/kg CrVI | 25 | 21.39 | 534.91 |
| **Entact/Horwith** | Tri-axle Dump | Middlesex County Landfill, NJ | MCUA | Non-haz "C" | 9 | 21.8 | 197 |
| **Entact/Hortwith** | Tri-axle Dump | Middlesex County Landfill, NJ | MCUA | Non Haz Petroleum | 85 | 23.63 | 2009 |
| **Entact/Horwith** | Tri-axle Dump | Middlesex County Landfill, NJ | MCUA | Non-haz "B" | 19 | 23 | 437 |
| **Common Carrier** | Roll-off | Tullytown, Pa | Waste Management | Non Friable ACM | 1 | 30 cyds. | 30 cyds. |

## 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Excavation Completed** | Excavation Site 163 Complete - Total for Reporting Period (Site 163): 225 CY/ Total: 7,132.5 CY<br>Excavation SA-6 North Complete - Total to Date (SA-6 North): 39,443 CY |
| **Backfill in Progress** | EA-2/EA-3, Site 163, SA-6 South Utility Corridor (C Street), EA-1 Completed in March |

## 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 03/06/16 | 03/13/16 | 03/20/16 | 03/27/16 |
| Tilcon 1.5" Stone | 350.86 | 0 | 0 | 0 |
| Tilcon Mount Hope I-8 | 0 | 0 | 987.97 | 0 |
| Natures Choice Topsoil | 150.83 | 65.54 | 0 | 0 |

- Screened Celgene material was placed as protective cover soil in the SA-6 South cap area along edges which were disturbed during the temporary plastic cover installation.
- Overburden historic fill soils with hexavalent chromium concentrations confirmed to be < 20 mg/kg soils were placed as backfill in Site 163.
- Historic fill soils identified to be < 20 mg/kg hexavalent chromium were placed as backfill in EA-2/EA-3.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Surcharging and offloading of surcharge material is complete.
- Area 2N: Surcharging and offloading of surcharge material is complete.
- Area 3N: Surcharge complete. Began offloading of Area 3N.
- Area 4N: Surcharge complete. Began offloading of Area 4N.

## F. SHEET PILE OPERATIONS

- Completed installation of sheet pile for temporary excavation support at Site 163.
- Begin grouting Hydraulic Barrier Wall interlocks on SA-6 North.

## G. CAPPING OPERATIONS

- Completed evaluations of potential alternative fill source(s), of both Horizon B and C Soils for the SA-6 South open space area. Conditions for acceptability of Nature's Choice Horizon C soils were agreed upon. A separate short list of potential Horizon B and C soil source vendors and the Dr. Jason Grabosky of Rutgers University recommendations were submitted to all parties for review as part of DCB 2016-03-18.
- Completed installation of additional panels of temporary plastic sheeting on the SA-6 South Cap.
- Continued placement of Structural Fill Material in the SA-6 South Cap Area corridor (C Street).

## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete EA-2/EA-3 backfilling activities.
- Continue final grading of GDL cover soils to include associated compaction testing and installation of root barrier on SA-6 South open space area.
- Resume import and placement of Horizon C Soils from Nature's Choice on the SA-6 South open space area. Pending approval of Horizon B and alternative Horizon C sources, we will import as soon as possible.
- Complete grouting of Hydraulic Barrier Wall interlocks.
- Begin demolition of 60 and 72 Kellogg Street above-grade structures.

- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Conduct S-3 Mass Removal injection event no. 28 in well 088-IW-03.
- Continue to develop CGWES piping layout plans for connection to GWTP Neutralization Tank.

Project: SA-6 Remediation Schedule
Revision 4
Date: 3/31/16

Task  Milestone  Summary  Critical

# Attachment 2: Site Photographs

**Site Photograph 1:** Area C Dozer Spreading Backfill at Site 163.

**Site Photograph 2:** Area C Excavation at Site 163.

**Site Photograph 3:** Area EA-8 Restoration at JC Properties.

**Site Photograph 4:** Grading Structural Fill in future utility corridor.

**Site Photograph 5:** Loading concrete debris from Site 163.

**Site Photograph 6:** Removing temporary sheet pile at Area C Site 163.

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the February 2016 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

**I certify under penalty of law that this document and attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. # Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending March 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending March 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Contractor only. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groudnwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |

**SA-6 North/South Field Change Log - Month Ending March 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | Submitted to Contractor only. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only. |
| **DC 2015-07-22** | Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending March 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA-6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Contractor only. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | Submitted to Contractor only. |
| **DC 2015-09-28** | Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling. | Submitted to Parties on October 1, 2015. |
| **DC 2015-12-21** | Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation –8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area. | Submitted to Contractor only. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |

**SA-6 North/South Field Change Log - Month Ending March 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only. |
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance withASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |
| **DC 2015-12-01** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | Submitted to Contractor only. |
| **DC 2016-02-03** | The final grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. | Submitted to Contractor only. |
| **DC 2016-02-22** | AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entact's request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location.<br>In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5. | Submitted to Contractor only. |
| **DC 2016-03-18** | This DC 2016-03-18 documents the revised acceptable ranges of physical parameters and provides an updated specification made in consultation with Dr. Grabosky of Rutgers University. Dr. Grabosky provided his recommendations in correspondence dated 3/17/2016. | Submitted to Parties on March 22, 2016. |
| **DC 2016-03-21** | Nature's Choice was identified as the source that best met the physical requirements for Horizon C soils by Dr. Grabosky; however, several samples of Nature's Choice Horizon C soils have hexavalent chromium concentration >1.0 mg/kg. Consequently, Honeywell is proposing a design change to allow the hexavalent chromium concentration in Nature's Choice Horizon C soils to be less than 1.8 mg/kg, as agreed to by the parties, as documented in the attached emails. For future sampling, hexavalent chromium soil samples will be composited from 10 grab sample locations per 5,000 CY (maximum). There are additional conditions in Attachment A that are part of this DCB and specific to Nature's Choice Horizon C soil. All other requirements specified in the 100% Design for imported soils will be met by the Nature's Choice Horizon C soils as amended in previous DC 2015-09-17. | Submitted to Parties on March 22, 2016. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

Hopewell, NJ 08525

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2016-04**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from April 1 – April 30, 2016.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Design and Construction

WJH:jtc/sgf

| B&B Drilling | 0 | 0 | 0 | 1 | 1 |
| Cornerstone | 0 | 0 | 0 | 0 | 0 |
| **TOTAL STAFF** | **41** | **45** | **42** | **45** | **44** |

## 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected April PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Conducted 6-month performance assessment soil sampling from the in-situ treatment area TA-10-1 in accordance with the updated Work Plan, dated August 2015 for the in-situ treatment of hexavalent chromium (Cr(VI)) impacted soils. Results submitted to all Parties on May 5, 2016.
- Completed demolition activities associated with 60/72 Kellogg to include demolition, loadout of demolition debris, and demolition of the above grade slab. Restoration of the site is pending evaluation of the analytical results of a sample of suspect material observed at one timber pile location below the former building slab.
- Reinstalled JCMUA water main vault and completed valve connection associated with the JCMUA water line.
- Completed S-3 Mass Removal Injection Event No. 28 in well 088-IW-03.

## C. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned upstream process (tank 201 and tank 202) pH probes, and tank 201.
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on April 12, 2016.
- Continued piping layout plans for routing the Contingent Groundwater Extraction System force mains from SA-6 North and South to the existing GWTP Neutralization Tank.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | | |
|---|---|---|---|---|---|
| | 4/3/16 | 4/10/16 | 4/17/16 | 4/24/16 | 5/1/16 |
| Avg. Gallons Treated & Discharged (per day) | 78,240 | 79,310 | 79,016 | 77,790 | 78,493 |
| Average Flow (gpm) for Operating Period | 57 | 57 | 57 | 58 | 56 |
| Avg. Hours of Plant Operation | 23 | 23 | 23 | 23 | 23 |
| GWTP Influent Tanks (gal.) | 4,322 | 3,806 | 4,492 | 3,816 | 5,500 |

## D. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Contractor completed abandonment of 3 monitoring wells (087-MW-14, 087-MW-130T, and 087-MW-OBS-6D).
- Completed backfilling of EA-2/EA-3 excavation area.
- Placed flowable concrete within the vault on the north side of the JCIA trash pit to an elevation of approximately +5.0 msl.
- Continued backfilling the SA-6 North CGWES pipeline and installed the risers on manholes.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Sarnia, Ontario Canada | Stablex | WWTP Filer Cake | 0 | 0 | 0 |
| **Eglentowicz/F Rover & Sons** | Roll-off | Harrison, NJ | Rover & Sons Recycling Yard | Metal | 4 | 6.9 | 27.63 |
| **Eglentowicz/ Evergreen Recycling** | Roll-off | Newark, NJ | Evergreen Recycling Solutions | Concrete | 21 | 19.45 | 408.55 |
| **Eglentowicz/ Evergreen Recycling** | Roll-off | Newark, NJ | Evergreen Recycling Solutions | C&D Debris | 8 | 16 | 127 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Excavation Completed** | Excavation Site 163 Complete - Total for Reporting Period (Site 163): 225 CY/ Total: 7,132.5 CY<br>Excavation SA-6 North Complete - Total to Date (SA-6 North): 39,443 CY |
| **Backfill in Progress** | EA-2/EA-3, SA-6 South Utility Corridor (B Street) |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | | |
|---|---|---|---|---|---|
| | 4/3/16 | 4/10/16 | 4/17/16 | 4/24/16 | 5/1/16 |
| Natures Choice Horizon C | 0 | 0 | 01,141.83 | 1,381.44 | 3,322.93 |
| Tilcon Mount Hope I-8 | 0 | 0 | 0 | 1,838 | 2,633.5 |
| Natures Choice Topsoil | 0 | 0 | 00 | 0 | 271.4 |

- Historic fill soils identified to be < 20 mg/kg hexavalent chromium were placed as backfill in EA-2/EA-3.
- Screened Celgene material was removed from the SA6-South open space area during grading of the protective cover soils. Approximately 160 cubic yard was removed from the cap area and transferred to the Celgene stockpile area.

## E. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Surcharging and offloading of surcharge material is complete.

- Area 2N: Surcharging and offloading of surcharge material is complete.
- Area 3N: Surcharging and offloading of surcharge material is complete.
- Area 4N: Surcharging and offloading of surcharge material is complete.

## F. SHEET PILE OPERATIONS

- Completed grouting Hydraulic Barrier Wall interlocks on SA-6 North.

## G. CAPPING OPERATIONS

- Completed repairs to exposed GDL on west side of the SA-6 South Cap.
- Regraded the GDL cover soil in GDL repair areas on the west side of the SA-6 South cap to include associated compaction testing. In addition, the underlying exposed root barrier on the west side of the cap was replaced.
- Began importing and placing Horizon C soils to include associated compaction testing and placement of underlying root barrier and demarcation tape.
- Began SA-6 North cap subgrade construction activities.
- Continued placement of Structural Fill Material in the SA-6 South Cap Area corridor (B Street).

## H. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |

** Amec Foster Wheeler reviewed the expiration of this TWA with NJDEP, Division of Water Quality and no extension is necessary.*

## I. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Continue final grading of GDL cover soils to include associated compaction testing and installation of root barrier on SA-6 South open space area.
- Continue placement of Horizon C and begin importing and placing Horizon B soils.
- Continue SA-6 North cap subgrade construction activities.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Continue to develop CGWES piping layout plans for connection to GWTP Neutralization Tank.

**ATTACHMENTS:**

1. Schedule – 6 Month Look Ahead
2. Site Photographs
3. Excavation and Backfill (Progression Chart)
4. Dewatering Operations Update
5. SA-6 Construction Water Discharge Data (To PVSC)
6. Backfill Analytical Data *(not included in this reporting period)*
7. Perimeter Pools Update
8. Groundwater Quality Data *(not included in this reporting period)*
9. Surcharge Monitoring Update *(not included in this reporting period)*
10. Sheet Pile Update *(not included in this reporting period)*
11. Capping Update
12. Weekly SWPPP Reports
13. GWTP Update
14. SA-6 North & South Design Change Tracking Log

# Attachment 1: Schedule – 6 Month Look Ahead

# SA-6 North/South Combined Chromium Remediation Schedule

amec foster wheeler

| ID | Task Name | Duration | Start | Finish |
|---|---|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1936 days** | **1/4/08** | **6/1/15** |
| **2** | **Remedial Action Work Plan** | **33 days** | **1/4/08** | **2/19/08** |
| **5** | **Remedial Action Design** | **1522 days** | **2/20/08** | **12/13/13** |
| **18** | **JCIA/JCDPW Relocation** | **1780 days** | **8/11/08** | **6/1/15** |
| 19 | Develop Site Relocation Master Plan | 38 days | 8/11/08 | 10/1/08 |
| 20 | Submit Site Relocation Master Plan | 0 days | 10/1/08 | 10/1/08 |
| 21 | JC Construction of New Facilities | 1309 days | 6/2/09 | 6/2/14 |
| 22 | Relocation Contractor Procurement | 392 days | 4/15/10 | 10/13/11 |
| 23 | JCIA and JCDPW Relocation | 949 days | 10/17/11 | 6/1/15 |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days | 12/12/11 | 4/30/12 |
| 24a | Demolition of JCIA Structures | 146 days | 9/1/14 | 3/23/15 |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** | **7/11/08** | **4/30/14** |
| **26** | **Remedial Action Work Plan** | **187 days** | **7/11/08** | **3/30/09** |
| **32** | **Remedial Action Design** | **1161 days** | **2/2/09** | **7/9/13** |
| **57** | **SA-6 South Relocation** | **616 days** | **12/26/11** | **4/30/14** |
| 58 | New GWTP Construction Completion | 502 days | 3/5/12 | 1/30/14 |
| 59 | Demolition of 80 Kellogg | 857 days | 12/26/11 | 4/30/14 |
| **60** | **SA-6 North/South Field Implementation** | **894 days** | **3/1/13** | **8/1/16** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 664 days | 6/17/13 | 12/31/15 |
| 60b | SA-6S (Site 163) In-Situ Treatment | 555 days | 11/15/13 | 12/31/15 |
| **61** | **Mobilization (Includees new GWTP, In-situ Treatment & Main Remedy)** | **87 days** | **3/1/13** | **6/28/13** |
| 61a | Mobilization | 87 days | 3/1/13 | 6/28/13 |
| **62** | **Surcharge Install/Instrumentation** | **706 days** | **6/17/13** | **2/29/16** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instumentation | 142 days | 6/17/13 | 12/31/13 |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 185 days | 4/8/14 | 2/13/15 |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days | 6/30/15 | 2/29/16 |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 91 days | 6/16/14 | 2/23/15 |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 155 days | 10/6/14 | 5/8/15 |
| **63** | **Barrier Wall Install** | **569 days** | **8/12/13** | **10/15/15** |
| 63a | SA 6N Installation of Barrier Wall | 159 days | 3/9/15 | 10/15/15 |
| 63b | SA 6S Installation of Barrier Wall | 210 days | 8/12/13 | 5/30/14 |
| **64** | **Excavation** | **507 days** | **10/22/13** | **9/30/15** |
| 64a | SA 6N Excavation | 218 days | 12/1/14 | 9/30/15 |
| 64b | SA 6S Excavation | 295 days | 10/22/13 | 12/8/14 |
| **65** | **Backfill** | **558 days** | **11/11/13** | **12/30/15** |
| 65a | SA 6N Backfill | 283 days | 12/1/14 | 12/30/15 |
| 65b | SA 6S Backfill | 384 days | 11/11/13 | 4/30/15 |
| **66** | **Capping and Cover Soil Placement** | **426 days** | **12/1/14** | **7/15/16** |
| 66a | SA 6N Capping and Cover Soil Placement | 83 days | 3/24/16 | 7/15/16 |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days | 12/1/14 | 12/30/15 |
| **67** | **Restoration** | **234 days** | **9/1/15** | **7/21/16** |
| 67a | Restoration | 234 days | 9/1/15 | 7/21/16 |
| **68** | **Demobilization** | **22 days** | **7/1/16** | **8/1/16** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | | | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | | | |
| **69** | **SA-6 North Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **75** | **SA-6 South Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **81** | **SA-6 North Long Term Protections** | **1830 days** | **10/1/08** | **10/1/15** |
| **92** | **SA-6 South Long Term Protections** | **2569 days** | **6/5/08** | **3/31/18** |

Project: SA-6 Remediation Schedule
Revision 4
Date: 5/03/16

Task  Milestone  Summary  Critical

# Attachment 2: Site Photographs

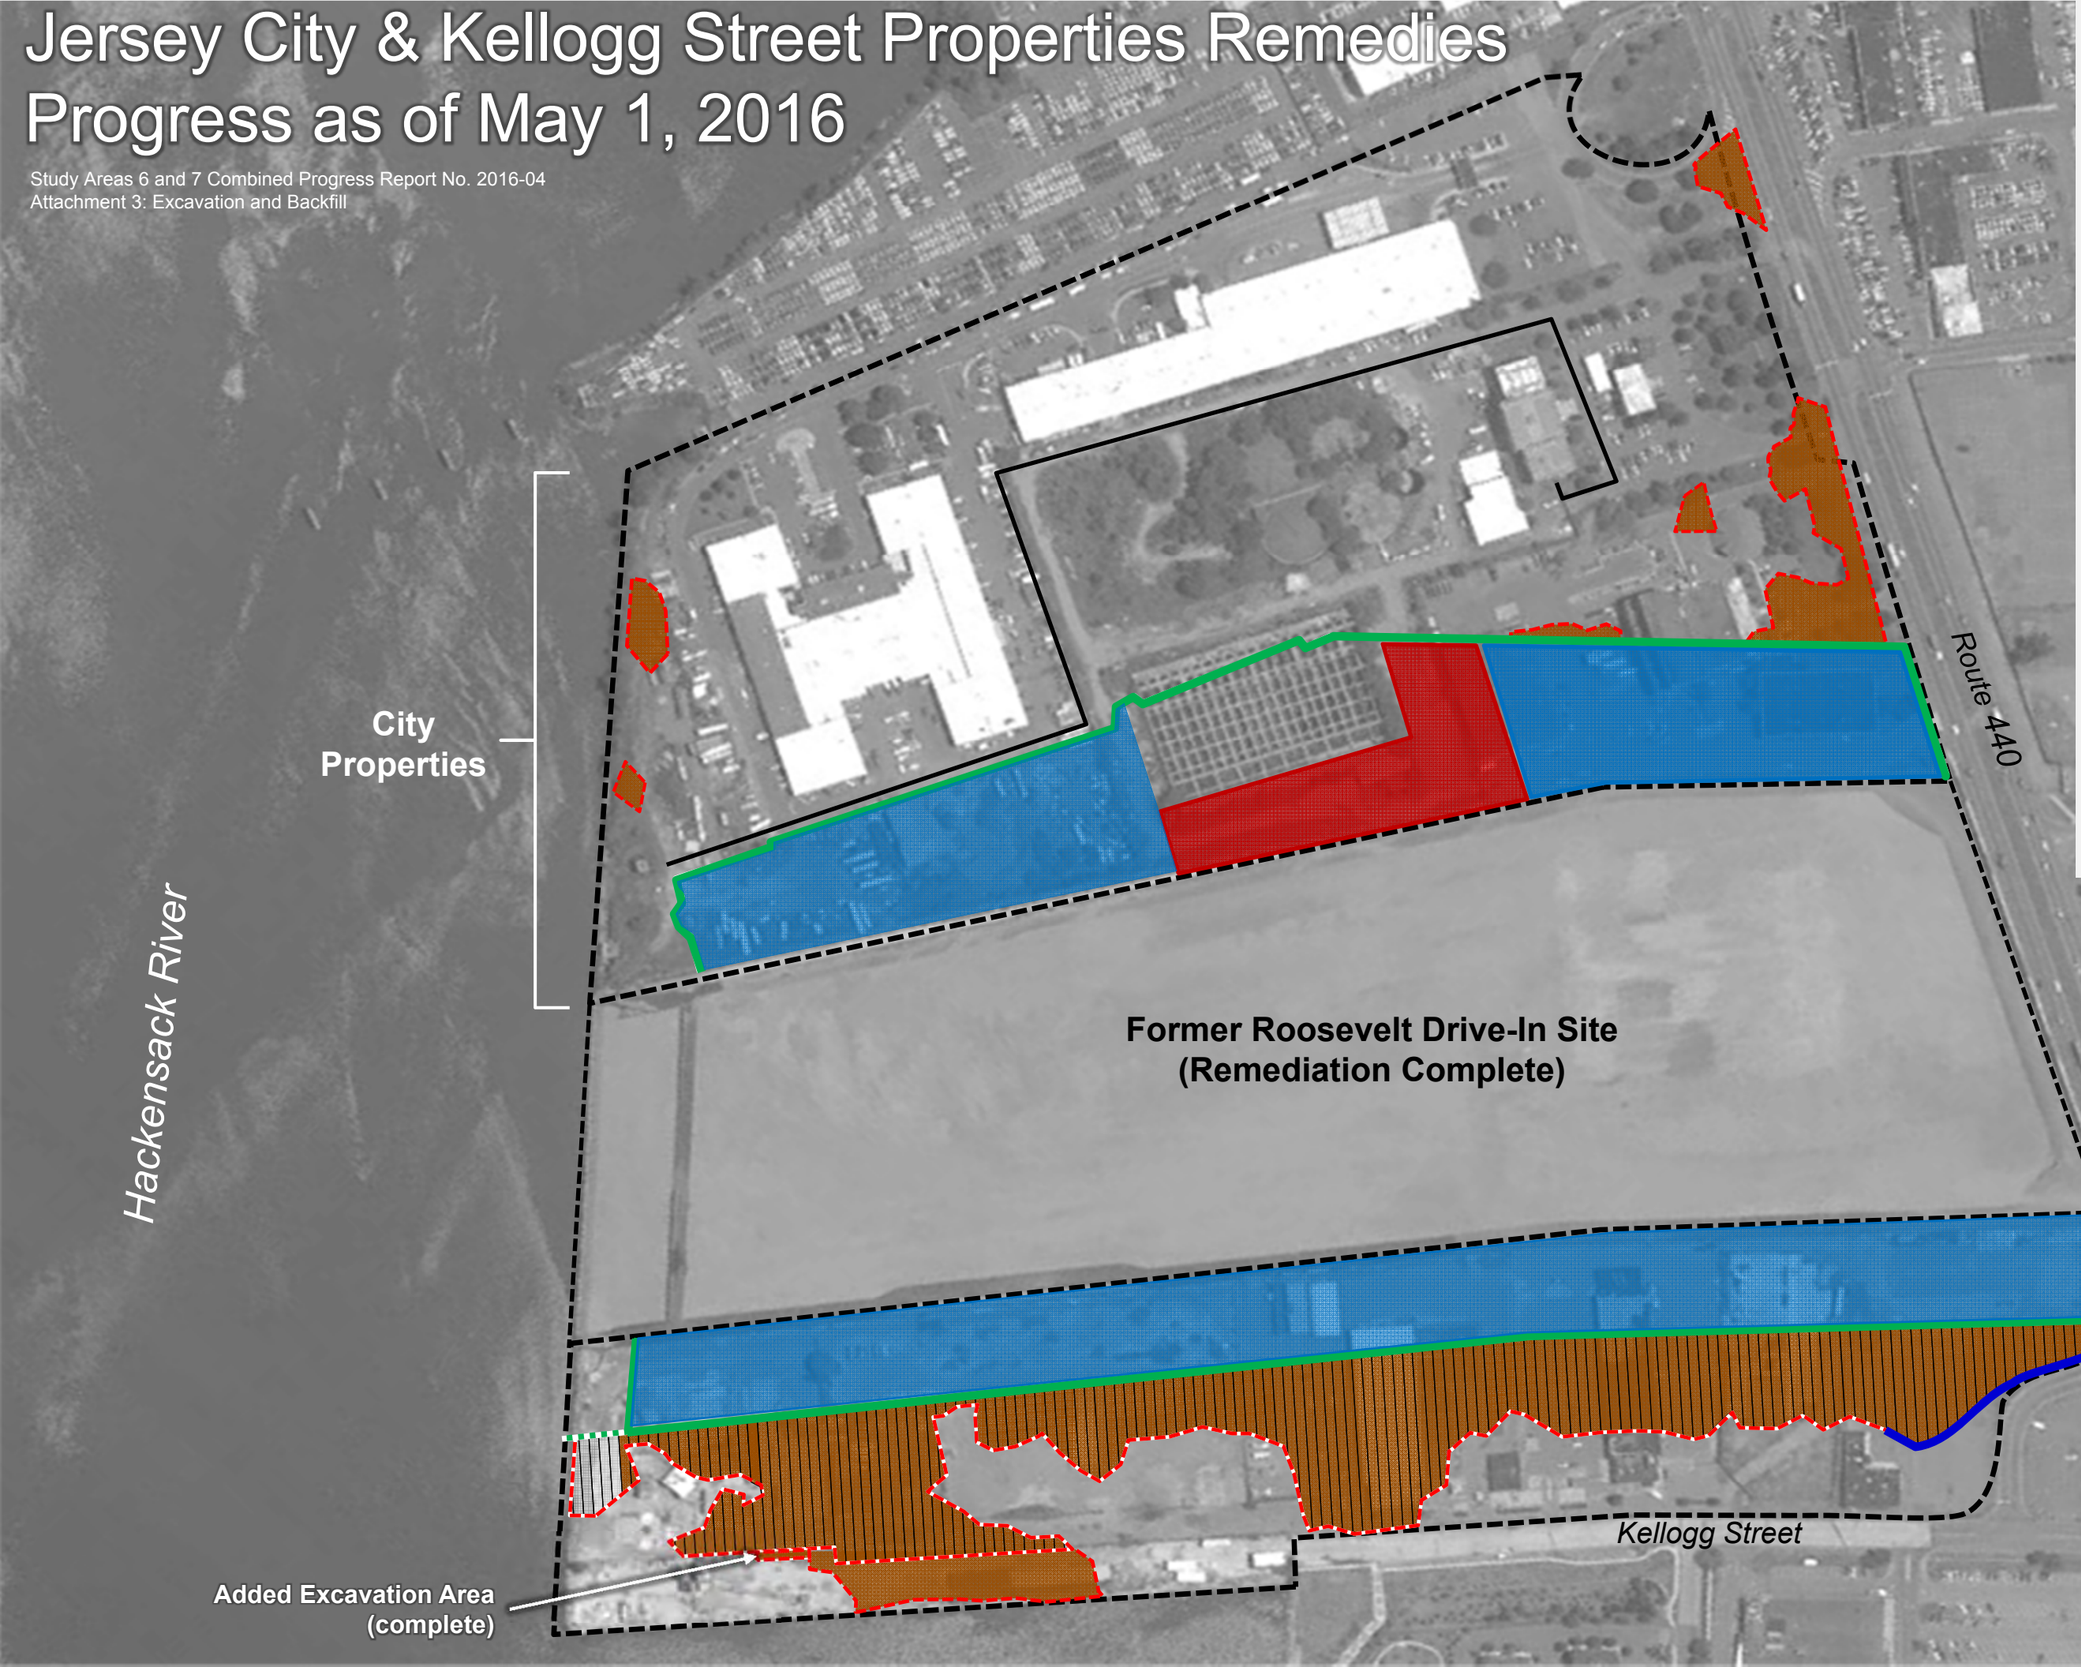
**Site Photograph 1:** Delivery of Horizon C Material at SA-6 South.

**Site Photograph 2:** Demolition of 60 Kellogg Building SA-6 South.

**Site Photograph 3:** Grading Cover Soils on SA-6 South Cap.

**Site Photograph 4:** Reinstallation of the JCMUA Water Meter Valve Box.

**Site Photograph 5:** Removal of Surcharge Material at JC Properties.



**Site Photograph 6:** Restoration of EA-3 at JC Properties.

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the March 2016 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager

## PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending April 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending April 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Parties on July 2, 2015. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groundwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |

**SA-6 North/South Field Change Log - Month Ending April 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | Submitted to Contractor only. |
| **DC 2016-04-15** | Amec Foster Wheeler has provided final restoration grades for SA-6 South Development Area. The DCB also includes the final cover types in revised Drawing C-128. | Submitted to Contractor only. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on June 22, 2015. |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on June 22, 2015. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only. |
| **DC 2015-07-22** | Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending April 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA-6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Contractor only. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | Submitted to Contractor only. |
| **DC 2015-09-28** | Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling. | Submitted to Parties on October 1, 2015. |
| **DC 2015-12-21** | Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation –8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending April 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only. |
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance withASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |
| **DC 2015-12-01** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | Submitted to Contractor only. |
| **DC 2016-02-03** | The final grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. | Submitted to Contractor only. |
| **DC 2016-02-22** | AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entact's request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location.<br>In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5. | Submitted to Contractor only. |
| **DC 2016-02-25** | This DCB has been issued to provide Entact with the latest SA-6 North HB Wall and SCB wall plan and profile drawings (SN-201 thru SN-205), which were modified to reflect changes made in DC 2016-02-22. | Submitted to Contractor only. |
| **DC 2016-05-03** | The laboratory results of all gradations for planting soils shall be presented in terms of the USDA classification system rather than the USCS classification system. | Submitted to Contractor only. |
| **DC 2016-03-18** | This DC 2016-03-18 documents the revised acceptable ranges of physical parameters and provides an updated specification made in consultation with Dr. Grabosky of Rutgers University. Dr. Grabosky provided his recommendations in correspondence dated 3/17/2016. | Submitted to Parties on March 22, 2016. Plaintiffs responded in a letter dated April 15, 2016. Plaintiffs and Honeywell subsequently held discussions and DCB 2016-04-20 was developed to document an agreement reached by all parties on the Special Master All-Hands monthly call on April 19, 2016. |

**SA-6 North/South Field Change Log - Month Ending April 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-03-21** | Nature's Choice was identified as the source that best met the physical requirements for Horizon C soils by Dr. Grabosky; however, several samples of Nature's Choice Horizon C soils have hexavalent chromium concentration >1.0 mg/kg. Consequently, Honeywell is proposing a design change to allow the hexavalent chromium concentration in Nature's Choice Horizon C soils to be less than 1.8 mg/kg, as agreed to by the parties, as documented in the attached emails. For future sampling, hexavalent chromium soil samples will be composited from 10 grab sample locations per 5,000 CY (maximum). There are additional conditions in Attachment A that are part of this DCB and specific to Nature's Choice Horizon C soil. All other requirements specified in the 100% Design for imported soils will be met by the Nature's Choice Horizon C soils as amended in previous DC 2015-09-17. | Submitted to Parties on March 22, 2016. |
| **DC 2016-04-20** | This DCB documents the approved sources of Horizon B and Horizon C materials, as agreed to by all parties on the Special Master All-Hands monthly call on April 19, 2016. | Submitted to Parties on April 21, 2016. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**MONTHLY REPORT**

Honeywell
115 Tabor Road
Morris Plains, NJ 07950

June 10, 2016

Honorable Robert G. Torricelli
Office of the Special Master
c/o Sean Jackson
7 So. Lanning Ave.
Hopewell, NJ 08525

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2016-05**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from May 1 – May 31, 2016.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Director, Remediation
Design and Construction

WJH:jtc/sgf

| **Cornerstone** | 0 | 0 | 0 | 0 |
| **TOTAL STAFF** | **41** | **49** | **47** | **48** |

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Collected May PVSC compliance sample from the Construction Water Treatment Plant (CWTP).

## B. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned downstream process tanks T-300 (neutralization tank) and T-400 (effluent tank).
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on May 6, 2016.
- Completed piping layout plans for routing the Contingent Groundwater Extraction System force mains from SA-6 North and South to the existing GWTP Neutralization Tank.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 05/08/16 | 05/15/16 | 05/22/16 | 05/29/16 |
| Avg. Gallons Treated & Discharged (per day) | 77,947 | 78,345 | 77,444 | 78,840 |
| Average Flow (gpm) for Operating Period | 56 | 56 | 54 | 57 |
| Avg. Hours of Plant Operation | 23 | 23 | 24 | 23 |
| GWTP Influent Tanks (gal.) | 4,400 | 3,026 | 4,109 | 5,352 |

## C. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Sarnia, Ontario Canada | Stablex | WWTP Filer Cake | 0 | 0 | 0 |
| **Bayshore** | Tri-Axle | Keasbey, NJ | Bayshore Recycling | Non-Haz Petroleum Soil | 30 | 24 | 720 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Excavation Completed** | No chromium soil excavation performed. |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 05/08/16 | 05/15/16 | 05/22/16 | 5/29/16 |
| Natures Choice Horizon C | 1,867.67 | 1,826.85 | 2,461.46 | 4,442.30 |
| Cedar Hill Horizon B | 2,093.69 | 1,206.67 | 1,917.90 | 2,347.65 |
| Tilcon Mount Hope I-8 | 1,320.32 | 817.21 | 304.28 | 308.73 |
| Natures Choice Topsoil | 0 | 786.37 | 740.25 | 0 |
| Weldon Screenings | 0 | 1,806.60 | 1,649.19 | 2,154.68 |

## D. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Surcharging and offloading of surcharge material is complete.
- Area 2N: Surcharging and offloading of surcharge material is complete.
- Area 3N: Surcharging and offloading of surcharge material is complete.

- Area 4N: Surcharging and offloading of surcharge material is complete.

## E. SHEET PILE OPERATIONS

- Grouting of Hydraulic Barrier Wall on SA-6 North interlocks is complete.

## F. CAPPING OPERATIONS

- Continued re-grading the GDL cover soil in GDL repair areas on the west side of the SA-6 South cap to include associated compaction testing.
- Continued placement of root barrier and demarcation tape and importing and placing Horizon C soils to include associated compaction testing on the SA-6 South open space area.
- Began importing and placing Horizon B soils atop Horizon C soils on SA-6 South.
- Continued importing and stockpiling Horizon A Topsoil.
- Continued SA-6 North liner subgrade grading activities within the open space area.
- Continued placement of Structural Fill Material in the future utility corridors crossing the SA-6 South open space area.

## G. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |

## H. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete final grading of GDL cover soils to include associated compaction testing and installation of root barrier on SA-6 South open space area.
- Continue placement of Horizon C and Horizon B soils on SA-6 South open space area.
- Continue importing Horizon A Topsoil and begin placement on the SA-6 South Cap Area.
- Continue SA-6 North liner subgrade grading activities.
- Begin cutting SA-6 North Hydraulic Barrier Wall and Soil-Cement Bentonite Wall to liner grade.
- Prepare SA-6 North subgrade for initial geomembrane liner installation.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Continue to coordinate the CGWES piping layout with selected contractor for connection to GWTP Neutralization Tank.
- Complete PVSC Monthly compliance sampling.
- Conduct S-3 Mass Removal Injection Event No. 29 in well 088-IW-01 (completed June 5$^{th}$ through 7$^{th}$, 2016).
- Conduct second quarterly LTMP regional groundwater level measurement round.
- Complete excavation and post-excavation sampling of small area of observed chromium impacted soils under the former 60 Kellogg St. building.
- Coordinate follow-up injections in Treatment Area TA 10-1.

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start | Finish |
|---|---|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1936 days** | **1/4/08** | **6/1/15** |
| **2** | **Remedial Action Work Plan** | **33 days** | **1/4/08** | **2/19/08** |
| **5** | **Remedial Action Design** | **1522 days** | **2/20/08** | **12/13/13** |
| **18** | **JCIA/JCDPW Relocation** | **1780 days** | **8/11/08** | **6/1/15** |
| 19 | Develop Site Relocation Master Plan | 38 days | 8/11/08 | 10/1/08 |
| 20 | Submit Site Relocation Master Plan | 0 days | 10/1/08 | 10/1/08 |
| 21 | JC Construction of New Facilities | 1309 days | 6/2/09 | 6/2/14 |
| 22 | Relocation Contractor Procurement | 392 days | 4/15/10 | 10/13/11 |
| 23 | JCIA and JCDPW Relocation | 949 days | 10/17/11 | 6/1/15 |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days | 12/12/11 | 4/30/12 |
| 24a | Demolition of JCIA Structures | 146 days | 9/1/14 | 3/23/15 |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** | **7/11/08** | **4/30/14** |
| **26** | **Remedial Action Work Plan** | **187 days** | **7/11/08** | **3/30/09** |
| **32** | **Remedial Action Design** | **1161 days** | **2/2/09** | **7/9/13** |
| **57** | **SA-6 South Relocation** | **616 days** | **12/26/11** | **4/30/14** |
| 58 | New GWTP Construction Completion | 502 days | 3/5/12 | 1/30/14 |
| 59 | Demolition of 80 Kellogg | 857 days | 12/26/11 | 4/30/14 |
| **60** | **SA-6 North/South Field Implementation** | **894 days** | **3/1/13** | **8/1/16** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 664 days | 6/17/13 | 12/31/15 |
| 60b | SA-6S (Site 163) In-Situ Treatment | 555 days | 11/15/13 | 12/31/15 |
| **61** | **Mobilization (Includees new GWTP, In-situ Treatment & Main Remedy)** | **87 days** | **3/1/13** | **6/28/13** |
| 61a | Mobilization | 87 days | 3/1/13 | 6/28/13 |
| **62** | **Surcharge Install/Instrumentation** | **706 days** | **6/17/13** | **2/29/16** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instumentation | 142 days | 6/17/13 | 12/31/13 |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 185 days | 4/8/14 | 2/13/15 |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days | 6/30/15 | 2/29/16 |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 91 days | 6/16/14 | 2/23/15 |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 155 days | 10/6/14 | 5/8/15 |
| **63** | **Barrier Wall Install** | **569 days** | **8/12/13** | **10/15/15** |
| 63a | SA 6N Installation of Barrier Wall | 159 days | 3/9/15 | 10/15/15 |
| 63b | SA 6S Installation of Barrier Wall | 210 days | 8/12/13 | 5/30/14 |
| **64** | **Excavation** | **507 days** | **10/22/13** | **9/30/15** |
| 64a | SA 6N Excavation | 218 days | 12/1/14 | 9/30/15 |
| 64b | SA 6S Excavation | 295 days | 10/22/13 | 12/8/14 |
| **65** | **Backfill** | **558 days** | **11/11/13** | **12/30/15** |
| 65a | SA 6N Backfill | 283 days | 12/1/14 | 12/30/15 |
| 65b | SA 6S Backfill | 384 days | 11/11/13 | 4/30/15 |
| **66** | **Capping and Cover Soil Placement** | **426 days** | **12/1/14** | **7/15/16** |
| 66a | SA 6N Capping and Cover Soil Placement | 83 days | 3/24/16 | 7/15/16 |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days | 12/1/14 | 12/30/15 |
| **67** | **Restoration** | **234 days** | **9/1/15** | **7/21/16** |
| 67a | Restoration | 234 days | 9/1/15 | 7/21/16 |
| **68** | **Demobilization** | **22 days** | **7/1/16** | **8/1/16** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | | | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | | | |
| **69** | **SA-6 North Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **75** | **SA-6 South Project Closeout** | **311 days** | **10/1/15** | **12/7/16** |
| **81** | **SA-6 North Long Term Protections** | **1830 days** | **10/1/08** | **10/1/15** |
| **92** | **SA-6 South Long Term Protections** | **2569 days** | **6/5/08** | **3/31/18** |

Project: SA-6 Remediation Schedule

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the April 2016 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

PVSC FORM MR-1 REV: 4 6/87 P1

**PRETREATMENT MONITORING REPORT**

Certification of Non-Use if applicable (use additional sheets):

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analytes are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending May 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2014-6-10** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-6-10 includes the french drain installation, as well as pump and access station manholes for SA-6 South. Some design details, including the electrical design, will be finalized in supplemental DCBs based field obersvations and constructability review. | Submitted to Contractor only. |
| **DC 2014-11-20** | DC 2014-11-20 supplements DC 2014-06-10 and includes the french drain installation, electrical supply and discharge piping for SA-6 North. | Submitted to Contractor only. |
| **DC 2015-2-12** | DC 2015-2-24 is a follow up to DC 2014-6-10, the SA-6 South CGWES trench design. DC 2015-2-24 includes details for electrical supply and discharge piping. | Submitted to Contractor only. |
| **DC 2014-2-24** | DC 2016-5-24 was issued to document the changes in the SA-6 North and South cap subgrades that resulted from the change to a trench system. | Submitted to Contractor only. |
| **DC 2015-9-03** | DC 2015-9-03 is a follow up to DC 2015-2-24, the SA-6 South CGWES electrical supply. DC 2015-9-03 provides a revised electrical plan. | Submitted to Contractor only. |
| **DC 2016-5-24** | DC 2016-5-24 was issued to address the elimination of a drop structure, the elmination of a flow meter, conduit sizing changes, and to clarify Entact's scope. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending May 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Parties on July 2, 2015. |

**SA-6 North/South Field Change Log - Month Ending May 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groundwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | Submitted to Contractor only. |
| **DC 2016-04-15** | Amec Foster Wheeler has provided final restoration grades for SA-6 South Development Area. The DCB also includes the final cover types in revised Drawing C-128. | Submitted to Contractor only. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |

**SA-6 North/South Field Change Log - Month Ending May 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only. |
| **DC 2015-07-22** | Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA-6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Contractor only. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |

**SA-6 North/South Field Change Log - Month Ending May 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | Submitted to Contractor only. |
| **DC 2015-09-28** | Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling. | Submitted to Parties on October 1, 2015. |
| **DC 2015-12-21** | Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation –8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area. | Submitted to Contractor only. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only. |
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance withASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |
| **DC 2015-12-01** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | Submitted to Contractor only. |
| **DC 2016-02-03** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending May 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-02-22** | AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entact's request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location. In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5. | Submitted to Contractor only. |
| **DC 2016-02-25** | This DCB has been issued to provide Entact with the latest SA-6 North HB Wall and SCB wall plan and profile drawings (SN-201 thru SN-205), which were modified to reflect changes made in DC 2016-02-22. | Submitted to Contractor only. |
| **DC 2016-05-03** | The laboratory results of all gradations for planting soils shall be presented in terms of the USDA classification system rather than the USCS classification system. | Submitted to Contractor only. |
| **DC 2016-03-18** | This DC 2016-03-18 documents the revised acceptable ranges of physical parameters and provides an updated specification made in consultation with Dr. Grabosky of Rutgers University. Dr. Grabosky provided his recommendations in correspondence dated 3/17/2016. | Submitted to Parties on March 22, 2016. Plaintiffs responded in a letter dated April 15, 2016. Plaintiffs and Honeywell subsequently held discussions and DCB 2016-04-20 was developed to document an agreement reached by all parties on the Special Master All-Hands monthly call on April 19, 2016. |
| **DC 2016-03-21** | Nature's Choice was identified as the source that best met the physical requirements for Horizon C soils by Dr. Grabosky; however, several samples of Nature's Choice Horizon C soils have hexavalent chromium concentration >1.0 mg/kg. Consequently, Honeywell is proposing a design change to allow the hexavalent chromium concentration in Nature's Choice Horizon C soils to be less than 1.8 mg/kg, as agreed to by the parties, as documented in the attached emails. For future sampling, hexavalent chromium soil samples will be composited from 10 grab sample locations per 5,000 CY (maximum). There are additional conditions in Attachment A that are part of this DCB and specific to Nature's Choice Horizon C soil. All other requirements specified in the 100% Design for imported soils will be met by the Nature's Choice Horizon C soils as amended in previous DC 2015-09-17. | Submitted to Parties on March 22, 2016. |
| **DC 2016-04-20** | This DCB documents the approved sources of Horizon B and Horizon C materials, as agreed to by all parties on the Special Master All-Hands monthly call on April 19, 2016. | Submitted to Parties on April 21, 2016. |
| **DC 2016-5-11** | Consistent with minor Bayfront final grading changes, Amec adjusted the interim grade in the SA-6 North landscape area by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. As part of DC 2016-5-11, AmecFW issued SA-6 North Interim Grades to Entact. | Submitted to Contractor only. |
| **DC 2016-5-20** | After further review, AmecFW lowered the geomembrane liner elevations proximate to Pump Station #1 on the SA-6 North cap in order to provide additional separation between the geomembrane and the bottom of the vault. (Refer to DC 2016-02-22). | Submitted to Contractor only. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2016-06**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from June 1 – June 30, 2016.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Global Director, Remediation
Design and Construction

WJH:jtc/sgf

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Conducted second round of quarterly regional groundwater level measurements.
- Conducted S-3 Mass Removal Injection Event No. 29 in injection well 088-IW-01 and related semi-annual groundwater quality sampling.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 South and SA-6 North.
- Completed installation of piezometer pairs associated with SA-6 North Open Space Area.
- Completed reinstallation of electrical service on the northeast corner of SA-7.
- PVSC completed yearly inspection of the GWTP and the CWTP on June 2, 2016.
- Collected June PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Collected 3-Year Performance Assessment soil samples from in-situ treatment areas TA-7 and TA-8 in accordance with the Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil (dated February 2013) on June 27, 2016.

## B. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned downstream process tanks T-300 (neutralization tank) and T-400 (effluent tank).
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on June 9, 2016.
- Completed replacement of Groundwater Treatment Plant breaker and electrical panel.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 06/05/16 | 06/12/16 | 06/19/16 | 06/26/16 |
| Avg. Gallons Treated & Discharged (per day) | 76,848 | 78,192 | 77,202 | 74,270 |
| Average Flow (gpm) for Operating Period | 57 | 56 | 56 | 55 |
| Avg. Hours of Plant Operation | 23 | 23 | 23 | 23 |
| GWTP Influent Tanks (gal.) | 3,331 | 3,816 | 2,512 | 3,619 |

## C. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completed excavation and post-excavation sampling of small area of observed chromium impacted soils under the former 60 Kellogg St. building. Post excavation sampling indicates that results were <20ppm.
- Completed cutting of pilings within the 60 Kellogg footprint and completed backfilling of the 60 Kellogg excavation.
- Completed disassembly of SA-6 South Soil Containment area.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Sarnia, Ontario Canada | Stablex | WWTP Filer Cake | 1 | 17.6 | 17.6 |
| **Bayshore** | Tri-Axle | Keasbey, NJ | Bayshore Recycling | Non-Haz Petroleum Soil | 84 | 24 | 2,016 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Excavation Completed** | Excavation Area 60 Kellogg Footprint<br>Volume Excavated - Total for Reporting Period: 60 Kellogg (30 CY) |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 06/05/16 | 06/12/16 | 06/19/16 | 06/26/16 |
| Natures Choice Horizon C | 1,020 | 0 | 0 | 0 |
| Cedar Hill Horizon B | 3,929.39 | 2,545.57 | 4,185.73 | 848.7 |
| Tilcon Mount Hope I-8 | 630.20 | 179.47 | 301.45 | 0 |
| Natures Choice Topsoil | 0 | 0 | 1,678.96 | 0 |
| Tilcon 3/8" Stone | 0 | 102.64 | 0 | 51.41 |
| Weldon Screenings | 2,977.8 | 2,543.6 | 1,870.25 | 358.04 |

- Overburden historic fill soils with hexavalent chromium concentrations confirmed to be < 20 mg/kg soils were transferred and placed as backfill in Site 140.
- Continued to screen Celgene material for use as protective cover soils on the SA-6 North Open Space Area.

## D. SURCHARGE OPERATIONS

- Area 1S: Surcharging and offloading of surcharge material is complete.
- Area 2S: Surcharging and offloading of surcharge material is complete.
- Area 3S: Surcharging and offloading of surcharge material is complete.
- Area 1N: Surcharging and offloading of surcharge material is complete.
- Area 2N: Surcharging and offloading of surcharge material is complete.
- Area 3N: Surcharging and offloading of surcharge material is complete.
- Area 4N: Surcharging and offloading of surcharge material is complete.

## E. SHEET PILE OPERATIONS

- Continued cutting hydraulic barrier sheets to final elevation in SA-6 North Open Space Area.

## F. CAPPING OPERATIONS

- Completed placement of root barrier and demarcation tape and importing and placing Horizon C soils to include associated compaction testing on the SA-6 South Open Space Area.
- Completed importing and placing Horizon B soils atop Horizon C soils on SA-6 South Open Space Area.

- Continued importing and placing Horizon A Topsoil.
- Applied lime on western portion of the SA-6 South Open Space Area topsoil in preparation for hydro-seeding.
- Continued placement of Structural Fill Material in the future utility corridors crossing the SA-6 South open space area to include associated compaction testing on the SA-6 South Open Space Area.
- Continued SA-6 North geomembrane liner subgrade grading activities within the Open Space Area.
- Began installation of geosynthetic components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, and geocomposite drainage layer.
- A total of 57,807 sq. ft. of geomembrane liner totaling 13% of the total cap area was deployed during the reporting period.
- Completed spark testing on three initial boot welds.
- Continued cutting hydraulic barrier sheets and finishing the SCB wall to final elevation in SA-6 North Open Space Area.
- Continued installation of Gas Vent Pipe within the SA-6 North Open Space Area.

## G. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |

** Amec Foster Wheeler reviewed the expiration of this TWA with NJDEP, Division of Water Quality and no extension is necessary.*

## H. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Continue importing and placement of Horizon A Topsoil and on the SA-6 South Open Space Area.
- Begin Hydro-seeding of SA-6 South Open Space Area.
- Continue screening of Celgene soils for protective cover soils.
- Continue cutting SA-6 North Hydraulic Barrier Wall and Soil-Cement Bentonite Wall to geomembrane liner grade.
- Continue preparation of the SA-6 North subgrade for geomembrane liner installation.
- Continue installation of geosynthetic components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, and geocomposite drainage layer.
- Begin placement of GDL cover soils within the SA-6 North Open Space Area.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Continue installation CGWES Components.
- Complete PVSC Monthly compliance sampling.
- Conduct S-3 Mass Removal Injection Event No. 30 in well 088-IW-02.
- Conduct second quarterly LTMP regional groundwater level measurement round.
- Prepare and submit the NJDEP – Discharge to Groundwater Permit by Rule for Treatment Area 10-1 injections.

## ATTACHMENTS:

1. Schedule – 6 Month Look Ahead
2. Site Photographs
3. Excavation and Backfill (Progression Chart)
4. Dewatering Operations Update *(not included in this reporting period)*
5. SA-6 Construction Water Discharge Data (To PVSC)
6. Backfill Analytical Data *(not included in this reporting period)*
7. Perimeter Pools Update
8. Groundwater Quality Data *(sampled June 30; data not available for this reporting period)*
9. Surcharge Monitoring Update *(not included in this reporting period)*
10. Sheet Pile Update *(not included in this reporting period)*
11. Capping Update
    - SA-6 Cap Subgrade Progress Maps
    - Repair Log
    - Non-conformance Log
    - Subgrade Approval Form
    - QA Photo Log
    - Daily QA Reports (Langan)
12. Weekly SWPPP Reports
13. GWTP Update
14. SA-6 North & South Design Change Tracking Log

| ID | Task Name | Duration |
|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1936 days** |
| **2** | **Remedial Action Work Plan** | **33 days** |
| **5** | **Remedial Action Design** | **1522 days** |
| **18** | **JCIA/JCDPW Relocation** | **1780 days** |
| 19 | Develop Site Relocation Master Plan | 38 days |
| 20 | Submit Site Relocation Master Plan | 0 days |
| 21 | JC Construction of New Facilities | 1309 days |
| 22 | Relocation Contractor Procurement | 392 days |
| 23 | JCIA and JCDPW Relocation | 949 days |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days |
| 24a | Demolition of JCIA Structures | 146 days |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** |
| **26** | **Remedial Action Work Plan** | **187 days** |
| **32** | **Remedial Action Design** | **1161 days** |
| **57** | **SA-6 South Relocation** | **616 days** |
| 58 | New GWTP Construction Completion | 502 days |
| 59 | Demolition of 80 Kellogg | 857 days |
| **60** | **SA-6 North/South Field Implementation** | **894 days** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 664 days |
| 60b | SA-6S (Site 163) In-Situ Treatment | 555 days |
| **61** | **Mobilization (Includees new GWTP, In-situ Treatment & Main Remedy)** | **87 days** |
| 61a | Mobilization | 87 days |
| **62** | **Surcharge Install/Instrumentation** | **706 days** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instumentation | 142 days |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 185 days |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 91 days |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 155 days |
| **63** | **Barrier Wall Install** | **569 days** |
| 63a | SA 6N Installation of Barrier Wall | 159 days |
| 63b | SA 6S Installation of Barrier Wall | 210 days |
| **64** | **Excavation** | **507 days** |
| 64a | SA 6N Excavation | 218 days |
| 64b | SA 6S Excavation | 295 days |
| **65** | **Backfill** | **558 days** |
| 65a | SA 6N Backfill | 283 days |
| 65b | SA 6S Backfill | 384 days |
| **66** | **Capping and Cover Soil Placement** | **426 days** |
| 66a | SA 6N Capping and Cover Soil Placement | 83 days |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days |
| **67** | **Restoration** | **234 days** |
| 67a | Restoration | 234 days |
| **68** | **Demobilization** | **22 days** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | |
| **69** | **SA-6 North Project Closeout** | **311 days** |
| **75** | **SA-6 South Project Closeout** | **311 days** |
| **81** | **SA-6 North Long Term Protections** | **1830 days** |
| **92** | **SA-6 South Long Term Protections** | **2569 days** |

Current field implementation schedule shows capping complete in September 2016 and restoration in October 2016.

Project: SA-6 Remediation Schedule
Revision 4
Date: 6/22/15

Task Milestone Summary Critical

# Attachment 2: Site Photographs

**Site Photograph 1:** Grading clean imported cover soils in Open Space Area.

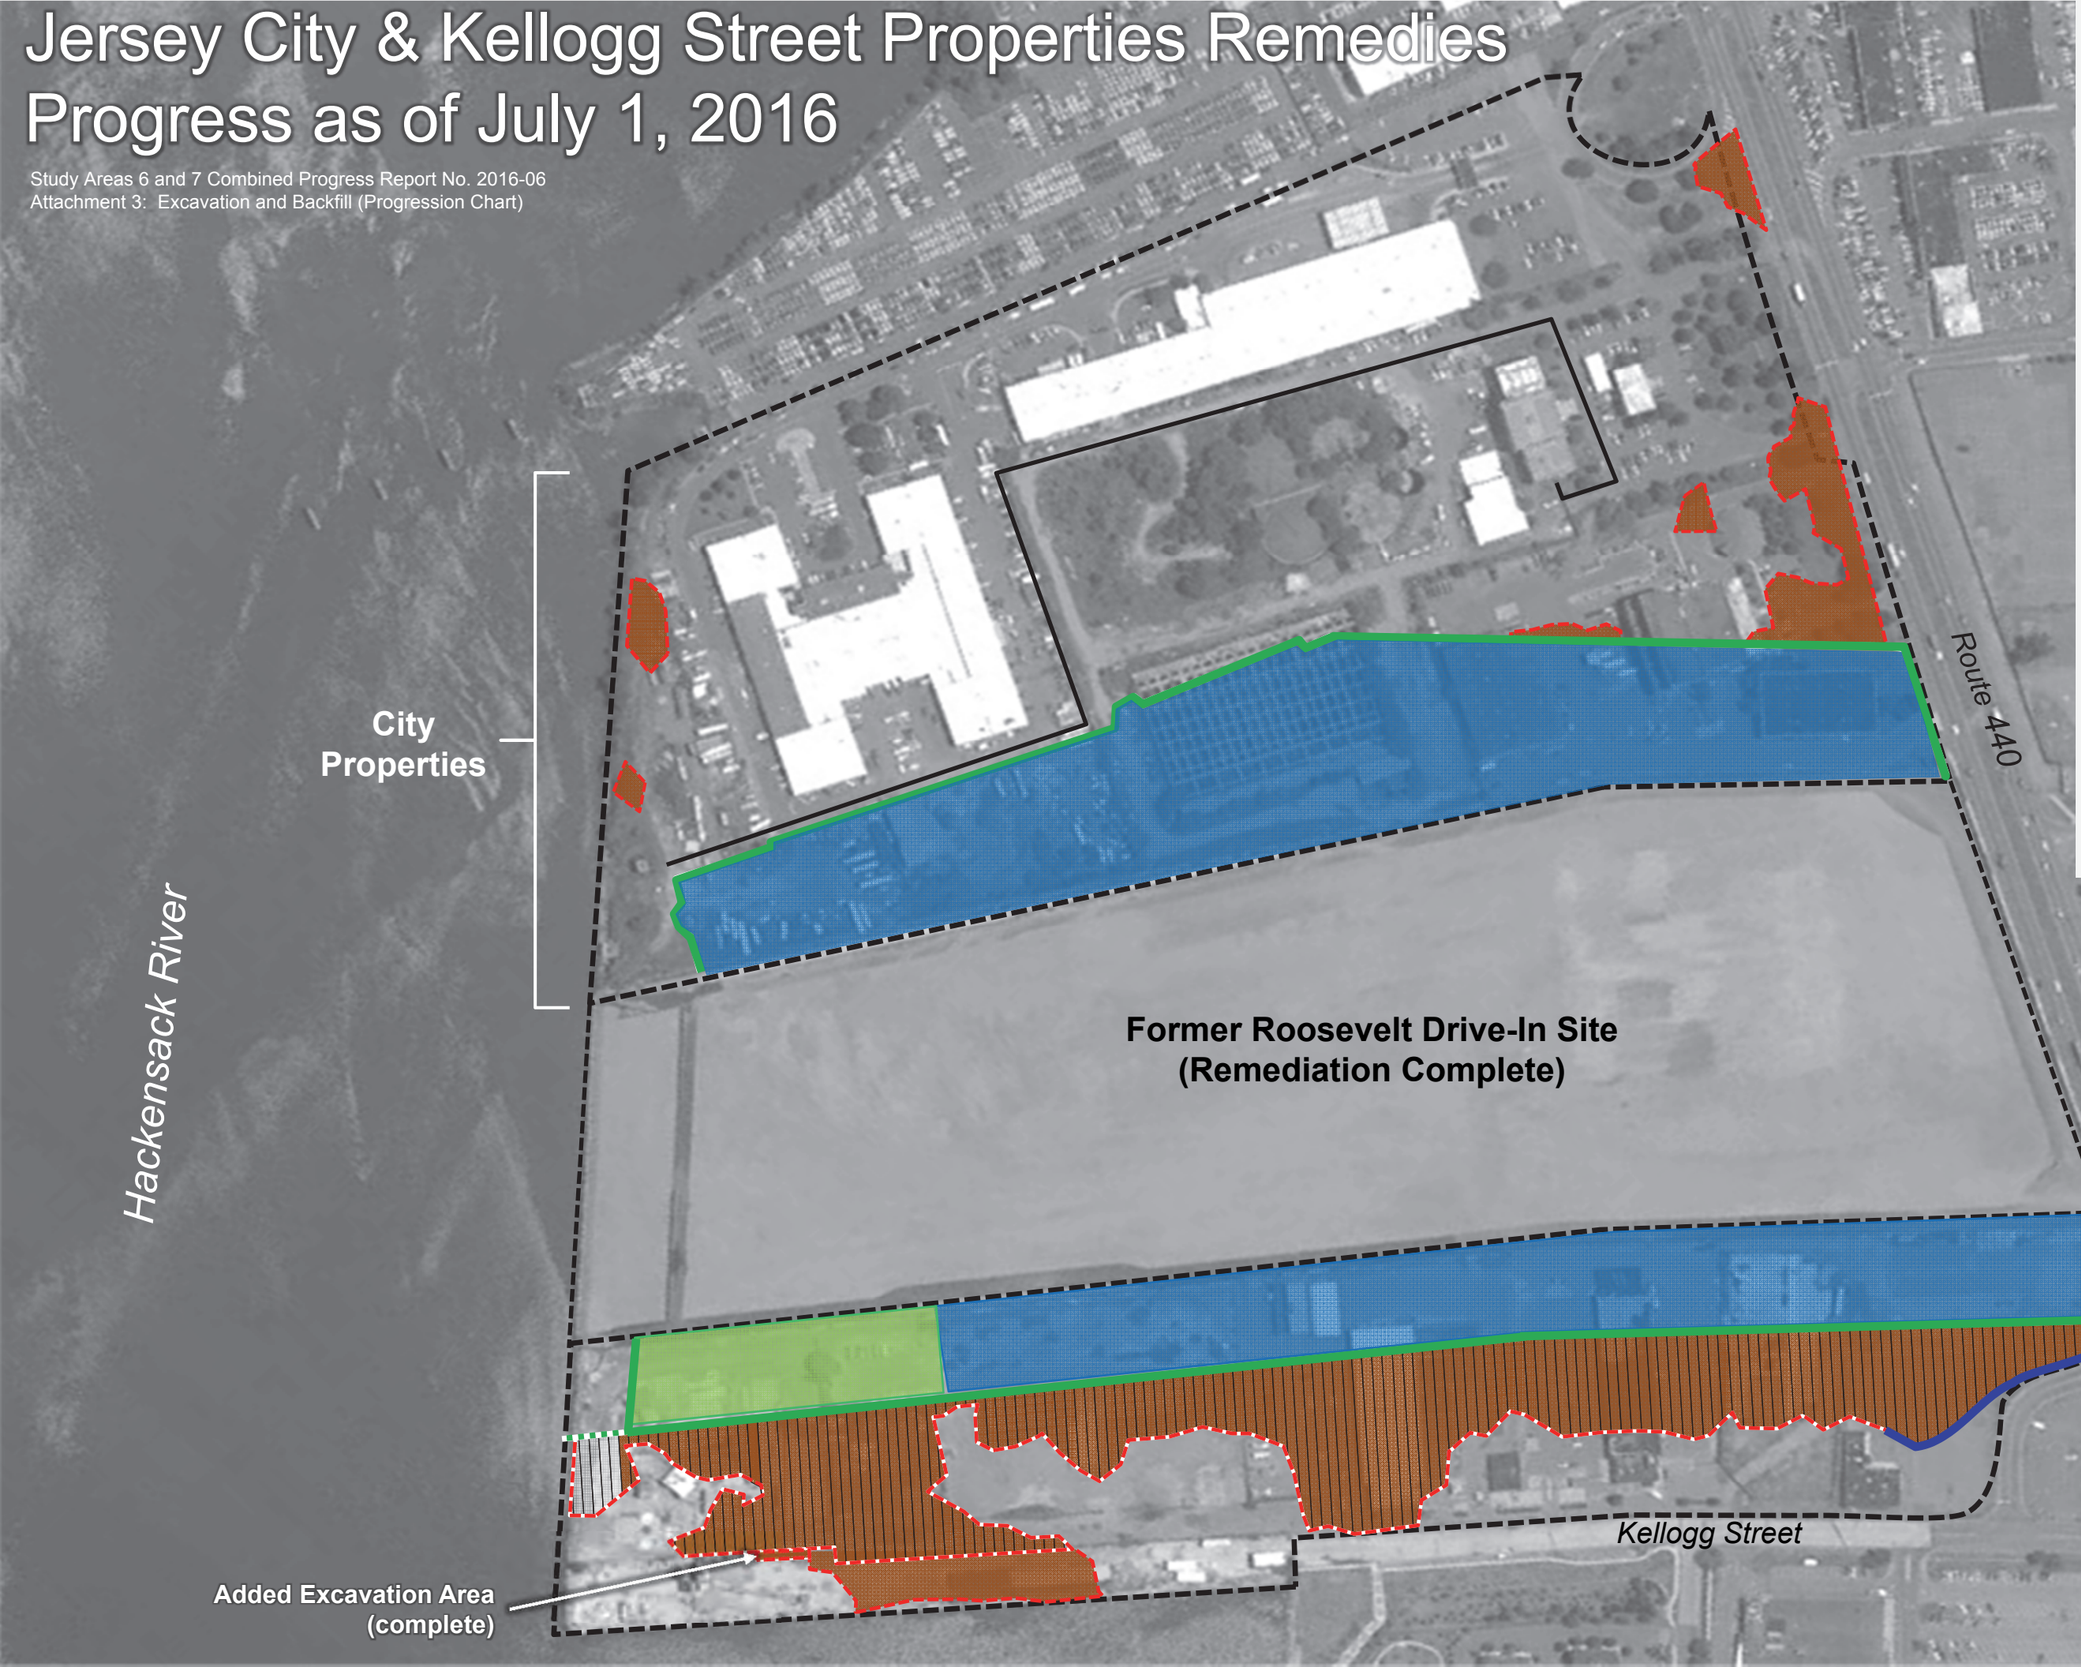
**Site Photograph 2:** Installing monitoring wells former Jersey City properties.

**Site Photograph 3:** Loading clean imported cover soils for placement in Open Space Areas.

**Site Photograph 4:** Placement of Venting Layer in Open Space Area.

**Site Photograph 5:** Placing clean imported topsoil in Open Space Area Kellogg St properties.

**Site Photograph 6:** Removing trimmed sections of sheet pile barrier wall.



**Site Photograph 7:** Unloading clean imported stone screenings in utility corridor.

# Certificate of Soil Surface

Sheet # 1

| | | | | | |
|---|---|---|---|---|---|
| Project Name | HONEYWELL SA-6 NORTH | Material Desc. | GEOMEMBRANE | | |
| Project No. | 100530001 | General Desc. | (Subgrade) | Operations | LCRS |
| Owner/ Contr. | HONEYWELL / AMEC FW | Cell No. | ~STA. 319+00 + ~STA 317+75 | | |
| QA Monitor | LANGAN | Date | 6/22/16 | | |

Description of Soil Surface to be lined: WESTERN END OF SA-6 NORTH (~STA 319+00) APPROX. 125 FT. EAST (STA. 317+75). SOIL APPEARS TO BE GRADED, COMPACTED, AND FREE OF DEBRIS (7½") AND IN CONFORMANCE WITH PROJECT SPECS. NOTE: MINOR CHANGES IN SUBGRADE ELEVATION IN SELECT AREAS TO ALLOW POSITIVE DRAINAGE

I hereby certify that the above surface area is suitable for the installation of geosynthetics, and I shall be responsible for its integrity and suitability in accordance with the specifications from this date to the completion of the installation.

| Visual Inspection of Subgrade Surface | |
|---|---|
| **QUALITY** | **Y/N/NA** |
| **Geomembrane** | |
| Smooth | Y |
| Uniform | Y |
| Relatively free from abrupt changes in grade, rocks larger than ½, sharp objects, and debris | Y |
| Free of standing water | Y |
| Surface area to be lined has been properly prepared | Y |
| **Geocomposite Clay Liner** | |
| Free from wheel ruts, debris, rocks, sticks, and rocks larger than 1 inch | |
| Suitable for placement of GCL | |
| Smooth | |
| Any changes required? If so the contractor and owner's representative must be notified. | |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 6/21/2015 |
| **PROJECT:** | SA-6 Capping | | | **WEATHER:** | 80/92° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Soil Subgrade Inspection | | **TIME:** | 0745 – 1215 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #1** |
|---|---|
| **Entact & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Philemon<br>**Langan:** Dan Bosworth, Jeff Stoicescu<br>**ENTACT**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite to conduct soil subgrade inspection along the west end of SA-6 North. A preliminary kickoff meeting was conducted between AmecFW, Langan, and Entact to discuss the QA / QC activities, along with the strategy and implementation plan for the proposed capping of SA-6 North.
- Following the meeting, Langan and AmecFW conducted a visual observation of the prepared soil subgrade along the western end of SA-6 North. This area included the furthest western part of the cap (approximately 100 ft. from the western end moving east).
- In general, the following soil subgrade properties were observed:
  - Various debris including broken glass, wood fragments, small rocks, etc. were observed along the western end of SA-6 North (specifically along the slopes and elevation changes at the northern end of the cap). It is recommended that this debris addressed so that no objects are penetrating / extruding from the surface, and the overall subgrade is flat and even. Additionally, Entact should provide laborers with a wheelbarrow and equipment to collect various debris as it is encountered.
  - Some slight changes in elevation were observed in areas along the western end of the cap where one area appeared higher than the other. The variations in cap subgrade elevation could potentially result in the ponding of water. Additionally, the mouths along the tree bulb swales appeared to be higher than the swale itself, thus causing water to pond in the swales instead of flowing out and down the sides of the cap. AmecFW to review the survey data and confirm existing grades.
  - Additional details regarding the subgrade are outlined in the 6/21/16 Photograph Log attached as part of this report.
- AmecFW to address the issues outlined above, with follow up subgrade inspection to be completed on 6/22/16 by Langan (prior to deployment of GVL).

## ***Observations Requiring Contractor / QA Engineer Review***

- Based on the soil subgrade observation, the soil has not yet been approved for liner installation activities based on the debris / penetrations outlined in this report. It is recommended that the Entact provide the necessary labor to remove the various debris and provide a flat, even surface with no penetrations or extrusions through the subgrade.

Cc Jeff Stoicescu, Rory Johnston, Vikki Hon, File

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items Pending***

- QA Engineer - Review SA-6 North capping specifications and drawings. Review product submittals (as provided) and ensure that all data, drawings, and pertinent documents are ready for liner installation kickoff (planned to commence on 6/22/16).

***Action Items – Weekly Completions***

- None to Date

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- SA-6 North capping to commence on 6/22/16 (pending soil subgrade approval).

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 6/22/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 78/92° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | | **TIME:** | 0745 – 1630 |

| | |
|---|---|
| **CONTRACTOR & EQUIPMENT:**<br>**ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Misc. Hand Tools (shovels, rakes) | **PERSONNEL ON SITE:** **Day #2**<br>**AmecFW**: Stu Bills, Geoff Shallard, Dave Ambrose, Philemon<br>**Langan:** Dan Bosworth<br>**ENTACT**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) starting at the western end of SA-6 North. Material to be placed starting from the western end (approximate Sta. 319+00) of SA-6 North for approximately 125 ft. east. (to approximate Sta. 317+75).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area).
- Prior to placement of geosynthetic material, soil subgrade observation was conducted by Langan and Entact for the area outlined above. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos #1, 2, 3, and 4 of the daily photo log for 6/22/2016, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications as verified by AmecFW. Additionally, minor modifications to the subgrade elevations were completed by Entact to facilitate positive drainage flow away from the tree bulb swales (located at approximate Sta. 317+75).
- Following soil subgrade approval, ESI began by placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 2 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed on the western end of the Site (approximate Sta. 319+00) moving east (to approximate Sta. 317+75). GVL was placed according to the project specifications with white plastic fasteners spaced at a minimum of 5 ft. Additionally the top panel of geotextile was sewed along the seams (according to the project specifications). Refer to 6/22/16 Photo Log for supporting photographs.
- After installation of GVL, geomembrane liner was installed beginning at the western end of SA-6 North and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 319+00 to approximate Sta. 317+75. A total of seven panels were installed (P1, P2, P3, P4, P5, P6, and P7). Note: P1 consisted of an approximate 50 ft. by 18 ft. piece of LLDPE installed along the western end of SA-6 North. During placement of panel P4, the roll of LLDPE terminated at the approximate center of the cap, thus the remaining run of LLDPE was installed as P5. P2, P3, P6, and P7 ran the entire width of SA-6 North (approximately 162 ft.) from north to south.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- Adjacent panel seams were overlapped a minimum of four inches for fusion welding (according to project specifications). Prior to welding activities, trial welds were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing. The results of the pre-trial weld are provided in the 6/22/16 *Trial Weld Log.*
- Non-destructive testing was then conducted (pressure testing) for the fusion welded seams. 30 psi was applied to the seams and held for 5-minute increments with no more than 4 psi loss measured over the 5-minute interval. The results of the non-destructive tests are outlined in the *Seam Control Form.*
- Destruct test samples and extrusion weld detailing to be completed on 6/23/15.

***Non-Conformance Items / Corrective Actions***

- None Encountered.

***Action Items – Pending***

- Complete Daily Report and Photo Log. Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, etc.)

***Action Items – Weekly Completions***

- None to Date

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Additional subgrade preparation work for the next approximate 100 ft. run east (approximately from Sta. 317+75 to Sta. 316+75).
- Continue with 16 oz. geotextile, GVL, and LLDPE placement moving east along SA-6 North.

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from panel P7 installed on 6/22/16 (approximate Sta. 317+75). Material to be placed from Panel P7 running approximately 125 ft. east to approximate Sta. 316+50.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 317+75 (Panel P7 installed on 6/22/16) to approximate Sta. 316+50. Refer to *Soil Subgrade Approval* forms from 6/23/15 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 4 of the daily photo log for 6/23/2016, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications as verified by AmecFW
- GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 317+75 (east Panel P7) moving east to approximate Sta. 316+50. GVL was placed according to the project specifications with white plastic fasteners spaced at a minimum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/23/16 Photo Log for supporting photographs.
- While GVL was being deployed, ESI also conducted patch / repair work along the panels installed on 6/22/16 (Panels P1 to P7). Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (6/23/16).

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- A total of eleven repairs (R-1 through R-11) were observed and fixed (according to the project specifications) from Panels P1 through P7. Refer to 6/23/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While the geomembrane (installed on 6/22/16) was being patched / repaired, ESI also began to prepare penetration boots for Piezometer PZ10 and Well 115-W6-SO. Note: The boot and boot skirts were completed, however, the vertical welds along the boot have not yet been completed as methane testing / spark testing are to be completed prior to finalizing the boot details.
- During repair activities / extrusion welding one non-conformance issue was observed and was documented on Sheet #1 as non-compliance. The non-compliance issue encountered was identified based on debris / rock that was observed underneath the LLDPE geomembrane. The rock was subsequently removed and the hole was patched / repaired according to the project specifications and further outlined in the *Non-Compliance and Corrective Action* forms – *Sheet #1* for 6/23/16. The non-compliance issue was also recorded within the *Repair Log* as a subgrade irregularity and is identified as R-10.
- After placement of GVL, geomembrane liner was installed beginning at the western end of SA-6 North (from Panel P7) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 317+75 (Panel P7) to approximate Sta. 316+50. A total of six panels were installed (P8, P9, P10, P11, P12, and P13). Note: During placement of panel P8, the roll of LLDPE terminated approx.. 2/3 from the north of the cap, thus the remaining run of LLDPE was installed as P9. Similarily, during placement of Panel P12, the roll terminated along the northern end of SA-6 North, thus the remaining run of LLDPE was labeled as P13. Panels P10 and P11 ran the entire width of SA-6 North (approximately 162 ft.) from north to south.
- Adjacent geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 6/23/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 316+50, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 6/23/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panels P8 through P13. A total of 32 additional repairs (RP-11 through RP-43) were observed and fixed according to the project specifications. Additional details are also outlined on the 6/23/16 *Repair Log.*
- A total of four destruct samples were collected for laboratory sampling by Entact / ESI. Three fusion weld destruct samples DS-1 (Panel P1 / P2 seam), DS-2 (Panel P6 / P7 seam), and DS-3 (Panel P10 / P11 seam) were collected for laboratory analysis. Additionally, one extrusion weld sample DSX-1 (Panel P1) was also collected for laboratory analysis.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 1 (Sheet #1) – Subgrade irregularity identified as R-10 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P6. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 1 Notice of Non-Compliance.*

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 6/23/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16. ESI Daily Form Submittals still to be reviewed.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 6/24/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 78/95° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | | **TIME:** | 0645 – 1545 |

| | |
|---|---|
| **CONTRACTOR & EQUIPMENT:**<br>**ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **PERSONNEL ON SITE:** **Day #4**<br>**AmecFW**: Stu Bills, Dave Ambrose, Ari Eslaminejad, Philemon Onyango<br>**Langan:** Dan Bosworth<br>**ENTACT / ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from Panel P12 / P13 installed on 6/23/16 (approximate Sta. 316+50). Material to be placed from Panel P12 / P13 running approximately 75 ft. east to approximate Sta. 315+75.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 316+50 (Panel P12 / P13 installed on 6/23/16) to approximate Sta. 315+75. Refer to *Soil Subgrade Approval* forms from 6/24/15 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 3 of the daily photo log for 6/24/2016, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications as verified by AmecFW
- GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 316+50 (east of Panel P12 / P13) moving east to approximate Sta. 315+75. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/24/16 Photo Log for supporting photographs.
- While GVL was being deployed, ESI also continued patch / repair work for the panels installed on 6/23/16 (Panels P8 to P13). Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (6/24/16).
- In addition, methane / spark testing was conducted for the pipe boots completed for Well 115-W6-SO,

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

Piezometer PZ10, and Gas Vent GV-6. Prior to spark testing, methane testing was conducted to measure the concentration of methane present below the LLDPE geomembrane. During methane testing of Well 115-W6-SO, a concentration of 1.4% (greater than 1%) was measured. No spark testing was conducted on Well 115-W6-SO due to the measured methane concentration. Instead, the weld was visually observed for deficiencies and none were noted.

- Methane testing for PZ10 and Gas Vent GV-6 yielded methane concentrations of 0.8% and 0.0%, respectively (<1%). Following the methane testing, spark testing was conducted by ESI for the vertical weld and pipe boot weld at the base of the penetration (i.e. welds not accessible for vacuum box testing). No sparks were observed during the test, and both boots passed. Additional details are outlined in the *Spark Testing QA Form Sheets #1-3.*
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P12 / P13 (installed on 6/23/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 316+50 (Panel P12 / P13) to approximate Sta. 315+75. A total of six panels were installed (P14, P15, P16, P17, P18, and P19). Note: During placement of panel P15, the roll of LLDPE terminated approx. 2/3 from the north of the cap, thus the remaining run of LLDPE was installed as P16. Panels P14, P17, P18, and P19 ran the entire width of SA-6 North (approximately 192 ft.) from north to south.
- Adjacent geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 6/24/16 *Trial Weld Log*.
- Upon completion of geomembrane panel placement to approximate Sta. 315+75, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 6/24/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panels P14 through P19. Additional details are also outlined on the 6/24/16 *Repair Log.*
- A total of thirty repairs (RP-44 through RP-73) were observed and fixed (according to the project specifications) from Panels P14 through P19. Refer to 6/24/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Note: vacuum box testing not completed for all welds. To be continued on 6/27/16.
- A total of two destruct samples were collected for laboratory analysis by Entact / ESI. One fusion weld destruct sample DS-4 (Panel P15 / P17 seam) was collected for laboratory analysis. Additionally, one extrusion weld sample DSX-2 (Panel P10) was also collected for laboratory analysis.

## ***Non-Conformance Items / Corrective Actions***

- None Encountered

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 6/24/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample data (once received from laboratory).

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 6/29/2016 |
| **PROJECT:** | SA-6 North Capping | | **WEATHER:** | 78/90° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | **TIME:** | 0650 – 1530 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #6** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton<br>**Langan:** Dan Bosworth<br>**ENTACT / ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for LLDPE repair activities to be completed on LLDPE geomembrane installed on 6/27/16. Note: No capping activities conducted on 6/28/16 due to inclement weather, and no new LLDPE was placed on 6/29/16 as soil subgrade was not approved.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI continuing with non-destructive testing (pressure testing) and repair activities for geomembrane panels P19 through P27 (installed on 6/27/16). Non-destructive testing was conducted on the remaining panel seams and the seams were pressurized to 30 psi and held for 5 minutes with less than 4 psi loss. Refer to *6/29/16 Seam Control Form* for additional details.
- A total of twenty-two repairs (R-82 through RP-103) were observed and fixed (according to the project specifications) from Panels P19 through P27. Refer to 6/29/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of two destruct samples were collected for laboratory analysis. Two fusion weld destruct samples, DS-5 and DS-6, were collected from Panel Seam P19 / P20 and Panel Seam P23 / P24, respectively. Additional details are outlined in the *Trial Weld Log* dated 6/29/16.
- The LLDPE pipe boot penetration for Gas Vent GV-5 was completed and extrusion welded. Note: no methane testing / spark testing completed. Methane / spark testing to be completed week of July 5, 2016.
- While ESI was conducting repairs, small areas of standing water were observed on the soil subgrade from Sta. 314+25 to approximate Sta. 313+75. Entact solidified the subgrade by adding calcium cement to the soils so that the wet areas were absorbed / removed. Additionally, minor modifications to the subgrade were completed to facilitate positive drainage off of SA-6 North.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 2 (Sheet #2) – Subgrade irregularity identified as R-98 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P26. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 2 Notice of Non-Compliance.*

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 6/29/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct samples results for DS-5 and DS-6.

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, and 6/27/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1, DS-2, DS-3, and DS-4. Reviewed laboratory data for extrusion weld destruct sample DSX-1 and DSX-2. Laboratory results in compliance with project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the May 2016 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy/SGF

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used: All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3. SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler. All samples are iced in a cooler during transport to the lab.

# Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending June 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2014-6-10** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-6-10 includes the french drain installation, as well as pump and access station manholes for SA-6 South. Some design details, including the electrical design, will be finalized based field obersvations and constructability review. | Submitted to Contractor only. |
| **DC 2014-11-20** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-11-20 includes the french drain installation, electrical supply and discharge piping for SA-6 North. | Submitted to Contractor only. |
| **DC 2015-2-12** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-2-24 is a follow up to DC 2014-6-10, the SA-6 South CGWES trench design. DC 2015-2-24 includes details for electrical supply and discharge piping. | Submitted to Contractor only. |
| **DC 2014-2-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to document the changes in the SA 6 North and South cap subgrades that resulted from the change to a trench system. | Submitted to Contractor only. |
| **DC 2015-9-03** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-9-03 is a follow up to DC 2015-2-24, the SA-6 South CGWES electrical supply. DC 2015-9-03 provides a revised electrical plan. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending June 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-5-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to address the elimination of a drop structure, the elmination of a flow meter, conduit sizing changes, and to clarify Entact's scope. | Submitted to Contractor only. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |

**SA-6 North/South Field Change Log - Month Ending June 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Parties on July 2, 2015. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groundwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | Submitted to Contractor only. |
| **DC 2016-04-15** | Amec Foster Wheeler has provided final restoration grades for SA-6 South Development Area. The DCB also includes the final cover types in revised Drawing C-128. | Submitted to Contractor only. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |

**SA-6 North/South Field Change Log - Month Ending June 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only. |
| **DC 2015-07-22** | Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA-6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |

**SA-6 North/South Field Change Log - Month Ending June 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Contractor only. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | Submitted to Contractor only. |
| **DC 2015-09-28** | Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling. | Submitted to Parties on October 1, 2015. |
| **DC 2015-12-21** | Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation –8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area. | Submitted to Contractor only. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending June 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance withASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |
| **DC 2015-12-01** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | Submitted to Contractor only. |
| **DC 2016-02-03** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. | Submitted to Contractor only. |
| **DC 2016-02-22** | AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entact's request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location.<br>In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5. | Submitted to Contractor only. |
| **DC 2016-02-25** | This DCB has been issued to provide Entact with the latest SA-6 North HB Wall and SCB wall plan and profile drawings (SN-201 thru SN-205), which were modified to reflect changes made in DC 2016-02-22. | Submitted to Contractor only. |
| **DC 2016-05-03** | The laboratory results of all gradations for planting soils shall be presented in terms of the USDA classification system rather than the USCS classification system. | Submitted to Contractor only. |
| **DC 2016-03-18** | This DC 2016-03-18 documents the revised acceptable ranges of physical parameters and provides an updated specification made in consultation with Dr. Grabosky of Rutgers University. Dr. Grabosky provided his recommendations in correspondence dated 3/17/2016. | Submitted to Parties on March 22, 2016. Plaintiffs responded in a letter dated April 15, 2016. Plaintiffs and Honeywell subsequently held discussions and DCB 2016-04-20 was developed to document an agreement reached by all parties on the Special Master All-Hands monthly call on April 19, 2016. |
| **DC 2016-03-21** | Nature's Choice was identified as the source that best met the physical requirements for Horizon C soils by Dr. Grabosky; however, several samples of Nature's Choice Horizon C soils have hexavalent chromium concentration >1.0 mg/kg. Consequently, Honeywell is proposing a design change to allow the hexavalent chromium concentration in Nature's Choice Horizon C soils to be less than 1.8 mg/kg, as agreed to by the parties, as documented in the attached emails. For future sampling, hexavalent chromium soil samples will be composited from 10 grab sample locations per 5,000 CY (maximum). There are additional conditions in Attachment A that are part of this DCB and specific to Nature's Choice Horizon C soil. All other requirements specified in the 100% Design for imported soils will be met by the Nature's Choice Horizon C soils as amended in previous DC 2015-09-17. | Submitted to Parties on March 22, 2016. |

**SA-6 North/South Field Change Log - Month Ending June 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-04-20** | This DCB documents the approved sources of Horizon B and Horizon C materials, as agreed to by all parties on the Special Master All-Hands monthly call on April 19, 2016. | Submitted to Parties on April 21, 2016. |
| **DC 2016-05-06** | To allow for traffic flow within the project site following completion of the SA-6S Cap, a road will be installed within the "B Street" corridor. The road will be constructed by continuing the "Structural Fill under Roadways to within 6 inches of final grade" | Submitted to Parties on June 30, 2016. |
| **DC 2016-05-31** | This DCB documents the vault sketch Drawing C-310 (Rev 5, 5/31/16) | Submitted to Contractor only. |
| **DC 2016-5-11** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. As part of DC 2016-5-11, AmecFW issued SA-6 North Interim Grades to Entact. | Submitted to Contractor only. |
| **DC 2016-5-20** | After further review, AmecFW lowered the geomembrane Pump Station #1 on the SA-6 North cap in order to provide additional separation between the geomembrane and the bottom of the vault. (Refer to DC 2016-02-22). | Submitted to Contractor only. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2016-07**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from July 1 – July 31, 2016.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Global Director, Remediation
Design and Construction

WJH:jtc/sgf

| **TOTAL STAFF** | **70** | **69** | **72** | **68** | **65** |

## 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Conducted S-3 Mass Removal Injection Event No. 30 in injection well 088-IW-02.
- Replaced the submersible pump in GWET extraction well PW-3 with spare.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Continued perimeter air monitoring activities on SA-6 North. On SA-6 South, all intrusive activities are complete. As only site grading and restoration activities remain, air monitoring will be completed using hand-held portable devices for nuisance dust.
- Prepared and submitted the NJDEP – Discharge to Groundwater Permit by Rule for the planned Treatment Area 10-1 second injection event.
- Collected July PVSC compliance sample from the Construction Water Treatment Plant (CWTP).

## B. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned downstream process tanks T-300 (neutralization tank) and T-400 (effluent tank).
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on July 7, 2016.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | | |
|---|---|---|---|---|---|
| | 07/03/16 | 07/10/16 | 07/17/16 | 07/24/16 | 07/31/16 |
| Avg. Gallons Treated & Discharged (per day) | 78,968 | 77,153 | 76,395 | 77,536 | 76,878 |
| Average Flow (gpm) for Operating Period | 56 | 56 | 55 | 56 | 56 |
| Avg. Hours of Plant Operation | 23 | 23 | 23 | 23 | 23 |
| GWTP Influent Tanks (gal.) | 5,100 | 5,436 | 3,360 | 3,294 | 2,761 |

## C. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Began backfilling as part of site restoration in the SA-6 South Development Area.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Sarnia, Ontario Canada | Stablex | WWTP Filer Cake | 0 | 0 | 0 |
| **Entact/FCI** | Roll-off | Kearny, NJ | Clean Earth | Soil >1000ppm Cr | 3 | 18.0 | 54.2 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Backfill in Progress** | Historic Fill Soils – SA-6 South Development Area |

### 3. BACKFILL MATERIALS USED

| Source | Week Ending | | | | |
|---|---|---|---|---|---|
| | 07/03/16 | 07/10/16 | 07/17/16 | 07/24/16 | 07/31/16 |
| Natures Choice Horizon C | 0 | 0 | 0 | 9,523.88 | 0 |
| Cedar Hill Horizon B | 125.95 | 0 | 0 | 45.49 | 111.16 |
| Tilcon Mount Hope I-8 | 0 | 0 | 982.78 | 1994.48 | 533.16 |
| Natures Choice Topsoil | 0 | 0 | 0 | 0 | 0 |
| Tilcon 3/8” Stone | 51.11 | 127.94 | 0 | 0 | 77.08 |
| Weldon Screenings | 182.7 | 0 | 0 | 0 | 0 |

- Overburden historic fill soils with hexavalent chromium concentrations confirmed to be < 20 mg/kg soils were transferred and placed as backfill the SA-6 South development area.
- Screened Celgene material was placed as protective cover soil in the SA-6 North open space area. Approximately 6,848 cubic yards was placed as protective cover soil during the reporting period.
- Continued to screen Celgene material for use as protective cover soils on the SA-6 North Open Space Area.
- Completed the frequency sampling of stockpiled Horizon C soils at the Nature's Choice facility remaining to be imported for use at SA-6 North. Results provided in Attachment 6.

## D. SURCHARGE OPERATIONS

- All surcharging activities are completed.

## E. SHEET PILE OPERATIONS

- Continued cutting hydraulic barrier sheets to final elevation in SA-6 North Open Space Area.

## F. CAPPING OPERATIONS

- Completed importing and placing Horizon B soils atop Horizon C soils on SA-6 South Open Space Area Completed hydro-seeding of western portion of the SA-6 South Open Space. Approximately 2.1 acres of hydro-seeding was completed.
- Continued placement of Structural Fill Material in the future utility corridors crossing the SA-6 South open space area.
- Began placement of GDL cover soils and demarcation tape to include associated compaction testing on the SA-6 North Open Space Area.
- Began placement structural fill, root barrier, and Horizon C to include associated compaction testing on the SA-6 North Open Space Area.
- Continued SA-6 North geomembrane liner subgrade grading activities within the Open Space Area.
- Continued installation of geosynthetic components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, and geocomposite drainage layer.
- A total of 288,543 sq. ft. of geomembrane liner (65% of the total cap area) was deployed during the reporting period.
- Completed spark testing on ten boot welds during the reporting period. Please see the email summary in Attachment 11 for clarifications of the spark test reporting.
- Continued cutting hydraulic barrier sheets and finishing the SCB wall to final elevation in SA-6 North Open Space Area.

- Continued installation of Gas Vent Pipe within the SA-6 North Open Space Area.

## G. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDEP Waterfront Development | SA-6 North Only | Obtained 6/23/2010 | Not Specified, Est. 3/31/2015 | 6/23/2015 | - |

| USACE Nationwide Permit No. 27 for Droyers Cove Beneficial Environmental Project | Bayfront | Issued: 4/15/2016 | TBD | 3/18/2017 | 5/4/16 |
| NJDEP Coastal General Permit 24 for the living shoreline | Bayfront | Issued: 10/15/2015 | TBD | 10/14/2020 | 5/4/16 |

** Amec Foster Wheeler reviewed the expiration of this TWA with NJDEP, Division of Water Quality and no extension is necessary.*

## H. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Continue importing and placement of Horizon A Topsoil on the SA-6 South Open Space Area.
- Continue development area regrading on SA6 South.
- Continue hydro-seeding of SA-6 South Open Space Area.
- Continue screening of Celgene soils for protective cover soils.
- Continue cutting SA-6 North Hydraulic Barrier Wall and Soil-Cement Bentonite Wall to geomembrane liner grade.

- Continue preparation of the SA-6 North subgrade for geomembrane liner installation.
- Continue installation of geosynthetic components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, and geocomposite drainage layer.
- Continue placement of GDL cover soils within the SA-6 North Open Space Area.
- Continue placement structural fill, root barrier, and Horizon C soils to include associated compaction testing on the SA-6 North Open Space Area.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Continue installation CGWES Components.
- Complete PVSC Monthly compliance sampling.
- Conduct S-3 Mass Removal Injection Event No. 31 in well 088-IW-03.
- Conduct second injection event for Treatment Area 10-1.

Honeywell

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration |
|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1936 days** |
| **2** | **Remedial Action Work Plan** | **33 days** |
| **5** | **Remedial Action Design** | **1522 days** |
| **18** | **JCIA/JCDPW Relocation** | **1780 days** |
| 19 | Develop Site Relocation Master Plan | 38 days |
| 20 | Submit Site Relocation Master Plan | 0 days |
| 21 | JC Construction of New Facilities | 1309 days |
| 22 | Relocation Contractor Procurement | 392 days |
| 23 | JCIA and JCDPW Relocation | 949 days |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days |
| 24a | Demolition of JCIA Structures | 146 days |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** |
| **26** | **Remedial Action Work Plan** | **187 days** |
| **32** | **Remedial Action Design** | **1161 days** |
| **57** | **SA-6 South Relocation** | **616 days** |
| 58 | New GWTP Construction Completion | 502 days |
| 59 | Demolition of 80 Kellogg | 857 days |
| **60** | **SA-6 North/South Field Implementation** | **894 days** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 664 days |
| 60b | SA-6S (Site 163) In-Situ Treatment | 555 days |
| **61** | **Mobilization (Includees new GWTP, In-situ Treatment & Main Remedy)** | **87 days** |
| 61a | Mobilization | 87 days |
| **62** | **Surcharge Install/Instrumentation** | **706 days** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instumentation | 142 days |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 185 days |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 91 days |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 155 days |
| **63** | **Barrier Wall Install** | **569 days** |
| 63a | SA 6N Installation of Barrier Wall | 159 days |
| 63b | SA 6S Installation of Barrier Wall | 210 days |
| **64** | **Excavation** | **507 days** |
| 64a | SA 6N Excavation | 218 days |
| 64b | SA 6S Excavation | 295 days |
| **65** | **Backfill** | **558 days** |
| 65a | SA 6N Backfill | 283 days |
| 65b | SA 6S Backfill | 384 days |
| **66** | **Capping and Cover Soil Placement** | **426 days** |
| 66a | SA 6N Capping and Cover Soil Placement | 83 days |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days |
| **67** | **Restoration** | **234 days** |
| 67a | Restoration | 234 days |
| **68** | **Demobilization** | **22 days** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | |
| **69** | **SA-6 North Project Closeout** | **311 days** |
| **75** | **SA-6 South Project Closeout** | **311 days** |
| **81** | **SA-6 North Long Term Protections** | **1830 days** |
| **92** | **SA-6 South Long Term Protections** | **2569 days** |

Project: SA-6 Remediation Schedule
Revision 4
Date: 8/2/2016

Task  Milestone  Summary  Critical

Note: Current field implementation schedule shows capping complete in September 2016 and restoration in October 2016.

*(Attachment 8: Groundwater Quality Data)*

Note:
Well 115-MW-203BR has been replaced with well 115-MW-215BR

Notes:
Well 115-MW-203BR was replaced with 115-MW-215BR on 3/3/14.
Well 087-PW-2 was replaced with well 087-PW-3 on 12/2215.

**Non-conformance Log**
*(Attachment 11:  Capping Update)*

## Summary of Non-Compliance & Corrective Action Forms

***SA-6 North Cap Installation***

| Notice of Non-Compliance & Corrective Action Sheet Number | Date | Item | Associated Repair Number | Approx. Location | Follow Up Action Taken |
|---|---|---|---|---|---|
| 1 | 6/23/2016 | Subgrade Irregularity | R-10 | Panel P6 | Rock was removed from underneath geomembrane and hole was then patched with approximate 3 ft. by 3 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs) |
| 2 | 6/29/2016 | Subgrade Irregularity | R-98 | Panel P26 | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs) |
| 3 | 7/6/2016 | Failed Spark Test | Gas Vent GV-5 | Gas Vent GV-5 | Spark identified during spark testing of vertical boot weld on Gas Vent GV-5 boot. Area of weld was grinded, rewelded, and re-tested. Spark retest passed as no sparks were observed duriing the test |
| 4 | 7/6/2016 | Failed Spark Test | Well 115-W1-SO | Well 115-W1-SO | Spark identified during spark testing of vertical boot weld on Well 115-W1-SO boot. Area of weld was grinded, rewelded, and re-tested. Spark retest passed as no sparks were observed duriing the test |
| 5 | 7/7/2016 | Subgrade Irregularity | R-170 | Panel P38 | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs) |
| 6 | 7/8/2016 | Subgrade Irregularity | R-222 | Panel P45 | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 3 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs) |
| 7 | 7/12/2016 | Subgrade Irregularity | R-242 | Panel P49 / P50 | Rock was removed from underneath LLDPE geomembrane along the southern edge of SA-6 North (approximately 3 ft. from the edge of the cap. As such, the edge of the LLDPE was cut to remove the stone. This cut was then repaired with an extrusion weld bead. Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the cut / bead was properly sealed (as outlined in Section 02372). |
| 8 | 7/27/2016 | Subgrade Irregularity | R-328 | Panel P72 | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs) |
| 9 | 7/28/2016 | Failed Destruct Sample | DS-26 | Panel P72 / P74 (Repair R-312) | Destruct sample DS-26 reported two coupons as EPA Break Classification Code "AD BRK". Although the peel and shear strength requirments were met, since the coupons broke at the weld and were not conisdering a Film Tearing Bond, the sample was reported as a failed sample. Two field samples (DS-26A and DS-26B) were cut 10 ft. from each side of DS-26 and field tested. Peel and shear field tests met the strength requirments and sample DS-26B (lesser strength values of both samples) was sent for laboratory analysis (results pending). |

# Certificate of Soil Surface

Sheet # 15

| | | | | | |
|---|---|---|---|---|---|
| Project Name | HONEYWELL SA-6 NORTH | Material Desc. | GEOMEMBRANE | | |
| Project No. | 100530001 | General Desc. | (Subgrade) | Operations | LCRS |
| Owner/ Contr. | HONEYWELL / AMEC FW | Cell No. | ~STA. 306+40 TO ~STA. 305+40 | | |
| QA Monitor | LANGAN | Date | 7/28/16 | | |

Description of Soil Surface to be lined: AREA IMMEDIATELY EAST OF PANEL P&C (INSTALLED ON 7/27/16) APPROX 100 FT. EAST FROM ~STA. 306+40 TO ~STA. 305+40 SOIL APPEARS TO BE GRADED, COMPACTED, AND FREE OF DEBRIS (>1/2") AND IN CONFORMANCE WITH PROJECT SPECS.

I hereby certify that the above surface area is suitable for the installation of geosynthetics, and I shall be responsible for its integrity and suitability in accordance with the specifications from this date to the completion of the installation.

| Visual Inspection of Subgrade Surface | |
|---|---|
| **QUALITY** | **Y/N/NA** |
| **Geomembrane** | |
| Smooth | Y |
| Uniform | Y |
| Relatively free from abrupt changes in grade, rocks larger than ½, sharp objects, and debris | Y |
| Free of standing water | Y |
| Surface area to be lined has been properly prepared | Y |
| **Geocomposite Clay Liner** | |
| Free from wheel ruts, debris, rocks, sticks, and rocks larger than 1 inch | |
| Suitable for placement of GCL | |
| Smooth | |
| Any changes required? If so the contractor and owner's representative must be notified. | |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 6/27/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 70/85° F, Sunny (AM), PM Showers |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | | **TIME:** | 0650 – 1930 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #5** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Dave Ambrose, Ari Eslaminejad, Philemon Onyango<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from Panel P19 installed on 6/24/16 (approximate Sta. 315+75). Material to be placed from Panel P19 running approximately 150 ft. east to approximate Sta. 314+25.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 315+75 (Panel P19 installed on 6/24/16) to approximate Sta. 314+25. Refer to *Soil Subgrade Approval* forms from 6/27/15 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 3 of the daily photo log for 6/27/2016, for supporting subgrade photos. During subgrade observation, AmecFW was also completing surveying to verify the subgrade elevations. The area was subsequently approved by AmecFW following review of the survey data.
- While the subgrade was being surveyed, ESI deployed the orange geocomposite drainage layer (GDL), over the installed LLDPE geomembrane. GDL was placed from Panel P1 (approximate Sta. 319+00), to Panel P11 (approximate Sta. 316+25). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/27/16 Photo Log for supporting photographs.
- While GDL was being deployed, ESI also conducted, methane / spark testing for the pipe boot completed for Access Manhole #1 (Panel P10). Prior to spark testing, methane testing was conducted to measure the concentration of methane present below the LLDPE geomembrane. During methane testing of Manhole #1, a concentration of 0.1% (less than 1%) was measured. Following the methane testing, spark testing was conducted by ESI for the vertical weld and pipe boot weld at the base of the penetration (i.e. welds not accessible for vacuum box testing). No sparks were observed during the test, and Manhole #1 boot passed. Additional details are outlined in the *Spark Testing QA Form Sheet #4.*

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- Following the placement of GDL, and subsequent to AmecFW completing the survey requirements for the soil subgrade, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 315+75 (east of Panel P19) moving east to approximate Sta. 314+25. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/27/16 Photo Log for supporting photographs.
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P19 (installed on 6/24/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 315+75 (Panel P19) to approximate Sta. 314+25. A total of eight panels were installed (P20, P21, P22, P23, P24, P25, P26, and P27). Note: During placement of panel P21, the roll of LLDPE terminated at the approximate center of the cap, thus the remaining run of LLDPE was installed as P22. Similarly, during placement of Panel P24, the roll of LLDPE terminated along the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P25. Panels P20, P23, P26, and P27 ran the entire width of SA-6 North (approximately 200 ft.) from north to south.
- Adjacent geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 6/27/16 *Trial Weld Log*.
- Upon completion of geomembrane panel placement to approximate Sta. 314+25, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 6/27/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panels P19 through P27 to attempt to patch / cover the LLDPE before inclement weather. Additional details are outlined on the 6/27/16 *Repair Log.*
- A total of seven repairs (R-75 through R-81) were observed and fixed (according to the project specifications) from Panels P20 through P21. Refer to 6/27/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Note: not all repairs completed, repairs conducted to cover and seal cap before inclemente weather. Vacuum box testing not completed. Activities to be continued on 6/28/16. No destruct samples were collected, as destruct samples to be cut on 6/28/16 (Note: Repair R-74 destruct sample to be cut on 6/28/16).

## ***Non-Conformance Items / Corrective Actions***

- None Encountered

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 6/27/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete pipe boot penetration log for Piezometer PZ-8 (Panel P21).

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, and 6/24/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1, DS-2, DS-3, and DS-4. Reviewed laboratory data for extrusion weld destruct sample DSX-1 and DSX-2. Laboratory results in compliance with project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

***Daily QA Documents Completed***

## ***Site Activities***

- Langan onsite for LLDPE repair activities to be completed on LLDPE geomembrane installed on 6/27/16. Note: No capping activities conducted on 6/28/16 due to inclement weather, and no new LLDPE was placed on 6/29/16 as soil subgrade was not approved.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI continuing with non-destructive testing (pressure testing) and repair activities for geomembrane panels P19 through P27 (installed on 6/27/16). Non-destructive testing was conducted on the remaining panel seams and the seams were pressurized to 30 psi and held for 5 minutes with less than 4 psi loss. Refer to *6/29/16 Seam Control Form* for additional details.
- A total of twenty-two repairs (R-82 through RP-103) were observed and fixed (according to the project specifications) from Panels P19 through P27. Refer to 6/29/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of two destruct samples were collected for laboratory analysis. Two fusion weld destruct samples, DS-5 and DS-6, were collected from Panel Seam P19 / P20 and Panel Seam P23 / P24, respectively. Additional details are outlined in the *Trial Weld Log* dated 6/29/16.
- The LLDPE pipe boot penetration for Gas Vent GV-5 was completed and extrusion welded. Note: no methane testing / spark testing completed. Methane / spark testing to be completed week of July 5, 2016.
- While ESI was conducting repairs, small areas of standing water were observed on the soil subgrade from Sta. 314+25 to approximate Sta. 313+75. Entact solidified the subgrade by adding calcium cement to the soils so that the wet areas were absorbed / removed. Additionally, minor modifications to the subgrade were completed to facilitate positive drainage off of SA-6 North.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 2 (Sheet #2) – Subgrade irregularity identified as R-98 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P26. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 2 Notice of Non-Compliance.*

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 6/29/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct samples results for DS-5 and DS-6.

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, and 6/27/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1, DS-2, DS-3, and DS-4. Reviewed laboratory data for extrusion weld destruct sample DSX-1 and DSX-2. Laboratory results in compliance with project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 6/30/2016 |
| **PROJECT:** | SA-6 North Capping | | **WEATHER:** | 78/95° F, Sunny, Clear |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | **TIME:** | 0645 – 1615 |

| | |
|---|---|
| **CONTRACTOR & EQUIPMENT:**<br>**ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **PERSONNEL ON SITE:** **Day #7**<br>**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from Panel P27 installed on 6/27/16 (approximate Sta. 314+25). Material to be placed from Panel P27 running approximately 100 ft. east to approximate Sta. 313+25.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 314+25 (Panel P27 installed on 6/27/16) to approximate Sta. 313+25. Refer to *Soil Subgrade Approval* forms from 6/30/16 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 3 of the daily photo log for 6/30/2016, for supporting subgrade photos. During subgrade observation, AmecFW was also completing surveying to verify the subgrade elevations. The area was subsequently approved by AmecFW following review of the survey data.
- Following subgrade approval (including AmecFW completing the survey requirements for the soil subgrade), GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 314+25 (east of Panel P27) moving east to approximate Sta. 313+25. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/30/16 Photo Log for supporting photographs.
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P27 (installed on 6/27/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 314+25 (Panel P27) to approximate Sta. 313+25. A total of five panels were installed (P28, P29, P30, P31, P32. Note: During placement of Panel P30, the

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

roll of LLDPE terminated near the north end of SA-6 North, thus the remaining run of LLDPE was installed as P31. Panels P28, P29, and P31 ran the entire width of SA-6 North (approximately 215 ft.) from north to south.

- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 6/30/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 314+25, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 6/30/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panels P27 through P32. Additional details are outlined on the 6/30/16 *Repair Log.*
- A total of thirty-one repairs (R-104 through R-134) were observed and fixed (according to the project specifications) from Panels P19 through P27. Refer to 6/30/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Note: Add on (AO) repairs completed for Panels P17, P18, and P19, as LLDPE length had to be increased along edges of SA-6 North.
- Following the placement of LLDPE geomembrane, ESI deployed the orange geocomposite drainage layer (GDL), over the installed LLDPE geomembrane. GDL was placed from Panel P11 (approximate Sta. 316+25), to east of Panel P19 (approximate Sta. 315+50). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/30/16 Photo Log for supporting photographs
- A total of four destruct samples were collected on 6/30/16. Three fusion weld destruct samples DS-7, DS-8, and DS-9 were collected from panel seams P13 / P14, P18 / R-105, and 18 / 19, respectively. One extrusion weld destruct sample, DSX-3, was collected from Panel P21 (R-79).

## ***Non-Conformance Items / Corrective Actions***

- None Encountered

## ***Action Items – Pending***

- Complete Daily Report and Photo Log for 6/30/16. Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DS-7, DS-8, DS-9, and DSX-3.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, and 6/29/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-6. Reviewed laboratory data for extrusion weld destruct sample DSX-1 and DSX-2. Laboratory results in compliance with project specifications.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

***Daily QA Documents Completed***

| | | |
|---|---|---|
| A1 – Certificate of Completion | | To be completed at termination of project |
| A2 – Receiving and Inspection | | NA – no material delivered on 6/30/16 |
| A3 – Photo Log | Pages 1 – 7 | Total of 13 photos outlining pertinent daily observations and descriptions for 6/30/16 |
| A4 – Geosynthetic Inventory Log | | Completed to date; no updates from 6/30/16 |
| A5 – Subgrade Approval | Sheet 5 & ESI (6/30/16) | Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer |
| A6 – Trial Weld Log | Pages 2-3 | One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 6/30/16 |
| A7 – Panel Placement Log | Pages 4-5 | One panel placement log provided by ESI and confirmed by Langan for panels placed on 6/30/16 |
| A8 – Destruct Seam Testing COC | Sheet 1 | Updated for destruct samples collected on 6/30/16 |
| A9 – Seam/Non-Destruct. Test Log | Pages 7-8 | One seam control form provided by ESI and confirmed by Langan for air pressure testing conducted on 630/16 |
| A10 – Repair Log | Pages 6-7 | One repair log provided by ESI and confirmed by Langan for repairs completed for 6/30/16 |
| A11 – Conformance COC | | NA for 6/30/16 |
| A12 – Destructive Seam Field Test | Page 1 | Updated with destruct samples collected on 6/30/16 |
| A13 – Destruct. Sample Summary | Page 1 | Destruct sample summary updated with samples collected on 6/30/16 |
| A14 – Penetration & Edge Form | | NA – no pipe boot penetrations completed on 6/30/16. |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from Panel P32 installed on 6/30/16 (approximate Sta. 313+25). Material to be placed from Panel P32 running approximately 65 ft. east to approximate Sta. 312+60.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 313+25 (Panel P32 installed on 6/30/16) to approximate Sta. 312+60. Refer to *Soil Subgrade Approval* forms from 7/1/16 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 3 of the daily photo log for 7/1/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 313+25 (east of Panel P32) moving east to approximate Sta. 312+60. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/1/16 Photo Log for supporting photographs.
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P32 (installed on 6/30/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 313+25 (Panel P32) to approximate Sta. 312+60. A total of seven panels were installed (P33, P34, P35, P36, P37, and P38). Note: During placement of Panel P33 the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P34. Similarly, during placement of Panel 36, the roll of LLDPE terminated

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

approximately 2/3 from the north end of SA-6 North, thus the remaining run of LLDPE was installed as P37. Panels P32, P35, and P38 ran the entire width of SA-6 North (approximately 220 ft.) from north to south.

- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 7/1/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 312+60, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/1/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panel P29 (installed on 6/30/16) and Panels P33 to P38 (installed on 7/1/16). Additional details are outlined on the 7/1/16 *Repair Log.*
- A total of twenty-eight repairs (R-135 through R-162) were observed and fixed (according to the project specifications) from Panels P19 through P27. Refer to 7/1/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- ESI also completed a pipe boot for Well 115-S1-SO located on the Panel P28 / P29 seam. Additional details are provided in the pipe boot penetration form for 7/1/16. No methane / spark testing was conducted on the boot (to be completed on 7/6/16).
- Following the placement of LLDPE geomembrane, ESI deployed the orange geocomposite drainage layer (GDL), over the installed LLDPE geomembrane. GDL was placed from Panel P11 (approximate Sta. 316+25), to east of Panel P19 (approximate Sta. 315+50). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/30/16 Photo Log for supporting photographs
- A total of four destruct samples were collected on 7/1/16. Three (3) fusion weld destruct samples were collected – DS-11, DS-12, and DS-13 from Panel Seams P31 / P32, P34 / P35, and P36 / P38, respectively. One extrusion weld destruct sample – DSX-4 was collected from Panel P32 (Repair R-148).

## ***Non-Conformance Items / Corrective Actions***

- None Encountered

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/1/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory data for destruct samples DS-11, DS-12, DS-13, and DSX-4.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, and 6/30/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-10. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-3. Laboratory results in compliance with project specifications.

Hand Tools (shovels, rakes) | **PERSONNEL ON SITE:** **Day #9**<br>**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), 60-mil geomembrane liner (LLDPE) continuing east from Panel P38 installed on 7/1/16 (approximate Sta. 312+60). Material to be placed from Panel P38 running approximately 85 ft. east to approximate Sta. 311+75.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P19 (approximate Sta. 315+50), moving east up to Panel P27 (approximate Sta. 314+60). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/6/16 Photo Log for supporting photographs
- While ESI was deploying GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 312+60 (Panel P38 installed on 7/1/16) to approximate Sta. 311+75. Refer to *Soil Subgrade Approval* forms from 7/6/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 3 to 5 of the daily photo log for 7/6/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 312+60 (east of Panel P38) moving east to approximate Sta. 311+75. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/6/16 Photo Log for supporting photographs.

- During deployment of GVL, the potential for rocks or other debris to become dislodged in the soil subgrade were observed. Additional walkover and observation activities were conducted along the GVL to attempt to identify any rocks or debris (>1/2") that may have been dislodged.
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P38 (installed on 7/1/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 312+60 (Panel P38) to approximate Sta. 311+75. A total of four panels were installed (P39, P40, P41, and P42). Note: During placement of Panel P39 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P40. Panels P41 and P42 ran the entire width of SA-6 North (approximately 220 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 7/6/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 311+75, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/6/16 *Seam Control Form* for non-destructive testing details. ESI completed a temporary pipe boot for Extraction Pump Station #1 and completed leistering of temporary patches to cover the LLDPE geomembrane. Repair (detailing) activities to be completed on 7/7/16.
- While GDL was being deployed, ESI also conducted, methane / spark testing for the pipe boots completed for Piezometer PZ8, Gas Vent GV-5, and Well 115-W1-SO. Prior to spark testing, methane testing was conducted to measure the concentration of methane present below the LLDPE geomembrane. During methane testing, a concentration of 0.0% (<1%) was measured for each of the pipe boots. Following the methane testing, spark testing was conducted by ESI for the vertical weld and pipe boot weld at the base of the penetration (i.e. welds not accessible for vacuum box testing).
- During the spark testing for Piezometer PZ8 a spark was observed at the top of the boot (outside of the 2 ft. boot requirement). Since this spark was outside of the required boot construction, the boot was subsequently cut at 2 ft. (thus removing the failed weld), and the remaining boot was retested with no sparks observed.
- During spark testing of Gas Vent GV-5 and Well 115-W1-SO, a spark was observed while testing the vertical weld and a small pinhole deficiency was observed in the weld. These areas will be grinded, rewelded, and retested on 7/7/16. Additional details are outlined in the *Spark Testing QA Forms* dated 7/6/16.
- No destruct samples collected on 7/6/16. Destruct samples to be cut on 7/7/16.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 3 (Sheet #3) – Failed spark test along vertical weld of Gas Vent GV-5
  - Failed spark test identified during spark testing of Gas Vent GV-5. Small pinhole deficiency identified in vertical weld. Weld to be grinded, re-welded, and re-tested on 7/7/16.
- Non-Conformance No. 4 (Sheet #4) – Failed spark test along vertical weld of Well 115-W1-SO
  - Failed spark test identified during spark testing of Well 115-W1-SO. Small pinhole deficiency identified in vertical weld. Weld to be grinded, re-welded, and re-tested on 7/7/16.

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/6/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, and 7/1/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-13. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-4. Laboratory results in compliance with project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

***Daily QA Documents Completed***

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 7/7/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 82/98° F, Overcast, Humid |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | | **TIME:** | 0645 – 1530 |

| | |
|---|---|
| **CONTRACTOR & EQUIPMENT:**<br>**ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **PERSONNEL ON SITE:** **Day #10**<br>**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), 60-mil geomembrane liner (LLDPE), continuing east from Panel P42 installed on 7/6/16 (approximate Sta. 311+75). Material to be placed from Panel P42 running approximately 20 ft. east to approximate Sta. 311+55. Note: based on available prepared subgrade and inclement weather scheduled in the afternoon, ESI deployed one panel of GVL and one panel of LLDPE geomembrane so that the installed LLDPE was outside of the slope swales and depressed contours thus promoting positive drainage away from the installed material.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P27 (approximate Sta. 314+60), moving east up to Panel P36 / P37 (approximate Sta. 313+25). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/7/16 Photo Log for supporting photographs
- While GDL was being deployed, ESI also completed repair activities for Panels P39 to P42 (installed on 7/6/16). A total of thirty-seven repairs (R-163 through R-199) were observed and fixed (according to the project specifications) from Panels P39 through P42. Refer to 7/7/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of two (2) destruct samples were collected. One fusion weld destruct sample (DS-14) was collected from Panel P41 / P42 seam, and one extrusion weld sample (DSX-5) was collected from Panel P42, Repair R-179 for laboratory analysis.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- While GDL and repair activities were being completed, ESI also conducted, methane / spark testing for the pipe boots repairs for Gas Vent GV-5, and Well 115-W1-SO. Based on the sparks observed during spark testing on 7/6/16, the areas were subsequently grinded, re-welded, and re-tested. Refer to 7/7/16 Photograph Log for supporting photos. Prior to spark testing, methane testing was conducted by AmecFW to measure the concentration of methane present below the LLDPE geomembrane. During methane testing, a concentration of 0.0% (<1%) was measured for each of the boots. Following the methane testing, spark testing was conducted by ESI for the vertical weld areas that were re-welded. During the re-test no sparks were observed and the retest spark test passed. Additional details are outlined in the *Spark Testing QA Forms* dated 7/6/16.
- Following the LLDPE repair activities, and deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 311+75 (Panel P42 installed on 7/6/16) to approximate Sta. 311+55. Refer to *Soil Subgrade Approval* forms from 7/7/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photo 9 of the daily photo log for 7/7/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement. Note: the approximate 20 ft. area of soil was approved so that an additional panel of LLDPE geomembrane could be deployed to allow the edges of the liner to be outside of the depressed contours in the event of afternoon rainstorms (positive drainage away from the installed LLDPE geomembrane).
- Following subgrade approval, one panel of GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications).
- After placement of GVL, one panel of LLDPE geomembrane was installed continuing from Panel P42 (installed on 7/6/16) and moving east. The panel was oriented from north to south (as proposed in the approved Panel Layout) and was installed from approximate Sta. 311+75 (Panel P42) to approximate Sta. 311+55. A total of one panel was installed (P43). Panel P43 ran the entire width of SA-6 North (approximately 230 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 7/7/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 312+60, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/7/16 *Seam Control Form* for non-destructive testing details. Additionally, repairs were marked and temporary patches were leistered in place for repair activities (i.e. detailing) to be completed on 7/8/16.
- ESI completed the boot / penetration construction for Extraction Pump Station #1 manhole and welded (detailed) the repairs. Note: Extraction Pump Station #1 manhole was located in a recessed contour of SA-6 North and repair activities were conducted to seal the LLDPE geomembrane as rainstorms were forecasted for the afternoon.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 5 (Sheet #5) – Subgrade irregularity identified as R-170 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P38. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 5 Notice of Non-Compliance.*
- Note: Failed spark test non-conformance details are outlined in the 7/6/16 Daily Report.

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/6/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct samples DS-14 and DSX-5.

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, and 7/6/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-13. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-4. Laboratory results in compliance with project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

| **CONTRACTOR & EQUIPMENT:**<br>**ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **PERSONNEL ON SITE:** **Day #11**<br>**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P43 installed on 7/7/16 (approximate Sta. 311+55). Material to be placed from Panel P43 running approximately 75 ft. east to approximate Sta. 310+80.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI completing repair activities for Panels P42 and P43 (Panel P43 installed on 7/7/16). A total of twelve repairs (R-200 through R-211) were observed and fixed (according to the project specifications) from the two panels. Refer to 7/8/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While LLDPE repair activities were being conducted, Langan and Entact conducted soil subgrade approval from approximate Sta. 311+55 (Panel P43 installed on 7/7/16) to approximate Sta. 310+80. Refer to *Soil Subgrade Approval* forms from 7/8/16 for additional details. During subgrade observation, the subgrade area was transversed in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 1 and 2 of the daily photo log for 7/8/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 311+55 (east of Panel P43) moving east to approximate Sta. 310+80.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/8/16 Photo Log for supporting photographs.
- During deployment of GVL, the potential for rocks or other debris to become dislodged in the soil subgrade were observed. Additional walkover and observation activities were conducted along the GVL to attempt to identify any rocks or debris (>1/2") that may have been dislodged.
- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P43 (installed on 7/7/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 311+55 (Panel P43) to approximate Sta. 310+80. A total of eight panels were installed (P44, P44A, P44B, P45, P46, P47, P48, and P49). Note: During placement of Panel P44 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P45. Similarly, during placement of Panel P47, the roll of LLDPE terminated near the center of SA-6 North, thus the remaining run of LLDPE was installed as P48. Panels P46 and P49 ran the entire width of SA-6 North (approximately 290 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 7/8/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 310+80, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/8/16 *Seam Control Form* for non-destructive testing details. Additionally, repairs activities were conducted for Panels P44 through P49 (installed on 7/8/16). These repair activities were conducted in addition to the repairs completed in the morning for Panels P42 and P43 (installed on 7/7/16).
- A total of twenty additional repairs (R-212 through R-223, R-225, R-227, R-228, R-229, and R-233 to R-236) were observed and fixed (according to the project specifications) from Panels P44 to P49. Refer to 7/8/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of one (1) destruct samples was collected. One extrusion weld sample (DSX-6) was collected from Panel P42, Repair R-180 for laboratory analysis. Additional destruct samples to be cut and collected on 7/11/16.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 6 (Sheet #6) – Subgrade irregularity identified as R-222 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P45. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 6 Notice of Non-Compliance.*

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/13/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct sample DSX-6.

## ***Site Activities***

- Langan onsite for observation of LLDPE repair activities (from Panels P44 to P49 installed on 7/8/16). Note: soil subgrade not approved for LLDPE placement as standing water / wet areas observed along subgrade from rainstorms over the weekend. Entact to solidify, rework, and re-compact soils for subgrade approval to be completed on 7/12/16. Note: the edge of the LLDPE geomembrane placed on 7/8/16 was pulled back until dry soil subgrade from below the liner was exposed (as shown in the 7/11/16 Photo Log). Soil to be dried, solidified, reworked, and re-compacted by Entact for approval on 7/12/16.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting repair activities for Panels P44 through P49 (panels installed on 7/8/16). A total of eight repairs (R-224, R-226, R-230, R-231, R-232, R-239, R-240, and R-241) were observed and fixed (according to the project specifications) from the two panels. Refer to 7/11/16 *Repair Report* for additional details. In general, the majority of the repairs were destruct samples that were collected for laboratory analysis and cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of four (4) destruct samples were collected from panels installed on 7/8/16. Three fusion weld destruct samples – DS-15, DS-16, and DS-17 were collected from Panel Seam P43 / P44, P46 / P47, and P45 / 46, respectively. Additionally, one extrusion weld destruct sample - DSX-7 was collected from Panel P44, Repair R-179 for laboratory analysis.

## ***Non-Conformance Items / Corrective Actions***

- None Encountered

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/11/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct results for DS-15, DS-16, DS-17, and DSX-7.

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, and 7/8/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-14. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-6. Laboratory results in compliance with project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 7/12/2016 |
| **PROJECT:** | SA-6 North Capping | | **WEATHER:** | 72/85° F, Sunny, Clear |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | **TIME:** | 0645 – 1500 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #13** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P49 installed on 7/8/16 (approximate Sta. 310+80). Material to be placed from Panel P49 running approximately 100 ft. east to approximate Sta. 309+75.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P36 / P37 (approximate Sta. 313+25), moving east up to Panel P42 (approximate Sta. 312+25). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/12/16 Photo Log for supporting photographs.
- While GDL was being deployed, ESI also completed the LLDPE pipe boot for Gas Vent GV-4. The boot was patched and welded (to be methane / spark tested later in the morning). Additional details are outlined in the Gas Vent GV-4 penetration log dated 7/12/16.
- ESI completed methane / spark testing for the LLDPE pipe boot for Pump Station #1 and Gas Vent GV-4. Prior to spark testing, Entact conducted methane testing to measure the concentration of methane present underneath the LLDPE geomembrane. A concentration of 0.0% (>1%) was measured for both boots. As such, ESI conducted spark testing along the base of the boot and the vertical weld. No sparks were observed during the spark test and both boots passed. Additional details are outlined in the *Spark Testing QA Forms* dated 7/12/16.
- Following the deployment of GDL and spark testing activities, Langan and Entact conducted soil subgrade approval from approximate Sta. 310+80 (Panel P49 installed on 7/8/16) to approximate Sta. 309+75. Refer to *Soil Subgrade Approval* forms from 7/12/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

generally free of any loose material greater than ½". Refer to Photos 7 to 9 of the daily photo log for 7/12/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement. Note: the approximate 20 ft. area of soil was approved so that an additional panel of LLDPE geomembrane could be deployed to allow the edges of the liner to be outside of the depressed contours in the event of afternoon rainstorms (positive drainage away from the installed LLDPE geomembrane).

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 310+80 (east of Panel P49) moving east to approximate Sta. 309+75. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/12/16 Photo Log for supporting photographs.
- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P49 (installed on 7/8/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 310+80 (Panel P49) to approximate Sta. 309+75. A total of eight panels were installed (P50, P51, P52, P53, P54, P55, P56, and P7). Note: During placement of Panel P51 the roll of LLDPE terminated near the approximate center of SA-6 North, thus the remaining run of LLDPE was installed as P52 and P53 (P52 and P53 remaining pieces of LLDPE from rolls previously used). Similarly, during placement of Panel P55, the roll of LLDPE terminated near the center of SA-6 North, thus the remaining run of LLDPE was installed as P56 & P57 (Panels P56 and P57 installed as remaining pieces of previously used LLDPE rolls). Panels P50 and P54 ran the entire width of SA-6 North (approximately 288 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 7/12/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 309+75, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/12/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P50 through P57 (installed on 7/12/16).
- ESI conducted repair activities for Panels P50 to P57 (installed on 7/12/16). A total of twenty-two repairs (R-237, R-238 and R-242 through R-261) were observed and fixed (according to the project specifications) from Panels P50 through P57. Refer to 7/12/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of three (3) destruct samples were collected. Three fusion weld destruct samples - DS-18, DS-19, DS-20 were collected from Panel Seams P49 / P50, P53 / P54, and P55 / P56 for laboratory analysis

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 7 (Sheet #7) – Subgrade irregularity identified as R-242 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P49 / P50. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 7 Notice of Non-Compliance.*

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/12/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct samples DS-18, DS-19, and DS-20.

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, and 7/11/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-17. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-7. Laboratory results in compliance with project specifications.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P55 / P56 / P57 installed on 7/12/16 (approximate Sta. 309+75). Material to be placed from Panel P55 / P56 / P57 running approximately 75 ft. east to approximate Sta. 309+00.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P42 (approximate Sta. 312+25), moving east through Panel P47 / P48 (approximate Sta. 311+10). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/13/16 Photo Log for supporting photographs.
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 309+75 (Panel P55 / P56 / P57 installed on 7/12/16) to approximate Sta. 309+00. Refer to *Soil Subgrade Approval* forms from 7/13/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 3,4, and 5 of the daily photo log for 7/13/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 309+75 (east of Panel P55 / P56 / P57) moving east to approximate Sta. 309+00. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/13/16 Photo Log for supporting photographs.

- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P55 / P56 / P57 (installed on 7/12/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 309+75 (Panel P55 / P56 / P57) to approximate Sta. 309+00. A total of six panels were installed (P58, P59, P60, P61, P62, and P63). Note: During placement of Panel P59 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P60. Similarly, during placement of Panel P62, the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P63. Panels P58 and P61 ran the entire width of SA-6 North (approximately 295 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 7/13/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 309+00, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/13/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P58 to P63 (installed on 7/13/16)
- ESI conducted repair activities for Panels 58 to P63 (installed on 7/13/16). A total of eleven repairs (R-262 through R-272) were observed and fixed (according to the project specifications) from Panels P58 through P63. Refer to 7/13/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of two (2) destruct samples were collected. Two fusion weld destruct samples - DS-21 and DS-22 were collected from Panel Seams P58 / P59 and P61 / P63, respectively, for laboratory analysis.

## ***Non-Conformance Items / Corrective Actions***

- None Encountered.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/13/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct samples DS-21 and DS-22.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, and 7/12/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-20. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-7. Laboratory results in compliance with project specifications.

- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting repair activities for a wrinkle observed on Panel P50 / P51. A total of four repairs (R-273 through R-276) were observed and fixed (according to the project specifications) from Panels P50 and P51. Refer to 7/14/16 *Repair Report* for additional details. The observed wrinkles were cut to allow the geomembrane to conform to the subgrade, and the cut areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While repair activities were being conducted, Langan and Entact conducted soil subgrade approval from approximate Sta. 309+00 (Panel P62 / P63 installed on 7/13/16) to approximate Sta. 308+20. Refer to *Soil Subgrade Approval* forms from 7/14/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 1, 2, and 3 of the daily photo log for 7/14/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta.309+00 (east of Panel P62 / P63) moving east to approximate Sta. 308+20. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/14/16 Photo Log for supporting photographs.

- During deployment of GVL, the potential for rocks or other debris to become dislodged in the soil subgrade were observed. Additional walkover and observation activities were conducted along the GVL to attempt to identify any rocks or debris (>1/2") that may have been dislodged.
- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P62 / P63 (installed on 7/13/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 309+00 (Panel P62 / P63) to approximate Sta. 308+20. A total of five panels were installed (P64, P65, P66, P67, and P68). Note: During placement of Panel P66 the roll of LLDPE terminated approximately 2/3 from the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P67. Panels P64, P65, and P68 ran the entire width of SA-6 North (approximately 299 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 7/14/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 308+20, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/14/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P64 to P68 (installed on 7/14/16).
- ESI conducted repair activities for Panels P64 to P68 (installed on 7/14/16) in addition to the wrinkle repairs completed in the morning on Panels P50 / P51. A total of sixteen repairs (R-277 through R-292) were observed and fixed (according to the project specifications) from Panels P64 through P68. Refer to 7/14/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- ESI also completed the boot / penetration construction for Gas Vent GV-3 and Extraction Pump Cleanout 1. The boots were welded and sealed with methane / spark testing to be conducted at a later date.
- A total of three (3) destruct samples were collected. Two fusion weld destruct samples - DS-23 and DS-24 were collected from Panel Seams P64 / P65 and P66 / P68, respectively, for laboratory analysis. In addition, one extrusion weld destruct sample – DSX-8 was collected from Panel P61 (Repair R-270) for laboratory analysis.

## ***Non-Conformance Items / Corrective Actions***

- None Encountered.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/14/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct samples DS-23, DS-24, and DSX-8.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, and 7/13/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-22. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-7. Laboratory results in compliance with project specifications.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

## ***Daily QA Documents Completed***

| ***Appendix / QA Forms*** | ***Sheet / Page Numbers*** | ***Comments*** |
|---|---|---|
| A1 – Certificate of Completion | | To be completed at termination of project |
| A2 – Receiving and Inspection | | NA – no new material delivered on 7/14/16 |
| A3 – Photo Log | Pages 1 – 6 | Total of 11 photos outlining pertinent daily observations and descriptions for 7/14/16 |
| A4 – Geosynthetic Inventory Log | | Completed to date; no updates from 7/14/16 |
| A5 – Subgrade Approval | Sheet 12 & ESI (7/14/16) | Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer |
| A6 – Trial Weld Log | Pages 5 | One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 7/14/16 |
| A7 – Panel Placement Log | Page 10 | One panel placement log provided by ESI and confirmed by Langan for panels placed on 7/14/16 |
| A8 – Destruct Seam Testing COC | Sheet 3 | Updated for destruct samples collected on 7/14/16 |
| A9 – Seam/Non-Destruct. Test Log | Pages 24-25 | One seam control form provided by ESI and confirmed by Langan for air pressure testing conducted on 7/14/16 |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** | Honeywell International, Inc. | **DATE:** | 7/15/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 80/95° F, Partly Cloudy, Humid |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** | Geocomposite Drainage Layer (GDL) | **TIME:** | 0645 – 1630 |

| **CONTRACTOR & EQUIPMENT:** | **PERSONNEL ON SITE:** **Day #16** |
|---|---|
| **ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton<br>**Langan:** Dan Bosworth, Kale Novalis<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite drainager layer (GDL) over approved LLDPE geomembrane. Note: no soil subgrade approved and no LLDPE geomembrane installed on 7/15/16. Next area of subgrade still being prepared, graded, and compacted by Entact (to be surveyed by Maser).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P47 / P48 (approximate Sta. 311+10) to Panel P66 (approximate Sta. 308+35) along northern end of cap. Note: GDL rolls were approximately 200 ft. in length and covered approximately 2/3 of the cap (north to south). As such, GDL was deployed along the northern half to Panel P66. The southern end of the cap was covered to Panel P63 (approximate Sta. 309+00). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 7/15/16 Photo Log for supporting photographs.

## ***Non-Conformance Items / Corrective Actions***

- None encountered

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/15/16). No LLDPE paperwork to be completed as no subgrade was approved and no LLDPE geomembrane was installed.

| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 7/25/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 85/93° F, Overcast |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | | **TIME:** | 0645 – 1630 |

| | |
|---|---|
| **CONTRACTOR & EQUIPMENT:**<br>**ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **PERSONNEL ON SITE:** **Day #18**<br>**AmecFW**: Dave Ambrose, Josh Boynton<br>**Langan:** Dan Bosworth, Kale Novalis<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P68 installed on 7/14/16 (approximate Sta. 308+15). Material to be placed from Panel P68 running approximately 95 ft. east to approximate Sta. 307+20.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 308+15 (Panel P68 installed on 7/14/16) to approximate Sta. 307+20. Refer to *Soil Subgrade Approval* forms from 7/25/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 1, 2, and 3 of the daily photo log on 7/25/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 308+15 (east of Panel P68) moving east to approximate Sta. 307+20. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 7/25/16 Photo Log for supporting photographs.
- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P68 (installed on 7/14/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 308+15 (Panel P68) to approximate Sta. 307+20. A total of seven panels were installed (P69, P70, P71, P72, P73, P74 and P75).

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

Note: During placement of Panel P69 the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P70 and P71 (P70 and P71 remaining pieces of LLDPE from rolls previously used). Similarly, during placement of Panel P73, the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P74. Panels P72 and P75 ran the entire width of SA-6 North (approximately 280 ft.) from north to south.

- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 7/25/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 307+20, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 7/25/16 *Seam Control Form* for non-destructive testing details.
- ESI conducted repair activities for Panels 68 to P75 (installed on 7/25/16). A total of twenty-six repairs (R-293 through R-318) were observed and fixed (according to the project specifications) from Panels P68 through P75. Refer to 7/25/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications (Note: vacuum box testing not completed for all repairs. To be finished on 7/26/16).
- ESI also completed the pipe boot construction for Extraction Pump Cleanout Well 2.
- A total of two (3) destruct samples were collected. Two fusion weld destruct samples were collected – DS-25 and DS-26 were collected from Panel Seams P69 / P69 and P72 / P74, respectively. One extrusion weld destruct sample – DSX-9 was also collected from patch repair R29 (Panel P72) for laboratory analysis.

## ***Non-Conformance Items / Corrective Actions***

- None Encountered.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/25/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Complete boot penetration log for Extraction Pump Cleanout, Well 2
- Review laboratory results for destruct samples DS-25, DS-26, and DSX-9.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, and 7/18/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-24. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-8. Laboratory results in compliance with project specifications.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 7/27/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 78/98° F, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | | **TIME:** | 0645 – 1615 |

| | |
|---|---|
| **CONTRACTOR & EQUIPMENT:**<br>**ENTACT & ESI**<br>*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes) | **PERSONNEL ON SITE:** **Day #19**<br>**AmecFW**: Dave Ambrose, Josh Boynton<br>**Langan:** Dan Bosworth<br>**ENTACT** / **ESI**: Keith Goisse, Caroline Panico |

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P75 installed on 7/25/16 (approximate Sta. 307+20). Material to be placed from Panel P75 running approximately 80 ft. east to approximate Sta. 306+40.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 307+20 (Panel P75 installed on 7/25/16) to approximate Sta. 306+40. Refer to *Soil Subgrade Approval* forms from 7/27/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and one wet / soft area was identified at the top of the western slope of the utility corridor. The wet area was identified underneath the edge of the GVL panel (previously installed on 7/25/16). The GVL was pulled back and the soil subgrade was exposed. The wet area was re-worked by Entact and calcium cement was added to solidify the soil. Based on visual observation, the remaining soil subgrade (along with the re-worked wet area) appeared to be firm and unyielding with no other soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 1 to 4 of the daily photo log for 7/27/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 307+20 (east of Panel P75) moving east to approximate Sta. 306+40. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to the 7/27/16 Photo Log for supporting photographs.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P75 (installed on 7/25/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 307+20 (Panel P75) to approximate Sta. 306+40. A total of five panels were installed (P76, P77, P78, P79, and P80). Note: During placement of Panel P77 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P78. Panels P76, P79, and P80 ran the entire width of SA-6 North (approximately 270 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 7/27/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 306+40, ESI began to conduct non-destructive testing (pressure testing) in accordance with the project specifications. Seams were pressurized to 30 psi and held for 5 minutes with less than 5 psi loss. Refer to the 7/27/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P75 to P80 (installed on 7/25/16 and 7/27/16)
- ESI conducted repair activities for Panel P75 (installed on 7/25/16), and Panels P76 through P80 (installed on 7/27/16). A total of forty-three repairs (R-319 through R-361) were observed and fixed (according to the project specifications) from Panels P75 through P80. Refer to 7/27/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- While repair activities were being conducted, ESI also completed methane / spark testing for Piezometer PZ6 and Extraction Well 1. Prior to spark testing methane testing was conducted at each location and 0.0% methane was recorded. As such, spark testing was then conducted and no sparks were observed along the base of the boot or vertical weld for both boots. Refer to the *Spark Testing Forms* from 7/27/16 for additional details.
- A total of two (2) destruct samples were collected on 7/27/16. One fusion weld destruct samples - DS-27 was collected from Panel Seams P75 / P76, for laboratory analysis. Additionally, one extrusion weld sample – DSX-10 was collected from Panel P75 Repair R-320.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 8 (Sheet #8) – Subgrade irregularity identified as R-328 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P71 / P72. Stone was subsequently removed, and hole was patched/repaired following project specs as further described in *Sheet 8 Notice of Non-Compliance.*

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/27/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory results for destruct samples DS-27 and DSX-10.

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, and 7/25/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-24. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-8. Laboratory samples DS-25, DS-26, and DSX-9 still pending.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P80 installed on 7/27/16 (approximate Sta. 306+40). Material to be placed from Panel P80 running approximately 100 ft. east to approximate Sta. 305+40.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 306+40 (Panel P80 installed on 7/27/16) to approximate Sta. 305+40. Refer to *Soil Subgrade Approval* forms from 7/28/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 1, 2, and 3 of the daily photo log for 7/28/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 306+40 (east of Panel P80) moving east to approximate Sta. 305+40. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to the 7/28/16 Photo Log for supporting photographs.
- While GVL was being installed, Entact and ESI conducted spark testing for Gas Vent GV-3, and Extraction Pumpout Well #2. Prior to spark testing, methane testing was conducted by Entact and a concentration of 0.0% was measured at each boot. As such, spark testing was subsequently completed, and no sparks were observed during the test (i.e. spark test passed). Additional details regarding the

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

methane / spark testing are provided in the 7/28/16 *Spark Test Logs*.

- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P80 (installed on 7/27/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 306+40 (Panel P80) to approximate Sta. 305+40. A total of eight panels were installed (P81, P82, P83, P84, P85, P86, P87, and P88). Note: During placement of Panel P81 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P82. Similarly, during placement of Panel P84 the roll of LLDPE terminated near the southern end of SA-6, thus the remaining run of LLDPE was installed as Panel P85. Panel P87 also terminated near the approximate center of SA-6 North, thus the remaining LLDPE run was installed as Panel P88. Panels P83 and P86 ran the entire width of SA-6 North (approximately 260 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 7/28/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 305+40, ESI began to conduct non-destructive testing (pressure testing) in accordance with the project specifications. Seams were pressurized to 30 psi and held for 5 minutes with less than 5 psi loss. Refer to the 7/28/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P80 to P88 (installed on 7/27/16 and 7/28/16)
- ESI conducted repair activities for Panel P80 (installed on 7/27/16), and Panels P81 through P88 (installed on 7/28/16). A total of twenty-nine repairs (R-362 through R-390) were observed and fixed (according to the project specifications) from Panels P80 through P88. Refer to 7/27/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- Laboratory results for destruct sample DS-26 were received and two of the coupons were reported as EPA Break Classificaion Code “AD BRK”. Although the coupons met the peel strength requirements, since the break was reported at the weld and not considered a film tearing bond (FTB), the sample was considered a failed sample and reported as a non-conformance item.
- No destruct samples were collected due to the forecasted storms at the end of the day. Destruct samples to be cut on 8/1/16 (rain forecast for 7/29/16 – no LLDPE activities anticipated).

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 9 (Sheet #9) – Failed destruct sample DS-26 collected from Panel P72 / P74
    - Destruct sample DS-26 failed 2/5 coupons as the weld breaks were reported as “AD BRK” under the EPA Break Classification Code. Although the coupons achieved the required peel / shear strength parameters, since the break occurred at the weld and was not considered an FTB, the sample failed.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 7/28/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, and 7/27/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-27. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-10. Laboratory results in compliance with project specifications with the exception of destruct sample DS-26 (recorded as Non-Conformance #9).

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

**Subject:** Resolution of the SA-6 North Anomalous Destruct Sample

Steve/Kim,

I am sending this email on behalf of Honeywell and in response to the technical question raised during our biweekly technical call on Tue Aug 2.

Specifically, it was asked that Honeywell provide an update to a reported geomembrane destruct sample failure on a fusion weld that was identified by Langan as part of their standard 3rd party Quality Assurance (QA) testing procedures. It is noted that the failed sample met the strength requirement but the "inside" weld failed in such a manner as to be classified as a failure by the geotechnical testing lab.

The approved 100% Design Specifications and the QA Plan describe the procedures to be followed in the event of a failed destruct sample. Langan and the Amec EOR instructed the contractor to collect and run additional destruct samples 10 feet either side of the failed test. In addition an additional sample was collected from the sample for offsite testing from the location that yielded the lower field strength.

Both field tests and the supplemental offsite laboratory test passed. The contractor subsequently placed a single patch that encompasses all three destruct sample locations in accordance with the approved 100% Design. Langan observed the repair and the passing vacuum testing of the patch.

Lastly, we want to emphasize that this entire approach is not only consistent with the 100% Design, but is also industry practice, and considered a routine item when dealing with geomembrane liner installations of this scale.

Both the Langan QA manager and Amec EOR consider that the geomembrane in this location meets the specified requirements. The results will be reported and documented as part of the routine repair log as well as the next monthly progress report and final RAR documentation.

Please let us know if you have any other questions on this item.

Thank you. -Joe

**Subject:** RE: 080116 June 2016 SA-6 and SA-7 Combined Progress Report 21319

Kim,

In response to your questions on the boot testing information provided in the June 2016 Study Areas 6 and7 Combined Monthly Progress Report, please see the following clarifications:

.

- Langan has clarified the dates of methane testing and spark testing. Langan Site Observation Report dated 6/24/16 (4 pages is attached with redline/strikeout).
- The three individual BOOT LOG QA forms (R-1/R-7/R-38) for the first three boots completed by Langan are attached.
- Regarding the question on the explanation of abbreviations.

    - **“SEOS”** represents the **South End of Seam** which refers to the southern edge of the SA-6 North Cap. The edge of the cap is used as a reference point to record and document the repair distances, panel lengths, etc. For example, if a repair was completed 10 ft. from the south edge of the cap, it is recorded on the repair report as 10 ft. north of SEOS.

    - Similarly, **“NEOS”** represents the **North End of Seam**, or northern edge of SA-6 North.

- Langan and AmecFW both disagree with the Plaintiffs request that the boot on Well-W6-S0 should be classified as a “Non Compliance” based on not performing the spark test. Specification 02372 was amended to include the spark testing. The amended specification provides for visual inspection of an extrusion weld if spark testing is not feasible due to the methane readings consistent with standard

industry practice. The specification was followed and both the methane reading and visual observation are noted on the Boot Log QA form R-7.

- Amec/Langan confirm that Plaintiffs understanding of the pipe boot penetrations on the daily reports is correct.

- The Amec portion of the Combined Report-Section F, 9th bullet will be amended to indicate that **"Spark testing was conducted on two boots that had methane reading of <1%. Visual inspection of the extrusion weld was performed on Well 115-W6-SO boot due to methane > 1%."**

Honeywell will issue an this email as an attachment to the next Study Areas 6 and 7 Combined Monthly Progress/Highlights Report to document these clarifications.

Let us know if you have any other questions on this item.

Regards,

Bill

**Subject:** 080116 June 2016 SA-6 and SA-7 Combined Progress Report 21319

We have reviewed the Study Areas 6 and 7 Combined Monthly Progress/Highlights Report No. 2016-06 and have the following comments and requests for additional information.

Section F, Capping Operations, states that three sparks tests of initial boot welds were conducted in June. The documentation provided in Attachment 11 – Capping Update does not support this statement. The Repair Report includes entries regarding three pipe boot penetrations:

- Repair No. 1 – Panel Number P-1, 35'North of SEOS & 8'W
- Repair No. 7 – 15'N of S EOS (PB 6")
- Repair No. 38 – Panel Number 11, 83' N of SEOS (8" Pipe)

We understand that the locations as shown on the Repair Report correspond to the pipe boot penetrations described in the Daily Reports. If our understanding is incorrect, please provide a drawing showing the panel layout and a description of the terms "SEOS" and "EOS."

While Section F, Capping Operations, states that three sparks tests of initial boot welds were conducted in June, the June 24, 2016, Site Observation Report, included in Attachment 11, indicates that only 2 of the 3 installed boots were spark tested. The Site Observation Report states that methane testing was conducted at Well 115-W6-SO, GV-6, and Piezometer PZ-10. Per the specifications, due to methane concentrations of >1.0%, no spark testing was conducted of the Well 115-W6-SO boot. Spark tests were conducted at GV-6 and PZ10 (methane <1%) and passed. Thus, based on Langan's Site Observation Report, only two spark tests were conducted in June. Section F should accurately reflect the testing that was conducted and the results.

The Repair Report, included in Attachment 11, contains entries regarding vacuum testing, but does not contain any entries for spark testing. Completed spark tests should be documented on the Repair Report and, in the event that methane concentrations are detected >1%, the lack of spark testing should be documented on the Summary of Non-Compliance & Corrective Action Forms. In addition, the QA/QC logs for the spark testing should be included in Attachment 11.

Please let me know if you have any questions or require additional information.

Thank you –

ENGINEERING & ENVIRONMENTAL SERVICES

**SITE OBSERVATION REPORT**

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** | Honeywell International, Inc. | **DATE:** | 6/24/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 78/95° F, Clear, Sunny |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** | Geocomposite & LLDPE Placement | **TIME:** | 0645 – 1545 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #4**
**AmecFW**: Stu Bills, Dave Ambrose, Ari Eslaminejad, Philemon Onyango
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) continuing east from Panel P12 / P13 installed on 6/23/16 (approximate Sta. 316+50). Material to be placed from Panel P12 / P13 running approximately 75 ft. east to approximate Sta. 315+75.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with Langan and Entact conducting soil subgrade approval from approximate Sta. 316+50 (Panel P12 / P13 installed on 6/23/16) to approximate Sta. 315+75. Refer to *Soil Subgrade Approval* forms from 6/24/15 for additional details. Based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was free of any loose material. Refer to Photos 1 to 3 of the daily photo log for 6/24/2016, for supporting subgrade photos. This area was also surveyed to meet the grading requirements as outlined in the project specifications as verified by AmecFW
- GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 316+50 (east of Panel P12 / P13) moving east to approximate Sta. 315+75. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 6/24/16 Photo Log for supporting photographs.
- While GVL was being deployed, ESI also continued patch / repair work for the panels installed on 6/23/16 (Panels P8 to P13). Prior to repair work a preweld test was conducted to confirm the extrusion welds met the requirements of the project specs. Refer to *Preweld Trial Log* (6/24/16).
- In addition, methane testing was conducted for the pipe boots completed for Well 115-W6-SO,

Deleted: / spark

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

Piezometer PZ10, and Gas Vent GV-6. Methane testing was conducted by AmecFW to measure the concentration of methane present below the LLDPE geomembrane. During methane testing of Well 115-W6-SO, a concentration of 1.4% (greater than 1%) was measured. No spark testing was conducted on Well 115-W6-SO due to the measured methane concentration. Instead, the weld was visually observed for deficiencies and none were noted.

Deleted: Prior to spark testing, m

- Methane testing for PZ10 and Gas Vent GV-6 yielded methane concentrations of 0.8% and 0.0%, respectively (<1%). Following the methane testing, spark testing was conducted by ESI for the vertical weld and pipe boot weld at the base of the penetration (i.e. welds not accessible for vacuum box testing). No sparks were observed during the test, and both boots passed. Additional details are outlined in the *Spark Testing QA Form Sheets #1-3*.
- After placement of GVL, LLDPE geomembrane was installed continuing from Panel P12 / P13 (installed on 6/23/16) and moving east. Panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 316+50 (Panel P12 / P13) to approximate Sta. 315+75. A total of six panels were installed (P14, P15, P16, P17, P18, and P19). Note: During placement of panel P15, the roll of LLDPE terminated approx. 2/3 from the north of the cap, thus the remaining run of LLDPE was installed as P16. Panels P14, P17, P18, and P19 ran the entire width of SA-6 North (approximately 192 ft.) from north to south.
- Adjacent geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 6/24/16 *Trial Weld Log*.
- Upon completion of geomembrane panel placement to approximate Sta. 315+75, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 6/24/16 *Seam Control Form* for non-destructive testing details. Additionally, repair and extrusion weld activities were also conducted for Panels P14 through P19. Additional details are also outlined on the 6/24/16 *Repair Log*.
- A total of thirty repairs (RP-44 through RP-73) were observed and fixed (according to the project specifications) from Panels P14 through P19. Refer to 6/24/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Note: vacuum box testing not completed for all welds. To be continued on 6/27/16.
- A total of two destruct samples were collected for laboratory analysis by Entact / ESI. One fusion weld destruct sample DS-4 (Panel P15 / P17 seam) was collected for laboratory analysis. Additionally, one extrusion weld sample DSX-2 (Panel P10) was also collected for laboratory analysis.

***Non-Conformance Items / Corrective Actions***

- None Encountered

***Action Items – Pending***

- Complete Daily Report and Photo Log (for 6/24/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample data (once received from laboratory).

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16 and 6/23/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1, DS-2, and DS-3. Reviewed laboratory data for extrusion weld destruct sample DSX-1.

***Near Misses / Incidents***

- None Encountered

***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the June 2016 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analytes are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

## Attachment 14: SA-6 North & South Design Change Tracking Log

- SA-6 North & South Design Change Tracking Log
- Design Change Bulleting 2016-07-12: SA-6 North Clarify location of Sand Bentonite Plug

**SA-6 North & South Design Change Tracking Log**
*(Attachment 14:  SA-6 North & South Design Change Tracking Log)*

**SA-6 North/South Field Change Log - Month Ending July 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2014-6-10** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-6-10 includes the french drain installation, as well as pump and access station manholes for SA-6 South. Some design details, including the electrical design, will be finalized based field obersvations and constructability review. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2014-11-20** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-11-20 includes the french drain installation, electrical supply and discharge piping for SA-6 North. | Submitted to Contractor only. |
| **DC 2016-6-10** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-6-10 includes the revised electrical supply and discharge piping for SA-6 North. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2015-2-12** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-2-24 is a follow up to DC 2014-6-10, the SA-6 South CGWES trench design. DC 2015-2-24 includes details for electrical supply and discharge piping. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2014-2-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to document the changes in the SA 6 North and South cap subgrades that resulted from the change to a trench system. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2015-9-03** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-9-03 is a follow up to DC 2015-2-24, the SA-6 South CGWES electrical supply. DC 2015-9-03 provides a revised electrical plan. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |

**SA-6 North/South Field Change Log - Month Ending July 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-5-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to address the elimination of a drop structure, the elmination of a flow meter, conduit sizing changes, and to clarify Entact's scope. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead. | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only. |
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Contractor only. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |

**SA-6 North/South Field Change Log - Month Ending July 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Parties on July 2, 2015. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groundwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Contractor only. |
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | Submitted to Contractor only. |
| **DC 2016-04-15** | Amec Foster Wheeler has provided final restoration grades for SA-6 South Development Area. The DCB also includes the final cover types in revised Drawing C-128. | Submitted to Contractor only. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |

**SA-6 North/South Field Change Log - Month Ending July 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only. |
| **DC 2015-07-22** | Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA-6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending July 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Contractor only. |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | Submitted to Contractor only. |
| **DC 2015-09-28** | Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling. | Submitted to Parties on October 1, 2015. |
| **DC 2015-12-21** | Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation –8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area. | Submitted to Contractor only. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only. |
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance withASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |

**SA-6 North/South Field Change Log - Month Ending July 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-12-01** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | Submitted to Contractor only. |
| **DC 2016-02-03** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. | Submitted to Contractor only. |
| **DC 2016-02-22** | AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entact's request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location.<br>In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5. | Submitted to Contractor only. |
| **DC 2016-02-25** | This DCB has been issued to provide Entact with the latest SA-6 North HB Wall and SCB wall plan and profile drawings (SN-201 thru SN-205), which were modified to reflect changes made in DC 2016-02-22. | Submitted to Contractor only. |
| **DC 2016-05-03** | The laboratory results of all gradations for planting soils shall be presented in terms of the USDA classification system rather than the USCS classification system. | Submitted to Contractor only. |
| **DC 2016-03-18** | This DC 2016-03-18 documents the revised acceptable ranges of physical parameters and provides an updated specification made in consultation with Dr. Grabosky of Rutgers University. Dr. Grabosky provided his recommendations in correspondence dated 3/17/2016. | Submitted to Parties on March 22, 2016. Plaintiffs responded in a letter dated April 15, 2016. Plaintiffs and Honeywell subsequently held discussions and DCB 2016-04-20 was developed to document an agreement reached by all parties on the Special Master All-Hands monthly call on April 19, 2016. |
| **DC 2016-03-21** | Nature's Choice was identified as the source that best met the physical requirements for Horizon C soils by Dr. Grabosky; however, several samples of Nature's Choice Horizon C soils have hexavalent chromium concentration >1.0 mg/kg. Consequently, Honeywell is proposing a design change to allow the hexavalent chromium concentration in Nature's Choice Horizon C soils to be less than 1.8 mg/kg, as agreed to by the parties, as documented in the attached emails. For future sampling, hexavalent chromium soil samples will be composited from 10 grab sample locations per 5,000 CY (maximum). There are additional conditions in Attachment A that are part of this DCB and specific to Nature's Choice Horizon C soil. All other requirements specified in the 100% Design for imported soils will be met by the Nature's Choice Horizon C soils as amended in previous DC 2015-09-17. | Submitted to Parties on March 22, 2016. |
| **DC 2016-04-20** | This DCB documents the approved sources of Horizon B and Horizon C materials, as agreed to by all parties on the Special Master All-Hands monthly call on April 19, 2016. | Submitted to Parties on April 21, 2016. |
| **DC 2016-05-06** | To allow for traffic flow within the project site following completion of the SA-6S Cap, a road will be installed within the "B Street" corridor. The road will be constructed by continuing the "Structural Fill under Roadways to within 6 inches of final grade" | Submitted to Parties on June 30, 2016. |
| **DC 2016-05-31** | This DCB documents the vault sketch Drawing C-310 (Rev 5, 5/31/16) | Submitted to Contractor only. |

**SA-6 North/South Field Change Log - Month Ending July 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-5-11** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. As part of DC 2016-5-11, AmecFW issued SA-6 North Interim Grades to Entact. | Submitted to Contractor only. |
| **DC 2016-5-20** | After further review, AmecFW lowered the geomembrane Pump Station #1 on the SA-6 North cap in order to provide additional separation between the geomembrane and the bottom of the vault. (Refer to DC 2016-02-22). | Submitted to Parties on June 15, 2016. |
| **DC 2016-7-12** | DC 2016-7-12 clarifies the limit of GCL deployment and the location of the sand bentonite plug in the SA-6 North cap. | Included as an attachment to this log. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**Design Change Bulleting 2016-07-12: SA-6 North Clarify location of Sand Bentonite Plug**

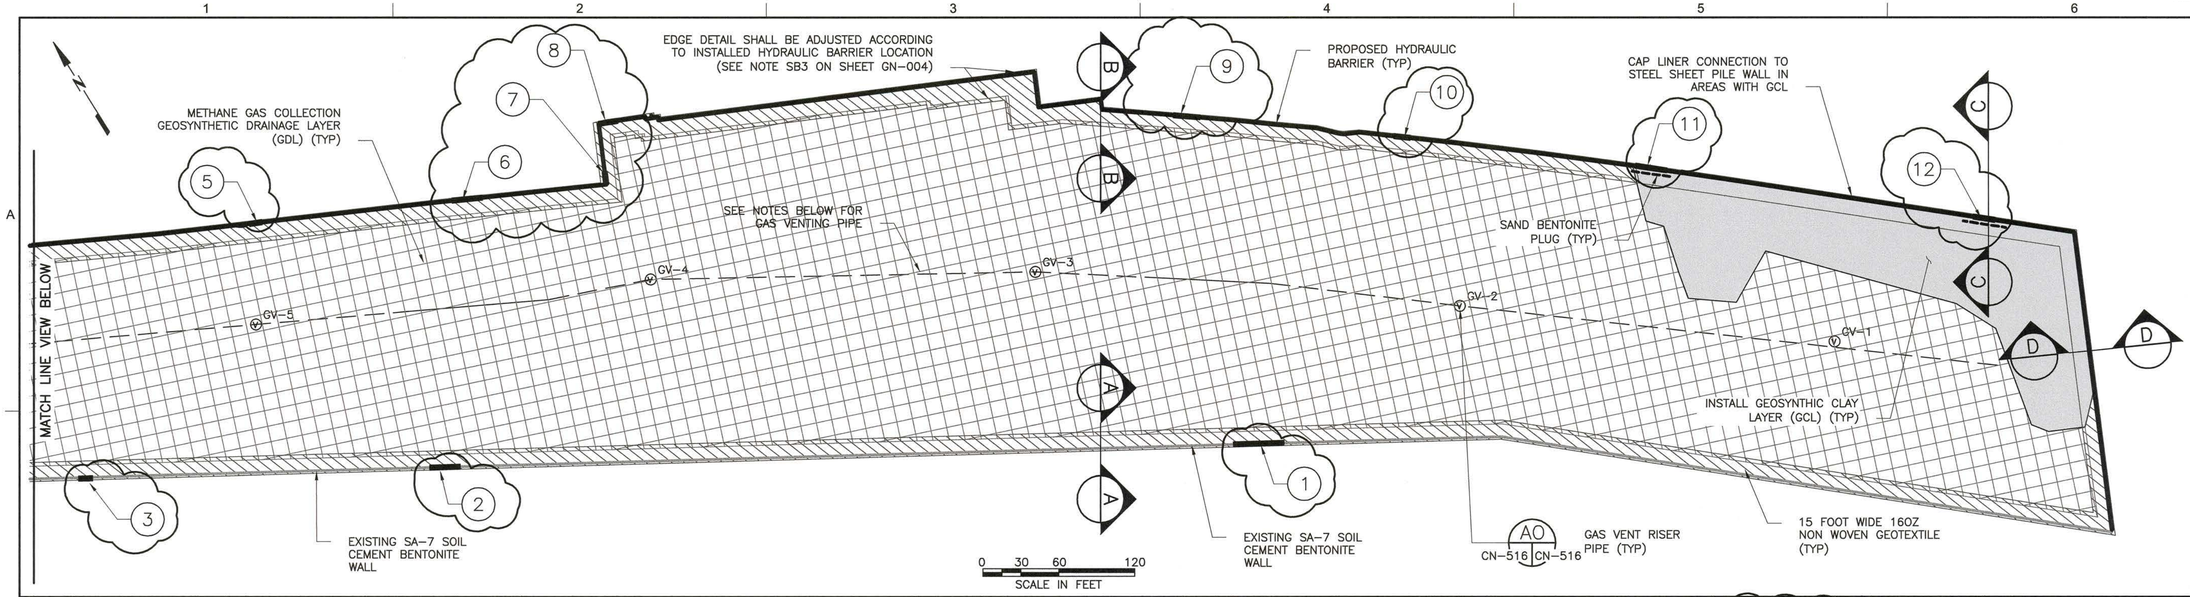
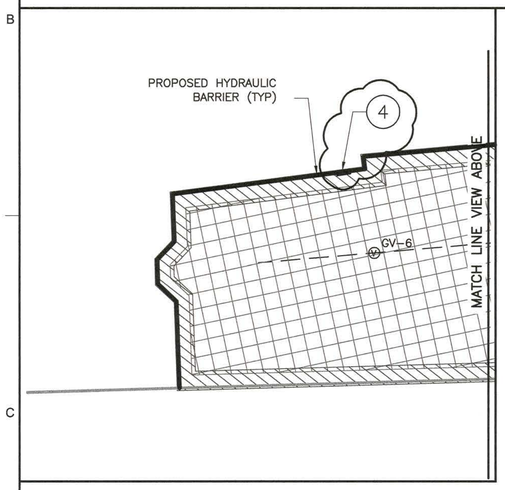
DESIGN CHANGE BULLETIN

| | |
|---|---|
| **Project Name:** Chromium Remedy Study Area 6 Jersey City, NJ | **DCB No.:** **Type:** Minor(a)<br>**Effective Date:** 7/12/16 |
| **Project Location:** SA-6 North | **Associated RFI:** |
| **Title:** Clarify location of Sand Bentonite Plug | ☐ Yes, RFI Nos. ☑ None |
| **Contractor (Subcontractor):** ENTACT | **Project No.:** 3480130377 |

**Description.**



Drawing CN-516 indicates the limit of the GCL deployment. Where the top of the Barrier Wall is below elevation 7.0, a sand bentonite plug will be installed as shown on Section C-C. The intent of the plug is to provide a connection between the GCL and Barrier wall in locations where the cap may be below the groundwater. The plug is isolated to two utility corridors. The plug limits are noted on Section C-C.



In the remainder of the areas where the Barrier Wall is at or above elevation 7.0, the GCL will be carried over the wall as shown in Section D-D. The GCL should be in intimate contact with the top of the Barrier Wall.

## 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Conducted S-3 Mass Removal Injection Event No. 31 in injection well 088-IW-03.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Raised the PW-3 Pump elevation to the top of screen.
- Completed perimeter air monitoring activities on SA-6 North. As of July 1, 2016, all intrusive activities are complete. As only site grading and restoration activities remain, air monitoring will be completed using hand-held portable devices for nuisance dust.
- PVSC personnel removed the spare 72” force main repair components stored on SA-7 on August 18, 2016.
- Obtained a Discharge to Groundwater-Permit by Rule from NJDEP for additional injections in treatment area 10-1.
- ERFS installed a total of 10 injection wells in Treatment Area 10-1. On August 4, 2016, received the NJDEP – Discharge to Groundwater Permit authorization for the additional in-situ treatment injections at this location.
- Began installation of CGWES components within the SA-6 South Open Space and the SA-6 North Open Space Areas to include installation of the valve vaults and link seals.
- Completed resampling of 124-MW-106T (results pending, will be provided when available.)

- Collected August PVSC compliance sample from the Construction Water Treatment Plant (CWTP).

## B. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned downstream process tanks T-300 (neutralization tank) and T-400 (effluent tank).
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on August 9, 2016.
- Contracted with mechanical contractor, Brownfield Science & Technology, Inc. (BTSI), to complete piping installation from the CGWTS force mains to the neutralization tank in accordance with the PVSC permit.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 08/07/26 | 08/14/16 | 08/21/16 | 08/28/16 |
| Avg. Gallons Treated & Discharged (per day) | 76,768 | 77,362 | 77,405 | 77,197 |
| Average Flow (gpm) for Operating Period | 55 | 56 | 55 | 55 |
| Avg. Hours of Plant Operation | 23 | 23 | 23 | 23 |
| GWTP Influent Tanks (gal.) | 3,540 | 4,560 | 2,880 | 3,648 |

## C. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Continued placing backfill as part of site restoration in the SA-6 South Development Area.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Sarnia, Ontario Canada | Stablex | WWTP Filer Cake | 1 | 18.4 | 18.4 |

| Weldon Screenings | 0 | 377.68 | 0 | 0 |

- Overburden historic fill soils with hexavalent chromium concentrations confirmed to be < 20 mg/kg soils were transferred and placed as backfill the SA-6 South Development Area.
- Screened Celgene material was placed as protective cover soil in the SA-6 North Open Space Area. Approximately 9,984 cubic yards was placed as protective cover soil during the reporting period.
- Approximately 272 cubic yards of Celgene screening operations were placed as backfill on the south slope of the SA-6 North Open Space Area.

## D. SURCHARGE OPERATIONS

- All surcharging activities are completed.

## E. SHEET PILE OPERATIONS

- Completed cutting hydraulic barrier sheets to final elevation in SA-6 North Open Space Area.

## F. CAPPING OPERATIONS

- Continued importing and placing Horizon A soils on SA-6 South Open Space Area.
- Continued placement of GDL cover soils and demarcation tape to include associated compaction testing on the SA-6 North Open Space Area.
- Continued placement structural fill, root barrier, and Horizon C soils to include associated compaction testing on the SA-6 North Open Space Area.
- Completed SA-6 North geomembrane liner subgrade grading activities within the Open Space Area.
- Completed installation of geosynthetic components to include placement of the geocomposite gas venting layer, 60 mil geomembrane liner, geosynthetic clay layer, and geocomposite drainage layer.
- A total of 92,588sq. ft. of geomembrane liner (21% of the total cap area) was deployed during the

reporting period.

- Completed spark testing on twelve boot welds during the reporting period. Please see **Attachment 11** for the spark test logs.
- Completed cutting hydraulic barrier sheets and finishing the SCB wall to final elevation in SA-6 North Open Space Area.
- Completed installation of Gas Vent Pipe within the SA-6 North Open Space Area.

## G. PERMIT STATUS

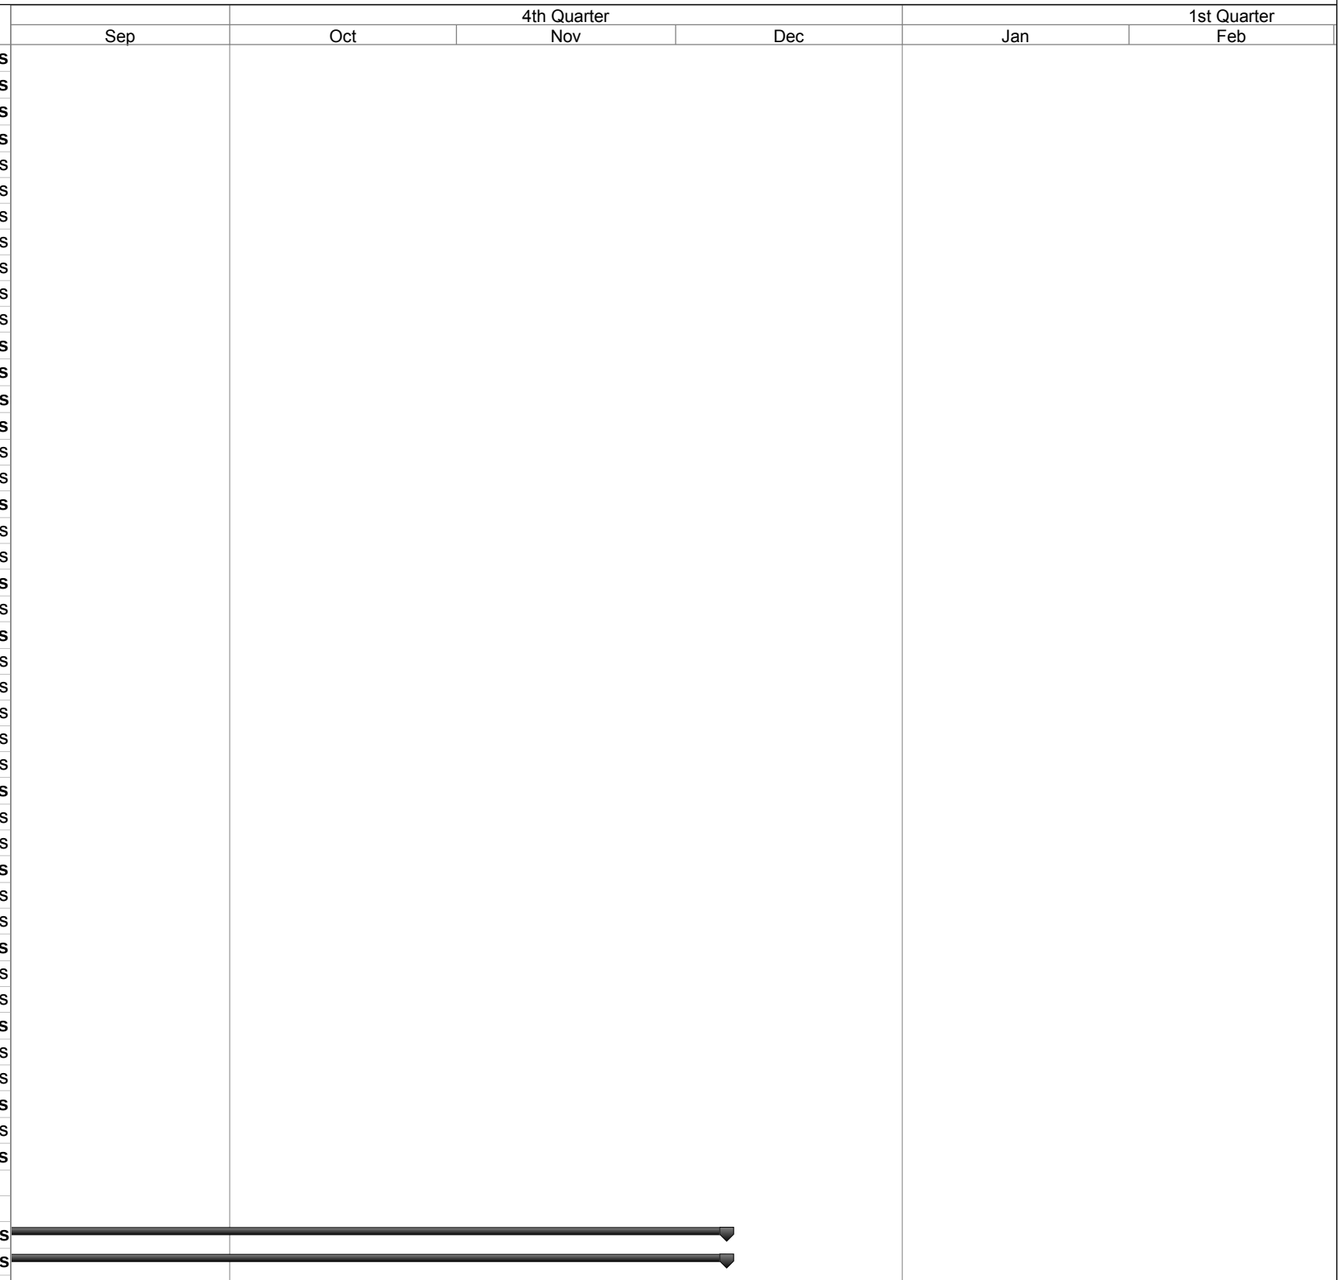
** Amec Foster Wheeler reviewed the expiration of this TWA with NJDEP, Division of Water Quality and no extension is necessary.*

## H. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete importing and placement of Horizon A Topsoil on the SA-6 South Open Space Area.
- Complete redevelopment area regrading and site restoration on SA-6 South.
- Complete hydro-seeding of SA-6 South Open Space Area.
- Complete placement of historic fill cap to include geotextile and 6-inches of stone in the SA-6 South Development Area.
- Continue installation of the Contingent Groundwater Extraction System Components including the mechanical piping and conduit within the GWTP.
- Complete placement of GDL cover soils within the SA-6 North Open Space Area.
- Continue placement structural fill, root barrier, and Horizon C soils to include associated compaction testing on the SA-6 North Open Space Area.
- Begin placement of Horizon A Topsoil on the SA-6 North Open Space Area.
- Begin hydro-seeding of SA-6 North Cap Area.
- Continue dewatering and storm-water management activities.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Conduct S-3 Mass Removal Injection Event No. 32 in well 088-IW-01.
- Conduct third quarter regional groundwater level measurement round.
- Start injections in Treatment Area 10-1 in accordance with NJDEP-DGW permit.

## ATTACHMENTS:

1. Schedule – 6 Month Look Ahead
2. Site Photographs
3. Excavation and Backfill (Progression Chart)
4. Dewatering Operations Update *(not included in this reporting period)*
5. SA-6 Construction Water Discharge Data (To PVSC)
6. Backfill Analytical Data *(not included in this reporting period)*
7. Perimeter Pools Update
8. Groundwater Quality Data *(reported quarterly – not included in this report)*
9. Surcharge Monitoring Update *(not included in this reporting period)*
10. Sheet Pile Update *(not included in this reporting period)*
11. Capping Update
    - SA-6 Cap Subgrade Progress Maps
    - Repair Log
    - Non-conformance Log
    - Subgrade Approval Form
    - QA Photo Log
    - Daily QA Reports (Langan)
    - Spark Test Logs
12. Weekly SWPPP Reports
13. GWTP Update
14. SA-6 North & South Design Change Tracking Log
15. Issued Permit: NJDEP Discharge to Groundwater (DGW) for In-Situ Treatment of Chromium Impacted Soils



## Attachment 1: Schedule – 6 Month Look Ahead

Honeywell

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration |
|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1936 days** |
| **2** | **Remedial Action Work Plan** | **33 days** |
| **5** | **Remedial Action Design** | **1522 days** |
| **18** | **JCIA/JCDPW Relocation** | **1780 days** |
| 19 | Develop Site Relocation Master Plan | 38 days |
| 20 | Submit Site Relocation Master Plan | 0 days |
| 21 | JC Construction of New Facilities | 1309 days |
| 22 | Relocation Contractor Procurement | 392 days |
| 23 | JCIA and JCDPW Relocation | 949 days |
| 24 | Demolition of Existing JCIA Facilities - Sedimentation Basin | 101 days |
| 24a | Demolition of JCIA Structures | 146 days |
| **25** | **SA-6 South Chromium Remedy Preparation (Sites 073, 124, 125, 134, 140 and 163)** | **1518 days** |
| **26** | **Remedial Action Work Plan** | **187 days** |
| **32** | **Remedial Action Design** | **1161 days** |
| **57** | **SA-6 South Relocation** | **616 days** |
| 58 | New GWTP Construction Completion | 502 days |
| 59 | Demolition of 80 Kellogg | 857 days |
| **60** | **SA-6 North/South Field Implementation** | **894 days** |
| 60a | SA-6N In-Situ Treatment Areas 7, 8 and 10 | 664 days |
| 60b | SA-6S (Site 163) In-Situ Treatment | 555 days |
| **61** | **Mobilization (Includees new GWTP, In-situ Treatment & Main Remedy)** | **87 days** |
| 61a | Mobilization | 87 days |
| **62** | **Surcharge Install/Instrumentation** | **706 days** |
| 62a | Prepare Open Space Areas for Surcharge/Install Instumentation | 142 days |
| 62b | Place Stockpile Surcharge SA6N Western Areas | 185 days |
| 62c | Place Stockpile Surcharge SA6N Eastern Areas | 175 days |
| 62d | Place Stockpile Surcharge SA6S Western Areas | 91 days |
| 62e | Place Stockpile Surcharge SA6S Eastern Areas | 155 days |
| **63** | **Barrier Wall Install** | **569 days** |
| 63a | SA 6N Installation of Barrier Wall | 159 days |
| 63b | SA 6S Installation of Barrier Wall | 210 days |
| **64** | **Excavation** | **507 days** |
| 64a | SA 6N Excavation | 218 days |
| 64b | SA 6S Excavation | 295 days |
| **65** | **Backfill** | **558 days** |
| 65a | SA 6N Backfill | 283 days |
| 65b | SA 6S Backfill | 384 days |
| **66** | **Capping and Cover Soil Placement** | **426 days** |
| 66a | SA 6N Capping and Cover Soil Placement | 83 days |
| 66b | SA 6S Capping and Cover Soil Placement | 283 days |
| **67** | **Restoration** | **234 days** |
| 67a | Restoration | 234 days |
| **68** | **Demobilization** | **22 days** |
| 68a | Deferred Remediation of SA-6 South Along Bulkhead | |
| 68b | Deferred Remediation of SA-6 North/South Along PSEG Gas Line | |
| **69** | **SA-6 North Project Closeout** | **311 days** |
| **75** | **SA-6 South Project Closeout** | **311 days** |
| **81** | **SA-6 North Long Term Protections** | **1830 days** |
| **92** | **SA-6 South Long Term Protections** | **2569 days** |

Project: SA-6 Remediation Schedule
Revision 4
Date: 8/2/2016

Task  Milestone  Summary  Critical

Note: Current field implementation schedule shows capping complete in September 2016 and restoration in October 2016.

The following wells have been abandoned in accordance with the SA-6 100% Design:
134-W4-DO, 087-MW-001, 087-MW-019, 087-MW-Y20, 115-E1-DO, 115-E1-SO, 125-MW-01, 073-MW-BB-11, 073-MW-Y10, 134-MW-Q08.

The following wells have been abandoned:
North FS-1, FS-2, FS-3, FS-4, FS-5, FS-6, FS-7, FS-13
South FS-1, FS-3, FS-4, FS-5, FS-6, FS-7

The following wells are temporarily inaccessible:
134-MW-V09,

## Summary of Non-Compliance & Corrective Action Forms

***SA-6 North Cap Installation***

| Notice of Non-Compliance & Corrective Action Sheet Number | Date | Item | Associated Repair Number | Approx. Location | Follow Up Action Taken |
|---|---|---|---|---|---|
| 1 | 6/23/2016 | Subgrade Irregularity | R-10 | Panel P6 | Rock was removed from underneath geomembrane and hole was then patched with approximate 3 ft. by 3 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 2 | 6/29/2016 | Subgrade Irregularity | R-98 | Panel P26 | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 3 | 7/6/2016 | Failed Spark Test | Gas Vent GV-5 | Gas Vent GV-5 | Spark identified during spark testing of vertical boot weld on Gas Vent GV-5 boot. Area of weld was grinded, rewelded, and re-tested. Spark retest passed as no sparks were observed duriing the test. |
| 4 | 7/6/2016 | Failed Spark Test | Well 115-W1-SO | Well 115-W1-SO | Spark identified during spark testing of vertical boot weld on Well 115-W1-SO boot. Area of weld was grinded, rewelded, and re-tested. Spark retest passed as no sparks were observed duriing the test. |
| 5 | 7/7/2016 | Subgrade Irregularity | R-170 | Panel P38 | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 6 | 7/8/2016 | Subgrade Irregularity | R-222 | Panel P45 | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 3 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 7 | 7/12/2016 | Subgrade Irregularity | R-242 | Panel P49 / P50 | Rock was removed from underneath LLDPE geomembrane along the southern edge of SA-6 North (approximately 3 ft. from the edge of the cap. As such, the edge of the LLDPE was cut to remove the stone. This cut was then repaired with an extrusion weld bead. Once extrusion welding was completed, vacuum box testing was conducted along the seams to confirm the cut / bead was properly sealed (as outlined in Section 02372). |
| 8 | 7/27/2016 | Subgrade Irregularity | R-328 | Panel P72 | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 2 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 9 | 7/28/2016 | Failed Destruct Sample | DS-26 | Panel P72 / P74 (Repair R-312) | Destruct sample DS-26 reported two coupons as EPA Break Classification Code "AD BRK". Although the peel and shear strength requirments were met, since the coupons broke at the weld and were not conisdering a Film Tearing Bond, the sample was reported as a failed sample. Two field samples (DS-26A and DS-26B) were cut 10 ft. from each side of DS-26 and field tested. Peel and shear field tests met the strength requirments and sample DS-26B (lesser strength values of both samples) was sent for laboratory analysis (results pending). |
| 10 | 8/5/2016 | Equipment Puncture | R-418 | Panel P36 | Equipment puncture through SA-6 North on Panel P36 (north end) as grounding rod was driven through liner. The puncture was exposed and a geomembrane patch was placed over the area and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut. Repairs were confirmed with vacuum box testing (vacuum box test passed), as per project specs. |
| 11 | 8/9/2016 | Failed Spark Test | Piezometer PZ4 | Piezometer PZ4 | Spark identified during spark testing of vertical boot weld on Piezometer PZ4 boot. Area of weld was grinded, rewelded, and re-tested. Spark retest passed as no sparks were observed during the test. |
| 12 | 8/9/2016 | Failed Spark Test | Well 115-E5-WO | Well 115-E5-SO | Spark identified during spark testing of vertical boot weld on Well 115-E5-SO boot. Area of weld was grinded, rewelded, and re-tested. Spark retest passed as no sparks were observed during the test. |
| 13 | 8/10/2016 | Subgrade Irregularity | R-457 | Panel P107 / P108 | Rock was removed from underneath geomembrane and hole was then patched with approximate 2 ft. by 3 ft. geomembrane patch and sealed with an extrusion weld with minimum of 4-inches beyond edges of cut, and confirmed with vacuum box testing (as per project specs). |
| 14 | 8/12/2016 | Failed Spark Test | Well 115-E4-SO | Well 115-E4-SO | Spark identified during spark testing of vertical boot weld on Well 115-E4-SO boot. Area of weld was grinded, rewelded, and re-tested. Spark retest passed as no sparks were observed during the test. |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 8/2/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 78/85° F, Overcast |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | | **TIME:** | 0645 – 1645 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #21**
**AmecFW**: Stu Bills, Dave Ambrose, Josh Boynton
**Langan:** Dan Bosworth, Vikki Hon
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite drainage layer (GDL) over approved LLDPE geomembrane. Note: no soil subgrade approved and no LLDPE geomembrane installed on 8/2/16. Next area of subgrade still being prepared, graded, and compacted by Entact (to be surveyed by Maser).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was first placed along the northern end of SA-6 North from Panel P66 / P67 (approximate Sta. 308+35) to the approximate center of the Utility Corridor (approximate Sta. 306+80) Note: The GDL panel orientation changed to east to west through the utility corridor so that the GDL followed the same contours as the utility corridor slopes. GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/2/16 Photo Log for supporting photographs.
- While GDL was being deployed ESI also conducted vacuum box testing and minor repair activities for Panels P86 and P87 (installed on 7/28/16). Additional details are provided in the 8/2/16 Repair Report.
- A total of three (3) destruct samples were collected. One fusion weld sample – DS-28 was collected from Panel Seam P81 / P83. Two extrusion weld destruct samples – DSX-11 and DSX-12 were collected from Repair R-365 (Panel 81) and Repair R-387 (Panel 86), respectively.
- ESI also completed repair activities for fusion weld destruct sample DS-26 (Panel P72 / P74 seam). DS-26 failed laboratory testing as two specimens were reported as EPA Break Code “AD-BRK” outlining a break in the weld and not the film tear break (FTB). Although the minimum peel requirements were met, since the break code was not an FTB, the test was reported as a failed test.
- To address the failed destruct sample, two field specimens (DS-26A & DS-26B) were cut approximately 10 ft. on each side of DS-26. Both samples were field tested and peel and shear strength requirements were met. Sample DS-26B which exhibited peel and shear breaks slightly less than DS-26A was sent for laboratory analysis.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Non-Conformance Items / Corrective Actions***

- None Encountered - Failed destruct sample DS-26 was previously outlined on the 7/28/16 Daily Report

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/2/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct results for DS-28, DSX-11, DSX-12, and DS-26B.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/27/16, and 7/28/16. ESI Daily Form Submittals still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-27. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-10. Laboratory results generally in compliance with project specifications with the exception of DS-26.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

## ***Daily QA Documents Completed***

| ***Appendix / QA Forms*** | ***Sheet / Page Numbers*** | ***Comments*** |
|---|---|---|
| A1 – Certificate of Completion | | To be completed at termination of project |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 8/3/2016 |
| **PROJECT:** | SA-6 North Capping | | **WEATHER:** | 80/85° F, Clear |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | **TIME:** | 0645 – 1630 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #22**
**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
**Langan:** Dan Bosworth, Kale Novalis
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P87 / P88 installed on 7/28/16 (approximate Sta. 305+40). Material to be placed from Panel P87 / P88 running approximately 80 ft. east to approximate Sta. 304+60.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from the approximate center of the Utility Corridor (approximate Sta. 306+80), moving east through Panel P81 (approximate Sta. 306+20). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/3/16 Photo Log for supporting photographs.
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 305+40 (Panel P87 / P88 installed on 7/28/16) to approximate Sta. 304+60. Refer to *Soil Subgrade Approval* forms from 8/3/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 3 to 5 of the daily photo log for 8/3/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 305+40 (east of Panel P87 / P88) moving east to approximate Sta. 304+60. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/3/16 Photo Log for supporting photographs.

- After placement of GVL, LLDPE geomembrane was installed continuing east from Panel P87 / P88 (installed on 7/28/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 305+40 (Panel P87 / P88) to approximate Sta. 304+60. A total of five panels were installed (P89, P90, P91, P92, and P93). Note: During placement of Panel P89 a piece of LLDPE was used to realign the panel placement arrangement. Panels P90, P91, P92, and P93 ran the entire width of SA-6 North (approximately 245 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 8/3/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 304+60, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 8/3/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P89 to P93 (installed on 8/3/16)
- ESI conducted repair activities for Panels 89 to P93 (installed on 8/13/16). A total of sixteen repairs (R-400 through R-415) were observed and fixed (according to the project specifications) from Panels P89 through P93. Refer to 8/3/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Additionally, ESI completed boot construction activities for Gas Vent GV-2 and Piezometer PZ4.
- No destruct samples were collected on 8/3/16. Samples to be cut for laboratory analysis on 8/4/16.

## ***Non-Conformance Items / Corrective Actions***

- None Encountered.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/3/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 and 8/2/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-28. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-12. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

## ***Near Misses / Incidents***

- None Encountered

| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 8/4/2016 |
| **PROJECT:** | SA-6 North Capping | | **WEATHER:** | 72/85° F, Clear |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | **TIME:** | 0645 – 1645 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #23**
**AmecFW**: Stu Bills, Dave Ambrose, Josh Boynton
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and temporary liner, continuing east from Panel P93 installed on 8/3/16 (approximate Sta. 304+60). Material to be placed from Panel P93 running approximately 85 ft. east to approximate Sta. 303+75.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting vacuum box and repair activities for LLDPE previously installed on 8/3/16. In addition, two destruct samples were collected for laboratory analysis. One fusion weld destruct sample – DS-29 was collected from Panel P90 / P91. One extrusion weld destruct sample was also collected – DSX-13 from Panel P90 Repair R-401.
- While repair / vacuum box activities were being conducted ESI deployed the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed moving east through Panel P81 (approximate Sta. 306+20) up to Panel P86 (approximate Sta. 305+80). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/4/16 Photo Log for supporting photographs.
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 304+60 (Panel P93 installed on 8/3/16) to approximate Sta. 303+75. Refer to *Soil Subgrade Approval* forms from 8/4/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 3,4, and 5 of the daily photo log for 8/4/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 304+60 (east of Panel P93) moving east to approximate Sta. 303+75. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/4/16 Photo Log for supporting photographs.
- Additionally, GCL was placed along the areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included a small area along the northern edge of SA-6 North east of Sta. 303+75. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/4/16 *Photograph Log*.
- Based on an LLDPE inventory completed by Entact, it was determined that approximately two additional rolls of 60-mil LLDPE would be required to complete the remaining area of SA-6 North. As such, three temporary panels were installed (to be replaced once new LLDPE rolls were received) from approximate Sta. 304+60 to approximate Sta. 303+75 (area of SA-6 North at upper elevation above the water table).
- After placement of GVL, three temporary panels were installed east of Panel P93 (installed on 8/3/16) and moving east. The three temporary panels were installed up to approximate Sta. 303+75 (did not cover the GCL or remaining area of subgrade to the east as permanent 60-mil panels will be installed continuing east from the temporary panel on 8/5/16.
- Note: since no permanent LLDPE was installed, and only temporary panels were placed, no repairs or non-destructive testing was conducted on the temporary panels.

## ***Non-Conformance Items / Corrective Actions***

- None Encountered.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/4/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct results for samples DS-29 and DSX-13.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, and 8/3/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-28. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-12. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

## ***Near Misses / Incidents***

- None Encountered

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

## ***Daily QA Documents Completed***

| ***Appendix / QA Forms*** | ***Sheet / Page Numbers*** | ***Comments*** |
|---|---|---|
| A1 – Certificate of Completion | | To be completed at termination of project |
| A2 – Receiving and Inspection | | NA – no new material delivered on 8/4/16 |
| A3 – Photo Log | Pages 1 – 5 | Total of 10 photos outlining pertinent daily observations and descriptions for 8/4/16 |
| A4 – Geosynthetic Inventory Log | | Completed to date; no updates from 8/4/16 |
| A5 – Subgrade Approval | Sheet 17 & ESI (8/4/16) | Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer |
| A6 – Trial Weld Log | | NA – no trial welds completed on 8/4/16 |
| A7 – Panel Placement Log | | NA – no permanent LLDPE panels on 8/4/16 |
| A8 – Destruct Seam Testing COC | Sheet 3 | Updated for destruct samples collected on 8/4/16 |
| A9 – Seam/Non-Destruct. Test Log | | NA – no non-destructive testing conducted as no permanent LLDPE panels were installed |
| A10 – Repair Log | Page 21 | One repair log provided by ESI and confirmed by Langan for repairs completed for 8/4/16 |
| A11 – Conformance COC | | NA for 8/4/16 |
| A12 – Destructive Seam Field Test | Page 3 | Updated with destruct samples collected on 8/4/16 |
| A13 – Destruct. Sample Summary | Page 3 | Destruct sample summary updated with samples collected on 8/4/16 |
| A14 – Penetration & Edge Form | | NA – No pipe boots / penetrations completed on 8/4/16 |
| A16 – Notice of Non-Compliance | | NA – no non-compliance issues observed on 8/4/16 |
| A17 – Spark Test Log | | NA – no spark testing conducted on 8/4/16 |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 8/5/2016 |
| **PROJECT:** | SA-6 North Capping | | **WEATHER:** | 75/85° F, Clear |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | **TIME:** | 0645 – 1745 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #24**
**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from the third temporary panel installed on 8/4/16 (approximate Sta. 303+75). Material to be placed from Temp Panel 3 running approximately 60 ft. east to approximate Sta. 303+15.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed moving east through Panel P86 (approximate Sta. 305+80) up to Panel P93 (approximate Sta. 304+60). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/5/16 Photo Log for supporting photographs.
- While GDL was being deployed, a puncture / penetration through the liner was fixed at Panel P36. The penetration was due to work activities outside of SA-6 North, as a grounding rod was driven through the liner. This penetration was recorded as a non-conformance issue, and is identified as Repair R-418 on the *Repair Report.*
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 303+75 (east of temporary panels installed on 8/4/16) to approximate Sta. 303+15. Refer to *Soil Subgrade Approval* forms from 8/5/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 5 to 8 of the daily photo log for 8/5/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 303+75 (east of temporary panels) moving east to approximate Sta. 303+15. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/5/16 Photo Log for supporting photographs. Note: GVL was placed along the southern end of SA-6 North at areas above the site water table (areas not covered by GCL).
- Additionally, GCL was placed along the northern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included an area along the northern edge of SA-6 North from Sta. 303+75 to Sta. 303+15. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/5/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east of the temporary panels (installed on 8/4/16). The LLDPE panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 303+75 (east of temporary panels) to approximate Sta. 303+15. A total of five panels were installed (P94, P95, P96, P97, and P98). Note: During placement of Panel P96 the LLDPE panel terminated along the southern end of SA-6 North, thus the remaining run of LLDPE was installed as Panel P97. Panels P94, P95, and P98 ran the entire width of SA-6 North (north to south) spanning approximately 235 ft.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, and smooth to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 8/5/16 *Trial Weld Log*.
- Upon completion of geomembrane panel placement to approximate Sta. 303+15, ESI began to conduct non-destructive testing in accordance with the project specifications. Refer to the 8/5/16 *Seam Control Form* for non-destructive testing details.
- ESI conducted repair activities for Panels P94 to P98 (installed on 8/5/16). A total of thirteen repairs (R-418 through R-430) were observed and fixed (according to the project specifications) from Panels P94 through P98. Refer to 8/5/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- ESI also completed the pipe boot construction for Injection Well 088-IW-02.
- No destruct samples were collected on 8/5/16.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 10 (Sheet #10) – Penetration / puncture through LLDPE geomembrane
    - Penetration / puncture through LLDPE geomembrane from work activities outside of geosynthetic installation. Grounding rod driven through liner. Puncture exposed, and hole patched / repaired as per project specifications and outlined in the non-conformance log.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/5/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P98 installed on 8/5/16 (approximate Sta. 303+15). Material to be placed from Panel P98 running approximately 45 ft. east to approximate Sta. 302+70.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI completing vacuum box testing for repairs from Panels P94 to P98 (installed on 8/5/16). Additionally, two destruct samples were collected. One fusion weld destruct sample – DS-30 was collected from Panel P97 / P98, and one extrusion weld sample DSX-14 was collected from Panel P98 (Repair R-430).
- ESI deployed the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed moving east through Panel P93 and up to the temporary panels (installed on 8/4/16). Approximately 2 rolls of GDL were placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/8/16 Photo Log for supporting photographs.
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 303+15 (east of Panel P98 installed on 8/5/16) to approximate Sta. 302+70. Refer to *Soil Subgrade Approval* forms from 8/8/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.
- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 303+15 (east of Panel P98) moving east to approximate Sta. 302+70. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/8/16 Photo Log for supporting photographs. Note: GVL was placed along the southern end of SA-6 North at areas above the site water table (areas not covered by GCL).

- Additionally, GCL was placed along the northern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included an area along the northern edge of SA-6 North from approximate Sta. 303+15 to Sta. 302+70. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/8/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east Panel P98 (installed on 8/5/16). The LLDPE panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 303+15 (east of Panel P98) to approximate Sta. 302+70. A total of two panels were installed (P99 and P100). Panels P99 and P100 ran the entire width of SA-6 North (north to south) spanning approximately 238 ft.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. A total of six 1-inch specimens were collected for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 8/8/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 302+70, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/8/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P99 and P100 (installed on 8/8/16) as outlined below.
- ESI conducted repair activities for Panels P99 and P100 (installed on 8/8/16). A total of seven repairs (R-431 through R-437) were observed and fixed (according to the project specifications) from Panels P99 to P100. Refer to 8/8/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs). These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.

## ***Non-Conformance Items / Corrective Actions***

- None Encountered

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/8/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DS-30 and DSX-14.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, and 8/5/16. ESI Forms still to be reviewed.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 8/9/2016 |
| **PROJECT:** | SA-6 North Capping | | **WEATHER:** | 85/90° F, Clear |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | **TIME:** | 0645 – 1800 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #26**
**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
**Langan:** Dan Bosworth, Kale Novalis
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## *Site Activities*

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P100 installed on 8/8/16 (approximate Sta. 302+70). Material to be placed from Panel P100 running approximately 100 ft. east to approximate Sta. 301+70.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane. GDL was placed from Panel P94 (approximate Sta. 303+75), moving east through Panel P97 (approximate Sta. 303+15). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/9/16 Photo Log for supporting photographs.
- While GDL was being deployed, ESI also collected two destruct samples for laboratory analysis. Two fusion weld destruct samples – DS-31 was collected from Panel P79 / P80 and DS-32 was collected from Panel P86 / P87. These additional samples were collected to supplement the destruct sample data previously collected beyond failed destruct sample DS-26. DS-31 and DS-32 were collected between the destruct samples collected at 1,500 LF to provide additional sample information.
- Following the deployment of GDL, Langan and Entact conducted soil subgrade approval from approximate Sta. 302+70 (Panel P100 installed on 8/8/16) to approximate Sta. 301+70. Refer to *Soil Subgrade Approval* forms from 8/9/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". Refer to Photos 9 to 12 of the daily photo log for 8/9/2016, for supporting subgrade photos. The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 302+70 (east of Panel P100) moving east to approximate Sta. 301+70. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/9/16 Photo Log for supporting photographs.
- Additionally, GCL was placed along the northern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs), which included an area along the northern edge of SA-6 North from approximate Sta. 302+70 to Sta. 301+70. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/9/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east from Panel P100 (installed on 8/8/16) and moving east. The panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 302+70 (Panel P100) to approximate Sta. 301+70. A total of six panels were installed (P101, P102, P103, P104, P105, and P106). Note: During placement of Panel P101 the roll of LLDPE terminated near the southern end of SA-6 North, thus the remaining run of LLDPE was installed as P102. Similarly, during placement of Panel P104, the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P105. Panels P103 and P106 ran the entire width of SA-6 North (approximately 235 ft.) from north to south.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for peel and shear testing (3 samples for each test) for each weld. The results of the pre-trial weld are provided in the 8/9/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 301+70, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/9/16 *Seam Control Form* for pressure testing details. Additionally, repair activities were conducted for Panels P100 to P106 (installed on 8/9/16)
- ESI conducted repair activities for Panels P100 to P106 (installed on 8/9/16). A total of eight repairs (R-438 through R-445) were observed and fixed (according to the project specifications) from Panels P100 through P106. Refer to 8/9/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds. Repair activities for Panels P100 to P106 to be completed on 8/10/16.
- ESI also conducted spark testing for seven pipe boots / penetrations total. Prior to spark testing, Entact conducted methane testing prior to spark testing and a concentration of 0.0% was measured at each location. Spark testing was completed for Extraction Pump Sta. 2, Gas Vent GV-2, Utility Corridor Drain Pipe, Injection Well 088-IW-02, and Injection Well 088-IW-03. The vertical weld and base of the boot was tested and no sparks were observed (thus the spark test passed). During spark testing of Piezometer PZ4 and Well 115-E5-SO,a spark was observed during testing as the spark was able to arc to the wire through a section of vertical weld. Area to be re-grinded, rewelded, and retested on 8/9/16.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 11 (Sheet #11) – Failed spark test along vertical weld of Piezometer PZ4
  - Failed spark test identified during spark testing of Piezometer PZ4. Spark able to arc to wire through section of vertical weld (thin weld). Weld to be grinded, re-welded, and re-tested on 8/9.
  -

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Non-Conformance Items / Corrective Actions (continued)***

- Non-Conformance No. 12 (Sheet #12) – Failed spark test along vertical weld of Well 115-E5-SO
  - Failed spark test identified during spark testing of Well 115-E5-SO. Spark able to arc to wire through section of vertical weld (thin weld). Weld to be grinded, re-welded, and re-tested on 8/9.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/9/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DS-31 and DS-32.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, and 8/8/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-30. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-14. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 8/10/2016 |
| **PROJECT:** | SA-6 North Capping | | **WEATHER:** | 82/88° F, Overcast |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | **TIME:** | 0645 – 1315 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #27**
**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE) for area previously covered by temporary panels (area east of Panel P93). Temporary panels were removed, and new LLDPE was placed from Panel P93 (approximate Sta. 304+60) running approximately 85 ft. east to approximate Sta. 303+75 (subgrade previously approved on 8/4/16).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI continuing with repair activities for Panels P100 to P106 (installed on 8/9/16). The repairs were patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications. Additional details are outlined on the 8/10/16 *Repair Report.*
- ESI also collected two destruct samples from Panels P100 to P106 (installed on 8/9/16) for laboratory analysis. One fusion weld destruct samples – DS-33 was collected from Panel P104 / P106 and one extrusion weld destruct sample – DSX-15 was collected from Repair R-445 (Panel P104 / P106).
- While repair / vacuum box activities were being conducted ESI removed the temporary panels from approximate Sta. 304+60 to approximate Sta. 303+75 which were previously installed on 8/4/16. Note: soil subgrade approval for this area was also completed on 8/4/16 prior to the temporary panel placement. 16 oz. geotextile and GVL were also placed on 8/4/16 following subgrade approval.
- LLDPE geomembrane was installed continuing east from Panel P93 (installed on 8/4/16) up to Panel P94 (installed on 8/5/16). The new LLDPE panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 304+60 (east of Panel P93) to approximate Sta.303+75 (Panel P94) . A total of four panels were installed (P107, P108, P109, and P110). Note: During placement of Panel P109 the roll of LLDPE terminated near the northern end of SA-6 North, thus the remaining run of LLDPE was installed as P110. Panels P107 and P108 ran the entire width of SA-6 North (approximately 233 ft.) from north to south.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture, smooth to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for peel and shear testing for each weld (3 samples for each test). The results of the pre-trial weld are provided in the 8/10/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 303+75, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/10/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P107 to P110 (installed on 8/10/16)
- ESI conducted repair activities for Panels P107 to P110 (installed on 8/10/16), along with the repair activities for Panels P100 to P106 (installed on 8/9/16). A total of twenty-two repairs (R-446 through R-467) were observed and fixed (according to the project specifications). Refer to 8/10/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- ESI also completed pipe boot / penetrations for Gas Vent GV-1 and Well 115-E4-SO. Additional details are provided in the 8/10/16 Pipe Boot Construction Logs.
- One fusion weld sample – DS-34 was also collected from Panels P107 to P110 (installed on 8/11/16) from Panel P94 / P110 seam for laboratory analysis.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 13 (Sheet #13) – Subgrade irregularity identified as R-457 on *Repair Log*
    - Stone identified underneath LLDPE geomembrane located on Panel P107 / P108. Stone was subsequently removed, and hole was patched / repaired following project specs as further described in *Sheet 13 Notice of Non-Compliance.*

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/10/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DS-33, DS-34, and DSX-15.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, 8/8/16, and 8/9/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-32. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-14. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

## ***Near Misses / Incidents***

- None Encountered

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #28**
**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P106 installed on 8/9/16 (approximate Sta. 301+70). Material to be placed from Panel P106 running approximately 45 ft. east to approximate Sta. 301+25.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting vacuum box testing and "Add On" repair activities for Panels P94 to P104. ESI completed Add On repairs along the southern end of SA-6 North. Additional LLDPE was installed so that the cap extended a minimum of 1 ft. beyond the edges of the SCB wall. These repairs were recorded and documented on the 8/11/16 *Repair Report.*
- Following repair activities, ESI placed geocomposite drainage layer (GDL) continuing east of Panel P93. GDL was placed over Panels P107 to P110 (installed on 8/10/16) from approximate Sta. 304+60 to approximate Sta. 303+75. GDL was placed according to the project specs with white plastic fasteners spaced at a maximum of 5 ft. with the top layer of geotextile sewn.
- Prior to soil subgrade approval, the edge of Panel P106 (installed on 8/9/16) was pulled back to expose the underlying GCL layer. A small portion of the GCL had become saturated due to overnight storms. The saturated GCL was cut and exposed to dry the GCL and soil subgrade. A new piece of GCL was then installed over the saturated GCL, secured with bentonite, and leistered in place. See Photos 6 & 7 in 8/11/6 *Photograph Log.*
- Following the GCL activities, Langan and Entact conducted soil subgrade approval from approximate Sta. 301+70 (east of Panel P106 installed on 8/9/16) to approximate Sta. 301+25. Refer to *Soil Subgrade Approval* forms from 8/11/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 301+75 (east of Panel P106) moving east to approximate Sta. 301+25. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/11/16 Photo Log for supporting photographs. Note: GVL was placed along the southern end of SA-6 North at areas above the site water table (areas not covered by GCL).
- Additionally, GCL was placed along the northern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included an area along the northern edge of SA-6 North from approximate Sta. 301+75 to Sta. 301+25. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/11/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east Panel P106 (installed on 8/9/16). The LLDPE panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 301+75 (east of Panel P106) to approximate Sta. 301+25. A total of two panels were installed (P111 and P112). Panels P111 and P112 ran the entire width of SA-6 North (north to south) spanning approximately 237 ft.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected to conduct peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 8/11/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 301+25, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/11/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P111 and P112 (installed on 8/11/16)
- ESI completed repair activities for Panels P94 to P104 (Add On repairs along southern end of the cap) and Panels P111 & P112 (installed on 8/11/16). A total of twenty-one repairs (R-468 through R-485 and R-495 to R-497) were observed and fixed (according to the project specifications). Refer to the 8/11/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- No destruct samples collected on 8/11/16.

## ***Non-Conformance Items / Corrective Actions***

- None Encountered.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/11/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, 8/8/16, 8/9/16, and 8/10/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-34. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-15. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

## ***Daily QA Documents Completed***

| ***Appendix / QA Forms*** | ***Sheet / Page Numbers*** | ***Comments*** |
|---|---|---|
| A1 – Certificate of Completion | | To be completed at termination of project |
| A2 – Receiving and Inspection | | NA – no new material delivered on 8/11/16 |
| A3 – Photo Log | Pages 1 – 8 | Total of 16 photos outlining pertinent daily observations and descriptions for 8/11/16 |
| A4 – Geosynthetic Inventory Log | | Completed to date; no updates from 8/11/16 |
| A5 – Subgrade Approval | Sheet 21 & ESI (8/11/16) | Two subgrade approval forms provided. One by Independent QA and one from Geosynthetic Installer |
| A6 – Trial Weld Log | Page 8 | One trial weld log provided by ESI and confirmed by Langan for prewelds completed up to 8/11/16 |
| A7 – Panel Placement Log | Page 16 | One panel placement log provided by ESI and confirmed by Langan for panels placed on 8/11/16 |
| A8 – Destruct Seam Testing COC | | NA – no destruct samples collected on 8/11/16 |
| A9 – Seam/Non-Destruct. Test Log | Pages 40-42 | One seam control form provided by ESI and confirmed by Langan for pressure testing conducted on 8/11/16 |
| A10 – Repair Log | Pages 24-25 | One repair log provided by ESI and confirmed by Langan for repairs completed for 8/11/16 |

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 8/12/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 85/98° F, Sunny, Humid |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | | **TIME:** | 0645 – 1730 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #29**
**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P112 installed on 8/11/16 (approximate Sta. 301+25). Material to be placed from Panel P112 running approximately 45 ft. east to approximate Sta. 300+80.
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI deploying orange geocomposite drainage layer (GDL) continuing east from Panel P98. GDL was placed over Panels P99 to P106 (installed on 8/8/16 and 8/9/16) from approximate Sta. 303+15 (Panel P99) to approximate Sta. 301+70 (Panel P106). GDL was placed according to the project specs with white plastic fasteners spaced at a maximum of 5 ft. with the top layer of geotextile sewn.
- While GDL was being deployed ESI also conducted vacuum box testing and minor repairs for Panels P111 and P112 (installed on 8/11/16). Additional details are provided in the 8/12/16 *Repair Report.*
- ESI also completed spark testing for Gas Vent GV-1 and Well 115-E4-SO. Prior to spark testing, methane testing was completed by AmecFW and a concentration of 0.0% was measured for both boots. Spark testing was then completed for Gas Vent GV-1 along the base of the boot and vertical weld and no sparks were observed (spark test passed). During spark testing of Well 115-E4-SO a spark was observed along the edge of the vertical weld as the extrusion weld was not centered over the copper wire. This area was marked by ESI, grinded, re-welded, and retested. No sparks were observed during the spark retest thus the retest passed.
- Prior to soil subgrade approval, the edge of Panel P112 (installed on 8/11/16) was pulled back to expose the underlying GCL layer. A small portion of the GCL had become saturated due to overnight storms. The saturated GCL was cut and exposed to dry the GCL and soil subgrade. A new piece of GCL was then installed over the saturated GCL, secured with bentonite, and leistered in place.
- Following the GCL activities, Langan and Entact conducted soil subgrade approval from approximate Sta. 301+25 (east of Panel P112 installed on 8/11/16) to approximate Sta. 300+80. Refer to *Soil Subgrade Approval* forms from 8/12/16 for additional details.

Cc Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any loose material greater than ½". The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 301+25 (east of Panel P112) moving east to approximate Sta. 300+80. GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/12/16 Photo Log for supporting photographs. Note: GVL was placed along the southern end of SA-6 North at areas above the site water table (areas not covered by GCL).
- Additionally, GCL was placed along the northern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included an area along the northern edge of SA-6 North from approximate Sta. 301+25 to approximate Sta. 300+80. GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/12/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east of Panel P112 (installed on 8/12/16). The LLDPE panels were oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 301+25 (east of Panel P112) to approximate Sta. 300+80. A total of two panels were installed (P113 and P114). Panels P113 and P114 ran the entire width of SA-6 North (north to south) spanning approximately 233 ft.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for peel and shear testing (3 samples for each weld). The results of the pre-trial weld are provided in the 8/12/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 300+80, ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/12/16 *Seam Control Form* for non-destructive testing details. Additionally, repair activities were conducted for Panels P113 and P114 (installed on 8/12/16)
- ESI completed repair activities for Panels P113 to P114 (installed on 8/12/16). A total of seven repairs (R-486 through R-489 and R-492, R-493, and R-494) were observed and fixed (according to the project specifications). Refer to the 8/12/16 *Repair Report* for additional details. Repairs were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- ESI also completed pipe boot / penetrations for Access Manhole Sta. 18+00 and Injection Well 088-IW-01. Additional details are provided in the 8/12/16 Pipe Boot Construction Logs.
- No destruct samples collected on 8/12/16.

## ***Non-Conformance Items / Corrective Actions***

- Non-Conformance No. 14 (Sheet #14) – Failed spark test along vertical weld of Well 115-E4-SO
  - Failed spark test identified during spark testing of Well 115-E4-SO. Spark observed along edge of extrusion weld (weld not centered over wire). Area was grinded, rewelded, and retested and no sparks were observed during spark retest (spark retest passed).

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

By: Dan Bosworth

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/12/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, 8/8/16, 8/9/16, 8/10/16, and 8/11/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-34. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-15. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

# SITE OBSERVATION REPORT

| | | | | | |
|---|---|---|---|---|---|
| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | | **DATE:** | 8/13/2016 |
| **PROJECT:** | SA-6 North Capping | | | **WEATHER:** | 85/98° F, Sunny, Humid |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | | **TIME:** | 0645 – 1800 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #30**
**AmecFW**: Philemon Onyango, Josh Boynton
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of 16 oz. geotextile, geocomposite venting layer (GVL), and 60-mil geomembrane liner (LLDPE), continuing east from Panel P114 installed on 8/12/16 (approximate Sta. 300+80). Material to be placed from Panel P114 running approximately 80 ft. east to approximate Sta. 300+00 (east end of SA-6 North).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI conducting vacuum box testing and minor repair activities for Panels P113 / P114 (installed on 8/12/16). Repairs were patched, extrusion welded, and vacuum box tested as per project specifications. Additional details are outlined on the 8/13/16 *Repair Report*. Additionally, two destruct samples were collected. One fusion weld destruct sample DS-35 was collected from Panel P112 / P113, and one extrusion weld destruct sample – DSX-16 was collected from Panel P112 (Repair R-478)
- While repair activities were being completed ESI deployed orange geocomposite drainage layer (GDL) continuing east from Panel P106. GDL was placed over Panels P106 (approximate Sta. 301+70) to approximate Sta. 300+80 (Panel P114). GDL was placed according to the project specs with white plastic fasteners spaced at a maximum of 5 ft. with the top layer of geotextile sewn. Note: repairs were completed for Panels P113 / P114 in the early morning and were surveyed and verified before GDL was deployed over the panels later in the morning.
- ESI also completed spark testing for Access Manhole Sta. 18+00 and Injection Well 088-IW-01. Prior to spark testing, methane testing was completed by AmecFW and a concentration of 0.0% was measured for both boots. Spark testing was then completed along the base of the boot and vertical weld for both locations. No sparks were observed during either test (spark tests passed).
- Following the GDL activities, Langan and Entact conducted soil subgrade approval from approximate Sta. 300+80 (east of Panel P114 installed on 8/12/16) to approximate Sta. 300+00 (east end of cap). Refer to *Soil Subgrade Approval* forms from 8/13/16 for additional details. During subgrade observation, the subgrade area was transected in approximate 200 ft. by 8 ft. sections and based on visual observation, the soil subgrade appeared to be firm and unyielding with no soft / wet areas observed. Furthermore, miscellaneous debris (rocks, debris, etc.) were removed so that the surface was generally free of any

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

loose material greater than ½". The area was also previously surveyed and subsequently approved by AmecFW prior to LLDPE placement.

- Following subgrade approval, GVL and LLDPE placement began with ESI placing the 16 oz. geotextile at the boundaries of the SA-6 North Cap over the sheet pile and surrounding barrier walls. The geotextile was overlapped approximately 1 ft. outside of the cap (remaining roll width inside), as outlined in the project specifications. After the 16 oz. geotextile was placed, GVL was installed from approximate Sta. 300+80 (east of Panel P114) moving east to approximate Sta. 300+00 (east end of cap). GVL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top layer of geotextile was sewn along the seams (according to the project specifications). Refer to 8/13/16 Photo Log for supporting photographs. Note: GVL was placed along the southern end of SA-6 North at areas above the site water table (areas not covered by GCL).
- Additionally, GCL was placed along the northern and eastern end of SA-6 North at areas below (to 1 ft. above) the water table (as shown on the drawings and outlined in the project specs). This included an area along the northern edge of SA-6 North from approximate Sta. 300+80 to approximate Sta. 300+00 (east end of cap). GCL was overlapped a minimum of 1 ft. along the seams with granular bentonite placed along the edges. Supporting photos are provided in the 8/13/16 *Photograph Log*.
- After placement of GVL and GCL, LLDPE geomembrane was installed continuing east of Panel P114 (installed on 8/12/16). The LLDPE panels were generally oriented from north to south (as proposed in the approved Panel Layout) and were installed from approximate Sta. 300+80 (east of Panel P114) to approximate Sta. 300+00. A total of five panels were installed (P115, P116, P117, P118, and P119). Panels P116, P117, P118, and P119 were oriented northwest/southeast and were placed to fill in the triangle area along the southeast portion of the cap. Panel P115 ran the entire width of SA-6 North (north to south) spanning approximately 235 ft.
- Adjacent LLDPE geomembrane seams were overlapped a minimum of four inches for fusion welding (according to the project specifications). Prior to welding activities, trial welds (smooth to smooth, texture to texture) were conducted to confirm that the equipment met the required specifications. At least six 1-inch specimens were collected for several welds for peel and shear testing (3 samples for each test). The results of the pre-trial weld are provided in the 8/13/16 *Trial Weld Log.*
- Upon completion of geomembrane panel placement to approximate Sta. 300+00 (east end of cap), ESI conducted non-destructive testing in accordance with the project specifications. Refer to the 8/13/16 *Seam Control Form* for non-destructive testing details.
- Temporary patches were leistered in place for Panels P115 to P119, but no repair activities (extrusion welding) were completed on 8/13/16 (to be finished Monday – 8/15/16). ESI completed repair activities for Panels P113 to P114 (installed on 8/12/16). A total of seven repairs (R-490, R-491, R-498 to R-502) were observed and fixed (according to the project specifications). Refer to the 8/13/16 *Repair Report* for additional details. Repairs were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.

## ***Non-Conformance Items / Corrective Actions***

- None Encountered.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/13/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DSX-16 and DS-35.

Cc: Jeff Stoicescu, Rory Johnston, Geoff Shallard, Stu Bills, Dave Ambrose

**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, 8/8/16, 8/9/16, 8/10/16, 8/11/16, and 8/12/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-34. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-15. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

| **PROJECT No.:** | 10053001 | **CLIENT:** Honeywell International, Inc. | **DATE:** | 8/15/2016 |
| **PROJECT:** | SA-6 North Capping | | **WEATHER:** | 82/92° F, Sunny, Humid |
| **LOCATION:** | 60 Kellogg St., Jersey City New Jersey | **TASK.:** Geocomposite & LLDPE Placement | **TIME:** | 0645 – 1500 |

**CONTRACTOR & EQUIPMENT:**
**ENTACT & ESI**
*Equipment:* Dozers, Steel Drum Rollers, Skytrak 10 Forklift, Deere 333E Bobcat, Misc. Hand Tools (shovels, rakes)

**PERSONNEL ON SITE:** **Day #31**
**AmecFW**: Stu Bills, Dave Ambrose, Philemon Onyango, Josh Boynton
**Langan:** Dan Bosworth
**ENTACT / ESI**: Keith Goisse, Caroline Panico

## ***Site Activities***

- Langan onsite for observation of placement of geocomposite drainage layer (GDL) over approved LLDPE geomembrane (Panel P115 to P119). Note: LLDPE geomembrane installation complete up to east end of cap (Panels P115 to P119).
- Prior to Site activities, a daily health & safety (H&S) tailgate meeting was conducted with onsite personnel and contractors regarding work to be completed and potential hazards / complications that may be encountered during daily activities. Appropriate personal protective equipment (PPE) was donned (hard hat, safety vest, gloves, eyeglasses, and tyvek suit) prior to entering the work area (SA-6 capping area). It should be noted that after GVL has been placed on SA-6, modified level D PPE (tyvek suit, rubber boots, etc.) was not required.
- Site activities commenced with ESI completing repair activities and vacuum box testing for Panels P115 to P119 (installed on 8/13/16). A total of twelve repairs were (R-503 to R-514) observed and fixed according to the project specifications. Refer to the 8/15/16 *Repair Report* for additional details. In general, the majority of the repairs were cuts that were made on the geomembrane to allow the cap to conform to the contours of SA-6 North grade (custom fit repairs), as well as seam joint patches. These areas were subsequently patched and sealed with extrusion welds, with vacuum box testing then conducted as outlined in the project specifications.
- A total of two destruct samples were collected. One destruct sample DS-36 was collected from Panel P117 / P118 seam and one extrusion weld destruct sample – DSX-17 was collected from Panel P118 (Repair R-505) for laboratory analysis.
- ESI also completed the boot construction for Piezometer PZ2. Following the boot completion, methane / spark testing for Piezometer PZ2 was completed. Methane testing was conducted prior to spark testing and a concentration of 0.0% was measured. Spark testing was then conducted along the base of the boot and vertical weld and no sparks were observed (spark test passed). Additional details are provided in the Piezometer PZ2 boot construction log and the 8/15 *Spark Test Log.*
- After repair activities were completed, the as-built information including repair locations, distances, etc. was verified and ESI deployed the orange geocomposite drainage layer (GDL), over the previously installed LLDPE geomembrane (Panels P115 to P119). GDL was placed from approximate Sta. 300+80 to the east end of SA-6 North (approximate Sta. 300+00). GDL was placed according to the project specifications with white plastic fasteners spaced at a maximum of 5 ft. Additionally the top panel of geotextile was sewn along the seams (according to the project specifications). Refer to 8/15/16 Photo Log for supporting photographs.

By: Dan Bosworth
**Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.**

## ***Non-Conformance Items / Corrective Actions***

- None Encountered.

## ***Action Items – Pending***

- Complete Daily Report and Photo Log (for 8/15/16). Review and confirm supporting QA paperwork (soil subgrade approval, trail weld log, panel placement, notice of non-compliance, etc.).
- Review laboratory destruct sample results for DSX-17 and DS-36.

## ***Action Items – Weekly Completions***

- Completed Daily Report, Photo Log, and Soil Subgrade Approval for 6/22/16, 6/23/16, 6/24/16, 6/27/16, 6/29/16, 6/30/16, 7/1/16, 7/6/16, 7/7/16, 7/8/16, 7/11/16, 7/12/16, 7/13/16, 7/14/16, 7/15/16, 7/18/16, 7/25/16, 7/28/16 8/2/16, 8/3/16, 8/4/16, 8/5/16, 8/8/16, 8/9/16, 8/10/16, 8/11/16, 8/12/16, and 8/13/16. ESI Forms still to be reviewed.
- Reviewed laboratory data for fusion weld destruct samples DS-1 through DS-35. Reviewed laboratory data for extrusion weld destruct sample DSX-1 through DSX-16. Laboratory results generally in compliance with project specifications with the exception of DS-26. Destruct sample DS-26B passed for peel and shear.

## ***Near Misses / Incidents***

- None Encountered

## ***Future Activities Scheduled***

- Continue subgrade preparation work for remaining areas of SA-6 North continuing east. Continue with subgrade observation to confirm if subgrade is graded, compacted, and free of debris, as well as surveyed (to be completed by AmecFW / Maser) to specifications.
- Continue with GVL and LLDPE geomembrane placement moving east along SA-6 North.

## ***Site Activities***

- Langan (Dan Bosworth and Jeff Stoicescu) onsite for final site walk of SA-6 North to observe completed geosynthetic components of SA-6 North capping activities.
- Langan conducted a site walk of the completed SA-6 North cap spanning from the west end (approximate. Sta. 319+00) to the east end (approximate Sta. 300+00). During the site walk, the following conditions were observed (in relation to the geosynthetic components of the cap installation):
  - Condition 1: The final GDL geotextile wrap around Gas Vent GV-2 was cut and gas vent was exposed.
  - Action Item: Based on discussions with Entact, the GDL was cut so that the construction of the gas vent could be completed. Entact plans to conduct leistering activities to reseal the geotextile wrap and secure the GDL.
  - Condition 2: Wrinkles were observed along the east end of the cap (approximate Sta. 300+00) due to the spreading of cover soils over the GDL.
  - Action Item: Entact to attempt to work out wrinkles to the east end of the cap. If wrinkles cannot be removed, ESI will return to the site to cut the geomembrane and complete patch / repair activities.
  - Condition 3: LLDPE was pulled taught along the slopes / contour changes along SA-6 North for areas where cover soil was being placed. During placement of cover soil, sand bags were removed from the cap so that the cover soil could be placed over the GDL. However, for areas where cover soil was not completed by the end of the day, the sand bags were not returned and the geosynthetic material was left un-weighted, thus causing the LLDPE to trampoline.
  - Action Item: Entact to ensure that areas not covered with cover soil at the end of the day will be secured with sand bags.
- Above items shall be reviewed on Friday (8/19).
- Additional details are outlined in the 8/17/16 *Photograph Log.*

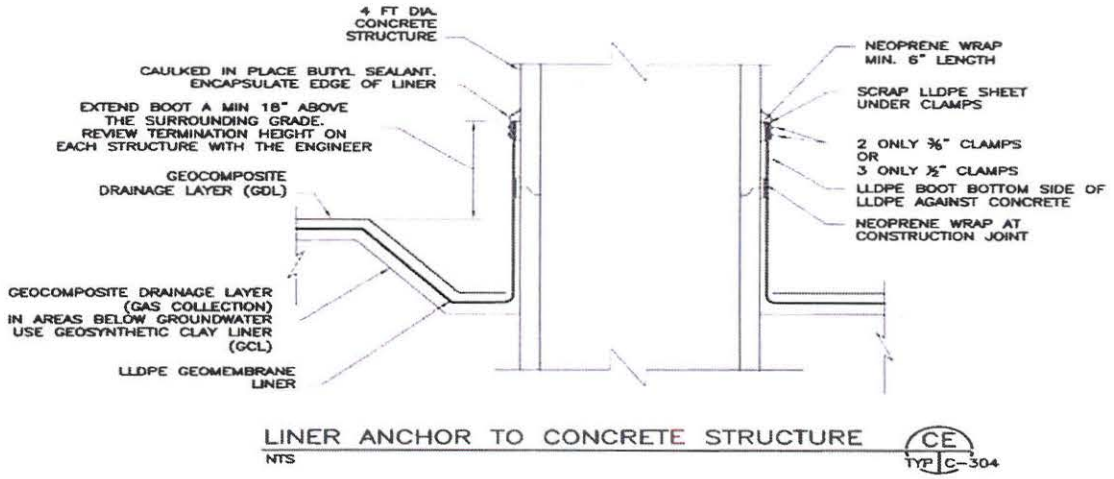
LANGAN



**Project:** Study Area 6 North

**Location:** Access Manhole Sta. 18+00 located near approximate center of SA-6 North Cap on Panel P113 (approximately 110 ft. north of southern end of cap and 10 ft. east of Panel P112/P113 seam). Identified as R-492 on *As Built* and *Repair Report*.

**Date:** 8/13/16 **Repair Number:** R-492

**Boot Log QA Form (cross-reference):** 8/12/16 Access Manhole Sta. 18+00 Form

### QA – Spark Test Log – Manhole

LINER ANCHOR TO CONCRETE STRUCTURE
NTS

CE TYP C-304

**Methane Testing:** *Instrument:* Landtec GEM 5000 *Time:* 0910

*% Methane* 0.0%

☒Methane < 1%; Proceed with spark testing ☐Methane > 1%; Visual observation of welds

**Skirt to Panel Extrusion Weld:** ☐Vacuum Box Tested ☒Spark Tested (as outlined below)

**Spark Test Information**

| *Item Tested* | *Thickness* | *Operator Initials* | *Voltage (kV)* | *AC / DC* | *Brush Probe* | *Point Probe* | *QCR I.D** | *Pass / Fail* | *Retest Pass /Fail* | *QCR I.D** |
|---|---|---|---|---|---|---|---|---|---|---|
| Base of boot | ~20 Gauge Copper | TU | 20,000 – 45,000 | AC | | Model BD-10A | CP | Pass | | CP |
| Vertical weld | ~20 Gauge Copper | TU | 20,000 – 45,000 | AC | | Model BD-10A | CP | Pass | | CP |

*QCR represents the designated Quality Control representative determined by the Geosynthetic Installer

**Comments:** Boot fabrication completed on 8/12/16. Spark / methane testing conducted on 8/13/16. Concentration of 0.0% methane measured prior to spark testing. As such, spark testing was conducted along the base of the boot and the vertical weld and no sparks were observed (spark test passed). Additionally, vacuum box testing was conducted along vertical and horizontal extrusion welds completed for the boot construction.

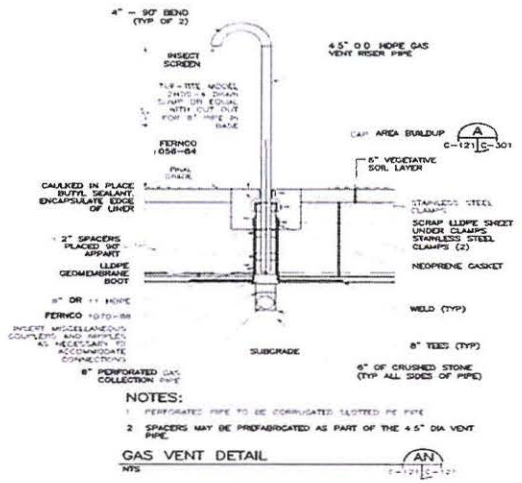
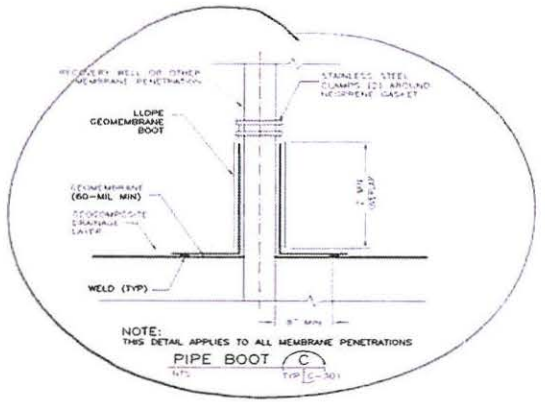
# STUDY AREA 6 - CAP INSTALLATION

LANGAN



**Project:** Study Area 6 North



**Location:** Injection Well 088-IW-01 located along N end of SA-6 North Cap on Panel P113 / P114 seam (approx 206 ft. north of southern end of cap and 13 ft. east from Panel P113/P114 seam). Identified as R-493 on *As Built* and *Repair Report*.

**Date:** 8/13/16 **Repair Number:** R-493

**Boot Log QA Form (cross-reference):** 8/12/16 Injection Well 088-IW-01 Form

## QA – SPARK TEST LOG (circle type of boot)

**Methane Testing:** *Instrument:* Landtec GEM 5000 *Time:* 0800

*% Methane* 0.0% ☒Methane < 1%; Proceed with spark testing ☐Methane > 1%; Visual observation of welds

**Skirt to Boot Extrusion Weld**: ☐Vacuum Box Tested ☒Spark Tested (as outlined below)

**Spark Test Information**

| *Item Tested* | *Thickness* | *Operator Initials* | *Voltage (Volts)* | *AC / DC* | *Brush Probe* | *Point Probe* | *QCR I.D** | *Pass / Fail* | *Retest Pass /Fail* | *QCR I.D** |
|---|---|---|---|---|---|---|---|---|---|---|
| Base of boot | ~20 Gauge Copper | TU | 20,000 – 45,000 | AC | | Model BD-10A | CP | Pass | | CP |
| Vertical weld | ~20 Gauge Copper | TU | 20,000 – 45,000 | AC | | Model BD-10A | CP | Pass | | CP |

*QCR represents the designated Quality Control representative determined by the Geosynthetic Installer

**Comments:** Boot fabrication and construction completed on 8/12/16. Methane / spark testing completed on 8/13/16 by ESI. Methane testing yielded concentration of 0.0%. As such, spark testing was conducted at the base of boot and along the vertical weld. No sparks were observed during testing, thus the spark test passed.

**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the July 2016 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

## Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending August 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2014-6-10** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-6-10 includes the french drain installation, as well as pump and access station manholes for SA-6 South. Some design details, including the electrical design, will be finalized based field obersvations and constructability review. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2014-11-20** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-11-20 includes the french drain installation, electrical supply and discharge piping for SA-6 North. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2016-6-10** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-6-10 includes the revised electrical supply and discharge piping for SA-6 North. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2015-2-12** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-2-24 is a follow up to DC 2014-6-10, the SA-6 South CGWES trench design. DC 2015-2-24 includes details for electrical supply and discharge piping. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2014-2-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to document the changes in the SA 6 North and South cap subgrades that resulted from the change to a trench system. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2015-9-03** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-9-03 is a follow up to DC 2015-2-24, the SA-6 South CGWES electrical supply. DC 2015-9-03 provides a revised electrical plan. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |

**SA-6 North/South Field Change Log - Month Ending August 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-5-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to address the elimination of a drop structure, the elmination of a flow meter, conduit sizing changes, and to clarify Entact's scope. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead. | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |

**SA-6 North/South Field Change Log - Month Ending August 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Parties on July 2, 2015. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groundwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | To be submitted to Parties as Attachment to Declaration 005. |
| **DC 2016-04-15** | Amec Foster Wheeler has provided final restoration grades for SA-6 South Development Area. The DCB also includes the final cover types in revised Drawing C-128. | To be submitted to Parties as Attachment to Declaration 005. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |

**SA-6 North/South Field Change Log - Month Ending August 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2015-07-22** | Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA-6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | To be submitted to Parties as Attachment to Declaration 004. |

**SA-6 North/South Field Change Log - Month Ending August 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | To be submitted to Parties as Attachment to Declaration 003. |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | To be submitted to Parties as Attachment to Declaration 003. |
| **DC 2015-09-28** | Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling. | Submitted to Parties on October 1, 2015. |
| **DC 2015-12-21** | Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation –8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance withASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |

**SA-6 North/South Field Change Log - Month Ending August 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-11-30** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | To be submitted to Parties as Attachment to Declaration 003. |
| **DC 2016-02-03** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-02-22** | AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entact's request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location.<br>In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-02-25** | This DCB has been issued to provide Entact with the latest SA-6 North HB Wall and SCB wall plan and profile drawings (SN-201 thru SN-205), which were modified to reflect changes made in DC 2016-02-22. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-05-03** | The laboratory results of all gradations for planting soils shall be presented in terms of the USDA classification system rather than the USCS classification system. | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |
| **DC 2016-03-18** | This DC 2016-03-18 documents the revised acceptable ranges of physical parameters and provides an updated specification made in consultation with Dr. Grabosky of Rutgers University. Dr. Grabosky provided his recommendations in correspondence dated 3/17/2016. | Submitted to Parties on March 22, 2016. Plaintiffs responded in a letter dated April 15, 2016. Plaintiffs and Honeywell subsequently held discussions and DCB 2016-04-20 was developed to document an agreement reached by all parties on the Special Master All-Hands monthly call on April 19, 2016. |
| **DC 2016-03-21** | Nature's Choice was identified as the source that best met the physical requirements for Horizon C soils by Dr. Grabosky; however, several samples of Nature's Choice Horizon C soils have hexavalent chromium concentration >1.0 mg/kg. Consequently, Honeywell is proposing a design change to allow the hexavalent chromium concentration in Nature's Choice Horizon C soils to be less than 1.8 mg/kg, as agreed to by the parties, as documented in the attached emails. For future sampling, hexavalent chromium soil samples will be composited from 10 grab sample locations per 5,000 CY (maximum). There are additional conditions in Attachment A that are part of this DCB and specific to Nature's Choice Horizon C soil. All other requirements specified in the 100% Design for imported soils will be met by the Nature's Choice Horizon C soils as amended in previous DC 2015-09-17. | Submitted to Parties on March 22, 2016. |
| **DC 2016-04-20** | This DCB documents the approved sources of Horizon B and Horizon C materials, as agreed to by all parties on the Special Master All-Hands monthly call on April 19, 2016. | Submitted to Parties on April 21, 2016. |
| **DC 2016-05-06** | To allow for traffic flow within the project site following completion of the SA-6S Cap, a road will be installed within the "B Street" corridor. The road will be constructed by continuing the "Structural Fill under Roadways to within 6 inches of final grade" | Submitted to Parties on June 30, 2016. |
| **DC 2016-05-31** | This DCB documents the vault sketch Drawing C-310 (Rev 5, 5/31/16) | Submitted to Contractor only as clarification or response to RFI. All DCBs will be included in final Remedial Action Report. |

**SA-6 North/South Field Change Log - Month Ending August 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-5-11** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. As part of DC 2016-5-11, AmecFW issued SA-6 North Interim Grades to Entact. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-5-20** | After further review, AmecFW lowered the geomembrane Pump Station #1 on the SA-6 North cap in order to provide additional separation between the geomembrane and the bottom of the vault. (Refer to DC 2016-02-22). | Submitted to Parties on June 15, 2016. |
| **DC 2016-7-12** | DC 2016-7-12 clarifies the limit of GCL deployment and the location of the sand bentonite plug in the SA-6 North cap. | Included as an attachment to July 2016 Monthly Progress Report. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

## Attachment 15: Issued Permit: NJDEP Discharge to Groundwater (DGW) for In-Situ Treatment of Chromium Impacted Soils

State of New Jersey

DEPARTMENT OF ENVIRONMENTAL PROTECTION
SITE REMEDIATION PROGRAM
Mail Code 401-06
P.O. Box 420
Trenton, NJ 08625-0420

Re: Permit-by-Rule Discharge Authorization
In-Situ Treatment of Chromium Impacted Soils
Study Area 6 – North
Hudson County Chromate Site 087
Jersey City, Hudson County
NJDEP PI # G000008710

Dear Mr. Hague:

This New Jersey Pollutant Discharge Elimination System/Discharge to Ground Water (NJPDES/DGW) authorization is hereby issued under the authority of the New Jersey Water Pollution Control Act, N.J.S.A. 58:10A-1 et seq. and the implementing regulations, N.J.A.C. 7:14A-1 et seq. N.J.A.C. 7:14A-7.5 authorizes this discharge of calcium polysulfide ($CaS_x$) to the ground waters of the State for the purpose of remediating chromium impacted soil at the above referenced site. Pursuant to N.J.A.C. 7:14A-22.4(b)5, a Treatment Works Approval is not required for discharges to ground water authorized pursuant to N.J.A.C. 7:14A-7.5 or 8.5. The discharge approved through this DGW Permit is to injection wells, and must be conducted in conformance with the "Proposed In-Situ Treatment Event for Remaining Hexavalent Chromium Impacted Soils, Treatment Area 10-1, SA-6 North, Site 087" (July 8, 2016) prepared by Amec Foster Wheeler E&I, Inc. for the subject site.

Honeywell is authorized to discharge fluids to the ground waters of the state from injection wells related to in-situ soil treatment where the discharge will not last more than 180 days from the first date of discharge. This NJPDES/DGW permit authorization is issued in order to facilitate the remedial activities conducted with oversight from the NJDEP. Specifically, the Administrative Consent Order executed between the NJDEP and AlliedSignal on June 17, 1993, pursuant to N.J.A.C. 7:26C, is the oversight document for remedial activities conducted at the site. In addition, remedial activities are being conducted in accordance with the Consent Decree Regarding Remediation and Redevelopment of Study Area 6 North entered by the Federal Court in JCMUA v. Honeywell Civ. No. 05-5955 on April 21, 2008. Termination of the oversight document by the

Department or Honeywell will revoke the permit-by-rule authorization to discharge to the ground waters of the State.

## I. DISCHARGE DESCRIPTION AND AREA RECEPTORS

### Site Description

The location of the permit-by-rule is Jersey City, Hudson County (west of Route 440, within Block 21901, Lot 9). The site has areas of soil contaminated with hexavalent chromium (Cr(VI)). The area targeted for in-situ treatment is Treatment Area 10-1. Area 10-1 is an 800 square foot area proximate to a 72 inch force main, with impacted soils located at 10 to 16 feet below grade. The impacted soils are contaminated with Cr(VI) at levels above 20 mg/kg and up to 39 mg/kg.

An initial in-situ treatment event with Calcium Polysulfide occurred at Area 10-1 between August and September 2015, in accordance with a Permit-By-Rule dated July 14, 2015. Post in-situ analytical results showed that Cr(VI) samples in the majority of areas treated are now below the 20 mg/kg clean up criteria. However, 5 out of 20 sample points contained soil which will require additional treatment. Calcium Polysulfide will be re-injected within all five original treatment points, not just the remaining areas of soil exceedances.

### Proposed Remedy

The proposed discharge is comprised of a Calcium Polysulfide ($CaS_x$) solution, which is to be injected into at least 10 temporary injection points within the targeted areas to convert hexavalent chromium (CrVI) to trivalent chromium (CrIII). Ten (10) 1-inch diameter PVC injection wells (IWs) will be drilled and installed within subarea TA-10-1, grouped in 5 nested pairs spaced approximately 15 feet apart, in the same general location as the previous 5 injection points. Wells within each pair will be screened at 3-foot intervals, one from 10 to 13 feet below ground surface and one from 13 to 16 feet below ground surface, to increase the vertical distribution of $CaS_x$. A total of 825 gallons of 29% $CaS_x$ will be mixed with approximately 2,425 gallons of potable water to produce 3,250 gallons of a 7% $CaS_x$ solution. Stoichiometric chemical dose is estimated to be 2.5X. The discharge will be within soils contaminated with hexavalent chromium between the depths of 10 to 16 feet, but will not be contained by recovery wells. The CaSx will be gravity fed from tanker trucks into the injection wells. Injections will occur over an estimated 5 weekly dosages of 650 gallons each. Each IW will receive 65 gallons of solution during each event.

The proposed area for the $CaS_x$ treatment in Area 10-1 is approximately 20 feet north of the force main location. As a contingency, Honeywell proposes that if the sulfate concentrations in either one or both of 087-MW-133 and 087-MW-134 reach 150 mg/L, clean potable water will be injected into both wells to dilute the sulfate concentrations in the shallow ground water adjacent to the force main.

**Site Monitoring Requirements**

Site monitoring will be scheduled as follows:

- **Baseline Monitoring**

Ten (10) injection wells (IWs) will be installed around the perimeter of the injection areas. The breathing zones at drilling locations will be monitored for volatile organic compounds (VOCs) and $H_2S$. Ground water monitoring wells 087-MW-132, 087-MW-133, and 087-MW-134 installed between subarea TA-10-1 and the adjacent force main (FM) for the 2015 injection event have been maintained in the area. The following measurements will be taken and recorded in the ten newly installed IWs and existing monitoring wells prior to the start of injections (baseline): depth to ground water; ground water quality parameters, including pH, oxidation/reduction potential (ORP), specific conductivity (SC), and total dissolved solids (TDS); hydrogen sulfide ($H_2S$) and volatile organic compounds (VOCs) in the headspace of the PVC riser pipe; and ground water color and/or odor. Ground water samples will be collected from the monitoring wells for analysis of sulfate and sulfide prior to the start of injections. Additionally, the five temporary well points (TWPs) 087-TWP-37 through 087-TWP-41 installed for the 2015 injection event have been maintained in the area and will also be monitored for sulfate and sulfide.

- **Injection Performance Monitoring**

During the course of injections, IWs and permanent monitoring wells will be sampled to monitor changes in water levels during injection, and to monitor distribution of reductant (changes in redox and conductivity as well as sulfate and sulfide concentration), and sampled for ground water quality parameters, including pH, ORP, SC, and TDS; $H_2S$ and VOCs in the headspace of the PVC riser pipe and ground water color and/or odor. The breathing zones at storage, mixing, and injection areas will be monitored for hydrogen sulfide (H2S). Ground water samples will be collected from the TWPs and monitoring wells within the vicinity of the treatment area for analysis of sulfate and sulfide each week between dosages.

- **Post-Injection Sampling**

Subsequent to the completion of the injection program, IWs and permanent monitoring wells will be sampled for ground water quality parameters, including pH, ORP, SC, and TDS; $H_2S$ and VOCs in the headspace of the PVC riser pipe and ground water color and/or odor. Also, at a minimum, samples will be collected from the TWPs and monitoring wells for analysis of sulfate and sulfide each week between dosages and for several weeks after the last dosage. Additional sampling may be implemented if conditions warrant.

The treatment remedy is being performed with a goal of long-term protectiveness. Approximately six months after the final (fifth) weekly injection dosage in subarea TA-10-1 (weather permitting), Honeywell will collect and analyze ten (10) soil samples to evaluate the effectiveness of the in-situ treatment. A second round of soil sampling will be conducted 3 years after completion of the field program. Honeywell may seek to conduct the final sampling event sooner than 3 years after the completion of the TA-10-1 injection program. Soil samples will be analyzed for Cr(VI) (3060A/7199).

All sampling and monitoring will be performed according to the methodology specified in the most current edition of the Department's Field Sampling Procedures Manual. All samples are to be analyzed by a New Jersey Certified Laboratory except those field-determined parameters specified in the monitoring program.

## II. CONSTRUCTION REQUIREMENTS

Ten (10) 1-inch diameter PVC injection wells (IWs) will be drilled and installed within subarea TA-10-1, grouped in 5 nested pairs. Wells within each pair will be screened at 3-foot intervals, one from 10 to 13 feet below ground surface and one from 13 to 16 feet below ground surface.

All design plans and specifications for the injection wells shall be retained and made available to the Department upon request. UIC Class V injection wells shall be operated and maintained pursuant to N.J.A.C. 7:14A-8.16 (c)1. Upon termination of injection well operations, the UIC-Class V injection wells will be properly closed and abandoned in accordance with N.J.A.C. 7:14A-8.16(d).

## III. SYSTEM OPERATION AND CLOSURE

The injection wells shall be inspected during injection activities for evidence of malfunction. Said evidence shall include, but not be limited to: breakout, wet areas, ponding, or odors. Discharge of water via any discharge to ground water unit shall not create an unpermitted discharge to any surface water of the State, create a persistent standing, ponded or surface-flowing fluid condition. Honeywell shall conduct periodic inspections of the treatment area throughout the injection.

Upon termination of the discharge, any discharge to ground water units will be properly closed and abandoned. Any temporary UIC-Class V injection wells shall be properly abandoned in accordance with N.J.A.C. 7:14A-8.16(d).

## IV. REPORTING REQUIREMENTS AND INFORMATION SUBMITTALS:

Honeywell, AMEC or a subcontractor will submit the Remedial Action Report, and any other information identified above which is required to be delivered to the Department, to:

Thomas J. Cozzi, Assistant Director
New Jersey Department of Environmental Protection
Site Remediation Program
Mail Code 401-06
P.O. Box 420
Trenton, NJ 08625-0420

The Department contact for this Permit-by-Rule Authorization is:

Attention: David Van Eck
New Jersey Department of Environmental Protection
Bureau of Ground Water Pollution Abatement
Mail Code 401-05V
P.O. Box 420
Trenton, NJ 08625-0420
Phone: (609) 633-2427

If you have any questions, please contact Thomas J. Cozzi of the Site Remediation Program at (609) 984-2905.

Sincerely,

Thomas J. Cozzi, Assistant Director
NJDEP Site Remediation

# SITE OPERATIONS

## 1. AVERAGE WEEKLY SITE RESOURCES

| Team | Week Ending | | | | |
|---|---|---|---|---|---|
| | 9/4/16 | 9/11/16 | 9/18/16 | 9/25/16 | 10/2/16 |
| **Construction Management (AMEC)** | 10 | 8 | 9 | 8 | 9 |
| **Engineering (AMEC)** | 1 | 1 | 1 | 1 | 1 |
| **Air Monitoring (Emilcott)** | 1 | 1 | 1 | 1 | 1 |
| **Security (Securitas)** | 3 | 3 | 3 | 3 | 3 |
| **Entact/Subcontractors** | 30 | 29 | 28 | 27 | 24 |
| **Arecon/US Ecology Subcontractors** | 0 | 0 | 0 | 1 | 0 |
| **E&V Dirt Works** | 2 | 0 | 0 | 0 | 0 |
| **Lagan** | 0 | 0 | 0 | 0 | 0 |
| **ERFS** | 1 | 1 | 1 | 0 | 0 |
| **Evoqua** | 1 | 1 | 1 | 1 | 1 |
| **B&B Drilling** | 2 | 0 | 1 | 0 | 0 |
| **Cornerstone** | 0 | 0 | 0 | 1 | 2 |
| **TOTAL STAFF** | **51** | **44** | **45** | **43** | **41** |

## 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Conducted perimeter air monitoring activities using hand-held portable devices for nuisance dust.
- Continued installation of CGWES components within the SA-6 South and the SA-6 North Open Space Areas to include installation of the valve vaults and link seals.
- ERFS Continued injections in Treatment Area 10-1 in accordance with NJDEP-DGW permit.
- Implemented post-injection groundwater sampling and monitoring in Treatment Area 10-1 in accordance with the NJDEP – Discharge to Groundwater Permit.
- Collected groundwater samples for chromium and hexavalent chromium analysis of filtered and unfiltered from the interior piezometers at both SA-6 North and South Open Space Areas.
- Completed third round of quarterly regional groundwater level measurements.
- Collected September PVSC compliance sample from the Construction Water Treatment Plant (CWTP).

## B. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned downstream process tanks T-300 (neutralization tank) and T-400 (effluent tank).
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on September 13, 2016.
- Reviewed submittals from the mechanical contractor, Brownfield Science & Technology, Inc. (BTSI), associated with piping installation from the CGWTS force mains to the neutralization tank in accordance with the PVSC permit.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | | |
|---|---|---|---|---|---|
| | 9/4/16 | 9/11/16 | 9/18/16 | 9/25/16 | 10/2/16 |
| Avg. Gallons Treated & Discharged (per day) | 78,586 | 76,458 | 77,623 | 77,940 | 78,057 |
| Average Flow (gpm) for Operating Period | 56 | 54 | 55 | 56 | 56 |
| Avg. Hours of Plant Operation | 23 | 23 | 23 | 23 | 23 |
| GWTP Influent Tanks (gal.) | 3,989 | 3,780 | 3,312 | 3,264 | 2,928 |

## C. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Continued routine dewatering activities and associated discharge to the construction water treatment facility.
- Completed placing backfill as part of site restoration in the SA-6 South Development Area.
- Continued placement of historic fill cap to include geotextile and 6-inches of stone in the SA-6 South Development Area.
- Completed placement of asphalt to restore the JCMUA driveway.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Sarnia, Ontario Canada | Stablex | WWTP Filer Cake | 0 | 0 | 0 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Backfill in Progress** | 3/4" stone Historic Fill Cap – SA-6 South Development Area |

### 3. BACKFILL MATERIALS USED (TONS)

| Source | Week Ending | | | | |
|---|---|---|---|---|---|
| | 9/4/16 | 9/11/16 | 9/18/16 | 9/25/16 | 10/2/16 |
| Natures Choice Topsoil | 376 | 454 | 1,125 | 1,569 | 898 |
| Tilcon Mt. Hope DGA | 0 | 0 | 1,654 | 0 | 0 |
| Tilcon Mount Hope I-8 | 4,458 | 4,148 | 4,248 | 4,604 | 2,738 |
| Natures Choice Horizon C | 1,350 | 0 | 6,116 | 726 | 308 |
| Tilcon 3/8" Stone | 0 | 51.51 | 51 | 51 | 76.23 |
| Tilcon Mt. Hope 1.5" | 0 | 0 | 0 | 0 | 250 |
| Tilcon Mt. Hope #57 | 629 | 2,606 | 3,742 | 3,473 | 1,348 |
| Weldon Screenings | 0 | 0 | 0 | 0 | 1,086 |

- Screened Celgene material was placed as protective cover soil in the SA-6 North Open Space Area. Approximately 464 cubic yards were placed as protective cover soil during the reporting period.

## D. SURCHARGE OPERATIONS

- All surcharging activities are completed.

## E. SHEET PILE OPERATIONS

- All sheet pile operations are complete.

## F. CAPPING OPERATIONS

- Continued importing and placing Horizon A soils on SA-6 South Open Space Area.
- Begin construction of the SA-6 South Temporary Access Road in utility corridor B.
- Begin installation of toe drain on the north site of the SA6 South Open Space Area.
- Completed placement of GDL cover soils and demarcation tape to include associated compaction testing on the SA-6 North Open Space Area.
- Continued placement structural fill to included compaction.
- Completed placement of root barrier, and Horizon C soils to include associated compaction testing on the SA-6 North Open Space Area.

## G. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDEP Waterfront Development | SA-6 North Only | Obtained 6/23/2010 | Not Specified, Est. 3/31/2015 | 6/23/2015 | - |
| NJDEP CAFRA/FHA | SA-6 South Only | Obtained 9/26/2012 | Renewal Not Needed | 9/25/2017 | 10/09/2012 |
| HEPSCD SESCP | Novartis Soil Pile/SA-7 | Obtained 8/21/2012 Extension Obtained 5/17/2015 | Renewal Not Needed | 10/04/2019 | - |
| NJDEP RFA | Novartis Soil Pile/SA-7 | Obtained 9/7/2012 | Renewal Not Needed | Not Specified | - |
| PVSC SUP No. 31630019 | SA-6 Chromium Remedy | Obtained 3/26/2014 Final Revision 5/23/14 | Renewal Not Needed | 8/31/2018 | 04/19/2014 |
| SESCP | SA-6 Chromium Remedy | Obtained 5/16/2013 | Renewal Not Needed | 11/16/2016 | - |
| RFA | SA-6 Chromium Remedy | Obtained 5/29/2013 | Not Specified | Not Specified | - |
| NJDEP - Water Allocation | SA-6 Chromium Remedy | Obtained 6/19/2013 | Renewal Not Needed | 5/31/2018 | - |
| NJDEP – Treatment Works Approval | SA-6 Chromium Remedy | Obtained 7/8/2013 Extension Obtained 3/16/2015 | Not Specified, Est. 3/31/2016 | 6/30/2016* | - |
| NJDOT - Highway Occupancy Permit | SA-6 Chromium Remedy | Obtained 9/11/2013 Extension Obtained 10/14/2015 | Not Specified | 6/30/2016 | - |
| NJDEP CAFRA/WFD/FHA GWTP Force Mains | GWTP | Obtained 4/22/2008 | Renewal Not Needed | 4/22/2013 | - |
| HEPSCD SESCP | GWTP | Obtained 8/27/2012 | Renewal Not Needed | 2/27/2016 | - |
| NJDEP CAFRA/WFD/FHA | GWTP | Obtained 11/16/2012 | Renewal Not Needed | 6/23/2015 | - |
| NJDEP Treatment Works Approval | GWTP | Obtained 4/11/2013 | Renewal Not Needed | 4/10/2015 | 4/23/2013 |
| NJDEP Air Pollution Control Preconstruction Permit | Existing GWTP | Obtained 9/24/2013 Automatically Renewed for 5 years | Not Specified, Est. 3/23/2019 | 6/23/2019 | 11/20/2013 |

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| PVSC SUP No. 20630025 | Existing GWTP | Obtained 10/1/2013 Final Revision Received 12/02/2015 | 6/30/2018 | 9/30/2018 | 10/29/2013 |
| NJDEP Discharge to Groundwater (DGW) for In-Situ Treatment of Chromium Impacted Soils | SA-6 North Only | Obtained 4/30/2012 Revised 07/14/2015 | Not Specified | Not Specified | 5/10/2012 |
| NJDEP DGW for In-Situ Treatment of Chromium Impacted Soils | SA-6 South Only | Obtained 1/3/2013 | Not Specified | Not Specified | - |
| NJDEP Discharge to Groundwater (DGW) for In-Situ Treatment of Chromium Impacted Soils | SA-6 North Only | Obtained 08/04/2016 | Not Specified | Not Specified | 9/12/16 |
| NJPDES Permit | SA-7 | Renewed: Effective 12/01/2012 | Renewal Not Needed | 6/30/2015 | 1/11/2013 |
| Subchapter 8 Air Permit Application for the Waste Water Treatment Plant | SA-7 | Issued: 06/24/2009 | Renewal Not Needed | 6/23/2014 | 7/15/2009 |
| Individual Waterfront Development Permit and Water Quality Certificate for Sediment Remedy | SA-7 | Issued: 05/27/2011 Modified: 07/02/2012 | N/A | 5/26/2016 | 5/27/2011, 7/5/2012 |
| Tidelands Licenses for Sediment Remedy | SA-7 | Re-Issuance of Final Tidelands License is pending and will be effective 7/21/2013 | N/A | 7/21/2014 | 7/19/2012 |
| Pre-Construction Notice – Nationwide Permit #38 for Sediment Remedy | SA-7 | Issued: 3/21/2013 | N/A | 3/18/2015 | 3/25/2013 |
| NJDEP Individual Upland Waterfront Development Permit and Water Quality Certificate for Bulkhead Expansion Project | SA-7 | Issued: 5/10/2016 | TBD | 5/9/2021 | - |
| NJDOT – Application for Drainage Connection, Post Remediation Grading and Drainage | SA-6 Chromium Remedy | Application Submitted 8/19/14 Permit Application Rescinded 12/1/14 & Approved by DOT on 12/18/14 | N/A | N/A | N/A |

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDOT – Highway Occupancy Permit – Installation of Sheet Piling and Excavation Adjacent to Rte 440 ROW | SA-6 Chromium Remedy | Application Submitted 9/8/14 Final Executed Permit Issued 12/2/14 | 11/2/15, 1-yr Extension Obtained 12/24/15 | 12/03/16 | Pending |
| USACE Nationwide Permit No. 27 for Droyers Cove Beneficial Environmental Project | Bayfront | Issued: 4/15/2016 | TBD | 3/18/2017 | 5/4/16 |
| NJDEP Coastal General Permit 24 for the living shoreline | Bayfront | Issued: 10/15/2015 | TBD | 10/14/2020 | 5/4/16 |

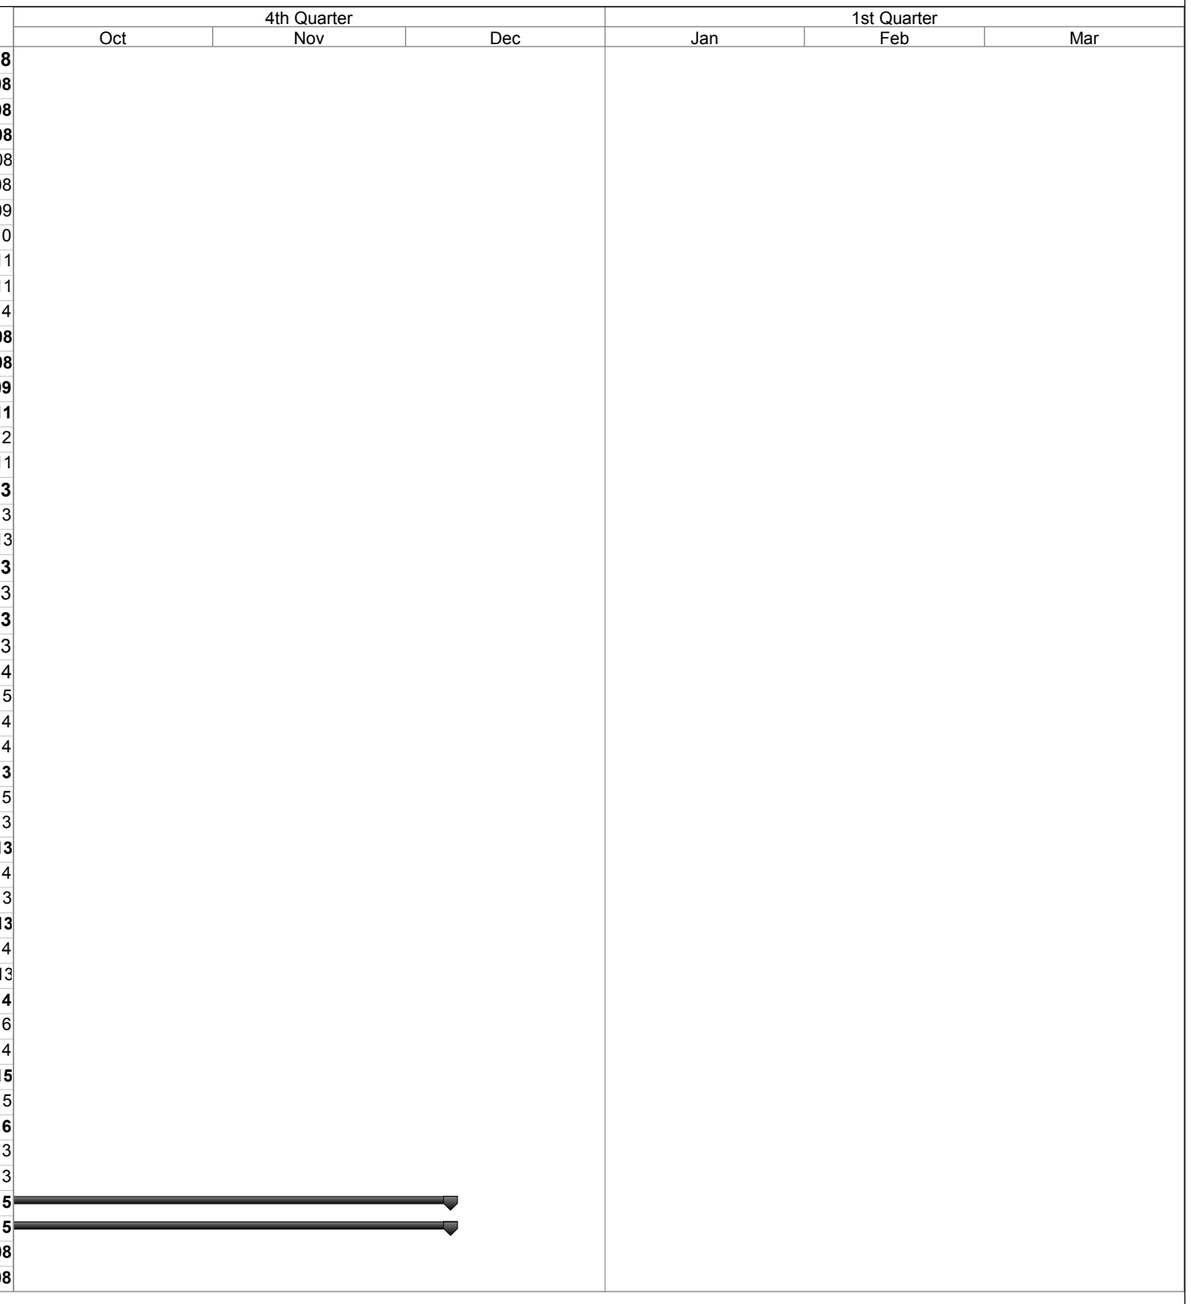
** Amec Foster Wheeler reviewed the expiration of this TWA with NJDEP, Division of Water Quality and no extension is necessary.*

## H. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete importing and placement of Horizon A Topsoil on the SA-6 South Open Space Area.
- Complete hydro-seeding of SA-6 South Open Space Area.
- Complete placement of historic fill cap to include geotextile and 6-inches of stone in the SA-6 South Development Area.
- Complete installation of the Contingent Groundwater Extraction System Components including the mechanical piping and conduit within the GWTP.
- Complete placement structural fill, root barrier, and Horizon C soils to include associated compaction testing on the SA-6 North Open Space Area.
- Begin placement of Horizon A Topsoil on the SA-6 North Open Space Area.
- Begin hydro-seeding of SA-6 North Cap Area.
- Continue storm-water management activities.
- Begin cleaning and demobilization of temporary CWTS.
- Continue SWPPP inspections.
- Complete PVSC Monthly compliance sampling.
- Conduct S-3 Mass Removal Injection Event No. 32 in well 088-IW-01 (completed October 3, 2016).
- Conduct S-3 Mass Removal Injection Event No. 33 in well 088-IW-02.
- Complete injections in Treatment Area 10-1 in accordance with NJDEP-DGW permit.

## ATTACHMENTS:

1. Schedule – 6 Month Look Ahead
2. Site Photographs
3. Excavation and Backfill (Progression Chart)
4. Dewatering Operations Update *(not included in this reporting period)*
5. SA-6 Construction Water Discharge Data (To PVSC)
6. Backfill Analytical Data *(not included in this reporting period)*
7. Perimeter Pools Update
8. Groundwater Quality Data *(reported quarterly – not included in this report)*
9. Surcharge Monitoring Update *(not included in this reporting period)*
10. Sheet Pile Update *(not included in this reporting period)*
11. Capping Update (SA-6 Cap Subgrade Progress Maps)
12. Weekly SWPPP Reports
13. GWTP Update
14. SA-6 North & South Design Change Tracking Log



## Attachment 1:  Schedule – 6 Month Look Ahead

Honeywell

# SA-6 North/South Combined Chromium Remediation Schedule

| ID | Task Name | Duration | Start |
|---|---|---|---|
| **1** | **SA-6 North Chromium Remedy Preparation (Sites 087 and 088)** | **1936 days** | **Fri 1/4/08** |

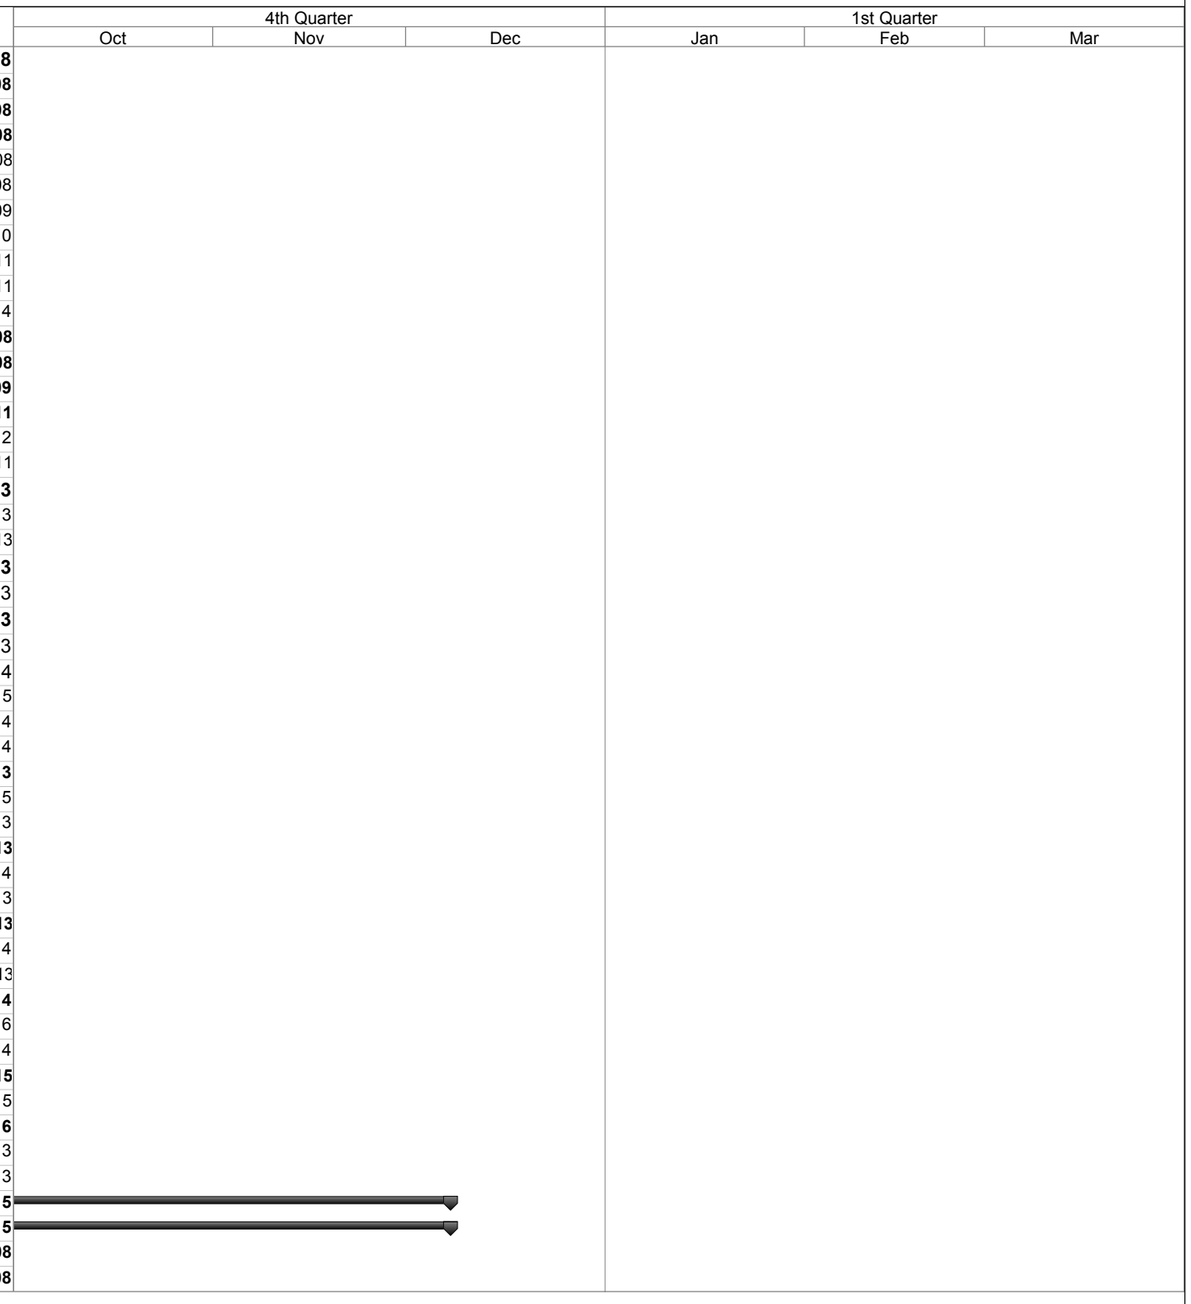
Project: SA-6 Remediation Schedule
Revision 4
Date: 8/2/2016

Task | Milestone | Summary | Critical



Note: Current field implementation schedule shows capping complete in September 2016 and restoration in October 2016.

## Attachment 2: Site Photographs

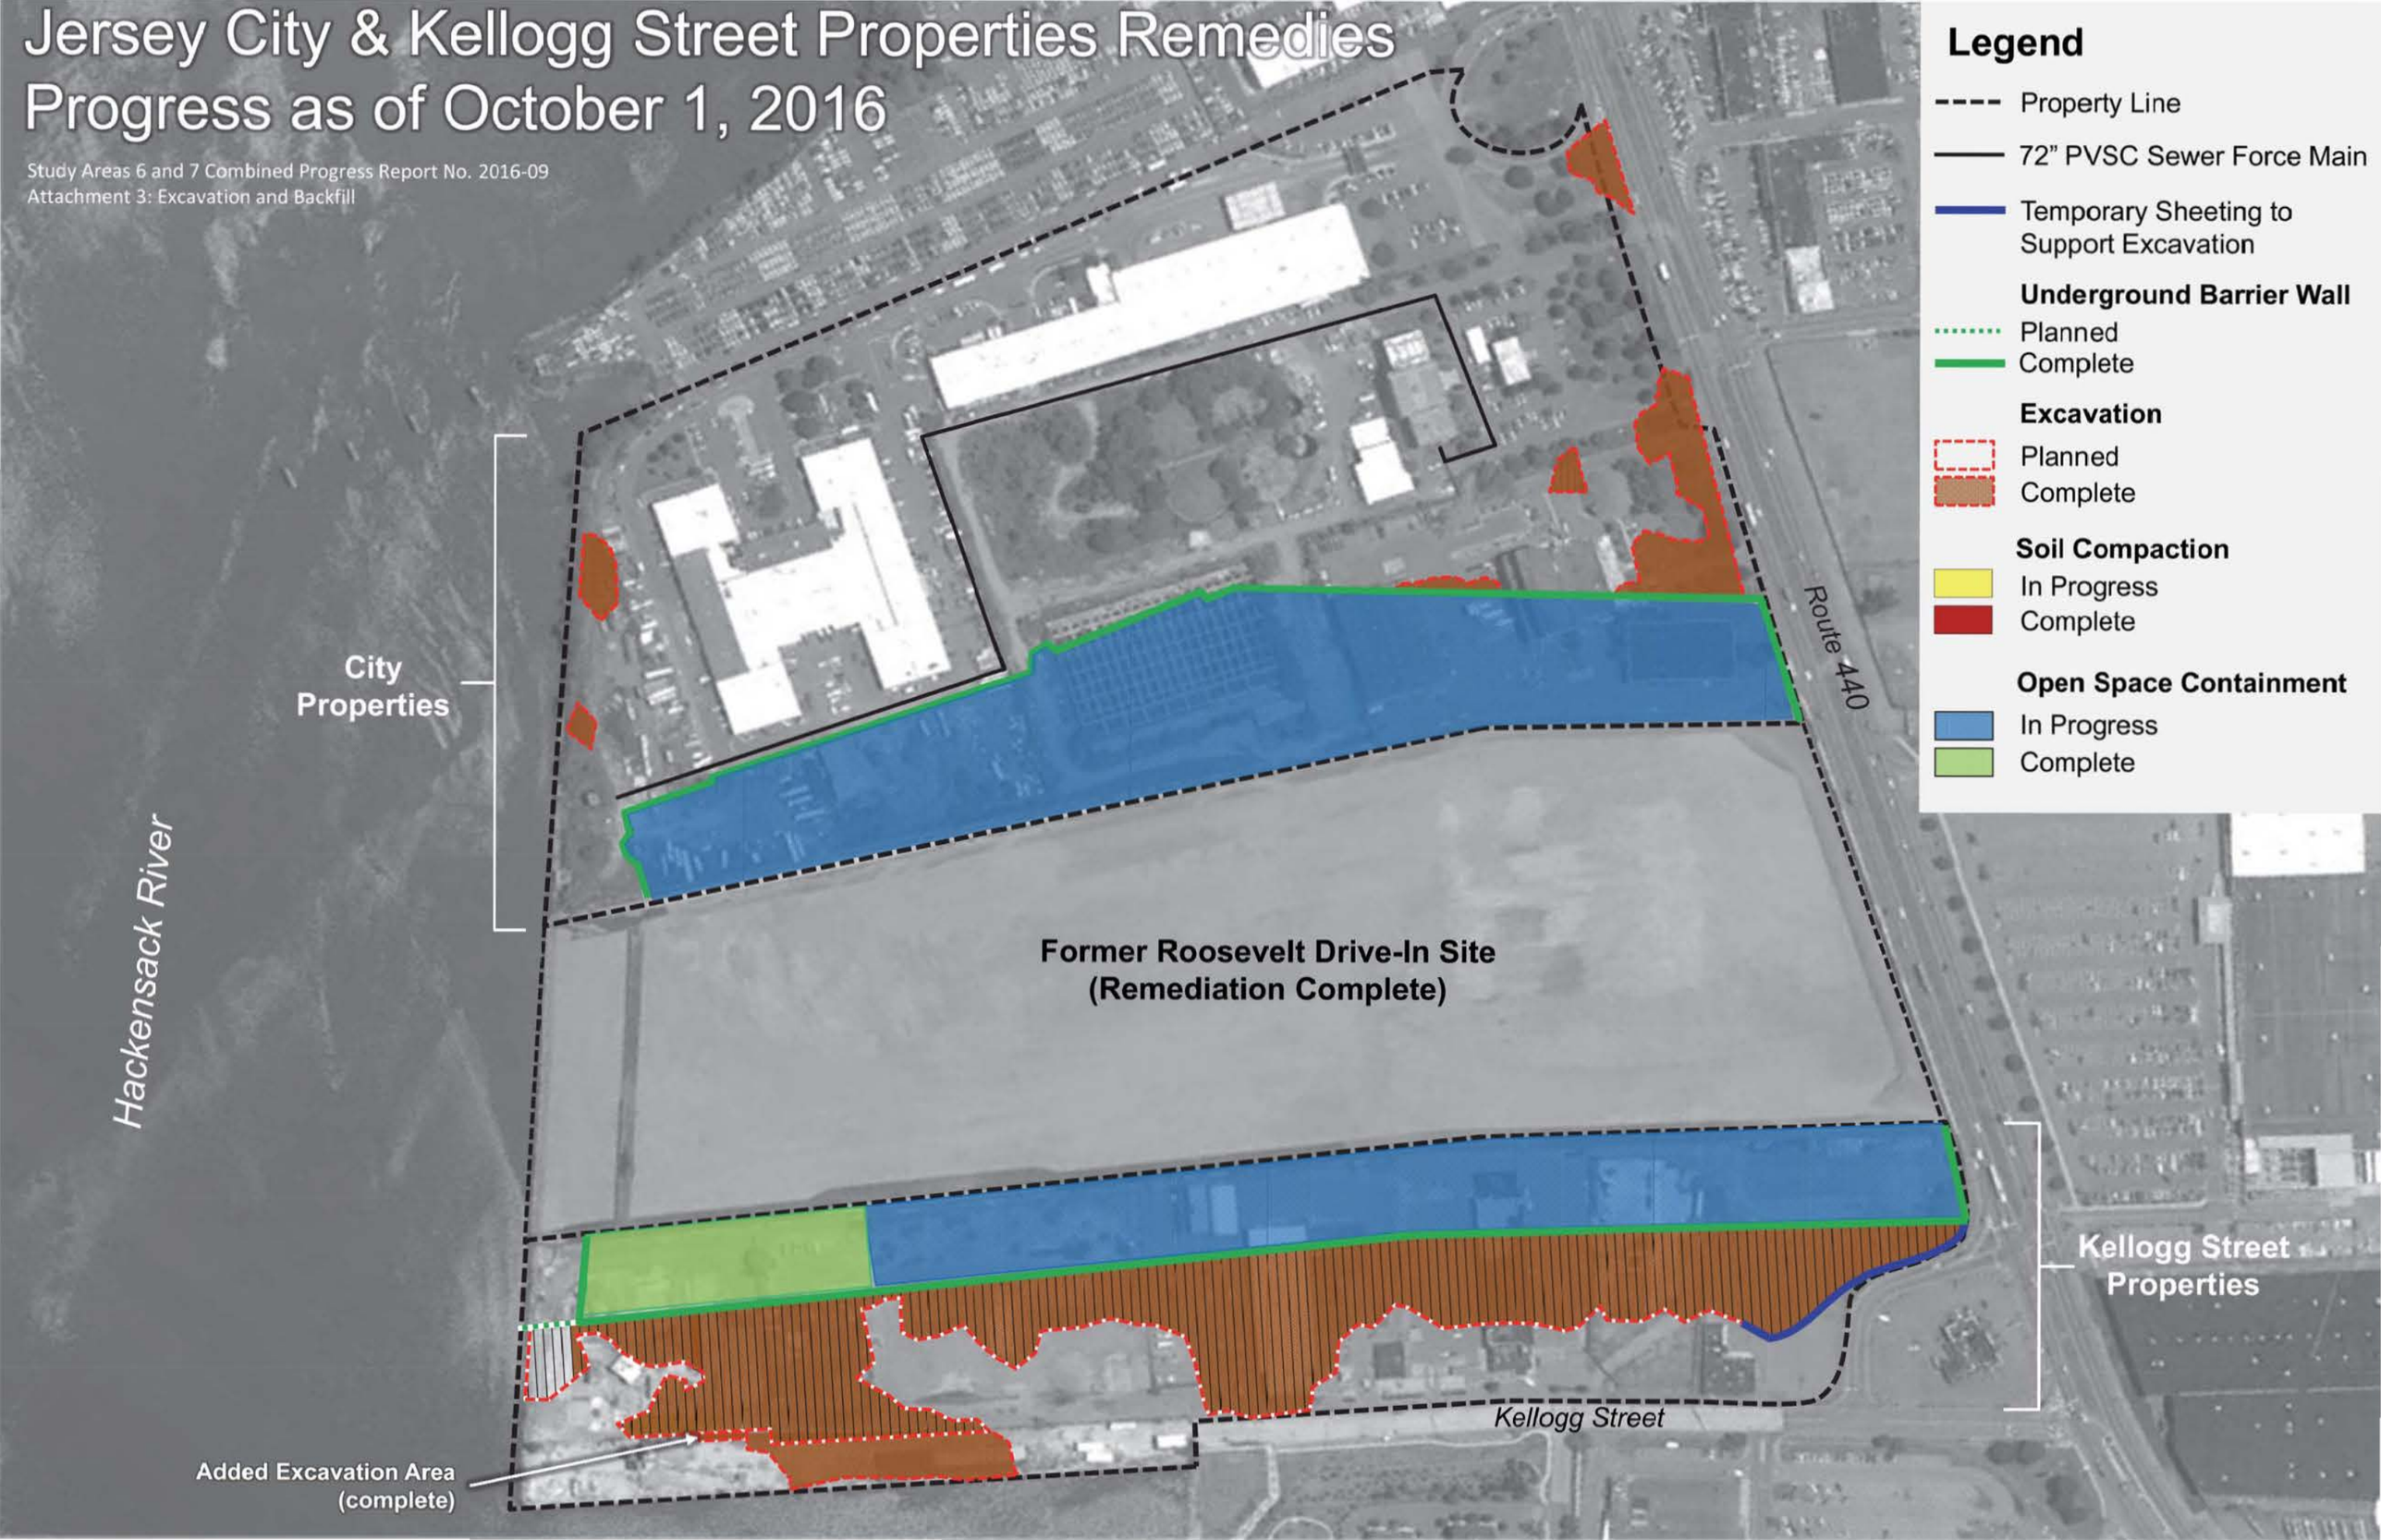
**Site Photograph 1:** Compacting clean fill on Open Space Area.

**Site Photograph 2:** Delivering clean stone to Kellogg St Properties.

**Site Photograph 3:** Delivering clean top soil for SA6 South Open Space Area.

**Site Photograph 4:** Grading structural fill along SA6 North Open Space Area.

**Site Photograph 5:** Grading topsoil at SA6 South Open Space Area.



**Site Photograph 6:** Placement of asphalt for the JCMUA south entrance.

| Comment Number | Permit Number | SWAP Observer's Comments |
|---|---|---|
| 1 | IA2Q4A1AL8 | No sediment controls are currently in place for the newly-installed historic fill lifts along Droyer's Cove on SA-6 South. |
| 2 | IA2Q4A1AL8 | Additional sandbags are needed in the low areas along the eastern edge of the south cap to prevent Horizon A soils from eroding off site during storm events. |
| 3 | IA2Q4A1AL8 | The filter fabric in the catch basins along the north side of Kellogg Street is blinded with sediment. |
| 4 | IA2Q4A1AL8 | Garbage has accumulated on the grass area by the Kellogg Street jughandle |
| 5 | IA2Q4A1AL8 | The filter fabric in the catch basins by the former JCIA garbage pit on SA-6 North is blinded with sediment. |

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used: All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3. SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler. All samples are iced in a cooler during transport to the lab.

## Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending September 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only as clarification or response to RFI. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only as clarification or response to RFI. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only as clarification or response to RFI. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2014-6-10** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-6-10 includes the french drain installation, as well as pump and access station manholes for SA-6 South. Some design details, including the electrical design, will be finalized based field obersvations and constructability review. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2014-11-20** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-11-20 includes the french drain installation, electrical supply and discharge piping for SA-6 North. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2016-6-10** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-6-10 includes the revised electrical supply and discharge piping for SA-6 North. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2015-2-12** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-2-24 is a follow up to DC 2014-6-10, the SA-6 South CGWES trench design. DC 2015-2-24 includes details for electrical supply and discharge piping. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2015-2-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to document the changes in the SA 6 North and South cap subgrades that resulted from the change to a trench system. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2015-9-03** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-9-03 is a follow up to DC 2015-2-24, the SA-6 South CGWES electrical supply. DC 2015-9-03 provides a revised electrical plan. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |

**SA-6 North/South Field Change Log - Month Ending September 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-5-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to address the elimination of a drop structure, the elmination of a flow meter, conduit sizing changes, and to clarify Entact's scope. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead. | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |

**SA-6 North/South Field Change Log - Month Ending September 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Parties on July 2, 2015. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groundwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | To be submitted to Parties as Attachment to Declaration 005. |
| **DC 2016-04-15** | Amec Foster Wheeler has provided final restoration grades for SA-6 South Development Area. The DCB also includes the final cover types in revised Drawing C-128. | To be submitted to Parties as Attachment to Declaration 005. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |

**SA-6 North/South Field Change Log - Month Ending September 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-07-22** | Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA-6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | To be submitted to Parties as Attachment to Declaration 004. |

**SA-6 North/South Field Change Log - Month Ending September 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | To be submitted to Parties as Attachment to Declaration 003. |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | To be submitted to Parties as Attachment to Declaration 003. |
| **DC 2015-09-28** | Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling. | Submitted to Parties on October 1, 2015. |
| **DC 2015-12-21** | Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation –8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance withASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |

**SA-6 North/South Field Change Log - Month Ending September 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-11-30** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | To be submitted to Parties as Attachment to Declaration 003. |
| **DC 2016-02-03** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-02-22** | AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entact's request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location.<br>In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-02-25** | This DCB has been issued to provide Entact with the latest SA-6 North HB Wall and SCB wall plan and profile drawings (SN-201 thru SN-205), which were modified to reflect changes made in DC 2016-02-22. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-05-03** | The laboratory results of all gradations for planting soils shall be presented in terms of the USDA classification system rather than the USCS classification system. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2016-03-18** | This DC 2016-03-18 documents the revised acceptable ranges of physical parameters and provides an updated specification made in consultation with Dr. Grabosky of Rutgers University. Dr. Grabosky provided his recommendations in correspondence dated 3/17/2016. | Submitted to Parties on March 22, 2016. Plaintiffs responded in a letter dated April 15, 2016. Plaintiffs and Honeywell subsequently held discussions and DCB 2016-04-20 was developed to document an agreement reached by all parties on the Special Master All-Hands monthly call on April 19, 2016. |
| **DC 2016-03-21** | Nature's Choice was identified as the source that best met the physical requirements for Horizon C soils by Dr. Grabosky; however, several samples of Nature's Choice Horizon C soils have hexavalent chromium concentration >1.0 mg/kg. Consequently, Honeywell is proposing a design change to allow the hexavalent chromium concentration in Nature's Choice Horizon C soils to be less than 1.8 mg/kg, as agreed to by the parties, as documented in the attached emails. For future sampling, hexavalent chromium soil samples will be composited from 10 grab sample locations per 5,000 CY (maximum). There are additional conditions in Attachment A that are part of this DCB and specific to Nature's Choice Horizon C soil. All other requirements specified in the 100% Design for imported soils will be met by the Nature's Choice Horizon C soils as amended in previous DC 2015-09-17. | Submitted to Parties on March 22, 2016. |
| **DC 2016-04-20** | This DCB documents the approved sources of Horizon B and Horizon C materials, as agreed to by all parties on the Special Master All-Hands monthly call on April 19, 2016. | Submitted to Parties on April 21, 2016. |
| **DC 2016-05-06** | To allow for traffic flow within the project site following completion of the SA-6S Cap, a road will be installed within the "B Street" corridor. The road will be constructed by continuing the "Structural Fill under Roadways to within 6 inches of final grade" | Submitted to Parties on June 30, 2016. |
| **DC 2016-05-31** | This DCB documents the vault sketch Drawing C-310 (Rev 5, 5/31/16) | Submitted to Contractor only as clarification or response to RFI. |

**SA-6 North/South Field Change Log - Month Ending September 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-5-11** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. As part of DC 2016-5-11, AmecFW issued SA-6 North Interim Grades to Entact. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-5-20** | After further review, AmecFW lowered the geomembrane Pump Station #1 on the SA-6 North cap in order to provide additional separation between the geomembrane and the bottom of the vault. (Refer to DC 2016-02-22). | Submitted to Parties on June 15, 2016. |
| **DC 2016-7-12** | DC 2016-7-12 clarifies the limit of GCL deployment and the location of the sand bentonite plug in the SA-6 North cap. | Included as an attachment to July 2016 Monthly Progress Report. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2016-10**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from October 1 – October 31, 2016.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Global Director, Remediation
Design and Construction

### 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Conducted perimeter air monitoring activities using hand-held portable devices for nuisance dust.
- Continued installation of CGWES components within the SA-6 North Open Space Areas to include installation of spare conduit pipe for future piezometer instrumentation on the north side of the SA-6 North Open Space Area.
- Completed installation of the CGWES dual wall force main pipe on the north side of the SA-6 North Open Space Area to approximately 8 feet outside of the GWTP.
- ERFS completed injections in Treatment Area 10-1 in accordance with NJDEP-DGW permit.
- Continued post-injection groundwater sampling and monitoring in Treatment Area 10-1 in accordance with the NJDEP – Discharge to Groundwater Permit.
- An inspector from the Hudson Essex Passaic Soil Conservation District was on site on October 25, 2016 for an inspection of the current erosion and sediment controls. There were no findings and all items were in compliance.
- Conducted S-3 Mass Removal Injection Event No. 32 in injection well 088-IW-01.
- Conducted S-3 Mass Removal Injection Event No. 33 in injection well 088-IW-02.
- Collected October PVSC compliance sample from the Construction Water Treatment Plant (CWTP).
- Obtained NJDOT Permit for Restoration of Sidewalks within work limits along Rt. 440.

## B. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned downstream process tanks T-300 (neutralization tank) and T-400 (effluent tank).
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on October 11, 2016.

- Reviewed submittals from the mechanical contractor, Brownfield Science & Technology, Inc. (BTSI), associated with piping installation from the CGWTS force mains to the neutralization tank.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 10/9/16 | 10/16/16 | 10/23/16 | 10/30/16 |
| Avg. Gallons Treated & Discharged (per day) | 78,882 | 77,380 | 78,011 | 78,861 |
| Average Flow (gpm) for Operating Period | 56 | 55 | 56 | 56 |
| Avg. Hours of Plant Operation | 23 | 23 | 23 | 23 |
| GWTP Influent Tanks (gal.) | 5,784 | 4,266 | 3,669 | 2,431 |

## C. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Completed routine dewatering activities and associated discharge to the construction water treatment facility.
- Initiated cleaning and demobilization of temporary Construction Water Treatment Plant.
- Completed cutting of temporary sheetpile along the SA-6 South Kellogg Street Jug handle.
- Completed placement of historic fill cap to include geotextile and 6-inches of stone in the SA-6 South Development Area.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Sarnia, Ontario Canada | Stablex | WWTP Filer Cake | 0 | 0 | 0 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Backfill in Progress** | 3/8” stone Historic Fill Cap – SA-6 South Development Area |

### 3. BACKFILL MATERIALS USED (TONS)

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 10/9/16 | 10/16/16 | 10/23/16 | 10/30/16 |
| Natures Choice Topsoil | 0 | 0 | 0 | 994 |
| EME Topsoil | 0 | 0 | 0 | 294.53 |
| Tilcon Mount Hope I-8 | 203 | 256 | 203 | 868 |
| Natures Choice Horizon C | 0 | 0 | 0 | 0 |
| Tilcon 3/8" Stone | 53 | 51 | 52 | 0 |
| Tilcon Mt. Hope 1.5" | 316 | 153 | 154 | 105 |
| Tilcon Mt. Hope #57 | 0 | 676 | 356 | 0 |
| Weldon Screenings | 0 | 0 | 0 | 290.32 |

- A total of 37 loads totaling approximately 834 cubic yards on crushed concrete were relocated from the SA-6 North former JCIA area to the south of the former JCDPW "H" building. This concrete stockpile will be sampled and managed in accordance with the approved materials management plan by the non-chromium contractor.

## D. SURCHARGE OPERATIONS

- All surcharging activities are completed.

## E. SHEET PILE OPERATIONS

- All sheet pile operations are complete.

## F. CAPPING OPERATIONS

- Continued importing and placing Horizon A soils on SA-6 South Open Space Area.
- Completed construction of the SA-6 South Temporary Access Road in utility corridor B.
- Completed installation of toe drain on the north site of the SA-6 South Open Space Area.
- Performed hydro-seeding of SA-6 South Open Space Area to include placement of erosion control matting. Approximately 5 acres were hydro-seeded.
- Initiated installation of toe drain on the south side slope of the SA-6 North Open Space Area.
- Completed placement structural fill to included compaction on the SA-6 North Open Space Area.
- Initiated importing and placing Horizon A soils on SA-6 North Open Space Area.

## G. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |
|---|---|---|---|---|---|
| NJDEP Waterfront Development | SA-6 North Only | Obtained 6/23/2010 | Not Specified, Est. 3/31/2015 | 6/23/2015 | - |
| NJDEP CAFRA/FHA | SA-6 South Only | Obtained 9/26/2012 | Renewal Not Needed | 9/25/2017 | 10/09/2012 |

| USACE Nationwide Permit No. 27 for Droyers Cove Beneficial Environmental Project | Bayfront | Issued: 4/15/2016 | TBD | 3/18/2017 | 5/4/16 |
| NJDEP Coastal General Permit 24 for the living shoreline | Bayfront | Issued: 10/15/2015 | TBD | 10/14/2020 | 5/4/16 |

** Amec Foster Wheeler reviewed the expiration of this TWA with NJDEP, Division of Water Quality and no extension is necessary.*

## H. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete importing and placement of Horizon A Topsoil on the SA-6 South Open Space Area.
- Complete hydro-seeding of SA-6 South Open Space Area.
- Initiate installation of the Contingent Groundwater Extraction System Components within the GWTP including the mechanical piping and conduit.
- Complete importing and placement of Horizon A Topsoil on the SA-6 North Open Space Area.
- Complete hydro-seeding of SA-6 North Open Space Area.
- Complete storm-water management activities associated with construction.
- Complete cleaning and demobilization of temporary CWTS.
- Complete NJDOT sidewalk restoration and removal of Highway Occupancy Permit traffic control devices.
- Complete SWPPP inspections associated with construction.
- Conduct S-3 Mass Removal Injection Event No. 34 in well 088-IW-03.
- Initiate periodic groundwater level monitoring in accordance with Draft Long-Term Monitoring Plan at SA-6 South and perimeter pools.
- Demobilize Entact office trailers and equipment.

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the September 2016 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

PVSC FORM MR-1 REV: 4 6/87 P1

**PRETREATMENT MONITORING REPORT**

Certification of Non-Use if applicable (use additional sheets):

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used:

All analytes are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3.

SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler.

All samples are iced in a cooler during transport to the lab.

## Attachment 14: SA-6 North & South Design Change Tracking Log

**SA-6 North/South Field Change Log - Month Ending October 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentaion Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-8-14** | The area indicated on sheets S-201 to S-203 from Station 0+00 to 17+80 will be sealed with a cement bentonite grout in lieu of hydraulic sealant. This area will include a grouted angle. | Contingency to Expand Use of Grouted Joint Called out in 100% Design. Submitted to Contractor only as clarification or response to RFI. |
| **DC 2013-9-12** | Hydraulic barrier alignment for SA-6 South between 21+00 and 22+00 to be straightened. Stationing from 21+00 on is to be adjusted to account for the elimination of the 3-ft offset in the wall. | Minor alignment adjustment now that Boatyard Property transaction to Bayfront completed. Submitted to Contractor only as clarification or response to RFI. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only as clarification or response to RFI. |
| **DC 2013-12-12** | The proposed bottom of excavation elevations may be deepened as required to expose Post-Excavation Samples as reported on the revised PDI summary tables which were submitted to Parties in HON/Amec Response to Comments dated 02/06/14. | In addition to the periodic notice of excavation complete emails to the Parties, Honeywell submitted the following documents that further defined excavation extents, updated PDI Tables (converted to elevations), Colorized Area Excavation Depth Drawing, and procedures to certify those extents:<br>1) 2/6/14 RTC letter on 1/28/14 & 1/31/14 Plaintiff comment letters Re: Cells 17 - 29.<br>2) 3/3/14 SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits.<br>3) 4/17/14 RTC letter on 4/11/14 Plaintiff comment letters Re: Cells 44 - 52.<br>4) 4/24/14 Revised SA-6 South Standard Operating Procedure, Confirmation of Excavation Limits. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2014-6-10** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-6-10 includes the french drain installation, as well as pump and access station manholes for SA-6 South. Some design details, including the electrical design, will be finalized based field obersvations and constructability review. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2014-11-20** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-11-20 includes the french drain installation, electrical supply and discharge piping for SA-6 North. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2016-6-10** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-6-10 includes the revised electrical supply and discharge piping for SA-6 North. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2015-2-12** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-2-24 is a follow up to DC 2014-6-10, the SA-6 South CGWES trench design. DC 2015-2-24 includes details for electrical supply and discharge piping. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2015-2-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to document the changes in the SA 6 North and South cap subgrades that resulted from the change to a trench system. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2015-9-03** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2015-9-03 is a follow up to DC 2015-2-24, the SA-6 South CGWES electrical supply. DC 2015-9-03 provides a revised electrical plan. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |

**SA-6 North/South Field Change Log - Month Ending October 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-5-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to address the elimination of a drop structure, the elmination of a flow meter, conduit sizing changes, and to clarify Entact's scope. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2013-8-14** | Modify surcharge pile toe of slope to reduce load on the bulkhead. | Submitted to all Parties on July 10, 2014. |
| **DC 2014-5-6** | Excavate down to 4 ft bgs (instead of 3 ft bgs) in a portion of the Site 163 excavation area. | 5/6/14 letter from Honeywell summarizing the ERFS SiteVision field testing program indicated that this portion of Site 163 would be excavated instead of treated in-situ. |
| **DC 2014-5-19** | Defer removal of concrete/asphalt berm, demolition of subsurface concrete, and excavation to design elevations in the SA-6 South excavation area adjacent the bulkhead. | Submitted to all Parties on May 19, 2014. |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-10-28** | Direction on the handling of petroleum soils under the cap. | Submitted to all Parties on November 19, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2014-12-01** | The Southern limits of the Site 163 Chromium remediation extend close to the existing bulkhead. The bulkhead is in a dilapidated condition and has deteriorated subsequent to design of the remedy. During implementation of the remedy the condition of the bulkhead was visually assessed. As a result of this assessment it was determined that it was necessary to add additional protection to the backfill placed in Site 163 pending installation of the permanent replacement bulkhead. The design was modified in the field to include placement of geotextile fabrics and a sloped rip-rap facing to provide additional protection to the backfill. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2015-01-22** | During shallow excavation along the cove on Site 163, unreinforced mass concrete and a steel structure were identified in direct contact with structural components of the bulkhead. The structures will be left in place and remediation will be completed with the other SA-6 South bulkhead deferral area along the river, once the permanent bulkhead is installed. The total volume of the three isolated areas left in place is estimated to be 35 cubic yards. | Submitted to all Parties on January 28, 2015. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on 5/27/15. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on 5/27/15. |

**SA-6 North/South Field Change Log - Month Ending October 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-03-04** | The surcharge pile has been constructed to the design height of the barrier wall. The strip or land between the barrier wall and the property line is one of the "deferred areas" and varies in width from 0 to 12 feet. Final Development grades east of the barrier wall are at essentially the same grade as the existing grade. As such there is no additional load generated by the development grades and therefore there is no necessity of surcharge. | Submitted to Parties on July 2, 2015. |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-04-30** | A concrete protuberence was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groundwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2015-06-18** | Bayfront Redevelopment Civil Designer has eliminated one utility corridor along the eastern portion of SA-6 South (water main and sewer line were relocated to another utility corridor).<br>In addition, it was identified that minor increases in the Bayfront final grades of up to 0.25 feet may be made in the landscaped areas (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Final Grade surface has been verified to meet the minimum and average requirements of the SA-6 South Consent Decree and the 100% Design. | Submitted to all Parties on June 18, 2015. |
| **DC 2015-05-29** | Details were revised in order to clarify cap termination beyond the SCB/VHB wall, GCL to SCB/sheetpile barriers and Geofoam Block locations above the liner. | Submitted to Parties on August 27, 2015. |
| **DC 2015-06-05** | Amec Foster Wheeler reviewed the piezometer locations shown in the IFC design with the latest road and utility designs prepared by CHA. This has resulted in minor movements of the piezometers. The movement will have no impact on the performance of the piezometers to meet their intended purpose for measurement of the hydraulic gradient across the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-11-12** | Amec Foster Wheeler has provided Final Cap Grades (in CAD) to Entact. Amec Foster Wheeler and Entact developed a methodology for adapting grading of the cover soils to offsets from either subgrade or Final Development Grade. The methodology was described in the response to RFI 057. Some minor changes (0.1 to 0.2 ft.) have also been made in localized areas to improve surface drainage. | To be submitted to Parties as Attachment to Declaration 005. |
| **DC 2016-04-15** | Amec Foster Wheeler has provided final restoration grades for SA-6 South Development Area. The DCB also includes the final cover types in revised Drawing C-128. | To be submitted to Parties as Attachment to Declaration 005. |
| **DC 2015-06-18 (South)** | Amec Foster Wheeler and ERFS performed in-situ injections of calcium polysulfide (CAPS) at SA-6 South, Site 163 in July & August 2014. 6-month performance assessment soil samples were collected and analytical results indicated that seven of the fifteen treatment areas at the Site are now <20 milligrams per kilogram (m/kg) for Cr(VI). Honeywell will implement additional CAPS injections at several of the areas that remain >20 m/kg for Cr(VI). While the specific scope of this next field phase is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated September 2012. | Submitted to all Parties on 6/22/15. |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on 6/22/15. |

**SA-6 North/South Field Change Log - Month Ending October 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-06-15** | A Construction Control Grid for the SA-6 cap subgrade was developed in CAD as a Triangular Irregular Network for construction control and verification of compliance with cover thickness requirements in the Consent Decree and Open Space Design Standards. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-16** | The alignment of the gas vent system piping and trench was modified in the west portion of the SA-6 South cap to establish smooth grades in the utility corridors and avoid contingent groundwater extraction system components. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-18** | The Design detail (Drawing C-121, Detail AN) assembly has been modified to reflect changes resulting from collaboration between Entact and AmecFW. | Submitted to Parties on August 27, 2015. |
| **DC 2015-10-06** | GCL is required to be installed over the SCB wall and Barrier Wall at the locations shown in the annotated PDF of C-121 (rev 4, 8/13/15). | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-07-22** | Detail BN has been modified to extend the LLDPE up and over the SCB Wall. The prior detail showed both the GDL and geomembrane terminating at the wall. | Submitted to Parties on August 27, 2015. |
| **DC 2015-07-28** | Drawing 304, Detail CE and associated notes regarding the "Liner Anchor to Concrete Structure" have been modified. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-08-07** | AmecFW has conducted further review of the "Liner to Concrete Structure Detail" (Drawing C-304, Detail CE) with Entact/ESI, including field review, to improve constructability. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-07-30** | Entact was granted approval to install a wedge of soil in the B Street corridor against the SCB wall. There is a step up in this location from the corridor subgrade to the top of the SCB wall. The intent of the Entact request was to provide a more gradual transition between the corridor subgrade and SCB Wall. AmecFW reviewed the CHA utility drawings and determined that there were no utility structures within this location that would be impacted by the change i.e. the change has no impact on the future development. The remaining corridor to SCB wall detail will be installed as shown on the contract drawings. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA-6S Caps. As such, Paragraph 3.02 is no longe required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-20** | The most easterly utility corridor was eliminated from the Development Plan, allowing for a revision to the cap subgrade and related revisions to the top of the Barrier Wall (revised Drawing S-201). Addendum: The top of the SCB wall will also be revised to reflect the elimination of the utility corridor (revised Drawing S-204). | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | To be submitted to Parties as Attachment to Declaration 004. |

**SA-6 North/South Field Change Log - Month Ending October 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | To be submitted to Parties as Attachment to Declaration 003. |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | To be submitted to Parties as Attachment to Declaration 003. |
| **DC 2015-09-28** | Chromium-impacted soils within the residential footprint of Site 163 that remained at levels above 20 ppm hexavalent chromium after in-situ treatment will be excavated in lieu of additional in-situ treatment and further sampling. | Submitted to Parties on October 1, 2015. |
| **DC 2015-12-21** | Amec Foster Wheeler (AmecFW), Entact and Maser Consulting have developed alternative methods for documentation/survey of the excavation bottom in Site 163. The alternative methods were developed in light of safety considerations for surveyor access into a sheet piled excavation to elevation –8.0. The bottom of the excavation will be in very low strength Stratum O soils. These alternative survey control methods are different from those previously used in the SA-6 South Development Area. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance withASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |

**SA-6 North/South Field Change Log - Month Ending October 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2015-11-30** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | To be submitted to Parties as Attachment to Declaration 003. |
| **DC 2016-02-03** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-02-22** | AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entact's request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location.<br>In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-02-25** | This DCB has been issued to provide Entact with the latest SA-6 North HB Wall and SCB wall plan and profile drawings (SN-201 thru SN-205), which were modified to reflect changes made in DC 2016-02-22. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-05-03** | The laboratory results of all gradations for planting soils shall be presented in terms of the USDA classification system rather than the USCS classification system. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2016-03-18** | This DC 2016-03-18 documents the revised acceptable ranges of physical parameters and provides an updated specification made in consultation with Dr. Grabosky of Rutgers University. Dr. Grabosky provided his recommendations in correspondence dated 3/17/2016. | Submitted to Parties on March 22, 2016. Plaintiffs responded in a letter dated April 15, 2016. Plaintiffs and Honeywell subsequently held discussions and DCB 2016-04-20 was developed to document an agreement reached by all parties on the Special Master All-Hands monthly call on April 19, 2016. |
| **DC 2016-03-21** | Nature's Choice was identified as the source that best met the physical requirements for Horizon C soils by Dr. Grabosky; however, several samples of Nature's Choice Horizon C soils have hexavalent chromium concentration >1.0 mg/kg. Consequently, Honeywell is proposing a design change to allow the hexavalent chromium concentration in Nature's Choice Horizon C soils to be less than 1.8 mg/kg, as agreed to by the parties, as documented in the attached emails. For future sampling, hexavalent chromium soil samples will be composited from 10 grab sample locations per 5,000 CY (maximum). There are additional conditions in Attachment A that are part of this DCB and specific to Nature's Choice Horizon C soil. All other requirements specified in the 100% Design for imported soils will be met by the Nature's Choice Horizon C soils as amended in previous DC 2015-09-17. | Submitted to Parties on March 22, 2016. |
| **DC 2016-04-20** | This DCB documents the approved sources of Horizon B and Horizon C materials, as agreed to by all parties on the Special Master All-Hands monthly call on April 19, 2016. | Submitted to Parties on April 21, 2016. |
| **DC 2016-05-06** | To allow for traffic flow within the project site following completion of the SA-6S Cap, a road will be installed within the "B Street" corridor. The road will be constructed by continuing the "Structural Fill under Roadways to within 6 inches of final grade" | Submitted to Parties on June 30, 2016. |
| **DC 2016-05-31** | This DCB documents the vault sketch Drawing C-310 (Rev 5, 5/31/16) | Submitted to Contractor only as clarification or response to RFI. |

**SA-6 North/South Field Change Log - Month Ending October 2016**

| Changed Item Identifier | Description of Change | Comments |
|---|---|---|
| **DC 2016-5-11** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. As part of DC 2016-5-11, AmecFW issued SA-6 North Interim Grades to Entact. | To be submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-5-20** | After further review, AmecFW lowered the geomembrane Pump Station #1 on the SA-6 North cap in order to provide additional separation between the geomembrane and the bottom of the vault. (Refer to DC 2016-02-22). | Submitted to Parties on June 15, 2016. |
| **DC 2016-7-12** | DC 2016-7-12 clarifies the limit of GCL deployment and the location of the sand bentonite plug in the SA-6 North cap. | Included as an attachment to July 2016 Monthly Progress Report. |
| **DC 2016-10-21** | Amee Foster Wheeler has consulted with Dr. James Murphy of the Rutgers Cooperative Extension regarding seed mixes that are suitable for use at this time of year. Based on the Rutgers' recommendations either one of the two seed mixes noted below is considered acceptable.<br>Seed Mix 1:<br>• 80% tall fescue<br>• 20% perennial ryegrass<br>• seeded at 360 pounds per acre<br>Seed Mix 2:<br>• 70% ta ll fescue<br>• 10% Kentucky bluegrass<br>• 20% perennial ryegrass<br>• seeded at 360 pounds per acre | Included as an attachment to October 2016 Monthly Progress Report. |

**Notes:** All tracked changes will be reflected in the as-built drawings and Final Record Documents as agreed to with the Parties.

**Re: Riverkeeper et al v. Honeywell International Inc. et al**
**Study Areas 6 and 7 Combined Monthly Progress/Highlights**
**Report No. 2016-11**

Dear Senator Torricelli:

Attached is the combined Chromium Remedy Monthly Progress Report for Study Areas 6 and 7, for activities conducted by Honeywell during the period from November 1 – November 30, 2016.

If you have any questions concerning the content of the report, please feel free to contact the undersigned.

Sincerely,

William J. Hague
Global Director, Remediation
Design and Construction

| **TOTAL STAFF** | **35** | **34** | **41** | **34** |

## 2. SITE HIGHLIGHTS (GENERAL)

- Performed routine groundwater monitoring and GWET inspections.
- Continued Ground Water Treatment Plant (GWTP) processing activities.
- Conducted perimeter air monitoring activities using hand-held portable devices for nuisance dust.
- Completed installation of CGWES components within the SA-6 North Open Space Areas to include installation of spare conduit pipe for future piezometer instrumentation on the north side of the SA-6 North Open Space Area.
- Initiated long-term groundwater monitoring activities at SA-6 South in accordance with the correspondence submitted by Honeywell to All Parties, dated November 7, 2016. This correspondence also transmitted results of samples collected from piezometers located on the interior of both SA-6 North and SA-6 South Open Areas.
- Completed post-injection groundwater sampling and monitoring in Treatment Area 10-1 in accordance with the NJDEP – Discharge to Groundwater Permit.
- On December 5, 2016, collected post-injection soil samples for total and hexavalent chromium and sulfide from the TA-10-1 area in accordance with the Amec Foster Wheeler memo entitled, "Proposed In-Situ-Treatment Event for Remaining Hexavalent Chromium Impacted Soils – Treatment Area 10-1", dated July 11, 2016.
- Conducted S-3 Mass Removal Injection Event No. 34 in injection well 088-IW-03.
- Completed sidewalk restoration activities within the work limits along Route 440.
- Removed Highway Occupancy Permit Fence and barricades along Route 440.

## B. SA-6N GROUND WATER TREATMENT PLANT

- Cleaned all process vessel pH and ORP probes, and mixed/refilled the polymer.
- Cleaned downstream process tanks T-300 (neutralization tank) and T-400 (effluent tank).
- Received monthly lab results for the GWTP effluent PVSC sampling conducted on November 15, 2016.

### 1. WEEKLY SUMMARY

| 80 Kellogg GWTP Data | Week Ending | | | |
|---|---|---|---|---|
| | 11/06/16 | 11/13/16 | 11/20/16 | 11/27/16 |
| Avg. Gallons Treated & Discharged (per day) | 77,961 | 77,307 | 78,910 | 74,929 |
| Average Flow (gpm) for Operating Period | 55 | 55 | 56 | 58 |
| Avg. Hours of Plant Operation | 23 | 23 | 23 | 22 |
| GWTP Influent Tanks (gal.) | 3,246 | 2,844 | 4,300 | 3,463 |

## C. EXCAVATION AND BACKFILL *(see **Attachment 3** for Progression Chart)*

- Continued storm-water management activities.
- Completed cleaning and demobilization of temporary Construction Water Treatment Plant.
- Initiated placement of geotextile and 6 inches of #57 Stone in the SA-6 North in the area just north of the Open Space Area and south of the JCMUA property. The restoration serves as both final restoration of disturbed areas and also as historic fill cap.

### 1. OFF-SITE DISPOSAL MONTHLY WASTE MATERIALS SUMMARY

| Contractor/ Transporter | Truck Type | Destination | TSDF | Material | Truck Loads | Avg. T/ Truck | Tons Shipped |
|---|---|---|---|---|---|---|---|
| **Siemens/FCI** | Roll-off | Sarnia, Ontario Canada | Stablex | WWTP Filer Cake | 1 | 17 | 17 |
| **Montecalvo** | Tri-axle | Keasby, NJ | Bay shore Recycling | Non Haz Cr | 4 | 24 | 96 |

### 2. EXCAVATION & BACKFILL PROGRESS

| Description | Areas |
|---|---|
| **Backfill in Progress** | #57 Stone Historic Fill Cap – SA6 N Restoration Area |

### 3. BACKFILL MATERIALS USED (TONS)

| Source | Week Ending | | | |
|---|---|---|---|---|
| | 11/06/16 | 11/13/16 | 11/20/16 | 11/27/16 |
| Natures Choice Topsoil | 801 | 0 | 1,241 | 287 |
| EME Topsoil | 4,640 | 5,090 | 3,566 | 1,524 |
| Tilcon Mount Hope I-8 | 104 | 0 | 52 | 0 |
| Natures Choice Horizon C | 203 | 0 | 0 | 108 |
| Tilcon DGA | 0 | 0 | 0 | 100 |
| Tilcon Mt. Hope 1.5" | 0 | 52 | 51 | 77 |
| Tilcon Mt. Hope #57 | 0 | 513 | 1,427 | 1,189 |
| Weldon Screenings | 277 | 139 | 0 | 0 |

- The EME Horizon A clean fill new source information dated October 13, 2016 is included in Attachment 15.
- This new source transmittal includes the EME certification that materials from their identified quarries being used for the Horizon A Topsoil are both virgin and not commingled. In addition, this transmittal includes all initial analytical and geotechnical data that supported the material meets the SA-6 100% Design and DCB adjusted specifications for Horizon A topsoil.
- In response to Plaintiffs' initial questions, we are also attaching the October 19, 2016 e-mail transmittal which confirmed earlier discussions (among Amec Foster Wheeler and the Parties during a conference call on October 4, 2016) which identified that the EME facility needed to increase the organic content via blending of an amendment to meet SA-6 100% Design and DCB adjusted specifications.
- The October 19, 2016 transmittal also clarifies that a natural Peat material was the organic amendment being used in the blending process at the EME facility. Honeywell further provided a separate clean fill certification from the Peat organic amendment supplier.
- Lastly, the October 19, 2016 response by Honeywell includes a clarification statement that Amec Foster Wheeler obtained the analytical and geotechnical samples on the blended Horizon A Topsoil product to be imported to SA-6.

## D. SURCHARGE OPERATIONS

- All surcharging activities are completed.

## E. SHEET PILE OPERATIONS

- All sheet pile operations are complete.

## F. CAPPING OPERATIONS

- Completed importing and placing Horizon A soils on SA-6 South Open Space Area.

- Completed hydro-seeding of SA-6 South Open Space Area and placement of erosion control matting.
- Completed installation of toe drain on the south side slope of the SA-6 North Open Space Area.
- Performed hydro-seeding of the SA-6 North Open Space Area and placement of erosion control matting.
- Completed importing and placing Horizon A soils on SA-6 North Open Space Area.
- Stockpiled a small quantity of Horizon A & C soils within SA-7 for potential future repairs of the SA-6 South and SA-6 North Open Space Areas.

## G. PERMIT STATUS

| Permit | Site | Status | Renewal Application Due Date | Expiration Date | Date Transmitted to the Louis Berger Group |

** Amec Foster Wheeler reviewed the expiration of this TWA with NJDEP, Division of Water Quality and no extension is necessary.*

## H. PLANNED HIGHLIGHTS FOR NEXT MONTH

- Complete installation of the Contingent Groundwater Extraction System Components final connections within the GWTP including the mechanical piping and conduit.
- Complete hydro-seeding of SA-6 North Open Space Area.
- Complete storm-water management activities associated with construction.
- Complete placement of geotextile and 6 inches of #57 Stone in the SA-6 North Restoration Area.
- Complete SWPPP inspections associated with construction.
- Conduct fourth quarter regional groundwater level monitoring event.
- Complete demobilization of Entact crew, office trailers and equipment.

**Re: Honeywell International Inc.**
**Court Ordered Regional Groundwater Remedy Treatment Plant**
**Located at 525 & 575 Route 440, Jersey City**
**MR 1 and MR 2**
**Permit ID# 20630025**

Dear Mr. Caltagirone:

Honeywell is submitting the October 2016 discharge monitoring reports, MR 1 and MR 2, for the Court Ordered Regional Groundwater Remedy treatment plant located at 525 & 575 Route 440 in Jersey City. Our discharge is in compliance with the limits.

Please contact me at 973-455-2989 if you need further clarification or have questions.

On Behalf of Honeywell
Sincerely,

Helen Fahy
Remediation Manager
Fahy Associates

# PRETREATMENT MONITORING REPORT

Certification of Non-Use if applicable (use additional sheets): _____

Compliance or non compliance statement with compliance schedule (use additional sheets if necessary) for every parameter used: All analyte results are compliant (see attached report).

Explain Method for preserving samples: Monthly metals are preserved with HNO3. SGT-HEM & TVOC samples are preserved using HCl. BOD samples are collected in a refrigerated sampler. All samples are iced in a cooler during transport to the lab.

## Attachment 14: SA-6 North & South Design Change Tracking Log

| SA-6 North/South Field Change Log | | |
|---|---|---|
| **Changed Item Identifier** | **Description of Change** | **Comments** |
| **DC 2013-7-29** | Surcharge Monitoring Plan modifications to match changes associated with relocation of the hydraulic barrier wall near the 72" force main. 72-Inch Force Main Monitoring Layout Plan, Details, and Notes developed. Surcharge pile layout redesign and instrumentation adjustments. The format of the Daily Report, Instrumentation Installation Forms, and Monitoring Data Forms has been modified to allow for generation using a "tablet application". | Submitted to all Parties on March 12, 2014. |
| **DC 2013-8-14** | Modifications to the Barrier Wall alignment and Surcharge Program to address concerns of NJDEP/PVSC/JCMUA and Honeywell regarding protection of 72 inch force main. Design drawings have been modified and design calculations revised in support of the required modifications to subgrade/liner grading and final grades. | Submitted to all Parties on September 12, 2013. |
| **DC 2013-9-24** | Testing frequency for analytic parameters for imported borrow material is to be modified to 1 test/5,000 CY of borrow. | Honeywell directive to be more conservative than 100% Design. Submitted to Contractor only as clarification or response to RFI. |
| **DC 2014-3-25** | Change Contingent GW system from wells to trench on both SA-6 S and SA-6N. | Submitted to all Parties on March 25, 2014 and April 23, 2014. |
| **DC 2014-11-20** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2014-11-20 includes the french drain installation, electrical supply and discharge piping for SA-6 North. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016. |
| **DC 2016-6-6** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-6-10 includes the revised electrical supply and discharge piping for SA-6 North. | Submitted to Parties as Attachment to Declaration 004. (Design Change ID changed from DC 2016-6-10 to DC 2016-6-6 to reflect actual date on Design Change form). |
| **DC 2015-2-24** | AmecFW documented the SA-6 Contingent Groundwater system change to a trench system. The design will be released to Entact in stages to facilitate constructability. DC 2016-5-24 was issued to document the changes in the SA-6 North and South cap subgrades that resulted from the change to a trench system. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2014-7-28** | Update the list of monitoring wells to be abandoned / retained. | Submitted to all Parties on August 26, 2014. |
| **DC 2014-8-13** | Revised hydraulic barrier wall alignment through the sedimentation basin to reduce potential conflict with existing timber piles. | Submitted to all Parties on August 19, 2014. |
| **DC 2014-9-2** | Revised hydraulic barrier wall alignment adjacent the 72" force main in order to provide a clearance of 25 ft. between the centerline of the 72" force main and the barrier wall as previously agreed with PVSC. | Submitted to all Parties on September 4, 2014. |
| **DC 2014-10-31** | Revised Soil Management Plan (Appendix G - SA-6 North 100% Design Report) to indicate that any asphalt or concrete that meets NJDEP reuse requirements or is granted a variance by the NJDEP may be reused as backfill or placed underneath the cap.<br>Contractor directed to consolidate arsenic-impacted asphalt in Cap Areas in a footprint that does not exceed 44,000 SF and to cover the asphalt with chromium-impacted soil. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-01-22** | In accordance with the 100% Design, the Contractor is directed to remove 0-2 feet of <20 mg/kg overburden historic fill soils from selected locations throughout the SA-6 North Open Space Area. This will create a nominal 10,000 to 12,000 cubic yards (CY) additional capacity under the SA-6 North liner without affecting final grades for the liner or cover soils. The SMP allows such soils that are confirmed to be below 20 mg/kg for hexavalent chromium, to be used as temporary surcharge in the cap areas, backfill for excavations, or to raise the grades for the Redevelopment Project outside of the cap areas. In the space created by this removal of the 0-2 feet of historic fill soils from selected locations throughout the SA-6 North Open Space Area, the Contractor will relocate an additional estimated 10,000 to 12,000 CY worth of 20-240 mg/kg hexavalent chromium soils currently staged at SA-6 South. | Submitted to Parties as Attachment to Declaration 004. |
| **DC 2015-03-03** | Mueser Rutledge Consulting Engineers (MRCE) have revised the design for temporary excavation support in SA-6 North along Route 440. Revised drawings SN-501, SN-502, SN-503, SN-504, and SN-505 are included in this Design Change Bulletin. | Submitted to Contractor and BMUA/JCMUA. Submitted to all Parties on May 27, 2015. |
| **DC 2015-03-30** | A pile cap was encountered during pre-trenching at the general location of the demolished Waste Management Garage. An alternatives evaluation was conducted and it was concluded that the least risk option was to re-align the wall to the south effectively resulting in a decrease in the cap area and an increase in the EA-5 Excavation. | Submitted to all Parties on May 27, 2015. |

| SA-6 North/South Field Change Log | | |
|---|---|---|
| **Changed Item Identifier** | **Description of Change** | **Comments** |
| **DC 2015-03-09** | The utility pole relocations along Route 440 require the installation of new poles in the DOT Right of Way along Route 440. The DCB includes the pole sleeve construction details and locations. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-04-30** | A concrete protuberance was encountered 12-13 feet below grade, which prevented driving the sheet to full depth immediately adjacent the JCIA trash pit. The closure sheet was notched to clear the concrete, then lowered to design depth. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-05-19** | Supply and installation of specific components related to the contingent groundwater system will be deferred pending closure of the caps and stabilization of the groundwater levels and quality within the contingent groundwater system on both SA-6 North and SA-6 South. | Submitted to Parties as Attachment to Declaration 002 response memo on July 19, 2016 |
| **DC 2015-06-18 (North)** | Injections of calcium polysulfide (CAPS) will be implemented in a limited portion of TA-10, north of the northern curbline for the future Stegman Boulevard to be constructed during the Bayfront Redevelopment project. Monitoring wells installed in the injection area and between the injection area and the adjacent 72- inch force main will be used to measure sulfate conditions in shallow groundwater. If necessary, clean potable water may be injected into the monitoring wells to dilute the sulfate concentrations in the shallow groundwater adjacent to the 72-inch force main. While the specific scope of the proposed injections is provided in the attachment, the work will generally be performed in accordance with Amec Foster Wheeler's approved Revised Work Plan for In-Situ Treatment of Chromium Impacted Soil, dated February 19, 2013. | Submitted to all Parties on June 22, 2015. |
| **DC 2015-07-31** | The sheet pile pair is located at Sta. 0+50. Driving was stopped with a top elevation of +12.8 and a tip of -2.2. The top of meadow mat is at elevation +0.5. In accordance with the 100% Design Report (10.1.3 Bottom Key), the tip of the sheet shall be embedded a minimum of 2' into the Stratum D. The tip of the sheet is embedded 2.7 ft. and therefore meets the design criteria which was established in accordance with the requirements of the Consent Decree. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-08-19** | Entact notified AmecFW that the vendor had experienced difficulty during set up and could not produce an acceptable quality of lettering on the orange non-woven geotextile (due to ink blurring). As an option Entact proposed installing a standard direct burial utility marking tape. AmecFW approved use of a 6 inch wide yellow PE tape with 3.5 inch bold back lettering as meeting the specified requirements for a distinctive colored high visibility marking. | Submitted to Parties on August 27, 2015. |
| **DC 2015-08-21** | The anchor trench section of the Specification 02372 CAP GEOMEMBRANE LINER Section 3.02 is standard industry language and part of AmecFW's standard Geomembrane Specification. During the process of finalizing development of the capping system in the 100% Design, the Engineer determined that anchor trenches were not required for either the SA-6N or SA-6S Caps. As such, Paragraph 3.02 is no longer required and therefore the following is deleted in its entirety. | Submitted to Parties on August 27, 2015. |
| **DC 2015-9-02** | As identified in the 100% Design, ENTACT should now remove approximately 2 ft. of historic fill from the post surcharge removal surface of Area 1N to create capacity for 20-240 mg/kg chromium impacted soils. Excavated Soils will be sampled and analyzed according to the Soil Management Plan. Should any excavated historic fill exceed the 20 mg/kg criteria, it will be placed under the cap. | Submitted to Parties as Attachment to Declaration 004. |
| **DC 2015-9-17** | Extensive searching of available soil suppliers (including 6 specifically identified as potential sources/vendors by Dr. Grabosky) indicated that current sources could substantially meet the most critical, but not all, IFC specifications. In response, AmecFW submitted the provided borrow source testing data per specifications to Dr. Grabosky for his review. Dr. Grabosky selected specific blends from the list that he identified as acceptable for use within the Open Space Areas. In addition, Dr. Grabosky recommended minor revisions to the specifications that the AmecFW engineer has accepted. Dr. Grabosky's letter and specification revision recommendation are attached. | Submitted to Parties on September 23, 2015. |
| **DC 2015-9-04** | EA-8 boundaries have been revised to reflect additional sampling following initial excavation as defined in the 100% Design. The internal boundaries delineating the different soil disposition based on hexavalent chromium content have been revised. The revisions are minor in nature and are based on using a means of interpolation between sample points that is consistent with that used on SA-6S. | Submitted to Parties as Attachment to Declaration 003. |

| SA-6 North/South Field Change Log | | |
|---|---|---|
| **Changed Item Identifier** | **Description of Change** | **Comments** |
| **DC 2015-11-18** | Drawing CN-118 has been revised to show additional excavation in EA-8 as outlined in DC 2015-09-04. In addition, review of DC 2015-09-04 indicated a small area where the 20 - 240 ppm hatch had not been carried to the outer limit of excavation. The hatch mark has been corrected in CN-118 revision 2. | Submitted to Parties as Attachment to Declaration 003. |
| **DC 2015-10-02** | As an additional precautionary measure, ENTACT will install warning tape directly on top of the root barrier layer. The warning tape will generally be installed perpendicular to the warning tape above the GDL. On the steep slopes into roadway/utility corridors and the tree planting areas the tape will be set running from the top of the slope to the bottom of the slope. | Submitted to Parties on October 8, 2015. |
| **DC 2015-10-22** | Pre-trenching on the vinyl sheetpile alignment revealed a significant number of old timber piles along the western edge of the proposed repair. Removal of the piles would create openings in the Stratum D. In lieu of removing sheetpile, the western side was relocated approximately 6 ft. further west. This will result in an expansion of the repair plan area from approximately 14,000 SF to approximately 14,500 SF. This change has no impact of the functionality of the chromium remedy or on the future site development. | Submitted to Contractor only as clarification or response to RFI. |
| **DC 2015-12-14** | Specification 02372, Sections 3.03 – Geomembrane Placement, C. Liner Boots and 3.06 – Field Quality Control, B. Nondestructive Seam Testing have been amended to include spark testing of extrusion welds that cannot be tested by other means. Spark testing will be performed in accordance with ASTM D6365 - Standard Practice for the Non Destructive Testing of Geomembrane Seams using the Spark Test. In addition, GRI-19 - Specification Seam Strength & Related Properties of Thermally Bonded Polyolefin Geomembrane was added as a reference document. The Specification also requires preparation of a Spark Testing form for each location that Spark Testing is used, to be signed by the Independent Geosynthetics QA representative.<br>Agreement was reached between Honeywell and the Plaintiffs to implement Spark Testing on SA-6N. Specification 02372 has been revised accordingly. | Submitted to Parties on January 14, 2016. |
| **DC 2015-11-30** | EA 2&3 external boundaries remain consistent with the Issued for Construction Design. Internal waste classification boundaries required adjustment to clarify the limits in three small triangular areas within the main excavation. A complete set of EA 2&3 Drawings and AutoCAD Files have been included showing all intervals. EA-8 Issued for Construction defined excavation limits from the surface to elevation 7. Upon reaching elevation 7 supplemental sampling was conducted and excavation conducted based on those results. Observation of excavation faces revealed a suspect area that subsequent testing verified required removal. A further round of supplemental sampling established new excavation limits. A detail is shown on the Interval 6 drawing showing the extent of extra excavation required. | Submitted to Parties as Attachment to Declaration 003. |
| **DC 2016-02-02** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. | Submitted to Parties as Attachment to Declaration 004. (Design Change ID changed from DC 2016-02-03 to DC 2016-02-02 to reflect actual date on Design Change form). |
| **DC 2016-02-22** | AmecFW revised the SA-6 North cap subgrade in a single localized area in order to accommodate Entact's request to relocate Pump Station #1 (RFI 64). The subgrade has been lowered at the new location to accommodate the vault and piping, and raised in the original pump station location.<br>In addition, for grading purposes, any hydraulic barrier sheets within the Sedimentation Basin that have sections below elevation 12.0 will be trimmed to a uniform elevation of 11.5. | Submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-02-25** | This DCB has been issued to provide Entact with the latest SA-6 North HB Wall and SCB wall plan and profile drawings (SN-201 thru SN-205), which were modified to reflect changes made in DC 2016-02-22. | Submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-05-03** | The laboratory results of all gradations for planting soils shall be presented in terms of the USDA classification system rather than the USCS classification system. | Submitted to Contractor only as clarification or response to RFI. |

| SA-6 North/South Field Change Log | | |
|---|---|---|
| **Changed Item Identifier** | **Description of Change** | **Comments** |
| **DC 2016-03-18** | This DC 2016-03-18 documents the revised acceptable ranges of physical parameters and provides an updated specification made in consultation with Dr. Grabosky of Rutgers University. Dr. Grabosky provided his recommendations in correspondence dated 3/17/2016. | Submitted to Parties on March 22, 2016. Plaintiffs responded in a letter dated April 15, 2016. Plaintiffs and Honeywell subsequently held discussions and DCB 2016-04-20 was developed to document an agreement reached by all parties on the Special Master All-Hands monthly call on April 19, 2016. |
| **DC 2016-03-21** | Nature's Choice was identified as the source that best met the physical requirements for Horizon C soils by Dr. Grabosky; however, several samples of Nature's Choice Horizon C soils have hexavalent chromium concentration >1.0 mg/kg. Consequently, Honeywell is proposing a design change to allow the hexavalent chromium concentration in Nature's Choice Horizon C soils to be less than 1.8 mg/kg, as agreed to by the parties, as documented in the attached emails. For future sampling, hexavalent chromium soil samples will be composited from 10 grab sample locations per 5,000 CY (maximum). There are additional conditions in Attachment A that are part of this DCB and specific to Nature's Choice Horizon C soil. All other requirements specified in the 100% Design for imported soils will be met by the Nature's Choice Horizon C soils as amended in previous DC 2015-09-17. | Submitted to Parties on March 22, 2016. |
| **DC 2016-04-20** | This DCB documents the approved sources of Horizon B and Horizon C materials, as agreed to by all parties on the Special Master All-Hands monthly call on April 19, 2016. | Submitted to Parties on April 21, 2016. |
| **DC 2016-5-11** | The interim grade in the SA-6 North landscape area has been raised by a nominal amount of 0.25' (no changes were made to the roadway grades). The difference between the adjusted Geomembrane Subgrade surface and Interim Grade surface has been verified to meet the minimum and average requirements of the SA-6 North Consent Decree and the 100% Design. As part of DC 2016-5-11, AmecFW issued SA-6 North Interim Grades to Entact. | Submitted to Parties as Attachment to Declaration 004. |
| **DC 2016-5-20** | After further review, AmecFW lowered the geomembrane Pump Station #1 on the SA-6 North cap in order to provide additional separation between the geomembrane and the bottom of the vault. (Refer to DC 2016-02-22). | Submitted to Parties on June 15, 2016. |
| **DC 2016-7-14** | Design change documenting minor grading adjustments to improvements to drainage off of the SA6N Open Space Area. | DCB will be provided to Parties in the November 2016 monthly progress report and included in the finalized Declaration No. 4. |
| **DC 2016-7-12** | DC 2016-7-12 clarifies the limit of GCL deployment and the location of the sand bentonite plug in the SA-6 North cap. | Included as an attachment to July 2016 Monthly Progress Report. |

**DCB-2016-7-14: North Cap – Field Engineered Subgrade Adjustments**

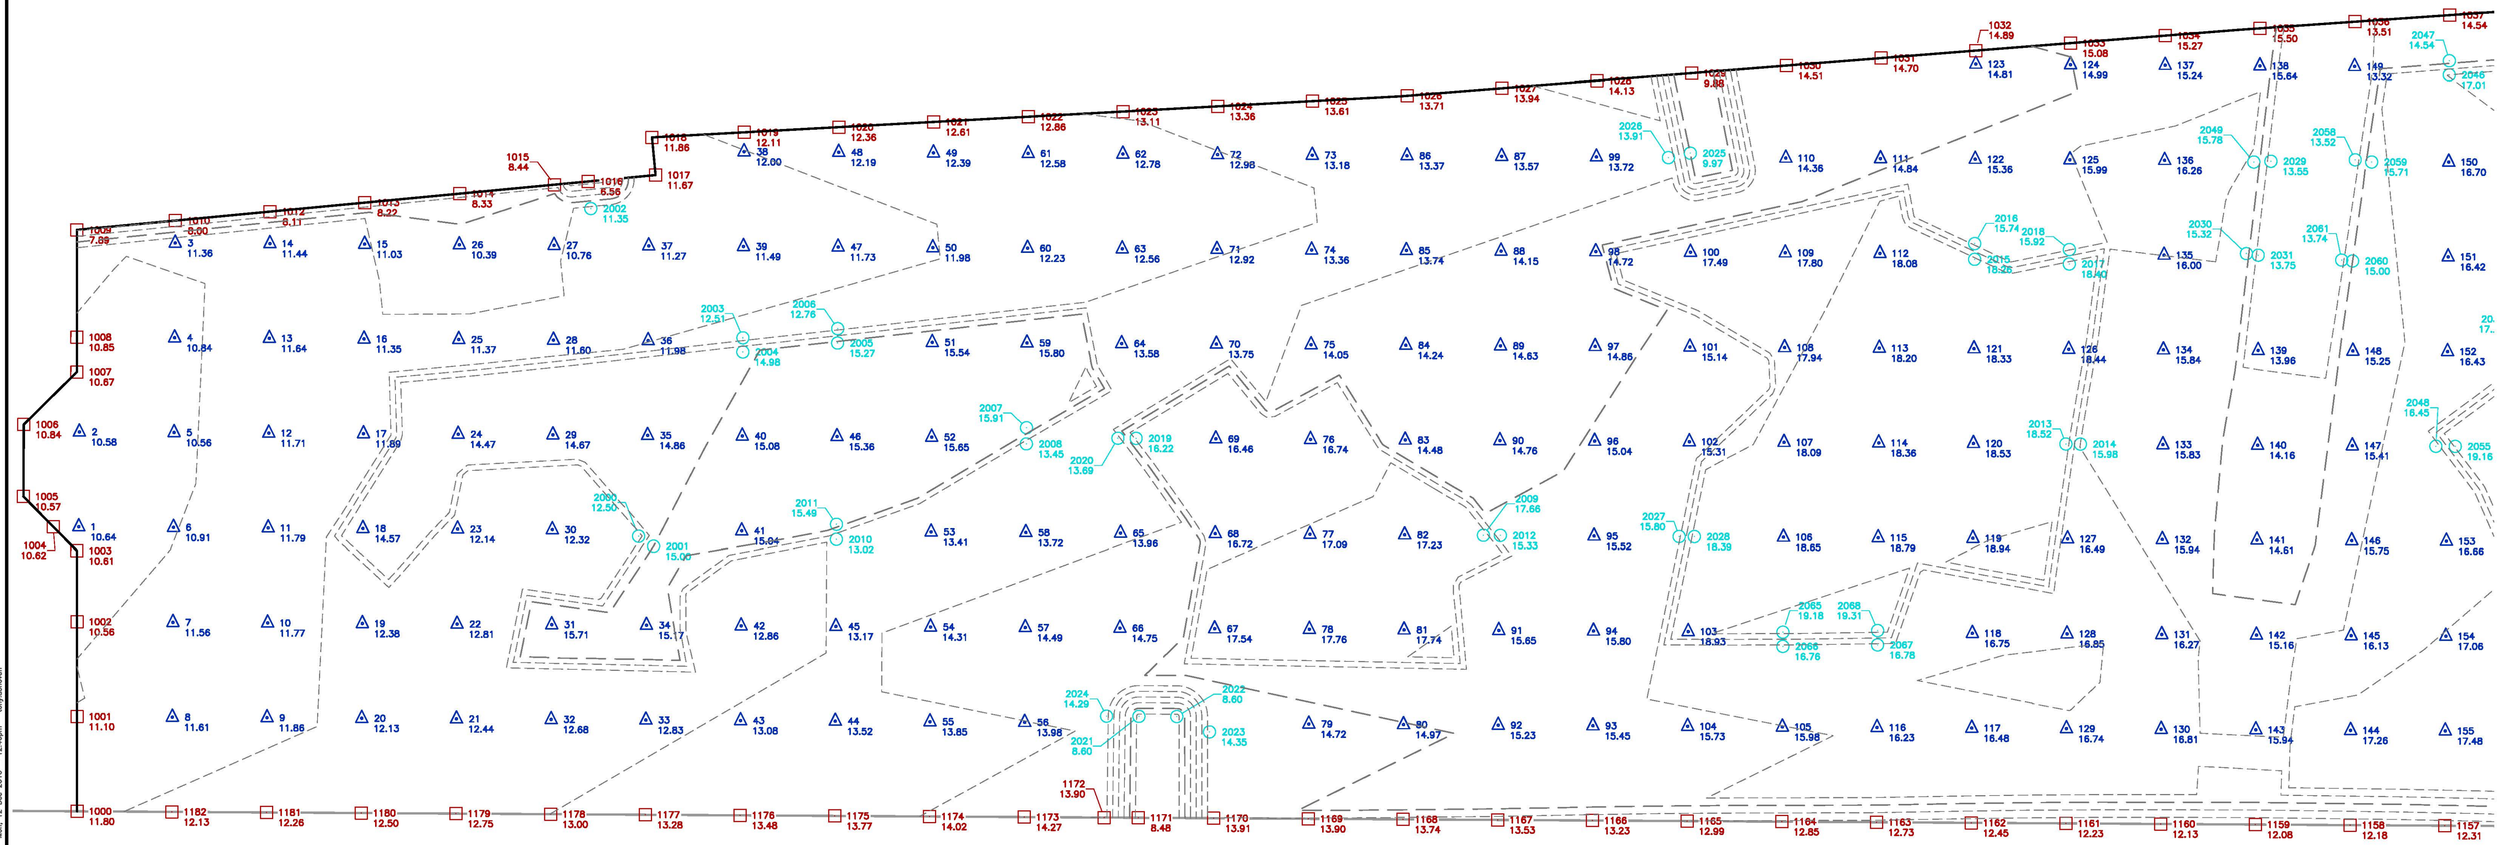
PDESIGN CHANGE BULLETIN

| | |
|---|---|
| **Project Name:** Chromium Remedy Study Area 6<br>Jersey City, NJ | **DCB No.:** **Type:** Minor(a)<br>**Effective Date:** 7/14/16 |
| **Project Location:** SA-6 North | **Associated RFI:** |
| **Title:** North Cap - Field Engineered Subgrade Adjustments | ☐ Yes, RFI Nos. ☑ None |
| **Contractor (Subcontractor):** ENTACT | **Project No.:** 3480130377 |



**Description.**

During the course of subgrade construction two field conditions were identified that resulted in the need for minor adjustments to several small localized areas of the subgrade to achieve positive drainage. In one area these field developed changes resulted in a change in elevation of the Construction Control Grid subgrade elevation.

In addition there were several minor changes in the top elevation of the Hydraulic Barrier wall. These changes were made to avoid major changes to the Construction Water Treatment forcemain and to address several locations where the final top elevations of driven sheets were slightly below the design levels. These changes did result in a very small reduction in capacity under the cap and had no impact on the containment and hydraulic requirements of the wall. The changes are so minor they are not readily visible on the hard copy drawings. Revisions were issued to Entact in electronic format and will be incorporated in As Built documentation.

Morris Plains, NJ 07950

October 13, 2016 ***via Electronic Mail***

The Honorable Robert G. Torricelli
Office of the Special Master
*RGTSpecialMaster@aol.com*

**Re: New Source of Horizon A Topsoil**
**Study Area 6 (SA-6)**
**Jersey City, New Jersey**

Dear Senator Torricelli:

Honeywell is preparing this letter to advise the parties that we have identified a new fill material from the Excavating Materials & Equipment, Inc. quarry in New Egypt, NJ, which can be used at SA-6 for Horizon A topsoil needs. A clean fill certification and mine registration certificate are provided in Attachment A.

Although the fill material is certified by the quarry, an analytical sample was collected and compared to the NJDEP Residential Soil Remediation Standards. The soil sample was analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and hexavalent Cr.

All the data was found to meet NJDEP unrestricted use criteria and the hexavalent Cr was found to be < 1 mg/kg. Consistent with our prior practice, we are providing the parties with a copy of the final laboratory data package, which includes the Horizon A topsoil sample collected by Amec Foster Wheeler, WOOLSTON-TS-002.

In addition, Amec Foster Wheeler collected a geotechnical sample to confirm that the material meets the topsoil specifications in the approved 100% Design and DC 2015-09-17 (provided to Parties in a letter dated September 23, 2015). Amec Foster Wheeler found that the materials meet the topsoil specifications. A copy of the geotechnical data is also attached to this letter (Attachment B).

Should you have any questions please contact the undersigned at (973) 455-2175.

Sincerely,

William J. Hague
Global Director, Remediation
Design and Construction

**GENERAL CONTRACTOR : Entach Corp**

**CERTIFICATION:** Clean Fill Certification

**PROJECT: Honeywell Jersey City NJ.**

Please accept this letter as our certification that the Clean Fill to be supplied to you through EME for the above referenced project is produced at our Plumsted Township Plant located at 849 Route 539, New Egypt, NJ 08533. Block 80 lot 4.

The material provided from our pit is:
Excavated from undisturbed geologic formations;
Obtained from a licensed quarry/mine;
Not been subject to a discharged hazardous substance at any time;
Not located on or impacted by other contaminant sources;
Not comingled with any other materials;
Not known or suspected of being contaminated.
Not adversely impacted by discharges of hazardous materials or chemical applications;
Not affected by conditions or processes that would result in the introduction of contaminates into the licensed quarry/mine material in concentrations above regulatory concern; and
Not affected by conditions or processes that would increase the concentrations of contaminants already present in the licensed quarry/mine to concentrations above regulatory concern.
Also please find a copy of our state mine registration.

If you need any further assistance, please feel free to contact me.

Sincerely,

Keith Prince
Vice President

State of New Jersey
Department of Labor and Workforce Development

## Technical Report for

Honeywell International Inc.

HLANJPR: Study Area 6 Chrome Remedy

SGS Accutest Job Number: JC28902

Sampling Date: 10/04/16

Report to:

AMEC Environment & Infrastructure, Inc.

jenna.desiderio@amecfw.com

ATTN: Jenna Desiderio

Total number of pages in report: 349

NELAP ACCREDITED TNI LABORATORY

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

Nancy Cole
Laboratory Director

Client Service contact: Marty Vitanza 732-329-0200

Certifications: NJ(12129), NY(10983), CA, CT, FL, IL, IN, KS, KY, LA, MA, MD, ME, MN, NC, OH VAP (CL0056), AK (UST-103), AZ (AZ0786), PA, RI, SC, TX, UT, VA, WV, DoD ELAP (L-A-B L2248)

This report shall not be reproduced, except in its entirety, without the written approval of SGS Accutest.
Test results relate only to samples analyzed.

SGS Accutest is the sole authority for authorizing edits or modifications to this document.
Unauthorized modification of this report is strictly prohibited.

# CASE NARRATIVE / CONFORMANCE SUMMARY

| | | | |
|---|---|---|---|
| **Client:** | Honeywell International Inc. | **Job No** | JC28902 |
| **Site:** | HLANJPR: Study Area 6 Chrome Remedy | **Report Date** | 10/11/2016 5:29:27 P |

On 10/04/2016, 1 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at SGS Accutest at a maximum corrected temperature of 5.2 C. Samples were intact and chemically preserved, unless noted below. A SGS Accutest Job Number of JC28902 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Please refer to certification exceptions summary for additional certification information.

Compounds qualified as out of range in the continuing calibration summary report are acceptable as per method requirements when there is a high bias but the sample result is non-detect.

## Volatiles by GCMS By Method SW846 8260C

**Matrix:** SO **Batch ID:** VY7259

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC28964-1DUP, JC28964-2MS, JC28964-1DUP were used as the QC samples indicated.
- RPD(s) for Duplicate for 2-Butanone (MEK), Acetone, Benzene, Carbon disulfide, Chloroform, Cyclohexane, Ethylbenzene, Isopropylbenzene, m,p-Xylene, Methylcyclohexane, o-Xylene, Toluene, Xylene (total) are outside control limits for sample JC28964-1DUP. Outside control limits due to different encores.

## Extractables by GCMS By Method SW846 8270D

**Matrix:** SO **Batch ID:** OP97539

- All samples were extracted within the recommended method holding time.
- Sample(s) JC28910-1MS, JC28910-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- JC28902-1: Confirmation run.
- JC28902-1 for 2-Fluorobiphenyl: Outside control limits due to matrix interference.

## Extractables by GC By Method NJDEP EPH

**Matrix:** SO **Batch ID:** OP97541

- All samples were extracted within the recommended method holding time.
- Sample(s) JC28906-2MS, JC28906-2MSD, JC28910-2DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Matrix Spike Recovery(s) for EPH (>C28-C40) are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- Matrix Spike / Matrix Spike Duplicate Recovery(s) for EPH (C9-C28), Total EPH (C9-C40) are outside control limits. Outside control limits due to high level in sample relative to spike amount.

## Extractables by GC By Method SW846 8081B

**Matrix:** SO **Batch ID:** OP97536

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC28906-1MS, JC28906-1MSD, OP97536-MSMSD were used as the QC samples indicated.

## Extractables by GC By Method SW846 8082A

**Matrix:** SO **Batch ID:** OP97535

- All samples were extracted within the recommended method holding time.
- Sample(s) JC28902-1MS, JC28902-1MSD, OP97535-MSMSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- OP97535-BS1 for Aroclor 1260: Reported from 2nd signal. %D of check calibration on 1st signal exceed method criteria (20%) so using for confirmation only.

## Extractables by GC By Method SW846 8151

**Matrix:** SO **Batch ID:** OP97538

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC28904-1AMS, JC28904-1AMSD were used as the QC samples indicated.
- Matrix Spike Recovery(s) for 2,4-DB, Dinoseb, MCPA, MCPP are outside control limits. Outside control limits due to matrix interference.
- Matrix Spike Duplicate Recovery(s) for Dinoseb, MCPA, MCPP are outside control limits. Outside control limits due to matrix interference.
- RPD(s) for MSD for 2,4,5-T, 2,4,5-TP (Silvex), 2,4-DB, Dalapon, Dicamba, Dichloroprop, Pentachlorophenol are outside control limits for sample OP97538-MSD.
- OP97538-MSD for 2,4-DB: Outside the QC limits.

## Metals By Method SW846 6010C

**Matrix:** SO **Batch ID:** MP96373

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC28910-1MS, JC28910-1MSD, JC28910-1SDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Antimony, Arsenic, Barium, Cadmium, Calcium, Chromium, Cobalt, Copper, Lead, Nickel, Potassium, Sodium, Vanadium are outside control limits for sample MP96373-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MP96373-SD1 for Zinc: Serial dilution indicates possible matrix interference.
- MP96373-MB1 for Zinc: All reported results >10x MB value or with RL> 2X of this value.

## Metals By Method SW846 7471B

**Matrix:** SO **Batch ID:** MP96393

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC28910-1MS, JC28910-1MSD were used as the QC samples for metals.

## Wet Chemistry By Method ASTM D1498-76M

**Matrix:** SO **Batch ID:** GN52967

- Sample(s) JC28819-1DUP were used as the QC samples for Redox Potential Vs H2.

## Wet Chemistry By Method SM2540 G-97

**Matrix:** SO **Batch ID:** GN52970

- The data for SM2540 G-97 meets quality control requirements.

## Wet Chemistry By Method SW846 3060A/7199

**Matrix:** SO **Batch ID:** GP574

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC28902-1PS, JC28902-1MS, JC28902-1DUP were used as the QC samples for Chromium, Hexavalent.
- Matrix Spike Recovery(s) for Chromium, Hexavalent are outside control limits. Insoluble XCR matrix spike recovery indicates possible matrix interference. See additional comments on soluble matrix spike recovery.
- RPD(s) for Duplicate for Chromium, Hexavalent are outside control limits for sample GP574-D1. RPD acceptable due to low duplicate and sample concentrations.
- GP574-S1 for Chromium, Hexavalent: Soluble XCR matrix spike recovery indicates possible matrix interference. Good post spike recovery (102%) on this sample.

**Matrix:** SO **Batch ID:** GP648

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC28902-1RPS, JC28902-1RMS, JC28902-1RDUP were used as the QC samples for Chromium, Hexavalent.
- Matrix Spike Recovery(s) for Chromium, Hexavalent are outside control limits. Insoluble XCR matrix spike recovery indicates possible matrix interference. See additional comments on soluble matrix spike recovery.
- RPD(s) for Duplicate for Chromium, Hexavalent are outside control limits for sample GP648-D1. RPD acceptable due to low duplicate and sample concentrations.
- GP648-S1 for Chromium, Hexavalent: Soluble XCR matrix spike recovery indicates possible matrix interference. Good post spike recovery (97.2%) on this sample.

## Wet Chemistry By Method SW846 9012B/LACHAT

**Matrix:** SO **Batch ID:** GP585

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JC28906-1DUP, JC28906-1MS were used as the QC samples for Cyanide.
- Matrix Spike Recovery(s) for Cyanide are outside control limits. Spike recovery indicates possible matrix interference.

## Wet Chemistry By Method SW846 9045D

**Matrix:** SO **Batch ID:** GN52968

- Sample(s) JC28819-1DUP were used as the QC samples for pH.

SGS Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS Accutest is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by SGS Accutest indicated via signature on the report cover

## Misc. Forms

### Custody Documents and Other Forms

Includes the following where applicable:

- Certification Exceptions
- Chain of Custody
- Sample Tracking Chronicle
- Internal Chain of Custody

# Parameter Certification Exceptions

**Job Number:** JC28902
**Account:** HWINJM Honeywell International Inc.
**Project:** HLANJPR: Study Area 6 Chrome Remedy

The following parameters included in this report are exceptions to NELAC certification.
The certification status of each is indicated below.

| Parameter | CAS# | Method | Mat | Certification Status |
|---|---|---|---|---|
| Redox Potential Vs H2 | | **ASTM D1498-76M** | SO | Accutest is not certified for this parameter.[a] |

(a) Lab cert for analyte not supported by NJDEP, OQA. Only methods/analytes required for reporting by the State of NJ can be certified in NJ. Use of this analyte for compliance must be verified through the appropriate regulatory office.

Certification exceptions shown are based on the New Jersey DEP certifications. Applicability in other states may vary. Please contact your laboratory representative if additional information is required for a specific regulatory program.

## SGS Accutest Sample Receipt Summary

**Job Number:** JC28902 **Client:** **Project:**

**Date / Time Received:** 10/4/2016 4:52:00 PM **Delivery Method:** **Airbill #'s:**

**Cooler Temps (Raw Measured) °C:** Cooler 1: (4.1);

**Cooler Temps (Corrected) °C:** Cooler 1: (5.0);

| Cooler Security | Y | or | N | | Y | or | N |
|---|---|---|---|---|---|---|---|
| 1. Custody Seals Present: | ☑ | | ☐ | 3. COC Present: | ☑ | | ☐ |
| 2. Custody Seals Intact: | ☑ | | ☐ | 4. Smpl Dates/Time OK | ☑ | | ☐ |

| Cooler Temperature | Y | or | N |
|---|---|---|---|
| 1. Temp criteria achieved: | ☑ | | ☐ |
| 2. Cooler temp verification: | IR Gun | | |
| 3. Cooler media: | Ice (Bag) | | |
| 4. No. Coolers: | 1 | | |

| Quality Control _Preservation | Y | or | N | N/A |
|---|---|---|---|---|
| 1. Trip Blank present / cooler: | ☐ | | ☑ | ☐ |
| 2. Trip Blank listed on COC: | ☐ | | ☑ | ☐ |
| 3. Samples preserved properly: | ☑ | | ☐ | |
| 4. VOCs headspace free: | ☐ | | ☐ | ☑ |

| Sample Integrity - Documentation | Y | or | N |
|---|---|---|---|
| 1. Sample labels present on bottles: | ☑ | | ☐ |
| 2. Container labeling complete: | ☑ | | ☐ |
| 3. Sample container label / COC agree: | ☑ | | ☐ |

| Sample Integrity - Condition | Y | or | N |
|---|---|---|---|
| 1. Sample recvd within HT: | ☑ | | ☐ |
| 2. All containers accounted for: | ☑ | | ☐ |
| 3. Condition of sample: | Intact | | |

| Sample Integrity - Instructions | Y | or | N | N/A |
|---|---|---|---|---|
| 1. Analysis requested is clear: | ☑ | | ☐ | |
| 2. Bottles received for unspecified tests | ☐ | | ☑ | |
| 3. Sufficient volume recvd for analysis: | ☑ | | ☐ | |
| 4. Compositing instructions clear: | ☐ | | ☐ | ☑ |
| 5. Filtering instructions clear: | ☐ | | ☐ | ☑ |

# Instrument Performance Check (DFTPP)

**Job Number:** JC28902
**Account:** HWINJM Honeywell International Inc.
**Project:** HLANJPR: Study Area 6 Chrome Remedy

**Sample:** EZ5729-DFTPP
**Lab File ID:** Z114913.D
**Instrument ID:** GCMSZ
**Injection Date:** 10/07/16
**Injection Time:** 09:43

| m/e | Ion Abundance Criteria | Raw Abundance | % Relative Abundance | | Pass/Fail |
|---|---|---|---|---|---|
| 51 | 30.0 - 60.0% of mass 198 | 30500 | 39.2 | | Pass |
| 68 | Less than 2.0% of mass 69 | 0 | 0.00 | (0.00) [a] | Pass |
| 69 | Mass 69 relative abundance | 35041 | 45.0 | | Pass |
| 70 | Less than 2.0% of mass 69 | 185 | 0.24 | (0.53) [a] | Pass |
| 127 | 40.0 - 60.0% of mass 198 | 40669 | 52.3 | | Pass |
| 197 | Less than 1.0% of mass 198 | 0 | 0.00 | | Pass |
| 198 | Base peak, 100% relative abundance | 77808 | 100.0 | | Pass |
| 199 | 5.0 - 9.0% of mass 198 | 5292 | 6.80 | | Pass |
| 275 | 10.0 - 30.0% of mass 198 | 21245 | 27.3 | | Pass |
| 365 | 1.0 - 100.0% of mass 198 | 2872 | 3.69 | | Pass |
| 441 | Present, but less than mass 443 | 9795 | 12.6 | (75.0) [b] | Pass |
| 442 | 40.0 - 100.0% of mass 198 | 65941 | 84.7 | | Pass |
| 443 | 17.0 - 23.0% of mass 442 | 13063 | 16.8 | (19.8) [c] | Pass |

(a) Value is % of mass 69
(b) Value is % of mass 443
(c) Value is % of mass 442
